His anger is unmistakable when observing the excessive physical force he uses against the victims. What is of concern is the escalation in violence observable in this series of attacks. He is using far more physical force against the victims than is necessary to control them. In addition to this, the offender has stuffed articles of clothing into the mouths of victims and in the case of the sixth victim, not only broke her collar bone, but poured dirt on her and rubbed it into her hair and onto her body. This is a symbolic gesture which expresses the assailants opinion of women.

We do not believe the offender would attack a victim with a premeditated idea of murdering her. However, we would opine, based upon our research and experience, that if confronted by a victim who vigorously resists his attack, your offender is the type who would likely become so enraged he could lose control and thereby become capable of unintentionally murdering the victim.

This type of behaviour is observable in your offender to a lesser degree in these attacks. In analyzing the interaction between the individual victims and the offender it can be seen that the victims feel overpowered by him and are generally compliant and submissive. Still, when the victims either misunderstand a command or delay, even momentarily responding to a demand, the offender immediately becomes enraged and escalates the amount of violence directed at the victim.

The offenders escalation in violence is observable also as the first three attacks could be seen as attempted rapes where no penile penetration occurred, while the rest of the attacks were successful rapes from the offenders view point as he achieved penile penetration. This expansion of the sexual nature of the assaults was accompanied by an escalation in the verbal and physical violence directed at the victims.

Also observable in the offender is the development of sadistic tendencies. He asked the seventh victim, should I kill you, thereby making her beg for her life. The sadist achieves gratification by the victims response to his attempts to dominate and control her either physically or psychologically, by posing a question that made the victim beg for her life he is deriving pleasure.

He has shown adaptive behaviour, indicating he is becoming comfortable in committing the assaults and feels unthreatened and in control. This is exemplified in the sixth attack. While he was accosting the

victim and attempting to gain control over her, a car pulls out of a driveway a few inches away and drives by them. He does not panic, but forces the victim into some bushes near a house and continues to assault her.

OFFENDER CHARACTERISTICS AND TRAITS:

Your offender is a white male, 18 to 25 years of age. It should be cautioned that age is a difficult category to profile since an individual's behaviour is influenced by emotional and mental maturity, and not chronological age. No suspect should be eliminated based on age alone. The behaviour exhibited throughout these assaults suggests a youthful offender rather than an order more mature one.

As noted above, we believe your offender lives in the Scarborough area. He is familiar with Scarborough, especially the initial assault sites, and, therefore, in all probability lives in the immediate vicinity of those first assaults.

The offender's anger towards women will be known by those individuals who are close to him. He will speak disparagingly of women in general conversation with associates.

He had a major problem with women immediately before the onset of these attacks. His anger would have been apparent not only for the particular woman involved but those close to him.

He is sexually experienced but his past relationships with women have been stormy and have ended badly. In all probability he has battered women he has been involved with in the past. He places the blame for all his failures on women.

If he has a criminal record, it will be one of assaultive behaviour. The arrests will likely be for assault, disturbing the peace, resisting arrest, domestic disturbance, etc.

His aggressive behaviour would have surfaced during adolescence. His education background will be at the high school level with a record of discipline problems. He may have received counseling for his inability to get along with others, his aggressiveness, and or substance abuse.

He is bright, but an underachiever in a formal academic setting.

He is nocturnal and spends a good deal of time on foot in the target assault area.

We believe your offender is single.

The offender has an explosive temper and can easily become enraged. This rage transfers over into the rest of his life.

He blames everyone else for his problems.

His work record will be sporadic and spotty as he cannot hold a job due to his inability to handle authority.

He is financially supported by his mother or other dominant female in his life.

He is a lone wolf type of person. He can deal with people on a superficial level but prefers to be alone.

The personal property of the victims which your offender took from the assault scenes is being kept by him. These effects are viewed as trophies by the offender and allow him to relive the assaults. He will keep these items in an area which is under his personal control which he feels is secure, but yet allows him ready access to them.

The nature of these attacks will continue to be episodic and sporadic. In all probability, they will continue to occur outdoors as he is familiar with the area and this familiarity gives him a sense of freedom and mobility which would be denied if he were to attack indoors. Each attack is precipitated by a stressor in the offenders life. This stressor could be either one in face or in his mind.

The offender recognizes his inadequacies and attempts to mask them, but very often overcompensates. These inadequacies are not known by casual acquaintances, but are well known by those closest to him.

POST OFFENSE BEHAVIOUR:

Your offender harbours no guilt or remorse for these crimes. He believes his anger is justified and, therefore, so are the resultant attacks. His only concern is being identified and apprehended.

Any further questions regarding this analysis or discussion regarding investigative strategy and interview techniques should be direct to SA Gregg O. McCrary or SSA James A. Wright, F.B.I. Academy, Behavioral Science Unit.

The Importance of Victimology in Criminal Profiling

by Amy Goldman

The professionals in the field of Criminal Profiling have a challenging future ahead of them. While violent crime is on the rise, profilers are using any resources available to them to aid in stopping the offenders. One such resource is the victim of the crime. How can a deceased victim aid in the investigation? The answer is through a technique called: victimology. This paper will define victimology and depict its importance through examples pertinent to criminal profiling.

The definition of victimology varies from expert to expert. In its most narrow sense, it is finding out as much as possible about the victim. In the Crime Classification Manual, the authors define victimology as followed:

A complete history of the victim, including life-style, personality traits, employment, and so on.

This includes, but is not limited to the following:

- Family Background
- Reputation of victim
- Likes and dislikes
- Drug/Alcohol abuse
- Financial troubles
- The last known person(s) the victim spoke to and the circumstances.
- Any enemies or any reason known that someone may have wanted to kill the victim
- Routines the victim had (check mail every day as soon as s/he got home, foreexample)

Above are examples of various types of information a profiler would want to know about a victim. Each bit of information collected regarding the victim is a potential answer to the question: why did the offender choose this person to be his victim?

The most important aspect of victimology in relation to profiling is the fact that it narrows the offender type tremendously. Each question answered regarding the victim is actually a window to the offender's psyche and in turn, answers questions about the offender. Victimology is essential to profilers for many reasons. First, profiling the victim assists profilers when suggesting "pro-active techniques" used to draw the offender out into the open. In addition, victimology enables profilers to advise investigators as to which interrogation tactics to use when talking with the apprehended suspect. Furthermore, victimology aids in recognizing the next type of victim the offender will choose; therefore assisting in appropriate warnings to the public.

To begin, by assessing the type of victim the offender prefers, profilers can suggest pro-active techniques to bring the offender out in the open. For instance, Brent Turvey, MS explains the advantages of knowing the offender's victim choice in his article **BEHAVIOR EVIDENCE: UNDERSTANDING MOTIVES AND DEVELOPING SUSPECTS IN UNSOLVED SERIAL RAPES THROUGH BEHAVIORAL PROFILING TECHNIQUES**:

Knowing this is investigatively significant in this example because investigators will be able to establish generally where the rapist will be, at what time, and with which victims in mind to make his fantasy (his preferred sexual behavior of choice) come true. This opens the door for a great deal of pro-active investigative behavior in relationship to future victims.

Though alive in Turvey's example, the same would be applicable had the victims been dead...because the victimology would have remained the same. In other words, the victims would have still had the same characteristics because those are what attracted the offender to those victims to begin with. Due to the victimology in the above example, it is most likely that apprehension of the offender will occur in less time than if there had not been victim analysis.

Next, victimology assists in the development of interrogation techniques used by law enforcement when interviewing the suspect. While the correlation may not seem evident at first, it is there. The profiler has learned as much about the victim and now knows a great deal about the type of person the offender is. An experienced profiler will know that certain suspects will feel remorseful or lack remorse. The profiler will know this by the behaviors of the offender at the crime scene. The profiler will also know which tactics are most likely to yield a confession. He or she, who generally has a strong grasp on the behavior of people in general, will use knowledge from past cases to guide him/her in putting the pieces together. For example, in his book *MindHunter*, John Douglas (a retired FBI profiler) discusses the case of a twelve-year-old rape/murder victim. He learns all he can about the victim; he wants to know her reputation, if she was a trusting individual and so on. After getting a sense of the victim, Douglas begins looking at the physical evidence and assimilating what he thinks happened from the crime scene indicators. Based on his findings, he tells the investigators to interrogate the suspect at night to one, make the suspect feel more comfortable and two, to let the suspect know the seriousness of the investigation. Douglas gives a few other suggestions. Most importantly, the investigators were to place the murder weapon "...on a low table at a forty-five-degree angle to his line of sight so that he'll have to turn his head to look at it." He tells investigators to observe non-verbal clues closely--if he is the killer, he will not be able to ignore the rock. The next component was the actual wording to the suspect. Douglas tells them to blame the victim--no matter how this repulsed the investigators. The suspect did not ignore the rock; in fact, he began perspiring. The investigators did as instructed, blaming the victim for threatening the suspect. In the end, the suspect confessed to the murder of the twelve-year-old and the rape of another as well. Because Douglas learned about the victim, he also learned how she most likely would have reacted in the situation. In a sense, he was actually able to put himself in the shoes of both the victim and the offender. The pieces of the puzzle came together more clearly. John Douglas used what is generally known about the personality traits of that particular type of victim and combined them with the personality traits of the offender.

Finally, victimology is important to criminal profiling because it enables the profilers to recognize if a specific type of person is at risk. The case of a Saint Louis, Missouri rapist dubbed the South Side Rapist is indicative of an offender who targets specific types of victims. According the Saint Louis Dispatch newspaper, the rapist chooses women who live alone, have dark hair, are in the 35-40 year-old age group, and live in apartments. Although spread apart and committed in different jurisdictions, authorities are able to warn the types of victims the offender is targeting. There are better known cases demonstrating the importance of victimology in relation to criminal profiling. Ted Bundy's victims all had long hair parted down the middle. During 1985, about ten women with red hair were murdered along highways spanning several states (Serial Murder, Holmes & DeBurger). The victims of these killers had more in common than the unfortunate fate of meeting their killers. Profilers use victimology to locate the common denominator(s) among the victims. This not only enables them to narrow the possible offender type, but also to alert law enforcement as to the types of people to warn (via media coverage, for example).

To conclude, while violent crime is on the rise, the importance of victimology cannot be over-looked. The tool of victimology assists criminal profiles in several ways; including, but not limited to:

- Suggesting pro-active techniques to bring the offender closer to apprehension
- Advising law enforcement of interrogation techniques designed to get a particular offender to confess and
- To help find the common denominator(s) among the victims to one, narrow the offender-type possibilities and two, to enable law enforcement to make the public aware of who is most likely to be in danger.

The victim is, in this way, able to be an active participant in the investigation and is the only one, aside from the offender, who knows what happened during the committing of the crime.

The Impressions of a Man: An Objective Forensic Guideline to Profiling Violent Serial Sex Offenders

by Brent E. Turvey

March, 1995

Author's Note: The following paper is done out of respect for, and in addition to, the important body of work generated by the National Center for the Analysis of Violent Crime, at the FBI Academy in Quantico, Virginia. Also, the use of the generic term "he" to describe the violent serial sex offender is with the full awareness that a population of female serial offenders has been documented.

THE PROBLEM

To date, no universally accepted typology for violent serial offenders exists. There is no common language that both the law enforcement community and the mental health community use to describe violent criminal behavior, or to discuss motive and means. Even the best classification efforts, produced by such groups of motivated and respected individuals as the National Center for the Analysis of Violent Crime, have yet to be widely accepted. This is largely because everyone associated with the field has their own idea about the criminal mind, and none of the professionals involved like to be told how to think about criminal behavior by someone else.

The progeny of this unhappy relationship between law enforcement and mental health is a lack of mutual understanding and discarded professional respect on both sides of the fence. Not enough Psychologists and Psychiatrists have been to a crime scene, and not enough investigators have studied principles of psychology, psychopathology, and human behavior. Each could greatly benefit from the experiences of the other. More importantly, the successful investigation of a violent serial offender often takes skills from both disciplines.

Even though a straight-forward typology for violent serial offenders can be useful, this work does not presume to present such a typology at this time. This work will discuss some general concepts and guidelines to assist the investigator of violent serial sex crimes in profiling and in mentally navigating the inefficient coexistence between mental health and law enforcement.

The science and art of profiling crime scenes, and subsequently offenders, from physical and psychological evidence is key to the investigation of a violent serial sex crime for which there is no known perpetrator. The profiling method is based on Locard's Principle of Exchange; anyone who enters the scene both takes something of the scene with them and leaves something of themselves behind. However, profiling goes beyond a scientific reconstruction of a crime scene. The unintended

psychological ramifications of Locard's Principle are powerful, but often ignored by even the most seasoned investigator. It has been demonstrated that what can be recovered at a crime scene, utilizing basic principles of psychology applied to the physical evidence, is an impression of the man who committed the crime (Burgess, et al.[2] & [3], Douglas, et al [5], & Hazelwood, et al., [10], [11], [12]) . That is the result of profiling. By the trained investigator, an impression can be lifted from a crime scene---residual psychological traces of the individual who created the world of that crime scene and lived in it for a given time. Ultimately, profiling the scene or scenes of a crime can give an investigator a more narrowed pool of suspects, insight into motive, and linkages of a given crime to other similar crimes. The opportunity to profile an unsolved crime is not to be ignored or wasted.

PHYSICAL EVIDENCE

The first thing to consider in working up the profile of a violent serial sex offender is the crime scene. It is a living document of the offender's actions, and it is the basis for much of the objective behavioral interpretation (victimology provides objective and subjective interpretation, but is not less valuable). Therefore, it is critical to first preserve the crime scene and then process it, documenting the physical evidence and being attentive to the smallest detail. Any recovered physical evidence is grist for profiling. Even the smallest item, such as a red fiber from a car rug taken off the victim's body, can provide valuable insight.

Every agency or department has its own crime scene protocol, some better than others. The key concept to remember here is choosing an approach that provides what is needed from a given scene, and then sticking with it. As a result, processing a scene becomes habit, and then eventually it becomes second nature. Planned consistency is a good investigative practice. For specific examples, reference Crime Scene Investigation, by Henry Lee, Ph.D., et al.[16], Physical Evidence, by Henry Lee, PhD.[17], Practical Homicide Investigation, by Vernon Geberth[8], & Criminalistics: an Introduction to Forensic Science, by R. Saferstein[19].

Some suggestions- Always consider whether or not a scene is primary or secondary. If you have a body in an isolated location, conduct a spiral search pattern using the body as a starting point; look for the suspect's path of entrance/path of exit, and look for other bodies. Also, don't release the body until you absolutely have to. Notify the M.E. or Coroner, but give yourself some time to document and collect the evidence. You only get one shot at the pristine body in context, and once it's gone, that opportunity is lost forever. If time of death is a viable consideration, that can be reasonably established without removing the body from the scene. But don't get hung up on it. No M.E. worth their salt would give a time of death that isn't a block between 2-3 hours. Anything much more finite, with rare exceptions, is ego.

Once the physical evidence has been collected and a scientific reconstruction of the crime has been done, profiling can follow.

PITFALLS

Profiling tends to rely heavily on varied offender typologies. Investigators put a series of questions to a crime scene and to an offender's behavior, and then discuss the answers in terms of a psychologically based typology. The major failure of most typologies of violent serial offenders is perspective. The offender is described in terms that express the investigator's understanding of the motivation behind offender's behavior. This can be very subjective and may be misleading to an investigative effort to understand an offender and link him to another crime.

Many investigators take psychology into their own hands and start from possible subjective motives, then pick and choose offender behaviors to explain their motive theories. That is backwards. Profiling does not mean coming up with a theory and then inserting an offender as best he fits.

Profiling means letting the physical evidence tell an investigator what behaviors occurred, then thinking about what was intended by the commission of those behaviors. By reconstructing a sense of motive from offender behavior patterns, the investigator can then reconstruct the offender's fantasy. This may help in the area of predicting patterns of future offender behavior.

Most investigators are chronically unable to overcome their own perspective when faced with one or more disturbing violent crime scenes. This is largely because they are not serial sex offenders. They do not think as offenders think. Marshall [18] puts a very fine point on it when he explains that what distinguishes rapists and non-rapists is the ability to perform the response of hostile aggression and sexual arousal at the same time. The violent serial offender can do this quite easily. Therefore, when we apply our own values and belief systems to the scene of a violent serial crime, we are necessarily at a loss for an explanation of behavior and fall back on easy, trite, and meaningless cliché explanations like, "crazy" and "sick". Offenders have their own intricate set of values. That is part of what defines a psychopath, according to Burgess et al.[3]--the lack of trust and commitment to a world of rules and negotiation. That is the perspective difference, and that is why many investigators are at a loss to explain motive in such cases, and are necessarily frustrated by the thought of attempting behavioral analysis.

In considering these factors, the most useful profile of a violent serial offender should include objective terms that best describe an offender's perspective and behavior towards the scene and towards the victim. Start first by thinking about what it is that they did at the scene. Describe offenders first by their behaviors. Then begin asking what desires those behaviors satisfy. Remember: violent serial sex offenders, in general, do not commit their crimes by accident. They are in possession, however elusive, of their own reasons for the behavior they act out with a victim.

PROFILING

The accepted method for profiling most crimes in law enforcement is prediction of behavior based on a

known motive. In violent serial crimes, the motive is unknown to the investigator. It is not about money, and it is not about uncomplex interpersonal revenge. Therefore, conventional methods of behavior prediction fail. Profiling provides a solution by approaching the problem from the opposite direction. The unknown motive is explained in terms of known behavior.

For successful and objective profiling, there are two concepts that must be accepted by the investigator before walking through the door of understanding violent serial sex offender behavior. First, violent serial sex offenders have generally lived out their crime in deliberate fantasy many times before they realize it with an actual victim. Second, most behaviors satisfy a wish, need, or desire. Accepting these two basic concepts, an investigator can deduce what a violent serial offender wishes, needs, or desires from crime scene behavior.

FANTASY

The published research of the NCAVC over the past ten years has established that fantasy occurs well in advance of the crime in the cases of serial sex offenders, serial rapists, and serial sexual killers(i.e. [10], [11], & [12]). For most of society, fantasy is a means of escape or a means of entertainment. It is temporary and generally understood as unreal. For the violent serial sex offender, fantasy evolves into something compelling and complex until it becomes the central behavior of choice, rather than a brief, unrealized mental distraction.

Take for example Edward Wyatt, a convicted serial rapist from the central and western United States. At age 18, he was convicted of criminal trespassing for peeping through a neighbor's window. Several years later, he was convicted of the same offense. He was found to be carrying a buck knife at the time. Over the next several years, while married and starting a family, he moved a number of times and changed jobs with the same frequency. When he began his series of rapes, he used a buck knife as a means of threatening and controlling his victims. He would enter their houses when they were alone. He would use the knife to threaten them, and then tie them up with duct tape. Once they were bound and blindfolded, he would force them to submit to vaginal, anal, and then oral intercourse, in that order. All the while, he would script them, saying repeatedly, "Tell me how good I am," or "Beg me to fuck you in the ass, whore!". When he kidnapped 17 year old Allison Shaw, to his own house, Edward Wyatt escalated to audio-taping and photographing the ordeal. It lasted several hours and took place in the living room in front of the Wyatt family Christmas tree. Allison was let go and later identified Wyatt as her assailant. During an interview while incarcerated for that crime, Edward Wyatt explained that he did not know if he would have eventually started killing his victims. In 1991, after serving 9 years, Edward Wyatt was granted parole. Fourteen months later, he was charged with burglary. After getting a search warrant, police discovered a ski mask, a video camera, and a stool in the trunk of his car. A subsequent search of his home revealed videotapes of Edward committing other crimes such as masturbating over a ten-year old girl while she slept (Flynn, [7]).

This case demonstrates a clear escalation from fantasy to behavior. Note that the escalation of behavior

keeps true to the flavor of the original fantasy. Edward Wyatt carried the knife with him from the beginning of his criminal career. The buck knife represented a wish, or fantasy, that was already present before the commission of the crimes, as the nature of his later crimes indicates. In the beginning, the knife was the link to an unrealized fantasy waiting in his mind for an opportunity. Later on, it was the means. Its consistent presence clearly suggests a deliberate escalation.

The crime itself is the fantasy planned and played out by the offender. The victim is subsequently cast and scripted. The victim is inserted into a role that the offender needs occupied for his fantasy to come true. The victim, then, is a reinforcing element. The victim serves as fortification to the fantasy. The escalation of fantasy and behavior requires constant reinforcement, and consequently a succession of victims. This kind of escalation has a great deal of momentum, and ultimately the burgeoning fantasy is the behavior of acting out the escalated fantasy. The fantasy becomes the motive and establishes the offender's signature [5].

Tandem escalation of fantasy and behavior itself serves a number of complex ends for the offender. The most basic values of the escalable fantasy to the offender are 1) provision of control 2) disassociation from the victim/crime to support the superficial personality veneer & 3) provision for later reenactment and fantasy fueling. This is where in the fantasy the trained investigator finds motive.

CONTROL--The fantasy provides an offender with a means of controlling a situation. As long as he can keep the world he creates with the victim true to his fantasy, he is in control. Levin & Fox, [6], put it this way: "Domination unmitigated by guilt is a crucial element in serial crimes with a sexual theme. Not only does sadistic sex-- consensual or forcible --express the power of one person over another, but in serial homicides, murder enhances the killers sense of control over his victims." The offenders engage in behavior that establishes that they are unquestionably in control.

One such way to establish control is a fantasy theme of extended periods of victim degradation and devaluation. With a live victim, offenders can use scripting (i.e.-- repeating severe epithets to the victim, or simply getting them say how powerful the offender is, etc.), sex (i.e.-- forcing the victim to engage in painful anal sex then immediately fellate the offender), and torture (i.e.-- biting and ripping away nipples, or pre-mortem cutting). Some offenders do not feel that they have control until the victim is dead, so they kill the victim relatively early on. Once the victim is dead and under control, they proceed to freely master the corpse by such means as postmortem mutilation (such as numerous curiosity incisions made throughout the body, or removal of an appendage), defeminization (which includes severe damage or removal to the sexual areas of a female), and ritual displaying of the corpse (leaving the body in a purposeful, humiliating position, unclothed, in a place where it is certain to be discovered, perhaps by loved ones). In both cases, the behavior clearly establishes the offender's control over the victim. To the offender, the fantasy that is played out, which elicits fear and humiliation from the victim, establishes the dominance of the offender over the world he creates; the world of a victim in a crime scene.

Consider the case of Dayton Leroy Rogers of Portland, Oregon. By the late 1980s, Rogers is known to

have killed eight women, all prostitutes. He had just married his first wife, when after an attack on a 15 year old girl with a knife, he was put into a sex offenders program. There, his fantasies grew and became more violent. He used narcotics, he drank heavily, he masturbated chronically, and he admits to having violent sexual bondage fantasies while engaging in intercourse with his second wife. He claims this heightened his sexual arousal. He would pick up prostitutes late at night and drive them to a remote location in Molalla forest. Once there, he would coerce them into letting him tie them up, but the nature of the bondage would be extreme and methodical. At some point he would engage in masturbatory acts with their feet. He would also torture them intermittently by slicing their feet, and biting or cutting their nipples. This would last until the early hours of the morning. According to some of the victims who escaped, he would regularly pause his assaults, leaving them in his truck to urinate outside, as he was consuming alcohol during the entire ordeal. Rogers would also script his victims by calling one of them "Maureen" after Maureen Ann Hodges, a favorite prostitute and eventual victim. Moreover, while Rogers had them tied up, tightly and painfully, he would threaten to strangle them, over and over, if they didn't verbally submit to his requests. Unless his victim could escape, he would kill them and dump their bodies in the forest. The decomposed bodies would not be found for some time, generally by hunters (King, [15]). Rogers would seek out his victims, take them to a location where he could gain control, and force them to play the object role in his fantasy.

Gilgun[9] finds the theme of control in sex offender fantasy so pertinent, she uses the classification "Controllers" in her typology continuum of child sex offenders. She cites one such offender as saying "I liked...the actual sex...Then the controlling, being in control of her life completely was a thrill for me. I thought about it more than I thought about my wife." Gilgun also found a recurrent theme of bargaining with "controllers," for example such statements to victims as "Do this[masturbate me] or you're not going out again!".

Behavior fuels the fantasy. Part of the fantasy is offender control or dominance, by any or all of the means mentioned above. The behavior of violent serial sex offenders clearly seeks to establish that control or dominance. It can be prescribed, among many other offender behaviors, by the location choice of the assault, by the script he uses with the victim, by weapons he may use or bring with him, by the mutilation he may inflict upon the victim, and so on. The offender does what he feels will keep him in control, and thereby fuels and reinforces his fantasy. Ultimate manifestation of the fantasy is offender behavior, which in turn reinforces the fantasy, which is again manifested in later behavior, which further reinforces the fantasy. This is an important concept to be mindful of in the development of a profile.

DISASSOCIATION-- To successfully blend in with society, many violent serial sex offenders develop a thick superficial veneer of personality that is entirely disassociated from their violent criminal behavior.

Disassociation is not an aberrant human characteristic. It is something that we all do to some extent, like the careful superficial behavior many individuals exhibit with their co-workers vs. their emotional transparency with close family. Violent serial sex offenders merely carry a human self-protective behavior to an unhealthy extreme.

Violent serial sex offenders are successful criminals. They are intelligent enough to avoid detection and persist in the repeated commission of their crimes. They live in our society with little or no leakage as to their true nature. Many are married or in a relationship. But it is disassociated.

Fantasy enables the disassociation. The more intricate the fantasy, the more objectified the victim, the more distance that is mentally created between the violent criminal behavior and the superficial veneer of personality. Mutilation of the victim and scripting of the victim that is dehumanizing also further the distance.

The true behavior of choice is successfully suppressed in social contexts by the offender's practiced superficiality. This may sound like indications of paraphilic fugue episodes or a second personality, but this is not the case. The behavior of the serial sex offender deliberately avoids detection, indicating that the offender knows full well that the behavior is not acceptable to society. The practiced superficiality of the violent serial offender in social contexts is deliberate, because it is practiced, and it does prevent leakage of the behavior of choice. Without that veneer of superficiality, provided for by the fantasy and the ritual, the violent serial offender would not be able to live in society and avoid detection for prolonged periods. There must be a disassociation from the crimes while in a social context.

Take for example Jerry Brudos of Salem, Oregon. Brudos began fantasizing about dressing up in women's clothes and kidnapping women for sexual purposes as an adolescent. He escalated to kidnapping a 15-year old girl at knife point when he was in his late teens. When he was married and starting a family, he procured his victims through various cons but also used a revolver for intimidation. He had a large collection of women's shoes and some women's lingerie. Brudos would get his victims to his garage, by force or con. There, he would force them to take off their clothes, put on some of the shoes and lingerie from his collection, and then tie them up. Jerry would masturbate while photographing them and himself, sometimes using mirrors rigged to his garage ceiling. Jerry would then strangle his victims. He tied them to heavy engine parts so that they would sink when he dropped them into the Willamette river. He is suspected of at least five similar murders including Jan Whitney, a college student who's car broke down, 19-year old Karen Ann Sprinkler, a freshman at Oregon State University, and Linda Dawn Salee. Police were issued a warrant and finally searched his home. Even though Jerry knew that they were coming to search home and garage and had several days notice, the police were still able to find evidence linking him directly to several of the murders. Among those possessions that Jerry chose not to remove from his garage were; his collection of photographs of the victims depicting their unwilling nudity and bondage in his garage, his collection of stolen footwear, the clothes of several of his victims, his collection of stolen lingerie, a molded paperweight made from the cast of one of the victims breasts. Also of note is that nude pictures of Ralphene Brudos, his wife, were found as well. All of this material facilitated his reenactment of the fantasy and subsequent offense in the absence of a victim. His wife Ralphene testified that he spent hours out in the garage, and got upset with her if she ever went in and violated his privacy. But to this day, as Jerry Brudos sits in the State Penitentiary in Salem, Oregon, he denies any and all knowledge of the crimes for which he was convicted. Despite his initial confession, claiming innocent by reason of insanity, then his recantation of that confession once the insanity plea was denied, he will not admit that he committed the crimes. Despite photos, despite eyewitness accounts, despite engine parts and rags found roped around the

bodies of dead victims linked to his possession, despite a large amount of damning physical evidence, Jerry claims to be innocent.

This author found Jerry Brudos quite polite and engaging during interviews (Turvey, [20]). He bought me a Coke and eventually showed me some of his prison scars. He was generally soft spoken, and although he wouldn't discuss his crimes, we did discuss the O.J. Simpson case.

His social veneer is so practiced, so polished and so believable, that he has become a trusted inmate at the Oregon State Pen. He has been allowed to work on state criminal computer records, and he installed the penitentiary's cable system (he is an electrician by trade). He is also in charge of restocking and repairing the penitentiary vending machines. The Penitentiary staff have only good things to say about Jerry as an inmate, and clearly had an amount of trust for him. In fact Jerry's largest complaint to this author, regarding the conditions of his incarceration, was the fact that he was denied his technical journals. All despite the fact that he is a convicted serial killer. This is not to say that his conditions should have been more miserable given the severe nature of the crimes he committed. However, clearly there did not exist an atmosphere surrounding Jerry Brudos that he was dangerous whatsoever during my visits to the state pen. We met in an open room with many other inmates and visitors, sat across from each other at short knee-high tables, and the only supervision was one guard and some video-cameras.

Because of the terms of his incarceration, Jerry Brudos comes up for parole every two years. He has been in the Oregon State Penitentiary for twenty-five years.

The use of a practiced social veneer provided for Jerry's existence in marriage, and continues to provide for him in prison. It is so believable that the prison staff have very little fear of him and give him their trust. This deliberate, protective social veneer, provided for by an intense ritualistic fantasy life, which is easily disassociated from because of it's complexity, may yet serve to free Jerry Brudos.

REENACTMENT-- Each offense, each victim experience, is a part of the offender's collective fantasy. Both are, if only in part, relived before, during and after subsequent offenses. The behavioral aspect of the fantasy is cumulative in that respect.

Reenactment serves two very important purposes for offenders that investigators must not forget; 1) it feeds back into the fantasy which reinforces the behavior to escalate, and 2) it gives sexual pleasure.

Reenactment is largely a mental exercise for the offender, often physically facilitated by periods of ritually orchestrated masturbation with various victim related props. It reinforces the control aspect of itself, because the fantasy can be engaged at the whim of the offender. It is also in itself stimulating for the offender while being preparatory for future offenses.

Each of the violent serial sex offenders mentioned in this work provided for the later reenactment of their crimes in fantasy. Edward Wyatt progressed to the point where he photographed and audio-taped his deliberately scripted rape of Allison Shaw. He then videotaped his later offenses. Dayton Leroy

Rogers kept some of his victims' clothing. He also committed his crimes in the same remote areas, so that with each progressive victim he could revisit the associative feelings elicited from previous victims; location type was an important part of his ritual. Jerry Brudos took photographs, and kept bags of his victim's clothes and shoes. Jerry also removed body parts, particularly a victim's foot which he kept in the freezer in his garage and a breast from which he cast a paperweight.

To mentally and sexually re-experience the emotional flavor from past episodes of victim degradation and dehumanization is the purpose of reenactment. It is also the time when offenders plan and "rehearse" escalatory behaviors. Offenders of violent serial sex crimes behave in a way that provides for reenactment. Investigators may gain insight into the elements of the crime that are the most stimulating to the offender by examining those providing behaviors closely. I.E.--examine still photographs taken by the offender for a reoccurrent body position, props such as shoes, or point of view.

It is not to be ignored that a great deal of fantasy behavior can be sexually motivated, because much of the fantasy behavior is sexual in nature. As will be discussed shortly, increased sexual arousal and offender satisfaction has been shown to be correlated with offender domination, victim resistance and victim degradation. The sexual stimulus of the behavior is intensified for the violent serial sex offender when coupled with those sadistic acts of brutality that elicit a fear/humiliation response from a victim.

The balance of fantasy behavior is rehearsed and deliberate. Reenactment is self-reinforcing for the violent serial offender. It can have both mental and physical expression. Disassociation and control also feed into the relationship between the offender and his crimes. As integral parts of the fantasy behavior, all three are a part of the central behavior of choice for violent serial sex offenders.

BEHAVIOR ANALYSIS

DSM-IV and the general population of the mental health community have accepted a fairly helpful definition of a psychopath or sociopath (these terms are interchangeable). Mostly it consists of a Chinese menu; fulfillment of 7 behaviors from a list of 10 known psychopathic behaviors equals a diagnosis of psychopathy. This is indeed a helpful laundry list of behaviors. However, many such lists are problematic and tend to be riddled with judgment and morale evaluation, often avoiding objectivity. For example, at a professional lecture on serial child molester/murderers, the author notes that respected Portland, Oregon psychologist Stanley Abrams used the phrase "evil" several times to describe offender behavior (Abrams, [1]).

The trained investigator should be able to understand that value judgments do not help, and can distract, a successful offender profile and subsequent investigation. Trained investigators and mental health should not harness an investigation to personal morals or belief systems. It will not solve the crime.

A golden calf of psychopathy check-lists and the DSM-III & IV is the idea that not only are psychopaths

morally bereft, they are not capable of intimacy, and they are not capable of empathy, being entirely egocentric. The phrase "cold and calculating" is used over and over to describe violent serial sex offenders in court, many considered psychopaths, because this is what the mental health expert sees during a pretrial examination and then later in the courtroom. A cool, practiced disassociation from behavior.

This final section will discuss some of that untouchable reasoning.

Part of psychopathy is antisocial behavior, which means behavior against society. Everyone agrees that these offenders do not reason in a way acceptable to society. What must be established is how their alternative reasoning works. That is the only doorway to explaining fantasy and subsequently motive. Making a morale judgment may make investigators feel better, but it will not get investigators closer to an unknown perpetrator of a series of violent offenses.

The NCAVC has generated some impressive work on the characteristics of violent serial sex offenders. Of note is Burgess et al.,[2] which discusses organized and disorganized crime scenes left by sexual killers. Also, they showed evidence of the frequency of certain offender behaviors over time in Burgess et al., [3]. Burgess and her colleagues showed evidence from their population of violent sexual offenders that several characteristic offender behaviors were quite frequent, and most notably consistent at a high rate of frequency were (reported in over 80% of the sex offender population in the study);

- 1) Compulsive, chronic masturbation.
- 2) Constant daydreaming.
- 3) Social isolation.
- 4) More likely to force fellatio and anal intercourse upon their victims. Decrease in the frequency of vaginal intercourse over time.
- 5) Average to superior intelligence with 15% in the very superior range.

The first three behaviors were reported to be consistent from childhood to adulthood. All provide for and are conducive to a rich and intense fantasy life.

Also, the NCAVC has generated serial sex offender research[12] supporting the theory that the increase of force and sadism at each progressive crime scene is correlated positively with offenders who have more victims over a shorter period of time. Earlier research[11] on the same population of offenders indicated from offender reports that increased offender sexual pleasure and satisfaction were positively correlated with victim resistance and an increased duration of the crime. That data shows that the mean average duration of an offense increased from 36 minutes to 94 minutes when the victim resisted. The bottom line here for the investigator of violent serial sex offenders is this-- violent serial sex offenders have the most number of victims, over the shortest periods of time, and victim resistance evokes offender sexual arousal and subsequently offense duration is increased. Again, violent serial offenders commit more offenses in less time, and spend more time at the scene with the victim when the victim resists, because sexual arousal is increased. In such cases of victim resistance and increased arousal, it is

noted that intercourse was delayed significantly by the offender.

EMPATHY-- The author had a very interesting experience in a parenting seminar during his final term as a psych major. At a round table discussion of the behavioral development of deviant children, the professor stated that we (the mental health community) can determine that a new stage in moral development has been reached by a child when he or she first begins to tease. Teasing requires perspective taking and empathy. The teaser must first assume the role of the teasee and understand what bothers them. Once they know what hurts, they can use it against them. Teasing behavior requires basic empathic skills and is a definite, measurable marker for a new stage of moral development.

Extending that logic; to receive any kind of sexual pleasure from a victim response such as humiliation, pain and submission, the offender must first understand what humiliates, frightens, and subordinates the victim. The violent serial offender does just that. He understands what is humiliating, what is degrading, and what is painful to the victim. He has already taken the viewpoint of the victim into full consideration, and understands it well. In fact he is dependent upon it. That is often how he is able to achieve and maintain control. That is often where he derives his pleasure and satisfaction. That is generally the only way he can fulfill the fantasy; he knows how to behave to get what he wants, needs, and desire from his victims.

This is further evidence that violent serial sex offenders have a very clear understanding of the consequences of their behavior towards the victim. They understand that the victim is humiliated and in pain, and in fact that is part of why they are doing it. They feel aroused and powerful when they are assured by victim responses denoting a state of submission and painful humiliation. To be aroused by the pain and domination of the victim, the offender first must understand that the victim is in pain and is dominated, and to successfully elicit those victim responses the offender must understand what behavior on their own causes it. Their behavior is ultimately self serving, but not born of a single perspective. Their behavior cannot, therefore, be described as purely egocentric. The violent serial sex offender uses non-egocentric, perspective taking thought processes to arrive at his egocentric pleasure.

Violent serial offenders do not lack empathy. They often depend upon it for successful engagement of their fantasy. It makes them feel good to know that they have made their victims feel bad. That is the essence of the violent serial offender's point of view. Egocentric entitlement coupled with a necessary empathy.

INTIMACY-- Intimacy is a great concern for most violent serial sex offenders. As Marshall[18] points out, sex offenders probably desire intimacy but lack the skills to achieve it in a healthy form.

What offender behavior suggests is a sort of one way intimacy where the victim is physically revealed to the offender, and completely under his control. Through this forced opening of physical intimacy, the offender may perceive an emotional and spiritual intimacy as well. Yet the offender takes pleasure in either the notion that intimacy is being forced from the victim, or the fantasy that the victim really has a desire for him to experience her intimately. He has revealed the victim in a private, intimate and violent

way, devouring the victim's own sense of personal security and control. Though incredibly unhealthy and destructive, this is how the violent serial offender achieves intimacy. That is how he understands it; through his violent criminally sexual behavior.

Consider a stanza of poetry written from that perspective, which was downloaded from the Internet, address: mimir@hardy.u.washington.edu (Al Billings), by "Hakim Bey" ---

"Burglarize houses but instead of stealing, leave Poetic-Terrorist objects. Kidnap someone & make them happy. Pick someone at random & convince them they're the heir to an enormous, useless & amazing fortune--say 5000 square miles of Antarctica, or an aging circus elephant, or an orphanage in Bombay, or a collection of alchemical mss. Later they will become to realize that for a few moments they believed in something extraordinary, & will perhaps be driven as a result to seek out some more intense mode of existence.

Bolt up a brass commemorative plaques in places (public or private), where you have experienced a revelation or had a particularly fulfilling sexual experience, etc.

Go naked for a sign."

The brilliant psychopath who wrote this passage believes in creation by control via sexual domination. In the act of controlling something, dominating it and forcing it (a kidnapped victim) to submit, something spiritual will happen. Something will become. The fantasy being that sexual domination equals the re-creation of the victim, and the enlightenment will follow that amounts to the offender giving life to something that was before lifeless. The offender sees himself as a god (the author is a member of the LOKI Society), making from every victim a new source of energy. In fact, from this individual's perspective, the offender is doing the victim a large favor. Each victim would then reinforce this fantasy. Again, the victim is the object for offender, selected here in generally non-random ways for scripting into a complex fantasy of spiritual and artistic metamorphosis.

Some might theorize that the inclusion of the victim in the fantasy of the offender suggests a desire to express intimate feelings on the offender's part. He is, after all, sharing with the victim his most private desires and personal feelings. However, the investigator must be aware that the victim remains an object to the fantasy. Not an equal partner.

The offender forces an unwilling victim into a role as the object of his fantasy. The offender gets what he wants from his object, and then disposes of it. Disposal can mean dumping the victim on the side of the road, badly in need of medical attention, or it can mean ligature strangulation of the victim's throat to the point of death and ritual display of the broken body in the front lawn.

CONCLUSION

Only when the crime scene is documented thoroughly and then the evidence collected properly can an objective profile of the violent serial sex offender begin. This means all scenes and relationships to scenes can be established or dismissed, and that all behavioral avenues can be explored by the trained investigator without barrier. The physical, scientific reconstruction should be the starting point of the offender profile, and all elements of the profile should match the realities of the physical evidence. This grounding of the profile in physical evidence is essential for objectivity.

Most investigators do not bother to or do not have the training to overcome their own perspective towards violent serial sex crimes. Subsequently, crime scene and behavioral analysis can be misleading and destructive to the investigation, yielding few clues from sparse evidence and providing little true insight into the genuine nature of the crime and the criminal mind responsible for it. Therefore, investigators should be trained to profile the offender and the crime scene in terms that are objective to the offender's perspective. Deduce motivation from behavior, rather than the other way around. Do not marry into one person's idea about the crime; investigate the nature of the offender's behavior in relation to all physical elements of the crime.

Violent serial sex offenders have an alternative morality. It is by definition antisocial. The question for the investigator is not whether or not behavior is right or wrong, or even good or bad. Once a victim or series of victims has been confirmed, morality ceases to be the most important issue. The only important issue at this point is how do we capture or neutralize the individual responsible.

The question for the trained investigator is what insight does the offender's behavior provide into his own morality, and how does that lend itself to motive and signature. What does the behavior say about what the offender has done in the past, is doing in the present, and will do in the future.

Violent serial sex offenders fantasize about their crime well before committing them. The fantasy has value to the offender because it provides for the control he needs/wants/desires, it supports the superficial nature of the offender's social personality, and it provides for later reenactment of the offense while fueling and rebuilding onto the original fantasy. From the behavioral elements of fantasy, motive can be deduced, and signature can be identified. The pool of suspects will necessarily shrink, and elements of behavior may become more predictable.

Clearly, the investigators who must undertake the task of solving such cases cannot be from either of the traditional schools of thought. Investigators cannot be strictly from law enforcement because they lack the psychological and sociological training regarding human behavior. Investigators cannot be strictly from the mental health community because those lack insight into the true nature of these type of crime scenes and advanced training in the forensic sciences. Also, professional jealousy and territoriality tend to keep both sides from consulting with, or truly communicating with each other. An investigator must be devoid of any weighty investment in the ends of either discipline to keep objective. An investigator

has but one duty, and that is to the victim. Solve the crime. Apprehend the offender. Any other social, political or organizational consideration must take a far second.

The successful investigation of a violent serial sex offender, due to the lack of obvious suspects and the extreme nature of fantasy behavior displayed by the offender, involves extensive behavioral profiling. Profiling takes strong skills from both the mental health and law enforcement community. In light of the rising number of serial crimes and the intense human suffering involved, the need for more objective profiling guidelines, cooperation and communication between both fields is evident.

Stidham Law Firm, P.A.
203 North Second Street
PO Box 856
Paragould, AR 72451
Contact: Dan Stidham; (870) 236-7600
Client: Jessie Misskelly

LOCATION: On May 6th, 1993, all three victims were found, bound wrist to ankle with shoe laces, in the water of a drainage ditch, in a heavily wooded area called the Robin Hood hills, behind the Blue Beacon Truck Wash in West Memphis, Arkansas.

EXAMINATIONS PERFORMED: An equivocal forensic examination of all available crime scene and autopsy photos, crime scene video, investigator's reports, witness statements, family statements, autopsy reports and numerous other sources to be listed as referenced in the endnote section of this report. The purpose of this preliminary examination was to competently assess the nature of the interactions between the victims and their environments as it contributed to their deaths as indicated by available forensic evidence, and the documentation regarding that evidence.

Forensic Analysis

Established Timeline of Events:

According to statements made by Mark Byers to Det. Brian Ridge of the West Memphis PD during a formal police interview dated 5-19-93:

From 9:00AM to 2:45PM on 5-5-93, Mark Byers was at a clinic in Memphis having tests performed on him for his health condition.

According to parents of the three victims, Weaver Elementary let out around 3:00PM. All three victims, attendants of Weaver Elementary, would have left school at that time.

According to the Offense Incident Report on file with the West Memphis Police Department, Pamela Hobbs (the mother of Steve E. Branch), reported her son missing at 3:30PM on 5-5-93. She stated that her son left home after arriving there from school, and she hadn't seen him since. This report was filed at

9:25PM.

The following details are taken directly from statements made by Mark Byers to Det. Brian Ridge of the West Memphis PD during a formal police interview dated 5-19-93:

Mark Byers arrived home at 3:10PM. Chris Byers was not waiting outside the home as he was expected to do (Chris Byers did not have a key to the family home, and was supposed to wait for Mark Byers or Ryan Byers, his brother, to let him in). Ryan Byers arrived home at 3:30-3:35PM. At 3:50PM, Mark Byers drove Ryan Byers to the courthouse for a 4:00PM appointment where Ryan was a witness at a trial. Mark Byers left Ryan Byers at the courthouse, to pick-up his wife Melissa Byers from work. Mark instructed Ryan to get a ride home with Chad Bell and his mother if court got out before he returned. At 5:20PM, Mark Byers and Melissa Byers arrived at their home and found signs that Chris had been there but had been unable to get into the home through an open window. The front door was locked.

Mark Byers left the home to pick up Ryan at the courthouse, and on the way found Chris Byers playing on his skateboard. Mark Byers drove Chris home and gave him '2 or 3 licks' described as a spanking with his belt in front of Melissa Byers. This was punishment for Chris not waiting outside the family home until Mark or Ryan arrived home to let him in. Ryan had a key, but Mark Byers explained that Chris was too young to have a key.

Mark Byers then left the Byers home to pick up Ryan, and instructed Chris to clean up the area around the carport until he returned.

According to the Offense Incident Report on file with the West Memphis Police Department, Mark Byers reported his step-son, Chris Byers, missing as of 5:30PM on 5-5-93. In the report, Mark Byers states that Chris Byers was last seen cleaning the yard at that time. This report was filed at 8:10PM.

According to the Offense Incident Report on file with the West Memphis Police Department, Diana Moore reported her son, Michael Moore, missing as of 6:00PM on 5-5-93. She states in this report that she observed her son riding bicycles with his friends Steve Branch and Chris Byers at this time. She further states that she lost sight of them, and sent her daughter to find them. The daughter was unable to locate the boys. This report was filed at 9:24PM.

The following details are taken directly from statements made by Mark Byers to Det. Brian Ridge of the West Memphis PD during a formal police interview dated 5-19-93:

At 6:30PM, Mark Byers arrived home with his son Ryan from the courthouse. Chris was not outside the house, and he was not found inside the house. Melissa Byers was, at that time, on the phone with her boss.

From 6:30-7:30PM, Mark, Melissa, and Ryan Byers drove around the neighborhood and surrounding areas and looking for their missing son. There is an indication that they wanted to find him and then

proceed to dinner at a local restaurant. During this time, they came across a black police officer on patrol, informed him of their missing son, and Mark Byers claims that the patrolman advised them to wait to make an official report to police until 8:00PM. Mark Byers explained to the officer, at this point, that he was very concerned because his son had never disappeared like this before.

(Note: This is in direct conflict with statements made by Melissa Byers in an interview with Det. Allen of the West Memphis PD dated 5-25-93. She states in this interview that Chris had on several occasions disappeared for several hours at a time, and that she believed that Chris lied to her about going to the Robin Hood area at least once.)

At approximately 8:00PM, Officer Regina Weeks of the West Memphis PD arrived at the Byers residence in response to a phone call from Mark Byers that his son Christopher was missing.

At approximately 8:15PM, Diana Moore shows up in the Byers' neighborhood looking for her son James M. Moore. She makes contact with the Byers, and Mark Byers explains that this is the first time he was informed that Chris was with other children. Diana Moore explains that she saw Steve Branch on his bike, James Moore on his bike, and Chris Byers on the back of Steve Branch's bike.

At approximately 8:30PM, Diana Moore, Mark Byers, Melissa Byers, and Ryan Byers begin a search of the last known location of the boys near the Robin Hood area. It was dark by this time, according to Mark Byers.

At this time, Mark Byers leaves the search party alone and returns to his home to change his clothing. The search party included, but was not limited to Ryan Byers, Ritchie Masters, Brett Smith, and Brett Smith's sister. Mark Byers was wearing shorts and flip-flops, and changes into boots and coveralls.

After changing his clothes, he returned to the search area and met up with Officer Moore of the West Memphis PD. Together they searched the woods until 10:30 or 11:00PM.

At this time, Mark Byers returned home and called the Sheriff to request a search and rescue team. He was advised to call Denver Reed, the leader of the Crittenden County search and rescue team, in the morning.

Mark Byers states that, after this phone conversation, he drove out to the Blue Beacon Truck Wash with his son Ryan. There he told everyone inside what he was doing, informed them of the missing children, and then drove his vehicle around back. He and Ryan stood outside shouting towards the woods for the children, and honking the car horn. They continued this for some time.

After this, Mark Byers and Ryan Byers drove back to the Byers' home and met up with Melissa Byers, Terry Hobbs (Steve Branch's grandfather) and Diana Moore. They talked for a while, then decided to make another pass through the woods in a search effort.

Between 1:30-2:30AM on 5-6-97, Sgt. Ball of the West Memphis PD drove by the Byers residence, and spoke with Mark and Melissa Byers. He advised them that a search was ongoing, and that officers in the area were looking for the children.

Shortly after this, Mark Byers' friend Tony Hudson arrived at the Byers residence. He and Mark Byers went to the Mid-continent building, which had been blown over, and was being rebuilt. They felt that the boys might be playing over there. At that location, they noticed a black van which was locked, and which appeared to belong to the people performing repairs on the building. They searched this location from between 2:00AM to 3:00AM. According to Byers, the children were not found at this location.

At that point, Mark Byers decided to wait for daylight before engaging in further search efforts.

At daybreak, Terry Hobbs, Diana Moore and others arrived at the Byers residence to resume search efforts. The search of the Robin Hood area lasted until about 8:00AM.

At 6:30AM, Mark Byers had called Denver Reed and arranged to meet him at the search area with the search and rescue team at approximately 8:30AM-9:00AM. Between 8:30AM and 9:00AM on 5-6-93, Mark Byers and Denver Reed met, and the search of the Robin Hood area began again.

According to the handwritten, unsigned, un-initialed 6 page investigative report labeled 'Crime Scene Notes' dated 5-6-93, the first body of one of the missing boys was located on Thursday, May 6th, 1993 at 1:45PM, by Sgt. Mike Allen. A location is not given. However it is implied that the body was found in a creek. The first body was pulled from the creek by police officers at 2:45PM. Det. Ridge located the second body in the creek at 2:56PM, approximately 25ft South of the first body. At 2:59PM, the third and final body is located in the creek 5ft South of the second body.

According to an undated report drafted by Kent Hale, the Crittenden County Coroner, Mr. Hale was contacted by the West Memphis PD on May 6th, 1993 at 3:20PM. He was advised that they had found the bodies of three boys in the woods near the Blue Beacon Truck Wash. Upon his arrival at the scene, all of the bodies had been removed from the creek, which was actually a drainage ditch, by officers on the scene.

Per his official reports, all dated 5-6-93, Kent Hale pronounced all three boys dead at the scene as follows:

Steve E. Branch 5-6-93, 3:58PM
Chris M. Byers 5-6-93, 4:02PM
James M. Moore 5-6-93, 4:02PM

Autopsy Report

James M. Moore:

The following forensic information is taken directly from the official autopsy report filed by Dr. Frank J. Peretti of the Arkansas State Crime Lab, Medical Examiner Division, dated 5-7-93, Case No. ME-329-93 and/ or from The official coroner's report filed by Kent Hale, Crittenden County Coroner, dated 5-6-97.

The purpose of this section is not to present an all inclusive, detailed account and explanation of every piece of information in these reports, but rather to explore these reports, with the corresponding photos, for consistency, possible omissions, and to review injuries or patterns that this examiner deemed to be significant to the case.

The victim, James M. Moore was a white male, 8 years of age, born July 27th, 1984, who died of multiple traumatic injuries to the head, torso, and extremities with drowning. He was found in a drainage ditch, drowned in 2ft of water, near the bodies of two other 8-year-old male victims. He was found completely nude, with his wrists bound to his ankles by shoelaces.

Time of Death Estimates

The Coroner's report completed by Mr. Kent Hale states that lividity (the red discoloration in the skin caused by the pooling and settling of the blood within the blood vessels) was present. It also states that the lividity blanched with pressure. Lividity begins about thirty minutes after death has occurred. After 4 or 5 hours, dependent on environmental conditions, lividity fixes and will not blanch. It takes about 8 to 10 hours for lividity to become fixed. This could place the time of death (which can only be given as a range) of James Moore at sometime after daybreak on May 6th, 1993. However it is only one biological indicator, and no one indicator should be used to determine the time of death.

The Coroner's report completed by Mr. Kent Hale further states that Rigor Mortis (the chemical process of the exhaustion of ATP in muscle tissue, which begins after death, that results in the stiffening or contracting of muscles in the body) was present, but that it was difficult to assess due to the way the victim was bound. As a general biological guideline, Rigor Mortis begins about 2 to 4 hours after death. And full Rigor Mortis is complete about 8 to 12 hours after death. Cold slows Rigor Mortis down, and heat speeds the process up.

When Dr. Peretti conducted his autopsy of James M. Moore, on May 7th, 1993, he stated that 'Rigor was present and fixed to an equal degree in all extremities.' The time that the autopsy was conducted is not noted on the report, therefore is difficult to gauge how far the body was into rigor. However, Dr. Peretti was confident that Rigor was evenly present throughout the extremities, and that he made no mention of any dissolution. As a general guideline, Rigor reaches full even distribution within 12 to 24 hours after death. Also as a general guideline, Rigor begins to disappear within 12 hours after that, at which time decomposition begins. Again, by itself, the use of Rigor Mortis to determine a time of death, or a time range of death, is not advised. Several biological indicators should be used.

As the above suggests, a time of death of any kind is very difficult to estimate given the differences in metabolic processes between individuals, given varying individual anatomy, and given varying environmental factors. The presentation and stages of Rigor Mortis and/ or Livor Mortis (lividity) used to make such estimations are not absolute, and should be treated as guidelines, not hard and fast biological principals to be blanketly generalized from case to case.

Wound Pattern Analysis

This victim received more traumatic head injuries than any of the other victims in this case. Dr. Peretti states that defense wounds were present on the victim's hands. These wounds were very few, indicating that victim was incapacitated quickly after the attack began. So the nature of these head injuries, and the limited defensive type wounds, combine to indicate sudden, forceful, and repeated blows that resulted in abraded contusions, multiple lacerations, and multiple skull fractures.

There is an unexplained directional pattern abrasion just below the victim's right anterior shoulder area.

This unexplained injury does not correspond with any of the physical evidence collected at the location that victim was discovered. It is furthermore inconsistent with any of the naturally occurring elements that exist in that environment. The best conclusion that this examiner can reach is that this pattern abrasion was created by forceful, directional contact with something that was not found at that crime scene, whether it be a weapon, a surface or something else capable of creating that pattern.

The shoelace ligatures used to restrain this victim did not leave deep furrows, and also did not leave abrasions. This indicates that the victim was not struggling while the ligatures were in place. This indicates further that the victim was very much unconscious when the ligatures were affixed to his wrists and ankles.

We know that the victim drowned, that is to say that hemorrhagic edema fluid was present in the victim's lungs, indicating that the victim was breathing when he was placed into the 2ft of water in the drainage ditch at Robin Hood Hills.

Together, these facts suggest that the purpose of the ligatures in this victim's case was to keep the victim from moving around or being able to swim should he regain consciousness once he had been thrown into the water. It is this examiners opinion that the assailant in this case demonstrated all manner of awareness and cognizance at this location. The assailant knew that this victim was not dead when they threw this victim into the water, and that the ligatures would assist to complete the act of deliberate homicide should the victim become conscious.

Sexual Assault/ Rape Indicators

The victim in this case does not show any signs consistent with sexual assault or rape. As Dr. Peretti's examination concluded, no sperm were present in any of the orifices, no injuries were detected on or at

the victim's genitals and an examination of the victim's anus revealed no injuries in the mucosal surfaces, which are very tender and sensitive.

Mr. Hale in his Coroner's report states that the victim may have been sexually assaulted. That is not a helpful statement. What may have occurred is not at issue. It is more accurate to state, after a full examination, that there is no evidence of sexual assault. It further important to note that sperm evidence, along with many other types of physical transfer evidence, would have been washed away when the victim was placed in the water. So a determination of whether or not a rape or sexual assault occurred is not always possible under these conditions.

It is also important to note that though the victim's anus was dilated, this by itself does not indicate or suggest anal penetration. The anus is a sphincter; a muscle which is tight and closed in most living individuals, and always open and dilated in deceased individuals. When someone dies their anus relaxes and dilates. The presence of a dilated anus taken to indicate sexual assault or rape is a very common misinterpretation made by untrained individuals when examining those who have met with violent death.

Lack Of Injuries

When compared to the other two victims in this case, who were found at the same location, bound nude with shoelace ligatures in the same fashion, the most striking discrepancy is the lack of injuries suffered by this victim. In the crime scene and autopsy photos made available to this examiner, there were no readily discernible bite marks visible, the genitals have not been visibly disturbed or molested, and there are no discernible stab wounds. This lack of attention is very telling, and will be discussed in the Offender Characteristics section of this report.

There is again a lack of evidence to support any sort of strangulation. Dr. Peretti states that his examination of the neck of this victim revealed no injuries, and the photos that this examiner has seen support that conclusion.

There is also, again, a lack of mosquito bites to this victim, which, as mentioned earlier, suggests that he received his injuries elsewhere first. This because the injuries took time to inflict, time during which many mosquito bites would have been received, even after death.

Recommendations

It is apparent from the physical evidence in this case that James M. Moore was attacked with sudden, violent force from which he defended himself in only a limited fashion. It cannot be known whether or not this was done before or after his clothes were removed. After the attack, he was unconscious, as it was at this point that he was bound with the shoelace ligatures.

It is this examiner's recommendation that the clothes of James M. Moore, recovered from the drainage

ditch, be re-analyzed by experts to determine if bloodstain patterns are evident. If present, they may tell us the nature and angle of blows delivered; if blood is not present, then this could help establish whether or not the victim was wearing clothes when he was attacked.

Furthermore, the piece of cloth (pictured clutched in the victim's hand at the right), found in this victim's hand at the scene, should be re-examined. This is a very critical piece of physical evidence that has not been fully examined by qualified individuals to determine its full evidentiary value in this case. The cloth is a potential link from this victim directly to a suspect. Where this victim tore this piece of cloth from is a question that begs answering. And given that it could be physically matched back to the material of origin, this makes its evidentiary value all the greater.

Autopsy Report

Steve E. Branch:

The following forensic information is taken directly from the official autopsy report filed by Dr. Frank J. Peretti of the Arkansas State Crime Lab, Medical Examiner Division, dated 5-7-93, Case No. ME-330-93 and/ or from The official coroner's report filed by Kent Hale, Crittenden County Coroner, dated 5-6-97.

The purpose of this section is not to present an all inclusive, detailed account and explanation of every piece of information in these reports, but rather to explore these reports, with the corresponding photos, for consistency, possible omissions, and to review injuries or patterns that this examiner deemed to be significant to the case.

The victim, Steve E. Branch, was a white male, 8 years of age, born Nov. 26th, 1984, who died of multiple traumatic injuries to the head, torso, and extremities with drowning. He was found in a drainage ditch, drowned in 2 ft of water, near the bodies of two other 8-year-old male victims. He was found completely nude, with his wrists bound to his ankles by shoelaces.

Time Of Death Estimates

The Coroner's report completed by Mr. Kent Hale states that lividity (the red discoloration in the skin caused by the pooling and settling of the blood within the blood vessels) was present. It also states that the lividity blanched with pressure. Lividity begins about thirty minutes after death has occurred. After 4 or 5 hours, dependent on environmental conditions, lividity fixes and will not blanch. It takes about 8 to 10 hours for lividity to become fixed. This could place the time of death (which can only be given as a range) of Steve Branch at sometime after daybreak on May 6th, 1993. However it is only one biological indicator, and no one indicator should be used to determine the time of death.

The Coroner's report, completed by Mr. Kent Hale, further states that Rigor Mortis (the chemical process of the exhaustion of ATP in muscle tissue, which begins after death, that results in the stiffening

or contracting of muscles in the body) was present, but that it was difficult to assess due to the way the victim was bound. As a general biological guideline, Rigor Mortis begins about 2 to 4 hours after death. And full Rigor Mortis is complete about 8 to 12 hours after death. Cold slows Rigor Mortis down, and heat speeds the process up.

When Dr. Peretti conducted his autopsy of Steve E. Branch, on May 7th, 1993, he stated that 'Rigor was present and fixed to an equal degree in all extremities.' The time that the autopsy was conducted is not noted on the report, therefore is difficult to gauge how far the body was into rigor. However, Dr. Peretti was confident that Rigor was evenly present throughout the extremities, and that he made no mention of any dissolution. As a general guideline, Rigor reaches full even distribution within 12 to 24 hours after death. Also as a general guideline, Rigor begins to disappear within 12 hours after that, at which time decomposition begins. Again, by itself, the use of Rigor Mortis to determine a time of death, or a time range of death, is not advised. Several biological indicators should be used.

As the above suggests, a time of death of any kind is very difficult to estimate given the differences in metabolic processes between individuals, given varying individual anatomy, and given varying environmental factors. The presentation and stages of Rigor Mortis and/ or Livor Mortis (lividity) used to make such estimations are not absolute, and should be treated as guidelines, not hard and fast biological principals to be blanketly generalized from case to case.

Wound Pattern Analysis

There are numerous violent, traumatic injuries to this victim's face and head, as well as numerous superficial scratches, abrasions, and contusions noted throughout the rest of his body. Dr. Peretti, however, does not note the presence of extensive defensive wounds.

This indicates a violent, overpowering attack on this victim that he was unable to put up resistance against. The constellation of wounds are very similar to those inflicted on James Moore, however they are much more intense and include the victim's face.

This level of attention paid to the victim's face, in terms of depersonalization and rage, is indicative of familiarity and that will be explored later on in this report.

Furthermore, there is the existence of patterned injuries all over this victim's face that could be bite marks. Since the ME may have missed this crucial evidence, other areas of his body may show bite mark evidence as well. The autopsy photos of this victim supplied to this examiner were not of sufficient quality to make an absolute determination of any kind, and would require a thorough examination by a qualified forensic odontologist for an informed, conclusive analysis. *[Dr. Thomas David, board certified forensic odontologist, has confirmed the wound as a human adult bitemark and excluded Damien Echols, Jason Baldwin and Jessie Misskelley as the offender using bite impressions obtained from the men in prison]*

Bite mark evidence is very important in any criminal case because it demonstrates behavior and lends itself to individuation. It can reveal to an examiner who committed the act, because bite marks can be as unique as fingerprints. And, once established, it also reveals the act itself; biting.

Human adult bitemark confirmed by board certified odontologist, Dr. Thomas David

Another unidentified pattern compression abrasion can be found on the back of Steve Branch's head. The source of this injury caused a 3' inch fracture at the base of the skull with multiple extension fractures that terminate in the foramen magnum (that's the hole at the base of the skull where the spinal cord connects to the brain). Upon close examination, this pattern injury is consistent with compression made from footwear. Again, without better photos supplied to the examiner showing a variety of angles, it's very difficult to make a positive identification of any kind. But the pattern is consistent with a footwear impression, and would require a footwear impression expert to analyze and make an informed, competent determination.

The shoelace ligatures used to restrain this victim did leave deep furrows, and also did leave patterned

abrasions on both the wrists and ankles. This indicates that the victim was struggling while the ligatures were in place. This indicates further that the victim was very much conscious before or after the ligatures were affixed to his wrists and ankles.

We know that the victim drowned, that is to say that hemorrhagic edema fluid was present in the victim's lungs, as well as in the victim's mouth, indicating that the victim was breathing when he was placed into the 2ft of water in the drainage ditch at Robin Hood Hills.

Together, these facts, again, suggest that the purpose of the ligatures in this victim's case was to keep the victim from moving around or being able to swim should he regain consciousness once he had been thrown into the water. It is this examiner's opinion that the assailant in this case demonstrated all manner of awareness and cognizance at this location. The assailant knew that this victim was not dead when they threw this victim into the water, and that the ligatures would assist to complete the act of deliberate homicide should the victim become conscious.

Sexual Assault/ Rape Indicators

As Dr. Peretti's examination concluded, no sperm were present in any of the orifices, no injuries were detected on or at the victim's genitals and an examination of the victim's anus revealed no injuries in the mucosal surfaces, which are very tender and sensitive.

Mr. Hale in his Coroner's report states that the victim may have been sexually assaulted. That is not a helpful statement. What may have occurred is not at issue. It is more accurate to state, after a full examination, that there is no evidence of sexual assault. It further important to note that sperm evidence, along with many other types of physical transfer evidence, would have been washed away when the victim was placed in the water. So a determination of whether or not a rape or sexual assault occurred is not always possible under these conditions.

It is also important to note that though the victim's anus was dilated, this by itself does not indicate or suggest anal penetration. The anus is a sphincter; a muscle which is tight and closed in most living individuals, and always open and dilated in deceased individuals. When someone dies their anus relaxes and dilates. The presence of a dilated anus taken to indicate sexual assault or rape is a very common misinterpretation made by untrained individuals when examining those who have met with violent death.

Lack Of Injuries

There is again a lack of evidence to support any sort of strangulation. Dr. Peretti states that his examination of the neck of this victim revealed no injuries, and the photos that this examiner has seen support that conclusion.

There is also, again, a lack of mosquito bites to this victim, which, as mentioned earlier, suggests that he

received his injuries elsewhere first. This because the injuries took time to inflict, time during which many mosquito bites would have been received, even after death.

Recommendations

It is apparent from the physical evidence in this case that Steve E. Branch was attacked with sudden, violent force from which he defended himself in only a limited fashion. It appears as though this attack took place, at least in part, while his cloths were off and while he was restrained by the shoelace ligatures.

It is this examiner's recommendation that both a forensic odontologist and a footwear impression analyst review the aforementioned photos for evidentiary saliency. Without such experts it will be difficult to accurately assess the validity of the related evidence as indicated by the autopsy photos. The photos indicate pattern evidence that is consistent with bite mark and footwear impression evidence, but without an expert's eye and experience the usefulness of that evidence will be limited.

Autopsy Report

Chris M. Byers:

The following forensic information is taken directly from the official autopsy report filed by Dr. Frank J. Peretti of the Arkansas State Crime Lab, Medical Examiner Division, dated 5-7-93, Case No. ME-331-93 and/ or from The official coroner's report filed by Kent Hale, Crittenden County Coroner, dated 5-6-97.

The purpose of this section is not to present an all inclusive, detailed account and explanation of every piece of information in these reports, but rather to explore these reports, with the corresponding photos, for consistency, possible omissions, and to review injuries or patterns that this examiner deemed to be significant to the case.

The victim, Chris M. Byers, was a white male, 8 years of age, born June 23rd, 1984, who died of multiple traumatic injuries to the head, as well as the violent removal of his penis, the scrotal sac, and the testes, and associated cuts and stab wounds to the genital area.

This victim was found in a drainage ditch, in 2' ft of water, near the bodies of two other 8-year-old male victims. He was found completely nude, with his wrists bound to his ankles by shoelaces.

It should be noted that this victim's injuries were the most extensive, most violent, and most overtly sexual of the all the victims in this case. The nature and extent of this victim's wounds indicate that the assailant spent the most time with this victim. Additionally, this victim's toxicology report revealed non-therapeutic levels of carbamazepine in the blood. All of these differences are very important, and will be explored in the later sections of this report.

Time Of Death Estimates

The Coroner's report completed by Mr. Kent Hale states that lividity (the red discoloration in the skin caused by the pooling and settling of the blood within the blood vessels) was present. It also states that the lividity blanched with pressure. Lividity begins about thirty minutes after death has occurred. After 4 or 5 hours, dependent on environmental conditions, lividity fixes and will not blanch. It takes about 8 to 10 hours for lividity to become fixed. This could place the time of death (which can only be given as a range) of Steve Branch at sometime after daybreak on May 6th, 1993. However it is only one biological indicator, and no one indicator should be used to determine the time of death.

The Coroner's report, completed by Mr. Kent Hale, further states that Rigor Mortis (the chemical process of the exhaustion of ATP in muscle tissue, which begins after death, that results in the stiffening or contracting of muscles in the body) was present, but that it was difficult to assess due to the way the victim was bound. As a general biological guideline, Rigor Mortis begins about 2 to 4 hours after death. And full Rigor Mortis is complete about 8 to 12 hours after death. Cold slows Rigor Mortis down, and heat speeds the process up.

When Dr. Peretti conducted his autopsy of Chris M. Byers, on May 7th, 1993, he stated that 'Rigor was present and fixed to an equal degree in all extremities.' The time that the autopsy was conducted is not noted on the report, therefore is difficult to gauge how far the body was into rigor. However, Dr. Peretti was confident that Rigor was evenly present throughout the extremities, and that he made no mention of any dissolution. As a general guideline, Rigor reaches full even distribution within 12 to 24 hours after death. Also as a general guideline, Rigor begins to disappear within 12 hours after that, at which time decomposition begins. Again, by itself, the use of Rigor Mortis to determine a time of death, or a time range of death, is not advised. Several biological indicators should be used.

As the above suggests, a time of death of any kind is very difficult to estimate given the differences in metabolic processes between individuals, given varying individual anatomy, and given varying environmental factors. The presentation and stages of Rigor Mortis and/ or Livor Mortis (lividity) used to make such estimations are not absolute, and should be treated as guidelines, not hard and fast biological principals to be blanketly generalized from case to case.

Wound Pattern Analysis

There are numerous violent, traumatic injuries to this victim's head, specifically to the base of the skull. There was also evidence of the violent emasculation of the victim's sex organs, extensive lacerations and bruising to the victim's buttocks, as well as numerous superficial scratches, abrasions, and contusions noted throughout the rest of his body. Dr. Peretti also noted that there were numerous healed injuries of varying nature on this victim. Dr. Peretti, however, did not note the presence of defensive wounds.

Again, this indicates a violent, overpowering attack on this victim that he was unable to put up resistance

against. The general constellation of wounds to this victim is more advanced, more extensive, more overtly sexually oriented and includes the use of a knife.

This knife was used not only to inflict multiple stabbing and cutting injuries to the victim's inner thighs and genital area, it was used in the emasculation process. There is, unmentioned in either the ME's or Coroner's reports, what appears to be a clear impression of the knife handle on the right side of the large gaping defect left behind after the removal of the victim's penis, scrotal sac, and testes. This impression was created when the knife was thrust full length into the victim by the assailant, during the process of emasculation. This indicates forceful, violent thrusts. The nature of this emasculation, as indicated by these wounds, is neither skilled nor practiced. It was a rageful, careless, but purposeful act carried out in anger. It is the opinion of this examiner that this injury would have resulted in massive, uncontrollable blood-loss, from which the victim could not have survived without immediate medical attention.

It should also be pointed out that the nature of the stab wounds inflicted on the victim's genital area, separate from those received during the emasculation process, show marked irregular configuration and pulling of the skin. This indicates that either the knife was being twisted as the assailant stabbed the victim, or that the victim was moving as the blade was withdrawn.

As stated by Mark Byers, the step-father of Chris Byers, to Det. Brian Ridge of the West Memphis PD during a formal police interview dated 5-19-93, Mark Byers gave Chris '2 or 3 licks,' described as a spanking with his belt in front of Melissa Byers shortly before his disappearance. There are only three sets of injuries in Chris Byers' buttock area noted by Dr. Peretti in the official autopsy report that would seem to be the result of this spanking. Dr. Peretti does not venture to explain which of those three sets of injuries are the result of the spanking delivered by Mark Byers.

The first set of injuries is described as faint contusions on the surface of the right buttocks (not pictured). These injuries could be consistent with the parental whipping given to Chris Byers by Mark Byers.

The second set of injuries is described as five superficial cutting wounds on the left buttock (pictured on the left in this photo at the right). It should be noted that these injuries are actually lacerations, as indicated by the bridging between the open tissue, and the irregular edges. Both indicators are apparent upon close examination of the photographs. It is the opinion of this examiner that this set of injuries is most consistent with the parental whipping given to Chris Byers by Mark Byers. It is further the opinion of this examiner that after having received this set of injuries, which tore open the skin and would have resulted in some severe bleeding, the victim would have been unable to walk or ride a bicycle without incredible pain and discomfort.

The third set of injuries is the multiple linear superficial interrupted cuts on the right buttock region (pictured in the photo above on the right). These injuries are not consistent with having been made by a belt as they are cuts. The edges are not irregular, and the cuts are interrupted, again indicating movement by the victim or the assailant during the attack.

Furthermore, there is the existence of bruised ovoid compression injuries all over this victim's inner thigh that could be suction type bite marks. Since the ME may have missed this crucial evidence, other areas of his body may show bite mark evidence as well. The autopsy photos of this victim supplied to this examiner were not of sufficient quality to make an absolute determination of any kind, and would require a thorough examination by a qualified forensic odontologist for an informed, conclusive analysis.

Bite mark evidence is very important in any criminal case because it demonstrates behavior and lends itself to individuation. It can reveal to an examiner who committed the act, because bite marks can be as unique as fingerprints and positively identify a suspect. And, once established, it also reveals the act itself; biting.

The shoelace ligatures used to restrain this victim did leave deep furrows, and also did leave patterned abrasions on both the wrists and ankles. This indicates that the victim was struggling while the ligatures were in place. This indicates further that the victim was very much conscious before or after the ligatures were affixed to his wrists and ankles.

We know that this victim did not drown, that is to say that no hemorrhagic edema fluid was present in the victim's lungs, or well in the victim's mouth. This indicates that the victim was already dead when he was placed into the 2' ft of water in the drainage ditch at Robin Hood Hills. This is, again, very different from the other two victims in this case.

On a final note, Mr. Hale states in his supplemental report on Chris Byers that there is a stab wound on his head. This is actually incorrect, and rectified by Dr. Peretti who states in his autopsy report of Chris Byers that the same injury is a 1^o-inch laceration to the left parietal scalp.

Sexual Assault/ Rape Indicators

As Dr. Peretti's examination concluded, no sperm were present in any of the orifices. There were also no apparent injuries to the anus. However the victim was brutally emasculated, and shows some evidence of bite mark injury on the inside of his thighs. This victim was sexually assaulted, and the attack on this victim was highly sexual in its nature.

There are, however, no clear indications of rape (that is, forceful penetration). It is also important to note that though the victim's anus was dilated, this by itself does not indicate or suggest anal penetration. The anus is a sphincter; a muscle which is tight and closed in most living individuals, and always open and dilated in deceased individuals. When someone dies their anus relaxes and dilates. The presence of a dilated anus taken to indicate sexual assault or rape is a very common misinterpretation made by untrained individuals when examining those who have met with violent death.

Lack Of Injuries

There is again a lack of evidence to support any sort of strangulation. Dr. Peretti states that his examination of the neck of this victim revealed no injuries, and the photos that this examiner has seen support that conclusion.

There is also, again, a lack of mosquito bites to this victim, which, as mentioned earlier, suggests that he received his injuries elsewhere first. This because the injuries took time to inflict, time during which many mosquito bites would have been received, even after death.

Additionally, unlike Steve Branch, there is no overkill present in this victim's face. That is to say that this is another of the marked differences between the killings of Steve Branch and Chris Byers which is very important to note, and which will be explored more thoroughly in this report.

Recommendations

It is apparent from the physical evidence in this case that Chris M. Byers was attacked with sudden, violent force from which he defended himself in only a limited fashion. It appears as though this attack took place, at least in part, while his cloths were off and while the shoelace ligatures restrained him. He was sexually assaulted (an assault of a sexual nature, to areas of the body considered to be sexual, that does not include sexual penetration), and associated stab wounds indicate that he may have been conscious during several phases of the attack.

There is also evidence to suggest previous, but recent, physical abuse of Chris Byers. Given the use of corporal punishment by the father, Mark Byers, and given the healed injuries noted by Dr. Peretti, and the extent of the injuries to Chris Byers buttocks, this possibility should be thoroughly investigated.

It is this examiner's recommendation that a forensic odontologist review the aforementioned photos for evidentiary saliency. Without such experts it will be difficult to accurately assess the validity of the related evidence as indicated by the autopsy photos. The photos indicate pattern evidence that is consistent with bite mark evidence, but without an expert's eye and experience the usefulness of that evidence will be limited.

It is also the recommendation of this examiner that an expert in child abuse injuries be asked to review the photographs of the injuries to this victim and make a comment.

Victimology

James Michael Moore

The information available to this examiner regarding this particular victim was very limited. It is the opinion of this examiner that a full background investigation should be made of this victim, as well as establishing friends, enemies, regular activities, and that at least a full reconstruction be done of his last 24 hours before he was determined to be missing. It is also the opinion of this examiner that a

investigation into the medical records and school records of this child is requisite.

Background

The victim, 8 year old James M. Moore, was born on 7-27-84. At the time of the attack that resulted in his death, he lived on 1398 E. Barton in West Memphis, Arkansas with his mother, Diana Moore. His family is in the lower socioeconomic class.

He attended Weaver Elementary School, and was an avid Boy Scout. In fact he was wearing his Boy Scout shirt and cap at the time of his disappearance, both of which were recovered at the scene with his body.

Physical Traits

The victim is described by his mother, in the missing persons report filed with West Memphis PD on 5-5-93, as: 4 ft. tall, 60 lbs., with brown hair and blue eyes.

Clothing

On the evening of his disappearance, according to his mother, the victim was wearing blue pants, a blue Boy Scouts of America shirt, an orange and blue Boy Scouts hat, and tennis shoes.

Risk Assessment

This victim normally lived a low-medium risk lifestyle. He had a structured schedule involving school and extracurricular activities with friends and family. He was expected to be home for dinner, and his mother appeared to be aware of his whereabouts, generally. That is to say, he is normally at low-medium risk of being the victim of this type of crime because of his activities and lifestyle.

On the night of the victim's disappearance, he was not under the direct care of a parent or guardian. And he was engaging in activities away from his neighborhood and the protective eyes of the community. This put him at medium risk of being the victim of this type of crime.

However, he still would have been an extremely high-risk victim from the viewpoint of the assailant responsible for this crime for the following reasons:

The victim was in a group, not alone: the assailant would have had to successfully con or incapacitate all of the victims at once to prevent them from getting away. This is possible, but requires ability, strength and competence on the part of the offender.

The victim and his friends were young: young children are very carefully attended to, in general, and are

expected places, and will almost always be missed within a short period of time.

Steve Edward Branch

The information available to this examiner regarding this particular victim was very limited. It is the opinion of this examiner that a full background investigation should be made of this victim, as well as establishing friends, enemies, regular activities, and that at least a full reconstruction be done of his last 24 hours before he was determined to be missing. It is also the opinion of this examiner that an investigation into the medical records and school records of this child is requisite.

Background

The victim, 8 year old Steve E. Branch, was born on 11-26-84. At the time of the attack that resulted in his death, he lived on 1601 E. McAuley in West Memphis, Arkansas with his mother, Pamela Marie Hobbs. According to the Missing Persons Report filed by Pam Hobbs, at the time of his disappearance the family did not have a telephone at their residence. The Hobbs family is in the lower socioeconomic class.

Steve Branch attended Weaver Elementary School, and was an avid Boy Scout, according to statements made by Mark Byers.

Physical Traits

The victim is described by his mother, in the Missing Persons Report filed with West Memphis PD on 5-5-93, as: 4'2" tall, 60 lbs., blonde hair and blue eyes.

Clothing

On the evening of his disappearance, according to his mother, the victim was wearing blue jeans and a white T-shirt. He was also riding a 20" black colored 'Renegade' bicycle.

Personality/ Medical History

N/A

Risk Assessment

This victim normally lived a low-medium risk lifestyle. He had a semi- structured schedule involving school and extracurricular activities with friends and family. He was expected to be home for dinner, and his mother appeared to be aware of his whereabouts, generally. That is to say, he is normally at low-medium risk of being the victim of this type of crime because of his activities and lifestyle.

On the night of this victim's disappearance, he was not under the direct care of a parent or guardian. And he was engaging in activities away from his neighborhood and the protective eyes of his parents and the community. This put him at medium risk of being the victim of this type of crime.

However, he still would have been an extremely high-risk victim from the viewpoint of the assailant responsible for this crime for the following reasons:

The victim was in a group, not alone: the assailant would have had to successfully con or incapacitate all of the victims at once to prevent them from getting away. This is possible, but requires ability, strength and competence on the part of the offender.

The victim and his friends were young: young children are very carefully attended to, in general, and are expected places, and will almost always be missed within a short period time.

Christopher Mark Byers

Background

The victim, 8 year old Christopher Mark Byers, was born on 6-23-84. At the time of the attack that resulted in his death, he lived on 1400 E. Barton in West Memphis, Arkansas with his mother, Melissa Byers, his step-father, John Mark Byers, and his half brother, 13 year old Ryan Byers, who has dyslexia.

Chris was born Christopher Lee Murray. According to reports written by Pediatric Neurology, P.A., where Chris was a patient, Chris' biological father had 'multiple sociopathies' and was believed to be a paranoid schizophrenic. His biological father was also very aggressive, had a history of difficulty with the law as well as a history of substance abuse.

According to a police interview with Det. Allen dated 5-25-993, Melissa Byers states that John Mark Byers adopted Chris '2 or 3 years ago' at which time Chris' name was changed to Christopher Mark Byers. (Pediatric Neurology, P.A. lists the patient as Chris Murray throughout 1993, but as Chris Byers during 1990)

At the time of Chris Byers' death, the Byers family lived primarily from the disability pay received by Mark Byers, who claims to have been diagnosed with a brain tumor which he further claims results in black outs and slurred speech. Mark Byers was also trained as a jeweler, regularly attended swap meets, and claimed to be taking the prescription drug Tegretol for his seizures (trade name for Carbamazepine). At this time, Mark Byers was also a drug informant for the West Memphis PD, and enjoyed their confidence and trust, being on a first name basis with most of the detectives investigating this case.

Chris Byers attended Weaver Elementary School, and was not an avid Boy Scout, according to statements made by Mark Byers, but did attend one or two meetings and expressed a desire to become

more involved.

Physical Traits

Chris Byers is described by his stepfather, in the missing persons report filed with West Memphis PD on 5-5-93, as: 4'4" tall, 50 lbs., light brown hair and brown eyes.

Clothing

On the evening of his disappearance, according to his Mark Byers, the victim was wearing blue jeans dark shoes, and a white long sleeve shirt. He was also riding a 20" black colored 'Renegade' bicycle.

Intelligence/ Scholastic Achievement

The following information is according a medical report filed by Donald J. Eastmead, MD of Pediatric Neurology, P.A. in Memphis, Tennessee on 1/14/93:

Chris has been tested and appears to be at normal levels, and has a purported 'C' average, but attends special education classes.

Personality/ Medical History

The following information is according a medical report filed by Donald J. Eastmead, MD of Pediatric Neurology, P.A. in Memphis, Tennessee on 1/14/93:

'Chris is seen with his mother and stepfather (six years) for extreme impulsivity, destructiveness, opposition, defiance, hyperactivity, extremely low frustration tolerance and refusal to follow commands. There have been episodes of fire starting and anger outbursts with fighting towards the other children. The other children and their parents refuse to let their children play with Chris.'

On page two of that report, Dr. Eastmead gives three diagnosis' of Chris condition: Encephalopathy demonstrated by Attention-Deficit Hyerpactivity Disorder; Intermittent Explosive Behavior; and Conduct Disorder (it should be noted that the onset of conduct disorder before the age of 15 is one of the primary requirements of the Anti-social Personality Disorder).

Dr. Eastmead also states:

'Chris is certainly a difficult child who may require in-hospital treatment to gain control of his behavior. I am increasing the medication and changing it to Dexidrine 5 to 10 mg morning and noon, 5 in the afternoon, as well as adding Tegretol (Carbamazepine) 50 to

100 mg t.i.d. Tofranil caused visual hallucinations, and this will not be tried.'

It should also be noted that Chris had been prescribed a regular prescription of Ritalin since at least 4/21/92.

According to a missing persons report filed with the West Memphis PD on 5-5-93 by Mark Byers, Chris was on Ritalin at the time of his disappearance, but had not taken his medication that day.

According to an interview with Melissa Byers on 5-25-93 conducted by Det. Allen of the West Memphis PD, Melissa Byers claimed to be concerned that Chris was being sexually abused. She reportedly spoke with the school guidance counselor regarding this issue, and confronted Chris about it directly. This in response to Chris' pattern of destructive, violent, and defiant behavior, including several incidents of fire setting.

Risk Assessment

This victim normally lived a very high-risk lifestyle. Not only was Chris a defiant child with tendencies towards violence a destructive anti-social behavior, but he was susceptible, needing the attention and approval from others that he was clearly not getting in his home environment. There are also some very clear indicators that lead this examiner to believe that Chris was being physically, if not sexually, abused. These indicators include Chris' Conduct Disorder, his ADD, and the healed injuries noted in the autopsy report.

It is also clear that despite Chris pattern of behavior, Mark Byers and Melissa Byers put very little effort into regulating the behavior of Chris Byers. He certainly was not being monitored very closely on the day of his disappearance, despite statements by his parents that he was being punished for not waiting around outside his home until someone got home with a key to let him in. Chris Byers was an emotionally and physically vulnerable child who was constantly on medication, who desired the attention of others and who was constantly exhibiting defiant, violent, and impulsive behaviors. This was not a healthy child, living in a healthy home environment.

However, Chris still would have been a moderately high-risk victim from the viewpoint of any assailant responsible for this crime for the following reasons:

The victim was in a group, not alone: the assailant would have had to successfully con or incapacitate all of the victims at once to prevent them from getting away. This is possible, but requires ability, strength and competence on the part of the offender.

The victim and his friends were young: young children are very carefully attended to, in general, and are expected places, and will almost always be missed within a short period time.

Crime Scene Characteristics

Scene Type

A primary crime scene is most often defined as the scene where the most interactions between the victim and the offender take place. The crime scene that these three victims were found at was a disposal site only. It was secondary to the primary crime scene. This is established by the following factors:

The nature and extent of the wounds inflicted upon these victims, especially the emasculation of Chris Byers, required light, required time, and required uninterrupted privacy. As it was dark in those woods, and as search parties were traveling in and out of the area all evening, this dictates a secluded structure of some kind away from the immediate area of attention.

The nature and extent of the wounds inflicted upon these victims, especially the emasculation of Chris Byers, would have resulted in a tremendous amount of blood loss. Very little blood was found at this scene on the banks of the drainage ditch.

The stabbing injuries and emasculation injuries inflicted upon Chris Byers alone, because Chris was conscious during at least part of the assault, would have resulted in a great deal of screaming. Of all the sounds reported that evening by searchers and local residents, screaming was not among them.

It is the opinion of this examiner, then, that this crime as it stands is at least three crime scenes short of being solved. That is to say that there are at least four crime scenes total involved in this crime:

The abduction site (presumably in or near the Robin Hood Hills area)

The attack site (a nearby structure or residence)

The dump site (The drainage ditch where the bodies were found))

The vehicle used to transport (a truck of some kind)

Method of Approach

The three victims in this case were last seen together on two bicycles riding towards the Robin Hood Hills area. It is most likely that the assailant approached them while still together. This high likelihood and the sudden violent nature of the wounds, coupled with limited resistance on the part of the victims, is very suggestive.

These elements together suggest that someone that the victims knew and trusted approached them. They further suggest that once the confidence of the three victims was won, the assailant was able to take them to another location and gain control of them in some manner.

It is clear that the assailant was much larger and stronger than the victims, so physical intimidation and fear were factors. This would have been a factor in the initial approach. It is also clear that the assailant had a knife, but this would not have been displayed during the initial approach. The method of approach in this case was most likely a con of some kind to acquire trust, followed up at another location by a sudden, violent attack to gain control.

Methods of Control

The assailant in this case controlled his assault on these three victims with very specific, deliberate methods.

Firstly, he removed them to a location that he was familiar with, where he could feel dominant and establishes his authority by his presence alone.

Secondly, he delivered sudden and violent traumatic blows to each of the victim's heads. The superficial blows could have been corrective in nature, that is to say, delivered with the intent to gain compliance. However it is clear that the main body of injuries were rageful in nature, being deep, forceful, and resulting in extensive damage.

Thirdly, the assailant did bind each of the victims. Steve Branch and Chris Byers both show deep ligature furrows with ligature abrasions, indicating that they were alive and conscious while the bindings were in place. James Moore had no ligature abrasions, indicating he was unconscious while his bindings were in place. This indicates that the assailant did not feel the need to bind James Moore until much later in the offense. This indicates that either James Moore was completely compliant to the offender's commands, or that he was unconscious. Given the overall retaliatory nature of this attack, the level of excessive brutality, and the lack of emotional control demonstrated by the assailant in this case, it is the opinion of this examiner that James Moore was unconscious throughout most of this attack. He very likely received the first attack from the assailant, perhaps as an example to the other two victims.

Fourthly, there is the indication that Carbamazepine (Tegretol) was used on Chris Byers, as it was found in non-therapeutic levels in his system according to the toxicology report. It needs to be established what that child was taking at the time, in what doses, and what should have been in his system. If this child received a non-therapeutic dose of Carbamazepine, this could indicate an attempt at a fourth method of control on the part of the assailant.

The assailant's Methods of Approach and his Methods of Control speak to an offender who knew these victims well, and who had given some limited thought as to how to carry off this crime before doing so. However the use of available materials in the commission of the crime (shoelaces for bindings, potentially Carbamazepine), the amount of physical evidence left behind on the bodies (despite the fact that it was originally overlooked), and the anger evident in these assaults speak to an offender who did not set out on that evening to commit the crimes committed.

Amount of Force

There was a high level of suddenly applied physical force used to gain these victims' initial compliance once they had been removed to the primary crime scene.

There was a brutal level of physical force used throughout the assault on the victims. The victims were all given violent, traumatic blows to the head; Steve Branch received massive gauging and/ or bite mark injuries to his face; and Chris Byers received multiple stab wounds to his groin, up to and including a violent, unskillful emasculation.

The offender's need for these excessive levels of force, victim damage, and specific sexual violence indicate an extremely reactive, angry, retaliatory offender. These kids were being punished for some real or perceived wrong.

The amount of force and the nature of the force that was used on these victims suggest also that this assailant would not have bargained with or listened to the pleas of these victims. The assailant was enraged, and concerned only with teaching these victims a lesson, from his point of view.

Victim Resistance

The victims demonstrated only limited resistance to this attack. This is demonstrated by the very limited amount of defensive injury noted in the autopsy reports. This speaks to the sudden, unexpected application of force from an overwhelming assailant.

Type and Sequence of Sexual Acts

There is only physical evidence to suggest one overtly sexual act committed during the attacks on these three victims. That is the emasculation of Chris Byers. As will be explained, this is a sexual act with some sexual meaning to the offender. However it was more punishment oriented and should not be confused with something which would have necessarily sexually aroused the offender.

As explained in a prior section, the abrasions on Steve Branch's penis, which were likely self-inflicted, are not necessarily related to this particular attack. They do however, indicate a sexualized child which suggests a child who is being sexually abused.

Precautionary Acts

This case is replete with precautionary acts that were committed by the assailant. Precautionary acts are behaviors that the assailant purposefully engages in to protect his own identity, facilitate his escape from the scene, and destroy or deny the transfer of physical evidence (an uncomplex example would be a burglar who wears a mask and gloves; both are precautionary acts).

The following are examples of precautionary acts committed by the assailant. This is not meant to be an all-inclusive list, but rather to demonstrate the assailant's state of mind before, during and after the offense:

Removal of the victims to a location that he controlled: This act put the offender and the victims in an environment that the offender controlled. It facilitated an unseen, uninterrupted attack upon the victims, providing the assailant with the time to engage in those activities that he desired.

Disposal of the bodies in the water: This act very effectively washes all of the physical transfer evidence from the bodies of the victims. It also places the victims at a location separate from the assailant.

Destruction of the victim's clothing and related evidence: This act, carried out by dumping the victim's clothing in the water, used the water in the drainage to help wash away transfer evidence. It also serves the purpose of preventing investigators from finding the victim's clothing on the assailant should his residence or related location be searched.

Conclusions regarding these behaviors will be drawn in the Offender Characteristics section.

Purpose of the Assault

It is the opinion of this examiner that the primary reason for these killings was punitive. The victims were being punished for some real or perceived wrong. The reasons for this opinion have been thoroughly established in other parts of this report.

It should be pointed out at this point that this examiner is under the opinion that James M. Moore was a collateral victim. That is to say that he was not an intended victim, and that he died because of his association with the other two victims at the time. The anger of the assailant in this case, manifested in victim damage and sexual mutilation, is directed primarily at Steve Branch and Chris Byers. This would indicate that the strongest personal associations with the assailant are with Chris and Steve.

Number of Assailants

It is the opinion of this examiner that the number of assailants in this case was most likely two. The presentation is more consistent with two offenders than with one, or three.

This is for the following reasons:

The number of victims abducted and killed would have been more easily accomplished with two assailants.

It would have been easier to inflict the range of injuries on the victims with two assailants, especially for the emasculation of Chris Byers.

The nature, quality and extent of the injuries to Chris Byers and Steve Branch are markedly different, and suggest two separate offenders with very different ways of expressing their rage.

Steve Branch was bitten repeatedly about the face, with deep, tearing bites that left behind lacerations and poor detail. He suffered no stab wounds or cutting wounds. There is no sexual indication to the assault on his person, only punishment.

Chris Byers suffered comparatively less injury to the face, receiving the greatest attention to his genitals, which were stabbed repeatedly and then ultimately removed. In addition, the bite marks he appears to have suffered were of the 'suck mark' type, which is more sexually oriented. There is, in fact, a sexual aspect in the attack to Chris Byers' genitals, which clearly points to an offender ashamed of his own sexuality, and perhaps confused and angered by his own sexual attraction to males. Part of why Chris is being punished is for his own sexuality, and the sexuality that his genitals represent to the assailant. The offender punished Chris and established, or re-establish, sexual ownership of him through the emasculation. This is again most consistent with two separate offenders, because you would expect that assailant would have emasculated both or neither given his propensity.

It is further the opinion of this examiner that the attack on Chris Byers was carried out by a male assailant. But that the attack carried out on Steve Branch could have been either a male or female assailant. The Battered Child nature of the bite marks on Steve Branch, in the experience of this examiner, is more often associated with a female offender.

'Satanic Ritual' Assessment

This crime does not present at all as a satanic ritual, or cult related, homicide.

According to the Crime Classification Manual by Douglas et al, a designation of 141: Cult Murder has specific defining characteristics that are largely unseen in these particular homicides. They are as follows:

Victimology

Cult murders or satanic murders can be the result of randomly selected victims, but most often the victims are members of the group, or fringe members. Though it does generally involve multiple members.

Crime Scene Indicators

The crime scene will generally contain items or imagery that are symbolic to the group or cult.

The disposal methods involving the bodies tend to be thorough burials in mass graves when the killing is meant to intimidate a small group of people. Little attempt will be made to conceal the body when the purpose of the killing is to intimidate a larger number of people, however the body will often be positioned symbolically in such cases.

There are, however, generally indications of multiple offenders, as in this case.

Investigative Considerations

The leaders of cults or such groups tend to have a masterful ability to attract and manipulate people, exploiting their vulnerability. The purpose for killing tends to be to eliminate troublemakers and/ or tighten his control over the group.

'Serial Killer' Assessment

Victimology

The victimology in this case does not lend itself to suggesting a serial offender. In fact, quite the opposite is true.

Firstly, and most importantly, the victims would have represented a very high risk to any offender because there were three of them, and they were young children.

Three victims are a problem because if you grab one or two, the third could get away and later identify you. Serial offenders who grab kids off their bikes are going to take one, maybe two, victims at the most. But assaults or abductions of three victims or higher tend to occur when an offender breaks into a residence, or some other enclosed environment, with victims already inside. The offender would then be free to assault one victim at a time while able to control the others with bindings or a weapon of some kind.

Young children are a problem to serial offenders because they are missed very soon after they are acquired. So an offender grabbing a young child would most likely get as far away from the abduction site as possible before initiating any kind of activity such as an assault.

The Disposal Site

The disposal site was a drainage ditch with 2' ft of water located near a very busy Interstate, behind a very popular truck wash. The victim's clothing, the victim's bicycles, and the victim's bodies were disposed of there.

The disposal site itself is not visible from the Interstate, or even from the truck wash. In short, you'd have to be very familiar with the area to know that it was even there. You'd further have to be someone from the immediate area, which frequented that location recently, to know that there would be water available in which to dispose of the bodies. That drainage ditch can be dry, depending on a variety of factors.

Additionally, the assailant disposed of the clothes and the bicycles in that drainage ditch, suggesting that he needed to get rid all of the related physical evidence. And the location itself is very near where the point of initial approach would have to be in this case. Both of those items point, again, to someone who is a local resident who knew the victims. They felt they would be searched because of their relationship to the victims so they dumped all of the physical evidence; in stranger crimes where sexual assault or ritual is the motivation the assailant might have kept the clothes to relive the experience later in fantasy.

But more importantly, the location of the dumpsite itself does not suggest a serial offender. As indicated, it's simply too close to the point of abduction. If this assailant had been a stranger to the victims, then he would have grabbed them, and, knowing that others would be looking for the boys soon, he would have left the area immediately. Subsequently, the bodies would have been disposed of somewhere far away from West Memphis along down the Interstate, and a greater attempt would have been made to prevent the bodies from being discovered. All of this would have served to help a stranger or serial offender in his escape from the area, undetected.

Instead, the bodies were disposed of right where they were last seen, in the area where most of the people searching for them were looking. This suggests that the assailant wanted the bodies to be found quickly. No time was taken to conceal the bodies, because the offender did not have a great distance to go in order to be in his safe-zone. They were just dumped in the water, clothes, bicycles and all.

Wound patterns

The wound patterns inflicted on these victims are punishment oriented. That is to say that they were inflicted with the intention to punish these children for a real or perceived transgression. This is known because the wounds are violent, traumatic, and the product of rage. But in addition to that, the type of injuries inflicted, (i.e. the bite marks and the evident anger), pointedly indicate a custodial type homicide.

Because this is so, and because of the other factors discussed, it further lessens the likelihood of a serial offender or stranger being involved in this case.

Battered Child Homicide

Assessment

In this examiner's opinion, this classification is the most consistent with the physical evidence, crime

scene and victimological presentation in this case.

According to *Practical Homicide Investigation* by Vern Geberth, 3rd Ed., pp.642-643, the interpretation of patterns of bite mark evidence breaks down, generally, as such:

Homosexual Homicides tend to involve bite marks of the back, arms, shoulders, axillae (armpits, face, and scrotum of the victim).

Heterosexual Homicides usually involve bite marks delivered by the assailant to the breast and thighs.

Battered children most often have randomly placed bite marks on the cheeks, back, and sides. However, bite marks on battered children have also been found on the abdomen, scrotum, and buttocks. In child cases, biting seems to be done in a rapid, random, and enraged manner leaving tissue laceration, diffuse areas, and poor detail, as opposed to sexually associated bite marks, usually inflicted in a slow and sadistic manner and resulting in excellent detail.

Note: According to Dr. Lowell Levine (as detailed *Practical Homicide Investigation*), there are two general but distinct types of bite mark patterns. 1) Those which are inflicted slowly, which leave a central ecchymotic area or 'suck mark,' and a radiating linear abrasion pattern surrounding the central area resembling a sunburst. The type is most often found in sexually oriented homicides; 2) Those which resemble a tooth mark pattern. This is an attack or defensive bite mark and is seen most often in the battered-child type of homicide.

The bite marks in this case appear to be, in the majority, of the nature and quality described above in the Battered Child Homicide.

Based on this evidence, and the location of the disposal site, and the victimology, and the other injuries inflicted on the victims, it is the opinion of this examiner that this case represents a battered child or child-custodial homicide. To a greater extent the parents, and to a lesser extent the guardians, relatives and anyone else who was allowed frequent, trusted access to these children should be thoroughly investigated as suspects in this case.

Offender Personality Characteristics

There are very likely two offenders involved in the deaths of these children. This section will focus on the characteristics of the primary, retaliatory offender.

As already stated, the purpose of this offense was to punish the victim and to establish or re-establish sexual ownership of the victim Chris Byers. He is likely very similar in relationships with women in the rest of his life. His own violent and selfish sexual behaviors are indicative of how he is perceived by those who know him. He is likely a very selfish and explosive individual with a potentially violent temper. He wants those around him to think that he does not care how others view him. He would be

described by those who know him well as hostile, angry, and as someone who carries grudges. His sexual assault on the genitals of Chris Byers suggests that he projects a macho, heterosexual, in-control image to those around him despite deep homosexual urges.

This is an extremely egocentric individual who cannot take the criticism of others, or tolerate shortcomings of any kind. He would further be described as someone who requires instant gratification for his impulses, and who can react violently when those impulses are not satisfied.

He is glib and superficial, but also extremely manipulative. He must be dominant in all relationships with women. He can also become very possessive and irrationally jealous of those he feels are not spending enough time attending to his needs in his sexual relationships. His jealousy and possessiveness can and have manifested themselves in violent behavior acted out towards the females in his life.

Arrest History

The numerous precautionary actions taken by the offender, despite the fact the crime was not planned fully, demonstrate a level of knowledge and sophistication obtained through either repeated offenses, some level of exposure to law enforcement training and techniques, or previous arrests for similar crimes. The offender shows some knowledge of forensic methods, and attempts to dupe those specific efforts.

This offender has very possibly spent some time in prison, and if not is committing other petty crimes to support himself. He will most likely have been arrested or detained for incidents involving drugs, violent behavior, and assaultive behavior.

Marital Status

The offender's behavior and attitude suggest someone who is capable only of short term or sporadic on and off relationships with the females in his life. He very likely has been married more than once. His attitude towards women is very misogynistic, and his previous relationships with women would have involved a great deal of physical and/ or emotional abuse.

If this offender was married at the time of the offense, and indicators are not clear on this issue, then his marriage would have been in crisis at the time of this offense. And his wife may very well have been the compliant partner in this crime.

Residence

The offender lives within a few miles of the disposal site. This is indicated by the very poor attempt at concealing the bodies when disposing of them, and the fact that they were disposed of where they would be quickly found, in the area being searched by so many people including law enforcement.

It is very likely, in fact, that the offender was part of the search effort for these children, and that he placed the bodies in a specific location with perhaps the intent of being the one to later find them in an attempt to shift the blame.

Skill Level

Given the demographic location of this offense, and the fact that the offender was likely a local resident with a great familiarity of the area and the habits of the people in the area, it is not likely that the offender is educated past the high-school level. He would have performed poorly in school due to his aggressive nature, intolerance for others, and his overall impatience. He does not demonstrate characteristics of education at the high school level, though he may have obtained a GED at some point.

However the offender demonstrates a wealth of applied criminal knowledge about investigative techniques and forensic methods. He is not the kind of offender to leave obvious physical evidence behind at a crime scene without making some attempt to obscure it. He demonstrates foresight in his disposal behavior, as well as a complete understanding of the criminal nature and quality of his acts, as clearly shown in his extensive regimen of precautionary behavior.

Hobbies/ Personal Interests

As indicated by his use of one or more knives in the commission of this crime, this offender has a very intense interest in knives and likely has an extensive collection of them in his home. It also likely that the offender has the same type of interest in firearms, and in hunting.

He also very likely has a drinking problem, and/ or a very bad drug habit which he must commit crimes to support.

Employment

It is very likely that this offender is unemployed. He lacks the skills, discipline, and patience to hold down a full time job. When employed, he is often late, absent, or fails to show up at all. His temper and disposition keep him from legitimate work, and likely his true source of income is the sale of drugs or other illegal activity.

Transportation

If he does own a vehicle, it would be masculine, like a truck. This would also be consistent with the type of vehicle he would need to transport the victims to the disposal site. It would further be in strict keeping with his macho self-image of strength and control. The offender's own vehicle was likely used in this offense.

"Recognizing Sadism: The Importance of Reconstruction and Wound Pattern Analysis in Criminal Profiling,"

presented on February 19th, 1999 at the American Academy of Forensic Sciences Annual Meeting in Orlando, Florida

by

Brent E. Turvey, M.S.

Knowledge Solutions LLC

1271 Washington Ave #274

San Leandro, CA 94577

<http://www.corpus-delicti.com>

Learning Objectives: This presentation has three primary objectives. Firstly, to discuss the current definitions of Sadism in the published literature, and subsequent crime scene criteria. Secondly, to give students a brief overview of the criminal profiling process employed by the author. And finally, to stress the importance of crime scene reconstruction and wound pattern analysis by virtue of two case examples where the determination of Sadism was in question.

A Sadist is clinically defined as a person who demonstrates a long-standing maladaptive pattern of cruel, demeaning, and aggressive behavior towards others. Symptoms include the following: Over a period of at least six months, recurrent, intense sexually arousing fantasies, sexual urges, or behaviors involving acts (real, not simulated) in which the psychological or physical suffering (including humiliation) of a victim is sexually exciting to the individual. The fantasies, sexual urges, or behaviors must also cause clinically significant distress or impairment in social, occupational, or other important areas of functioning.

In a therapeutic setting, Sadism is a diagnosis given after clinical interviews and an extensive analysis of patient history. In an investigative setting, criminal profiling is the process of inferring offender characteristics from carefully examined crime scene behavior. Criminal profiling has been used in the past to identify patterns of crime scene behavior that are suggestive of a Sadistic aspect. The method used by the author when rendering a criminal profile includes the following general steps:

Forensic analysis: Includes an overall assessment of the physical evidence, crime scene reconstruction and wound pattern analysis when possible. Involves a great deal of teamwork and information management. This phase gives the profiler the behavior that they are going to assess based on the veracity of the physical evidence; without this stage, the entire profile is suspect and potentially flawed.

Victimology: Essentially a complete history of each victim, including a 24 timeline and a risk assessment from both the victim and offender point of view. This should not be confused with a victim blame assessment, as so often has occurred in the past.

Evaluation of Crime Scene Characteristics: Includes an assessment of many crime scene factors, including but not limited to things such as location selection, method of attack, method of approach,

nature of materials used, nature and sequence of sexual acts, precautionary acts, Modus Operandi behavior, and Signature behavior.

Offender Characteristics: The criminal profile, deducted from information assessed in the first three stages. It does not involve comparison to other like crimes or like offenders. It includes only those characteristics that can be explained from the convergence of behavioral patterns suggested by the physical evidence, victimology and crime scene characteristics associated with a specific crime or series of crimes.

There are essentially two requirements for the criminal profiler to make an informed inference that Sadism evident in crime scene behavior:

1. Evidence of deliberate mental, physical, or sexual torture to a living, conscious victim;
2. Evidence of a prolonged event (time).

Both require that the crime scene behaviors which evidence torture, and which evidence that the victim was alive and conscious, be adequately reconstructed by qualified individuals. This may be within the training of the criminal profiler, but more than likely it will require a team-oriented approach to the profiling process involving the collaboration of several forensic disciplines.

Two cases illustrate this point.

Case 1: The abduction rape of a 22-year-old female victim. The Sadistic pattern of behavior evidenced by the offender in this case included torturing the victim with vice-grips, screwdrivers, and other tools in an enclosed van for a period of more than two hours.

Case 2: The rape-homicide of two female victims in their residence, a mother and a daughter, both of which suffered post-mortem evisceration and genital mutilation. The behavior in this case was incorrectly interpreted as sadistic, despite the fact that all of the wounds to the victim were post-mortem.

Who Is A Serial Killer

The (generalized) differences between serial killer vs. typical killer

First, let's talk about murder. What is it? Yes, one person killing another, but what do the crime books define it as?

Murder

The willful and unlawful killing of one human being by another. This does not include: deaths caused by negligence, suicide, attempted murder, accident, or justifiable homicide. The other crimes listed have their own category to which they belong.

Murder can be further divided into categories; 1st degree, 2nd degree and so on.

Generally, murder/homicide happens for a few very BASIC reasons.

- First, which actually fits into category 1, is an outcome of an event: a quarrel, rage, reaction to an insult, or jealousy (Holmes, DeBurger, Serial Murder).
- Category 2, is the "for gain" type of murder. Examples of this would be: monetary gains, revenge, protection of ones self, or even power. (Holmes, DeBurger, Serial Murder)

Once we step outside of these "normal" motives for murder, we step into the far more serious-- such as serial murder. This is the type of murder that has perplexed all of us since Jack the Ripper.

But what, by definition, is serial murderer? Unlike the less complex murderer, serial killers portray several "elements":

- The most distinguishing factor is multiple victims (generally 3+ victims).
- A serial killer will continuously kill and not stop unless he/she is made to stop.
- Or, unless an event occurs which stops the killer. For example, the killer is institutionalized or incarcerated. This killing will have a "cooling down" or "cooling off" period, but will continue. A serial killer may even wait years before claiming another victim; the point is though: there will, undisputedly, be another victim.
- While "normal" murder most often involves persons who know one another, even in the slightest sense, serial killing has been, in the past, a stranger to stranger crime. It has only been recently that this is changing. For the most part though, we can say: the perpetrator and the victim usually do not know one another and have most often not had any previous contact.
- Serial killers, except in rare cases, work alone.
- For the serial killer, the motivation is not one of money, or the out-come of an event. The serial

killer is simply motivated to kill; as you or I need water, the serial killer needs to kill. Generally, their need to kill is fueled by fantasies which have been building for some time. Currently, the thought seems to be that the need for control, power, and dominance is the major driving force behind the killings.

- Motives for their killings are not as obvious as the for-gain or reaction murderer. Their motives are generally internal, which is the mystery which must be solved to figure out why one particular serial killer is killing.

So now we have differentiated between the typical murderer and the serial killer. Still, there is more. Like who, typically, is a serial killer? Men, women? How old are they? The answer to this is the best there is right now. The answer is a very generalized one, based on the traits of most known serial killers.

He is usually male, between the ages of 25-35, and he is usually white. The majority of the time, he will kill victims of his own race. The ages of his victims will vary greatly, depending on his particular "interests." His intellect ranges from below average to above average. He doesn't usually know his victims or have any particular hatred for them personally (though they might be symbolic to him in some way) most of the time...His victims never did anything to hurt him in any way...they are normally strangers to him. He doesn't come from one social class or another ; he can come from skid row or Park Avenue...just as his victims. He might be married, have children, and work...like many of us. Or, he might be so unstable that he either cannot work or works irregularly. He may not be able to maintain relationships with people, so may therefore be a loner.

Misconceptions about serial killers

There is often some confusion about exactly what a serial killer is. One of the biggest misconceptions is that a serial killer and a mass murderer are the same . This is not true. And a "spree killer" is neither a mass murderer or a serial killer.

* A mass murderer is someone, for example, who shoots everyone in the post office and then maybe even him/herself. They kill several people in a matter of hours and there is no cooling off period.

* A serial killer kills several people over a period of days, weeks, months, even years. **There is a cooling off period** and the killer goes through phases, or cycles.

Another misconception is that there is only 1 type of serial killer. In actuality, there are 4 distinctive types.

The 4 types are:

*The Visionary Motive Type

This is the group considered insane...psychotic. They often hear voices in their head telling them to commit the crime.

*The Missionary-Oriented Motive Type

This type displays no psychosis to the outside world, but on the inside, this killer has a need to rid the world of what he considers immoral or unworthy. This type of killer will select groups of individuals to kill off (prostitutes, for example).

*The Thrill Oriented Motive Type

These guys are in it for the fun. They get a high from killing. Of the 4 types, this is the one who enjoys killing...very sadistically. He is into the killing for excitement.

*The Lust Killer

And finally, our sexual killer. These are the ones who kill for the pure turn on. For them, the amount of their pleasure is in direct correlation with how much they can torture their victim; the more heinous their actions, the more aroused they become. This killer is in touch with reality and has relationships. In most cases, a serial murderer is a lust killer. Because the lust killer is so different from the rest, I am going to be putting up a whole section on just this type.

Also, each of these types can be broken down into 2 more categories--the organized and the disorganized. Sometimes, there is a third category which a killer is considered "mixed" by displaying traits found in both the organized and disorganized killers.

Another misconception is that these killers are complete and total loners who cannot function in society. While true some of the time, it's not true all of the time. We often think Ted Bundy was an exception because he seemed to lead such a normal life. Not so. The fact is, many serial killers capture their victims by conning them--impersonating authoritative figures, a friendly little chat. They even will dress neatly. These behaviors are most indicative of an organized killer.

To get a sense of the disorganized killer, picture the loner you may have thought all serial killers are. This is the type you may see on the street and think that he is at least a low-life. He normally has a past record of poor performance in school, in social situations, in his job. He is usually sloppy and a "night-owl." He would be the less intelligent of the 2 sub-types of offenders...to the point of showing a little too much interest in his crime--talking about it too much, checking out the crime scene.

Conclusion

A serial killer very often appears 'normal'. He is very often the last person his neighbors or friends would think is a serial killer. Even those who are "different" than most people (like don't associate much with others) are capable of appearing normal enough to not be considered a serial killer at first.

Bomb Threats and Physical Security Planning

Foreword

Bombing and the threat of being bombed are harsh realities in today's world. The public is becoming more aware of those incidents of violence that are perpetrated by vicious, nefarious segments of our society through the illegal use of explosives. Law enforcement agencies are charged with providing protection for life and property, but law enforcement alone cannot be held responsible. Every citizen must do his or her part to ensure a safe environment.

This pamphlet is designed to help both the public and private sectors prepare for the potential threat of explosives-related violence. While the ideas set forth herein are applicable in most cases, they are intended only as a guide. The information provided is compiled from a wide range of sources, including the actual experiences of special agents of the Bureau of Alcohol, Tobacco and Firearms (ATF).

If there is one point that cannot be overemphasized, it is the value of being prepared. Do not allow a bomb incident to catch you by surprise. By developing a bomb incident plan and considering possible bomb incidents in your physical security plan, you can reduce the potential for personal injury and property damage.

In making this pamphlet available to you, we hope to help you better prepare to deal with bomb threats and the illegal use of explosives.

Bombs

Bombs can be constructed to look like almost anything and can be placed or delivered in any number of ways. The probability of finding a bomb that looks like the stereotypical bomb is almost nonexistent. The only common denominator that exists among bombs is that they are designed or intended to explode.

Most bombs are homemade and are limited in their design only by the imagination of, and resources available to, the bomber. Remember, when searching for a bomb, suspect anything that looks unusual. Let the trained bomb technician determine what is or is not a bomb.

Bomb Threats

Bomb threats are delivered in a variety of ways. The majority of threats are called in to the target. Occasionally these calls are through a third party. Sometimes a threat is communicated in writing or by a recording. Two logical explanations for reporting a bomb threat are:

1. The caller has definite knowledge or believes that an explosive or incendiary bomb has been or will be placed and he/she wants to minimize personal injury or property damage. The caller may be the person who placed the device or someone who has become aware of such information.
2. The caller wants to create an atmosphere of anxiety and panic which will, in turn, result in a disruption of the normal activities at the facility where the device is purportedly placed. Whatever the reason for the report, there will certainly be a reaction to it. Through proper planning, the wide variety of potentially uncontrollable reactions can be greatly reduced.

Why Prepare?

If you accept the two aforementioned explanations for reporting that a bomb is about to go off, you can better prepare to foil the bomber or threat maker. Through proper preparation, you can reduce the accessibility of your business or building and identify those areas that can be "hardened" against the potential bomber. This will limit the amount of time lost to searching, if you determine a search is necessary. If a bomb incident occurs, proper planning will instill confidence in the leadership, reinforce the notion that those in charge do care, and reduce the potential for personal injury and property loss. Proper planning can also reduce the threat of panic, the most contagious of all human emotions. Panic is sudden, excessive, unreasoning, infectious terror. Once a state of panic has been reached, the potential for injury and property damage is greatly increased. In the context of a bomb threat, panic is the ultimate achievement of the caller not taking every step necessary to meet the threat.

How to Prepare

In preparing to cope with a bomb incident, it is necessary to develop two separate but interdependent plans, namely a physical security plan and a bomb incident plan. Physical security provides for the protection of property, personnel, facilities, and material against unauthorized entry, trespass, damage, sabotage, or other illegal or criminal acts. The physical security plan deals with prevention and control of access to the building. In most instances, some form of physical security may be already in existence, although not necessarily intended to prevent a bomb attack.

The bomb incident plan provides detailed procedures to be implemented when a bombing attack is executed or threatened. In planning for the bomb incident, a definite chain of command or line of authority must be established. Only by using an established organization and procedures can the bomb incident be handled with the least risk to all concerned. A clearly defined line of authority will instill confidence and avoid panic.

Establishing a chain of command is easy if there is a simple office structure, one business, one building. However, if a complex situation exists, a multioccupant building for example, a representative from each occupant entity should attend the planning conference. A leader should be appointed and a clear line of succession delineated. This chain of command should be printed and circulated to all concerned parties.

In planning, you should designate a command center to be located in the switchboard room or other focal point of telephone or radio communications. The management personnel assigned to operate the center should have the authority to decide whatever action should be taken during the threat. Only those with assigned duties should be permitted in the center. Make some provision for alternates in the event someone is absent when a threat is received. Obtain an updated blueprint or floor plan of your building and maintain it in the command center.

Contact the police department, fire department, or local government agencies to determine if any assistance is available to you for developing your physical security plan or bomb incident plan. If possible, have police and/or fire department representatives and members of your staff inspect the building for areas where explosives are likely to be concealed. (Make a checklist of these areas for inclusion in command center materials.) Determine whether there is a bomb disposal unit available, how to contact the unit, and under what conditions it is activated. In developing your bomb incident plan, you must also ascertain whether the bomb disposal unit, in addition to disarming and removing the explosives, will assist in searching the building in the event of a threat.

Training is essential to deal properly with a bomb threat incident. Instruct all personnel, especially those at the telephone switchboard, in what to do if a bomb threat is received. Be absolutely certain that all personnel assigned to the command center are aware of their duties. The positive aspects of planning will be lost if the leadership is not apparent. It is also very important to organize and train an evacuation unit which will be responsive to the command center and has a clear understanding of the importance of its role.

We have suggested that the command center be located near the switchboard or focal point of communications. It is critical that lines of communication be established between the command center and the search or evacuation teams. The center must have the flexibility to keep up with the search team progress. In a large facility, if the teams go beyond the communications network, the command center must have the mobility to maintain contact and track search or evacuation efforts.

Security Against Bomb Incidents

We mentioned earlier that, in dealing with bomb incidents or potential bomb incidents, two interrelated plans must be developed, the bomb incident plan and the physical security plan. Heretofore, we have primarily addressed the bomb incident plan. Now, before continuing with that plan, we will discuss security measures as they apply to "hardening" against the bomb attack.

Most commercial structures and individual residences already have some security in place, planned or unplanned, realized or not. Locks on windows and doors, outside lights, etc., are all designed and installed to contribute toward the security of a facility and the protection of its occupants.

In considering measures to increase security for your building or office, it is highly recommended that you contact your local police department for guidance regarding a specific plan for your facility. There

is no single security plan that is adaptable to all situations. The following recommendations are offered because they may contribute to reducing your vulnerability to bomb attacks.

The exterior configuration of a building or facility is very important. Unfortunately, in most instances, the architect has given little or no consideration to security, particularly toward thwarting or discouraging a bomb attack. However, by the addition of fencing and lighting, and by controlling access, the vulnerability of a facility to a bomb attack can be reduced significantly.

Bombs being delivered by car or left in a car are a grave reality. Parking should be restricted, if possible, to 300 feet from your building or any building in a complex. If restricted parking is not feasible, properly identified employee vehicles should be parked closest to your facility and visitor vehicles parked at a distance.

Heavy shrubs and vines should be kept close to the ground to reduce their potential to conceal criminals or bombs. Window boxes and planters are perfect receptacles for the bomber. Unless there is an absolute requirement for such ornamentation, window boxes and planters are better removed. If they must remain, a security patrol should be employed to check them regularly.

A highly visible security patrol can be a significant deterrent. Even if this "patrol" is only one security guard/night guard, he/she is optimally utilized outside the building. If an interior guard is utilized, consider the installation of closed circuit television cameras that cover exterior building perimeters. Have an adequate burglar alarm system installed by a reputable company that can service and properly maintain the equipment. Post signs indicating that such a system is in place.

Entrance/exit doors with hinges and hinge pins on the inside to prevent removal should be installed. Solid wood or sheet metal faced doors provide extra integrity that a hollowcore wooden door cannot provide. A steel door frame that properly fits the door is as important as the construction of the door. The ideal security situation is a building with no windows. However, bars, grates, heavy mesh screens, or steel shutters over windows offer good protection from otherwise unwanted entry. It is important that the openings in the protective coverings are not too large. Otherwise, a bomb may be introduced into the building while the bomber remains outside. Floor vents, transoms, and skylights should also be covered. Please note that fire safety considerations preclude the use of certain window coverings. Municipal ordinances should be researched and safety considered before any of these renovations are undertaken.

Controls should be established for positively identifying personnel who are authorized access to critical areas and for denying access to unauthorized personnel. These controls should extend to the inspection of all packages and materials being taken into critical areas.

Security and maintenance personnel should be alert for people who act in a suspicious manner, as well as objects, items, or parcels which look out of place or suspicious. Surveillance should be established to include potential hiding places (e.g., stairwells, rest rooms, and any vacant office space) for unwanted individuals.

Doors or access ways to such areas as boiler rooms, mail rooms, computer areas, switchboards, and elevator control rooms should remain locked when not in use. It is important to establish a procedure for the accountability of keys. If keys cannot be accounted for, locks should be changed.

Good housekeeping is also vital. Trash or dumpster areas should remain free of debris. A bomb or device can easily be concealed in the trash. Combustible materials should be properly disposed of, or protected if further use is anticipated.

Install detection devices at all entrances and closed-circuit television in those areas previously identified as likely places where a bomb may be placed. This, coupled with the posting of signs indicating such measures are in place, is a good deterrent.

We in ATF recognize the necessity for businesses to maintain good public relations. Corporate responsibility, however, also encompasses the safety and protection of the public. The threatened use of explosives necessitates that in the interest of safety and security, some inconvenience may have to be imposed on visitors to public buildings. The public is becoming more accustomed to routine security checks and will readily accept these minor inconveniences.

Perhaps entrances and exits can be modified with a minimal expenditure to channel all visitors through someone at a reception desk. Individuals entering the building would be required to sign a register indicating the name and room number of the person whom they wish to visit. Employees at these reception desks could contact the person to be visited and advise him/her that a visitor, by name, is in the lobby. The person to be visited may decide to come to the lobby to ascertain that the purpose of the visit is valid. A system for signing out when the individual departs could be integrated into this procedure.

Such a procedure may result in complaints from the public. If the reception desk clerk explains to the visitor that these procedures were implemented in his/her best interest and safety, the complaints would be reduced. The placement of a sign at the reception desk informing visitors of the need for safety is another option.

Responding to Bomb Threats

Instruct all personnel, especially those at the telephone switchboard, in what to do if a bomb threat call is received.

It is always desirable that more than one person listen in on the call. To do this, a covert signaling system should be implemented, perhaps by using a coded buzzer signal to a second reception point. A calm response to the bomb threat caller could result in obtaining additional information. This is especially true if the caller wishes to avoid injuries or deaths. If told that the building is occupied or cannot be evacuated in time, the bomber may be willing to give more specific information on the bomb's location, components, or method of initiation.

The bomb threat caller is the best source of information about the bomb. When a bomb threat is called in:

- Keep the caller on the line as long as possible. Ask him/her to repeat the message. Record every word spoken by the person.
- If the caller does not indicate the location of the bomb or the time of possible detonation, ask him/her for this information.
- Inform the caller that the building is occupied and the detonation of a bomb could result in death or serious injury to many innocent people.
- Pay particular attention to background noises, such as motors running, music playing, and any other noise which may give a clue as to the location of the caller.
- Listen closely to the voice (male, female), voice quality (calm, excited), accents, and speech impediments. Immediately after the caller hangs up, report the threat to the person designated by management to receive such information .
- Report the information immediately to the police department, fire department, ATF, FBI, and other appropriate agencies. The sequence of notification should be established in the bomb incident plan.
- Remain available, as law enforcement personnel will want to interview you.

When a written threat is received, save all materials, including any envelope or container. Once the message is recognized as a bomb threat, further unnecessary handling should be avoided. Every possible effort must be made to retain evidence such as fingerprints, handwriting or typewriting, paper, and postal marks. These will prove essential in tracing the threat and identifying the writer.

While written messages are usually associated with generalized threats and extortion attempts, a written warning of a specific device may occasionally be received. It should never be ignored.

Decision Time

The most serious of all decisions to be made by management in the event of a bomb threat is whether to evacuate the building. In many cases, this decision may have already been made during the development of the bomb incident plan. Management may pronounce a carte blanche policy that, in the event of a bomb threat, total evacuation will be effective immediately. This decision circumvents the calculated risk and demonstrates a deep concern for the safety of personnel in the building. However, such a decision can result in costly loss of time.

Essentially, there are three alternatives when faced with a bomb threat:

1. Ignore the threat.
2. Evacuate immediately.
3. Search and evacuate if warranted.

Ignoring the threat completely can result in some problems. While a statistical argument can be made that very few bomb threats are real, it cannot be overlooked that bombs have been located in connection with threats. If employees learn that bomb threats have been received and ignored, it could result in morale problems and have a longterm adverse effect on your business. Also, there is the possibility that if the bomb threat caller feels that he/she is being ignored, he/she may go beyond the threat and actually plant a bomb.

Evacuating immediately on every bomb threat is an alternative that on face value appears to be the preferred approach. However, the negative factors inherent in this approach must be considered. The obvious result of immediate evacuation is the disruptive effect on your business. If the bomb threat caller knows that your policy is to evacuate each time a call is made, he/she can continually call and force your business to a standstill. An employee, knowing that the policy is to evacuate immediately, may make a threat in order to get out of work. A student may use a bomb threat to avoid a class or miss a test. Also, a bomber wishing to cause personal injuries could place a bomb near an exit normally used to evacuate and then call in the threat.

Initiating a search after a threat is received and evacuating a building after a suspicious package or device is found is the third, and perhaps most desired, approach. It is certainly not as disruptive as an immediate evacuation and will satisfy the requirement to do something when a threat is received. If a device is found, the evacuation can be accomplished expeditiously while at the same time avoiding the potential danger areas of the bomb.

Evacuation

An evacuation unit consisting of management personnel should be organized and trained. The organization and training of this unit should be coordinated with the development of the bomb incident plan, as well as with all tenants of a building.

The evacuation unit should be trained in how to evacuate the building during a bomb threat. You should consider priority of evacuation, e.g., evacuation by floor level. Evacuate the floor levels above and below the danger area in order to remove those persons from danger as quickly as possible. Training in this type of evacuation is usually available from police, fire or other units within the community. You may also train the evacuation unit in search techniques, or you may prefer a separate search unit. Volunteer personnel should be solicited for this function. Assignment of search wardens, team leaders, etc., can be employed. To be proficient in searching the building, search personnel must be thoroughly familiar with all hallways, rest rooms, false ceiling areas, and every location in the building where an explosive or incendiary device may be concealed. When police officers or firefighters arrive at the building, the contents and the floor plan will be unfamiliar to them if they have not previously reconnoitered the facility. Thus, it is extremely important that the evacuation or search unit be thoroughly trained and familiar with the floor plan of the building and immediate outside areas. When a room or particular area is searched, it should be marked or sealed with a piece of tape and reported to the supervisor of that area.

The evacuation or search unit should be trained only in evacuation and search techniques and not in the techniques of neutralizing, removing or otherwise having contact with the device. If a device is located, it should not be disturbed. However, its location should be well marked and a route back to the device noted.

Search Teams

It is advisable to use more than one individual to search any area or room, no matter how small. Searches can be conducted by supervisory personnel, area occupants or trained explosive search teams. There are advantages and disadvantages to each method of staffing the search teams.

Using supervisory personnel to search is a rapid approach and causes little disturbance. There will be little loss of employee working time, but a morale problem may develop if it is discovered that a bomb threat has been received and workers were left unaware. Using a supervisor to search will usually not be as thorough because of his/her unfamiliarity with many areas and his/her desire to get on with business.

Using area occupants to search their own areas is the best method for a rapid search. The occupants' concern for their own safety will contribute toward a more thorough search. Furthermore, the personnel conducting the search are familiar with what does or does not belong in a particular area. Using occupants to search will result in a shorter loss of worktime than if all were evacuated prior to search by trained teams. Using the occupants to search can have a positive effect on morale, given a good training program to develop confidence. Of course, this would require the training of an entire work force, and ideally the performance of several practical training exercises. One drawback of this search method is the increased danger to unevacuated workers.

The search conducted by a trained team is the best for safety, morale and thoroughness, though it does take the most time. Using a trained team will result in a significant loss of production time. It is a slow operation that requires comprehensive training and practice.

The decision as to who should conduct searches lies with management, and should be considered and incorporated into the bomb incident plan.

Search Technique

The following room search technique is based on the use of a twoperson searching team. There are many minor variations possible in searching a room. The following contains only the basic techniques. When the two person search team enters the room to be searched, they should first move to various parts of the room and stand quietly with their eyes closed and listen for a clockwork device. Frequently, a clockwork mechanism can be quickly detected without use of special equipment. Even if no clockwork mechanism is detected, the team is now aware of the background noise level within the room itself.

Background noise or transferred sound is always disturbing during a building search. If a ticking sound

is heard but cannot be located, one might become unnerved. The ticking sound may come from an unbalanced airconditioner fan several floors away or from a dripping sink down the hall. Sound will transfer through airconditioning ducts, along water pipes, and through walls. One of the most difficult buildings to search is one that has steam or hot water heat. This type of building will constantly thump, crack, chatter, and tick due to the movement of the steam or hot water through the pipes and the expansion and contraction of the pipes. Background noise may also include outside traffic sounds, rain, and wind.

The individual in charge of the room searching team should look around the room and determine how the room is to be divided for searching and to what height the first searching sweep should extend. The first searching sweep will cover all items resting on the floor up to the selected height.

You should divide the room into two virtually equal parts. This equal division should be based on the number and type of objects in the room to be searched and not on the size of the room. An imaginary line is then drawn between two objects in the room; e.g., the edge of the window on the north wall to the floor lamp on the south wall.

First Room Searching Sweep

Look at the furniture or objects in the room and determine the average height of the majority of items resting on the floor. In an average room, this height usually includes table or desk tops and chair backs. The first searching height usually covers the items in the room up to hip height. After the room has been divided and a searching height has been selected, both individuals go to one end of the room division line and start from a backtoback position. This is the starting point, and the same point will be used on each successive searching sweep. Each person now starts searching his/her way around the room, working toward the other person, checking all items resting on the floor around the wall area of the room. When the two individuals meet, they will have completed a "wall sweep." They should then work together and check all items in the middle of the room up to the selected hip height, including the floor under the rugs. This first searching sweep should also include those items which may be mounted on or in the walls, such as airconditioning ducts, baseboard heaters, and builtin wall cupboards, if these fixtures are below hip height.

The first searching sweep usually consumes the most time and effort. During all the searching sweeps, use the electronic or medical stethoscope on walls, furniture items, and floors.

Second Room Searching Sweep

The individual in charge again looks at the furniture or objects in the room and determines the height of the second searching sweep. This height is usually from the hip to the chin or top of the head. The two persons return to the starting point and repeat the searching technique at the second selected searching height. This sweep usually covers pictures hanging on the walls, builtin bookcases, and tall table lamps.

Third Room Searching Sweep

When the second searching sweep is completed, the person in charge again determines the next searching height, usually from the chin or the top of the head up to the ceiling. The third sweep is then made. This sweep usually covers high mounted airconditioning ducts and hanging light fixtures.

Fourth Room Searching Sweep

If the room has a false or suspended ceiling, the fourth sweep involves investigation of this area. Check flush or ceilingmounted light fixtures, airconditioning or ventilation ducts, sound or speaker systems, electrical wiring, and structural frame members.

Have a sign or marker indicating "Search Completed" conspicuously posted in the area. Place a piece of colored Scotch tape across the door and door jamb approximately 2 feet above floor level if the use of signs is not practical.

The room searching technique can be expanded. The same basic technique can be applied to search any enclosed area. Encourage the use of common sense or logic in searching. If a guest speaker at a convention has been threatened, common sense would indicate searching the speakers platform and microphones first, but always return to the searching technique. Do not rely on random or spot checking of only logical target areas. The bomber may not be a logical person.

In conclusion, the following steps should be taken in order to search a room:

1. Divide the area and select a search height.
2. Start from the bottom and work up.
3. Start backtoback and work toward each other.
4. Go around the walls and proceed toward the center of the room.

Suspicious Object Located

It is imperative that personnel involved in a search be instructed that their only mission is to search for and report suspicious objects. Under no circumstances should anyone move, jar or touch a suspicious object or anything attached to it. The removal or disarming of a bomb must be left to the professionals in explosive ordnance disposal. When a suspicious object is discovered, the following procedures are recommended:

1. Report the location and an accurate description of the object to the appropriate warden. This information should be relayed immediately to the command center, which will notify the police and fire departments, and rescue squad. These officers should be met and escorted to the scene.
2. If absolutely necessary, place sandbags or mattresses, never metal shields, around the

suspicious object. Do not attempt to cover the object.

3. Identify the danger area, and block it off with a clear zone of at least 300 feet, including floors below and above the object.

4. Check to see that all doors and windows are open to minimize primary damage from blast and secondary damage from fragmentation.

5. Evacuate the building.

6. Do not permit reentry into the building until the device has been removed/disarmed, and the reentry.

Handling of the News Media

It is of paramount importance that all inquiries from the news media be directed to one individual appointed as spokesperson. All other persons should be instructed not to discuss the situation with outsiders, especially the news media.

The purpose of this provision is to furnish the news media with accurate information and to see that additional bomb threat calls are not precipitated by irresponsible statements from uninformed sources.

Summary

This pamphlet serves only as a guide and is not intended to be anything more. The ultimate determination of how to handle a bomb threat must be made by the individual responsible for the threatened facility. Develop a bomb incident plan. Draw upon any expertise that is available to you from police departments, government agencies, and security specialists. Don't leave anything to chance. Be prepared!

Bomb Incident Plan

1. Designate a chain of command.

2. Establish a command center.

3. Decide what primary and alternate communications will be used.

4. Establish clearly how and by whom a bomb threat will be evaluated.

5. Decide what procedures will be followed when a bomb threat is received or device discovered.

6. Determine to what extent the available bomb squad will assist and at what point the squad will respond.

7. Provide an evacuation plan with enough flexibility to avoid a suspected danger area.

8. Designate search teams.

9. Designate areas to be searched.

10. Establish techniques to be utilized during search.

11. Establish a procedure to report and track progress of the search and a method to lead qualified bomb technicians to a suspicious package.

12. Have a contingency plan available if a bomb should go off.
13. Establish a simple to follow procedure for the person receiving the bomb threat.
14. Review your physical security plan in conjunction with the development of your bomb incident plan.

Command Center

1. Designate a primary location and an alternate location.
2. Assign personnel and designate decisionmaking authority.
3. Establish a method for tracking search teams.
4. Maintain a list of likely target areas.
5. Maintain a blueprint of floor diagrams in the center.
6. Establish primary and secondary methods of communication. (Caution-the use of twoway radios during a search can cause premature detonation of an electric blasting cap.)
7. Formulate a plan for establishing a command center, if a threat is received after normal work hours.
8. Maintain a roster of all necessary telephone numbers.

GENERAL TERMINOLOGY & RESOURCE INFORMATION

The following information is provided as reference data. This is a compilation of terminology, reference materials, charts, chemistry and technical data which may be utilized for a wide variety of activities involving explosives and their many diverse applications. All underlined, italic, blue words are cross-references to the main definition term. If you are using Netscape or MS Internet Explorer, you may also use EDIT | FIND (or Ctrl + F) to conduct a search for a term. You may also use (Ctrl + Home) to return to the top of the page.

Absolute Deviation

The shortest distance between the center of the target and the point where a projectile hits or bursts.

Absolute Error

Shortest distance between the center of impact or the center of burst of a group of shots and the point of impact or burst of a single shot within the group.

AC

Alternating current.

Acceptance Quality Level (AQL)

A nominal value expressed in terms of percentage defective per hundred units, by which a group of sampling plans is identified. The sampling plans so identified have a high probability of accepting lots containing material with a process average not greater than the designed value of the AQL.

Accuracy

Closeness to true value; not to be used indiscriminately as a synonym for precision which latter means reproducibility of measurement.

Accuracy Life

The estimated average number of rounds that a particular weapon can fire before its tube becomes so worn that its accuracy tolerance is exceeded.

Accuracy Of Fire

The measurement of the precision of fire expressed as the distance of the center of impact from the center of the target.

Acetone

Acetone or dimethyl ketone or 2-propanone (CH₃COCH₃), colorless, flammable liquid. Acetone is widely used in industry as a solvent for many organic substances and is a component of most

paint and varnish removers. It is used in making synthetic [Resins](#) and fillers, smokeless powders, and many other organic compounds.

Acetylene

Acetylene or ethyne (HC CH), a colorless gas and the simplest alkyne ([Hydrocarbon](#)). Explosive on contact with air, it is stored dissolved under pressure in [Acetone](#). It is used to make neoprene [rubber](#), [plastics](#), and [resins](#). The oxyacetylene torch mixes and burns oxygen and acetylene to produce a very hot flame—as high as 6300°F (3480°C)—that can cut steel and weld iron and other metals.

Acids & Bases

Acids and bases are two related classes of chemicals; the members of each class have a number of common properties when dissolved in a solvent, usually water. Acids in water solutions exhibit the following common properties: they taste sour; turn litmus paper red; and react with certain metals, such as zinc, to yield hydrogen gas. Bases in water solutions exhibit these common properties: they taste bitter; turn litmus paper blue; and feel slippery. When a water solution of acid is mixed with a water solution of base, a salt and water are formed; this process, called neutralization, is complete only if the resulting solution has neither acidic nor basic properties. When an acid or base dissolves in water, a certain percentage of the acid or base particles will break up, or dissociate, into oppositely charged ions. The Arrhenius theory of acids and bases defines an acid as a compound that can dissociate in water to yield hydrogen ions (H⁺) and a base as a compound that can dissociate in water to yield hydroxyl ions (OH⁻). The Brönsted-Lowry theory defines an acid as a proton donor and a base as a proton acceptor. The Lewis theory defines an acid as a compound that can accept a pair of electrons and a base as a compound that can donate a pair of electrons. Each of the three theories has its own advantages and disadvantages; each is useful under certain conditions. Strong acids, such as hydrochloric acid, and strong bases, such as potassium hydroxide, have a great tendency to dissociate in water and are completely ionized in solution. Weak acids, such as acetic acid, and weak bases, such as ammonia, are reluctant to dissociate in water and are only partially ionized in solution. Strong acids and strong bases make very good [Electrolytes](#) (see [Electrolysis](#)), i.e., their solutions readily conduct electricity. Weak acids and weak bases make poor electrolytes. Also [Amphoterism](#); [Buffer](#); [Catalyst](#); Indicators Acids-Base [Titration](#).

Actuator

A mechanical device, such as a pin puller, operated by a [Pressure Cartridge](#).

Acoustic Impedance

A material's acoustic impedance is the product of the material's sound speed multiplied by the material's density.

Acoustics

The science of [Sound](#), including its production, propagation, and effects. An important practical application of acoustics is in the designing of auditoriums, which requires a knowledge of the characteristics of sound [Waves](#). Reflection of sound can cause an [Echo](#), and repeated reflections in an enclosed space can cause reverberation, the persistence of sound. Some reverberation in auditoriums is desirable to avoid deadening the sound of music. Reflection can be reduced through the proper configuration and texture of walls, and by the use of sound-absorbent

materials. Another acoustical problem is [Interference](#), which can create “dead spots” in auditoriums for certain frequencies.

Actinide Series

The radioactive metals, with atomic numbers 89 through 103, in group IIIb of the [periodic table](#). They are Actinium, Thorium, Protactinium, [Uranium](#), Neptunium, [Plutonium](#), Americium, Curium, Berkelium, Californium, Einsteinium, Fermium, Mendelevium, Nobelium, and Lawrencium. All members of the series have chemical properties similar to actinium. Those elements with atomic numbers greater than 92 are called [Transuranium Elements](#).

Additive

Something added to a basic composition to accomplish some special purpose - mostly in small proportions.

Adhesion

Adhesion and cohesion, attractive forces between material bodies. Adhesive forces act between different substances, whereas cohesive forces act within a single substance, holding its atoms, ions, or molecules together. Without these forces, solids and liquids would act as gases. [Surface Tension](#) in liquids results from cohesion, and [Capillarity](#) results from a combination of adhesion and cohesion. [Friction](#) between two solid bodies depends in part on adhesion.

Adiabatic

Occurring without gain or loss of heat; a change of the properties, such as volume and pressure of the contents of an enclosure, without exchange of heat between the enclosures and its surroundings.

Adiabatic Flame Temperature

As applied to interior ballistics calculation, the temperature which the gaseous products of combustion of the propellant would attain if maintained at constant volume and without loss of energy to the surrounding medium.

Adiabatic Temperature

The temperature attained by a system undergoing a volume or pressure change in which no heat enters or leaves the system.

Aerosol

A mixture of extremely fine liquid or solid particles and a gas or air such as smoke or fog.

Aerodynamics

Aerodynamics is the study of gases in motion. Because the principal application of aerodynamics is the design of airplanes, air is the principal gas with which this science is concerned. Bernoulli's principle, which states that the pressure of a moving gas decreases as its velocity increases, has been used to explain the lift produced by a wing having a curved upper surface and a flat lower surface ([Airfoil](#)). Because the flow is faster across the curved surface than across the plane one, a greater pressure is exerted in the upward direction. Aerodynamics is also concerned with the drag caused by air friction, which is reduced by making the surface area of the craft as small as possible. At speeds close to the speed of sound, or Mach 1 ([mach number](#)), there is also a large, sudden increase of drag, which has been called the sonic, or sound, barrier. Aerodynamics is also used in designing automobile bodies and trains for minimum drag and in computing wind stresses on bridges, buildings, and the like. The wind tunnel is one of the basic experimental tools of the

aerodynamicist. [Shock wave](#); [Sonic boom](#).

Afterburner

An auxiliary combustion chamber in certain jet engines.

Agglomeration

The property of particles to cohere, thereby increasing apparent particle size.

Air Blast

The airborne [shock wave](#) or acoustic transient generated by an explosion.

Air Burst

A burst of a projectile or bomb above the ground.

Airfoil

A surface designed to develop a desired force by reaction with a fluid, especially air, that is flowing across the surface. Examples of airfoils are the fixed wings of airplanes, which produce lift ([aerodynamics](#)), and control surfaces, such as ailerons, elevators, rudders, and flaps, that are manipulated to produce variable forces. Other airfoils include spoilers, propeller blades, and the blades utilized in turbojet engines.

Alcohol

Alcohol is any of a class of organic compounds with the general formula R-OH, where R is an alkyl group made up of carbon and hydrogen and -OH is one or more hydroxyl groups, each made up of one atom of oxygen and one of hydrogen. Although the term alcohol ordinarily refers to [Ethanol](#), the alcohol in alcoholic beverages, the class of alcohol also includes [Methanol](#) and the amyl, butyl, and propyl alcohols, all with one hydroxyl group; the glycols, with two hydroxyl groups; and glycerol, with three. Many of the characteristic properties and reactions of alcohols are due to the polarity, or unequal distribution, of electric charges in the C-O-H portion of the molecule.

Alkali

Alkali, [Hydroxide](#) of an [Alkali Metal](#). Alkalies are soluble in water and form strongly basic solutions. They neutralize acids, forming salts and water. Strong alkalies (e.g., those of sodium or potassium) are called caustic alkalies. The term alkali is sometimes applied to sodium or potassium carbonate or to the hydroxide of an [Alkaline-Earth Metal](#).

Alkali Metals

Alkali metals are elements in group Ia of the [Periodic Table](#). In order of increasing atomic number, they are [Lithium](#), [Sodium](#), [Potassium](#), Rubidium, [Cesium](#), and [Francium](#). They are softer than other metals, and have lower melting points and densities. All react violently with water, releasing hydrogen and forming hydroxides. They tarnish rapidly, even in dry air. They never occur uncombined in nature.

Alkaline-Earth Metals

Alkaline-earth metals are elements in group IIa of the [Periodic Table](#). In order of increasing atomic number, they are [Beryllium](#), [Magnesium](#), [Calcium](#), [Strontium](#), [Barium](#), and [Radium](#). They are softer than most other metals and react readily with water. Their properties are exceeded by the corresponding [Alkali Metal](#).

All-Fire Current

The minimum amperage (or wattage) level which must be applied to a bridgewire circuit to

reliably ignite the surrounding explosive material without regard to the time of operation. Operation at all-fire level should be avoided.

Allotropy

The occurrence of certain chemical elements in two or more forms; the forms are called allotropes. Allotropes generally differ in physical properties, such as color and hardness; they may also differ in molecular structure or in chemical activity but are usually alike in most chemical properties. [Diamond](#) and [Graphite](#) are two allotropes of the element [Carbon](#).

Alpha Particle

A particle emitted in one of the three forms of natural [Radioactivity](#).

Aluminized Explosive

A high explosive to which aluminum powder or flake has been added. [Metallized](#).

Amatol

High explosive made of a mixture of ammonium nitrate and trinitrotoluene; sometimes used as a bursting charge in high-explosive projectiles.

Ambient

Surrounding meteorological conditions such as ambient temperature, humidity and pressure.

Amine

A type of organic compound containing the NH_2 group. (Example: ethylenediamine.)

Amino acid

An amino acid is any of a class of organic compounds having a carboxyl group (COOH) and an amino group (NH_2). Some 22 amino acids are commonly found in animals and more than 100 less common forms are found in nature, chiefly in plants. When the carboxyl carbon atom of one amino acid binds to the [nitrogen](#) of another with the release of a water molecule, a linkage called a peptide bond is formed. Chains of amino acids, joined head-to-tail in this manner, are synthesized by living systems and are called polypeptides (up to about 50 amino acids) and [Proteins](#) (over 50 amino acids). The process of digestion releases individual amino acids from food protein by cleaving to the peptide bonds.

Ammine

An inorganic compound containing NH_3 molecules as part of a complex salt or coordination compound. (Example: hexammine cobalt (III) nitrate; also spelled hexaammine.)

Ammonia

Ammonia is a chemical compound (NH_3), colorless gas with a characteristic pungent, penetrating odor. It is extremely soluble in water. Ammonia solutions are used to clean, bleach, and deodorize; to etch aluminum; to saponify oils and fats; and in chemical manufacture. Ammonia and ammonia vapors are irritating—prolonged exposure and inhalation cause serious injury and may be fatal. Water-free ammonia is used in refrigeration. The major use of ammonia and its compounds is as [Fertilizers](#). Ammonia is usually produced by direct combination of nitrogen with hydrogen at high temperature and pressure in the presence of a catalyst.

Ammonium Nitrate

The ammonium salt of [nitric acid](#) represented by the formula NH_4NO_3 .

Ammonium Nitrate Satchel Charge

A mixture of ammonium nitrate fertilizer and melted wax. The mixing ratio is 4 pounds of

fertilizer to 1 pound of wax.

Ammonium Perchlorate

Material to be added.

Ammonol

High-explosive substance made of a mixture of ammonium nitrate, trinitrotoluene, and flaked or powdered aluminum. Ammonol is sometimes used as a bursting charge in high-explosive projectiles, and produces bright flashes on detonation.

Ammunition

Generic term for all kinds of missiles, explosive and pyrotechnic devices. Ordnance means, in addition, also non-offensive military items. Munition(s) equals ordnance.

Ammunition Data Card

Identification card prepared for each individual lot of ammunition manufactured, giving the type and composition of the ammunition, and identifying its components by lot number and manufacturer. When necessary, it may also include instructions for handling the ammunition.

Ampere

A unit of electrical current produced by 1 volt acting through a resistance of 1 ohm. Also referred to as an “amp” or “amps”.

Amphibious Warfare

Amphibious Warfare describes the use of combined land and sea forces to take a military objective, typically through an air-supported assault on an enemy coastline. Although the strategy is ancient, e.g., the Athenian attack on Sicily in 415 BC, the term came into widespread use during WW II. Early in the war, coordinated land, sea, and air attacks by the Japanese in the SW Pacific met little opposition. By contrast, Allied attacks on Europe and the Pacific islands were mounted against heavily defended coasts, requiring construction of special vessels (called landing craft) that were seaworthy and yet capable of allowing [Tanks](#) and fully equipped [Infantry](#) to disembark in shallow water. Such landings were preceded and accompanied by continuous air and naval bombardment of coastal defenses. By this method the Allies were able to invade such Pacific strongholds as Saipan (1944), Iwo Jima (1945), and Okinawa (1945), and to launch the most spectacular amphibious invasion in history, on the coast of Normandy, France, on June 6, 1944. Amphibious landings later occurred in the Korean War and Vietnam War and in the British attack (1982) on the Falkland Islands.

Amphoterism

Amphoterism, in chemistry, the property of certain compounds of acting either as acids or as bases ([Acids & Bases](#)), depending on the reaction in which they are involved. Many hydroxide compounds and organic molecules that contain both acidic (e.g., carboxyl) and basic (e.g., amino) [Functional Groups](#) are usually amphoteric.

Amplifier

Amplifier, a device in which a varying input signal controls a flow of energy to produce an output signal that varies in the same way but has a larger amplitude; the input signal may be a current, a voltage, a mechanical motion, or any other signal, and the output signal is usually of the same nature. The ratio of the output voltage to the input voltage is called the voltage gain. The most common types of amplifiers are electronic and have [Transistors](#) as their principal

components. In most cases today, transistors are incorporated into *Integrated Circuits* chips. Most amplifiers include more than one transistor. Transistor amplifiers are used in *Radio* and *Television* transmitters and receivers, stereophonic record players, and intercoms.

AN

Ammonium nitrate.

AN/FO

A commercial blasting agent consisting of AN and fuel oil.

AN slurry

Ammonium Nitrate Slurry.

Analysis

A branch of mathematics that uses the concepts and methods of the *Calculus*. It includes basic calculus; advanced calculus, in which such underlying concepts as that of a *Limit* are subjected to rigorous examination; differential and integral equations, in which the unknowns are functions rather than numbers; *Vector* and tensor analysis; differential geometry; and many other fields.

Angle Attack

A method of attack used in bridge demolition.

Angle Of Departure

Angle between the line of sight and the axis of the bore of a gun at the instant the projectile leaves the muzzle. Angle of departure is the sum of the angles of site, elevation and vertical jump.

Angle Of Fall

Angle between the horizontal and the tangent to the trajectory at the point at which a projectile falls.

Angle Of Impact

Acute angle between the tangent to the trajectory at the point of impact of a projectile and the plane tangent to the surface of the ground at the point of impact; angle at which a projectile strikes the ground or target.

Anode

The positive pole of a direct current device. Opposite *Cathode* (adj.: anodic).

Antenna

Antenna or aerial, a system of wires or other conductors used to transmit or receive radio or other electromagnetic waves (*Radio*; *Television*). In a transmitting antenna, the signal from an *Electrical Circuit* causes electrons in the antenna to oscillate; these moving electric charges generate *Electromagnetic Radiation*, which is then transmitted through space. The distribution pattern of the transmitted wave depends on the design of the antenna; radio broadcast-station antennas are frequently designed to emit waves in all directions, whereas those used for *Radar* and for certain communication systems focus the waves in a single direction. In a receiving antenna, electromagnetic waves cause the electrons in the antenna to oscillate, inducing a signal that can be detected by an electric circuit. In general, a longer antenna is used to transmit or receive signals of longer wavelengths. Theoretically, the same antenna can be used both for sending and for receiving signals, but in practice, transmitting antennas are constructed to handle higher power loads than receiving antennas.

Antifreeze

Antifreeze is a substance added to a solvent to lower its freezing point. Antifreeze is typically added to water in the cooling system of internal combustion engines so that it may be cooled below the freezing point of pure water (32° F or 0° C) without freezing. Automotive antifreezes include ethylene glycol (the most widely used), methanol, ethanol, isopropyl alcohol, and propylene glycol. **WARNING:** Straight antifreeze can be deflagrated and / or be very flammable if directly exposed to a high explosive detonation.

Antimatter

Material composed of antiparticles, which correspond to ordinary protons, electrons, and neutrons but have the opposite electrical charge and magnetic moment. When matter and antimatter collide, both may be annihilated, and other *Elementary Particles*, such as photons and pions, are produced. In 1932 Carl D. Anderson, while studying cosmic rays, discovered the positron, or antielectron, the first known antiparticle. Any antimatter in our part of the universe is necessarily very short-lived because of the overwhelming preponderance of ordinary matter, by which the antimatter is quickly annihilated.

Antipersonnel (AP)

Designed to kill, wound or obstruct single persons.

Anti-Removal Device

A mechanical device which prevents de-fuzing of a land mine, etc., setting it off in the attempt.

Apparent Density

The ratio of mass to volume of a finely powdered material, under stated conditions, which is always less than true density. Sometimes called loading density. Because apparent density depends on the method used to obtain it, the method should always be specified. *Bulk Density*.

Approx.

Approximately.

Archimedes' Principle

The Archimedes' principle states that a body immersed in a fluid is buoyed up by a force equal to the weight of the displaced fluid. The principle applies to both floating and submerged bodies, and to all fluids. It explains not only the buoyancy of ships but also the rise of a helium-filled balloon and the apparent loss of weight of objects underwater.

Area Target

Target or gunfire or bombing covering a considerable space, such as ammunitions factory, airport or freight yard. An area target differs from a point target, which is a particular object or structure.

Argon

(Ar), gaseous element, discovered in 1894 by Sir William Ramsay and Lord Rayleigh. An odorless, tasteless, and colorless inert gas, it makes up 0.93% of the atmosphere by volume. Argon is used in light bulbs and neon signs, in refining reactive elements, and for protection in arc welding.

Arm-To-Arm

As applied to fuses, the changing from an armed condition to a state of readiness for initiation.

Arming

As applied to fuzes, the changes from a safe condition to a state of readiness for initiation. Generally a fuze is caused to arm by acceleration, rotation, clock mechanism or air travel, or by combinations of these. Armor Protective covering, especially metal plates used on ships, tanks,

motor vehicles, etc.

Armor Piercing

A term applied to bullets and projectiles designed to pierce armor plate.

Army

An army is a land based armed force under regular military organization, as distinguished from the horde, or armed mass of all able-bodied men in a tribe. The earliest known professional army was that of Egypt, followed by those of Assyria and Persia. Military service became obligatory for citizens of Greece. The Roman army evolved from a citizen soldiery into a professional standing army increasingly composed of barbarian mercenaries. In the Middle Ages, the armed knight and yeoman owed a set number of days of military service each year to a great lord; but with the decline of feudalism and the advent of firearms, this system also gave way to the service of mercenaries. In the 17th century, Louis XIV of France organized a national standing army that set the pattern for all of Europe: a highly disciplined, professional body set apart from civilian life. The concept reached a harsh perfection under Frederick II of Prussia. It was the introduction of conscription during the French Revolutionary Wars that set in motion the development of modern mass armies built around a professional nucleus and organized into specialized units for combat and support. Although conscription was used in the U.S. Civil War and WW I, the U.S., until 1940, traditionally relied in emergencies on its citizen militia, the National Guard, and on voluntary enlistment in the armed forces; the peacetime draft was again lifted in 1973. The term army generally applies to all armed land forces of a nation (e.g., the French army); it can also designate a self-contained fighting force in a given area (e.g., the Army of the Potomac in the U. S. Civil War) or a unit of 100,000 men composed of two or more corps. A corps in turn is composed of two or more divisions (usually about 15,000 men). Traditionally, an army was made up of major [Infantry](#), [Cavalry](#), and [Artillery](#) commands, but these gave way to more complex forms of organization. Today, each division typically includes infantry, airborne, mechanized, and other specialized battalions or brigades.

ARNG

US term for Army National Guard.

Aromatic Compound

An aromatic compound is any of a large class of organic compounds including [Benzene](#) and compounds that resemble benzene in chemical properties. Aromatic compounds contain unusually stable ring structures, often made up of six carbon atoms arranged hexagonally. Some of the compounds, however, have rings with more or fewer atoms, not necessarily all carbon. Furan, for example, has a ring with four atoms of carbon and one of oxygen. Also, two or more rings can be fused, as in naphthalene. The characteristic properties of the class, notably the stability of the compounds, derive from the fact that aromatic rings permit the sharing of some electrons by all the atoms of the ring, which increases the strength of the bonds.

Artillery

Artillery is a term now applied to heavy firearms, as distinguished from [Small Arms](#). It came into use in the mid-14th century with the introduction in Europe of [Gunpowder](#), which had been discovered many centuries earlier in China. First employed mainly against fortifications, artillery was increasingly used in the field from the early 17th century. It was characteristically smooth-bore and muzzle-loaded, firing solid, round shot, until the late 19th century, when breech-loaded,

rifled, and shell-firing artillery became standard. Modern artillery includes a variety of long-range guns that fire their shells with rapid muzzle-velocity in a low arc; howitzers, which fire on a high trajectory at relatively nearby targets; antiaircraft guns, which fire rapidly and at high angles; armor-piercing antitank guns; and many field-artillery pieces used in support of infantry and other ground operations. Mobility has become a key factor in the usefulness of heavy firearms, most of which now either are self-propelled or can be towed. Ash Combustion products, usually in the form of slag or crust, accumulating at the surface, along the cavity wall and immediately beyond the flame area, which tend to interfere with combustion and visibility of the flame or colored smoke or pyrotechnic ammunition.

ASP

Ammunition Supply Point.

Astronomical Unit

Astronomical unit (AU), means distance between the earth and the sun. One AU is c.92,960,000 mi (149,604,970 km).

AT

Antitank.

Atmosphere

The envelope of air surrounding the earth; also, the body of gases surrounding or comprising any planet or other celestial body. Atmospheric pressure may be measured as weight per area. On earth, normal air pressure at sea level is 14.7 pounds of weight per square inch, or 1033 grams of weight per square centimeter. Expressed in more formal units of force per area, one atmosphere is equal to 1,013,300 dynes/cm². One million dynes per square centimeter has been set equal to one bar, therefore one atmosphere is equal to 1.0133 bars.

Atom

The atom is the smallest unit of a chemical [Element](#) having the properties of that element. An atom contains several kinds of particles. Its central core, the nucleus, consists of positively charged particles, called [Protons](#), and uncharged particles, called [Neutrons](#). Surrounding the nucleus and orbiting it are negatively charged particles, called [Electrons](#). Each atom has an equal number of protons and electrons. The nucleus occupies only a tiny fraction of an atom's volume but contains almost all of its mass. Electrons in the outermost orbits determine the atom's chemical and electrical properties. The number of protons in an atom's nucleus is called the [Atomic Number](#). All atoms of an element have the same atomic number and differ in atomic number from atoms of other elements. The total number of protons and neutrons combined is the atom's [Mass Number](#). Atoms containing the same number of protons but different numbers of neutrons are different forms, or [Isotopes](#), of the same element. [Atomic Weight](#).

Atomic Bomb

A weapon deriving its great explosive force from the sudden release of [Nuclear Energy](#) through the fission, or splitting, of heavy atomic nuclei. The first atomic bomb was successfully tested by the U.S. near Alamogordo, N.Mex., on July 16, 1945 ([Manhattan Project](#)). In the final stages of World War II the U.S. dropped atomic bombs on Hiroshima on Aug. 6, 1945, and on Nagasaki three days later to force Japan to surrender. Atomic bombs were subsequently developed by the USSR (1949), Great Britain (1952), France (1960), China (1964), and India (1974), and a number

of other nations, particularly Pakistan, South Africa, and Israel, are believed to have atomic bombs or the capability to produce them readily. Practical fissionable nuclei for atomic bombs are the isotopes [Uranium-235](#) and [Plutonium-239](#), which are capable of undergoing chain reaction. If the mass of the fissionable material exceeds the critical mass, the chain reaction multiplies rapidly into an uncontrollable release of energy. An atomic bomb is detonated by bringing together very rapidly (e.g., by means of a chemical explosion) two subcritical masses of fissionable material. The ensuing explosion produces great amounts of heat, a [shock wave](#), and intense neutron and gamma radiation. The region of the explosion becomes radioactively contaminated, and wind-borne radioactive products may be deposited elsewhere as fallout.

[Nuclear, Hydrogen Bomb.](#)

Atomic Number

Often represented by the symbol Z, the number of [Protons](#) in the nucleus of an [Atom](#). Atoms with the same atomic number make up a chemical [Element](#). The elements are arranged in the [Periodic Table](#) in the order of their atomic numbers. [Atomic Weight](#)

Mean (weighted average) of the masses of all the naturally occurring [Isotopes](#) of a chemical [Element](#); the atomic mass is the mass of any individual isotope. Atomic weight is usually expressed in atomic mass units (amu); the atomic mass unit is defined as exactly 1/12 the mass of a carbon-12 atom. Each proton or neutron weighs about 1 amu, and thus the atomic mass is always very close to the [Mass Number](#) (total number of protons and neutrons in the nucleus). Because most naturally occurring elements have one principal isotope and only insignificant amounts of other isotopes, most atomic weights are also very nearly whole numbers. For the atomic weight of individual elements, see [Element](#).

Atomized

In pyrotechnics, an atomized metal powder consists of regular spherical particles which may be as small as 5 microns in diameter.

Attitude

The position or orientation of an aircraft, spacecraft, munition, device, etc., either in motion or at rest, as determined by the relationship between its axes and some reference line or plane such as the horizon.

Attn.

Attention.

Aurora

The sporadic visible emission from the upper atmosphere over middle and high latitudes. Also called "northern lights" in the northern hemisphere.

Autogenous Pressurization System

Pressurizing tanks with available propulsion system propellant gases, on-board devices.

Autoignition

A temperature is reached at which the rate of reaction is so rapid that deflagration occurs.

Automatic (self-acting)

Moving or acting by itself. After the first round is fired, an automatic weapon fires, extracts, ejects and reloads without application of power from an outside source, repeating the cycle as long as the firing mechanism is held in the proper position. Automatic action involves repeating

the cycle of operation, as distinguished from semi-automatic, which is restricted to one complete cycle at a time.

Automatic Feed Mechanism

Mechanism in an automatic gun that puts fresh shells into the chamber in position for firing.

Auxplosive Group

Atom groupings commonly present in a high explosive, but which by their presence do not produce an explosive. They can, however, have an effect upon the power of an explosive, usually not in a helpful direction.

Average Burning Rate

The arithmetic mean (statistical average) burning rate of pyrotechnic or propellants at specific pressures and temperatures. Dimension - length/time or mass/time.

AVLB

Armored vehicle launch bridge.

Axis

A straight line about which a body rotates, or around which a plane figure may rotate to produce a solid; a line symmetry. One of a set of reference lines for certain systems of coordinates. (Plural: axes).

B

Return to [topof](#) page.

Back-Blast

Rearward blast of gases from the breech of recoil-less weapons and rockets upon the burning of the propellant charge. It is sometimes referred to as breech-blast.

Bakelite

For its inventor, Leo Baekeland, a synthetic thermosetting phenol-formaldehyde resin with an unusually wide variety of industrial applications ranging from billiard balls to electrical insulation.

Ballistic Cap

Cap for projectile, designed to improve its ballistic efficiency.

Ballistic Coefficient

Measure of the ability of a missile to overcome air resistance.

Ballistic Conditions

Conditions which affect the motion of a projectile in the bore and through the atmosphere, including [muzzle velocity](#), weight of projectile, size and shape of projectile, rotation of the earth, density of the air, elasticity of the air and the wind.

Ballistic Curve

Actual path or trajectory of a bullet or shell.

Ballistic Density

Computed constant air density that would have the same total effect on a projectile during its flight as the varying densities actually encountered.

Ballistic Efficiency

Ability of a projectile to overcome the resistance of the air. Ballistic efficiency depends chiefly on the weight, diameter and shape of the projectile.

Ballistic Limit

Velocity at which a given type of projectile will perforate a given thickness and type of armor plate at a specified obliquity.

Ballistic Mortar

Instrument used to determine the relative energy obtainable from explosive materials.

Ballistic Pendulum

An instrument used for measuring the velocity of a projectile or the output of a cartridge or explosive charge. Ballistic Rating

Ballistic Temperature

A computed constant temperature that would have the same total effect on a projectile traveling from the gun to the target as the varying temperatures actually encountered.

Ballistic Wave

Audible disturbance or wave caused by the compression of air ahead of a projectile in flight.

Ballistic Wind

Assumed constant wind that would have the same total effect on a projectile traveling from the gun to the target as the varying winds actually encountered.

Ballistics

The science of the motion of projectiles.

Ballistite

Smokeless powder used as a propelling charge in small arms and mortar ammunition.

Balloting

The bounding from side to side of a projectile in the bore of a gun.

Bandoleer

A wide ribbon of fabric or [plastic](#) provided with numerous adjoining pockets to accommodate small arms ammunition or similarly shaped items.

Bar

Derived from the Greek word "heavy". A bar is a measure of pressure, one bar is equal to 0.9869 atmospheres or 10^5 pascals.

KBar

Kilobar = 1,000 Bars or 10^3 Bars

MBar

Megabar = 1,000,000 Bars or 10^6 Bars

Barium

Barium, a metallic element, isolated by electrolysis in 1808 by Sir Humphrey Davy. It is a soft, silver-white [Alkaline-Earth Metal](#). Its principal ore is barite. Various barium compounds are used as paint pigments, rat poison, a drying agent, and a water softener, and in pyrotechnics. [Element](#) ; [Periodic Table](#).

Barrage

A barrier of fire from guns, etc.

Bases & Acids

[Acids & Bases.](#)

Baseline Ejection Shell

Type of special purpose shell which functions by expelling its filler out of base of the shell. Expulsion is usually achieved by a small charge of propellant, called an expelling charge.

Base Line

Line of known length and direction between two points whose locations are known; used in fire control.

Base Plug

Seal in base of projectile.

Base Of Trajectory

Straight horizontal line from the center of the muzzle of a weapon to the point of intersection with the downward curve of the path of a projectile.

Base Spray

[Spray.](#)

Battery Actuation Cartridge

May be electric, percussion or pneumatic: A controlled pressure cartridge used to force [electrolyte](#) into a dry-charge battery. [Pressure Cartridge.](#)

Beam

A ray or collection of focused rays of radiated energy. Radio waves used as a navigation aid.

Beam Collapse Mechanism

A method of allowing a bridge to collapse under its own weight.

Benzene

Benzene (C₆H₆), colorless, flammable toxic liquid with a pleasant aromatic odor. A [Hydrocarbon](#), benzene is the parent substance of the [Aromatic Compounds](#). It consists of an unusually stable hexagonal ring of six [carbon](#) atoms, each of which is attached to a hydrogen atom. Derivative compounds include toluene, phenol, and aniline. Obtained from coal tar and petroleum, benzene and its derivatives are used in making dyes, drugs, and [plastics](#).

Beryllium

Beryllium, a metallic element, first isolated in 1828 independently by Friedrich Wohler and Antoine Bussy. The silver-gray, [Alkaline-Earth Metal](#) is light, strong, high-melting, and resistant to corrosion. It is used as a window material for X-ray tubes and as a shield and a moderator in nuclear reactors. [Element](#) ; [Periodic Table](#).

Binary Explosive

A two component explosive based on safe-to-handle compounds such as hydrazine or nitromethane, shipped separately and united at the site to form a high-energy explosive.

Binder

Compositions that hold together a charge of finely divided particles and increase the mechanical strength of plugs or pellets of these particles when consolidated under pressure. Binders usually are resins, [plastics](#), asphaltics or hard waxes used dry or in solution.

Biological Agent

Viruses, any of certain classifications of microorganisms and toxic substance derived from living organisms used to produce death or disease in man, animals and growing plants.

Biological Warfare

Tactics and techniques of conducting warfare by use of biological agents.

Black Powder

A deflagrating or low explosive compound, consisting of a mixture of an alkali nitrate, usually potassium or sodium nitrate, mixed with charcoal and sulfur, which is mostly pressed, granulated and classified into definite grain fractions. It is easily ignited, friction sensitive, and produces dense smoke. Formerly used as a propellant before the advent of so-called smokeless powder; few remaining military uses, such as igniters, in fuzes to give short delay, in blank ammunition and as spotting charges. It deflagrates faster than it detonates; and is thus classified as a low explosive. The standard composition is: 75% potassium nitrate, 10% sulfur and 15% charcoal. There are also graded compositions containing 74, 70, 68 or 64% potassium nitrate. Corresponding compositions based on sodium nitrate are known as B-Black Powder.

Blank Ammunition

Ammunition containing no projectile but which does contain a charge of low explosive, such as black powder, to produce a noise; used in training, in signaling and in firing salutes.

Blast

Sudden air pressure created by the discharge of a gun or the explosion of a charge.

Blast Cube

Angle iron frame covered with aluminum sheets; used for testing effectiveness of blast.

Blast Shield

This is a specialty type of portable protective shield used by both bomb technicians and tactical personnel which is designed to protect the user from fragments, thermal effects and overpressure.

Blast Tube

Device used for the study of [shock waves](#) and for calibration of air-blast gages. *Shock Tube*.

Blaster

[Shot Firer](#).

Blasting Accessories

Nonexplosive devices and materials used in blasting, such as, but not limited to, cap crimpers, tamping bags, blasting machines, blasting galvanometers, and cartridge punches.

Blasting Agent

Any material or mixture consisting of a fuel (combustible) and oxidizer, intended for blasting, not otherwise classified as an explosive provided that the finished product, as mixed and packaged for shipment, cannot be detonated by a commercial grade No. 8 blasting cap.

Blasting Cap

A small thin-walled cylindrical case containing a sensitive explosive. Also called a [Detonator](#). Blasting caps serve as initiators of explosive charges. They consist of a cylindrical copper or aluminum capsule containing a primary charge of an initiating explosive or a mixture of initiating explosives (e.g. lead azide with lead trinitroresorcinate); in order to achieve a higher brisance, they also contain a secondary charge of a high brisance explosive (e.g. [Tetryl](#); [PETN](#); [Cyclonite](#)). A blasting cap can be ignited by the flame of a safety fuse or electrically, or nonelectrically (as in the case of *Shock Tube*). In the past, 10 standard types of blasting caps were marketed; these differed from each other by the quantity of the explosive in the charge and by their size. Currently, No. 8 blasting cap (0.3 g primary charge. 0.8 g secondary charge, 4-50mm in length

and 7.0 mm in external diameter) is, for all practical purposes, the main type of blasting cap on the market.

Blasting Galvanometer

An electrical resistance instrument designed specifically for testing electric detonators and circuits containing them. Along with blasting ohmmeters and blaster's multimeters, it is used to measure resistance or to check electrical continuity.

Blasting Log

A written record of information about a specific blast as may be required by law or regulation.

Blasting Machine

An electrical or electromechanical device that provides electrical energy for the purpose of energizing detonators in an electric blasting circuit.

Blasting Machine - CD type

Capacitor-Discharge Blasting Machine.

Blasting Machine - Generator type

A hand-operated electromechanical device that provides an output current to energize electric detonators.

Blasting Machine Rheostat

A graduated electrical resistance device used to simulate electric detonator resistances in the testing of blasting machines.

Block Demolition Charge

Prepackaged, high explosive charges for general demolition operations, such as tree cutting, breaching and cratering; composed of a high explosive such as *TNT*, *Tetrytol*, *Composition-C Series* and / or *Ammonium Nitrate*.

Block-Hole Method

A way of removing boulders; a hole is drilled in the top of the boulder deep and wide enough to hold the required amount of explosive.

Blowback

Escape, to the rear and under pressure, of gases formed during the firing of a gun. Blowback may be caused by a defective breech mechanism, a ruptured cartridge, or a faulty primer.

Blow-out Disk

(Safety Diaphragm) A thin metal diaphragm used as a safety measure against excess gas pressure.

Boat-tail

Rear end of a projectile that is tapered or cone-shaped and not cylindrical, as in a projectile having a square base.

Boiling Point

Boiling point, the temperature at which a substance boils, or changes from a liquid to a vapor or gas (*States Of Matter*), through the formation and rise to the surface of bubbles of vapor within the liquid. In a stricter sense, the boiling point of a liquid is the temperature at which its vapor pressure is equal to the local atmospheric pressure. Decreasing (or increasing) the pressure of the surrounding gases thus lowers (or raises) the boiling point of a liquid. The quantity of heat necessary to change 1 g of any substance from liquid to gas at its boiling point is known as its latent heat of vaporization.

Bomb

A criminal bomb is an explosive substance which is placed, dropped, thrown or projected with the unlawful intention of causing either injury, death, or destruction of property, or creating a disturbance.

Bomb Disrupter

A device which projects a fluid projectile or solid slug into an explosive package such as an I.E. D. or bomb. The intent is to decrease the density of the explosive by causing it to be spread apart from the impact of the projectile - at a speed which will be faster than the reaction time of the initiating system.

Bomb Suit

A protective suit worn by E.O.D personnel and bomb technicians when handling hazardous devices. The suit is specially designed and built to provide maximum protection to the wearer against fragments, thermal effects, overpressure and impact, which may result if a hazardous device is initiated.

Boom Powder

A pyrotechnic ignition mixture designed to produce many incandescent particles. A typical boom composition is:

| Ingredient | Parts By Weight |
|---|------------------------|
| Iron Oxide | 50 |
| Titanium (Powdered) | 32.5 |
| Zirconium (Powdered) | 17.5 |
| plus about 1 part cellulose nitrate as a binder | |

Booster

- 1) An explosive of special character, usually high strength and high detonating velocity, generally used in small quantities to improve the performance of another explosive, the latter constituting the major portion of the charge and normally a less sensitive explosive. When it is armed with a detonator, becomes a primer.
- 2) In rocketry, an auxiliary propulsion system employed in the early launching phase of a rocket vehicle or missile to attain the required speed.

Booster Charge

The final high explosive component of an explosive train which amplifies the detonation from the lead or detonator so as to reliably detonate the main high explosive charge. Also used loosely to indicate a reinforcing or augmenting charge.

Borax

Borax is sodium tetraborate decahydrate, the chemical compound ($\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$) occurring as a colorless, crystalline salt or a white powder. Borax is used as an antiseptic, cleansing agent, water softener, corrosion inhibitor in antifreeze, and flux for silver soldering, and in the manufacture of fertilizers, Pyrex glass, and pharmaceuticals.

Bore

The cylindrical, and usually rifled, portion of the gun tube, or barrel interior, extending from the forcing cone to the muzzle. Bore is used both for the inside surface of the barrel or tube of a gun, with its rifling, and for the cylindrical space enclosed by that portion of the tube.

Bore Impression

Impression of the bore of a gun tube, made with a *plastic* substance in order to determine the condition of the rifling.

Bore Premature

The explosion of a gun-launched projectile in the barrel.

Boresafe Fuze

Type of fuse having an interrupter in the explosive train that prevents a functioning until after the projectile has cleared the muzzle of a weapon.

Bottom Attack

Forms a hinge at the top of the span being demolished; as the span falls, the cut ends at the bottom move outward.

Bourellet

Finely machined band or ring of metal just behind the ogive of a projectile, designed to support the front portion of the projectile by riding the lands as the projectile travels through the bore of a gun.

Bow Wave

Ballistic Wave.

Branch Line

A length of *detonating cord*.

Breach Point

Access point to the target area.

Breaching Charges

Used to destroy concrete-slab bridges, bridge beams, bridge piers, bridge abutments, and permanent field fortifications. The size, shape, placement, and tamping or confinement of breaching charges are critical to success.

Breaching Device

A device designed to facilitate breaching activities. This may include explosive devices and mechanical devices.

Breaching Radius

(R) For external charges, it is equal to the thickness of the target being breached. For internal charges placed at the center of the target's mass, R is one half the thickness of the target. For internal charges placed less than one half the target mass thickness, R is the longer of the distances from the center of the charge to the outside of the target.

Breech

The rear part of the bore of a gun, especially the opening that permits the projectile to be inserted at the rear of the bore.

Breech-blast

Back-blast.

Breech Block

Movable steel block that closes the rear part of the barrel in a firearm.

Bridgewire

A relatively fine resistance wire incorporated into an ignition element connecting the ends of the legwires inside an electric detonator and which is imbedded in the ignition charge of the

detonator.

Bridge Waves

Mach waves caused by the interaction of two [shock waves](#) to form a third that bridges the volume between the original two.

Brisance

The performance of an explosive cannot be expressed by means of a single characteristic parameter. Brisance is the destructive fragmentation effect of a charge on its immediate vicinity. The relevant parameters are the detonation rate and the loading density (compactness) of the explosive, as well as the gas yield and the heat of explosion. The higher the loading density of the explosive (molding or pressing density), the higher its performance concentration per unit volume; also, the faster the reaction rate, the stronger the impact effect of the detonation. Moreover, an increase in density is accompanied by an increase in the detonation rate of the explosive, while the shock wave pressure in the detonation front ([Detonation](#)) varies with the square of the detonation rate. Thus it is very important to have the loading density as high as possible. This is particularly true for [Shaped Charges](#).

Kast introduced the concept of “brisance value”, which is the product of loading density, specific energy and detonation rate. Brisance tests are upsetting tests according to Kast and HeB; the compression of a copper cylinder is determined by actuating a piston instrument; alternatively, a free-standing lead cylinder is compressed by the application of a definite cylindrical load of the explosive being tested: *Upsetting Tests*.

Brisant

Sudden, sharp, violent. A descriptive term which, when applied to explosions, indicates a powerful impulse of short duration.

British Thermal Unit

British thermal unit (BTU), unit of energy required to raise the temperature of 1 lb of water by one degree Fahrenheit (from 59.5° to 60.5°F). 1 BTU = 251.996 calories = 778.26 foot-pounds = 1054.8 joules.

Broadcasting

The transmission of sound or images to a number of [Radio](#) or [Television](#) receivers.

Bruceton Analysis

A statistical analysis approach to the problem of determining as economically as possible the behavior characteristics of explosive components by using a limited number of samples to determine a reliability factor. In this test, the level of variable applied depends upon the results of the previous test.

Buffer

A solution that can keep its pH, i.e., its relative acidity or alkalinity, constant despite the addition of strong acids or bases ([Acids & Bases](#)). Buffer solutions contain either a weak acid or weak base and one of their salts. [pH](#).

Bulk Density

The mass per unit volume of bulk materials. Used in connection with packaging, storage or transportation.

Bulk Strength

The strength per unit volume of an explosive calculated from its weight strength and density.

[Strength.](#)

Bullet-Resistant

Magazine walls or doors of construction resistant to penetration of a bullet of 150-grain M2 ball ammunition having a nominal muzzle velocity of 2,700 ft/sec fired from a .30-caliber rifle from a distance of 100 ft perpendicular to the wall or door. When a magazine ceiling or roof is required to be bullet-resistant, the ceiling or roof shall be constructed of materials comparable to the sidewalls or other materials that will withstand penetration of the bullet described above when fired at an angle of 45 degrees from the perpendicular. Tests to determine bullet resistance should be conducted on test panels or empty magazines that will resist penetration of 5 out of 5 shots placed independently of each other in an area at least 3 ft. x 3 ft.

Bureau Of Mines Test

A U.S. Bureau Of Mines test for determination of the impact sensitivity of an explosive. A small sample of the explosive is placed between two hardened steel plates and a weight is dropped upon the upper plate. The figure representing the lowest height in centimeters at which at least one of ten trials results in explosion is the sensitivity index. The highest drop provided is 100 cm, so sensitivity may be given at 100+, meaning that at 100 cm, no explosion resulted.

Burning

(of propellant) [Linear Burning Rate.](#)

Burst

Explosion of a projectile in the air, or when it strikes the ground or target.

Burster

Explosive charge used to break open and spread the contents of chemical projectiles, bombs or mines.

Burster Tube

Tube that holds the burster in a chemical projectile.

Bursting Charge

Quantity of an explosive which breaks the casing of a projectile to produce demolition, fragmentation or chemical action.

Bus Wire

Expendable heavy-gauge bare copper wire used to connect detonators or series of detonators in parallel.

C

Return to [topof](#) page.

C

[Tamping Factor.](#)

C4

[Composition C4.](#)

CAD

1) Abbreviation for Cartridge Actuated Devices; lately the term Propellant Activated Devices

(PAD) has also been used.

2) Abbreviation for computer aided design.

Calcium

Calcium (Ca), metallic element, first isolated in 1808 by Sir Humphrey Davy. It is a silver-white, soft, malleable *Alkaline-Earth Metal*. The fifth most abundant element (3.64%) of the earth's crust, it is not found uncombined but occurs in numerous compounds, e.g., Apatite, Calcite, Dolomite, Iceland Spar, Limestone, and Marble. Calcium acts as a reducing agent in the preparation of other metals. It occurs in most plant and animal matter, and is essential for the formation and maintenance of strong bones and teeth. Calcium helps to regulate the heartbeat and is necessary for blood clotting. *Element; Periodic Table*.

Calculus

A branch of mathematics that studies continuously changing quantities. It was developed in the 17th century independently by Sir Isaac *Newton* and G.W. Leibniz. The calculus is characterized by the use of infinite processes, involving passage to a *Limit*. The differential calculus arises from the study of the rate at which a function, usually symbolized by y or $f(x)$, changes relative to a change in the independent variable, usually x . This relative rate can be computed from a new function—the derivative of y with respect to x , denoted by dy/dx , y' , or $f'(x)$ —arrived at by a process called differentiation. Formulas have been developed for the derivatives of all commonly encountered functions. For example, if $y = x^n$ for any real number n except -1 , then $y' = nx^{n-1}$, and if $y = \sin x$, then $y' = \cos x$. In physical applications, the independent variable is frequently time, e.g., if $s = f(t)$ expresses the relation between the distance s traveled and the time t elapsed, then $s' = f'(t)$ represents the rate of change of distance with time, i.e., the speed or velocity (*Motion*) at time t . Geometrically, the derivative is interpreted as the slope of the line tangent to a curve at a point. This view of the derivative yields applications, e.g., in the design of optical *mirrors* and *lenses* and the determination of projectile paths. The integral calculus arises from the study of the limit of a sum of elements when the number of such elements increases without bound while the size of the elements diminishes. Conventionally, the area A under the curve $y = f(x)$ between the two values $x = a$ and $x = b$ is symbolized by $A = \int_a^b f(x) dx$, called the definite integral of $f(x)$ from a to b . The area is approximated by summing the products of $f(x)$ and dx for each of the infinitely small distances (dx) that comprise the measurable distance between a and b . This method can be used to determine the lengths of curves, the areas bounded by curves, and the volumes of solids bounded by curved surfaces. The connection between the integral and the derivative is known as the Fundamental Theorem of the Calculus, which, in symbols, is $\int_a^b f(x) dx = F(b) - F(a)$, where $F(x)$ is a function whose derivative is $f(x)$. The calculus has been developed to treat functions not only of a single variable but also of several variables and is the foundation for the larger branch of mathematics known as *Analysis*.

Caliber

1) Diameter of the bore of a gun. In rifled gun bores, the caliber is obtained by measuring between opposite lands. A caliber .45 revolver has a barrel with a land diameter 45/100 of an inch.

2) Diameter of a projectile.

3) Unit of measure used to express the length of the bore of a weapon. The number of calibers is

determined by dividing the length of the bore of the weapon, from the breech face of the tube to the muzzle, by the diameter of its bore. A gun tube whose bore is 40 feet (480 inches) long and 12 inches in diameter is said to be 40 calibers long.

Calorie

A calorie (cal) is a unit of energy required to raise the temperature of one gram of water one degree Centigrade (from 14.5° to 15.5°C); 1 cal = 4.1840 joules. Nutritionists use the kilocalorie (1,000 cal) to state the heat content of food.

Calorimeter

A device for measuring heat of combustion (under compressed oxygen) or heat of explosion (under an inert gas such as [argon](#)); the latter is used for propellants, explosives and pyrochemical mixtures which react without outside oxygen, not to be mistaken for colorimeter, an apparatus to measure color.

Canister

- 1) Metal cylinder containing metal fragments which are scattered when cylinder breaks.
- 2) Cylinder containing materials for special terminal effects, such as smoke, propaganda leaflets, chaff, etc.

Canister Ammunition

Shell containing preformed metal fragments which are dispersed by the centrifugal force caused by the shell's rotation.

Cannelure

- 1) A ring-like groove in the jacket of a bullet which provides a means of securely crimping the cartridge case to the bullet; analogous to the crimping groove in artillery ammunition.
- 2) Ring-like groove for locking the jacket of an armor-piercing bullet to the core.
- 3) Ring-like groove in the rotating band of a projectile, intended to lessen the resistance offered to the gun riflings.
- 4) Groove around the base of the cartridge case, where the extractor takes hold.

Cannon

- 1) Fixed or mobile weapon, larger than small arms, that ejects its projectile by the action of an explosive. Cannon includes guns, howitzers and breech-loading mortars.
- 2) That portion of such weapon required to fire a projectile (that is, tube, breech mechanism and firing mechanism), as contrasted to that portion which supports the weapon and which is called the carriage or mount.

Cant

A leaning or tilt, to one side, of any object, militarily, the widewise tilting of a gun.

Cap

- 1) [Detonator](#), [Blasting Cap](#).
- 2) Nosepiece on a projectile.

Cap Crimper

A mechanical device for crimping the metallic shell of a fuse detonator or igniter cord connector securely to a section of inserted safety fuse.

Cap Sensitivity

The sensitivity of an explosive to initiation by a detonator. An explosive material is considered to be cap sensitive if it detonates with an IME No. 8 Test Detonator.

Cap Type

Commercial detonator types may also be abbreviated in describing the particular type of detonator:

- I Instantaneous FCA Fuse / Cap Assembly
- SP Short Period LP Long Period
- N Nonel (shock tube) EBW Exploding Bridge Wire

Capacitance

In electricity, the capability of a body, a system, or an [Electric Circuit](#) for storing electric charge. Capacitance, in units of farads, is expressed as the ratio of stored charge in coulombs to the applied potential difference in volts. In electric circuits, devices designed to store charge are called [Capacitors](#). When alternating current flows through a capacitor, the capacitor produces a reactance, inversely proportional to the capacitance, that resists the current flow ([Impedance](#)).

Capacitor

Capacitor or condenser, a device for storing electric charge. Simple capacitors usually consist of two plates made of an electrically conducting material (e.g., a metal) separated by a nonconducting material (e.g., glass, paraffin, mica, oil, or air). If an electric [Potential](#) (voltage) is applied to the capacitor plates, the plates will become charged, one positively and one negatively. If the externally applied voltage is then removed, the capacitor plates remain charged, and the electric charge induces an electric potential between the two plates. This phenomenon is called electrostatic [Induction](#). The capacity of the device for storing electric charge (i.e., its capacitance) can be increased by increasing the area of the plates, by decreasing their separation, or by varying the substance used as an insulator. The [Dielectric](#) constant is a measure of the increase in capacitance due to a particular insulator used to separate the plates. The Leyden jar, a form of capacitor invented at the University of Leiden in the 18th century, consists of a narrow-necked glass jar coated on part of its inner and outer surfaces with conductive metal foil.

Capacitor-Discharge Blasting Machine

A blasting machine in which electrical energy, stored on a capacitor, is discharged into a blasting circuit containing electric detonators.

Capillarity

Capillarity or capillary action, phenomenon in which the surface of a liquid is elevated or depressed when it comes in contact with a solid. The result depends on the outcome of two opposing forces, [Adhesion](#) and [Cohesion](#). Adhesion between glass and water causes the water to rise along a glass wall until this force is balanced by the cohesive force acting to minimize the liquid's surface area ([Surface Tension](#)). When adhesion is less than cohesion, as with glass and mercury, the surface is lowered. The upward flow of water in soil and in plants is partially caused by capillarity.

Capped Fuse

Safety fuse to which a plain detonator has been crimped.

Carbon

Carbon is a nonmetallic element, known since ancient times. Pure carbon forms are amorphous carbon (found in such sources as [Charcoal](#), [Coal](#), [Coke](#), [Lignite](#), and [Peat](#)) and the crystals [Graphite](#), a very soft, dark-gray or black, lustrous material, and [Diamond](#), the hardest substance

known. [Organic Chemistry](#) is the study of carbon compounds. All living organisms contain carbon. Carbon has seven isotopes; carbon-12 is the basis for [Atomic Weights](#); carbon-14, with a half-life of 5,730 years, is used to trace chemical reactions and to date geologic and archaeological specimens ([Dating](#)). [Carbon Dioxide](#); [Carbon Monoxide](#); [Element](#); [Periodic Table](#).

Carbon Dioxide

Carbon dioxide (CO₂), chemical compound, occurring as a colorless, odorless, tasteless gas that is about 1 1/2 times as dense as air under ordinary conditions. It does not burn and will not support combustion of ordinary materials. Its weakly acidic aqueous solution is called *Carbonic Acid*. The gas, easily liquefied by compression and cooling, provides the sparkle in carbonated beverages. Solid carbon dioxide, or dry ice, is a refrigerant. Dough rises because of carbon dioxide formed by the action of yeast and baking powder. Carbon dioxide is a raw material for photosynthesis in green plants, and is a product of animal respiration and of the decay of organic matter. Carbon dioxide occurs both free and combined in nature, and makes up about 1% of the volume of dry air. It can cause death by suffocation if inhaled in large amounts.

Carbon Monoxide

Carbon monoxide, chemical compound (CO), colorless, odorless, tasteless, extremely poisonous gas that is less dense than air under ordinary conditions. It burns in air with a characteristic blue flame, producing carbon dioxide. It is a component of the artificial fuels producer gas and water gas. As a reducing agent, it removes oxygen from many compounds and is used in the reduction of metals from ores. When air containing as little as 0.1% carbon monoxide by volume is inhaled, the oxygen of hemoglobin is replaced by the carbon monoxide, resulting in fatal oxygen starvation throughout the body.

Cartridge

- 1) A preformed unit of high explosive wrapped to a predetermined diameter and length; a plug; stick of dynamite; a soft [plastic](#) stick of AN/FO or slurry.
- 2) Round of ammunition wherein the propellant and primer are contained in a casing and in which the propellant, primer and projectile are assembled, stored, shipped and issued as a complete unit.

Cartridge Bag

Cloth bag holding the propelling charge for some types of cannon.

Cartridge Base

Container that holds the primer and propellant and to which the projectile may be affixed.

Cartridge Density

- 1) In industrial explosives, the ratio between the weight of an explosive cartridge and its volume. [Loading Density](#).
- 2) Some manufacturers indirectly give the cartridge density on the package by stating the number of standard 1 1/4 x 8" cartridges contained in a 50-pound case.
- 3) The relationship is given in the following table: Material Being Added

Cartridge Strength

[Bulk Strength](#).

Case

An outer substantial shipping container meeting DOT specifications for explosive materials.

Case Insert

A set of printed, precautionary instructions, including the IME Do's and Don'ts, which is inserted into a case of explosive materials.

Case Liner

A [Plastic](#) or paper barrier used to prevent the escape of explosive materials from a case.

Case-Bond Grain

A solid propellant grain which is cast in place in the surrounding rocket case.

Cast Loading

Loading HE shell by the pouring of molten high-explosive filler into the shell body.

Cast, Extrude, or Pressed Booster

A cast, extruded, or pressed solid high explosive used to detonate less sensitive explosive materials.

Catalyst

A substance which, in small amounts, influences a chemical reaction without chemically changing it. A substance that causes a change in the rate of a chemical reaction without itself being consumed by the reaction. Catalysts, which work by changing a reaction's activation energy, or minimum energy needed for the reaction to occur, are used in numerous industrial processes. Substances that increase the reaction rate are called positive catalysts, or simply catalysts, whereas substances that decrease the reaction rate are called negative catalysts, or inhibitors. The presence of a small amount of an acid or base may catalyze some reactions. Finely divided metals (e.g., platinum, copper, iron, palladium, rhodium) or metal oxides (e.g., silicon dioxide, vanadium oxide) may also serve as catalysts. Biological catalysts are called [Enzymes](#).

Catapult

A device designed for emergency ejection of personnel from aircraft.

Categorization

To put into any of several fundamental and distinct classes to which entities or concepts belong; a division within a system of classification.

Cathode

The negative pole of a direct current device. Opposite [Anode](#). (adj.: cathodic).

Cathode-Ray Tube

Cathode-ray tube, [Electron Tube](#) in which electrons are accelerated by high-voltage anodes, formed into a beam by focusing [Electrodes](#), and projected toward a phosphorescent screen that forms the face of the tube. The electron beam leaves a bright spot wherever it strikes the screen. To form the screen display, or image, the electron beam is deflected in the vertical and horizontal directions either by the electrostatic effect of electrodes within the tube or by magnetic fields produced by coils located around the neck of the tube. Some cathode-ray tubes, made for computer terminals [Oscilloscopes](#), and [Television](#) receivers, can produce multiple beams of electrons and have phosphor screens that can display more than one color. [Radar](#).

Cavalry

Cavalry defines mounted troops trained to fight from horseback. In use since the time of the ancient Hittites, horsemen remained at a disadvantage against well-disciplined [Infantry](#) until the

introduction (4th century AD) of the saddle. In medieval Europe the mounted knight became the typical warrior. Despite the invention of *Small Arms*, cavalry remained important in warfare until the end of the 19th century. The elite of the fighting forces in Europe, it was often recruited from the nobility and landed gentry. On the African, U.S., and British Indian frontiers the cavalry's mobility was essential against the lightly armed natives, but its value was drastically diminished by the development of rapid-fire rifles and machine guns. It was ultimately superseded by mobile *Tank* units in World War II.

Cavity Charge

Shaped Charge.

Celestial Mechanics

Celestial mechanics is the study of the motions of astronomical bodies as they move under the influence of their mutual *Gravitation*. The calculation of such motions is complicated because many separate forces are acting at once and all bodies are moving simultaneously. Celestial mechanics is based on Isaac *Newton's Laws* of motion and theory of universal gravitation. Only the problem of two isolated moving bodies mutually attracted by gravitation can be solved exactly. Because the sun is the dominant influence in the *solar system*, an application of the two-body problem leads to the simple elliptical *Orbits* as described by *Keplers Laws*, which give a close approximation of planetary motion. Problems that consider the additional effects, or perturbations, of other less dominant bodies (such as the other planets in the solar system) cannot be solved exactly except in a few special cases. Methods have been devised, however, to allow successive refinements of an approximate solution to be made to almost any degree of precision.

Cell

In electricity, a device that operates by converting chemical energy into electrical energy. A cell consists of two dissimilar substances, a positive *Electrode* and a negative electrode, and a third substance, the *Electrolyte*, that acts chemically on the electrodes. A group of cells connected together is called a battery. The *Electromotive Force*, or voltage produced between the positive and negative electrodes, depends on the chemical properties of the substances used but not on the size of the electrodes or the amount of electrolyte. When the electrodes are connected externally by a piece of wire, electrons flow from the negative electrode, through the wire, and into the positive electrode. There are several kinds of cells, differing in electrode material and electrolyte. The Leclanché cell has a zinc negative electrode, a carbon positive electrode, and an electrolyte consisting of ammonium chloride solution. It is the basis of the common dry cell, so called because the electrolyte is in the form of a paste instead of a liquid. An alkaline dry cell, which can operate up to ten times longer than common dry cells, has a zinc negative electrode, a manganese dioxide positive electrode, and an electrolyte of potassium hydroxide. A mercury dry cell, with a zinc negative electrode, a mercuric oxide positive electrode, and a potassium hydroxide electrolyte, has a constant output voltage and may be stored for many years.

Center Of Burst

Point in the air about which the bursts of several projectiles, from rounds fired under like conditions, are evenly distributed.

Center Of Burst Error

Distance between the target and center of burst.

Center Of Dispersion

Theoretical center of hits or bursts that would have been made if an unlimited number of shots had been fired with the same data. Actually it has to be considered the center of impact or bursts of all shots already fired.

Cesium

Cesium (Cs), metallic element, discovered by spectroscopy in 1860 by Robert Bunsen and Gustav Kirchhoff. Ductile, soft as wax, and silver-white, it is the most alkaline element ([Alkali Metals](#)) and the most reactive metal. Cesium metal is used in photoelectric cells and various optical instruments; cesium compounds, in glass and ceramic production. The cesium-137 radioactive isotope is used to treat cancer. [Element](#); [Periodic Table](#).

C.F.D. (Computational Fluid Dynamics Modeling.)

A method of projecting and / or analyzing the outcome of a high energy event utilizing special, computer codes.

Chaff

Electromagnetic-wave reflectors in the form of narrow metallic strips, used for creating echoes with which to confuse the enemy. ([Rope](#) and [Window](#).)

Chaff Shell

Hollow projectile containing a filler of chaff. [Chaff](#).

Chamber

Part of a gun in which the charge is placed, in a cannon, that space between the obturator or breechlock and the forcing cone. Nominally it is the space occupied by the cartridge case.

Chamber Capacity

Space available for gas expansion when the projectile is seated in position; measured from the face of the closed breech block, around the base of the projectile, to the rear of the rotating band (or obturator). In fixed ammunition, it is the volume of the cartridge case behind the projectile.

Chapman-Jouget plane

The C-J plane may be described simply as that "point" along a confined cylindrical column of explosives at which the detonation shock wave reaction is complete; and from which point onwards a permanent steady-state reaction (detonation) continues.

Charcoal

A nonvolatile residue obtained when organic matter, usually wood, is heated in the absence of air. Largely pure [Carbon](#), charcoal yields more heat per volume than wood. Charcoal obtained from bones is called bone black or animal charcoal. Finely divided charcoal, with its porous structure, efficiently filters the absorption of gases and of solids from solution. Charcoal is used in sugar refining and in water and air purification.

Charge

A given quantity of explosive.

Charge Weight

Ratio In rocket technology, the ratio of the weight of propellant to the total weight.

Chemical Agent

Solid, liquid or gas whose chemical properties produce lethal, injurious or irritant effects; a screening or colored smoke or an incendiary agent. (War gases, smokes and incendiaries are the

three main groups.)

Choking Gas

Casualty producing gas which causes irritation and inflammation of the bronchial tubes and lungs. Phosgene is an example of this type of gas.

Chord

Straight line parallel to the centerline of the projectile from the leading edge to the trailing edge of a fin; the length of that line.

Chronograph

Instrument for measuring and graphically recording small intervals of time; frequently used for measuring velocity of projectiles.

Chuffing

Intermittent or irregular burning in a solid propellant rocket motor with corresponding low frequency pressure oscillations.

Chugging

An irregular combustion of liquid fuels in a rocket engine with corresponding low frequency pressure oscillations.

Cigarette Burning

In inhibited solid propellants, burning from one end only so the burning progresses in the direction of the longitudinal axis.

Class

Classification.

Classification

The systematic arrangement in groups based on the load-carrying capacity of bridges.

Classification Of Defects

Factor introduced into the ballistic coefficient of a projectile, based on its shape.

Closed Bomb

A fixed volume chamber used for testing the pressure-time characteristics of cartridges or combustible materials.

Coal

A fuel substance of plant origin, composed largely of [Carbon](#) with varying amounts of mineral matter. Coal belongs to a series of carbonaceous fuels that differ in the relative amounts of moisture, volatile matter, and fixed carbon they contain; the most useful contain the largest amounts of carbon and the smallest amounts of moisture and volatile matter. The highest grade of coal is anthracite, or hard coal, which is nearly pure carbon and is used as a domestic fuel. Bituminous coal, or soft coal, with a lower carbon content, is used as an industrial fuel and in making [Coke](#). [Lignite](#) and [Peat](#) are the lowest in carbon content. Large amounts of coal were formed in the Carboniferous period of geological time (345 to 280 million years ago). It is thought that great quantities of vegetable matter collected and underwent slow decomposition in swamps similar to present-day peat bogs and in lagoons. The peat that formed was converted to lignite and coal by metamorphism. The pressure of accumulated layers of overlying sediment and rock forced out much of the volatile matter, leaving beds or seams of compact coal interstratified with shales, clays, or sandstones. Higher grades of coal were produced where the stress was greatest. Major U.S. coal fields are found in Appalachia, the Midwest, the Rocky Mt. region, and

along the Gulf Coast. The chief coal-producing countries of Europe are Germany, Britain, the USSR, Poland, France, and Belgium. Valuable coal deposits also exist in China, India, South Africa, and Australia.

Coefficient Of Form

Factor introduced into the ballistic coefficient of a projectile, based on its shape.

Coenzyme

A coenzyme is any of a group of relatively small organic molecules that assist certain [Enzymes](#) in their catalytic functions. Coenzymes participate in chemical reactions catalyzed by enzymes; although often structurally altered in the course of the reaction, the coenzymes are always restored to their original form. Important coenzymes include adenosine triphosphate, important in the transfer of chemical energy, and vitamins, vital to a variety of biochemical reactions in the body, including the Krebs cycle.

Cohesion

Adhesion and cohesion, attractive forces between material bodies. Adhesive forces act between different substances, whereas cohesive forces act within a single substance, holding its atoms, ions, or molecules together. Without these forces, solids and liquids would act as gases. [Surface Tension](#) in liquids results from cohesion, and [Capillarity](#) results from a combination of adhesion and cohesion. [Friction](#) between two solid bodies depends in part on adhesion.

Coke

A hard, gray, porous fuel with a high [Carbon](#) content. It is the residue left when bituminous [Coal](#) is heated in the absence of air. Coke is used in extracting metals from ores in the blast furnace.

Colored Marker Shell

Projectile containing a colored dye which is ejected by a burster charge; used for spotting, marking and signaling.

Colored Smoke

An aerosol of special dyestuffs dispersed by pyrotechnical reaction by explosion. Used for signaling and spotting.

Column Length

The length of a propellant or pyrotechnic composition.

Combustion

- 1) An exothermic chemical reaction which liberates heat and usually produces high temperature gases and light.
- 2) Any oxidation reaction, including those produced by introduction of atmospheric oxygen; many explosives are capable of burning without detonation if unconfined. Moreover, the oxidation reaction taking place in propellants without introduction of oxygen is also designated as combustion: it is preferable to denote this process as burning ([Burning Rate](#); [Deflagration](#)).

Command Post

- 1) Temporary location of issuing field commands locally.
- 2) Location where the demolition guard can best control the defense of the demolition target from the friendly side.

Commercial Explosives

Explosives designed, produced, and used for commercial or industrial applications other than for military purposes.

Common Series

Circuit Used to connect two or more electric blasting caps to a single blasting machine.

Communications Satellite

An artificial [Satellite](#) that provides a worldwide linkup of [Radio](#) and [Television](#) transmissions and [Telephone](#) service; such a satellite avoids the curvature-of-the-earth limitation formerly placed on communications between ground-based facilities. The first communications satellite was NASA's Echo 1, an uninstrumented inflatable sphere that passively reflected radio signals back to earth. The U.S. launching (1963) of the first synchronous-orbit satellite (Syncom 1) paved the way for the formation of the International Telecommunications Satellite Organization, whose successive series of Intelsat geostationary satellites have steadily lowered the cost of transoceanic communications. Domestic communications satellite systems, also geostationary, have been developed by Canada; the USSR; Indonesia. Military satellite systems have been developed by the U.S. and NATO.

Compatibility

Ability of materials to be stored intimately without chemical reaction occurring. Incompatibility may result in a loss of effectiveness or may be very hazardous. For example, Chlorate Explosives and Ammonium Nitrate Explosives are not compatible (formation of self-decomposing ammonium chlorate). For compatibility testing [Vacuum Test](#).

Complete Penetration

- 1) In the U.S. Army, penetration obtained when the projectile in the target or light through the target can be seen from the rear of the target.
- 2) In the U.S. Navy, penetration obtained when the projectile passes through the target intact or a major portion of the projectile passes through.

Complete Round

- 1) A complete round of separate-loading artillery ammunition consists of a primer, propelling charge and (except for blank ammunition) a projectile.
- 2) A complete round of fixed or semi-fixed ammunition comprises a primer, propelling charge, cartridge case and a projectile.

Composition

Specifically, a castable or moldable explosive such as Composition B. Composition C=.; also a pyrotechnic mixture. A composition may be compounded (by mixing) but the term, a compound, is better reserved to chemical individuals. "Mix" as a noun, is a vulgarism which should not be employed in lieu of "mixture" of composition.

Composition A; A-2; A-3 Pressed charges made of phlegmatized [Cyclonite \(RDX\)](#) differing from each other only by the various kinds of wax they contain. Detonation velocity, confined: 8,100 m/s = 26,600 ft/s at $r = 1.71 \text{ g/cm}^3$.

Composition B; B-2 Hexolite; Hexotol Castable mixtures of Cyclonite (RDX) and TNT in the proportion of 60 : 40; some of them contain wax as an additive. They are used as fillings for bombs, mines and [Hollow \(Shaped\) Charges](#).

density: about 1.65 g/cm^3)

detonation velocity, confined: 7800 m/s = 25600 ft/s at $r = 1.65 \text{ g/cm}^3$

Composition C; C-2; C-3; C-4 Military [plastic](#) explosive, consisting of [Cyclonite \(RDX\)](#) and a plasticizer, which itself may or may not be explosive. The respective formulations are:

| Composition | RDX % | Plasticizer % | Type |
|-------------|-------|---------------|-----------------|
| C | 88.3 | 11.7 | non-explosive |
| C-2 | 80.0 | 20.0 | explosive |
| C-3 | 78.0 | 22.0 | explosive |
| C-4 | 91.0 | 19.0 | polyisobutylene |

Composition C4

A composite explosive containing approximately 91% RDX and 9% non-explosive plasticizer. C4 is effective in temperatures between -70 and + 170 degrees Fahrenheit, but loses its plasticity in colder temperatures.

Compound

Compound, in chemistry, a substance composed of [Atoms](#) of two or more [Elements](#) in chemical combination, occurring in fixed, definite proportion and arranged in fixed, definite structures. A compound has unique properties that are distinct from the properties of its elemental constituents and of all other compounds. A compound differs from a mixture in that the components of a mixture retain their own properties and may be present in many different proportions. The components of a mixture are not chemically combined; they can be separated by physical means. A molecular compound, e.g., water, is made up of electrically neutral [Molecules](#), each containing a fixed number of atoms. An ionic compound, e.g., sodium chloride, is made up of electrically charged [Ions](#) that are present in fixed proportions and are arranged in a regular, geometric pattern called crystalline structure but are not grouped into molecules.

Computed Maximum Pressure

For any type of gun, the theoretical value of maximum pressure computed by interior ballistics formulas. When a new gun of the type in question is fired under standard conditions, with a propelling charge that will give a projectile its rated muzzle velocity, this is the pressure which should be developed.

Concentration

In chemistry, measure of the relative proportions of two or more quantities in a mixture ([compound](#)). Concentrations may be expressed in a number of ways. The simplest is in terms of a component's percentage by weight or volume. Mixtures of solids or liquids are frequently specified by weight-percentage concentrations, whereas mixtures of gases are usually specified by volume percentages. Very low concentrations, such as those of various substances in the atmosphere, are expressed in parts per million (ppm). The molarity of a [solution](#) is the number of [moles](#) of solute per liter of solution. The molality of a solution is the number of moles of solute per 1,000 grams of solvent. The mole fraction of a solution is the ratio of moles of solute to the total number of moles in the solution.

Concrete-Stripping Charge

Bulk, surface-placed charges designed to remove concrete from reinforced-concrete beams and

slabs, exposing steel reinforcement.

Conduction

Conduction is the transfer of *Heat* or *Electricity* through a substance, resulting from a difference in temperature between different parts of the substance or from a difference in electric *Potential*. Heat may be conducted when the motions of energetic (hotter) molecules are passed on to nearby, less energetic (cooler) molecules, but a more effective method is the migration of energetic free electrons. Conduction of electricity consists of the flow of charges. *Metals* are thus good conductors of both heat and electricity because they have a high free-electron density.

Confidence Level

A statistical evaluation of the percentage of statements or tests expected to be correct using a given analytical system.

Confined Detonating Fuze (CDF)

A detonating cord with a flexible outer sheath which retains the products of detonation.

Confined Detonation Velocity

The detonation velocity of an explosive material in a substantial container or a borehole.

Confinement

Confinement may be defined as an inert material of some strength and having a given wall thickness, situated in the immediate vicinity of an explosive. Priming or heating the explosive materials produces different results, according to whether they are located in a stronger or a weaker confinement. If confined by thick steel, almost any explosive will explode or detonate on being heated; on the other hand, they burn on contact with an open flame if unconfined (*Combustion; Mass Explosion Risk*), except *Initiating Explosives*.

The destructive (fragmentation) effect of an explosion becomes stronger if the explosive is confined (stemmed) in an enclosure such as a borehole. In the absence of natural confinement, the explosive charge is often embedded in an inert material such as clay. *Mud Cap, Stemming*.

Connecting Wire

Wire used to extend the *firing line* or legwires in an electric blasting circuit.

Conservation laws

Conservation laws, in physics are the basic laws that maintain that the total value of certain quantities remains unchanged during a physical process. Conserved quantities include *Mass* (or matter), *Energy*, linear Momentum, angular momentum, and electric *Charge*; the theory of *Relativity*, however, combines the laws of conservation of mass and of energy into a single law. Additional conservation laws have meaning only on the subatomic level.

Convection

Convection is the transfer of heat by the flow of a liquid or gas. A fluid expands when heated and thus undergoes a decrease in density. The warmer, less dense regions of a fluid tend to rise, in accordance with *Archimedes' Principle*, through the surrounding cooler fluid. If the heat continues to be supplied, the cooler fluid that flows in to replace the rising fluid will also become heated and will rise, setting up a convection current.

Conventional Entry / Breach Point

A normal point of entry into the target area which may include doorways, hallways, staircase, elevator.

Cook-Off

The detonation or deflagration of an explosive-filled device caused by externally applied heat.

Cooling salt

Either sodium chloride or sodium carbonate incorporated in a high explosive to reduce the heat of the explosion as in permitted (permissible) explosives. A flame-depressant, isothermic chemical.

Copper Crusher Gage

Device used to measure pressure developed in gun chamber by measuring the deformation of a copper cylinder.

Coppering

Metal fouling left in the bore of a weapon by the rotating band or the jacket of a projectile.

Cord. Detonating

Tube containing a core of high explosive.

Cordite

Double-base powder in the form of cords, composed of gun-cotton, [nitroglycerin](#) and mineral jelly, used by some foreign nations as a propellant in rounds of ammunition. Designation for double base (nitroglycerin-nitrocellulose) gun propellants in the United Kingdom.

Corrosion

Wearing away of a bore by the effect of chemical action on the material. [Erosion](#).

Cosmic Rays

The extremely high-energy subatomic particles which bombard the atmosphere from outer space. Cosmic-ray primaries seem to be mostly protons, hydrogen nuclei, but also comprise heavier nuclei. On colliding with atmospheric particles, they produce many different kinds of lower-energy secondary cosmic radiation.

Coulomb

A unit of electric charge. The absolute coulomb, the current U.S. legal standard, is the amount of charge transferred in 1 [second](#) by a current of 1 [Ampere](#); i.e., it is 1 ampere-second.

Coulomb's Law

Coulomb's law, physical law stating that the electrostatic force between two point charges in free space is proportional to the product of the amount of charge on the bodies divided by the square of the distance between them. If the bodies are oppositely charged, one positive and one negative, they are attracted toward each other; if the bodies are similarly charged, both positive or both negative, the force between them is repulsive.

Countdown

The time period in which a sequence of events is carried out to launch a rocket; the sequence of events.

Counterrecoil

Forward movement of a gun returning to firing position after recoil.

Coupling

The degree to which an explosive fills the cross section of a borehole or is in intimate contact with a target surface; in conventional drilling/load shoot operations, bulk-loaded explosives are completely coupled; untamped cartridges are decoupled; in the case of linear shaped cutting charges, these are uncoupled.

Covert Entry

A stealthful, quiet entry into the target area meant to not alert combatant(s) to the presence of the assault element(s).

Co-Volume

Used in the Nobel-Abel equation and represents the space occupied by a gas and propellant residue when compressed to a minimum volume (maximum density).

Creep

A term used to designate the forward movement of components that tends to take place during projectile flight as a result of the force caused by deceleration due to air resistance.

Crimp

The folded ends of paper explosive cartridges; the circumferential depression at the open end of a fuse cap or igniter cord connector that serves to secure the fuse; or the circumferential depression in the blasting cap shell that secures a sealing plug or sleeve into electric or nonelectric detonators.

Crimping

The act of securing a fuse cap or igniter cord connector to a section of a safety fuse by compressing the metal shell of the cap against the fuse by means of a cap crimper.

Critical Diameter

The minimum diameter for propagation of a detonation wave at a stable velocity. Critical diameter is affected by conditions of confinement, temperature, and pressure on the explosive. It is strongly texture dependent, and is larger in cast than in pressed charges. Finely dispersed gas inclusions considerably reduce the critical diameter. In the case of very insensitive materials - ammonium nitrate for example, the critical diameter may be very large. While in explosive products such as [DEXS](#) the critical diameter may be a cross-section as small as 1/64”.

Critical Humidity

The humidity at which the material is in equilibrium with its environment with respect to moisture content.

Critical Mass

Combustion, or burning, is a term usually employed to describe a reaction between a fuel and atmospheric air. This typically occurs when a small quantity of explosives burns. When a considerable quantity of explosives is burning, an adiabatic reaction may develop between the ingredients, reinforced by heat transferred from the gaseous products of the reaction. The threshold quantity of explosives so required to produce this second class of reaction is known as the “critical mass”, which has a characteristic value for each explosive substance. In quantities above the critical mass, therefore, quiescently burning explosives may suddenly spontaneously explode.

This propensity is particularly important to be aware of when destroying deteriorated or unwanted explosives by burning.

Critical Material

Something not available in sufficient quantity in war time.

Cross-Wind Force (Lift)

Component of air resistance in a direction perpendicular to the motion of the center of gravity, in the plane of yaw.

Cryogenics

Science concerned with the production and maintenance of very low temperatures, and with the effects that occur under such conditions. Although it is impossible to reach absolute zero, a temperature as low as about one millionth of a degree on the Kelvin scale above absolute zero can be attained. Low temperatures are achieved by removing energy from a substance. By using a succession of liquefied gases, a substance may be cooled to as low as 4.2°K, the boiling point of liquid helium. Still lower temperatures may be reached by successive magnetization and demagnetization. Some unusual conditions, notably [Superconductivity](#) and Superefluidity, prevail at cryogenic temperatures.

Crystal

Crystal, solid body bounded by natural plane faces that are the external expression of a regular internal arrangement of constituent atoms, molecules, or ions. The particles in a crystal occupy positions with definite geometrical relationships to each other, forming a kind of scaffolding called a crystalline lattice. On the basis of its chemistry and the arrangement of its atoms, a crystal falls into one of 32 classes; these in turn are grouped into seven systems according to the relationships of their axes. Differences in the physical properties of crystals sometimes determine the use to which they can be put in industry.

Crystal Density

Maximum density attainable for a given substance.

Current

In electricity, the flow or rate of flow of electric force in a conductor, from a point of higher potential to one of lower potential.

Current Density

The amount of electric current passing through a cross-sectional area of the conductor in a given unit of time; commonly expressed in amperes per square centimeter.

Current Leakage

Portion of the firing current bypassing part of the blasting circuit through unintended paths.

Current Limiting Device

An electric or electromechanical device that limits:

- 1) current amplitude;
- 2) duration of current flow; or
- 3) total energy of the current delivered to an electric blasting circuit.

Cutoff

A break in a path of detonation or initiation caused by extraneous interference, such as flyrock, debris, or shifting ground.

Cutting Charges

Cutting charges serve to cut through iron plates, cables, bridge trusses, etc. They are constructed on the principle of [Shaped charges](#), but are not rotationally symmetrical; their shape is that of long channels (grooves).

The cutting depth of these charges depends to a considerable extent on the thickness and lining material of the angular or semi-circular groove; in addition, the optimum distance from the target must be determined in advance.

As in rotationally symmetrical hollow charges, a jet of highly accelerated gases and metal fragments is produced.

Cyclonite

Material to be added.

Cyclotol

The name given to RDX / TNT mixtures with compositions varying between 50:50 and 75:25.
RDX and *Composition B*.

D

Return to [topof](#) page.

D-Ring

Shape of the ring pulled by either of the two Gemini astronauts to eject from spacecraft.

Dark Igniter

A priming charge of low luminosity for tracer ammunition.

Date-Shift Code

A code applied by manufacturers to the outside shipping containers, and, in many instances, to the immediate containers of explosive materials to aid in their identification and tracing.

Dating

Dating, in geology, archaeology, paleontology, and physics, is the determination of the actual or relative age of an object, of a natural phenomenon, or of a series of events. The most common and accepted method of absolute geologic dating (establishment of actual age) is based on the natural *Radioactivity* of certain minerals found in rocks; because the rate of radioactive decay of any particular *Isotope* is known, the age of a specimen can be computed from the ratio of the remaining isotope and its decay product. Relative geological dating (determination of the sequence of geological events) is accomplished by marking out the succession in which rocks were deposited, using various surface criteria. The identification of fossils in a geological sample is very useful, because certain assemblages of species are characteristic of specific geologic time periods. Pollen analysis, or palynology, can also establish the succession of deposits as well as the climate prevalent at the time of deposition. In archaeology and recent geology, the carbon-14 method, which measures the remaining amount of this radioactive isotope in organic matter, can date specimens as old as 35,000 years. The death of an organism terminates the previous incorporation of this isotope (created by *Cosmic-Ray* bombardment) at a rate equal to the isotope's known decay rate. This method's accuracy has been improved by cross-checking with dendrochronology, in which the age of a piece of ancient wood can be determined by examining the ring pattern in its cross section. The pattern of individual ring widths in a sample reflects local climatic conditions occurring at the time when the piece of wood was a growing tree. By the use of overlapping patterns found in different wood samples, dating by this method has been carried back over 8,000 years.

Dautriche Method-Detonation Velocity

A method of determining detonation velocity of an explosive material by employing detonating cord and a witness plate.

DC

Direct current.

Dead Pressed

In an explosive, a highly compressed condition which tends to prevent the transition from deflagration to detonation that would otherwise take place.

Deceleration

The act or process of moving, or if causing to move, with decreasing speed; the state of so moving.

Decelerator

Device for slowing the rotation of parachute-containing projectile before ejection of the parachute.

Decibel

A unit of air overpressure commonly used to measure air blast. The faintest audible sound is arbitrarily assigned a value of 0 dB, and the loudest sounds that the human ear can tolerate are about 120 dB. The difference in decibels between any two sounds is equal to $10 \log_{10} (P_1/P_2)$, where P1 and P2 are the two power levels.

Decimal Multiples & Submultiples

| Multiples and Submultiples | Prefixes | Symbols |
|----------------------------|----------|---------|
| 10^{18} | exa | E |
| 10^{15} | peca | P |
| 10^{12} | tera | T |
| 10^9 | giga | G |
| 10^6 | mega | M |
| 10^3 | kilo | k |
| 10^2 | hecto | H |
| 10 | deca | da |
| 10^{-1} | deci | d |
| 10^{-2} | centi | c |
| 10^{-3} | milli | m |
| 10^{-6} | micro | m |
| 10^{-9} | nano | n |
| 10^{-12} | pico | p |
| 10^{-15} | femto | f |
| 10^{-18} | atto | a |

Decomposition

The process of breaking down a material into more simple products. Disintegration, dissociation.

Deflagration

- 1) The chemical decomposition (burning) of a material in which the reaction front advances into the reacted material at less than sonic velocity.
- 2) Very rapid combustion sometimes accompanied by flame, sparks and/or spattering of burning particles. Deflagration, although classed as an explosion, generally implies the burning of a substance with self-contained oxygen so that the reaction zone advances into the unreacted material at less than the velocity of sound in the material. In this case, heat is transferred from the reacted to the unreacted material by conduction and convection. Burning rate usually less than 2,000 meters / second.

Degrassive Granulation

Propellant grain which burns with a continually decreasing surface until the grain is completely consumed.

Delay

A distinct pause of predetermined time between detonation or initiation impulses, to permit the firing of explosive charges separately. A delay may be mechanical, pyrotechnic, electronic or an explosive train component that introduces a controlled time delay in some element of the arming or functioning of a fuze mechanism.

Delay Detonator

An electric or nonelectric detonator used to introduce a predetermined lapse of time between the application of a firing signal and the detonation of the base charge.

Delay Element

An explosive train component normally consisting of a primer, a delay column and a relay detonator or transfer charge assembled in that order in a single housing.

Delay Fuze

Fuze that has a delay element incorporated in the fuze train permitting the missile to penetrate the target a distance corresponding to the delay. Such fuzes are used to permit penetration of the target before detonation or for mining effect.

Delay Interval

The nominal time between the detonations of delay detonators of adjacent periods in a delay series; the nominal time between successive detonations in a blast.

Delay Period

A designation given to a delay detonator to show its relative or absolute delay time in a given series.

Delay Series

A series of delay detonators designed to satisfy specific blasting requirements. There are basically two types of delay series: millisecond (MS) with delay intervals on the order of milliseconds, and long period (LP) with delay times on the order of seconds.

Delay Tag

A tag, band, or marker on a delay detonator that denotes the delay series, delay period, and / or delay time of the detonator.

Delay Time

The lapse of time between the application of a firing signal and the detonation of the base charge of a delay detonator.

The following chart demonstrates the delay number and its associated time in milliseconds for

particular types of detonators. NOTE: each manufacturer of delay caps may build their product to slightly different specifications, therefore a time chart should be acquired for each particular brand of detonator you may be using. The following is for CXA Delay Detonators.

| Delay Number | Constadet δ | Short Delay | Long Delay | Delay Number | Constadet δ | Short Delay | Long Delay |
|--------------|--------------------|-------------|------------|--------------|--------------------|-------------|------------|
| 0 | - | 0 | 157 | 15 | 375 | 725 | 5900 |
| 1 | 25 | 30 | 490 | 16 | 400 | 800 | 6550 |
| 2 | 50 | 50 | 800 | 17 | 425 | 875 | 7250 |
| 3 | 75 | 75 | 1125 | 18 | 450 | 950 | 8050 |
| 4 | 100 | 100 | 1400 | 19 | 475 | 1025 | |
| 5 | 125 | 128 | 1675 | 20 | 500 | 1125 | |
| 6 | 150 | 157 | 1950 | 21 | 550 | 1225 | |
| 7 | 175 | 190 | 2275 | 22 | 600 | 1400 | |
| 8 | 200 | 230 | 2650 | 23 | 650 | 1675 | |
| 9 | 225 | 280 | 3050 | 24 | 700 | 1950 | |
| 10 | 250 | 340 | 3450 | 25 | - | 2275 | |
| 11 | 275 | 410 | 3900 | 26 | 800 | | |
| 12 | 300 | 490 | 4350 | 28 | 900 | | |
| 13 | 325 | 570 | 4850 | 30 | 1000 | | |
| 14 | 350 | 650 | 5350 | | | | |

Demolition

The breaking up of artificial (man-made) structures by blasting.

Density

The density of a substance is its mass per unit volume. Because many substances, especially gases, can be compressed into a smaller volume by increasing the pressure on them, the temperature and pressure at which the density is measured are usually specified. *Specific Gravity*.

The SI unit of density is the kilogram per cubic meter (kg/m^3); the density of aluminum for instance is 2700 kg/m^3 . Another common unit of density is the gram per cubic centimeter (g/cm^3). Since $1 \text{ kg} = 1000 \text{ g}$ and $1 \text{ m}^3 = (100 \text{ cm})^3 = 10^6 \text{ cm}^3$, $1 \text{ g/cm}^3 = 10^3 \text{ kg/m}^3$. Hence the density of aluminum can also be given as 2.7 g/cm^3 .

Water at $3.98^\circ \text{ C} = 1.000000 \text{ grams/ml}$

Water at $3.98^\circ \text{ C} = 0.999973 \text{ grams/cm}^3$

Density Of Charge

Charge density refers to the mass of an explosive per unit of volume, usually expressed in grams per cubic centimeter or pounds per cubic foot. Density is an important characteristic of an explosive. Raising the density (i.e. by pressing or casting) improves brisance and detonating velocity.

Design Procedure

Outline of steps to follow in designing an item. Material being added.

Destructor

An explosive device for intentionally destroying a missile or aircraft or component thereof.

Deterrent

A material applied as a coating on grains of powder to reduce the initial rate of burning.

Detonate

A chemical reaction that progresses through an explosive at a rate exceeding the speed of sound in the reaction zone.

Detonating Agent

Explosive used to set off another explosive. Fulminate of mercury and tetryl are used as detonating agents to set off other less sensitive explosives.

Detonating Charge

Generally applied to a detonating initiator used to set off a high-explosive charge.

Detonating Cord (DC)

Cord, Detonating. A strong flexible cord containing a core of detonating explosive, used primarily for initiating a series of charges. It explodes practically instantaneously throughout its length, when initiated with a *Detonator.*

Detonating Cord Downline

The section of detonating cord that extends within the borehole from the ground surface down to the explosive charge.

Detonating Cord MS Connectors

Nonelectric, short-interval (millisecond) delay devices for use in delaying blasts that are initiated by detonating cord.

Detonating Cord Trunkline

The line of detonating cord that is used to connect and initiate other lines of detonating cord.

Detonating Explosive

High- Explosive.

Detonating Primer

A name applied for transportation purposes to a device consisting of a detonator and an additional charge of explosives, assembled as a unit.

Detonating wave

The *shock wave* set up when a detonator is ignited.

Detonation

An explosive reaction that moves through an explosive material at a velocity greater than the speed of sound in the material. A detonation is a chemical reaction given by an explosive substance in which a shock wave is formed. High temperature and pressure gradients are generated in the wave front, so that the chemical reaction is initiated instantaneously. Detonation velocities lie in the approximate range of 1,400 to 9,000 m/s = 5,000 to 30,000 ft/s; slower explosive reactions, which are propagated by thermal conduction and radiation, are known as deflagration.

A chemical reaction in which the reaction front advances with a speed which exceeds the velocity of sound in the material. In this case, energy is transmitted from the reacted to the unreacted

material by a shock wave. Burning rate usually in excess of 2,000 meters / second.

Detonation, Low Order

A chemical reaction in a detonable material in which the reaction front advances with a velocity which is appreciably lower than that which is the characteristic detonation velocity for the material in question.

Detonation Front

Wave Front.

Detonation Pressure

The pressure produced in the reaction zone of a detonating explosive.

Detonation Rate

Velocity at which the detonation wave travels through an explosive material.

Detonation Velocity

The velocity at which a detonation progresses through an explosive.

The detonation velocity is the rate of propagation of a detonation in an explosive; if the density of the explosive is at its maximum value, and if the explosive is charged into columns which are considerably wider than the critical diameter, the detonation velocity is a characteristic of each individual explosive and is not influenced by external factors. It decreases with decreasing density of packing in the column. It is measured with an electronic decade counter or by the

Dautriche Method.

Detonation Wave

The location within an explosive that is undergoing conversion (reaction) at a particular point in time, and which moves at a velocity known as the V.O.D. or Velocity Of Detonation. *V.O.D.*

Shock Wave.

Detonation Zone

That portion of a detonating explosive in which the chemical reaction is taking place comprises a chemical reaction zone preceded by a shock wave.

Detonator

An explosive train component which can be activated by either a non-explosive impulse or the action of a primer and is capable of reliably initiating high order detonation in a subsequent high explosive component of the train. When activated by a non-explosive impulse, a detonator includes the function of a primer. In general, detonators are classified in accordance with the method of initiation such as percussion, stab, electric, friction, flash chemical, etc. A cap or capsule of sensitive explosive material used to initiate a charge of high explosives. Any device containing any initiating or primary explosive that is used for initiating detonation. A commercial or may not contain more than 10 g of total explosives by weight, excluding ignition or delay charges. The term includes, but is not limited to, electric blasting caps of instantaneous and delay types, blasting caps for use with safety fuses, detonating cord delay connectors, and nonelectric instantaneous and delay blasting caps that use detonating cord, shock tube, or any other replacement for electric legwires. *Cap and Blasting Cap.*

DEMEX 100

DEMEX 400

Developed Muzzle Velocity

The actual muzzle velocity produced by any gun.

DEXS

Material to be added.

Diamond

Diamond is a mineral, one of two crystalline forms of the element [Carbon](#). It is the hardest substance known, and inferior stones are used as abrasives, in certain types of cutting tools, and as phonograph needles. Gem diamonds were first found in streambeds in India and Borneo; most now come from volcanic pipes in South Africa. Famous diamonds include the Koh-i-noor, now among the English crown jewels; the Cullinan, from which 105 stones were cut; and the blue Hope diamond. Synthetic diamonds, produced since 1955, are now widely used in industry, these are created through the utilization of explosive energy to compress carbon.

Dichromation

A chemical treatment given to metals or alloys to inhibit corrosion.

Dielectric

A material that does not readily conduct electricity, i.e., an insulator ([Insulation](#)). A good dielectric resists breakdown under high voltages, does not draw appreciable power from the circuit, and has reasonable physical stability. Dielectrics are used to separate the plates of a [Capacitor](#). The dielectric strength is a measure of the maximum voltage ([Potential](#), [Electric](#)), that a dielectric can sustain without significant [Conduction](#).

Diffraction

Diffraction is the bending of radiation (such as [light](#)) around the edge of an obstacle or by a narrow aperture. Diffraction results from the [Interference](#) of light waves that pass an opaque body, producing a fuzzy region between the shadow area and the lighted area that, upon close examination, is actually a series of light and dark lines. A diffraction grating contains many fine, parallel slits or scratches (about 12,000 per cm or 30,000 per inch) and disperses light into its colors. These gratings are used in diffracting spectoscopes. The atomic and molecular structure of crystals is examined by X-ray diffraction.

Diluent

An additive, usually inert, used to regulate burning rate or temperature.

Diode

A two-terminal device having a low [Resistance](#) to electric current in one direction and a high resistance in the reverse direction. Diodes are thus useful as [Rectifiers](#), converting alternating current ([AC](#)) into direct current ([DC](#)). Although [Electron-tube](#) diodes were once common, almost all diodes today are [Semiconductor](#) devices. In general, current flowing through a diode is not proportional to the voltage between its terminals. When the voltage applied in the reverse direction exceeds a certain value, a semiconductor diode breaks down and conducts heavily in the direction of normally high resistance. This effect can be exploited to regulate voltage. Some diodes are sensitive to light ([Photovoltaic Cell](#)). A light-emitting diode (LED) produces light as current passes through it; some LEDs can act as lasers. A thermistor is a special semiconductor diode whose conductivity increases with the diode temperature.

Disruptor

Material to be added.

Distillation

Distillation, process used to separate the substances composing a mixture; it involves a change of state, e.g., liquid to gas, and subsequent condensation ([States Of Matter](#)). A simple distillation apparatus consists of three parts: a flask in which the mixture is heated, a condenser in which the vapor is cooled, and a vessel in which the condensed vapor, called distillate, is collected. Upon heating, the substances with a higher boiling point remain in the flask and constitute the residue. When the substance with the lowest boiling point has been removed, the temperature can be raised and the process repeated with the substance having the next lowest boiling point. The process of obtaining portions (or fractions) in this way is called fractional distillation. In destructive distillation various solid substances, such as wood, coal, and oil shale, are heated out of free contact with air, and the portions driven off are collected separately. Distillation is used in refining [Petroleum](#) and in preparing alcoholic beverages.

Distribution Series

The systematic arrangement of data.

Do's and Don'ts

A list of precautions (*IME Safety Library Publication No. 4*) printed by the Institute of Makers of Explosives pertaining to the transportation, storage, handling, and use of explosive materials and inserted in cases of explosive materials and cartons of detonators.

Doppler effect

Doppler effect is the change in the wavelength (and frequency) of a wave as a result of the motion of either the source or receiver of the waves. If the source and the receiver are approaching each other, the frequency of the wave will increase and the wavelength will be shortened - sounds will be higher in pitch and light will be bluer. If the source and receiver are moving apart, sounds will become lower-pitched, and light will appear redder ([Red Shift](#)). Astronomers analyze Doppler shifts of light and radio waves to measure the velocities and (indirectly) distances of remote objects.

Double-Based Propellant

Propellant whose principle active ingredients are nitrocellulose and nitroglycerin. [Propellant](#).

Drag

Component of air resistance in the direction opposite to that of the motion of the center of gravity of a projectile.

Drill Ammunition

Ammunition without an explosive charge, used in training and practice.

Driver

A small unit similar to an explosive switch in which a piston is pushed forward by a small explosive and / or propellant charge.

Droque Gun

An explosive device designed to eject a slug which is attached to a drag parachute or similar device.

Dry Bend

Combining of fuels and oxidizers by tumbling / spatulating or rolling by remote equipment.

Dual Use (Explosive)

An explosive or more specifically an explosive product which is utilized for both civil and military applications.

Dud

An explosive device that has failed to initiate as intended.

Dummy Projectile

Shell that has no explosive charge. Dummy projectiles are used for practice and training purposes.

Dwell Time

In press loading powders into cavities, the interval of time that the powder is held at the full loading pressure.

Dynamic Entry

A description given to the assault element's rapid and aggressive movement into and / or throughout the target area.

Dynamics

Dynamics is a branch of mechanics that deals with the *Motion* of objects; it may be further divided into kinematics, the study of motion without regard to the forces producing it, and kinetics, the study of the *Forces* that produce or change motion. The principles of dynamics are used to solve problems involving work and energy, and to explain the pressure and expansion of gases, the motion of planets, and the behavior of flowing fluids (gases and liquids). Special branches of dynamics treat the particular effects of forces and motions in fluids (*Fluid mechanics*); these include *Aerodynamics*, these include the study of gases in motion, and hydrodynamics, the study of liquids in motion.

Dynamite

A high explosive used for blasting, consisting essentially of a mixture of, but not limited to, nitroglycerin, nitrocellulose, ammonium nitrate, sodium nitrate, and carbonaceous materials. Invented in 1866 by Alfred B. Nobel, dynamite is usually pressed in cylindrical forms and wrapped in an appropriate material, e.g., paper or *plastic*. The charge is set off with a detonator.

E

Return to [top](#) of page.

EBW (Exploding Bridge Wire)

A bridgewire designed to be exploded by a high energy discharge rather than being heated by applied power.

EBW Cap

Exploding bridge wire cap. Requires a special, high energy blasting machine to initiate EBW caps.

E.C. Blank Fire

E.C. Smokeless Powder.

E.C. Smokeless Powder

Orange or pink explosive powder, resembling coarse sand. It is used as a charge in small arms, in blank cartridges. Also called blank-fire powder or E.C. Blank Fire.

Eccentricity

Distance from center line to center of gravity of projectile.

Echo

Reflection of a [sound](#) wave back to its source in sufficient strength and with a sufficient time lag (at least 0.1 sec) to be separately distinguished by the human ear.

EED (Electro-Explosive Device)

Any cartridge, squib, igniter, etc., which is initiated by an electric current.

EFF

Acronym for explosive forged fragment.

EFP

Acronym for both explosive formed projectile, explosive forged projectile.

Ejection Capsule

- 1) In an aircraft or manned spacecraft, a detachable compartment serving as a cockpit or cabin which may be ejected as a unit and parachuted to the ground.
- 2) In an artificial satellite, probe or unmanned spacecraft, a box-like unit usually containing recording instruments or records of observed data which may be ejected and returned to earth by a parachute or other deceleration device.

Elastic Strength Pressure

The computed internal gas pressure in a gun which, at the section under consideration, will stress the metal in some layer of the wall tangentially, up to the minimum elastic limit which is prescribed for the metal from which the member is made.

Electric And Magnetic Units

Units used to express the magnitudes of various quantities in electricity and magnetism. Three systems of such units, all based on the [Metric System](#), are commonly used. One of these, the mksa-practical system, is defined in terms of the units of the mks system and has the [Ampere](#) of electric current as its basic unit. The units of this system - the [Volt](#), [Ohm](#), [Watt](#), and farad - are those commonly used by scientists and engineers to make practical measurements. The two other systems, now being gradually abandoned, are both based on the cgs system. Electrostatic units (cgs-esu) are defined in a way that simplifies the description of interactions between static electric charges; there are no corresponding magnetic units in this system. Electromagnetic units (cgs-emu), on the other hand, are defined especially for the description of phenomena associated with moving electric charges, i.e., electric currents and magnetic poles.

Electric Blasting Circuit

An electric circuit containing electric detonators and associated wiring; [Series Blasting Circuit](#), [Parallel Blasting Circuit](#), and [Series in Parallel Blasting Circuit](#).

Electric Circuit

An electric circuit can be described as an unbroken path along which an electric current may flow. A simple circuit consists of a voltage source, such as a battery ([Cell](#), in electricity) or a [Generator](#), whose terminals are connected to those of a circuit element, such as a [Resistor](#), through which current can flow. More complex circuits include additional sources or elements and perhaps [Switches](#), so interconnected that, when appropriate switches are closed, each element is included in a closed path that also contains a source. Series, parallel, and non-series-parallel connections are illustrated in the figure. The effective [Resistance](#) of two series-connected resistors is the sum of the individual resistances. The effective conductance (reciprocal of resistance) of two parallel-connected resistors is the sum of the individual conductances.

Electric Detonator

A detonator designed for, and capable of, initiation by means of an electric current.

Electric Primer

Metallic device containing a small amount of sensitive explosive or charge of black powder which is actuated by energizing an electric circuit. It is used for setting off explosive or propelling charges.

Electric Squib

Commercial flash-fuze device for electrical firing of burning type munitions such as smoke pots. It consists essentially of a small tube sealed with sulfur, crimped [rubber](#) or asphalt containing a small charge of powder compressed around a fine resistance wire. There are three types: open end; flash-vented; and closed end.

Electrical Storm

An atmospheric disturbance characterized by intense electrical activity, producing lightning strikes and strong electric and magnetic fields.

Electricity

Electricity describes a class of phenomena arising from the existence of charge. According to modern theory, most [Elementary Particles](#) of matter possess charge, either positive or negative. Two particles of like charge, both positive or both negative, repel each other; two particles of unlike charge are attracted ([Coulomb's Law](#)). The electric [Force](#) between two charged particles is much greater than the gravitational force between the particles. Many of the bulk properties of matter are ultimately due to the electric forces among the particles of which the substance is composed. Materials differ in their ability to allow charge to flow through them. Those that allow charge to pass easily are conductors ([Conduction](#)), whereas those that allow extremely little charge to pass through are called insulators ([Insulation](#)), or [Dielectrics](#). A third class of materials, called [Semiconductors](#), is intermediate. Electrostatics is the study of charges, or charged bodies, at rest. When a positive or negative charge builds up in fixed positions on objects, certain phenomena can be observed that are collectively referred to as static electricity. The charge can be built by rubbing certain objects together, such as silk and glass or [rubber](#) and fur; the friction between these objects causes [Electrons](#) to transfer from one to another with the result that the object losing electrons acquires a positive charge and the object gaining electrons acquires a negative charge. Electrodynamics is the study of charges in motion. A flow of electric charge constitutes an electric current. In order for a current to exist in a conductor, there must be an Electromotive Force (emf), or potential difference, between the conductor's ends. An electric [Cell](#), a [Photovoltaic Cell](#), and a [Generator](#) are all sources of emf. An emf source with an external conductor connected from one of the source's two terminals to the other constitutes an [Electric Circuit](#). Direct current (DC) is a flow of current in one direction at a constant rate. Alternating current (AC) is a current flow that increases in magnitude from zero to a maximum, decreases back to zero, increases to a maximum in the opposite direction, decreases to zero, and then repeats this process periodically. The number of repetitions of the cycle occurring each [second](#) is defined as the frequency, which is expressed in [Hertz](#) (Hz). The frequency of ordinary household current in the U.S. is 60 cycles per sec (60 Hz), and electric devices must be designed to operate at this frequency. In a solid, the current consists not of a few electrons moving rapidly but of

many electrons moving slowly; although this drift of electrons is slow, the impulse that causes it moves through the circuit, when the circuit is completed, at nearly the speed of light. The movement of electrons in a current is not steady; each electron moves in a series of stops and starts. In a direct current, the electrons are spread evenly through the conductor; in an alternating current, the electrons tend to congregate along the conductor surface. In liquids, gases, and semiconductors, current carriers may be positively or negatively charged.

Electrode

An electrode is a terminal, usually in the form of a wire, rod, or plate, through which electric current passes between metallic and nonmetallic parts of an [Electric Circuit](#). The electrode through which current passes from the metallic to the nonmetallic conductor is called the anode; that through which current passes from the nonmetallic to the metallic conductor is called the cathode. An electrode may be made of a metal, e.g., copper, lead, platinum, silver, or zinc, or of a nonmetal, commonly carbon.

Electrolysis

The passage of an electric current through a conducting solution or molten salt (either is a type of [Electrolyte](#) that is decomposed in the process. When a cathode, or negative electrode, and an anode, or positive electrode, are dipped into a solution, and a direct-current source is connected to the electrodes, the positive ions migrate to the negative electrode and the negative ions migrate to the positive electrode. At the negative electrode each positive ion gains an electron and becomes neutral; at the positive electrode each negative ion gives up an electron and becomes neutral. The migration of ions through the electrolyte constitutes the electric current flowing from one electrode to the other. Electrolysis is used in the commercial preparation of various substances, e. g., chlorine by the electrolysis of a solution of common salt, and hydrogen by the electrolysis of water. The electrolysis of metal salts is used for plating.

Electrolyte

An electrical conductor in which current is carried by [Ions](#) rather than free electrons (as in a metal). Electrolytes include water solutions of acids, bases or salts; certain pure liquids; and molten salts. [Electrolysis](#).

Electromagnet

A device in which an electric current, passing through a wire coil wrapped around a soft iron core, produces a magnetic field. The magnetic-field strength produced depends on the number of turns of the coil of wire, the size of the current, and the magnetic permeability of the core. Electromagnets lose their magnetism when the current is discontinued. [Superconductivity](#).

Electromagnetic Radiation

Electromagnetic radiation is energy radiated in the form of a *Wave* caused by an electric field interacting with a magnetic field.

Electromagnetic radiation is the result of the acceleration of a charged particle. It does not require a material medium, and can travel through a vacuum. The theory of electromagnetic radiation was developed by James Clerk Maxwell and published in 1865, although his ideas were not accepted until Heinrich Hertz proved the existence of radio waves in 1887. In order of decreasing wavelength and increasing frequency, the various types of electromagnetic radiation are [Radio waves](#), [Microwaves](#), [Infrared Radiation](#), visible [Light](#), [Ultraviolet Radiation](#), [X-Rays](#), and [Gamma Radiation](#). The possible sources of electromagnetic radiation are directly related to wavelength; long radio waves are produced by large antennas such as those used by broadcasting stations; much shorter visible light waves are produced by the motions of charges within atoms; the shortest waves, those of gamma radiation, result from changes within the nucleus of the atom. The individual quantum of electromagnetic radiation is known as the [Photon](#).

Electromotive Force

Electromotive force (emf) is the difference in electric [Potential](#), or voltage, between the terminals of a source of electricity. It is usually measured in [Volts](#).

Electron

An electron is an [Elementary Particle](#) carrying a unit charge of negative electricity. An [Atom](#) consists of a small, dense, positively charged nucleus surrounded by electrons that whirl about it in orbits, forming a cloud of charge. Ordinarily there are just enough negative electrons to balance the positive charge of the nucleus, and the atom is neutral. If electrons are added or removed, a net charge results, and the atom is said to be ionized ([Ion](#)). Atomic electrons are responsible for the chemical properties of matter ([Valence](#)). The electron was discovered in 1897 by Joseph John Thomson, who showed that cathode rays are composed of electrons. The electron is the lightest known particle having a non-zero rest mass. The positron, the electron's antiparticle ([Antimatter](#)), was discovered in 1932.

Electron Tube

Electron tube, device consisting of a sealed enclosure in which electrons flow between [Electrodes](#) separated either by vacuum (in a vacuum tube) or by an ionized gas at low pressure (in a gas tube). The two principal electrodes of an electron tube are called the anode and cathode. The simplest vacuum tube, the *Diode*, contains only these two electrodes. When the cathode is heated, it emits a cloud of electrons, which are attracted to the positive polarity of the anode and constitute the current through the tube. Because the anode is not capable of emitting electrons, no current can flow in the reverse direction, and the diode acts as a [Rectifier](#). In the vacuum triode, small signals applied to a third electrode, called a grid, placed between the cathode and anode cause large fluctuations in the current between the cathode and anode. A triode can thus act as a signal [Amplifier](#). Although formerly the key elements of [Electric Circuits](#), electron tubes have

been almost entirely displaced by [Semiconductor](#) devices. Also [Cathode-Ray Tube](#).

Element

In chemistry, substance composed of [Atoms](#) all having the same number of [Protons](#) in their nuclei. This number, called the [Atomic Number](#), defines the element and establishes its place in the [Periodic Table](#). Each element is assigned a symbol of one or two letters (see table). The total number of protons and [Neutrons](#) in the nucleus of an atom is called the [Mass Number](#). Although all atoms of an element have the same number of protons in their nuclei, they may not all have the same number of neutrons. Atoms of an element with the same mass number make up an [Isotope](#) of the element. All elements have isotopes; over 1,000 isotopes of the elements are known. As of 1989, 108 elements were known. Only 92 elements occur naturally on earth; the others are produced artificially ([Synthetic Elements](#), [Transuranium Elements](#)). The chemical properties of an element are due to the distribution of electrons around the nucleus, particularly the outer, or [Valence](#), electrons (the ones involved in chemical reactions). Chemical reaction does not affect the nucleus and thus does not change the atomic number. For this reason an element is often defined as a substance that cannot be decomposed into simpler substances by chemical means. Also [Atomic Weight](#); [Compound](#); [Molecule](#).

| Element | Symbol | Atomic Number | Atomic Weight1 | Melting Point (Degrees Centigrade) | Boiling Point (Degrees Centigrade) |
|-------------|--------|---------------|----------------|------------------------------------|------------------------------------|

1 Parentheses indicate most stable isotope for atomic weight.

2 Other proposed names are nielsbohrium (USSR) and hahnium (U 5.).

3 Other proposed names are kurchatovium (USSR) and rutherfordium (U.S.).

Elementary Particles

Elementary particles are tiny bits of matter assumed to be the most basic constituents of the universe. Certain elementary particles combine to form an *Atom*, which is the basic unit of any chemical *Element* and from which all forms of matter are built. The first elementary particle to be discovered was the *Electron*, identified in 1897 by Joseph John Thomson. The nucleus of ordinary hydrogen was subsequently recognized as a single particle and was named the *Proton*. The third basic particle in an atom, the *Neutron*, was discovered in 1932. Although models of the atom consisting of just these three particles are sufficient to account for all forms of chemical behavior of matter, *Quantum Theory* predicted the existence of additional elementary particles. A search for the positron, or antiparticle (*Antimatter*) of the electron, led to its detection in 1932, but a search for a particle predicted by Yukawa Hideki in 1935 led to the unexpected discovery of the mu meson, or muon, the following year. Yukawa's particle was finally discovered in 1947 and named the pi meson, or pion. Both the muon and the pion were first observed in *Cosmic Rays*. As the list of particles and antiparticles grew, through further study of cosmic rays and the study of the results of particle collisions produced by *Particle Accelerators*, four basic categories of particles were distinguished, according to their behavior with regard to the four fundamental forces of nature: gravitational, electromagnetic, strong nuclear, and weak nuclear. A given particle experiences certain of these forces but may be immune to others. The gravitational force is experienced by all particles. The electromagnetic force is experienced only by charged particles, although it is transmitted by the *Photon*, which has no charge. The weak and strong nuclear forces exist only at the atomic level. Of the four classes of particles, the smallest is that of the massless bosons, which include the photon, eight types of gluons, and the hypothetical graviton. The lepton class includes twelve particles: the electron, the positron, the positive and negative muons, the tauon and its antiparticle, and the neutrino or antineutrino associated with each of these particles. The bosons and the leptons are not strongly interacting. Members of the meson class are more massive than the leptons. The mesons are the “glue” that holds nuclei together. By far the largest class of particles is the baryon class, the lightest members of which are the proton and neutron; the heavier members are the hyperons. Baryons and mesons, both strongly interacting, are sometimes considered together as hadrons. A theory independently proposed in 1964 by Murray Gell-Mann and George Zweig explains the properties of all known hadrons according to the assumption that hadrons are built up of other, still more fundamental particles called *Quarks*.

Ellipse

A plane curve constituting the locus of all points the sum of whose distances from two fixed points called "foci" is constant; an elongated circle. *Conic Section*. (The orbits of planets, satellites, planetoids and comets are ellipses; center of attraction is at one focus.)

Emulsion

A blasting agent in which the AN is encapsulated by the fuel in an emulsion of water in oil. An explosive material containing substantial amounts of oxidizers dissolved in water droplets, surrounded by an immiscible fuel.

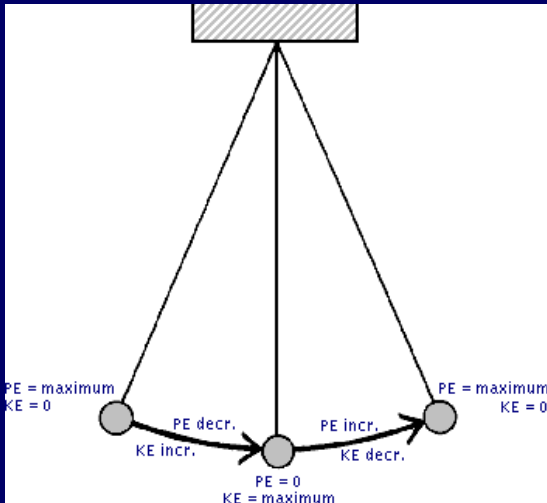

End Burning

A term used to describe a solid propellant grain which is inhibited so that it burns from one end only so that burning progresses in the direction of the longitudinal axis.

Endothermal

A reaction that occurs with the absorption of heat.

Energy

A measure of the potential for the explosive to do work. More specifically, energy in physics is the ability or capacity to do Work. Forms of energy include Heat, chemical energy, and, according to the theory of Relativity, Mass (Nuclear Energy); other forms of energy are associated with the transmission of Light, Sound, and Electricity. Energy and work are measured in the same units: Joules, ergs, electron-volts, calories, foot-pounds, or some other, depending on the system of measurement being used. When a force acts on a body, the work performed (and the energy expended) is the product of the force and the distance over which it is exerted. Potential energy is the capacity for doing work that a body possesses because of its position or condition. For example, a weight lifted to a certain height has potential energy because of its position in earth's gravitational field. Kinetic energy, the energy a body possesses because it is in motion, is equal to $1/2mv^2$, where m is its mass and v is its velocity. The average kinetic energy of the atoms or molecules of a body is measured by the Temperature of the body. Energy (or its equivalent in mass) can be neither created nor destroyed (Conservation Laws), but it can be changed from one form into another.

Energy, Sources of

In contemporary usage, energy is whatever can be efficiently converted into heat or motion to provide power to run machines and vehicles and to supply heat and light. Energy sources are of two basic types, renewable and nonrenewable. Most of the industrial world is presently powered by nonrenewable fossil fuels - coal, Petroleum, and Natural gas - that, once used, cannot be replaced. Fission Nuclear reactors are fueled by uranium or plutonium, themselves finite energy sources. Spent uranium, however, can be converted to fissile plutonium in a breeder reactor, a process that makes nuclear energy almost infinitely renewable. Nuclear technology, however, has not yet developed either failproof reactors or a safe method for disposing of nuclear wastes. The development of nuclear fusion (whose end products are harmless) has so far been hindered by the difficulties of containing the fuels (plentiful light elements such as hydrogen) at the extremely high temperatures necessary to initiate and sustain fusion. Renewable energy sources include the energy from water and wind (i.e. turbines; water wheels and windmills); geothermal energy, the earth's internal heat that is released naturally in geysers and volcanoes; tidal energy, the power released by the ebb and flow of the ocean's tides; biomass, the use of certain crops (including wood) or crop wastes either directly as fuel or as a fermentable source of fuels such as alcohol or methane; and Solar energy, which can be stored and used directly as heat, or transformed into electricity through the use of Photovoltaic cells. All these renewable energy sources are presently

being tapped in some form, but none can replace fossil fuels without huge advances in the technologies needed to exploit them.

English Units Of Measurement

English units of measurement is the principal system of a few nations, the only major industrial one being the United States. The English system actually consists of two related systems -- the U. S. Customary System, used in the United States and dependencies, and the British Imperial. Great Britain, the originator of the latter system, is now gradually converting to the [Metric System](#). The names of the units and the relationships between them are generally the same in both systems, but the sizes of the units differ, sometimes considerably. The basic unit of length is the yard (yd); the basic unit of mass (weight) is the pound (lb). Within the English units of measurement there are three different systems of weights (avoirdupois, troy, and apothecaries'), of which the most widely used is the avoirdupois. The troy system (named for Troyes, France, where it is said to have originated) is used only for precious metals. Apothecaries' weights are based on troy weights; in addition to the pound, ounce, and grain - which are equal to the troy units of the same name - other units are the dram and the scruple. For liquid measure, or liquid capacity, the basic unit is the gallon. The U.S. gallon, or wine gallon, is 231 cubic inches (cu in.); the British imperial gallon is the volume of 10 lb of pure water at 62°F and is equal to 277.42 cu in. The British units of liquid capacity are thus about 20% larger than the corresponding American units. The U.S. bushel, or Winchester bushel, is 2,150.42 cu in. and is about 3% smaller than the British Imperial bushel of 2,219.36 cu in.; a similar difference exists between U.S. and British subdivisions. The barrel is a unit for measuring the capacity of larger quantities and has various legal definitions depending on the substance being measured, the most common value being 105 dry quarts. Since the Mendenhall Order of 1893, the U.S. yard and pound and all units derived from them have been defined in terms of the metric units of length and mass, the meter (m) and the kilogram (kg); since 1959 these values are 1 yd = 0.9144 m and 1 lb = 0.45359237 kg. In the United States, the older definition of the yard as 3,600/3,937 m is still used for surveying, the corresponding foot (1,200/3,937 m) being known as the survey foot.

Enthalpy

In [thermodynamics](#), a term meaning total heat energy.

Envelope

Used to signify a container, also the overall dimensions of an item.

Environmental Testing

Tests referring to exposure of items to climatic, mechanical and other external stresses.

Enzyme

An enzyme is a protein functioning as a biological [Catalyst](#). Enzymes accelerate (often by several orders of magnitude) chemical reactions in the cell that would proceed imperceptibly or not at all in their absence. The enzyme is not permanently modified by its participation. Most enzymes demonstrate great specificity, reacting with only one or a small group of closely related chemical compounds; thus, sometimes several enzymes are required for efficient catalytic function. Some enzymes depend on the presence of [Coenzymes](#) for their function. For the enzyme to continue to be effective, its three-dimensional molecular structure must be maintained. X-ray crystallography is used to analyze the structure of enzymes. Over 1,000 different enzymes have been identified, and the exact sequence of [Amino Acids](#) (subunits of a [protein](#)) has been determined for many

proteins since 1967, when the first such determination was made. It is believed that enzymes function by attaching the substrate molecule to a specific molecular site, so that the electrostatic forces of nearby atoms sharply reduce the energy needed to cleave and re-form the appropriate chemical bonds.

Equal Section Charge

Propelling charge made up of a number of charges equal in size. The number of sections used determines the muzzle velocity and range of the projectile.

Equation Of State

An equation relating the volume, temperature and pressure of a system.

Erosion

- 1) In a solid rocket, the wearing away of the propellant due to heat, radiation and gas velocity.
- 2) Wearing away of a bore due to combined effect of gas washing, scouring and mechanical abrasion. (*Corrosion*.)

Escape Velocity

The radial speed which a particle or larger body must attain in order to escape from the gravitational field of a planet or star.

Ethanol

Ethanol, or ethyl alcohol ($\text{CH}_3\text{CH}_2\text{OH}$), a colorless liquid with characteristic odor and taste, commonly called grain alcohol or, simply, *Alcohol*. Ordinary ethanol is about 95% pure, the remaining 5% being water, which can only be removed with difficulty to give pure or absolute ethanol. Ethanol is the alcohol in beer, wine, and liquor, and can be made by the fermentation of sugar or starch. Denatured alcohol, for industrial use, is ethanol with toxic additives. Ethanol is used as a solvent in the manufacture of varnishes and perfumes; as a preservative; in medicines; as a disinfectant; and as a fuel. Ethanol is a soporific; if its presence in the blood exceeds about 5%, death usually occurs. Behavioral changes, impairment of vision, or unconsciousness occur at lower concentrations.

Ether

Ethere or aether, in physics, a hypothetical medium for transmitting *Electromagnetic radiation*, filling all unoccupied space. The theory of *Relativity* eliminated the need for such a medium, and the term is used only in a historical context.

Exosphere

The outermost, or topmost, position of the atmosphere.

Exothermal

A process characterized by the evolution of heat.

Expansion Ratio

In rocketry, the ratio of nozzle exit area to the nozzle throat area.

Expelling Charge

Quantity of propellant used in special purpose shell to eject the contents of the shell.

Explode

To be changed in chemical or physical state usually from a solid or liquid to a gas (as by chemical decomposition or sudden vaporization) so as to suddenly transform considerable energy into the kinetic form.

To be changed in chemical or physical state, usually from a solid or liquid gas (as by chemical decomposition or sudden vaporization) so as to suddenly transform considerable energy into the kinetic form *Explosion*.

Exploder

An alternative term for a fuze, usually used in connection with torpedoes.

Exploding Bridge Wire

EBW.

Explosion

A chemical reaction or change of state with the generation and extremely rapid expansion of gases, usually associated with the liberation of heat. An explosion produces a *shock wave* in the surrounding medium.

A rapid chemical reaction with the generation of high temperature and usually a large quantity of gas.

Explosive

Substance which, when subjected to heat, impact, friction or other suitable initial impulse, undergoes an explosion that is a very rapid chemical transformation, forming other more stable products entirely or largely gaseous, whose combined volume is much greater than that of the original substance. Explosives are classified as high-explosive or low-explosive, according to the rate of transformation.

Any chemical compound, mixture, or device, the primary or common purpose of which is to function by explosion.

Explosive Actuated Device

Any tool or special mechanized device that is actuated by explosives. The term does not include propellant-actuated devices. (*Propellant-Actuated Power Device*.)

Examples of explosive-actuated devices are jet tappers and jet perforators.

Explosive Bolt

A bolt that is intended to be fractured at a predetermined point by a contained or inserted explosive charge for the purpose of releasing a load. **Explosive Charge**

Predetermined quantity of explosive required to produce a specific effect. *Bursting Charge; Expelling Charge; Propelling Charge*.

Explosive Charge

The quantity of explosive material used in an explosive device, or in industrial applications refers to explosive material in a blasthole, coyote tunnel, or other form of placement.

Explosive D

Ammonium picrate, a high explosive charge that is not easily set off in transportation or in handling, etc. Sometimes it is used as a bursting charge in armor-piercing projectiles.

Explosive Entry

The utilization of explosive devices to facilitate access into a target area through a conventional or non-conventional breach point.

Explosive Logic

Material Being Added

Explosive Nut

A nut that is intended to be fractured by a contained or inserted explosive charge for the purpose

of releasing a load.

Explosive Oils

Liquid sensitizers for explosives such as nitroglycerin, ethylene glycol dinitrate, and metriol trinitrate.

Explosive Strength

The amount of energy released by an explosive upon detonation that is an indication of the capacity of the explosive to do work.

Explosive Switch

A self-contained electrically initiated small unit which causes one or more electric circuits to be opened and / or closed by "explosive" (actually propulsive) action.

Explosive Train

An arrangement of a series of combustible and explosive elements consisting of a primer, a detonator, a delay, a relay, a lead and booster charge, one or more of which may be either combined with another element or omitted. The function of the explosive train is to accomplish the controlled augmentation of a relatively small impulse into one of sufficient energy to cause the main charge of the munition to function.

A train of combustible and explosive elements arranged in order of decreasing sensitivity. The explosive train accomplishes the controlled augmentation of a small impulse into one of suitable energy to actuate the main charge. A fuze explosive train may consist of a primer, a detonator, a delay, a relay, a lead and booster charge, one or more of which may be either omitted or combined. If the bursting charge is added to the foregoing train it becomes a bursting charge explosive train. A propelling charge explosive train might consist of a primer, igniter or igniting charge, usually black powder, and finally, any of the various types of propellants. (*[Igniter Train.](#)*)

Explosive Wave

A wave of chemical action which passes through an explosive substance when it explodes; also, more accurately, detonation zone.

Exterior Ballistics

The branch of ballistics which deals with the motion of the projectile after it leaves the gun.

Extraneous Electricity

Electrical energy, other than actual firing current or the test current from a *[blasting galvanometer](#)*, that is present at a blast site and that could enter an electric blasting circuit. It includes stray current, static electricity, RF (electromagnetic) waves, and time-varying electric and magnetic fields.

F

Return to [top](#) of page.

F.A.E. (Fuel Air Explosive)

A chemical which will detonate when mixed with ambient air which is required to maintain the detonations oxygen balance. An example is propylene oxide.

Feasibility Study

A much misused and over-used term to denote the determination of the practicability, advisability

or adaptability of an item or technique for an intended purpose.

Fertilizer

A fertilizer may be an organic or inorganic material added to the soil to replace or increase plant nutrients. Organic fertilizers - including animal and green manure, fish and bone meal, guano (seabird excrement), and compost - are decomposed by soil microorganisms, and their elements are freed for plant use. Most inorganic or chemical fertilizers contain the major nutrients (nitrogen, phosphorus, and potassium) in proportions required by the crop. Properly used, fertilizers increase crop yields; they do not affect a crop's nutritive properties unless specifically intended to do so.

Fertilizer-Grade Ammonium Nitrate

A grade of ammonium nitrate as defined by The Fertilizer Institute.

Field Expedient

A material or technique which can be put together or operated from available materials and simple descriptions in emergencies especially behind lines or in guerrilla warfare.

Fin

A fixed or adjustable vane or [airfoil](#) affixed longitudinally to an aerodynamically or ballistically designed body for stabilizing purposes.

Fin Stabilization

Method of stabilizing a projectile, bomb or missile during flight by the fitting of fins.

Firing Current

An electric current of recommended magnitude and duration to sufficiently energize an electric detonator or a circuit of electric detonators.

Firing Device

Any item designed to initiate by mechanical means a blasting cap or an igniter.

Firing Line

The wire(s) connecting the electrical power source with the electric blasting circuit.

First Fire

The igniter composition used with pyrotechnic devices that is loaded in direct contact with the main pyrotechnic charge. A pyrotechnic first fire composition is compounded to produce a high temperature and hot slag. The composition must be readily ignitable and capable of igniting the underlying pyrotechnic charge.

Fixed Ammunition

Ammunition with primer and propellant powder contained in a cartridge case permanently crimped or attached to a projectile. Loaded into a weapon as a unit. Usually termed "cartridge."

Fixed Round

Round of fixed ammunition.

Flame

A chemical reaction or reaction product, partly or entirely gaseous, that yields heat and light. State of blazing combustion. A flame profile is a temperature profile of any particular flame.

Flame Temperature

[Adiabatic Flame Temperature](#).

Flammability

The ease with which an explosive material may be ignited by flames and heat.

Flare

A pyrotechnical device designed to produce a single source of intense light or radiation for relatively long durations for target or airfield illumination, signaling or other purposes.

Flash Reducer

Any material for use with a propelling charge to reduce its muzzle flash.

Flashover

The sympathetic detonation between explosive charges or between charged blastholes.

Flash Point

The lowest temperature at which vapors from a volatile combustible substance ignite in air when exposed to flame, as determined in an apparatus specifically designed for such testing.

Flat Trajectory

Trajectory with little curvature produced by a projectile with a high velocity.

Flechette

(French, "a small arrow")

- 1) An aerial dart.
- 2) A small fin stabilized missile, a large number of which can be loaded in artillery canister.
- 3) Stabilized fragment having a pointed nose and finned tail.

Flight Test Certification

A limited series of tests conducted on an item or system prior to formal qualification to determine if it meets the safety requirements.

Fluid Mechanics

A branch of [Mechanics](#) dealing with the properties and behavior of fluids, or substances that flow, i.e., liquids and gases. The larger part of the field is fluid dynamics (study of fluids in motion), which itself is divided into hydrodynamics (study of liquids in motion) and [Aerodynamics](#) (study of gases in motion).

FLSC (Flexible Linear Shaped Charge)

A flexible detonating fuse which is specially shaped to produce a cutting jet. Linear version of shaped charge.

Force

A term convenient in interior ballistic theory, which is defined as the product of the number of mols of gas per gram of propellant and the adiabatic-constant-volume flame temperature. The term force comes from the Latin word for "strength". In physics, force is defined by Newton's laws of motion and a force is considered that which can impose a change of velocity on a material body. In physics, force is described as a quantity that produces a change in the size or shape ([Strength Of Materials](#)) or the [Motion](#) of a body. Commonly experienced as a "push" or "pull," force is a vector quantity, having both magnitude and direction. Four basic types of force are known in nature. The gravitational force ([Gravitation](#)) and the electromagnetic force ([Electricity](#); [Magnetism](#)) both have an infinite range. The strong nuclear force, or strong interaction, is a short-range force holding the atomic nucleus together, and the weak nuclear force, or weak interaction, is a short-range force associated with radioactivity and particle decay. Scientists have not been able to confirm the existence of a hypothesized fifth force, a very weak force supposed to counteract gravitation. In the [Metric System](#) forces are measured in such units

as the dyne (cgs system) and the newton (mks system), which cause accelerations of, respectively, 1 cm/sec² on a 1-gram mass and 1 m/sec² on a 1-kg mass. In [English Units Of Measurement](#) the pound (lb) is used. A 1-lb force equals 444,823 dynes; 1 dyne equals 10⁻⁵ newtons.

Force = Mass X Acceleration $f = m \cdot a$

Force Cone

Tapered beginning of the lands at the origin of the rifling of a gun tube. The forcing cone allows the rotating band of the projectile to be gradually engaged by the rifling thereby centering the projectile in the bore.

Forced Entry

The utilization of force (mechanically or explosively generated) to gain entry to the target area. Generally, this term is used when discussing entry through conventional breach points, particularly doors.

Form Coefficient

Factor used in form functions to describe the ratio of burning surface to fraction burned.

Form Function

Mathematical expression relating burning rate to propellant grain geometry.

Formaldehyde

Formaldehyde or methanal (HCHO), a colorless, flammable, poisonous gas with a suffocating odor. Pure gaseous formaldehyde is uncommon, because it readily polymerizes into solid paraformaldehyde. Formalin, a 40% by volume solution of formaldehyde in water, is used as an antiseptic, disinfectant, and preservative for biological specimens. Formaldehyde is also used to make dykes, [Plastics](#), and synthetic [Resins](#).

Fragmentation

The breaking and scattering in all directions of the pieces of a projectile, bomb or grenade. The breaking of a solid mass into pieces by blasting.

Francium

Francium (Fr), radioactive element, discovered in 1939 by Marguerite Perey as a disintegration product of actinium. Some of the 21 known isotopes of this rare [Alkali Metal](#) are prepared by bombarding thorium with protons, deuterons, or alpha particles. [Element](#); [Periodic Table](#).

Frangible

A material which breaks into a powder or small fragments.

Free-Standing Grain

A solid propellant grain which is molded or extruded prior to loading into a rocket case.

Freon

Freon, trade name for any of a special class of chemical compounds used as refrigerants, aerosol

propellants, and solvents. Freons are [Hydrocarbon](#) derivatives that contain fluorine and often chlorine and bromine as well. They are generally colorless, odorless, nontoxic, noncorrosive, and nonflammable. Though usually unreactive, freons are now suspected to undergo reactions in the upper atmosphere that may damage the earth's *Ozone* layer. The most commonly used is Freon-12, or dichlorodifluoromethane (CCl_2F_2).

Friction

Friction, resistance offered to the movement of one body past another body with which it is in contact. The amount of friction depends on the nature of the contact surfaces and on the magnitude of the force pressing the two bodies together, but not on the surface area of the contact surface. The coefficient of friction is the ratio of the force necessary to move one body horizontally over another at a constant speed to the weight of the body. Fluid friction, observed in the flow of liquids and gases, is minimized in airplanes by a modern, streamlined design ([Aerodynamics](#)).

Fuel

A substance that may react with oxygen to produce combustion. In pyrotechnics, anything combustible such as sulfur, aluminum powder, iron powder, plastic binder; opposite: oxidizer.

Fuel Cell

An electric cell in which the chemical energy from the oxidation of a gas fuel is converted directly to electrical energy in a continuous process. In the hydrogen and oxygen fuel cell, hydrogen and oxygen gas are bubbled into separate compartments connected by a porous disk through which an [Electrolyte](#), such as aqueous potassium hydroxide (KOH), can pass. Inert graphite electrodes, mixed with a catalyst such as platinum, are dipped into each compartment. When the two electrodes are electrically connected, an *Oxidation* and reduction reaction takes place in the cell: hydrogen gas is oxidized to form water at the anode; electrons are liberated in this process and flow through the external circuit to the cathode, where the electrons combine with the oxygen gas and reduce it. Fuel cells have been used to generate electricity in spacecraft.

Fulminate Of Mercury

[Mercury Fulminate](#).

Fume Classification

[IME Fume Classification](#).

Fumes

The gaseous products of an explosion. For the purpose of fume classification, only poisonous or toxic gases, such as carbon monoxide, hydrogen sulfide, and nitrogen oxides are considered.

Functional Group

A functional group in organic chemistry is a group of atoms within a molecule that is responsible for certain properties of the molecule and reactions in which it takes part.

Functioning Time

In an EED, the lapsed time between application of initiating energy and some later function such as bridgewire break, case opening or start of pressure rise, peak pressure, etc.

Fuse

An igniting or explosive device in the form of a string or tube which contains a pyrochemical mixture. Slow burning fuse is called (commercially) Bickford fuse; other types; quickmatch,

firecracker fuse, detonating cord (prima cord). MDF and SCID. [Safety Fuse](#).

Fuse Cap (Fuse Detonator)

A detonator that is initiated by a safety fuse; also referred to as an ordinary blasting cap.

Fuse Cutter

A mechanical device for cutting safety fuse clean and at right angles to its long axis.

Fuse, Delay

Any fuze incorporating a means of delaying its action. Delay fuzes are classified according to the length of time of the delay.

Fuse Lighters Pyrotechnic devices for the rapid and certain lighting of safety fuse.

Fusee

Fusee is an R.R. flare or a special type of match.

Fuze

Device with explosive or pyrotechnic components designed to initiate a train of fire or detonation in a munition.

G

Return to [topof](#) page.

Galvanometer

[Blasting Galvanometer](#).

Gamma Radiation

Gamma radiation is emitted in one of the three types of natural [Radioactivity](#). It is the most energetic form of [Electromagnetic Radiation](#), with a very short wavelength of less than 10^{-10} meters. Gamma rays are essentially very energetic [X-Rays](#) emitted by excited nuclei. They often accompany alpha or beta particles, because a nucleus emitting those particles may be left in an excited (higher-energy) state. Gamma-ray sources are used in medicine for cancer treatment and for diagnostic purposes, and in industry for the inspection of castings and welds.

Gas Generator

A device in which a propellant is burned to produce a sustained flow of pressurized gas.

Gas Laws

Physical laws describing the behavior of a gas (see [States Of Matter](#)) under various conditions of volume (V), pressure (P), and absolute, or Kelvin, [Temperature](#)(T). Boyle's, or Mariotte's, gas law states that under constant temperature $PV = k_1$. Charles', or Gay-Lussac's, law states that under constant pressure $V = k_2T$. A third law states that under constant volume $P = k_3T$. The constants k_1 , k_2 , and k_3 are dependent on the amount of gas present and, respectively, on the temperature, pressure, and volume of the gas. These three laws can be combined into a single law, or equation of state: $PV = kT$ or $Pv = RT$, in which v is the specific volume equal to V/n , n is the number of moles of the gas, k is a proportionality constant, and R is the universal gas constant, equal to 8.3149×10^3 joules/kg-mole-degree in mks units. These laws are formulated for so-called ideal or perfect gases. Real gases are described more accurately by the van der Waals equation: $(P + a/v^2)(v - b) = RT$, in which (a) and (b) are specific constants for each

gas.

Gasoline

Gasoline is a light, volatile fuel oil; called petrol in Britain. A mixture of *Hydrocarbons* obtained in the fractional *Distillation* and “cracking” of *Petroleum*, it is used as a fuel for internal-combustion engines, for cooking, and as a solvent. The quality of gasoline used in engines is rated by *Octane Number*. To increase octane rating, lead additives were once widely used. Because of the possible health hazard of lead as an environmental pollutant and the harmful effect it has on pollution-control devices, however, a program was begun in the U.S. in the 1970s to change automobile design and gasoline composition, so that lead additives could be gradually eliminated.

Gauge

- 1) A measure. The dimensions of a part being machined, the amount of liquid in a container, steam pressure, etc.
- 2) The size of the bore of a firearm, especially of a shotgun, as determined by the number per pound of spherical projectiles fitting the bore.

Gauge (Wire)

A series of standard sizes such as the American Wire Gauge (AWG), used to specify the diameter of wire.

Gaussian Distribution

Normal Curve.

Gelatin Dynamite

A type of highly water-resistant dynamite characterized by its gelatinous consistency.

Generator

An electrical device used to convert mechanical energy to electrical energy. It operates on the principle of electromagnetic *Induction*. The generator moves a conductor through a magnetic field and directs the current produced by the induced voltage to an external circuit. In the simplest generator, the conductor is an open coil of wire rotating between the poles of a permanent magnet. During a single rotation, one side of the coil passes through the magnetic field first in one direction and then in the other, so that the induced current is alternating current (AC), moving first in one direction, then in the other. Each end of the coil is attached to a separate metal slip ring that rotates with the coil. Brushes resting on the slip ring pass the current to the external circuit. To obtain direct current (DC), i.e., current that flows in only one direction, a commutator is used in place of slip rings. The commutator is a single slip ring split into left and right halves that are insulated from each other and attracted to opposite ends of the coil. Current leaves the generator through the brushes in only one direction and pulsates from no flow to maximum flow and back again. In practice, generators have many coils and several magnets. The whole assembly carrying the coils is called the armature, or rotor; the stationary parts constitute the stator. Except for magnetos, which use permanent magnets, AC and DC generators use electromagnets. AC generators are often called alternators.

Gilding Metal

Copper-zinc alloy (brass) used for rotating bands.

Glow Plugs

Inserts containing high resistance wire which attain high incandescent heat when current is

passed through the wires. The heat is sufficient to ignite some propellant combinations.

Grain

A single mass of solid propellant regardless of size or shape of the final geometric configuration as used in a gas generator or rocket motor.

Grain, Free Standing

A solid propellant grain which is molded or extruded prior to loading into a rocket case.

Grains

A system of [weight](#) measurement where 7,000 grains are equivalent to one standard 16-ounce pound (0.45 kg).

Gram

Metric unit of weight, unfortunately, no generally adapted abbreviation exists; gm or g are most frequently used.

Granulation

Size and shape of grains of pyrotechnic or propellant ingredients. *Grist*.

Graphite

Graphite, also known as plumbago or black lead is a mineral, one of two crystalline forms of the element [Carbon](#), occurring in various parts of the world. Dark gray or black, greasy, and soft, with a metallic luster, it is a good conductor of electricity. It is used to make crucibles and electrodes; mixed with clay, it is the so-called lead of pencils.

Gravimetric Density

Weight of the propellant divided by the volume occupied by the propellant (includes the air space in and around propellant grains). [Bulk Density](#).

Gravitation

Gravitation is the attractive [Force](#) existing between any two particles of matter. Because this force acts throughout the universe, it is often called universal gravitation. Isaac [Newton](#) was the first to recognize that the force holding any object to the earth is the same as the force holding the moon and planets in their orbits. According to Newton's law of universal gravitation, the force between any two bodies is directly proportional to the product of their [Masses](#) and inversely proportional to the square of the distance between them. The constant of proportionality is known as the gravitational constant (symbol G) and equals 6.670×10^{-11} newton-M²/kg² in the *MKS System* of units. The measure of the force of gravitation on a given body on earth is the [Weight](#) of that body. In the general theory of [Relativity](#), gravitation is explained geometrically: matter in its immediate neighborhood causes the curvature of the four-dimensional *Space-Time* continuum. [Celestial Mechanics](#).

Greek Alphabet

| Greek Letter | Greek Name | English Equivalent | Greek Letter | Greek Name | English Equivalent |
|--------------|------------|--------------------|--------------|------------|--------------------|
| A a | Alpha | a | N n | Nu | n |

Grenade

A small explosive or chemical missile designed to be thrown by hand or projected from a special launcher, usually fitted to a rifle or carbine.

Grist

Particle size of pyrotechnic material. *Granulation*.

Grommet

- 1) Device to protect the rotating band of projectiles.
- 2) An eyelet of firm material to strengthen or protect something passed through it.

Ground vibration

Shaking of the ground, by elastic waves emanating from a blast; usually measured in inches per second of particle velocity.

G-Series War Gases

Group of persistent blood and nerve poisons which are highly toxic and practically odorless. GA, GB and GD are members of the G-series.

Guillotine

An explosive device designed to cut by driving a hardened knife through a cable or line.

Guncotton

Nitrocellulose containing 13 percent or more of nitrogen.

Gunpowder

Material to be added.

H

Return to [top](#) of page.

Halogen

Any of the five chemical elements in group VIIa of the *Periodic Table*. Fluorine, Chlorine, Bromine, Iodine, and the radioactive Astatine are nonmetallic, monovalent negative ions and exist in pure form as diatomic molecules. The first four elements exhibit an almost perfect gradation of physical properties. Fluorine is the least dense and chemically the most active, displacing other halogens from their compounds and oxygen from water. Iodine is the least

active. The halogens form numerous compounds with each other, and with other elements, such as hydrogen halides, metal halides (*Salts*), and halocarbons.

Hangfire

The detonation of an explosive charge at some nondetermined time after its normally designed firing time.

Temporary failure or delay in the action of a primer, igniter or propelling charge; for a few seconds it cannot be distinguished from a complete failure or misfire.

Hangfire Test

A test to determine uniformity and promptness of fire of a type of ammunition.

HC Mixture

Solid non-persistent screening smoke that, when burning, produces a grayish white smoke having a sharp, acrid odor; toxic if released in sufficient quantities in enclosed places; used in bombs, shells, grenades and smoke pots. The smoke is cool burning as contrasted with white phosphorous and tends to cling to the earth.

HE

High explosive (dynamite).

Heat

The internal *Energy* of a substance, associated with the positions and motions of its component molecules, atoms, and ions. The average kinetic energy of the molecules or atoms, which is due to their motions, is measured by the *Temperature* of the substance; the potential energy is associated with the state, or phase, of the substance (*States Of Matter*). Heat energy is commonly expressed in *Calories*, *British Thermal Units* (BTU), or *Joules*, (*Work*). Heat may be transferred from one substance to another by three means: *Conduction*, *Convection*, and *Radiation*. Also *Heat Capacity*; *Specific Heat*; *Thermodynamics*.

Originally an abbreviation for "high explosive antitank." A term used to designate high explosive ammunition containing a shaped charge. *High-Explosive Antitank Shell*.

Heat Capacity

Heat capacity or thermal capacity, ratio of the change in *Heat* energy of a unit mass of a substance to the change in *Temperature* of the substance. The heat capacity is a characteristic of a substance; it is often expressed in *Calories* per gram per degree Celsius or *British Thermal Units* per pound per degree Fahrenheit. Also *Specific Heat*.

Heat Of Combustion

Heat evolved in the complete oxidation of a substance under standard conditions of pressure and temperature.

Heat Of Explosion

Heat evolved in burning (exploding) a sample in a combustion bomb in an inert atmosphere under standard conditions of pressure and temperature. Products of explosion vary with the oxygen balance of the sample.

Heat Of Formation

Heat evolved, or absorbed, when a compound is formed by combination of its elements.

Heat Of Reaction

Heat evolved when a sample is burned in a combustion bomb in an atmosphere of helium or

other inert gas.

Heat Test

Accelerated stability test of an explosive material.

Helium

(He), gaseous element, first observed spectroscopically in the sun during a solar eclipse in 1868. Its noncombustibility and buoyancy make this extremely unreactive, *Inert Gas* the most suitable of gases for balloons and airships. Deep-sea divers often breathe a helium-and-oxygen mixture; because helium is less soluble in human blood than *nitrogen*, its use reduces the risk of the bends. Liquid helium is essential for low-temperature work Cryogenics, *Superconductivity*. Helium is also used in arc welding and gas-discharge lasers. Abundant in outer space, helium is the end product of fusion processes in stars.

HEP Shell

High-Explosive Plastic Shell.

Hermetic Seal

A seal made impervious to air and fluids.

Hertz (Hz)

A synonym for “cycles per second”. Hertz, Heinrich Rudolf, 1857–94, German physicist. He confirmed James Clerk Maxwell’s electromagnetic theory and produced and studied electromagnetic waves (radio waves), which he showed are long transverse waves that travel at the speed of light and can be reflected, refracted, and polarized like light. The unit of frequency, the hertz, is named for him.

High-Angle Fire

Fire delivered at elevations greater than the elevation of maximum range, its range, therefore, decreasing as the angle of elevation is increased. Mortars deliver high angle fire.

High Explosive (HE)

Explosive which undergoes an extremely rapid chemical transformation thereby producing a high order detonation and shattering effect. High explosives are used as bursting charges for bombs, projectiles, grenades, mines and for demolition.

High Explosives

Explosives that are characterized by a very high rate of reaction, high pressure development, and the presence of a detonation wave in the explosive.

High Explosive Antitank (HEAT)

Shell Ammunition for defeat of armor by use of a shaped charge.

High Explosive Plastic (HEP)

Shell Shell with deformable nose, designed to contain a *plastic explosive*, for use against armor; shock transmitted through the armor causes the back of armor plate to spall. Also referred to as Squash-Head Shell.

High Explosive Shell

Projectile with a bursting charge of high explosive, used against personnel and material.

High Order Detonation

A detonation rate equal to or greater than the stable detonation velocity of the explosive.

Histogram

A graph whose axes are the frequency of measurements and the actual measured values.

Hivelite

A high velocity ignition propagation fuse (deflagrating).

HMX

Homocyclonite family; specifically cyclotetramethylenetetranitramine, the U.S name for [Octogen](#), as an acronym for High Melting Explosive, and in the UK as Her Majesty's Explosive. [Octogen](#).

HNS

Abbreviation for hexanitrostilbene, also called hexanitrodiphenylethylene. A heat resistant explosive, commonly used in deep well charges found in the oil field or in applications requiring the explosive to withstand significant temperatures before initiation. $C_6H_2(NO_2)_3$. [Molecular weight](#) 450.24, nitrogen content 18.67%, melting point 316°C; detonating velocity 7000 m/s at density of 1.7 g/cc. Made in type I and type II and grades A and B. Differences between type I and type II is primarily the particle size (type I, 1-5 microns, type II, 100 - 300 microns). HNS has a uniquely small critical diameter of 0.020". It is relatively insensitive to heat, spark, impact and friction, yet it finds wide use as a heat resistant booster charge for military applications.

Howitzer

A weapon firing slower than a gun and faster, but at lower angle, than a mortar.

Hubble's law

Hubble's law, statement that the greater the distance between any two *Galaxies*, the greater their relative speed of separation. In other words, the universe is expanding roughly uniformly. This empirical finding is more consonant with the big bang theory of the universe's origin than with the steady state theory (*Cosmology*). The law was first proposed in 1929 by Edwin *Hubble*, who observed that the more distant a galaxy, the greater is its [Red Shift](#) and hence its velocity relative to our galaxy.

Hydrodynamics

The study of liquids in motion.

Hydrocarbon

A hydrocarbon is any organic compound composed solely of [Carbon](#) and [Hydrogen](#). Hydrocarbons include aliphatic compounds, in which the carbon atoms form a chain, and [Aromatic Compounds](#), in which the carbon atoms form stable rings. The aliphatic group is divided into alkanes (e.g., [Methane](#) and [Propane](#)), alkenes, and alkynes (e.g., [Acetylene](#)), depending on whether the molecules of the compounds contain, respectively, only single bonds, one or more carbon-carbon double bonds, or one or more carbon-carbon triple bonds. [Petroleum](#) distillation yields useful fractions that are hydrocarbon mixtures, e.g. [Natural Gas](#), [Gasoline](#), [Kerosene](#), home heating oil, lubricating oils, [Paraffin](#), and asphalt. Coal [Tar](#) is also a source of hydrocarbons. Hydrocarbon derivatives contain additional elements, e.g., oxygen, and include [Alcohols](#), aldehydes, ketones, carboxylic acids, and halocarbons.

Hydrogen

Hydrogen (H) is a gaseous element, discovered by Henry Cavendish in 1766. The first element on the [Periodic Table](#), hydrogen is colorless, odorless, tasteless, slightly soluble in water, and highly explosive. The hot flame produced by a mixture of oxygen and hydrogen is used in

welding, and in melting quartz and glass. Normal hydrogen is diatomic ([Allotropy](#)). The most abundant element in the universe, hydrogen is the major fuel in fusion reactions of the [Sun](#) and other [Stars](#). Atmospheric hydrogen has three isotopes: protium (nucleus: one proton), the most common; deuterium, or heavy hydrogen (nucleus: one proton and one neutron), used in particle accelerators and as a tracer for studying chemical-reaction mechanisms; and tritium (nucleus: one proton and two neutrons), a radioactive gas used in the hydrogen bomb, in luminous paints, and as a tracer. Hydrogen's principal use is in the synthesis of [Ammonia](#); liquid hydrogen has been greatly used as a rocket fuel, in conjunction with oxygen or fluorine. Deuterium oxide, or heavy water, is used as a moderator in nuclear reactors. [Element](#).

Hydrogen Bomb

A weapon deriving a large portion of its energy from the nuclear fusion of hydrogen isotopes. In fusion, lighter elements are joined together to form heavier elements, and the end product weighs less than the components forming it. The difference in mass is converted into energy. Because extremely high temperatures are required to initiate fusion reactions, a hydrogen bomb is also known as a thermonuclear bomb. The presumable structure of a hydrogen bomb is as follows: an [Atomic Bomb](#) is surrounded by a layer of lithium deuteride (a compound of lithium and deuterium) and then by a tamper, or thick outer layer, frequently of fissionable material, that holds the contents together in order to obtain a larger explosion. The atomic explosion produces neutrons that fission the lithium into helium, tritium, and energy, and also produces the extremely high temperature needed for the subsequent fusion of deuterium with tritium, and tritium with tritium. Explosion of the neutron bomb, which has a minimal atomic trigger and a nonfissionable tamper, produces blast effects and a hail of lethal neutrons but almost no radioactive fallout. The first thermonuclear bomb was exploded in 1952 at Enewetak by the U.S., the second in 1953 by the USSR. Also [Nuclear](#).

Hydrology

Hydrology, study of water and its properties, including its distribution and movement in and through the land areas of the earth. The hydrologic cycle consists of the passage of water from the oceans into the atmosphere; onto, through, and under the lands; and back to the ocean. Hydrology is mainly concerned with the part of the cycle that follows the precipitation of water onto the land and precedes its return to the oceans. Also [Meteorology](#); [Oceanography](#).

Hydrolysis

Hydrolysis is a chemical reaction of a compound with [Water](#), usually resulting in the formation of one or more new compounds. The most common hydrolysis occurs when a salt of a weak acid or weak base (or both) is dissolved in water. Water ionizes into negative hydroxyl ions (OH^-) and positive hydrogen ions (H^+), which become hydrated to form positive hydronium ions (H_3O^+). The salt also breaks up into positive and negative ions, and the formed ions recombine.

Hygroscopicity

The tendency of a substance to absorb any available moisture from its surroundings; specifically the absorption of water vapor from the atmosphere.

Hydroxide

Hydroxide, chemical compound that contains the hydroxyl ($-\text{OH}$) radical. The term refers especially to inorganic compounds. Organic compounds that have the hydroxyl radical as a

functional group are referred to as [Alcohols](#). Most metal hydroxides are bases. [Alkali Metals](#) hydroxides, such as sodium hydroxide (NaOH), are strong bases and are very soluble in water. The [Alkaline-Earth Metal](#) hydroxides are less basic, and magnesium hydroxide (Milk of Magnesia) is only slightly basic. Some hydroxides, such as aluminum hydroxide {Al(OH)₃}, exhibit [Amphoterism](#).

Hypergolic

A two-component propellant system which is capable of spontaneous ignition upon contact.

Hypervelocity

[Muzzle velocity](#) of an artillery projectile of 3,500 feet per second or more.

Hypervelocity Armor-Piercing (HVAP)

Ammunition which embodies a core of hard, dense material (such as tungsten carbide) within a shell of light material (such as aluminum). Its light overall weight permits it to be fired safely at very high velocities. The velocity is rapidly lost, but at short ranges, it is effective against armor.

Hypervelocity Armor-Piercing Discarding Sabot (HVAPDS) Ammunition

Ammunition which embodies a [Hypervelocity](#), armor-piercing subcaliber projectile within discarding sabot. [Sabot](#).

Hypervelocity Armor-Piercing Discarding Sabot Fin-Stabilized (HVAPDSFS) Ammunition

Ammunition which embodies hypervelocity, armor-piercing, subcaliber, fin-stabilized projectile within a discarding sabot. [Sabot](#).

I

Return to [top](#) of page.

I.E.D.'s

An acronym for improvised explosive device - a term used to describe a homemade bomb or homemade explosive booby trap.

Igniter

Device containing a ready burning composition, used to amplify the ignition of a propelling charge by a primer. Also sometimes used to amplify the initiation of a primer in the functioning of certain types of fuzes and burster charges.

Igniter Cord

A small-diameter pyrotechnic cord that burns at a uniform rate with an external flame and used to ignite a series of safety fuses.

Igniter cord (IC)

A cord filled with thermite for readily igniting a multiplicity of safety fuses in sequence.

Igniter Train

Step-by-step arrangement of charges in pyrotechnic bombs, shells, etc., by which the initial fire from the primer is transmitted and intensified until it reaches and sets off the main charge. An explosive bomb, projectile, etc., uses a similar series, called an explosive train.

Igniting Mixture

Chemical mixture used in pyrotechnics.

Igniting Primer

Primer designed to be initiated by flame from another primer. Sometimes used in subcaliber guns so as to permit drill or practice with the regular primer.

Ignition Cartridge

Igniter in cartridge form which may be used alone or with additional propellant increments as a propelling charge for certain mortar ammunition.

Ignition System

The system associated with rocket engines which provides for igniting the propellant.

Illuminant Composition

A mixture of materials used in the candle of a pyrotechnic device to produce a high intensity light as its principal function. Materials used include a fuel (reducing agent), an oxidizing agent and a binder plus a color intensifier and waterproofing agent. The mixture is loaded under pressure in a container to form the illuminant charge.

Illuminating Shell

Projectile with a time fuze that sets off a parachute flare at any desired height; used for lighting up an area.

IME Fume Classification

A classification indicating the amount of poisonous or toxic gases produced by an explosive or blasting agent. The IME Fume Classification is expressed as follows: Cubic Feet of Poisonous Gases Per (1 1/4" x 8") Cartridge.

Impact Fuze

Fuze designed to function on impact.

Impact Sensitivity

Material to be added.

Impedance

Impedance in electricity is a measure of the degree to which an electric circuit resists electric-current flow when a voltage (*Potential, Electric*) is impressed across its terminal. Impedance, expressed in OHMS, is the ratio of the voltage impressed across a pair of terminals to the current flow between those terminals. In direct-current (DC) circuits, impedance corresponds to *Resistance*. In alternating-current (AC) circuits, impedance is a function of resistance, *Inductance*, and *Capacitance*. Inductors and *Capacitors* build up voltages that oppose the flow of current. This opposition, called reactance, must be combined with resistance to find the impedance. The reactance produced by inductance is proportional to the frequency of the alternating current, whereas the reactance produced by capacitance is inversely proportional to the frequency. In order to transfer maximum electrical power from one device to another, the two impedances must be matched. Also *Ohm's Law*.

Implosion

The opposite of explosion; an inward burst of particles, fragments, etc., due to reduced pressure.

Impulse

In rocketry, product of the average thrust (in pounds or kilograms) by the burning time (in *seconds*).

Incendiary

- 1) Chemical agent used primarily for igniting combustible substances with which it is in contact by generating sufficient heat to cause ignition.
- 2) Filling for incendiary munitions such as shells, bombs, grenades and flame throwers.

Incendivity

The property of an igniting agent (e.g., spark, flame, or hot solid) whereby the agent can cause ignition.

Increment

A package of propellant, forming part of the full propelling charge, which may be removed to reduce the velocity or range. [Multisection Charge](#).

Indicators, Acid-Base

Organic compounds that in water solution exhibit color changes indicative of the acidity or basicity of the solution ([Acids & Base](#)). [Litmus](#), for example, is red in acidic solution and blue in basic. Other common indicators are phenolphthalein and methyl orange.

Induction

Induction in [Electricity](#) and [Magnetism](#) is a common name for three distinct phenomena. Electromagnetic induction is the production of an [Electromotive Force](#) (emf) in a conductor as a result of a changing magnetic field about the conductor. Such a variation may be produced by relative motion between the conductor and the source of the magnetic field, as in an electric [Generator](#), or by varying the strength of the entire field. Changing the current in a given circuit can also induce emf in a nearby circuit unconnected with the original circuit; this is called mutual induction and is the basis of the [Transformer](#). Electrostatic induction is the production of an unbalanced electric charge on an uncharged metallic body as a result of a charged body being brought near it without touching it. If the charged body is, e.g., positively charged, electrons in the uncharged body will be attracted toward it; if the opposite end of the body is then grounded, electrons will flow into it to replace those drawn to the other end. The body thus acquires a negative charge after the ground connection is broken. Magnetic induction is the production of a magnetic field in a piece of unmagnetized iron or other ferromagnetic substance when a magnet is brought near it. The magnet causes the individual particles of the iron, which act like tiny magnets, to line up so that the sample as a whole becomes magnetized.

Inert

Descriptive of condition of a device that contains no explosive, pyrotechnic or chemical agent.

Inert Gas

Inert gas or noble gas, any of the elements in group 0 of the [Periodic Table](#). In order of increasing atomic number, they are [Helium](#), [Neon](#), [Argon](#), [Krypton](#), [Xenon](#), and [Radon](#). Sometimes called the rare gases (although argon makes up 1% of the atmosphere), they are colorless, odorless, and tasteless. Inert gases have very low chemical activity because their outermost, or valence, electron is complete, containing two electrons in the case of helium and eight in the remaining cases.

Inertia

Inertia, in physics, the resistance of a body to any alteration in its state of [Motion](#), i.e., the resistance of a body at rest to being set in motion or of a body in motion to any change of speed

or direction of motion. Mass.

Infantry

An infantry is a body of soldiers who fight on foot, as distinct from [Cavalry](#) or other branches of an [Army](#). In ancient times, the relative military value of infantry fluctuated. The Romans are believed to have made the most effective use of the foot soldier, but with the decline of Rome cavalry became dominant in war, remaining so until firearms were introduced in the mid-14th century. Armed with muskets, and then rifles, troops fought in mass formation until the early 20th century, when trench warfare and automatic weapons affected deployment. Aircraft, [Tanks](#), and [Artillery](#) supported a massive use of infantry in WW II. Despite the innovations in weaponry since then, strategists continue to regard the infantry as the indispensable factor in military victory.

Infrared Radiation

Infrared radiation is [Electromagnetic Radiation](#) having a wavelength in the range of 750 to 1,000,000 nanometers, thus occupying that part of the electromagnetic spectrum with a frequency less than that of red visible [Light](#) and greater than that of [Microwaves](#). Infrared radiation is thermal, or heat, radiation, and is produced by any body having a temperature above absolute zero. It has many of the same properties as visible light, such as being reflected or refracted.

Inhibited Propellant

A propellant grain in which a portion of the surface area has been treated to control the burning.

Inhibitor

A material applied to the surface(s) of propellant grains to prevent burning on the coated surface (s).

Initial Air Space

Volume of gun chamber not occupied by propellant when gun is loaded for firing.

Initial Velocity

The starting highest velocity, referred to as V_1 . [Muzzle Velocity](#).

Initiate, to

The act of detonating a high explosive by means of a detonator or by detonating cord.

Initiating Explosive

Material to be added.

Initiation

As applied to an explosive item, the beginning of the deflagration or detonation of the explosive; the first action in the first element of an explosive train.

The act of causing an explosive material to detonate or deflagrate.

Initiator

Small quantity of very sensitive and powerful explosive used to start the detonation of another less sensitive explosive. [Mercury fulminate](#), lead azide and tetryl are the principal high explosives used as initiators.

Initiator

A detonator or detonating cord used to start detonation in an explosive material.

Instantaneous Detonator

A detonator that has a firing time of essentially 0 sec as compared to delay detonators with firing

times of from several milliseconds to several seconds.

Instantaneous Fuze

One which will burst the projectile on the outside of a hard surface (such as a concrete emplacement) before penetration or ricochet. This fuze will give some crater on hard ground.

[*SuperQuick Fuze.*](#)

Institute of Makers of Explosives (IME)

A nonprofit safety-oriented trade association representing leading producers of commercial explosive materials in the United States and Canada and dedicated to safety in the manufacture, transportation, storage, handling, and use of explosive materials.

Institute of Makers of Explosives No. 8 Test Detonator

IME No. 8 test detonator has 0.40 - 0.45 g of PETN base charge pressed to a specific gravity of 1.4 g/cc and primed with standard weights of primer, depending on manufacturer.

Insulation

A material used to inhibit or prevent the [Conduction](#) of heat or of electricity. Common heat insulators are asbestos, cellulose fibers, feathers, fiberglass, fur, stone, wood, and wool; all are poor conductors of heat. In the conduction of electricity from point to point, the conductor acts as a guide for the electric current and must be insulated at every point of contact with its support to prevent escape, or leakage, of the current. Good electrical insulators, or [Dielectrics](#), include dry air, dry cotton, glass, paraffin, porcelain, resin, [rubber](#), and varnishes.

Integrated Circuit

Integrated circuit, [Electric Circuit](#) or module packaged as a single unit with leads extending from it for input, output, and power-supply connections. All the electronic devices are formed by selective treatment (doping) of a single chip of [Semiconductor](#) material. Integrated circuits are categorized according to the number of [Transistors](#) or other active circuit devices they contain; an active circuit device is one that receives power from a source other than its input signal. An ordinary integrated circuit (IC) may contain up to several tens of such devices; a medium-scale integrated circuit (MSI), many tens to several hundred; a large-scale integrated circuit (LSI), several hundred to a few thousand; and an extra-large integrated circuit (ELSI), a few thousand or more.

Interface

A common boundary between one component and another.

Interference

Interference, in physics, the effect obtained when two systems of [Waves](#) reinforce, neutralize, or in other ways interfere with each other. Interference is observed in waves both in a material medium (such as [Sound](#)) and in [Electromagnetic Radiation](#). Constructive interference occurs when two waves in the same phase combine. The waves reinforce each other, and the amplitude of the resulting wave is equal to the sum of the amplitudes of the interfering waves. When the phases of the two waves are shifted over 180°, i.e., the maximum positive amplitude of one wave coincides with the maximum negative amplitude of the other wave, destructive interference occurs, which results in the cancelling of the waves when they have the same amplitude.

[Diffraction.](#)

Interior Ballistics

Subdivision of the study of ballistics which deals with that part of the phenomena within the chamber and bore of a weapon associated with imparting kinetic energy to missiles. [Ballistics](#).

Inventory

A listing of all explosive materials stored in a magazine.

Ion

An ion is an atom, or group of atoms, having a net electric charge, acquired by gaining or losing one or more electrons or protons. A simple ion consists of only one charged atom; a complex ion consists of an aggregate of atoms with a net charge. Because the electron and proton have equal but opposite unit charges, the charge of an ion is always expressed as a whole number of positive or negative unit charges. If an atom or group loses electrons or gains protons, it will have a net positive charge and is called a cation. If an atom or group gains electrons or loses protons, it will have a net negative charge and is called an anion. Also [Acids & Bases](#) [Electrolyte](#).

IR

Infrared; heat radiation of longer wave length than visible light. Used for tracking, spotting and simulation.

Isobaric Flame Temperature

The temperature of a propellant flame under constant pressure conditions. [Adiabatic Flame Temperature](#).

Isochoric Flame Temperature

The temperature of a propellant flame under constant volume conditions. [Adiabatic Flame Temperature](#).

Isomer

Isomer, in chemistry, one of two or more compounds having the same molecular formula (i.e., the same number of atoms of each element in a molecule) but different structures (arrangements of atoms in the molecule). Isomers have the same number of atoms of each element in them and the same [atomic weight](#) but differ in other properties. Structural isomers, e.g., [Ethanol](#) ($\text{CH}_3\text{CH}_2\text{OH}$) and dimethyl ether (CH_3OCH_3), differ in the way the atoms are joined together in their molecules. Stereoisomers have the same basic arrangement of atoms in their molecules but differ in the way the atoms are arranged in space. Geometric isomers, which are stereoisomers that differ in the positioning of groups about a double bond or some other feature that gives the molecule a certain amount of structural rigidity, differ in physical properties such as melting and boiling points. Optical isomers are stereoisomers in which the two molecules are mirror images of each other and, each being asymmetrical, cannot be superposed on each other; optical isomers differ in the direction in which they rotate light passed through the molecules.

Isotope

An isotope is one of two or more atoms having the same [Atomic Number](#) but differing in [Atomic Weight](#) and [Mass Number](#). The nuclei of isotopes of the same element have the same number of [Protons](#) (equal to the element's atomic number) but have different numbers of [Neutrons](#). The isotopes of a given element have identical chemical properties but slightly different physical properties. A radioactive isotope, or radioisotope, is a natural or artificially created isotope having an unstable nucleus that decays emitting alpha, beta, or gamma rays ([Radioactivity](#)) until stability is reached. For most elements, stable and radioactive, isotopes are known.

J

Return to [topof](#) page.

JANAF

U.S. military term referring to Joint Army-Navy-Air Force.

JATO (Jet Assisted Take-Off)

A rocket motor used to assist the take-off of an aircraft.

Jell

Something gelatinized (like "jello"), but spell "jellied gasoline" (gasoline thickened with "Napalm.")

Jet

The central stream of high velocity particles or gases from a shaped charge.

Jolt And Jumble Tests

Tests intended to simulate the shocks various components of ammunition are subjected to in transportation and handling.

Joule

Symbol J.

1 Joule = 1 Newton-meter = 0.738 ft•lb.

Jump

The movement which the tube of the gun describes under the shock of firing, but before the projectile leaves the muzzle. Usually expressed as an angle.

K

Return to [topof](#) page.

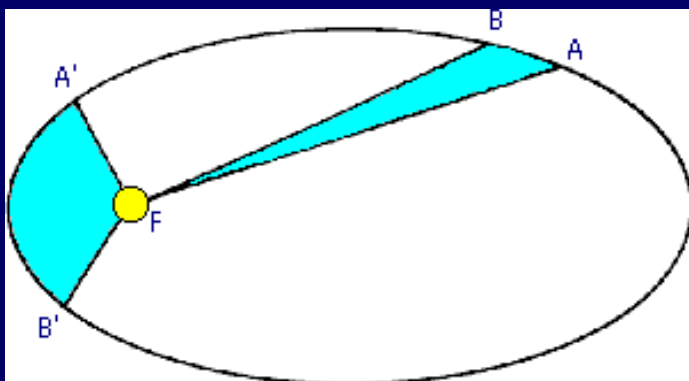

K

Temperature degree Kelvin or absolute on the centigrade scale; °C equals degree centigrade; sometimes also used: °R equals Rankine, in the absolute Fahrenheit scale.

Kcal

Kilogram calorie equals 1000 cal.

Kepler's Laws

Kepler's laws, three mathematical statements by Johannes Kepler that accurately describe the revolutions of the planets around the sun. The first law states that the shape of each planet's orbit is an ellipse (*Conic Section*) with the sun at one focus. The second law states that if an imaginary line is drawn from the sun to the planet, the line will sweep out equal areas in space in equal periods of time for all points in the orbit. The third law states that the ratio of the cube of the semimajor axis of the ellipse (i.e., the average distance of the planet from the sun) to the square of the planet's period (the time it needs to complete one revolution around the sun) is the same for all the planets. Newton gave a physical explanation of Kepler's laws with his laws of [Motion](#) and law of [Gravitation](#). Also [CelestialMechanics](#).

Kerosine

Kerosene or kerosine, a colorless, thin oil that is less dense than water. It is a mixture of [Hydrocarbons](#) commonly obtained in the fractional [Distillation](#) of [Petroleum](#), but also from coal, oil shale, and wood. Once the most important refinery product because of its use in lamps, kerosene is now used chiefly as a carrier in insecticide sprays and as a fuel in jet engines.

Kg

Kilogram equals 1000 gm (also "g").

Kinetic Energy

Ammunition Ammunition whose effectiveness is dependent upon its high density (mass) and high velocity.

Kinetic-Molecular Theory of Gases

Kinetic-molecular theory of gases, physical theory that explains the behavior of gases by assuming that any gas is composed of a very large number of very tiny particles, called molecules, that are very far apart compared to their sizes. The molecules are assumed to exert no forces on one another, except during rare, perfectly elastic collisions. A gas corresponding to these assumptions is called an ideal gas. The analysis of the behavior of an ideal gas according to the laws of mechanics leads to the [Gas Laws](#). The theory also shows that the absolute [Temperature](#) is directly proportional to the average kinetic energy of the molecules. Pressure is seen to be the result of large numbers of collisions between molecules and the walls of the container in which the gas is held. [Thermodynamics](#).

Krypton

(Kr), gaseous element, discovered by William Ramsay and M.W. Travers in 1898. It is a rare [Inert Gas](#) used to fill electric lamp bulbs and various electronic devices, and to detect heart defects. The definition of a meter is based on the emission spectrum of the krypton-86 isotope.

Return to [top](#) of page.

Laminac

A (proprietary) [plastic](#) binder material, the general class term is "unsaturated polyester."

Lands

Raised portion between grooves in the bore of a rifled gun.

Lanthanide Series

Rare - Earth Metals with atomic numbers 58 through 71 in group IIIb of the [Periodic Table](#).

They are, in order of increasing atomic number, Cerium, Praseodymium, Neodymium, Promethium, Samarium, Europium, Gadolinium, Terbium, Dysprosium, Holmium, Erbium, Thulium, Ytterbium, and Lutetium. Although they closely resemble Lanthanum and each other in their chemical and physical properties, lanthanum (at. no. 57) is not always considered a member of the series.

Lanyard

A cord, wire, etc. for firing certain fuze.

LASER

An acronym for Light Amplification By Stimulated Emission Of Radiation. Laser is made up of light waves that are nearly parallel to each other, all traveling in the same direction. Lasers emit beams of coherent light of a single color or wave length and frequency.

Lateral Deviation

Horizontal distance between the point of impact or burst and the gun-target line.

Lead (Rhymes with "feed").

An explosive train component which consists of a column of high explosive, usually small in diameter used to transmit detonation from one detonating component to a succeeding high explosive component. It is generally used to transmit the detonation from a detonator to a booster charge. Also called "explosive lead."

Lead Azide

Very sensitive high explosive used in small quantities to initiate other less sensitive high explosives. This agent has largely replaced [mercury fulminate](#) in military ammunition.

Leading (Lead) Lines or Wires

The wire(s) connecting the electrical power source with the circuit containing electric detonators ([Firing Line](#)).

Leaflet Shell

Usually consists of standard-base ejection smoke shell, of any caliber, with smoke canisters removed and propaganda substituted therefore.

Leakage Resistance

The resistance between the blasting circuit (including lead wires) and the ground.

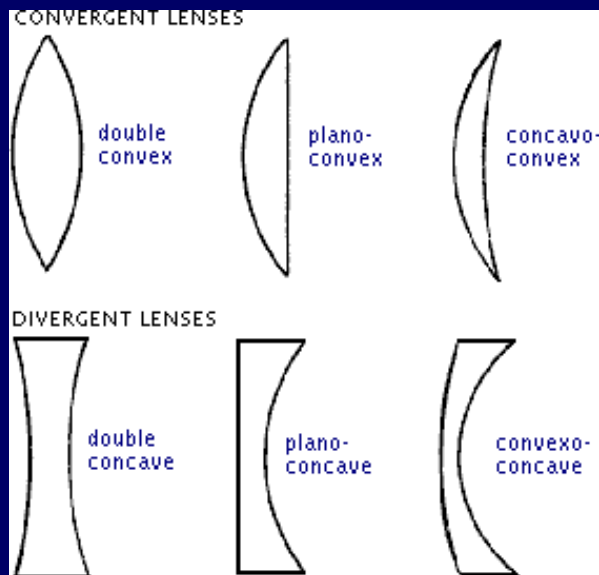

LEDC

Low energy detonating cord commercial version of mild (miniature) detonating fuse.

Legwires

The two single wires or one duplex wire extending out from an electric detonator, which are permanently attached to the electric detonator.

Lens

A device for forming an image of an object by the refraction, or bending, of light. In its simplest form it is a disk of transparent substance, commonly glass, with its two surfaces curved or with one surface plane and the other curved. Generally each curved surface—called convex if curved outward and concave if curved inward—of a lens is made as a portion of a spherical surface; the center of the sphere is called the center of curvature (C) of the surface. All rays of light passing through a lens are refracted except those that pass directly through a point called the optical center. A divergent lens (thicker at the edges than at the center) bends parallel light rays passing through it away from each other. The image formed by a diverging lens is always erect (upright), smaller than the object, and virtual (located on the same side of the lens as the object). A convergent lens (thicker at the center than at the edges) bends parallel light rays toward one another; if they are parallel to the principal axis of the lens, they converge to a common point, or focus (F), behind the lens. The image formed by a converging lens depends on the position of the object relative to the lens's focal length (distance between the focus and the optical center) and its center of curvature.

Lifting Plug

Threaded eyebolt which fits into the fuze cavity, permitting heavy shells to be handled by means of a winch.

Light

Light, that part of [Electromagnetic Radiation](#) to which the human eye is sensitive. The wavelengths of visible light range from c.400 to c.750 nanometers. If white light, which contains all wavelengths, is separated into a [Spectrum](#), each wavelength is seen to correspond to a different *Color*. The scientific study of the behavior of light is called *Optics*; it covers [Reflection](#) of light by a [Mirror](#) or other object, *Refraction* of light by a [Lens](#) or Prism, and [Diffraction](#) of light as it passes by an opaque object. Christiaan Huygens proposed (1690) a theory that explained light as a *Wave* phenomenon. Isaac [Newton](#), however, held (1704) that light is composed of tiny particles, or corpuscles, emitted by luminous bodies. By combining his corpuscular theory with his laws of mechanics, he was able to explain many optical phenomena. Newton's corpuscular theory of light was favored over the wave theory until important experiments, which could be interpreted only in terms of the wave theory, were done on the diffraction and [Interference](#) of light by Thomas *Young* (1801) and A.J. *Fresnel* (1814–15). In the 19th century the wave theory became the dominant theory of the nature of light. The electromagnetic theory of James Clerk *Maxwell* (1864) supported the view that visible light is a form of [Electromagnetic Radiation](#). With the acceptance of the electromagnetic theory of light, only two general problems remained. It was assumed that a massless medium, the *Ether*, was the carrier of light waves, just as air or water carries sound waves. The famous experiments (1881–

87) by A.A. *Michelson* and E.W. *Morley*, in which they tried unsuccessfully to measure the velocity of the earth with respect to this medium, failed to support the ether hypothesis. With his special theory of *Relativity*, Albert *Einstein* showed (1905) that the ether was unnecessary to the electromagnetic theory. Also in 1905, Einstein, in order to explain the *Photoelectric Effect*, suggested that light, as well as other forms of electromagnetic radiation, travel as tiny bundles of energy, called light quanta, or *Photons*, that behave as particles (*Quatum Theory*). Light thus behaves as a wave, as in diffraction and interference phenomena, or as a stream of particles, as in the photoelectric effect. The theory of relativity predicts that the speed of light in a vacuum (186,282 mi/sec = 299,792.458 km/sec) is the limiting velocity for material particles.

Light-Year

Light-year, in astronomy, the distance (5.87×10^{12} mi/ 9.46×10^{12} km) that *Light* travels in one sidereal year.

Lightning

Lightning, electrical discharge accompanied by *Thunder*, commonly occurring during a *Thunderstorm*. The discharge may take place between two parts of the same cloud, between two clouds, or between a cloud and the earth. Lightning may appear as a jagged streak (forked lightning), as a vast flash in the sky (sheet lightning), or, rarely, as a brilliant ball (ball lightning). The electrical nature of lightning was proved by Benjamin *Franklin* in his famous kite experiment of 1752.

Lignite

Lignite or brown coal, carbon-containing fuel intermediate between *Coal* and *Peat*, brown or yellowish in color and woody in texture. Lignite contains more moisture than coal and tends to dry and crumble when exposed to air. It burns with a long, smoky flame but little heat.

Limit

In mathematics, a value approached by a sequence or a function under certain specified conditions. For example, the terms of the sequence $1/2, 1/4, 1/8, 1/16, \dots$ are obviously getting smaller and smaller. Because one can, if enough terms are taken, make the last term as small, i.e., as close to zero, as one pleases, the limit of this sequence is said to be zero. If s_n denotes the n th term of a sequence, the equation $s_n = s$ (read "the limit of s_n as n approaches infinity is s ") expresses the fact that s is the limit of the sequence; in the example, $s_n = 1/2^n$ and $1/2^n = 0$. Similarly, although the function $f(x) = (x - 1)/(x^2 - 1)$ is not defined for $x = 1$ (where the denominator would be zero), values of x increasingly close to 1 yield values of $f(x)$ increasingly close to $1/2$. Thus, the limit of $f(x)$ as x approaches 1 is $1/2$, which is symbolized as $f(x) = 1/2$. Limits are the basis of differential and integral *Calculus*.

Linear Burning Rate

The rate of regression of a burning propellant surface, measured normal to the surface. *Piobert's Law*.

Liner

- 1) Inner tube, in a cannon, which bears the rifling and which may be replaced when worn out.
- 2) Cone of material used as an integral part of shaped charges.
- 3) A material applied to the inside of a solid rocket case which adheres to both the case and the propellant.

Liquid Fuels

Fuels in a liquid state. They may be used with oxidizers to form explosive materials.

Lithium

Lithium (Li), metallic element, discovered in 1817 by J.A. Arfvedson. A soft, silver-white corrosive *Alkali Metal*, lithium is the least dense metal. Lithium compounds are used in lubricating greases, special glasses, and ceramic glazes; as brazing and welding fluxes; and in the preparation of *plastics* and synthetic *rubber*. Lithium is also a medical antidepressant. *Element; Periodic Table.*

Litmus

Litmus, organic dye usually used as an indicator of acidity or alkalinity (*Acids and Bases*).

Naturally pink in color, it turns blue in alkaline solutions and red in acids. Litmus paper is paper treated with the dye.

Live Ammunition

Ammunition containing explosives. This is in contrast to drill ammunition (dummy ammunition), which contains no explosives and is used in training.

Loading

Placing explosive material in a blasthole or against the material to be blasted.

Loading Density

The weight of explosive loaded per unit length of borehole occupied by the explosive, expressed as pounds per foot or kilograms per metro of borehole.

Ratio of weight of propellant to available chamber volume.

Loading Ratio

The weight of explosive loaded per unit length into a device to accomplish a breach of a specific area. Total area breached divided by the total charge weight.

Logarithm

The power to which a number, called the base, must be raised in order to obtain a given positive number. For example, the logarithm of 100 to the base 10 is 2, because $10^2 = 100$. Common logarithms use 10 as the base; natural, or Napierian, logarithms (for John Napier) use the number e as the base.

Logic

The systematic study of valid inference. Classical, or Aristotelian, logic is concerned with the formal properties of an argument, not its factual accuracy. Aristotle, in his *Organon*, held that any logical argument could be reduced to a sequence of 3 propositions (2 premises and a conclusion), known as a *Syllogism*, and posited 3 laws as basic to all logical thought: the law of identity (A is A); the law of contradiction (A cannot be both A and not A); and the law of the excluded middle (A must be either A or not A).

Logic Circuit

An *Electric Circuit* whose output depends upon the input in a way that can be expressed as a function in symbolic *Logic*; it has one or more binary inputs (capable of assuming either of two states, e.g., “on” or “off”) and a single binary output. Logic circuits that perform particular functions are called gates. Basic logic circuits include the AND gate, the OR gate, and the NOT gate, which perform the logical functions AND, OR, and NOT. Logic circuits, which are mainly

used in digital Computers, can be built from any binary electric or electronic devices, including Switches, Relays, Electron Tubes, solid-state *Diodes*, and *Transistors*.

Lot Number

Code number that identifies a particular quantity of ammunition from one manufacturer. The number is assigned to each lot of ammunition when it is manufactured.

Loudspeaker

Loudspeaker or speaker, device used to convert electrical energy into sound. It consists essentially of a thin flexible sheet called a diaphragm that is made to vibrate by an electric signal from an Amplifier. The vibrations create sound waves in the air around the speaker. In a common dynamic speaker, the diaphragm has a cone shape and is attached to a wire coil suspended in a magnetic field. A signal current in the suspended coil creates another magnetic field that interacts with the already existing field, causing the coil and the diaphragm attached to it to vibrate. Quality sound systems employ three different sized speakers. The largest one, the woofer, reproduces low frequencies; the medium-sized one, called a mid-range speaker, reproduces middle frequencies; the smallest one, called a tweeter, reproduces high frequencies.

Low Explosives

Explosives that are characterized by deflagration or a low rate of reaction and the development of low pressure.

Explosive which undergoes a relatively slow chemical transformation, thereby producing a deflagration or an explosion, the effect ranging from that of a rapid combustion to that of a low order detonation. It is suitable for use in *igniter trains* and certain types of propellants. *Propellant*.

Low Order Detonation

Detonation, Low Order.

Lower Acceptable Mean Maximum Pressure

For any type gun, that value of the maximum pressure noted in the propellant specification as the lower limit for the average maximum pressure developed by an acceptable smokeless propellant, in the form of propelling charges, which will impart the specified *muzzle velocity* to the specified projectile. Smokeless propellant is considered as having failed to pass the test if, in acceptance tests, it develops an average maximum pressure lower than this value.

LSC (Linear Shaped Charge)

Less flexible, or rigid, version of FLSC.

Lupersol

A trade name for a *catalyst* for polyesters.

M

Return to [topof](#) page.

Mach

Number Ratio of the velocity of a body to that of *Sound* in the same medium. A plane traveling at Mach 3.0 is traveling at three times the speed of sound.

Mach Wave

Supersonic shock wave.

Magazine

Any building, structure, or container, other than an explosives manufacturing building, approved for the storage of explosive material.

Magnesium

Magnesium (Mg) is a metallic element, discovered as an oxide by Sir Humphrey Davy in 1808. A ductile, silver-white, chemically active *Alkaline-Earth Metal*, it is the eighth most abundant element in the earth's crust. Its commercial uses include lightweight alloys in aircraft fuselages, jet-engine parts, rockets and missiles, cameras, and optical instruments. The metal is used in pyrotechnics. Magnesium is found in plant chlorophyll and is necessary in the diet of animals and humans. *Element* ; *Periodic Table*.

Magnetic Resonance

Magnetic resonance in physics and chemistry refers to the phenomenon produced by simultaneously applying a steady magnetic field and *Electromagnetic Radiation* (usually radio waves) to a sample of atoms and then adjusting the frequency of the radiation and the strength of the magnetic field to produce absorption of the radiation. The resonance refers to the enhancement of the absorption that occurs when the correct combination of field and frequency is reached. Most magnetic resonance phenomena depend on the fact that both the proton and the electron behave like microscopic magnets—a property that can be ascribed to an intrinsic rotation, or spin. Types of magnetic resonance include electron paramagnetic resonance (EPR), involving the magnetic effect of electrons, and nuclear magnetic resonance (NMR), involving the magnetic effects of protons and neutrons in the nuclei of atoms. The NMR resonant frequency provides information about the molecular material in which the nuclei reside, and NMR is used in chemistry and physics to analyze samples of solids and liquids, as well as in medicine to analyze tissues removed from the body. Magnetic resonance imaging (MRI) is a noninvasive diagnostic technique that uses NMR to detect and analyze changes in body structure and function. The patient is placed in the field of an electromagnet, which causes the nuclei of certain atoms in the body (especially those of *hydrogen*) to align magnetically. The patient is then subjected to radio waves, which cause the aligned nuclei to “flip”; when the radio waves are withdrawn the nuclei return to their original positions, emitting radio waves that are then detected by a receiver and analyzed by computer. Unhampered by bone and capable of producing images in a variety of planes, MRI is used in the diagnosis of brain tumors and disorders, spinal disorders, multiple sclerosis, and cardiovascular disease. The procedure is considered to be without risk to the patient.

Magnetism

Magnetism is the Force of attraction or repulsion between various substances, especially those containing iron and certain other metals, such as nickel and cobalt; ultimately it is due to the motion of electric charges. Any object that exhibits magnetic properties is called a magnet. An ordinary magnet has two poles where the magnetic forces are the strongest; these poles are designated as a north (north-seeking) pole and a south (south-seeking) pole, because a magnet freely rotating in the earth's magnetic field tends to orient itself along a north-south line. The like poles of different magnets repel each other, and the unlike poles attract each other. Whenever a magnet is broken, a north pole appears at one of the broken faces and a south pole at the other, such that each piece has its own north and south poles. In the 18th century Charles Coulomb found that the magnetic forces of attraction and repulsion are directly proportional to the product of the strengths of the poles and inversely proportional to the square of the distances between them. As with electric charges, the effect of this magnetic force acting at a distance is expressed in terms of a field of force. A picture of the magnetic field lines can be obtained by placing a piece of paper over a magnet and sprinkling iron filings on it. The individual pieces of iron become magnetized by entering a magnetic field, i.e., they act like tiny magnets, lining themselves up along the magnetic field lines. The connection between magnetism and Electricity was discovered in the early 19th century.

Hans Oersted found (1820) that a wire carrying an electrical current deflects the needle of a magnetic compass because a magnetic field is created by the moving electric charges constituting the current. André Ampere showed (1825) that magnets exert forces on current-carrying conductors. In 1831 Michael Faraday and Joseph Henry independently discovered electromagnetic Induction—the production of a current in a conductor by a change in the magnetic field around it. The magnetic properties of matter are also explained by the motion of charges. Because the electron has both an electric charge and a spin, it can be considered a charge in motion, giving rise to a tiny magnetic field. In many atoms, all the electrons are paired within energy levels, so that the electrons in each pair have opposite (antiparallel) spins, and their magnetic fields cancel. In some atoms there are more electrons with spins in one direction than the other, resulting in a net magnetic field for the atom as a whole. Placed in an external field, the individual atoms will tend to align their fields with the external one. Because of thermal vibrations the alignment is not complete, and materials, called paramagnetic substances, that contain such atoms react only weakly to a magnetic field. Materials such as iron, nickel, or cobalt that respond strongly to a magnetic field are called ferromagnetic. In a ferromagnetic substance there are also more electrons with spins in one direction than in the other. The individual

magnetic fields of the atoms in a given region, called a domain, tend to line up in one direction, so that they reinforce each other. Materials such as bismuth and antimony that are repelled by a magnetic field are called diamagnetic. In a diamagnetic substance, an external magnetic field accelerates the electrons moving in one direction and retards those moving in the opposite direction; this situation produces an induced magnetization opposite in direction to the external field. Also [Electromagnet](#); [Electromagnetic Radiation](#).

Magnetohydrodynamics

Magnetohydrodynamics (MHD) is the study of the motions of electrically conducting fluids and their interactions with magnetic fields. The principles of magnetohydrodynamics are of particular importance in [Plasma](#) physics.

Magnitude

In astronomy magnitude is a measure of the brightness of a celestial object. Apparent magnitude is that determined on the basis of an object's relative brightness as seen from the earth. Objects differing by one magnitude differ in brightness by a factor of 2.512 (the 5th root of 100). The brightest stars have a magnitude of about +1; the sun's magnitude is -26.8. Absolute magnitude, a measure of the intrinsic luminosity, or true brightness, of an object, is the apparent magnitude an object would have if located at a standard distance of 10 [Parsecs](#).

Magnus Force

- 1) Force normal to the plane of yaw caused by the spin.
- 2) Force arising from interaction of a spinning body and the wind stream when the body is yawing.

Magnus Force - Center Of

Vanishing point of Magnus moment.

Main Explosive Charge

The explosive material that performs the major work of blasting.

Manhattan Project

The Manhattan Project was the wartime effort to design and build the first nuclear weapons ([Atomic Bomb](#)). A \$2-billion effort, centered at Oak Ridge, Tenn., and Hanford, Wash., was required to obtain sufficient amounts of the two necessary isotopes, uranium-235 and plutonium-239. The design and building of the bombs took place at Los Alamos, N.Mex., where J. Robert Oppenheimer directed a large group of American and European-refugee scientists. Following the test explosion of a plutonium device on July 16, 1945, near Alamogordo, N.Mex., a uranium bomb and a plutonium bomb were dropped on, respectively, Hiroshima (Aug. 6) and Nagasaki (Aug. 9).

Manufacturing Codes

Code markings stamped on explosive materials packages, indicating, among other information, the date of manufacture.

MASER

An acronym for (microwave amplification by stimulated emission of radiation), device, first operated in 1954, for the creation and amplification of high-frequency radio waves. The waves

produced by the maser are coherent, i.e., all of the same frequency, direction, and phase relationship. Used as an oscillator, the maser provides a very sharp, constant signal and thus serves as a time standard for atomic clocks. The maser can also serve as a relatively noise-free amplifier. The optical maser is now called a [Laser](#).

Mass

Mass in physics is the quantity of matter in a body regardless of its volume or of any forces acting on it. There are two ways of referring to mass, depending on the laws of physics defining it. The gravitational mass of a body may be determined by comparing the body on a beam balance with a set of standard masses; in this way the gravitational factor is eliminated ([Gravitation](#); [Weight](#)). The inertial mass of a body is a measure of the body's resistance to acceleration by some external force. All evidence seems to indicate that the gravitational and inertial masses are equal. According to the special theory of [Relativity](#), mass increases with speed according to the formula $m = m_0 \sqrt{1 - v^2/c^2}$, where m_0 is the rest mass (mass at zero velocity) of the body, v its speed, and c the speed of light in vacuum. The theory also leads to the Einstein mass-energy relation $E = mc^2$, where E is the energy and m the relativistic mass.

Mass Detonate (Mass Explode)

Explosive materials mass detonate (mass explode) when a unit or any part of a larger quantity of explosive material explodes and causes all or a substantial part of the remaining material to detonate or explode simultaneously. With respect to detonators, "a substantial part" means 90% or more.

Mass Explosion Risk

Material to be added.

Mass Number

Mass number is represented by the symbol A , the total number of nucleons ([Neutrons](#) and [Protons](#)) in the nucleus of an [Atom](#). All atoms of a chemical [Element](#) have the same [Atomic Number](#) but may have different mass numbers (from having different numbers of neutrons in the nucleus). Atoms of an element with the same mass number make up an [Isotope](#) of the element. Isotopes of different elements may have the same mass number but different numbers of protons.

Mass Ratio

The ratio of the initial mass of the propellant to the mass of the complete rocket motor.

Matter

Matter is anything that has mass. Because of its mass, all matter has [Weight](#), if it is in a gravitational field, and [Inertia](#). The three common [States Of Matter](#) are solid, liquid, and gas; scientists also recognize a fourth, [Plasma](#). Ordinary matter consists of [Atoms](#) and [Molecules](#). See also [Element](#); [Elementary Particles](#).

Maximum Pressure

The maximum value of the pressure exerted by the propellant gases on the walls of a gun during the firing of the round.

Maximum Recommended Firing Current

The highest recommended electric current to ensure safe and effective performance of an electric detonator.

Maximum Sky Brightness

Worst possible sky condition for observing pyrotechnic signals; usually uniform clouds or overcast.

Mean Or Average Mean

Unless otherwise specified, this is the arithmetic mean of the observations. A measure of the variability or dispersion of a number of observations.

Mechanical Entry

The utilization of mechanical equipment such as hooligan tools, glass cutters, saws, rams, pressurized jaws, etc., to facilitate entry through a conventional or non-conventional breach point.

Mechanics

Mechanics is a branch of physics concerned with [Motion](#) and the [Forces](#) causing it. The field includes the study of the mechanical properties of matter, such as [Density](#), Elasticity ([Strength Of Materials](#)), and [Viscosity](#). Mechanics is divided into [Statics](#), which deals with bodies at rest or in equilibrium, and [Dynamics](#), which deals with bodies in motion. Isaac [Newton](#), who derived three laws of motion and the law of universal [Gravitation](#), was the founder of modern mechanics. For bodies moving at speeds close to that of light, Newtonian mechanics is superseded by the theory of [Relativity](#), and for the study of very small objects, such as [Elementary Particles](#), [Quantum Theory](#) is used.

Median

The halfway point in the measurements when they have been arranged in order of size.

Melt Loading

Process of loading an explosive device by melting the explosive and allowing it to solidify in the device.

Melting Point

Melting point, temperature at which a substance changes its state from solid to liquid (see [States Of Matter](#)). Under standard atmospheric pressure, different pure crystalline solids will each melt at a different specific temperature; thus melting point is a characteristic of a substance and can be used to identify it. The quantity of heat necessary to change 1 gram of any substance from solid to liquid at its melting point is known as its latent heat of fusion.

Meplat

Flat nose.

Mercury Fulminate

Sensitive explosive that is detonated by friction, impact or heat. Its military uses have been taken over to a large extent by lead azide because of the poor stability of mercury fulminate at elevated temperatures.

Metal

A chemical [Element](#) displaying certain properties, notably metallic luster, the capacity to lose electrons and form a positive [Ion](#), and the ability to conduct heat and electricity ([Conduction](#)), by which it is normally distinguished from a nonmetal. The metals comprise about two thirds of the known elements. Some elements, e.g., arsenic and antimony, exhibit both metallic and nonmetallic properties, and are called metalloids. Metals fall into groups in the [Periodic Table](#) determined by similar arrangements of the orbital electrons and a consequent similarity in

chemical properties. Such groups include the [Alkali Metals](#) (Group Ia in the periodic table), the [Alkaline - Earth Metals](#) (Group IIa), and the [Rare - Earth Metals](#) ([Lanthanide](#) and [Actinide](#) series). Most metals other than the alkali metals and the [alkaline-earth metals](#) are called transition metals ([TransitionElements](#)). The oxidation states, or [Valence](#), of the metal ions vary from +1 for the alkali metals to +7 for some transition metals. Chemically, the metals differ from the nonmetals in that they form positive ions and basic oxides and hydroxides. Upon exposure to moist air, a great many metals undergo corrosion, i.e., enter into a chemical reaction, the oxygen of the atmosphere uniting with the metal to form the oxide of the metal, e.g., rust on exposed iron.

Metal Fouling

Deposit of metal in the bore of a gun, from the jackets or rotating bands of projectiles.

Metallized

In respect of blasting agents, sensitized or boosted with metal powders or granules (usually aluminum or ferrosilicon), to yield more energy.

Methane

Methane (CH₄) is a colorless, odorless, gaseous [Hydrocarbon](#) formed by the decay of plant and animal matter. It occurs naturally as the chief component of [Natural Gas](#), as the firedamp of coal mines, and as the marsh gas released in swamps and marshes. Methane can also be made synthetically by various means. It is combustible and can form explosive mixtures with air. Used for fuel in the form of natural gas, methane is also an important starting material for making solvents and certain *Freons*.

Methanol

Methanol, or methyl alcohol or wood alcohol (CH₃OH), a colorless, flammable liquid and the simplest *Alcohol*. Methanol is a fatal poison. Small internal doses, prolonged exposure of the skin to the liquid, or continued inhalation of the vapor may cause blindness. It can be obtained from wood, but now is made synthetically from the direct combination of hydrogen and carbon monoxide gases. Methanol is used to make [Formaldehyde](#), as a solvent, and as an *Antifreeze*.

Metric System

[SI System](#)

CGS System - centimeter / gram / second

MKS System - meter / kilogram / second

The metric system is a system of weights and measures planned in France and adopted there in 1799. Now used by most of the technologically developed countries of the world, it is based on a unit of length called the meter (m) and a unit of mass called the kilogram (kg). The meter is now defined in terms of a reproducible, universally available atomic standard, being equal to 1,650,763.73 wavelengths of the red-orange light given off by the krypton-86 isotope under certain conditions. The kilogram is defined as the mass of the International Prototype Kilogram, a platinum-iridium cylinder kept at Sèvres, France, near Paris. Other metric units can be defined in terms of the meter and the kilogram. Fractions and multiples of the metric units are related to each other by powers of 10, allowing conversion from one unit to a multiple of it simply by shifting a decimal point. This avoids the lengthy arithmetical operations required by the [English Units Of Measurement](#). The prefixes in the accompanying table have been accepted for designating multiples and fractions of the meter, the gram (= 1/1000 kilogram), and other units.

Several other systems of units based on the metric system have been in wide use. The cgs system uses the centimeter (= 1/100 meter) of length, the gram of mass, and the [Second](#) of time as its fundamental units; other cgs units are the dyne of [Force](#) and the erg of Work or energy. The mks system uses the meter of length, the kilogram of mass, and the second of time as its fundamental units; other mks units include the newton of force, the joule of work or energy, and the watt of [Power](#). The units of the mks system are generally much larger and of a more practical size than the comparable units of the cgs system. [Electric](#) and [Magnetism](#) have been defined for both these systems. The International System of Units (officially called the *Système International d'Unités*, or SI) is a system of units adopted by the 11th General Conference on Weights and Measures (1960). Its basic units of length, mass, and time are those of the mks system; other basic units are the [Ampere](#) of electric current, the kelvin of temperature (a degree of temperature measured on the Kelvin [Temperature](#) scale), the candela ([Photometry](#)) of luminous intensity, and the [Mole](#), used to measure the amount of a substance present. All other units are derived from these basic units.

Microelectronics

The branch of *Electronics* devoted to the design and development of extremely small electronic devices that consume very little electric power. The simplest, but least effective, approach used is to make circuit elements, such as resistors ([Resistance](#)), Capacitors, and Semiconductor devices, extremely small but discrete. In another approach, circuit elements fabricated as thin films of conductive, semiconductive, and insulating materials are deposited in sandwich form on an insulating substrate. The most advanced method is to form circuits, called Integrated Circuits, within and upon single semiconductor crystals. Also [Transistor](#).

Micrometer

An instrument used for measuring extremely small distances. In the micrometer caliper, the object to be measured is held between the two jaws of the instrument; the distance between the jaws is measured on a scale calibrated to the rotation of the finely threaded screw that moves one of the jaws. In astronomical and microscopic micrometers, the distance that a filament moves from one end to the other of the image of an object is read on a calibrated scale.

Micron

One micron equals 10^{-4} cm or may also be expressed as 10^{-6} meters..

A unit of length, the thousandth part of one millimeter. A particle of diameter between 0.01 and 0 0001 millimeter.

Microphone

A device (invented c.1877) used in radio broadcasting, recording, and sound-amplifying systems to convert sound into electrical energy. Its basic component is a flexible diaphragm that responds to the pressure or particle velocity of sound waves. In a Capacitor, or condenser, microphone, used in high-quality sound systems, two parallel metal plates are given opposite electrical charges. One of the plates is attached to the diaphragm and moves in response to its vibrations, generating a varying voltage. Also [Telephone](#).

Microsecond

One millionth of a second, 10^{-6} second, expressed as msec.

Microwave

Microwave, [Electromagnetic Radiation](#) having a frequency range from 1,000 to 300,000 megahertz, corresponding to a wavelength range from 300 to 1 mm (about 12 to about 0.04 in.). Microwaves are used in Microwave Ovens, [Radar](#), and communications links spanning moderate distances.

Mild Detonating Fuze (MDF)

A flexible metal tube, usually lead, containing a much smaller core of high explosive than the normal detonating cord. More accurately - miniature detonating fuse.

Millisecond

One thousandth of a second, 10^{-3} second, expressed as msec.

Mine

An encased explosive or chemical charge designed to be placed in position so that it detonates when its target touches it or moves in the vicinity.

Miniaturized Detonating Cord

Detonating cord with a core load of 5 or less grains of explosive per foot.

Minimum Recommended Firing Current

The lowest recommended electric current to ensure reliable performance of an electric detonator.

Minimum Gap Sensitivity

An air gap, measured in inches, that determines whether the explosive material is within specific tolerances for gap sensitivity.

Mirror

In optics, a reflecting surface that forms an image of an object when light rays coming from that object fall upon it [Reflection](#). A plane mirror, which has a flat reflecting surface, reflects a beam of light without changing its character. In a convex spherical mirror, the vertex, or midpoint, of the mirror is nearer to the object than the edges, and parallel rays from a light source diverge after reflection. In a concave mirror, the vertex is farther away from the object than the edges, and rays parallel to the principal axis are reflected to a single point, or principal focus. A concave parabolic mirror is the principal element of a reflecting telescope.

Misfire

1) Failure to fire or explode properly.
2) Failure of a primer or the propelling charge of a projectile to function, wholly or in part. Misfire may be contrasted with hangfire, which is delay in any part of a firing charge. Misfires are usually difficult and dangerous to resolve. Misfires must be treated with respect.

Missile

Any object thrown, dropped, fired, launched or otherwise projected with the purpose of striking a target. Short for "ballistic missile", "guided missile." (Missile is loosely used as a synonym for "rocket" or "spacecraft" by some careless writers.)

Misznay-Shardin

A type of shaped charge, an explosive charge with special penetrating effects. (Material to be added.)

Mockup

A model (often crude) for study or training.

Mode

The most frequent value in a series of measurements.

Modulation

Modulation, in communications, process in which some characteristic of a [Wave](#) (the carrier wave) is made to vary in accordance with an information-bearing signal wave (the modulating wave); demodulation is the process by which the original signal is recovered from the wave produced by modulation. In modulation the carrier wave is generated or processed so that its amplitude, frequency, or some other property varies. Amplitude modulation (AM), widely used in radio, is constant in frequency and varies the intensity, or amplitude, of the carrier wave in accordance with the modulating signal. Frequency modulation (FM) is constant in amplitude and varies the frequency of the carrier wave in such a way that the change in frequency at any instant is proportional to another time-varying signal. The principal application of FM is also in radio, where it offers increased noise immunity and greater sound fidelity at the expense of greatly increased bandwidth. In pulse modulation the carrier wave is a series of pulses that are all of the same amplitude and width and are all equally spaced. By controlling one of these three variables, a modulating wave may impress its information on the pulses. In pulse code modulation (PCM) it is the presence or absence of particular pulses in the carrier stream that constitutes the modulation.

M.O.E.

Method Of Entry

Mohaupt Effect

The effect of a metal liner introduced in a shaped charge to increase penetration. Generally incorporated in [Heat](#) ammunition. [Munroe Effect](#).

Mole

A mole in chemistry is a quantity of particles of any type equal to Avogadro's number (6.02252×10^{23}). One gram-atomic weight (or one gram-molecular weight)—the amount of anatomic (or molecular) substance whose weight in grams is numerically equal to the [Atomic Weight](#) (or [Molecular Weight](#)) of that substance—contains exactly one mole of atoms (or molecules). For example, one mole, or 12.011 grams, of carbon contains 6.02252×10^{23} carbon atoms, and one mole, or 180.16 grams, of glucose ($C_6H_{12}O_6$) contains the same number of glucose molecules.

Molecular Weight

Molecular weight is the weight of a [Molecule](#) of a substance expressed in atomic mass units ([Atomic Weight](#)). The molecular weight is the sum of the atomic weights of the atoms making up the molecule.

Molecule

A molecule is the smallest particle of a [Compound](#) that has all the chemical properties of that

compound. Molecules are made up of two or more [Atoms](#), either of the same [Element](#) or of two or more different elements. Ionic compounds, such as common salt, are made up not of molecules but of ions arranged in a crystalline structure ([Crystal](#)). Unlike [Ions](#), molecules carry no electrical charge. Molecules differ in size and [Molecular Weight](#) as well as in structure ([Isomer](#)).

Momentum

Momentum in mechanics is the quantity of [Motion](#) of a body. The linear momentum of a body is the product of its mass and velocity. The angular momentum of a body rotating about a point is equal to the product of its mass, its angular velocity, and the square of the distance from the axis of rotation. Both linear and angular momentum of a body or system of bodies are conserved ([Conservation Laws](#), in physics) if no external force acts on it or them.

Monopropellant

A liquid propellant which contains an oxidizing agent and combustible matter (fuel) in a single phase.

Motion

Motion, in [Mechanics](#), the change in position of one body with respect to another. The study of the motion of bodies is called [Dynamics](#). The time rate of linear motion in a given direction by a body is its velocity; this rate is called the speed if the direction is unspecified. If during a time t a body travels over a distance s , then the average speed of that body is s/t . The change in velocity (in magnitude and/or direction) of a body with respect to time is its acceleration.

The relationship between [Force](#) and motion was expressed by Isaac [Newton](#) in his three laws of motion:

(1) a body at rest tends to remain at rest, or a body in motion tends to remain in motion at a constant speed in a straight line, unless acted on by an outside force;

(2) the acceleration a of a mass m by a force F is directly proportional to the force and inversely proportional to the mass, or $a = F/m$;

(3) for every action there is an equal and opposite reaction. The third law implies that the total [Momentum](#) of a system of bodies not acted on by an external force remains constant ([Conservation Laws](#)). Motion at speeds approaching that of light must be described by the theory of [Relativity](#), and the motions of extremely small objects (atoms and elementary particles) are described by quantum mechanics ([Quantum Theory](#)).

Motor (Rocket)

A generic term for a solid propellant rocket consisting of the assembled propellant, case, ignition system, nozzle and appurtenances.

MS Connectors

Nonelectric, short-interval (millisecond) delay devices for use in delaying blasts that are initiated by detonating cord; Same as [Detonating Cord](#) .

Mud Cap

Material to be added.

Multiple Grain

An assembly of solid propellant grains inside an explosive device or motor.

Multisection Charge

Propelling charge in separate-loading or semi-fixed ammunition that is loaded into a number of powder bags. Range adjustments can be made by increasing or reducing the number of bags used, as contrasted with a single-section charge in which the size of the charge cannot be changed.

Munroe Effect

The jetting effect of a shaped charge. *Shaped Charge*. When a liner is used, the effect is called "*Mohaupt effect*", *Mohaupt effect*.

The concentration of explosive action through the use of a shaped charge. *Mercury Fulminate*

Mustard Gas

A blister gas which acts as a cell irritant and cell poison. Contains about 30 percent sulfur impurities, giving it a pronounced odor.

Muzzle Blast

Sudden air pressure exerted in the vicinity of the muzzle of a weapon by the rush of hot gases and air on firing.

Muzzle Brake (Also called a Recoil Brake):

Device attached to the muzzle of a gun which utilizes escaping gases to reduce the effective recoil force of the gun tube on the carriage or mount. In some designs, it eliminates or reduces muzzle flash.

Muzzle Flash

Undesirable luminous ignition of unburned propellant gases issuing from the muzzle of a gun. The gases ignite upon mixture with atmospheric oxygen.

Muzzle Velocity

Speed of a projectile at the instant it leaves the muzzle of a gun.

Muzzle Wave

Compression wave or reaction of the air in front of the muzzle of a weapon immediately after firing.

N

Return to [top](#) of page.

Napalm

A gasoline thickener.

National Fire Protection Association

Standards for explosive materials and ammonium nitrate issued by the National Fire Protection Association.

National Safety Council (NSC)

A nonprofit organization chartered by Congress to provide a regular information service on the causes of accidents and ways to prevent them.

Natural Gas

Natural gas, natural mixture of flammable gases found issuing from the ground or obtained from specially driven wells. Largely a mixture of *Hydrocarbons*, natural gas is usually 80 to 95% *Methane*. The composition varies in different localities, and minor components may include carbon dioxide, nitrogen, hydrogen, carbon monoxide, and helium. Often found with *Petroleum*,

natural gas also occurs apart from it in sand, sandstone, and limestone deposits. Natural gas began to be used as an illuminant and a fuel on a large scale in the late 19th century, when pipelines were built to provide it to large industrial cities. Liquefied natural gas (LNG) is natural gas that has been cooled and pressurized to liquify it for convenience in shipping and storage.

Neon

(Ne), gaseous element, discovered in 1898 by William Ramsay and M.W. Travers. A colorless, odorless, and tasteless inert gas, it emits a bright-red glow when conducting electricity in a tube. Neon is used in advertising signs, [Lasers](#), Geiger counters, Particle Detectors, and high-intensity beacons. Liquid neon is a cryogenic refrigerant.

Nerve Gas

[G-Series War Gases](#).

Neutral Burning

The burning of a propellant grain in such a manner that the exposed surface area remains constant as burning progresses.

Neutral Geometry

A propellant grain configured in such a manner that the exposed surface area remains constant as burning progresses.

Neutron

An uncharged [Elementary](#), discovered by James Chadwick in 1932, of slightly greater mass than the [Proton](#). The stable isotopes of all elements except hydrogen and helium contain within the nucleus a number of neutrons equal to or greater than the number of protons. The preponderance of neutrons becomes more marked for very heavy nuclei. A neutron bound within the nucleus may be stable. A nucleus with an excess of neutrons, however, is radioactive; the extra neutrons (as well as any free neutrons not bound within a nucleus) convert by beta decay ([Radioactivity](#)) into a proton, an electron, and an antineutrino. The neutron and the proton are regarded by physicists as two aspects, or states, of a single entity, the nucleon. The antineutron, the neutron's antiparticle ([Antimatter](#)), was discovered in 1956.

Newton, Sir Isaac

Sir Isaac Newton, 1642–1727, English mathematician and natural philosopher (physicist); considered by many the greatest scientist of all time. He was Lucasian professor of mathematics (1669–1701) at Cambridge University. Between 1664 and 1666 he discovered the law of universal [Gravitation](#), began to develop the [Calculus](#), and discovered that white light is composed of every color in the [Spectrum](#). In his monumental *Philosophiae naturalis principia mathematica* {Mathematical Principles of Natural Philosophy} (1687), he showed how his principle of universal gravitation explained both the motions of heavenly bodies and the falling of bodies on earth. The Principle covers [Dynamics](#) (including Newton's three laws of [Motion](#)), [Fluid mechanics](#), the motions of the planets and their satellites, the motions of the comets, and the phenomena of tides. Newton's theory that [Light](#) is composed of particles — elaborated in his *Opticks* (1704) — dominated optics until the 19th cent., when it was replaced by the wave theory of light; the two theories were combined in the modern [Quantum theory](#). Newton also built (1668) the first reflecting telescope, anticipated the calculus of variations, and devoted much energy towards alchemy, theology, and history. He was president of the Royal Society from 1703

until his death.

NG

[*Nitroglycerin.*](#)

Nitric Acid

Chemical compound (HNO_3), colorless, highly corrosive, poisonous liquid that gives off choking fumes in moist air. It is miscible with water in all proportions. Commercially, it is usually available in solutions of 52% to 68% nitric acid in water. Solutions containing over 86% nitric acid are commonly called fuming nitric acid. Nitric acid is a strong oxidizing agent. It reacts with metals, oxides, and hydroxides, forming nitrate salts.

Nitrous Oxide

Chemical compound (N_2O), colorless gas with a sweetish taste and odor. Although it does not burn, it supports combustion because it decomposes into oxygen and nitrogen when heated. A major use is in dental anesthesia. It is often called laughing gas because it produces euphoria and mirth when inhaled in small amounts.

Nitrocellulose

Explosive substance formed by the nitration of cotton, or some other form of cellulose. Used as the base of most U.S. propellants. Specific grades of nitrocellulose ([*Pyrocellulose*](#) or [*Guncotton*](#)) depend on the degree to which the cellulose is nitrated.

Nitrocotton

[*Guncotton.*](#)

Nitrogen

(N), a gaseous element, discovered by Daniel Rutherford in 1772. Nitrogen is a colorless, odorless, tasteless, diatomic gas that is relatively inactive chemically; it occupies about 78% (by volume) of dry air. Its chief importance lies in its compounds, which include [*Nitrous oxide*](#), [*Nitric Acid*](#), [*Ammonia*](#), many Explosives, Cyanides, fertilizers, and proteins. Nitrogen is present in the protoplasm of all living matter; it and its compounds are necessary for the continuation of life.

Nitrogen Mustard Gases

Group of blister gases similar to mustard gas with varying chemical properties and little or no odor; gases affect eyes, nose and lungs.

Nitroglycerin

An explosive chemical compound used as a sensitizer in dynamite and represented by the empirical formula $\text{C}_3\text{H}_5\text{N}_3\text{O}_9$. Yellow oil. Detonation velocity, confined: 7600 m/s = 25,000 ft/s at $r = 1.59 \text{ g/cm}^3$. Oxygen balance: 13.5%, nitrogen content: 18.50%, volume of detonation gases 782 l/kg. On old boxes of dynamite it may appear as white or light gray crystals.

Nitroglycerne

Nitrated ester of glycerol in which the OH radicals are replaced by NO_2 ; used as primary base of British propellants and as gelatinizing agent of U.S. propellants but not used as primary base of U. S. propellants because its high flame temperature accelerates bore erosion.

Nitroguanidine (Nitrated Aminomethanamide):

Used as an additional base of propellant; used as a "cool propellant" because of its low flame temperature which does not erode gun bores or produce as much luminous flash as single (nitrocellulose) propellants.

Nitromethane

Nitromethane is sparingly soluble in water. The compound is of industrial interest as a solvent rather than as an explosive. Its technical synthesis involves nitration of methane with *nitric acid* above 400°C (750°F) in the vapor phase.

It was used in the USA for underground model explosions ("Pre-Gondola"), in preparation for the *Nuclear Charge* technique. Nitromethane was also employed in stimulation blasting in oil and gas wells. PLX (*Picatinny Liquid Explosive*) is a mixture of nitromethane with 5% ethylenediamine and is used to clean up mine fields.

No. 8 Test Cap

Institute of Makers of Explosives No. 8 Test Detonator.

Nobel-Abel Equation

Derivation of perfect gas law - $P_{max} \text{ equals } FD/1-aD$ where P_{max} equals maximum pressure, F equals force factor in psi - cc/gD equals loading density in g/cc and a equals co-volume factor in cc/g . Used in interior ballistic computations.

No-Fire Current

Maximum current which can be continuously applied to a bridgewire circuit without igniting the prime material. (Note that continued application of this current may degrade the prime and "dud" the unit.)

Non-conventional Entry / Breach Point

A non-normal point of entry into the target area, which may include: air-conditioning ducting, service access, sewers or proceeding through a window, wall, ceiling or floor.

Non-Delay Fuze

Fuze that functions as a result of inertia of firing pin (or primer) as missile is retarded during penetration of target. The inertia causes the firing pin to strike the primer (or primer the firing pin) initiating fuze action. This type of fuze is inherently slower in action than the superquick or instantaneous fuze, since its action depends upon deceleration (retardation) of the missile during penetration of the target.

Nonelectric Detonator

A detonator that does not require the use of electric energy or safety fuse to function.

Nonhygroscopic

Does not absorb moisture from the air.

Nonsparking Metal

A metal that will not produce a spark when struck with other tools, rock, or hard surfaces.

Normal Charge

Propelling charge employing a standard amount of propellant to fire a gun under ordinary conditions, as compared with a reduced charge or a supercharge used in special circumstances.

Normal Curve

The idealized distribution of an infinite number of observations equally divided between favorable and unfavorable.

Normal Force

Component of air resistance perpendicular to the axis of the projectile in the plane of yaw (exterior ballistics). Any force perpendicular to a given line or surface (general).

Normal Impact

Striking of a projectile against a surface that is perpendicular to the line of flight of the projectile.

Nose Spray

Spray.

Nuclear Energy

Nuclear energy is the energy stored in the nucleus of an *Atom* and released through fission, fusion, or *Radioactivity*. In these processes a small amount of mass, equal to the difference in mass before and after the reaction, is converted to energy according to the relationship $E = mc^2$, where E is energy, m mass, and c the speed of light (*Relativity*). In fission processes, a fissionable nucleus absorbs a neutron, becomes unstable, and splits into two nearly equal nuclei. In fusion processes, two nuclei combine to form a single, heavier nucleus. Fission occurs for very heavy nuclei, while fusion occurs for the lightest nuclei. Nuclear fission was discovered in 1938 by Otto Hahn and Fritz Strassman, and was explained in 1939 by Lise Meitner and Otto Frisch. Fission energy can be obtained by bombarding the fissionable isotope *Uranium-235* with slow neutrons in order to split it. Because this reaction releases an average of 2.5 neutrons, a chain reaction is possible, provided at least one neutron per fission is captured by another nucleus and causes a second fission. In an *Atomic Bomb* the number of neutrons producing additional fission is greater than 1, and the reaction increases rapidly to an explosion. In a *Nuclear Reactor*, where the chain reaction is controlled, the number must be exactly 1 in order to maintain a steady reaction rate. *Uranium-233* and *Plutonium-239* can also be used but must be produced artificially. Moreover, the fuel for fusion reactors, deuterium, is readily available in large amounts. Temperatures greater than 1,000,000°C are required to initiate a fusion, or thermonuclear, reaction. In the *Hydrogen Bomb* such temperatures are provided by the detonation of a fission bomb. Sustained, controlled fusion reactions, however, require the containment of the nuclear fuel at extremely high temperatures long enough to allow the reactions to take place. At these temperatures the fuel is a *Plasma*, and magnetic fields have been used in attempts to contain this plasma. To produce fusion energy, scientists have also used high-powered laser beams aimed at tiny pellets of fission fuel. Once practical controlled fusion is achieved, it will have great advantages over fission as a source of energy.

Nuclear Physics

The study of the components, structure, and behavior of the nucleus of the *Atom*. It is especially concerned with the nature of matter and *Nuclear Energy*. The subject is commonly divided into three fields: low-energy nuclear physics, the study of *Radioactivity*; medium-energy nuclear physics, the study of the force between nuclear particles; and high-energy, or particle, physics, the study of the transformations among subatomic particles in reactions produced in a *Particle Accelerator*. *Elementary Particles*.

Nuclear Reactor

A device for producing *Nuclear Energy* by controlled nuclear reactions. It can be used for either research or power production. The reactor is so constructed that the fission of atomic nuclei produces a self-sustaining nuclear chain reaction, in which the produced neutrons are able to split other nuclei. A fission reactor consists basically of

- (1) a fuel, usually uranium or plutonium, enclosed in shielding;

(2) a moderator—a substance such as [graphite](#), beryllium, or heavy water—that slows down the neutrons so that they may be more easily captured by the fissionable atoms; and

(3) a cooling system that extracts the heat energy produced.

The fuel is sometimes enriched—i.e., its concentration of fissionable isotopes is artificially increased—to increase the frequency of neutron capture. The breeder reactor is a special type of reactor that produces more fissionable atoms than it consumes by using surplus neutrons to transmute certain nonfissionable atoms into fissionable atoms. The design of fusion reactors is still in an experimental stage because of the problems involved in containing the plasma fuel and attaining the high temperatures needed to initiate the reaction.

Nuclear Winter

A controversial predicted effect of a nuclear war. The theory holds that the dust and particles thrown into the atmosphere by a massive exchange of nuclear weapons would block a large percentage of sunlight, resulting in global cooling, leading to severe winterlike weather and killing all crops.

Nutation

A small periodic oscillation about the motion of precession.

Return to [top](#) of page.

Obturate

To stop or close an opening so as to prevent escape of gas or vapor, to seal as in delay elements.

Obturation

Any process that prevents the escape of gases from the tube of a weapon during the firing of a projectile.

Obturator

A device for making the tube of a weapon gas-tight, preventing any escape of gas until the projectile has left the muzzle.

Octane Number

Octane number, a quality rating for [Gasoline](#) indicating the ability of the fuel to resist premature detonation and to burn evenly when exposed to heat and pressure in an *Internal Combustion Engine*. Premature detonation, indicated by knocking and pinging noises, wastes fuel and may cause engine damage. The octane number can be increased by varying the relative amounts of the different [Hydrocarbons](#) that make up the gasoline or by additives, e.g., tetraethyl lead. Federal regulations in the U.S. require commercial gasoline pumps to indicate the octane number, which is usually 87 or 89 for regular grade gasoline and 93 for premium grade. Since the early 1970s most *Automobiles* have been built to operate on low octane gasoline with little or no lead added.

Octogen

Material to be added.

Octol

A mixture of Octogen (NMX) and TNT 70/30 and 75/25. Performance values:
70/30 75/25

detonation velocity, confined: 8377 8643 m/s
 at $r = 1.80$ 1.81 g/cm³
 volume of detonation gases: 847 830 l/kg
 heat of explosion (H₂O liq.): 1074 1131 kcal/kg
 4497 4735 kJ/kg

Office of Surface Mining (OSM)

An agency of the U.S. Department of the Interior regulating surface coal mining and the surface effects of underground coal mining.

Ogive

The shape of the head of the projectile, often a convex solid of revolution generated by an arc of a circle whose center lies on the side of the axis of revolution opposite to the arc.

Ohm

Ohm, symbol O, unit of electrical [Resistance](#), defined as the resistance to the flow of a steady electric current offered by a column of mercury 14.4521 grams in mass with a length of 1.06300 m and with an invariant cross-sectional area, when at a temperature of 0°C.

Ohm's Law

where: V = voltage of power source

I = current in amperes

R = resistance of circuit in ohms (W)

$$I = \frac{V}{R}$$

Solving for current (amps):

Solving for voltage (volts): $V = I \cdot R$

$$R = \frac{V}{I}$$

Solving for resistance (ohms):

One Watt - One Ampere Cartridge

An EED which will not fire or degrade when one ampere and / or one watt is passed through the bridgewire circuit (usually for a five-minute period).

Optics

Scientific study of light. Physical optics is concerned with the genesis, nature, and properties of light; physiological optics with the part light plays in vision; and geometrical optics with the geometry involved in the [reflection](#) and [refraction](#) of light as encountered in the study of the [mirror](#) and the [lens](#).

Optimum Charge

Web and propellant weight combination which produces maximum velocity at a specified pressure.

Orbit

Orbit, path in space described by a smaller body revolving around a second, larger body where the motion of the orbiting body is dominated by their mutual gravitational attraction ([Celestial Mechanics](#); [Gravitation](#); [Kepler's Laws](#)). The size and shape of an orbit are specified by

- (1) the semimajor axis (a length equal to half the greatest diameter of the orbit) and
- (2) the eccentricity (the distance of the larger body from the center of the orbit divided by the length of the orbit's semimajor axis). The position of the orbit in space is determined by three

factors:

- (3) the inclination, or tilt, of the orbital plane to the reference plane (the ECLIPTIC for sun-orbiting bodies; a planet's *Equator* for natural and artificial satellites);
- (4) the longitude of the ascending *Node* (measured from the vernal *Equinox* to the point where the smaller body cuts the reference plane moving south to north); and
- (5) the argument of pericenter (measured from the ascending node in the direction of motion to the point at which the two bodies are closest).

These five quantities, plus the time of pericenter passage, are called orbital elements. The gravitational attractions of bodies other than the larger body causes perturbations in the smaller body's motions that can make the orbit shift, or precess, in space or cause the smaller body to wobble slightly.

Ordnance

Military material, such as combat weapons of all kinds with ammunition and equipment for their use.

Organic Chemistry

Organic chemistry, branch of *Chemistry* dealing with [Carbon](#) compounds. Of all the elements, carbon forms the greatest number of different compounds; moreover, compounds that contain carbon are about 100 times more numerous than those that do not. Compounds containing only carbon and [Hydrogen](#) are called *Hydrocarbons*. Organic compounds containing [Nitrogen](#) are of great importance to *Biochemistry*. Organic chemistry is of importance to the petrochemical, pharmaceutical, and textile industries; in textiles a prime concern is the synthesis of new organic molecules and [Polymers](#).

Oscilloscope

Oscilloscope, a device based on a [Cathode-Ray Tube](#) used to produce a visual display of electrical signals. Typically the horizontal position of the illuminated point is controlled by the value of the independent variable (often time), while the vertical position is controlled by the dependent variable. A third signal is often used to control the brightness of the point.

OSHA

Occupational Safety and Health Administration. An agency of the Department of Labour in the United States, active in eliminating occupational hazards and promoting employee health and safety.

Output Characteristics

The characteristics of an explosive component which determine the form and magnitude of the energy released when the component functions.

Overturning

Moment (of a projectile in flight) Couple about an axis through the center of gravity, perpendicular to the plane of yaw.

Oxidizer

That portion of a chemical mixture or compound which furnishes the oxygen for burning a fuel or propellant

Oxidizer or Oxidizing Material

A substance, such as a nitrate, that readily yields oxygen or other oxidizing substances to stimulate the combustion of organic matter or other fuel.

Oxygen Balance

- 1.) The percentage excess or deficiency of oxygen as compared to that required to convert the carbon in an explosive to CO and the hydrogen to HO.
- 2.) The theoretical percentage of oxygen in an explosive material or ingredient that exceeds (+) or is less than (-) what is needed to produce ideal reaction products. The amount of oxygen, expressed in weight percent, liberated as a result of the complete conversion of the explosive material to CO₂, H₂O, SO₂, Al₂O₂, etc. ("positive" oxygen balance). If the amount of oxygen bound in the explosive is insufficient for the complete oxidation reaction ("negative" oxygen balance), the deficient amount of the oxygen needed to complete the reaction is reported with a negative sign. Commercial explosives must have an oxygen balance close to zero in order to minimize the amounts of toxic gases, particularly carbon monoxide, and nitrous gases, which are involved in the fumes.

P

Return to [top of page](#).

Paraffin

Paraffin, white, semitranslucent, odorless, tasteless, water insoluble, waxy solid. Though relatively inert, it burns readily in air. A mixture of [Hydrocarbons](#) obtained from [Petroleum](#) during refining, paraffin is used in candles and for coating paper.

Parallax

Any alteration in the relative apparent positions of objects produced by a shift in the position of the observer. Stellar parallax is the apparent displacement of a nearby star against the background of more distant stars resulting from the motion of the earth in its orbit around the sun; formally, the parallax of a star is the angle at the star that is subtended by the mean distance 1 [Astronomical Unit](#) between the earth and the sun. A star's distance (d) in parsecs is thus the reciprocal of its parallax (p) in seconds of arc (or $d = 1/p$). Friedrich Bessel measured (1838) the first stellar parallax (0.3 seconds of arc for the star 61 Cygni). Geocentric parallax, used to determine the distances of [solar system](#) objects, is measured similarly; the diameter of the earth, rather than that of its orbit, however, is used as the baseline.

Parallel Blasting Circuit

An electric blasting circuit in which the legwires of each detonator are connected across the [firing line](#) directly or through buswires.

Parallel-Series Circuit

[Series in Parallel Blasting Circuit.](#)**Parasheet**

Parachute-like device made from a single flat piece of material, or as few pieces as its size will permit; avoids cost of complex gore construction of parachute.

Parsec

Parsec, a unit of length equal to the distance (206,265 [Astronomical Units](#); 3.26 *Light-Years*; 1.917×10^{13} mi; or 3.086×10^{13} km) at which a hypothetical star's [Parallax](#) would be one second of arc. The distance in parsecs of an object from the earth is thus the reciprocal of the parallax in seconds of the object.

Particle Accelerator

A device used to produce beams of energetic charged particles and to direct them against various targets for studies of the structure of the atomic nucleus [Atom](#) and of the forces holding it together. Accelerators also have applications in medicine and industry, most notably in the production of radioisotopes. The first stage of any accelerator is an [Ion](#) source to produce the charged particles from a neutral gas. The charged particles are accelerated by electric fields. In linear accelerators, which are the most powerful and efficient electron accelerators, the particle path is a straight line. The early linear accelerators used large static electric charges, which produced an electric field along the length of an evacuated tube to accelerate the particles. Present linear accelerators use electromagnetic waves to accomplish the acceleration. To reach high energies without prohibitively long paths, E.O. Lawrence designed the cyclotron, in which a cylindrical magnet bends the particle beam into a circular path in a hollow circular metal box that is split in half to form two D-shaped sections. A radio-frequency electric field is applied across the gap, accelerating the particle each time it crosses the gap. In the synchrocyclotron, used to accelerate protons, the frequency of the accelerating electric field steadily decreases to match the decreasing angular velocity of the proton caused by the increase of its mass at relativistic velocities, i.e., those close to the speed of light. In the synchrotron, a ring of magnets surrounding a doughnut-shaped vacuum tank produces a magnetic field that rises in step with the proton velocities, thus keeping the radius of their paths constant; this design eliminates the need for a center section of the magnet, allowing construction of rings with diameters measured in miles.

Particle Board

A composition board made of small pieces of wood bonded together.

Particle Velocity

A measure of the intensity of material vibration, specifically the time rate of change of the amplitude of material vibration.

PBX

Abbreviation for plastic bonded explosives. Of particular importance for tactical operations are the "[sheet explosives](#)" which are made with [PETN](#) or [RDX](#), depending on the product. [Sheet Explosive](#).

Peat

Peat, soil material consisting of partially decomposed organic matter, formed by the slow decay of aquatic and semiaquatic plants in *Swamps* and bogs. Principal types include moss peat, derived chiefly from *Sphagnum* and used as mulch and stable litter, and fuel peat, used where wood and

coal are scarce. Peat is the first stage of transition from compressed plant growth to the formation of [Coal](#).

Peak Pressure

Instantaneous maximum pressure developed in the gun chamber by burning propellant; pressure immediately preceding an expanding shock wave.

Pellet

A consolidated charge.

Pelleting

Process of consolidating charges.

Pentolite

An explosive composition of PETN and TNT, but usually a 50/50 composition. Can be melt pour.

Percussion

A method of initiating an explosive item by a sudden sharp blow.

Percussion Composition

High-explosive powder that is ignited in some types of firearms by the blow of the firing pin against the primer cap.

Percussion Fuze

[Impact Fuze](#).

Percussion Primer

Cap or cylinder containing a small charge of high explosive that may be set off by a blow. A percussion primer is used in all fixed and semi-fixed ammunition and in certain types of separate-loading ammunition to ignite the main propelling charge.

Perforation

Passage of a missile completely through an object.

Periodic Table

Periodic table, chart that reflects the periodic recurrence of chemical and physical properties of the [Elements](#) when the elements are arranged in order of increasing [Atomic Number](#). The periodic table was devised by Dmitri *Mendeleev* and revised by Henry *Moseley*. It is divided into vertical columns, or groups, numbered from I to VIII, with a final column numbered 0. Each group is divided into two categories, or families, one called the a series (the representative, or main group, elements) the other the b series (the [Transition Elements](#), or subgroup elements). All the elements in a group have the same number of [Valence](#) electrons and have similar chemical properties. The horizontal rows of the table are called periods. The elements of a particular period have the same number of electron shells; the number of electrons in these shells, which equals the element's atomic number, increases from left to right within each period. In each period the lighter [Metals](#) appear on the left, the heavier metals in the center, and the nonmetals on the right. Elements on the borderline between metals and nonmetals are called metalloids. Elements in group Ia are called the [Alkali Metals](#); in group IIa, the [Alkaline-Earth Metals](#); in group VIIa, the [Halogens](#); and in group 0, the [Inert Gases](#).

Peripheral Test

A brief test program conducted on an item or system to determine if it will meet only the most rigorous specified requirements.

Permissible Diameter (Smallest)

The smallest diameter of a permissible explosive, as approved by the Mine Safety and Health Administration (MSHA).

Permissible Individual Maximum Pressure

For any type gun, that value which should not be exceeded by the maximum pressure developed by an individual round under any service condition.

PE

Abbreviation of “plastic explosives”. They consist of high brisance explosives such as [RDX](#) or [PETN](#) combined with plasticizers. [PBX](#) and [Plastic Explosives](#).

Petard

Device intended to breach a door or gate.

PETN

1) An explosive compound, pentaerythritol tetranitrate represented by the empirical formula $C_5H_8N_4O_{12}$, it is a colorless crystal, with a [molecular weight](#) 316.1 and density of 1.76 g/cm³.

Oxygen balance: -10.1%, nitrogen content: 17.72%, volume of detonation gases 823 l/kg.

Detonation velocity, confined: 8400 m/s = 27,600 ft/s at $r = 1.70$ g/cm³. Critical diameter of steel sleeve test: 6mm. Deflagration point: 202 °C = 396 F, impact sensitivity 3 N m. PETN is very stable, insoluble in water, sparingly soluble in alcohol, ether and [benzene](#), and soluble in acetone and methyl acetate.

2) A high explosive of exceptional brisance, pentaerythrite tetranitrate. Used in detonating cord, boosters, detonators, blasting caps and as a constituent of Dentolite. in which it is mixed with [TNT](#)

Petroleum

Petroleum or crude oil, oily, flammable liquid that occurs naturally in deposits, usually beneath the surface of the earth. The exact composition varies according to locality, but it is chiefly a mixture of [Hydrocarbons](#). Petroleum is a fossil fuel thought to have been formed over millions of years from incompletely decayed plant and animal remains buried under thick layers of rock. Drilling for oil is a complex, often risky process. Scientific methods are used to locate promising sites for wells, some of which must be dug several miles deep to reach the deposit. Many wells are now drilled offshore from platforms standing on the ocean bed. Usually the crude oil in a new well comes to the surface under its own pressure. Later it has to be pumped or forced up with injected water, gas, or air. Pipelines or tankers transport it to refineries, where it is separated into fractions, i.e., the portions of the crude oil that vaporize between certain defined limits of temperature. Fractions are obtained by a refining process called fractional [Distillation](#) in which crude oil is heated and sent into a tower. The vapors of the different fractions condense on collectors at different heights in the tower. The separated fractions are then drawn from the collectors and further processed into various petroleum products. Generally the fractions are vaporized in the following order: dissolved [Natural Gas](#), [Gasoline](#), naphtha, [Kerosene](#), diesel fuel, heating oils, and finally tars. Lighter fractions, especially gasoline, are in greatest demand and their yield can be increased by breaking down heavier hydrocarbons in a process called cracking. The leading producers of petroleum in 1980 were the USSR, Saudi Arabia, the U.S., Iraq, Venezuela, China, Nigeria, Mexico, Libya, and the United Arab Emirates. The largest reserves are in the Middle East. Modern industrial civilization depends heavily on petroleum for

motive power, fuel, lubrication, and a variety of synthetic products, e.g., dyes, drugs, and Plastics. The widespread burning of petroleum as fuel has resulted in serious problems of air pollution, and oil spilled from tankers and offshore wells has damaged oceans and coastlines. Unless the need for oil is reduced, conservationists may be unable to prevent the development of oil deposits whose exploitation poses threats to the environment. See also [Energy, Sources Of](#).

pH

pH, range of numbers expressing the relative acidity or alkalinity of a solution. The pH value is the negative common [Logarithm](#) of the hydrogen-ion [Concentration](#) in a solution expressed in [Moles](#) per liter of solution. A neutral solution is one that is neither acidic nor alkaline such as pure water has a concentration of 10^{-7} moles per liter; its pH is thus 7. Acidic solutions have pH values ranging with decreasing acidity from 0 to nearly 7; alkaline or basic solutions have a pH ranging with increasing alkalinity from just beyond 7 to 14. Also [Acids and Bases](#).

Phosgene

Colorless choking gas having an odor of new-mown hay or fresh corn; causes choking and coughing, and injuries to the lungs.

Photoelectric Cell

Photoelectric cell or photocell, a device whose electrical characteristics (e.g., current, voltage, or resistance) vary when light is incident upon it. Common photoelectric cells consist of two electrodes separated by a light-sensitive [Semiconductor](#) material. A battery or other voltage source connected to the two electrodes sets up a current even in the absence of light; when light strikes the semiconductor section of the photocell, the current increases in proportion to the light intensity. Photocells can be used to operate [Switches](#), [Relays](#), door openers, and intrusion alarms. See also [Photovoltaic Cell](#).

Photometry

Photometry, branch of physics dealing with the measurement of the intensity of light sources. Instruments used for such measurements are called photometers; most types are based on the comparison of the light source to be measured with a light source of known intensity. The modern unit, adopted in 1948, for the measurement of light intensity is the candela (cd); it is equal to 1/60 of the intensity of one square centimeter of a blackbody radiator at the temperature at which platinum solidifies (2046°K).

Photon

Photon or light quantum, the particle composing light and other forms of electromagnetic radiation. The [Photovoltaic Effect](#) and blackbody radiation can be explained only by assuming that light energy is transferred in discrete packets, or photons, and that the energy of each photon is equal to the frequency of the light multiplied by Planck's constant h . Light imparts energy to a charged particle when one of its photons collides with the particle. Also [Quantum Theory](#).

Photovoltaic Cell

A [Semiconductor](#) diode that converts light to electric current. When light strikes the exposed active surface, it knocks electrons loose from their sites in the crystal. Some of the electrons have sufficient energy to cross the E_{Diode} junction and pass through an external circuit. Because the current and voltage obtained from these devices are small, they are usually connected in large series-parallel arrays. Practical photovoltaic cells are currently about 10 to 15% efficient.

Although cells constructed from indium phosphide and gallium arsenide are, in principle, more efficient, silicon-based cells are generally less costly. Solar photovoltaic cells have long been used to provide electric power for spacecraft. Recent developments, still in progress, have driven costs down to the point where they are being used more and more as terrestrial energy sources.

Picric Acid

- 1) Material to be added.
- 2) (Trinitrophenol). High explosive, more powerful than trinitrotoluene, used widely in the form of mixtures with other nitro compounds.

Piezoelectric Crystal

Crystalline material s constituted that, when it is mechanically compressed or stretched in certain directions, electrical charges in direct proportion to the mechanical strain appear on the crystal surfaces.

Pin Puller

A mechanical device in which a pressure cartridge causes a pin or piston to retract, usually against a side load.

Pin Pusher

A mechanical device in which a pressure cartridge drives a pin or piston along its central axis.

Piobert's Law

Expression of the linearity of burning of homogeneous propellants. As any exposed propellant surface receives heat from the surrounding combustion products at the same rate, it, therefore, burns at the same rate. The burning surface thus recedes by parallel layers.

Pitch (of rifling)

Reciprocal of the twist. *Twist*.

Placards

Signs placed on vehicles transporting hazardous materials (including explosive materials) indicating the nature of the cargo.

Planet

Any of the nine relatively large, nonluminous bodies - Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto - that revolve around the sun (see *Solar System*). By extension, any similar body discovered revolving around another star would be called a planet. The *Asteroids* are sometimes called minor planets. The major planets are classified either as inferior, with an orbit between the sun and the orbit of the earth (Mercury and Venus), or as superior, with an orbit beyond that of the earth (Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto). The terrestrial planets - Mercury, Venus, Earth, and Mars - resemble the earth in size, chemical composition, and density. The Jovian planets - Jupiter, Saturn, Uranus, and Neptune - are much larger in size and have thick, gaseous atmospheres and low densities. Pluto is unclassified. The rapid rotation of the latter planets results in polar flattening of 2 - 10%, giving them an elliptical appearance.

Planform

Shape of plan view of fins.

Plasma

Plasma, in physics, a fully ionized gas containing approximately equal numbers of positive and negative *Ions* A plasma is an electric conductor and is affected by magnetic fields. The study of

plasmas, called plasma physics, is important in efforts to produce a controlled thermonuclear reaction ([Nuclear Energy](#). In nature, plasmas occur in the interior of stars and in interstellar gas, making plasma a form of matter in the universe ([States of Matter](#))).

Plastic

Plastic, any synthetic organic material that can be molded under heat and pressure into a shape that is retained after the heat and pressures are removed. There are two basic types of plastic: thermosetting, which cannot be resoftened after being subjected to heat and pressures; and thermoplastic, which can be repeatedly softened and reshaped by heat and pressure. Plastics are made up chiefly of a binder consisting of long chainlike molecules called [Polymers](#). Binders can be natural materials, e.g., [Cellulose](#), or (more commonly) synthetic [Resins](#), e.g., [Bakelite](#). The permanence of thermosetting plastics is due to the heat- and pressure-induced cross-linking reactions the polymers undergo. Thermoplastics can be reshaped because their linear or branched polymers can slide past one another when heat and pressure are applied. Adding plasticizers and fillers to the binder improves a wide range of properties, e.g., hardness, elasticity, and resistance to heat, cold, or acid. Adding [Pigments](#) imparts color. Plastic products are commonly made from plastic powders. In compression molding, heat and pressure are applied directly to the powder in the mold cavity. Alternatively, the powder can be plasticized by outside heating and then poured into molds to harden (transfer molding); be dissolved in a heating chamber and then forced by a plunger into cold molds to set (injection molding); or be extruded through a die in continuous form to be cut into lengths or coiled (extrusion molding). The first important plastic, celluloid, has been largely replaced by a wide variety of plastics known by such trade names as Plexiglas, Lucite, Polaroid, and cellophane. New uses continue to be found and include contact lenses, machine gears, and artificial body parts. The widespread use of plastics has led to environmental problems. Because plastic products do not decay, large amounts accumulate as waste. Disposal is difficult because they melt when burned, clogging incinerators and often emitting harmful fumes, e.g., the hydrogen chloride gas given off by [Polyvinyl Chloride](#). Also TM[DE_ Polypropylene](#); [Polyurethanes](#); [Teflon](#).

Plastic Explosives

- 1) High-brisance crystalline explosives, such as [RDX](#) or [Octogen](#), can be embedded in curable or polyadditive [plastics](#) such as polysulfides, polybutadiene, acrylic acid, polyurethane, etc. The mixture is then cured into the desired shape. Other components such as aluminum powder can also be incorporated. The products obtained can be of any desired size, and specified mechanical properties can be imparted to them, including [rubber](#)-like elasticity ([LX](#) and [PBX](#)). They can also be shaped into foils.
- 2) “Plastic” ® also means mixtures of RDX with Vaseline or gelatinized liquid nitro compounds of plastiline-like consistency. Explosive which, within normal ranges of atmospheric temperature, is capable of being molded into desired shapes. These explosives are easy to use by non-experts.
- 3) Also used propellant charges for rockets and guns have also been developed by compounding solid explosives such as nitramines (e.g. [Cyclonite](#)) with [plastics](#). Plastic explosives and plastic propellants are of interest, if low thermal and impact sensitivity is needed (“[Lova](#)”; [Armour Plate](#)

Impact Test; [Friction Sensitivity](#); Heat Sensitivity; [Impact Sensitivity](#); Projectile Impact Sensitivity; Susan Test).

Plasticizer

A material added to a propellant to increase flexibility or workability.

Platform Breaching

Breaching of a mobile structure such as an aircraft, oil rig, ship, train, bus, etc.

Plunging Fire

Gunfire that strikes the earth's surface at a high angle.

Plutonium

Plutonium (Pu), radioactive element, first produced artificially by Glenn *Seaborg* and colleagues in 1940 by deuteron bombardment of uranium oxide. It is a silver-gray [Transuranium Element](#) in the [Actinide Series](#). Plutonium is a fission fuel for [Nuclear Energy](#) and weapons ([Atomic Bomb](#); [Nuclear Energy](#)). It is an extremely dangerous poison, collecting in bones and altering the production of white blood cells. [Element](#); [Periodic Table](#).

Point-Blank Range

Distance, to a target, that is so short that the trajectory of a bullet or projectile is practically a straight rather than a curved line.

Point Detonating Fuze

Fuze, located in the nose of a projectile, which is initiated upon impact.

Polymer

A chemical compound with high molecular weight consisting of a number of structural units linked together by covalent bonds. The simple molecules that may become structural units are themselves called monomers. A structural unit is a group having two or more bonding sites. In a linear polymer, the monomers are connected in a chain arrangement and thus need only have two bonding sites. When the monomers have three bonding sites, a nonlinear, or branched, polymer results. Naturally occurring polymers include cellulose, proteins, natural [rubber](#), and silk; those synthesized in the laboratory have led to such commercially important products as [Plastics](#), synthetic fibers, and synthetic rubber.

Polypropylene

Lightweight [Plastic](#), a [Polymer](#) or propylene. It is less dense than water and resists moisture, oils, and solvents. It is used to make packaging material, textiles, luggage, ropes that float, and, because of its high melting point (250°F/121°C), objects that must be sterilized.

Polyvinyl Chloride

(PVC), thermoplastic that is a [Polymer](#) of vinyl chloride. By adding plasticizers, hard PVC resins can be made into a flexible, elastic [Plastic](#), used as an electrical insulator and as a coating for paper and cloth in making fabric for upholstery and raincoats.

Polyurethanes

Large group of [Plastics](#) that occur in a wide variety of forms. As a flexible foam, it is used for cushions and carpet backings. As a rigid foam, it can be molded into furniture or used as insulation. Some polyurethanes are highly elastic, e.g., Lycra, a fiber used in stretch clothing; others form hard protective coatings.

Population

All the items or devices about which conclusions are to be made.

Positive Duration

Time elapsing between the arrival of the shock front and the arrival of the part in which the pressure is exactly atmospheric.

Positive Impulse

Average pressure during the positive phase multiplied by the positive duration.

Potassium

Potassium (K), metallic element, discovered in 1807 by Sir Humphrey *Davy*, who decomposed potash with an electric current. It is a soft, silver-white, extremely reactive [Alkali Metal](#).

Potassium is the seventh most abundant element in the earth's crust and the sixth most abundant of the elements in solution in the oceans. It is an essential nutrient for plants and animals.

Potassium compounds are used in fertilizers, soaps, explosives, glass, baking powder, tanning, and water purification. [Element](#); [Periodic Table](#).

Potassium Chlorate

Potassium chlorate is sparingly soluble in cold water, readily soluble in hot water, and insoluble in alcohol.

It is the principal component of *Chlorate Explosives* and is an important component of primer formulations and pyrotechnical compositions, in particular matchheads.

Potassium Nitrate

Potassium nitrate is readily soluble in water, sparingly soluble in alcohol, and insoluble in ether. It is used as a component in pyrotechnical compositions, in industrial explosives, and in black powder.

Potassium Perchlorate

Potassium perchlorate is insoluble in alcohol but soluble in water. It is prepared by reacting a soluble potassium salt with sodium perchlorate or perchloric acid. It is employed in pyrotechnics.

Potential, Electric

Potential, electric, work per unit electric charge expended in moving a charged body from a reference point to any given point in an electric field. The potential at the reference point is considered to be zero, while the reference point itself is usually chosen to be at infinity. The change in potential associated with moving a charged body is independent of the actual path taken and depends only on the initial and final points. Potential is measured in [Volts](#) and is sometimes called voltage. Also [Electric Circuit](#) ; [Electromotive Force](#).

Potentiometer

Potentiometer, or voltage divider, manually adjustable variable electrical resistor that has a [Resistance](#) element attached to an [Electric Circuit](#) by three contacts, or terminals. The ends of the resistance element are attached to the two input voltage conductors of the circuit, and the third contact, attached to the output of the circuit, is usually a movable terminal that slides across the resistance element, dividing it into two resistors. Because the position of the movable terminal determines what percentage of the input voltage ([Potential, Electric](#)) is applied to the circuit, a potentiometer can be used to vary the magnitude of the voltage, e.g., in radio volume and television brightness controls.

Powder

- 1.) An explosive (or propellant) in the form of powder or small granules.
- 2.) A synonym designating any explosive, irrespective of type.

Powder Factor

The amount of explosive used per unit of rock; Also called *Explosive Loading Factor*.

Power

Power, in physics, the time rate of doing [Work](#) or of producing or expending [Energy](#). The unit of power in the [Metric System](#) is the watt, which equals 1 joule per second. It is also the amount of power that is delivered to a component of an electric circuit when a current of 1 ampere flows through the component and a voltage of 1 volt exists across it. The *English Unit Of Measurement* is the horsepower, which equals 550 foot-pounds per second or 746 watts.

Power, (electric)

Power, electric, is the rate per unit of time at which [Energy](#) is consumed or produced. Electric Power is usually measured in watts or kilowatts (1,000 watts). The energy supplied by a current to an appliance enables it to work or to provide other forms of energy such as light or heat. The amount of electric energy an appliance uses is found by multiplying its power rating by the operating time. Units of electric energy are usually watt-seconds (joules), watt-hours, or kilowatt-hours (the choice for commercial applications). Generally, practical electric-power-generating systems convert mechanical energy into electric energy (see [Generator](#)). Whereas some electric plants obtain mechanical energy from moving water (water power or hydroelectric power), the vast majority derive it from heat engines in which the working substance is steam generated by heat from combustion of fossil fuels or nuclear reactions ([Nuclear Energy](#); [Nuclear Reactor](#)). Although the conversion of mechanical energy to electric energy may approach 100% efficiency, the conversion of heat to mechanical energy is about 41% efficient for a fossil-fuel plant and about 30% for a nuclear plant. It is thought that a magnetohydrodynamic generator, which operates by using directly the kinetic energy of gases produced by combustion, would have an efficiency of about 50%. Although [Fuel Cells](#) develop electricity by direct conversion of hydrogen, hydrocarbons, alcohol, or other fuels, with an efficiency of 50 to 60%, their high cost has restricted their use to space programs. *Solar Energy* has been recognized as a feasible power source. It can be exploited through wind turbines, [Photovoltaic Cells](#), and heat engines, as well as through both conventional and low-head hydroelectric power plants. Research and development is bringing down the costs. An important problem in utilizing solar energy is related to the variable nature of sunlight and wind. To minimize energy losses from heating of conductors and to economize on the material needed for conductors, electricity is usually transmitted at the highest voltages possible. As modern [Transformers](#) are virtually loss free, the necessary steps upward or downward in voltage are easily accomplished. Electric utilities producing power are tied together by transmission lines into large systems called power grids. They are thus able to exchange power, so that a utility with low power demand can assist another with a high demand. See also [Energy Sources Of](#).

Power Source

The source of power for energizing electric blasting circuits, e.g., a blasting machine or power line.

Powder Train

- 1) Train, usually of compressed black powder, used to obtain time action in older fuze types.
- 2) Train of explosives laid out for destruction by burning.

Practice Ammunition

Ammunition used for target practice; ammunition with a propelling charge, but with either an inert filler or a low-explosive filler to serve as a spotting charge.

Precision

The quality of having small dispersion about the mean.

Precession

A change in the direction of the axis of a rotating body.

Preignition

The spontaneous and premature ignition.

Premature Firing

The detonation of an explosive charge before the intended time.

Pressure

When a force acts perpendicular to a surface, the pressure (p) exerted is the ratio between the magnitude of the force and the area of the surface:

pressure = force / area

Undisp.
Graphic

pressures are properly expressed in pascals, Pa ($=\text{N}/\text{m}^2$), and may well be expressed using other terms such as bars, atmospheres or dynes.

Pressure Cartridge

An explosive item designed to produce momentary gaseous products of combustion under pressure for performing a mechanical operation.

Pressure, Center Of

The point where the resultant force caused by air resistance intersects the axis of the projectile.

Prevalves

One-way, one-shot, leak proof valves which, when open, permit the propellant to reach the turbopumps preliminary to engine ignition.

Prilled Ammonium Nitrate

Ammonium nitrate in a pelleted or prilled form.

Prills

Cellular sub-globular particles of AN formed by spraying concentrated AN solution against a stream of air.

Primacord

Flexible fabric tube containing a filler of high-explosive that is used to transmit a detonation from a detonator to a booster or bursting charge. Primacord is the trade name for one type of detonating fuse currently in use.

Primary Blast

A term used in commercial blasting to describe a blast used to fragment and displace material from its original position to facilitate subsequent handling and crushing.

Primary Explosive

- 1) A sensitive explosive that nearly always detonates by simple ignition from such means, are

spark, flame, impact, friction, or other primary heat sources of appropriate magnitude.

2) A sensitive explosive, one of the first elements in an explosive train.

Primary Fragmentation

Fragments produced directly from the contents or casing of an explosive device.

Primer

1) A unit, package, or cartridge of explosives used to initiate other explosives or blasting agents, and which contains, a detonator, or detonating cord to which is attached a detonator designed to initiate the detonating cord.

2) Device used to initiate the functioning of an explosive or igniter train. It may be actuated by friction, flow, heat, pressure or electricity.

Primer-Detonator

Assembly consisting of a primer and a detonator. It may also include a delay element

Primer (Primer Mixture)

An explosive mixture containing a sensitive explosive, usually the first element in an explosive train.

Primer Seat

Primer location within the breech chamber of a gun that uses separate loading ammunition.

Probability

The ratio of the number of favorable events divided by the total number of events possible.

Probable Error

An error of such magnitude that the probability of making an error greater than it in any given observation is just equal to the probability of making one less than it, both probabilities being one-half.

Probate Analysis

A statistical analysis using a limited number of samples to determine a reliability factor. In this test, the level of variable is changed in a certain predetermined manner.

Procedure, Design

Outline of steps to follow in designing an item.

Product Lot Sampling

Tests conducted on a sample of a production lot to determine that the lot meets the specified dimensional and firing characteristics.

Progressive Burning

The burning of a propellant grain in which the reacting surface area increases during the combustion.

Progressive Granulation

Propellant grain which burns with a continually increasing surface until the grain is completely consumed.

Projectile

Object, such as a bullet or shell, that is propelled from a weapon by an explosive propelling charge.

Projectile Impact Sensitivity

The projectile impact sensitivity is the reaction of an explosive charge if hit by infantry projectiles. Impact safety is given if the charge does not fully explode at impact. The projectile

impact sensitivity does not only depend on the type of explosive itself, but also on the nature of its confinement (metallic, plastic, thin-walled, or thick-walled). A single bullet impact by an ordinary or a hard steel cored projectile, or a machine gun burst, will create different reactions. A test has been developed in Sweden: cylinders made of copper, brass, and aluminum (15 mm \varnothing) are brought to accurately adjusted and measured impact velocities. Also [Impact Sensitivity](#).

Proof Ammunition <bob>

Ammunition incorporating solid, blunt-nosed, steel or cast iron shot of inexpensive manufacture; used in proof firing of guns; used to simulate the weight of projectile designed for the gun in adjusting the charge weight or propellant.

Propaganda Shell

Leaflet Shell.

Propagation

The detonation of explosive charges by an impulse received from adjacent or nearby explosive charges.

Propane

Propane ($\text{CH}_3\text{CH}_2\text{CH}_3$), colorless gaseous *Hydrocarbons* that occurs in [Natural Gas](#) and [Petroleum](#). Propane is sold compressed in cylinders, often mixed with other hydrocarbons, and is used as fuel in lamps, gas grills, certain home and portable stoves, and certain cigarette lighters.

Propellant

- 1.) Explosive material whose rate of combustion is low enough, and its other properties suitable, to permit its use as a propelling charge.
- 2.) An explosive substance or mixture of substances which, when burned, produces gases to provide energy.

Propellant Actuated Device (PAD)

A mechanical device actuated by a contained or inserted propellant charge.

Propellant Composite

Propellant compositions commonly contain additives which affect the performance of the propellant.

Propellant Double Base

The double-base propellant consists of nitrocellulose and [nitroglycerin](#) with the addition of various stabilizers.

Propellant Explosive

An explosive material that normally functions by deflagration and is used for propulsion purposes. It may be a Class A or Class B explosive, depending upon its susceptibility to detonation.

Propelling Charge

Explosive charge that is burned in a weapon to propel a projectile therefrom ([Propellant](#)). Burning of the confined propelling charge produces gases whose pressure forces the projectile out.

Proper Motion

Proper motion (M), apparent angular motion of a star on the celestial sphere, usually measured in seconds of arc per year. A star's transverse velocity V_T i.e., its motion across the line of sight to

the star (as opposed to its RADIAL *Velocity*, or line-of-sight velocity), is calculated in kilometers per second from the equation $V_T = 4.74 M/p$, where p is the star's *Parallax*, expressed in seconds of arc.

Protein

Protein, any of the group of highly complex organic compounds found in all living cells. Protein is the most abundant class of all biological molecules, comprising about 50% of cellular dry weight. Classified by biological function, proteins include the enzymes, which catalyze cellular reactions; collagen, keratin, and elastin, which are structural, or support, proteins; hemoglobin and other transport proteins; casein, ovalbumin, and other nutrient proteins; antibodies, which are necessary for immunity; protein hormones, which regulate metabolism; and proteins such as actin and myosin, the contractile muscle proteins, that perform mechanical work. Structurally, proteins are large molecules composed of one or more chains of varying amounts of the same 22 amino acids, which are linked by peptide bonds. Each protein is characterized by a unique and invariant amino acid sequence. Protein chains may contain hundreds of amino acids; some proteins also incorporate phosphorus or such metals as iron, zinc, and copper. The amino acid sequence also determines the molecule's three-dimensional structure; this so-called native state is required for proper biological function. The information for the syntheses of the specific amino acid sequences from free amino acids is carried by the cell's nucleic acids.

Proton

Proton, *Elementary Particle* having a single positive electrical charge and constituting the nucleus of the ordinary hydrogen *Atom*. Every atomic nucleus contains one or more protons. The mass of the proton is about 1,840 times the mass of the *Electron* and slightly less than the mass of the neutron. In 1919 Ernest Rutherford discovered the proton as a product of the disintegration of the atomic nucleus. The proton and the neutron are regarded as two aspects, or states, of a single entity, the nucleon. The antiproton, the proton's antiparticle (*Antimatter*), was discovered in 1955.

Prototype

The first fully workable item; also a precursor of later developments.

Proximity Fuze

Fuze designed to detonate a projectile, bomb, mine, or charge when activated by an external influence in the close vicinity of a target.

Pyro Powder

Straight nitrocellulose powder; smokeless propelling charge consisting of a nitrocellulose that has a smaller nitrogen content than *guncotton*; single-base propellant.

Pyrocellulose

Nitrocellulose containing 12.60 percent nitrogen.

Pyrochemical

To be used (with discretion) in lieu of pyrotechnical, especially in regard to the chemical reactions of pyrotechnics.

Pyrocore

A flexible explosive cord similar to MDF except that the high explosive core is modified to promote ignition at the speed of detonation. A high velocity ignition propagation fuse (detonating).

Pyrocotton

[Pyrocellulose](#).

Pyrogen

A rocket ignition system containing a solid propellant grain as its main ignition material.

Pyrotechnic

A mixture of chemicals designed to produce heat, light, smoke, gas or noise.

Pyrotechnics

Any combustible or explosive compositions or manufactured articles designed and prepared for the purpose of producing audible or visible effects. Pyrotechnics are commonly referred to as fireworks.

Pyroxylin (Collodion)

Nitrocellulose containing 8-12 percent nitrogen.

Q

Return to [top](#) of page.

Qualification Tests

A series of tests conducted on an item or system to determine if it meets the requirements established for the specified use.

Quality Assurance

System of assuring that material accepted is in accordance with requirements, including inspection and test procedures, acceptance criteria, etc.

Quantity - Distance Table

A table listing minimum recommended distances from explosive materials stores of various weights to a specific location.

Quantum Theory

Quantum theory, modern physical theory that holds that energy and some other physical properties often exist in tiny, discrete amounts. The older theories of classical physics assumed that these properties could vary continuously. Quantum theory and the theory of [Relativity](#) together form the theoretical basis of modern physics. The first contribution to quantum theory was the explanation of blackbody radiation in 1900 by Max Planck, who proposed that the energies of any harmonic oscillator are restricted to certain values, each of which is an integral multiple of a basic minimum value. The energy E of this basic quantum is directly proportional to the frequency ν of the oscillator; thus $E = h\nu$, where Planck's constant h is equal to 6.63×10^{-34} J-sec. In 1905 Albert *Einstein*, in order to explain the *Photoelectric Effect*, proposed that radiation itself is also quantized and consists of light quanta, or [Photons](#), that behave like particles. Niels *Bohr* used the quantum theory in 1913 to explain both atomic structure and atomic spectra. The light or other radiation emitted and absorbed by atoms is found to have only certain frequencies (or wavelengths), which correspond to the absorption or emission lines seen in atomic spectra ([Spectrum](#)). These frequencies correspond to definite energies of the photons and result from the fact that the electrons of the atoms can have only certain allowed energy values, or levels. When an electron changes from one allowed level to another, a quantum of energy is emitted or

absorbed whose frequency is directly proportional to the energy difference between the two energy levels E_1 and E_2 ; thus $E_2 - E_1 = h\nu$. Quantum mechanics, the application of the quantum theory to the motions of material particles, was developed during the 1920s. In 1924 Louis de Broglie proposed that not only does light exhibit particle-like properties but also particles may exhibit wavelike properties. The observation, by Clinton Davisson and Lester Germer in a 1927 experiment that the diffraction of a beam of electrons is analogous to the diffraction of a beam of light confirmed this hypothesis. A particularly important discovery of the quantum theory is the uncertainty principle, enunciated by Werner Heisenberg in 1927; it places an absolute, theoretical limit on the combined accuracy of certain pairs of simultaneous, related measurements.

Quasar

Quasar or quasi-stellar object, one of a class of faint blue celestial objects, starlike in appearance, that are currently believed to be the most distant and most luminous objects in the universe. The spectral lines of quasars have enormous [Red Shifts](#) that seem to imply that they are receding from our galaxy with speeds as great as 80% of the speed of light. If *Hubble's Law* for the expansion of the universe is extrapolated to include quasars, they may be as far as 8 billion *Light-Years* away and consequently as luminous intrinsically as 100 galaxies combined.

Quickness

Rate of change of pressure within the closed chamber with respect to time.

R

Return to [top](#) of page.

Radar

Radar (radio detection and ranging), system or technique for detecting the position, motion, and nature of a remote object by means of radio waves reflected from its surface. Radar systems transmit pulses of electromagnetic waves by means of directional *Antennas*; some of the pulses are reflected by objects in the path of the beam. Reflections are received by the radar unit, processed electronically, and converted into images on a [Cathode-Ray Tube](#). The distance of the object from the radar source is determined by measuring the time required for the radar signal to reach the target and return. The direction of the object with respect to the radar unit is determined from the direction in which the pulses were transmitted. In most units, the beam of pulses is continuously rotated at a constant speed, or it is scanned (swung back and forth) over a sector at a constant rate. The velocity of the object is sometimes determined by the [Doppler Effect](#): if the object is approaching the radar unit, the frequency of the returned signal is greater than the frequency of the transmitted signal; if the object is receding, the returned frequency is less; and if the object is not moving relative to the radar unit, the frequency of the returned signal is the same as the frequency of the transmitted signal. Most radar units operate on microwave frequencies.

Radial Velocity

Radial velocity, the speed with which a star moves toward or away from the sun. It is measured from the [Red Shift](#) or blue shift in the star's spectrum. Also *Proper Motion*.

Radiation

Radiation is the emission or transmission of energy in the form of [Waves](#) through space or

through a material medium; the term also applies to the radiated energy itself. The term includes electromagnetic, acoustic, and particle radiation, and all forms of ionizing radiation. According to [Quantum Theory](#), [Electromagnetic Radiation](#) may be viewed as made up of [Photons](#). Acoustic radiation is propagated as sound waves. Examples of particle radiation are alpha and beta rays in [Radioactivity](#), and [Cosmic Rays](#).

Radiation Sickness

Radiation sickness is the illness caused by the effects of radiation on body tissues. It may be acute, delayed, or chronic and may occur after repeated (cumulative) exposure to small doses of radiation (as in a plant, a laboratory, or the environment); undue exposure to solar radiation; or exposure to a nuclear explosion. Symptoms may be mild and transitory, or severe, depending on the type of radiation, the dose, and the rate at which exposure is experienced. They include weakness, loss of appetite, vomiting, diarrhea, a tendency to bleed, increased susceptibility to infection, and—in severe cases—brain damage and death. Mild radiation sickness is a common side effect of radiation therapy for Cancer. Exposure to radiation is of concern even in small doses because of possible long-term genetic effects.

Radio

Radio, transmission or reception of [Electromagnetic Radiation](#) in the radio frequency range from one place to another without wires. For the propagation and interception of radio waves, a transmitter and receiver are employed. A radio wave carries information-bearing signals; the information may be encoded directly on the wave by periodically interrupting its transmission (*Telegraph*) or impressed on the carrier frequency by a process called *Modulation*, e.g., amplitude modulation (AM) or frequency modulation (FM). In its most common form, radio transmits sounds (voice and music) and pictures ([Television](#)). The sounds (or images) are converted into electrical signals by a *Microphone* (or camera tube), amplified (*Amplifier*), and used to modulate a carrier wave that has been generated by a transmitter. The modulated carrier is also amplified, then applied to an *Antenna* that converts the electrical signals to electromagnetic waves that radiate into space at the speed of light. Receiving antennas intercept part of this radiation, convert it back into electrical signals, and feed it to a receiver. Once the basic signals have been separated from the carrier wave, they are fed to a *Loudspeaker* or [Cathode-Ray Tube](#), where they are converted into sound and visual images, respectively. Some celestial bodies and interstellar gases emit relatively strong radio waves that are observed with radio telescopes composed of very sensitive receivers and large directional antennas (*Radio Astronomy*). Long-range radio signals enable communications between astronauts and ground-based controllers and carry information from *Space Probes* as they travel to and encounter distant planets. The invention of the *Transistor* and other microelectronic devices (*Micro*) led to the development of portable transmitters and receivers. Military applications of radio include the proximity fuse and various types of *Reconnaissance Satellites*. Citizens band (CB) radios, operating at frequencies near 27 megahertz, are used in vehicles for communication while traveling. Also *Broadcasting*; *Communications*

Radio Waves

The use of electromagnetic waves in the approximate frequency range from 10 kilocycles/second to 300,000 megacycles/second to transmit or receive electric signals without wires connecting the

points of transmission and reception.

Radioactivity

Radioactivity, the spontaneous disintegration or decay of the nucleus of an atom by emission of particles, usually accompanied by . [Electromagnetic Radiation](#). Natural radioactivity is exhibited by several elements, including [Radium](#) and [Uranium](#). The radiation produced is of three types: the alpha particle, which is a nucleus (two protons and two neutrons) of an ordinary helium atom; the beta particle, which is a high-speed electron or, in some cases, a positron (the electron's antiparticle); and [Gamma Radiation](#), which is a type of electromagnetic radiation with very short wavelengths. The rate of disintegration of a radioactive substance is commonly designated by its half-life, which is the time required for one half of a given quantity of the substance to decay. Radioactivity may be induced in stable elements by bombardment with particles of high energy. Also [Dating](#); [Isotope](#).

Radiometer

An instrument for the detection or measurement of [Electromagnetic Radiation](#), particularly [Infrared Radiation](#). Radiometers that function by increasing the temperature of the device are called thermal detectors; examples include the bolometer and the *Thermocouple*.

Radio Frequency Energy (RF)

The energy transferred by electromagnetic wave in the radio frequency spectrum.

Radio Frequency Transmitter

An electronic device that radiates radio frequency waves; the device may be fixed (stationary) or mobile.

Radium

Radium (Ra), is a radioactive metallic element, discovered in Pitchblende in 1898 by Pierre and Marie Curie. It is a rare, lustrous, white [Alkaline-Earth Metal](#) that resembles barium in its chemical properties. Radium compounds are found in uranium ores. The [Radioactivity](#) of radium and its compounds is used in the treatment of cancer. Radium compounds are mixed with a phosphor in luminous paints. In its radioactive decay, radium emits alpha, beta, and gamma rays and produces heat. *Element*; [Periodic Table](#).

Radon

(Rn), gaseous radioactive element, discovered by Ernest Rutherford in 1899. A colorless, chemically unreactive *Inert Gas*, it is the densest gas known. Highly radioactive (emitting alpha rays), it is used chiefly in the treatment of cancer by radiotherapy. In homes and other buildings in some areas of the U.S. radon produced by the radioactive decay of uranium-238 present in soil and rock can reach levels regarded as dangerous, but the seriousness of the problem is unclear.

Ram

- 1.) To push into position.
- 2.) To seal a projectile in the bore of a gun.

Rammer

- 1.) Device for driving a projectile into position in a gun. It may be hand- or power-operated or a part of the receiver mechanism.
- 2.) Tool used to remove live projectiles from the bore of a gun.

Random Sample

Sample selected without bias or prejudice.

Range

The difference between the smallest and largest measurements in the sample.

Rare Earth Oxides of the Rare-Earth Metals

. The name of an earth is formed from the name of its element by replacing -um with -a. Once thought to be very scarce, they are widely distributed and fairly abundant in the earth's crust. Rare-earth minerals include bastnasite, cerite, euxenite, gadolinite, monazite, and samarskite. Mixed rare earths are used in glassmaking, ceramic glazes, and glass-polishing abrasives, and as [catalysts](#) for petroleum refining. Individual purified rare earths are used in lasers and as color-television picture-tube phosphors.

Rare-Earth Metals

Group of chemical elements including those in the [Lanthanide](#) series, usually yttrium, sometimes scandium and thorium, and rarely zirconium. Promethium, which is not found in nature, is not usually considered a rare-earth metal. The metals occur together in minerals as their oxides Rare Earths and are difficult to separate because of their chemical similarity. The cerium metals are a subgroup, consisting of the elements with atomic numbers between 57 and 63 and ytterbium.

Rarefaction

Pertaining (among others) to the atmosphere at high altitude or relatively low pressure pulse following a shock wave.

Rated Maximum Pressure

For any type gun, that value of the maximum pressure which is specified in the propellant specification as the upper limit of average pressure which may be developed by an acceptable propellant in the form of propelling charges which will impart the specified muzzle velocity to the specified projectile. The smokeless propellant in propelling charges which, in the acceptance test, develops an average maximum pressure exceeding this value is considered as having failed to pass the test.

RDF (Reinforced Detonating Fuse)

Most frequently applied to reinforced MDF.

RDX (Cyclotrimethylenetrinitramine)

Secondary high explosive used extensively by the military.

A high explosive compound, the term RDX originated as an acronym for research development explosive by the U.S. military. In reality RDX is Cyclotrimethylenetrinitramine - for short cyclonite and is expressed as the empirical formula $C_3H_6N_6O_6$. Cyclonite is a colorless crystal, with a molecular weight of 222.1, density of 1.82 g/cm^3 , oxygen balance: -21.6%, nitrogen content: 37.84%, volume of detonation gases: 900 l/kg. Detonation velocity, confined: 8,750 m/s = 28,700 ft/s at $r = 1.76 \text{ g/cm}^3$. Critical diameter of steel sleeve test: 8mm, impact sensitivity 7.5 N m. RDX is very stable, insoluble in water, sparingly soluble in alcohol, ether and benzene, and soluble in acetone. Cyclohexanone, nitrobenzene and glycol are solvents at elevated temperatures. RDX is probably the most important high-brisance explosive; its brisant power is owed to its high density and high detonating velocity. It is relatively insensitive (as compared to [PETN](#) - an explosive of similar strength). Its performance properties are only slightly inferior to those of the homologous [Octogen](#) (HMX).

Reaction Engine

An engine that develops thrust by its reaction to ejection of a substance from it; specifically, such an engine that ejects a jet or stream of gases created by the burning of fuel within the engine.

Recommended Firing Current (Or Energy)

In an EED, the current (or energy) which must be applied to a bridge circuit to cause operation within a specified time.

Recommended Test Current (Or Energy)

In an EED, the current (or energy) that can be applied to a bridge circuit for extended periods without degrading the explosive material or firing device.

Reconnaissance Satellite

An artificial [Satellite](#) launched by a country to provide intelligence information on the military activities of foreign countries. There are four major types. Early-warning satellites detect enemy missile launchings. Nuclear-explosion detection satellites are designed to detect and identify nuclear explosions in space. Photo-surveillance satellites provide photographs of enemy military activities, e.g., the deployment of intercontinental ballistic missiles (ICBMs). There are two subtypes: close-look satellites provide high-resolution photographs that are returned to earth via a re-entry capsule, whereas area-survey satellites provide lower-resolution photographs that are transmitted to earth via radio. Later satellites have combined these two functions. Electronic-reconnaissance (ferret) satellites pickup and record radio and radar transmissions while passing over a foreign country. The U.S. and the USSR have launched numerous reconnaissance satellites since 1960.

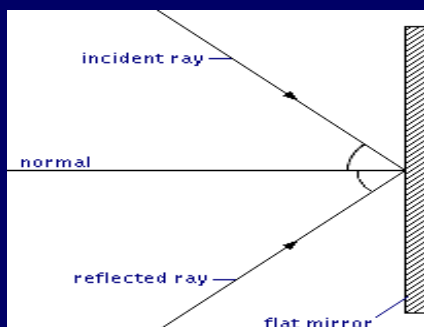

Rectifier

Rectifier, component of an [Electric Circuit](#) that changes alternating current to direct current. Rectifiers operate on the principle that current passes through them freely in one direction, but only slightly or not at all in the opposite direction. Also [Diode](#); [Electron Tube](#).

Red Shift

Red shift, the systematic increase in the wavelength of all light received from a celestial object; it is observed in the shifting of individual lines in the [Spectrum](#) of the object toward the red, or longer-wavelength, end of the visible spectrum. Most observed red shifts are the result of the [Doppler Effect](#); they are also produced by gravitation in accordance with the general theory of [Relativity](#). Also [Hubble's Law](#); [Quasar](#).

Reflection

Reflection, return of a wave, such as light, from a surface it strikes into the medium through which it has traveled. The law of reflection states that the angle of reflection (the angle between the reflected ray and the normal, or line perpendicular, to the surface at the point of reflection) is equal to the angle of incidence (the angle between the incident ray and the normal).

[Echo](#); [Mirror](#); [Refraction](#).

Refraction

Refraction, the deflection of a wave on passing obliquely from one transparent medium into a second medium in which its speed is different, as the passage of a light ray from air into glass.

The index of refraction of a transparent medium is equal to the ratio of the speed of light in a vacuum to the speed of light in the medium. Snell's law states that the ratio of the sine of the angle i of incidence (angle between the incident ray and the normal, or line perpendicular to the boundary between the two mediums at the point of refraction) to the sine of the angle r of refraction (angle between the refracted ray and the normal) is equal to the ratio of the refracting medium's index of refraction n_r to the original medium's index of refraction n_i .

Refractory

Very resistant especially to high temperatures; refractive pertains to optics.

Regenerative Cooling

A system for keeping liquid rocket engines cool in which one of the liquid propellants is circulated through the engine thrust chamber walls to protect the metal of the walls from melting under high combustion temperatures.

Regressive Burning

Burning of a propellant grain in such a manner that the surface area decreases as burning progresses.

Relative Force

Ratio of observed maximum pressure developed by a propellant under test to the maximum pressure developed by a standard propellant under identical test conditions.

Relative Strength

The chart below is based on US military explosives used for demolition purposes (tactical breaching is a significantly different task than military demolition).

RELATIVE EFFECTIVENESS FACTOR OF VARIOUS EXPLOSIVES

| Explosive Name | Principal Use | V.O.D.
m/s f/s | Relative

Relativity

Relativity, physical theory, introduced by Albert Einstein, that discards the concept of absolute motion and instead treats only relative motion between two systems or frames of reference. Space and time are no longer viewed as separate, independent entities but rather as forming a four-dimensional continuum called *Space Time*. In 1905 Einstein enunciated the special relativity theory, in which the hypothesis that the laws of nature are the same in different moving systems also applies to the propagation of light, so that the measured speed of light is constant for all observers regardless of the motion of the observer or of the source of light. From these hypotheses Einstein reformulated the mathematical equations of physics. In most phenomena of ordinary experience the results from the special theory approximate those based on Newtonian dynamics, but the results deviate greatly for phenomena occurring at velocities approaching the speed of light. Among the assertions and consequences of the special theory are the propositions that the maximum velocity attainable in the universe is that of light; that mass increases with velocity; that mass and energy are equivalent; that objects appear to contract in the direction of motion; that the rate of a moving clock seems to decrease as its velocity increases; that events that appear simultaneous to an observer in one system may not appear simultaneous to an observer in another system. Einstein expanded the special theory of relativity into a general theory (completed in 1915) that is principally concerned with the large-scale effects of [Gravitation](#) (Also *Cosmology*). The general theory recognizes the equivalence of gravitational and inertial mass, and asserts that material bodies produce the curvature of the space-time continuum and that the path of a body is determined by this curvature. The theory predicts that a ray of light is deflected by a gravitational field; observations of starlight passing near the sun, first made by Arthur *Eddington* and colleagues during a 1919 eclipse of the sun, confirmed this. The theory also predicts a [Red Shift](#) of spectral lines of substances in a gravitational field, a result

confirmed by observation of light from white dwarf stars. Finally, the theory also accounts for the entire observed perihelion motion of the planet Mercury, only part of which could be explained by Newtonian [Celestial Mechanics](#). Also [Motion](#).

Relay, (electrical)

Material to be added.

Relay, electromechanical

Switch in which the variation of current in one [Electric Circuit](#) controls the flow of electricity in another circuit. A relay consists of a movable contact connected to an *Electromagnet* by a spring. When the electromagnet is energized by the controlling current, it exerts a force on the contact that overcomes the pull of the spring and moves the contact so as to either complete or break a circuit. When the electromagnet is de-energized, the contact returns to its original position.

Relay, (explosive)

An element of a fuze explosive train which augments an outside and otherwise inadequate output of a prior explosive component so as to reliably initiate a succeeding train component. Relays, in general, contain a small single explosive charge such as lead azide and are not usually employed to initiate high explosive charges.

Reliability

A statistical evaluation of the probability of a device performing its design function.

Remaining Velocity

Speed of a projectile at any point along its path of flight. Remaining velocity is usually measured in feet per second.

Remover

An explosive telescoping device designed to remove a canopy from an aircraft.

Resin

Resin, any of a class of amorphous solids or semisolids. Natural resins occur as plant exudations (e.g., of pines and firs), and are also obtained from certain scale insects. They are typically yellow to brown in color, tasteless, and translucent or transparent. Oleoresins contain essential oils and are often sticky or plastic; other resins are exceedingly hard, brittle, and resistant to most solvents. Resins are used in varnish, shellac, and lacquer and in medicine. Synthetic resins, e.g., bakerlite, are widely used in making Plastics.

Resistance

The property of an electric conductor by which it opposes flow of electricity and dissipates electrical energy away from the [Electric Circuit](#), usually as heat. Resistance is basically the same for alternating- and direct-current circuits. A high-frequency alternating current, however, tends to travel near the surface of a conductor. Because such a current uses less of the available cross section of the conductor, it meets with more resistance than direct current. The unit of resistance is the OHM. Also [Conduction](#); [Impedance](#); [OHM's Law](#); [Superconductivity](#).

Resistance Of Copper

&Iron Wire Ohms /

1000' of wire

| | | |
|-----|--------|------|

|-----|--------|------|

| | | |
|-----|--------|-------|
| #6 | 0.395 | 1.4 |
| #8 | 0.628 | 3.7 |
| #10 | 0.999 | 6.1 |
| #12 | 1.590 | 9.8 |
| #14 | 2.530 | 15.6 |
| #16 | 4.020 | 24.8 |
| #18 | 6.380 | 39.5 |
| #20 | 10.150 | 62.7 |
| #21 | 12.800 | 76.1 |
| #22 | 16.140 | 100.0 |
| #23 | 20.360 | 126.0 |
| #24 | 25.670 | 159.0 |

Resistor

Resistor, two-terminal *Electric Circuit* component that generates heat by offering opposition to an electric current. The most common forms of resistors are made from fine wires of special alloys wound onto cylindrical forms or from a molded composition material containing carbon and other substances in varying amounts. Resistors are rated for the maximum amount of power that they can safely handle.

Restricted Burning Grain

A solid propellant grain in which certain surfaces are restricted or inhibited to provide particular burning characteristics.

Restricted Burning Rate

A solid propellant grain in which certain surfaces are restricted or inhibited to provide particular burning characteristics.

Retrofit

A partial change in older equipment.

Retrorocket

A rocket fired in a direction opposite to the line of flight of the vehicle to which it is attached.

Ricochet

Glancing rebound of a projectile after impact.

Rifle

- 1.) Any firearm that has rifling in the bore designed to give a spin to the projectile for greater accuracy of fire and longer range (not extensively used in this manner, except for shoulder arms).
- 2.) To cut spiral grooves (rifling) in the bore of a gun in order to give a spin to the projectile so that it will have a greater accuracy of fire and longer range.

Rifling

Spiral grooves in the bore of a weapon designed to give a spin to the projectile for greater accuracy. Rifling includes both the grooves and the ridges between, called lands.

Rocket

A missile containing combustibles, independent of atmospheric oxygen, which on being ignited, liberate gases producing thrust.

Rocket Propellant

Any agency used for consumption or combustion in a rocket and from which the rocket derives its thrust, such as a fuel oxidizer, additive, [catalyst](#), or any compound or mixture of these.

"Rocket propellant" is often shortened to "propellant."

Roll

The rolling of a launch vehicle about its axis as the vehicle continues on its flight path.

Rope (as it pertains to ballistics)

Electromagnetic wave reflectors consisting of long strips of metal foil. Similar to window or chaff, but longer. Dropped from planes or shot into the air in projectile, a small parachute or other device may be attached to each strip to reduce rate of fall.

Rotating Band

Soft metal band around a projectile near its base. The rotating band makes the projectile fit tightly in the bore by centering the projectile, thus preventing escape of gas and giving the projectile its spin as it engages in the rifling.

Round

1.) All the parts that make up the ammunition necessary in firing one shot (also called *Complete Round*).

2.) One shot fired by a weapon.

Round Of Ammunition

Round.

Rubber

Rubber, any solid substance, usually elastic, that can be vulcanized to improve its elasticity and add strength; the term includes natural rubber, or caoutchouc, and a wide variety of synthetic rubbers, which have similar properties. Rubbers are composed chiefly of [Carbon](#) and [Hydrogen](#), but some synthetics also have other elements, e.g., chlorine, fluorine, nitrogen, or silicon. All are compounds of high [molecular weight](#); each consists of a series of one kind of molecule (e.g., isoprene in natural rubber) hooked together in a long chain to form a very flexible, larger molecule, the [Polymer](#). Natural rubber is obtained as latex, a milky suspension of rubber globules found in a large variety of plants, chiefly tropical and subtropical. An important source is the *Para Rubber Tree*. Latex can be shipped for processing either as a liquid or coagulated by acid and rolled into sheets. For most purposes rubber is ground, dissolved in a solvent, and compounded with other ingredients, e.g., fillers, *Pigments*, and plasticizers. Known by pre-Columbian Indians of South and Central America, rubber first attracted interest in Europe in the 18th cent. Vulcanization, a process invented (1839) by Charles Goodyear revolutionized the rubber industry. It usually involves heating raw or compounded rubber with *Sulfur*, causing sulfur bridges to form between molecules. The product is nonsticky, elastic, and resistant to heat and cold. Natural rubber is used chiefly to make tires and inner tubes because it is cheaper than synthetic rubber and has greater resistance to tearing when hot. Natural rubber can be treated to make foam rubber and sponge rubber. The first synthetic rubber was made in Germany in World War I. Today synthetics, e.g., Buna S, neoprene, butyl, and nitrile, account for most of the

world's rubber production. Made from *Coal*, *Petroleum*, *Natural Gas*, and *Acetylene*, synthetic rubbers are resilient over a wider temperature range than natural rubber and are more resistant to aging, weathering, and attack by certain substances, notably, oil, solvents, oxygen, and ozone. *Silicone* rubbers are used in insulation. *Polyurethanes* are used in tires, in shoes, and as foams. Neoprene is used for making hose and tank linings. Butyl rubber is used in inner tubes and as insulation.

S

Return to [topof](#) page.

Sabot

Lightweight carrier to permit firing a smaller projectile from a larger weapon having a larger bore.

Safe And Arm

A device for interrupting (safing) and aligning (arming) an explosive train.

Safety Fuse

A flexible cord containing an internal burning medium by which fire or flame is conveyed at a continuous and uniform rate from the point of ignition to the point of use, usually a fuse detonator.

Safety Standard

Suggested precautions relative to the safety practices to be employed in the manufacture, transportation, storage, handling, and use of explosive materials.

Safety Wire

Wire set into the body of a fuze to lock all movable parts into safe position so that the fuze will not be set off accidentally. It is pulled out just before loading.

Salt

A chemical compound (other than water) formed by neutralization reactions between *Acids* and *Bases*; by direct combination of metal with nonmetal, e.g., sodium chloride (common table salt); by reaction of a metal with a dilute acid; by reaction of a metal oxide with acid; by reaction of a nonmetallic oxide with a base; or by reaction of two salts with each other to form two new salts. Most salts are ionic compounds. The chemical formula indicates the proportion of atoms of the elements making up the salt. A salt is classified as acidic, basic, or normal if it has, respectively, hydrogen (H), hydroxyl (OH), or neither in its formula. A salt undergoes dissociation when dissolved in a polar solvent, e.g., water

Saltpeter

Saltpeter or potassium nitrate, chemical compound (KNO_3), occurring as colorless prismatic crystals or as a white powder. When heated, it decomposes to release oxygen. Saltpeter has been used in *gunpowder* manufacture since about the 12th century, it is also used in explosives, fireworks, matches, and fertilizers, and as a food preservative.

Sample

That fraction of the population that is to undergo testing. Something to be analyzed.

Sapper

Soldier in WWI who was tasked with demolishing battle field barriers.

Satellite, artificial

An object launched by a *Rocket* into orbit around the earth or, occasionally, another solar-system body (*Space Probe*). A satellite in circular orbit at an altitude of 22,300 mi (35,880 km) has a period of exactly 24 hr, the time it takes the earth to rotate once on its axis; such an orbit is called synchronous. If such an orbit also lies in the equatorial plane, it is called geostationary, because the satellite will remain stationary over one point on the earth's surface. The first artificial satellite, Sputnik 1, was launched by the USSR on Oct. 4, 1957. Explorer 1, the first American satellite, was launched on Jan. 31, 1958. The principal types of applications satellites are *Communications Satellites*, *Navigation Satellites*, *Reconnaissance Satellites* and *Weather Satellites*. Major U.S. scientific research satellites include the Orbiting Astronomical Observatories (OAO), the Orbiting Geophysical Observatories (OGO), the Orbiting Solar Observatories (OSO), the High Energy Astronomical Observatories (HEAO), many Explorer satellites, the Solar Maximum Mission (SMM), and the forthcoming Space Telescope. Major Soviet space-science satellite programs include Elektron, Proton, Prognoz, and many Cosmos satellites. The U.S. has also launched several Landsat satellites to survey the earth's resources by means of special television cameras and radiometric scanners.

Satellite, natural

A celestial body orbiting a planet. The earth's only satellite is the MOON; thus satellites of other planets are often referred to as moons. The largest in the solar system is Jupiter's Ganymede, whose radius of 1,639 mi (2,638 km) is larger than that of the planet Mercury. Also *Planet*, table; articles on individual planets.

Scabbing

Breaking off of fragments from the inside wall of hard material due to impact or explosion of a projectile on the outside. *Spall*.

Scaled Distance

A factor relating similar blast effects from various size charges of the same explosive at various distances. Scaled distance referring to blasting effects is obtained by dividing the distance of concern by a fractional power of the weight of the explosive materials.

Scaling Law

A formula which permits calculating some explosive effect based on data obtained from a similar but different size article.

Scavenger

Sometimes used to indicate removal of (gaseous) material by energetic chemical action.

SCID (Small Column Insulated Delay)

Slow burning pyrotechnic core contained in a flexible metallic sheath used to produce delay trains.

Screening Smoke

Chemical agent which, when burned, hydrolyzed or atomized produces an obscuring smoke; used to deny observation and reduce effectiveness of aimed fire.

Second

Second (sec or s), fundamental unit of time in all systems of measurement. In practical terms, the second is 1/60 of a minute and 1/3,600 of an hour. Since 1967 it has been calculated by atomic standards to be 9,192,631,770 periods of vibration of the radiation emitted at a specific

wavelength by a cesium-133 atom.

Secondary Explosive

A high explosive which is relatively insensitive to heat and shock, usually initiated by a primary explosive or by an exploding bridgewire.

Secondary Fragmentation

Fragments produced by an explosive device that are made up of the target materials or other materials other than those directly resulting from the device itself.

Seek / Seeker

Refers to instrumentation for the guiding of missiles to the target.

Seismograph

An instrument, useful in monitoring blasting operations, that records ground vibration. Particle velocity, displacement, or acceleration is generally measured and recorded in three mutually perpendicular directions.

Semiconductor

Semiconductor, a solid material (*Solid State Physics*) whose electrical conductivity at room temperature lies between that of a conductor and that of an insulator ([Conduction](#); [Insulation](#)). At high temperatures its conductivity approaches that of a metal, and at low temperatures it acts as an insulator. In a semiconductor there is a limited movement of electrons, depending upon the crystal structure of the material used. Incorporation of certain impurities in a semiconductor enhances its conductive properties. The impurities either add free electrons or create holes (electron deficiencies) in the crystal structures of the host substances by attracting electrons. Thus there are two semiconductor types: the n-type (negative), in which the current carriers (electrons) are negative, and the p-type (positive), in which the positively charged holes move and carry the current. Compounds such as indium antimonide, gallium arsenide, and aluminum phosphide are semiconductors. Semiconductors are used in electronic devices such as computers, *Photoelectric Cells*, [Rectifiers](#), and [Transistors](#).

Semifixed Ammunition

Ammunition in which the cartridge case is not permanently fixed to the projectile, so that the zoned charge within the cartridge case can be adjusted to obtain the desired range; loaded into the weapon as a unit.

Semifixed Round

Round of semifixed ammunition.

Semtex

Trade name of a plastic explosive ([Plastic Bonded Explosives](#)) from the Czechoslovakian firm Synthesia, Pardubice-Semtin.

Semtex consists of *Pentaerythritol Tetranitrate* and styrene-butadiene copolymer as a plasticizer.

detonation rate: 5000 m/s

oxygen balance: -44.0%

critical diameter: 15 mm

Sensitiveness

A measure of an explosive's cartridge-to-cartridge propagating ability under certain test conditions. It is expressed as the distance through air at which a primed half-cartridge (donor) will detonate an unprimed half-cartridge (receptor).

Sensitivity

A physical characteristic of an explosive material classifying its ability to be initiated upon receiving an external impulse such as impact, shock, flame, friction, or other influences that can cause explosive decomposition.

Separated Ammunition

Separated ammunition is characterized by the arrangement of the propelling charge and the projectile for loading into the gun. The propelling charge, contained in a primed cartridge case that is sealed with a closing plug and the projectile are loaded into the gun in one operation. Separated ammunition is used when the ammunition is too large to handle as fixed ammunition.

Separate-Loading Ammunition

Ammunition in which the projectile, propelling charge and primer are not held together in a shell case, as in fixed ammunition, but are loaded into a gun separately. No cartridge case is utilized in this type of ammunition.

Separating Burst

Method of ejecting the contents of a projectile by means of a charge of propellant that breaks the projectile into two approximately equal parts, along a specially designed circumferential shear joint.

Separation Distances

Minimum recommended distances from explosive materials accumulations to certain specific locations.

Series Blasting Circuit

An electric blasting circuit that provides one continuous path for the current through all caps in the circuit.

Series in Parallel Blasting Circuit

An electric blasting circuit in which the ends of two or more series of electric detonators are connected across the [firing line](#) directly or through buswire.

Service Ammunition

Ammunition intended for combat rather than for training purposes.

Setback

Rearward movement of components of a missile, relative to the missile as a whole, that results from the force due to acceleration during launching.

Shaped Charge

An explosive charge with a lined cavity specifically designed to produce a high velocity cutting or piercing jet of liner material. [Mohaupt Effect](#).

Sheet Explosive

Known by many trade names, such as Metabel, Deta sheet, Series 1000 - PETN sheet explosive, and Series 2000 - RDX sheet explosive. These plastic bonded explosives have a very high brisance and detonating velocity. Sheet explosive is in most cases the explosive of choice for the tactical loading of the HYDRO CUT Entry and Gun Port Frames. Sheet explosive is supplied in North America in rolls which are a standard 10" wide. Depending on the thickness of the sheet explosive it is supplied as two X 10 pound rolls per box, or two X 20 pound rolls per box. P.E.T. N. - SERIES 1000 SHEET EXPLOSIVE PRODUCT INFORMATION

63% PETN, V.O.D. 6800 m/s, Density 1.48 g/cc

| THICKNESS IN INCHES | WEIGHT (Gm/Sq. INCH) | LENGTH IN FEET/ROLL | WEIGHT IN POUNDS/ROLL | PETN BASED |
|---------------------|----------------------|---------------------|-----------------------|------------|
| 0.042 | C-1.0 | 36 | 10 | * |
| 0.062 | C-1.5 | 24 | 10 | * |
| 0.083 | C-2.0 | 36 | 20 | * |
| 0.125 | C-3.0 | 24 | 20 | * |
| 0.166 | C-4.0 | 18 | 20 | * |
| 0.208 | C-5.0 | 15 | 20 | * |
| 0.250 | C-6.0 | 12 | 20 | * |
| 0.333 | C-8.0 | 9 | 20 | * |

R.D.X. - SERIES 2000 SHEET EXPLOSIVE PRODUCT INFORMATION

88% RDX, V.O.D. 7800 m/s, Density 1.58 g/cc

| THICKNESS IN INCHES | WEIGHT (Gm/Sq. INCH) | LENGTH IN FEET/ROLL | WEIGHT IN POUNDS/ROLL | RDX BASED |
|---------------------|----------------------|---------------------|-----------------------|-----------|
| 0.083 | C-2.0 | 33 | 20 | * |
| 0.125 | C-3.0 | 22 | 20 | * |
| 0.166 | C-4.0 | 18 | 20 | * |
| 0.250 | C-6.0 | 11 | 20 | * |
| 0.300 | C-8.0 | 9 | 20 | * |

Sheet explosive should be cut with a knife, not with scissors or shears to avoid potential injury. Both Series 1000 and Series 2000 are cap sensitive explosives.

Shelf Life

The length of time of storage during which an explosive material retains adequate performance characteristics.

The storage time during which an explosive item remains serviceable.

Shell

Hollow projectile filled with explosive, or chemical or other material as opposed to shot, which is a solid projectile.

Shell-Destroying Tracer

Tracer with an igniter element, placed between the explosive in an anti-aircraft projectile and the tracer element, that is designed to detonate the explosive after the projectile has passed the target point but is still high enough to be harmless to ground troops.

Shock Wave

Rapid expansion of hot gases resulting from detonation of an explosive charge. A shock wave is a wave formed of a zone of extremely high pressure within a fluid (*Fluid Mechanics*), especially one such as the atmosphere, that propagates through the fluid at supersonic speed, i.e., faster than the speed of *Sound*. Shock waves are caused by the sudden, violent disturbance of a fluid, such as that created by a powerful explosion or by the supersonic flow of a fluid over a solid object (*Sonic Boom*). **Shock Wave**

A transient pressure pulse that propagates at supersonic velocity. **Shock Tube** add description
Nonel

Short-Delay Blasting

The practice of detonating blastholes in successive intervals where the time difference between any two successive detonations is measured in milliseconds.

Short Delay Fuze

One which will burst a projectile on ricochet, preferably about 6 to 10 feet above ground. Some crater effect will be obtained on hard ground.

Shot

- I.) A solid projectile for cannon, without a bursting charge.
- 2.) Pellets; small balls, or slugs in shotgun shells, and some other types of ammunition.

Shot Firer

That qualified person in charge of and responsible for the loading and firing of a blast (*Blaster*).

Shrapnel

Artillery projectile which contains small lead balls that are propelled by a powder charge in the base, set off by a time fuze. Shrapnel has been replaced almost entirely by high-explosive shells. Wounds called shrapnel wounds usually are due to shell fragments rather than to shrapnel.

Shrinkage

Contraction of propellant grain from wet (green) dimensions (as it comes from the graining dye) to the dry dimensions after solvent extraction and evaporation.

Shunt

The shorting together of the free ends of 1) electric detonator legwires, or 2) the wire ends of an electric blasting circuit or part thereof; the name of an electrical shorting device applied to the free ends of electric detonators by the manufacturer.

SI System Of Measurement

SI, which is the abbreviation of the French word "Système Internationale d'Unités", is the accepted abbreviation for the International Metric System, which has several base units, as shown below.

| Quantity measured | Unit | Abbreviation |
|-------------------|------|--------------|
|-------------------|------|--------------|

| | | |
|---------------------|---------------|-----|
| Length | meter | m |
| Mass | kilogram | kg |
| Time | second | s |
| Electrical Current | ampere | A |
| Temperature | degree Kelvin | K |
| Luminous Intensity | candela | cd |
| Amount Of Substance | mole | mol |

Side Spray

Spray.

Signal

A pyrotechnic item designed to produce a sign (illumination, smoke or sound) to provide identification, location, warning, etc.

Signaling Smoke

Any type of smoke, but usually colored smoke from a hand or rifle grenade, or from a message.

Signs-Explosive (Placards)

Signs, called placards, placed on vehicles transporting explosives denoting the character of the cargo, or signs placed near storage areas as a warning to unauthorized personnel.

Silica

A compound of silicon such as quartz sand.

Silicon

A chemical element used in pyrotechnics.

Silicone

A modern type of plastic.

Silver Chloride Cell

A special battery of relatively low current output used in a *blasting galvanometer*.

Simple Harmonic Motion

Simple harmonic motion is the relationship between displacement, frequency and velocity allowing calculation of any of the three if the other two are known.

$V = 2 p f D$ where:

V = peak particle velocity in inches per second (ips)

$p = 3.14$

f = frequency in Hertz (cycles per second)

D = maximum displacement (inches)

also $T = \text{period} = 1/f$

and $2 p f =$ the circular frequency of the particle, = (or angular velocity)

Hence, $D = V / 2 p f$ and $f = V / 2 p D$

Simulator

An item which simulates a hazardous item for training purposes, also a type of test instrument.

Single-Base Propellant

Propellant whose principal active ingredient is nitrocellulose.

Single-Section Charge

Propelling charge in separate-loading ammunition that is loaded into a single bag. A single-section charge cannot be reduced or increased for changes of range, as a multi-section charge can be.

Slurry

An aqueous explosive material solution of AN sensitized with a combustible fuel (and thickened with a gelling agent at the point of charging).

SMDC (Shielded Mild Detonating Cord)

MDF contained in a small (.180" diameter) steel tubing. Sometimes referred to as hardline CDF.

Small Arms

Small arms, firearms designed primarily to be carried and fired by one person, as distinguished from heavy arms, or [Artillery](#), from which such weapons developed in the late 1300s. At first, small arms were nothing more than small, hand-held cannon fired by placing a small flame at the touchhole. In the matchlock—the first real handgun—a trigger moved the flame to the touchhole; in its successors, the wheel lock and flintlock, a spark-producing mechanism ignited the [Gunpowder](#). Among early weapons of this kind were the musket, fired from the shoulder, and the pistol, held and fired with one hand. The rifle, invented in the 15th cent., is a firearm with a rifled bore (that is, with spiral grooves that impart a spinning motion to the bullet, giving it greater accuracy). Rifles first came into widespread use in the American colonies. Two major innovations of the early 19th cent. were the percussion cap, a small capsule filled with fulminate of mercury that exploded when struck and fired the gun instantly; and the gas-expanding bullet, which, after being dropped down the barrel of a rifle, would expand when fired to fit the barrel's rifling. Both sides in the U.S. Civil War used a rifled musket. Thereafter, all guns became rifled with the exception of the shotgun, a smooth-bored, short-range gun firing a single slug or several small shot. Practical breech-loading, or rear-loading, firearms came into general use about 1870; by the 1880s magazine loading, smokeless powder, and bolt action had been introduced. Although a crude “revolving pistol” existed in the late 16th cent., the modern revolver was introduced c.1835 by Samuel Colt. Colt's revolving cylinder permitted his gun to be fired six times without reloading. The revolver and the magazine-loading rifle were the standard small arms of the later 19th cent., but around 1900 a host of new automatic weapons were developed. The heavy Gatling gun, used in the U.S. Civil War, was the forerunner of the modern, rapid-firing machine gun, which achieved its full potential during the trench warfare of World War I and remains an important military firearm. The 1920s saw the development of submachine guns, notably the Thompson submachine gun (or “tommy gun”), an easily portable automatic weapon that fired 450 to 600 cartridges per minute. During World War II the bolt-action rifle was supplanted by the semiautomatic Garand rifle—a lightweight, self-loading, clip-fed shoulder weapon. The Garand was the standard U.S. army and marine corps service rifle through the time of the Korean War. The American-made M-16 rifle, still widely used, can fire accurately up to 500 yd (460 m) when hand-held and up to 800 yd (730 m) when mounted.

Small-Arms Ammunition

Any cartridge for shotgun, rifle, pistol, revolver, and cartridges for propellant-actuated power devices and industrial guns. Military-type ammunition containing explosive bursting charges or any incendiary, tracer, spotting, or pyrotechnic projectile is excluded from this definition.

Small-Arms Ammunition Primers

Small percussion-sensitive explosive charges encased in a cap or capsule and used to ignite propellant powder.

Smoke

The airborne suspension of solid particles from the products of detonation or deflagration.

Smoke Shell

Any projectile containing a smoke-producing chemical agent that is released on impact or burst. Also called smoke projectile. Smoke may be white or colored. *Colored Marker Shell*.

Smokeless Propellant (Smokeless Powder)

Solid propellant, commonly called smokeless powder in the trade, used in small-arms ammunition, cannon, rockets, propellant-actuated power devices, etc.

Smokeless Powder

Smokeless Propellant.

Smooth-Bore

Having a bore that is smooth and without rifling; shotguns and mortars are commonly smooth-bore

SN

Sodium nitrate.

Sodium

Sodium (Na), metallic element, discovered in 1807 by Sir Humphrey Davy; its compounds have been known since antiquity. A silver-white, very reactive [Alkali Metal](#), it must be stored out of contact with air and water. The metal is used in arc-lamp lighting, as a heat-transfer liquid in nuclear reactors, and in manufacture of tetraethyl lead. Widely used compounds include *Sodium Chloride* (common salt), *Sodium Bicarbonate* (baking soda), *Sodium Carbonate* (soda ash), hydroxide (lye), nitrate, phosphates, and *Borax*. Soap is made with sodium hydroxide. Sodium compounds are widely distributed in rocks, soil, oceans, salt lakes, mineral waters, and salt deposits, and are found in the tissues of plants and animals. Sodium is an essential element of the diet. *Element*; [Periodic Table](#).

Sodium Bicarbonate

Or sodium hydrogen carbonate, chemical compound (NaHCO_3), a white crystalline or granular powder, commonly known as bicarbonate of soda or baking soda. It is soluble in water and very slightly soluble in alcohol. Because it evolves carbon dioxide gas when heated above 50°C (122°F), it is used in baking powder. It is sometimes used medically to correct excess stomach acidity.

Sodium Carbonate

A chemical compound (Na_2CO_3) soluble in water and very slightly soluble in alcohol. Pure sodium carbonate is a white, odorless powder that absorbs moisture from the air and forms a strongly alkaline water solution. One of the most basic industrial chemicals, it is usually produced by the Solvay process. The chief uses of sodium carbonate are in glassmaking and the production of chemicals.

Sodium Chloride

(NaCl), common salt. It is a chemical compound containing equal numbers of positively charged sodium and negatively charged chlorine *Ions*. The colorless-to-white crystals have no odor but a characteristic taste. When dissolved in water, the ions move about freely and conduct electricity

([Electrolysis](#)). Salt is essential in the diet of humans and animals, and is a part of blood, sweat, and tears. Salt is widely used for the seasoning, curing, and preserving of foods. Its major use is in the production of *Chlorine*, [Sodium](#), and *Sodium Hydroxide*. Salt makes up nearly 80% of the dissolved material in seawater and is also widely distributed in solid deposits. Manufacture and use of salt is one of the oldest chemical industries.

Sodium Tetraborate

Decahydrate, Borax or chemical compound ($\text{Na}_2\text{B}_4\text{O}_7 \cdot 10\text{H}_2\text{O}$) occurring as a colorless, crystalline salt or a white powder. Borax is used as an antiseptic, cleansing agent, water softener, corrosion inhibitor in anti freeze, and flux for silver soldering, and in the manufacture of fertilizers, Pyrex glass, and pharmaceuticals.

Sofar Bomb

A sound producing bomb designed to detonate at a given depth under water.

Solar Energy

Any form of [Energy](#) radiated by the [Sun](#), including light, radio waves, and X rays. Solar energy is needed by green plants for the process of *Photosynthesis*, which is the ultimate source of all food. The energy in fossil fuels (e.g., coal and petroleum) and other organic fuels (e.g., wood) is derived from solar energy. Difficulties with these fuels have led to the invention of devices that directly convert solar energy into usable forms of energy, such as electricity. Solar batteries, which operate on the principle that light falling on photosensitive substances causes a flow of electricity, play an important part in astronautics but are presently too expensive to be in common use on the earth ([Photovoltaic Cell](#)). Thermoelectric generators convert the heat generated by solar energy directly into electricity. Heat from the sun is used in air-drying a variety of materials and in producing salt by the evaporation of sea water (*Desalination*). Experimental solar heating systems can supply heat and hot water for domestic use; heat collected in special plates on the roof of a house is stored in rocks or water held in a large container. Such systems, however, usually require a conventional heater to supplement them. Solar stoves, which focus the sun's heat directly, are employed in regions where there is perennial sunlight.

Solar system

The [Sun](#) and the family of *Planets*, natural [Satellites](#), *Asteroids*, *Meteors*, and *Comets*; in order of increasing distance from the sun, they are MERCURY, VENUS, EARTH, MARS, JUPITER, SATURN, URANUS, NEPTUNE, and PLUTO. All the planets orbit the sun in approximately the same plane (that of the ECLIPTIC) and move in the same direction (from west to east). Current theories suggest that the solar system was formed from a NEBULA consisting of a dense nucleus, or protosun, surrounded by a thin shell of a gaseous matter extending to the present edges of the solar system. Because of gravitational instabilities, the nebula eventually broke up into whirlpools of gas, called protoplanets, within the rotating mass. In time the protoplanets condensed and accreted to form the planets.

Major Planets Of The Solar System

| Planet | Distance from the sun (AU)* | Period of revolution | Period of rotation | Mass (earth = 1) | Diameter (earth = 1) | Known Satellites |
|--------|-----------------------------|----------------------|--------------------|------------------|----------------------|------------------|
| | | | | | | |

| | | | | | | |
|----------------|-------|-----------|----------|--------|-----------|----|
| Mercury | 0.39 | 88 days | 59 days | 0.06 | 0.38 | 0 |
| Venus | 0.72 | 225 days | 243 days | 0.82 | 0.95 | 0 |
| Earth | 1 | 365 days | 24 hours | 1 | 1 | 1 |
| Mars | 1.52 | 687 days | 25 hours | 0.11 | 0.53 | 2 |
| Jupiter | 5.20 | 12 years | 10 hours | 317.89 | 11.27 | 16 |
| Saturn | 9.54 | 29 years | 10 hours | 95.15 | 9.44 | 17 |
| Uranus | 19.18 | 84 years | 16 hours | 14.54 | 4.10 | 15 |
| Neptune | 30.06 | 165 years | 18 hours | 17.23 | 3.88 | 8 |
| Pluto | 39.44 | 248 years | 6.4 days | .002? | 0.12-0.30 | 1 |

* AU = Astronomical Unit (Earth = 1)

Solar Time

Time defined by the position of the sun. The observer's local solar time is 0 hr (noon) when the center of the sun is on the observer's meridian. The solar day is the time it takes for the sun to return to the same meridian in the sky. The length of the solar day varies throughout the year because the earth moves with varying speed in its orbit and because the equatorial plane is inclined to the orbital plane. It is thus more convenient to define time in terms of the mean solar time, or average of local solar time; hence every mean solar day is of equal length. The equation of time is the difference between the local solar time and the mean solar time at a given location. Civil time is mean solar time plus 12 hr; the civil day begins at midnight, whereas the mean solar day begins at noon. Greenwich mean time (GMT) is the local civil time at the former site of the Royal Observatory in Greenwich, England, which is located on the Prime Meridian (0° longitude). Standard time is the civil time within one of the 24 time zones into which the earth's surface is divided. Within a zone all locations keep the same time, namely, the mean solar time of the central meridian (except when Daylight Saving Time is in effect). Zone times generally differ by a whole number of hours from GMT.

Solar Wind

A stream of ionized hydrogen and helium that radiates outward from the sun, carrying away about 1 million tons of gas per sec. Near the earth the solar wind normally has a velocity of 450 mi/sec (700 km/sec). The wind is believed to extend to between 100 and 200 *astronomical units* from the sun. Comet tails always point away from the sun because of the pressure exerted by the solar wind. The interaction of the solar wind with the earth's magnetic field is also responsible in part for such phenomena as the auroras and geomagnetic storms.

Solid Propellant

Specifically, a rocket propellant in solid form, usually containing both fuel and oxidizer combined or mixed and formed into a monolithic (not powdered or granulated) grain.

Solid-State Physics

Solid-state physics, the study of properties exhibited by atoms because of their association and

regular, periodic arrangement in [Crystals](#). Besides mechanical and thermal properties, electric conductivity ([Conduction](#)) is one of the most important properties of solids. [Metals](#) are highly conductive and offer little resistance to electric currents. Most solid nonmetals are insulators; they offer virtually infinite resistance to electric currents. [Semiconductors](#), which possess electrical conductivity that is neither very high nor very low, are used in [Transistors](#).

Sonic boom

A sonic boom is a [Shock Wave](#) produced by an object moving through the air at supersonic speed, i.e., faster than the speed of sound. An object, such as an airplane, moving through the air generates sound. When the speed of the object exceeds the speed of sound, the object forces the sound ahead of itself faster than the speed at which the sound would ordinarily travel. The piled-up sound takes the form of a violent shock wave propagating behind the object.

Sound

Sound is pressure [Waves](#) that propagate through air or other media. Sounds are generally audible to the human ear if their frequency lies between 20 and 20,000 vibrations per [second](#). Sound waves with frequencies below the audible range are called subsonic, and those with frequencies higher than the audible range are called ultrasonic ([Ultrasonics](#)). When a body, such as a violin string, vibrates, or moves back and forth, its movement in one direction pushes the molecules of the air before it, crowding them together. When it moves back again past its original position and on to the other side, it leaves behind it a nearly empty space. The body thus causes alternately in a given space a crowding together of the air molecules (a condensation) and a thinning out of the molecules (a rarefaction). The condensation and rarefaction make up a sound wave; such a wave is called longitudinal, or compressional, because the vibratory motion is forward and backward along the direction that the wave is following. Because such a wave consists of a disturbance of particles of a material medium, sound waves cannot travel through a vacuum. The velocity of sound in air at 32°F (0°C) is 1,089 ft/sec (331.9 m/sec), but at 68°F (20°C) it is increased to about 1,130 ft/sec (344.4 m/sec). Sound travels more slowly in gases than in liquids, and more slowly in liquids than in solids. The pitch of a sound depends upon the frequency of vibration; the higher the frequency, the higher the pitch. Loudness, or intensity of sound, is measured in units called [Decibels](#). Also [Acoustics](#); [Doppler Effect](#); [Echo](#); [Interference](#).

Sound Speed

A material's sound speed is the rate at which sound is conducted through that particular medium. A material's sound speed is also effected by the temperature the particular material is at. For example at standard temperature and standard pressure (STP) the velocity of sound in air is 340 m/s, (331 m/s at 0° C). The density of air at STP is 1.39 kg/m³. In air or other gases, the velocity of sound increases proportionally with the square root of the absolute temperature; the velocity increase is approximately 2% for each 10° C temperature increase. Usually, the temperature decreases with altitude - an average of the gradient is 0.6° C per 100 meters.

Space-Time

Space-time, the central concept in the theory of [Relativity](#) that replaces the earlier concepts of space and time as separate absolute entities. In space-time, events in the universe are described in terms of a four-dimensional continuum in which each observer locates an event by three spacelike coordinates and a timelike coordinate. The choice of the last is not unique; hence, time

is not absolute but is relative to the observer.

Spall

Fragments broken from either surface of a barrier (for example, fragments broken from an armor plate as the result of penetration, impact of a projectile, or detonation against the plate).

Specific Density

Mass per unit volume of a homogeneous material. In interior ballistics, it is usually distinguished from loading density and gravimetric density.

Specific Energy

The specific energy of an explosive is defined as its working performance per kg, calculated theoretically from the general equation of state for gases:

$$f = pV = nRT$$

where p is the pressure, V is the volume, n is the number of moles of the explosion gases per kg (® also *Volume of Detonation gases*), R is the ideal gas constant, and T is the absolute temperature of the explosion. If we put the volume equal to unity, i.e., if the loading density is unity, the specific energy becomes

$$f = p$$

i.e., is equal to the pressure which would be exerted by the compressed explosion gases in their confinement, if the latter were indestructible. This is why the term “specific pressure” is also frequently used, and why the magnitude f is often quoted in atmospheres.

Nevertheless, strictly speaking, [is an energy value and for this reason is reported in meter-tons per kg. The value of f will have this dimension if R is taken as $0.8479 \times 10^{-3} \text{ mt} \times \text{K} \times \text{mol}$.

In accordance with recent standardization regulations, the energy data are also reported in joules. For more details [Strength](#).

Specific Gravity

The ratio of the [Weight](#) of any volume of substance to the weight of an equal volume of pure water, which has a density of 1000 kg/m^3 or can also be expressed as 1.00 g/cm^3 . [Density](#).

Specific Heat

Specific heat is the ratio of the *Heat Capacity* of a substance to the heat capacity of a reference substance, usually water. Because the heat capacity of water is 1 BTU/Lb per degree Fahrenheit or 1 cal/gram per degree Celsius, the specific heat of a substance relative to water will be numerically equal to its heat capacity.

Specific Impulse

The thrust in pounds developed by burning one pound of a particular propellant in one second.

Spectrum

The arrangement or display of *Light* or other forms of *Electromagnetic Radiation* separated according to wavelength, frequency, energy, or some other property. Dispersion, the separation of visible light into a spectrum, may be accomplished by means of a prism or a *Diffractiongrating*. Each different wavelength or frequency of visible light corresponds to a different color, so that the spectrum appears as a band of colors ranging from violet at the short-wave length (high-frequency) end of the spectrum through indigo, blue, green, yellow, and orange, to red at the long-wavelength (low-frequency) end of the spectrum. A continuous spectrum containing all colors is produced by all incandescent solids and liquids and by gases under high pressure. A low-pressure gas made incandescent by heat or by an electric discharge emits a spectrum of bright emission lines. A dark-line absorption spectrum is produced by white light passing through a cool gas and consists of a continuous spectrum with superimposed dark lines; each line corresponds to a frequency where a bright line would appear if the gas were incandescent. The absorption lines correspond to transitions of electrons from a lower energy level to a higher energy level when a *Photon* is absorbed by the atom, and the emission lines correspond to transitions from a higher to a lower energy level in the atom, accompanied by the emission of a photon. The frequency of each emission or absorption line is proportional to the difference in energy between the two energy levels involved (*Quantum Theory*). Both absorption and line spectra are useful in chemical analysis, because they reveal the presence of particular elements.

Spin

Angular velocity about the axis of the projectile.

Spin-Decelerating Moment

A couple about the axis of the projectile which diminishes spin.

Spin Stabilization

Method of stabilizing a projectile during flight by causing it to rotate about its own longitudinal axis.

Spray

Fragments of a bursting shell. The nose, side and base sprays are the fragments thrown forward, sideways and rearward, respectively.

Squashed-Head Shell

High Explosive Plastic Shell. Squib

Used as a general term to mean any of various small-size pyrotechnic or explosive devices.

Squib

A firing device that burns with a flash and is used for igniting black powder or pellet powder.

Squib Switch (Explosive Switch)

An electric switch operated by a squib or pressure cartridge. **Stability**

The ability of an explosive material to retain its original properties without degradation when exposed to various environmental conditions over a period of time.

Stability

The ability of an explosive material to retain chemical and physical properties specified by the manufacturer when exposed to specific environmental conditions over a particular period of time.

Stability Test

Accelerated test to determine the suitability of an explosive material for long-term storage under a variety of environmental conditions.

Stabilizer

Material added to propellant colloid to inhibit, or reduce, decomposition in storage.

Stacked Charge

Powder charge in which the powder grains lie end to end within the powder bag.

Staging Area

The area directly outside of the target area, the final location where the assault element will prepare to enter the target area.

Standard Atmosphere

Values of air temperature, pressure and density vs. altitude based on average conditions and arbitrarily assumed as standard for computations. Various standards are in current use.

Standard Deviation (Sigma)

The square root of the sum of the squared deviations from the mean. For a given sample, this must be divided by the sample size in order to correct for bias and be a proper estimate of the true population. A measure of the variability or dispersion of a number of observations.

Standard Trajectory

Calculated path that a projectile will follow under given conditions of weather, position and material, including the particular fuze, projectile and propelling charge that are used. Firing tables are based on standard trajectories.

Stand Off

The distance between a shaped charge liner and the target material.

Star (astrological)

Star, hot, incandescent sphere of gas (usually more than 90% hydrogen) that is held together by its own gravitation and emits light and other forms of electromagnetic radiation whose ultimate source is nuclear energy. The universe contains billions of galaxies, and each galaxy contains billions of stars, which are frequently bunched together in star clusters of as many as 100,000. The stars visible to the unaided eye are all in our own galaxy, the Milky Way. The visible stars are divided into six classes according to their apparent *Magnitude*. Stars differ widely in mass, size, temperature, age, and luminosity. About 90% of all stars have masses between one tenth and 50 times that of the sun. The most luminous stars (excluding supernovas) are about a million

times more powerful than the sun, while the least luminous are only a hundredth as powerful. Variable stars fluctuate in luminosity. Red giants, the largest stars, are hundreds of times greater in size than the sun. At the opposite extreme, white dwarfs are no larger than the earth, and neutron stars are only a few kilometers in radius. The central region, or core, has a temperature of millions of degrees. At this temperature nuclear energy is released by the fusion of hydrogen to form helium. By the time nuclear energy reaches the surface of the star, it has been largely converted into visible light with a spectrum characteristic of a very hot body. The theory of stellar evolution states that a star must change as it consumes its hydrogen in the nuclear reactions that power it. When all its nuclear fuel is exhausted, the star dies, possibly in a supernova explosion.

Star (pyrotechnic)

Pyrotechnic signal that burns as a single light.

Star Gage

Instrument for measuring the diameter of the bore of a gun.

Star Grain

A solid propellant grain with an internal star-shaped cross section.

Star Shell

Illumination Shell.

Starting Mix

An easily ignited mixture that transmits flame from an initiating device to a less readily ignitable composition.

States Of Matter

The forms of matter differing in several properties because of differences in the motions of and the forces between the molecules (or atoms or ions) of which they are composed. There are three common states of matter: solid, liquid, and gas. The molecules of a solid are limited to vibrations about a fixed position, giving a solid both a definite volume and a definite shape. When heat is applied to a solid, its molecules begin to vibrate more rapidly until, at a temperature called the melting point, they break out of their fixed positions and the solid becomes a liquid. Because the molecules of a liquid are free to move throughout the liquid but are held from escaping by intermolecular forces (*Adhesion and Cohesion*), a liquid has a definite volume but no definite shape. As more heat is added to the liquid, some molecules near the surface gain enough energy to evaporate, or break away completely from the liquid, and change to a gaseous state. Finally, at a temperature called the BOILING POINT, molecules throughout the liquid become energetic enough to escape, forming bubbles of vapor that rise to the surface; the liquid thus changes completely to a gas. Because its molecules are free to move in every possible way, a gas has neither a definite shape nor a definite volume but expands to fill any container in which it is placed. The reverse processes of melting and boiling are, respectively, freezing and condensation. Also *Crystal; Gas Laws; Kinetic-Molecular Theory of Gases; Plasma.*

Static Electricity

Electric charge at rest on a person or object. It is most often produced by the contact and separation of dissimilar insulating materials.

Static Entry

A description given to a type of entry where a team member has access to the target area, but is

not moving into or around the target area, an example would be a gun port breach point.

Statics

Statics is a branch of *Mechanics* concerned with the maintenance of equilibrium in bodies by the interaction of *Forces* upon them. In a state of equilibrium the resultant of all outside forces acting on a body is zero, thus keeping the body at rest.

Statistical Method

A technique used to obtain, analyze and present numerical data.

Statistics

The science which deals with the collection, classification and use of numerical data relating to a given subject.

Steady State Velocity

The characteristic velocity at which a specific explosive at a given charge diameter will detonate.

Stemming

Material to be added.

Stoichiometric

Relating to components involved in a burning process which are present in exactly the quantities needed for reaction, without an excess of any component.

Storage

The safekeeping of explosive materials, usually in specially designed structures called magazines.

Stowage

- 1) Method of placing cargo in a vessel to prevent damage, shifting, etc.
- 2) Method of placing equipment and supplies in a vehicle to provide availability and operating room.
- 3) Equipment when stowed.

STP (Of Gases)

At standard temperature and pressure.

Stray Current

A flow of electricity outside an insulated conductor system.

Strength

The explosive strength of unit weight (or volume) of a high explosive when compared with that of Blasting Gelatine in a ballistic mortar. Although compared with Blasting Gelatine it is sometimes designated in percentage of nitroglycerine (%NG). This latter designation is not a true measure of its strength.

Strength of materials

Strength of materials, the capacity of materials to withstand stress (the internal force exerted by one part of an elastic body upon an adjoining part) and strain (the deformation or change in dimension occasioned by stress). When a body is subjected to a pull, it is said to be under tension, or tensional stress; when it is compressed, it is under compression, or compressive stress. Shear, or shearing stress, results when a force tends to make part of a body slide past the other part. Torsion, or torsional stress, occurs when external forces tend to twist a body around an axis. The elastic limit is the maximum stress that a material can sustain and still return to its original form. The ratio of tensile stress to strain for a given material is called its Young's modulus. Hooke's law states that, within the elastic limit, strain is proportional to stress.

Striker

Part of the firing mechanism of a gun, mine, mortar, etc., that hits the primer, hammer or firing pin of a gun.

Striking Velocity

Speed of a projectile at the point of impact.

Strontium

Strontium (Sr), metallic element, first recognized as distinct from [barium](#) by A. Crawford in 1790. A soft, silver-yellow [Alkaline-Earth Metal](#), it is stored away from air and water. Strontium-90 from nuclear fallout is absorbed in plants and animals, and may induce bone cancer and leukemia. *Element; Periodic Table.*

Subcaliber

Of a caliber smaller than standard.

Subsonic

Less than the speed of sound of a particular medium.

Sulfur

Sulfur (S) or sulphur, nonmetallic element, known to antiquity as the biblical brimstone and recognized as an element by Antoine Lavoisier in 1777. Solid sulfur is yellow, brittle, odorless, tasteless, and insoluble in water. Sulfur is widely distributed in minerals and ores, some volcanic regions, and large underground deposits, and often occurs with coal, natural gas, and petroleum. It is found in most proteins and protoplasm of plants and animals. Sulfur is used in [Gunpowder](#), matches, [Rubber](#) vulcanization, insecticides, and the treatment of certain skin diseases., *Sulfuric Acid* is its most important compound; others are used as disinfectants, refrigerants, organic solvents, and *Sulfa Drugs*. *Element; Periodic Table.*

Sun

Sun, intensely hot, self-luminous body of gases (mainly hydrogen and helium) at the center of the [Solar System](#). The sun is a medium-size main-sequence [Star](#). Its mean distance from the earth is defined as one [Astronomical Unit](#). The sun is c.865,400 mi (1,392,000 km) in diameter; its volume is about 1,300,000 times, and its mass 332,000 times, that of the earth. At its center, the sun has a density over 100 times that of water, a pressure of over 1 billion atmospheres, and a temperature of about 15,000,000°K. This temperature is high enough for the occurrence of nuclear reactions, which are assumed to be the source of the sun's energy. Hans Bethe proposed a cycle of nuclear reactions known as the carbon cycle, in which carbon acts much as a [catalyst](#), while hydrogen is transformed by a series of reactions into helium and large amounts of high-energy gamma radiation are released. The so-called proton-proton process is now thought to be a more important energy source: the collision of two protons ends with the production of helium atoms and the release throughout of gamma radiation. The bright surface of the sun is called the photosphere; its temperature is about 6000°K. During an *Eclipse* of the sun, the chromosphere (a layer of rarified gases above the photosphere) and the corona (a luminous envelope of extremely fine particles surrounding the sun, outside the chromosphere) are observed. Also *Solar Wind*; *Sunspots*.

Superconductivity

Superconductivity, the total disappearance of electrical resistance in a wire or circuit. Discovered

in 1911, superconductivity only appears in a specific material below a critical temperature. The major problems confronting the possible applications of superconductivity were the extremely low temperatures initially required (only a few degrees above absolute zero) and the fact that a strong magnetic field could destroy it. Much research has been done in recent years in the field of “high-temperature” superconductivity. Newer composites permit the absence of electrical resistance at temperatures near 125° K (-243° F).

Superfluidity

The capability of liquid helium cooled below a temperature of 2.19°K (the lambda point) to flow freely, even upward, with no measurable friction and viscosity. Superfluid helium flows easily through capillary tubes (*Capillarity*) that resist the flow of ordinary fluids, and a Dewar Flask filled with superfluid helium from a larger container will empty itself back into the original container because the liquid helium flows spontaneously in an invisible film over the surface of the flask.

Superquick Fuze

Fuze that functions immediately upon impact of the missile with the target. Action of this type of fuze is the quickest possible; the firing pin is driven into the primer immediately upon the first contact of the missile; functions at the surfaces of the target. Also called instantaneous fuze.

Supersensitive Fuze

Fuze that will set off a projectile when it strikes even a very light target, such as an airplane wing.

Supersonic

Greater than the speed of sound of a particular medium.

Supplemental Charge

Filler, normally TNT, used in deep cavitied projectiles to fill void between ordinary fuze and booster combination and bursting charge.

Sure-Fire Current

Minimum current which must be applied to a bridgewire circuit to reliably ignite the prime material without regard to the time of operation.

Surface tension

Surface tension, the cohesion forces (*Adhesion and Cohesion*) at the surface of a liquid. The molecules within a liquid are attracted equally from all sides, but those near the surface experience unequal attractions and thus are drawn toward the center of the liquid mass by this net force. A result of surface tension is the tendency of a liquid to reduce its exposed surface to the smallest possible area.

Surveillance (as it pertains to ordnance)

Observation, inspection, investigation, test study and classification of ammunition, ammunition components and explosives in movement, storage and use with respect to degree of serviceability and rate of deterioration.

Sustainer Grain

A propellant or pyrotechnic grain used in a pressure cartridge or igniter to sustain burning.

Swell Diameter

Maximum diameter of the ogive extended to the place where its generating arc is parallel to the center line.

Switch

An electrical device having two states—on, or closed, and off, or open—and, ideally, having the property that when closed it offers a zero *Impedance* to a current and when open it offers infinite impedance to a current. For many operations, as in digital computers, the operation of mechanical switches, which move contacts together and apart, is too slow. When faster switching is required, *Transistors* or vacuum tubes are used, operated in such a way that they conduct either heavily or very little. *Relay*.

Sympathetic Detonation (Ignition)

The explosion of a second charge or device caused by nearby detonation (ignition) of another.

Sympathetic Propagation

The detonation of an explosive material as the result of receiving an impulse from another detonation through air, earth, or water.

Synthetic Elements

Synthetic elements, radioactive chemical elements discovered not in nature but as artificially produced isotopes. They are TECHNETIUM, PROMETHIUM, ASTATINE, FRANCIUM, and the *TRANSURANIUM* ELEMENTS. Some have since been found to exist in small amounts in nature as short-lived members of natural radioactive decay series (*Radioactivity*).

T

Return to [top](#) of page.

Taliani Test

A heat stability test for propellants and explosives.

Tamping

The act of charging or tamping a charge into a hole, with the aid of a tamping stick. Sometimes used loosely for “*stemming*” (*q.v.*). The action of compacting the explosive charge or the *stemming* in a blasthole.

Tamping Bags

Cylindrical bags containing stemming material and used in boreholes to confine the explosive material charge.

Tamping Pole

A wooden or plastic pole used to compact explosive charges or stemming.

Tank (military)

A military tank is an armored vehicle that has caterpillar traction and is armed with machine guns, cannon, rockets, or flamethrowers. It was developed by the British and first used (Sept. 1916) in World War I. In World War II tanks and tank tactics were greatly improved. The German army, using large numbers of tanks, overran Poland in less than a month. In mass tank battles on the plains of Europe and N Africa the tide often swung toward the side with the best tanks. Since World War II the basic features of tanks and tank tactics have remained unchanged, although there have been refinements. Tanks are vulnerable to recoilless weapons and various antitank missiles, but they remain indispensable, because of their mobility and versatile weaponry, wherever the terrain is suitable to their operation.

Tar (and pitch)

Tar and pitch, viscous, dark-brown to black substances, obtained by the destructive distillation of certain organic materials, e.g., Coal, Wood, and Petroleum. Although the terms tar and pitch are sometimes used interchangeably, pitch is actually a component of tar that can be isolated by heating. Tar, more or less fluid, is now used to produce [Benzene](#) and various other substances. Tar from pine wood is used to make soap and medicinals. Coal tar derivatives are used to make dyes, cosmetics, and synthetic flavoring extracts. Pitch tends to be more solid than tar and is used to make roofing paper, in varnishes, as a coal-dust binder in making fuel briquettes, and as a lubricant. Asphalt is a naturally occurring pitch.

Target Area

An area to be entered or breached, generally where a threat resides.

Telegraph

An electrically operated device or system for distant communication (the first ever invented) by means of visible or audible signals. The method used throughout most of the world, based in large part on the mid-19th-cent. work of Samuel F.B. Morse, utilizes an [Electric Circuit](#) set up customarily by using a single overhead wire and employing the earth as the other conductor to complete the circuit. In the telegraph's simplest form, an electromagnet in the receiver is activated by alternately making and breaking the circuit. Reception by sound, with the Morse Code signals received as audible clicks, is the basis for a low-cost, reliable method of signaling. In addition to wires and cables, telegraph messages are now sent by such means as [Radio Waves](#), Microwaves, and Communications Satellites. Telex is a telegraphy system that transmits and receives messages in printed form. Facsimile is a system for transmitting and reproducing photographs and other graphic material by wire or radio.

Telephone

A device for transmitting and receiving sound, especially speech, by means of wires in [Electric Circuits](#). The telephones now in general use are developments of the device invented by Alexander Graham Bell and patented by him in 1876 and 1877. A modern telephone transmitter, which is essentially a carbon Microphone, contains loosely packed carbon grains. When someone speaks into the telephone, the diaphragm vibrates, causing the carbon grains to be compressed and released. This motion varies the current flow in the associated electric circuit. The current, when transmitted to a distant identical instrument, causes the diaphragm in it to vibrate in response to the fluctuations induced by the nearby magnetic field. Telephone lines used include ordinary open-wire lines; lead-sheathed cables consisting of many lines; coaxial cables; and, most recently, glass fibers (*Fiber Optics*). Coaxial cables and fiber-optic lines are placed underground, but other cables may be either overhead or underground. Long-distance transmission of telephone messages is often accomplished by means of radio and microwave transmissions. In some cases microwaves are sent to an orbiting communications satellites, from which they are relayed back to a distant point on the earth. Sophisticated services, including automatic switching systems, automatic dialing, call forwarding, and conference calling, have been developed in recent years.

Television

Television, transmission and reception of still or moving images by means of electrical signals, especially by means of [Electromagnetic Radiation](#) using the techniques of [Radio](#). One of the

most widely used image pickup devices, or camera tubes, is the iconoscope (invented by Vladimir Zworykin, 1923), which consists of a thin sheet of mica upon which thousands of microscopic globules of a photosensitive silver-cesium compound have been deposited. Backed with a metallic conductor, this expanse of mica becomes a mosaic of tiny Photoelectric Cells and Capacitors. The differing light intensities of various points of a scene cause the cells of the mosaic to emit varying quantities of electrons. The cells are left with positive charges in strengths proportional to the electrons lost. An electron gun, or “scanner,” passes its beam across the cells. As it does so, the charge is released, causing an electrical signal to appear on the back of the mosaic, which is connected externally to an amplifier. The strength of the signal is proportional to the amount of charge released. In the Vidicon, another type of pickup tube, the photoemissive mosaic is replaced by a photoconductive layer, resulting in increased efficiency. The scanning process, which is the essence of television accomplishment, operates as the human eye does in reading a page of printed material, i.e., line by line. A complex circuit of horizontal and vertical deflection coils controls this movement and causes the electron beam to scan the back of the mosaic 30 times per second. Two principal means of recording television programs for future use are video tape recording and kinescope. Video tape recording is similar to conventional tape recording except that because of the wide frequency range—4.2 megahertz (MHz)—occupied by a video signal, the effective speed at which the tape passes the recording head is kept very high. Sound is recorded along with the video signal on the same tape. Kinescope is a method in which programs are recorded on motion-picture film. Appropriate changes in the signal-carrying circuitry allow kinescopes to be played back from a developed negative as well as from a positive. Systems for recording television programs on discs have been recently developed. When a television program is broadcast, the varying electrical signals are amplified and used to modulate a carrier wave (*Modulation*); the modulated carrier is usually fed to an antenna, where it is converted to electromagnetic waves and broadcast over a large region. The waves are sensed by antennas connected to television receivers, and the image is reconstructed essentially by reversing the pickup operation. The final image is displayed on the face of a [*Cathode-Ray Tube*](#), where an electron beam scans the fluorescent face, called the “screen,” line for line with the pickup scanning. The tube's inside face glows when hit by the electrons, and the visual image is reproduced. Color television today uses an “element-sequential” system. Light from the subject is broken up into its three primary-color components (red, blue, and green), which are simultaneously scanned by three pickups. In the receiver the signals are brought together again. Each element, or dot, on the picture tube screen is subdivided into areas of red, blue, and green phosphors. Beams from three electron guns, modulated by the three color signals, scan the elements together in such a way that the beam from the gun using a given color signal strikes the phosphor of the same color.

Temperature

Temperature, the measure of the relative warmth or coolness of an object. The temperature of a substance measures not its heat content but rather the average kinetic energy of its molecules. Temperature is measured by means of a Thermometer or other instrument having a scale calibrated in units called degrees. A temperature scale is determined by choosing two reference temperatures and dividing the temperature difference between these points into a certain number of degrees. The size of the degree depends on the particular temperature scale being used. The most common reference temperatures are the Melting Point of ice and the Boiling Point of water. An absolute temperature scale for which zero degree corresponds to zero average kinetic energy can be defined theoretically (*Kinetic-Molecular Theory of Gases*); the Kelvin temperature scale is an absolute scale having degrees the same size as those on the Celsius scale. Also Energy; [Gas Laws](#); Heat; [Thermodynamics](#).

Temperature Coefficient

The relative change of a property (pressure, burning time) with the temperature.

Terminal Ballistics

The branch of ballistics which deals with the ultimate effect produced by a projectile.

Terminal Velocity

The constant velocity of a falling body attained when the resistance of air or other ambient fluid has become equal to the force of gravity acting upon the body. Sometimes called "limiting velocity."

Test Blasting Cap No. 8

[Institute of Makers of Explosives No. 8 Test Detonator.](#)

Tetryl

Sensitive explosive used especially in caps and boosters to detonate less sensitive explosives, and as the explosive filler in some types of projectiles.

Thermite

A high temperature producing mixture.

An incendiary composition consisting of 2.75 parts black iron oxide (ferrosferric oxide) and 1.0 part of granular aluminum.

Thermocouple

Thermocouple, a temperature-measuring device formed by joining the ends of two strips of dissimilar metals in a closed loop, with the two junctions at different temperatures. Because the voltage that arises in this circuit is proportional to the temperature difference between the junctions, the temperature at one junction can be determined if the other junction is maintained at a known temperature.

Thermodynamics

The science of the mechanical action of heat, or the relationship of heat and mechanical energy, and the conversion of one into the other. Refers to the branch of science concerned with the nature of heat and its conversion into other forms of energy. Heat is a form of energy associated with the positions and motion of the molecules of a body (*Kinetic-Molecular Theory of Gases*). The total energy that a body contains as a result of the positions and the motions of its molecules is called its internal energy. The first law of thermodynamics states that in any process the change in a system's internal energy is equal to the heat absorbed from the environment minus the work done on the environment. This law is a general form of the law of conservation of energy (*Conservation Laws*). The second law of thermodynamics states that in a system the entropy cannot decrease for any spontaneous process. A consequence of this law is that an engine can deliver work only when heat is transferred from a hot reservoir to a cold reservoir or heat sink. The third law of thermodynamics states that all bodies at absolute zero would have the same entropy; this state is defined as having zero entropy.

Thermometer

Thermometer, an instrument for measuring temperature. A clinical thermometer consists of a small vacuum tube of uniform bore, with a temperature scale etched on its front. The tube is closed at one end and connected at the other with a chamber containing mercury or another liquid. When the chamber is heated, the fluid expands and rises into the tube.

Through-Bulkhead Ignition (TBI)

A means of transferring a detonation from one side of a bulkhead to the other without destroying the integrity of the bulkhead seal.

Thrust

The resultant force in the direction of motion produced by a rocket motor.

Thrust Chamber

Spray Cooling and protective flow of water over external area of thrust chamber during static firing.

Thruster

The thruster was designed to provide a force through a relatively short stroke. The device consists of a cylinder, piston and propellant cartridge.

Thunderstorm

A violent local atmospheric disturbance accompanied by lightning, thunder, and heavy rain, often by strong gusts of winds and sometimes by hail. The typical thunderstorm caused by convection occurs on a hot summer afternoon when the sun's warmth has heated a large body of moist air near the ground. This air rises and is cooled by expansion. The cooling condenses the water vapor in the air, forming a cumulus cloud. If the process continues violently, the cloud becomes immense; the summit often attains a height of 4 mi (6.5 km) above the base, and the top spreads out in the shape of an anvil as the transition to a cumulonimbus cloud occurs. The turbulent air currents within the cloud cause a continual breaking up and reuniting of the raindrops, building up strong electrical charges that result in lightning.

Titration

The determination of the concentration of acids or bases (*Acids and Bases*) in solution by the gradual addition of an acidic solution of known volume and concentration to a basic solution of

known volume, or vice versa, until complete neutralization (observable by the color change in an added indicator, such as phenolphthalein) has occurred.

TNT

Trinitrotoluene.

Torpedo

A missile designed to contain an explosive charge and be launched into water where it is selfpropelling and usually directable.

Tracer

Element of a type of ammunition (called tracer ammunition) containing a chemical composition which burns visibly in flight. Tracer is used for observation and adjustment of fire, for incendiary purposes, and for signaling.

Trajectory

Path of projectile, missile or bomb in flight.

Trajectory Chart

Diagram of a side view of the paths of projectiles fired at various elevations, under standard conditions. The trajectory chart varies for different guns, projectiles and fuzes.

Transducer

A device which changes one form of energy into another. A loudspeaker changes electrical energy into acoustical energy, for example. A transducer is a device that accepts an input of energy in one form and produces an output of energy in some other form, with a known, fixed relationship between the input and output. One class of transducers consists of devices that produce an electrical output signal, e.g., Microphones, Record-Player cartridges, and Photoelectric Cells. Other transducers accept an electrical input, e.g., Loudspeakers, light bulbs, and Solenoids. Transducers may be either active or passive. Active transducers require a source of energy in addition to the input signal to produce the output signal, whereas passive transducers require only an input signal.

Transformer

Transformer, an electrical device that transfers an alternating current or voltage (*Potential, Electric*) from one Electric Circuit to another using Electromagnetic Induction. A simple transformer consists of two coils of wire electrically insulated from each other and arranged so that a change in the current through the primary coil will produce a change in voltage across the secondary coil. The ratio of the alternating-current (AC) output voltage to the AC input voltage is approximately equal to the ratio of the number of turns in the secondary coil to the number of turns in the primary coil. This capability for transforming voltages is the basis for a great many applications. Transformers are classified according to their use; power transformers (*Power, Electric*) are used to transmit power at a constant frequency, audio transformers are designed to operate over a wide range of frequencies with a nearly constant ratio of input to output voltage, and radio-frequency transformers operate efficiently within a narrow range of high frequencies.

Transistor

Transistor, an electronic device used as a voltage and current amplifier, consisting of semiconductor materials that share common physical boundaries. The material most commonly used is silicon into which impurities have been introduced. In n-type semiconductors there is an excess of free electrons, or negative charges, whereas in p-type semiconductors there is a

deficiency of electrons and therefore an excess of positive charges. Transistors are used in many applications, including radio receivers, electronic computers, and automatic control instrumentation (e.g., in spaceflight and guided missiles). Since the invention (announced in 1948) of the transistor by the American physicists John Bardeen, Walter H. Brattain, and William Shockley, many types have been designed. The n-p-n junction transistor consists of two n-type semiconductors separated by a thin layer of p-type semiconductor; the three segments are called emitter, base, and collector, respectively, and are usually sealed in glass, with a wire extending from each segment to the outside, where it is connected to an electric circuit. The transistor action is such that if the electric potentials on the segments are properly determined, a small current between the emitter and base connections results in a large current between the emitter and collector connections, thus producing current and amplification. The p-n-p junction transistor, consisting of a thin layer of n-type semiconductor lying between two p-type semiconductors, works in the same manner, except that all polarities are reversed. Also [Integrated Circuits](#); Microelectronics.

Transition Elements or Transition Metals

Elements of group VIII and the b groups (I through VII) of the Periodic Table, characterized by the filling of an inner d or f electron orbital as atomic number increases. Many chemical and physical properties of these elements are due to their unfilled d or f orbitals. Transition elements generally have high densities and melting points, magnetic properties, and variable valence arising from the electrons in the d or f orbitals. These metals form stable coordination complexes, or complexions, many of which are highly colored and exhibit paramagnetism.

Transponder

An electronic device that receives a challenging signal and automatically transmits a response.

Transtainer

A low trailer for transportation of the rocket stages.

Transuranium

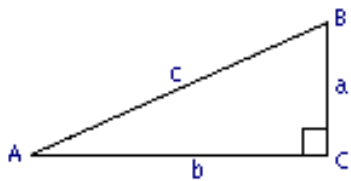

Elements Radioactive chemical elements with atomic numbers greater than 92 (Uranium). Only Neptunium (at. no. 93) and Plutonium (at. no. 94) occur in nature; they are produced in minute amounts in the radioactive decay of uranium. The transuranium elements of the [Actinide Series](#) were discovered as synthetic radioactive isotopes. Both American and Soviet scientists claim to have discovered independently the unstable transactinide elements 104, 105, and 106, and West German scientists reported discovering the unstable transactinide elements 107 and 109.

Trauzl Test

Method of determining relative energy available from an explosive material by measurement of the volume expansion of a lead block test.

Trigonometry

The study of certain mathematical relations originally defined in terms of the angles and sides of a right triangle, i.e., one containing a right ANGLE (90°). Six basic relations, or trigonometric functions, are defined. If A, B, and C are the angles of a right triangle (C = 90°) and a, b, and c are the lengths of the respective sides opposite these angles, then six functions can be expressed for one of the acute angles, say A, as various ratios of the opposite side (a), the adjacent side (b), and the hypotenuse (c), as set out in the table. Although the actual lengths of the sides of a right triangle may have any values, the ratios of the lengths will be the same for all similar right triangles, large or small. It may be seen that $\sin B = \cos A$, $\cos B = \sin A$, $\tan B = \cot A$, and so forth. The values of the sine and the cosine are always between 0 and 1, the values of the secant and the cosecant are always equal to or greater than 1, and the values of the tangent and the cotangent are unbounded, increasing from 0 without limit. The values of the trigonometric functions can be found in a set of tables or on a calculator. The notion of the trigonometric functions is extended beyond 90° (the largest angle size in a right triangle) by defining the functions with respect to Cartesian Coordinates; the functions then take on negative as well as positive values in a pattern that repeats every 360°. This repeating, or periodic, nature of the trigonometric functions leads to important applications in the study of such periodic phenomena as light and electricity. A general triangle, not necessarily containing a right angle, can also be analyzed by means of trigonometry. Spherical trigonometry, the study of triangles on the surface of a sphere, is important in surveying, navigation, and astronomy.

| TRIGONOMETRIC FUNCTIONS | |
|--|--|
|  | |
| Function (abbreviation) | Definition |
| sine (sin) | $\sin A = \frac{\text{opposite}}{\text{hypotenuse}} = \frac{a}{c}$ |
| cosine (cos) | $\cos A = \frac{\text{adjacent}}{\text{hypotenuse}} = \frac{b}{c}$ |
| tangent (tan) | $\tan A = \frac{\text{opposite}}{\text{adjacent}} = \frac{a}{b}$ |
| cotangent (cot or ctn) | $\cot A = \frac{\text{adjacent}}{\text{opposite}} = \frac{b}{a}$ |
| secant (sec) | $\sec A = \frac{\text{hypotenuse}}{\text{adjacent}} = \frac{c}{b}$ |
| cosecant (csc) | $\csc A = \frac{\text{hypotenuse}}{\text{opposite}} = \frac{c}{a}$ |

Trimonite

High explosive used as a substitute for trinitrotoluene as a bursting charge. Trimonite is a mixture of picric acid and mononitronaphthalene.

Trinitrophenol

Picric Acid.

Trinitrotoluene

(TNT) High explosive widely used as explosive filler in projectiles and by engineers; trinitrotoluol.

Trinitrotoluol

Trinitrotoluene.

Triple-Base Propellant

Propellant whose principal active ingredients are nitrocellulose, [nitroglycerin](#) and nitroguanidine. *Propellant.*

Triple Point

Intersection of the original shock wave, the reflected shock wave and the Maeh stem.

Trunkline

The line of detonating cord on the ground surface that connects detonating cord downlines.

Truss

Rigid frame between rocket tanks to hold electronic equipment.

Tube

The inner cylinder of a built-up gun, usually extending from the inner face of the breechblock to the muzzle.

Tubular Grain

A solid propellant grain in the form of a tube.

Twist

Inclination of the spiral grooves to the axis of the bore of a weapon. The degree of twist is the determining factor in the speed of rotation of the projectile.

U

Return to [top](#) of page.

Ullage

The empty volume of a propellant tank which is not occupied by fuel or oxidizer.

Ultrasonics

Ultrasonics is the study and application of Sound Waves with frequencies greater than 20,000 cycles per second, i.e., beyond the range of human hearing. Ultrasounds are commonly produced by piezoelectric transducers. They are used for nondestructive testing, and for the cleaning of fine machine parts and surgical instruments. In medicine, Ultrasound devices are used to examine internal organs without surgery. Ultrasonic whistles are audible to dogs and are used to summon them.

Ultrasound

Ultrasound, in medicine, a technique that uses sound waves to study hard-to-reach body areas. In scanning with ultrasound, high-frequency sound waves are transmitted to the area of interest and the returning echoes recorded. First developed in World War II to locate submerged objects, the technique is now widely used in virtually every branch of medicine, e.g., in obstetrics to study the fetus, in cardiology to detect heart damage, in ophthalmology to detect retinal problems. It is noninvasive, involves no radiation, and avoids the possible hazards—such as bleeding, infection, or reactions to chemicals—of other diagnostic methods.

Ultraviolet Radiation

Ultraviolet radiation is invisible Electromagnetic Radiation with frequencies (about 10¹⁵ to 10¹⁸ Hz) between that of visible violet light and X rays; it ranges in wavelength from about 400 to 4 nanometers. Ultraviolet (UV) radiation can be detected by the Fluorescence it induces in certain substances and by its blackening of photographic film. Most of the UV component of sunlight is absorbed by the Ozone layer of the atmosphere. UV radiation can also be produced artificially in arc lamps. Vitamin D in humans is produced by the action of UV radiation on ergosterol, a substance present in the human skin.

Unconfined Detonation Velocity

The detonation velocity of an explosive material without confinement, for example, a charge fired in the open.

Underwriters Laboratory, Inc. (UL)

A nationally recognized incorporated testing laboratory qualified and equipped to conduct the necessary tests to determine compliance with appropriate standards and the satisfactory performance of materials or equipment in actual usage.

Uranium

uranium (y•ră´nä•m) (U), radioactive metallic element, discovered in oxide form in Pitchblende by M.H. Klaproth in 1789. A silver-white, hard, dense, malleable, ductile, highly reactive metal in the [Actinide](#) series it occurs naturally as a mixture of three Isotopes. Because of a constant decay rate, the age of uranium samples can be estimated (v [Dating](#)). The rare uranium-235 isotope is the only naturally occurring fission fuel for Nuclear Energy. Breeder reactors convert the abundant but nonfissionable uranium-238 into fissionable plutonium-239. Uranium-235 and plutonium-239 are also practicable fissionable nuclei for [Atomic Bombs](#). *Element; [Nuclear Reactor](#); [Periodic Table](#); [Radioactivity](#).*

U.S. Bureau of Mines (USBM)

A bureau of the Department of Interior active in promoting safety in coal mines and in carrying out broad programs in mining and related fields.

V

Return to [topof](#) page.

V Rating

Material to be added.

Vacuum Stability Test

Stability Test.

Valence

Valence or oxidation state, combining capacity of an Atom expressed as the number of single bonds the atom can form or the number of electrons an Element gives up or accepts when reacting to form a compound. The valence of an atom is determined by the number of electrons in the outermost, or valence, electron shell. An atom exists in its most stable configuration when its outermost shell is completely filled; in combining with other atoms, it thus tends to gain or lose valence electrons in order to attain a stable configuration. The valence of many elements is determined from their ability to combine with hydrogen or to replace it in compounds.

Vector

A quantity having both magnitude and direction. Many physical quantities are vectors, e.g., force, velocity, and *momentum*. The simplest representation of a vector is an arrow connecting two points: [m.ABvector] designates the vector represented by an arrow from point A to point B, whereas [m.BAvector] designates the vector of equal magnitude from B to A. In order to compare vectors and to operate on them mathematically, it is necessary to have some reference system that determines scale and direction, such as Cartesian Coordinates. A vector is frequently symbolized by its components with respect to the coordinate axes. Suppose, for example, that the point A has coordinates (2,3) and the point B has coordinates (5,7). The x-component of [m.ABvector] i.e., its size with respect to the x-axis, is the difference between the x-coordinates of the points A and B, or $5 - 2 = 3$; the y-component is $7 - 3 = 4$. Thus [m.ABvector] becomes {3,4}. Knowledge of the components of a vector enables one to compute its magnitude—in this case, 5, by the Pythagorean theorem $\{(3^2 + 4^2)^{1/2} = 5\}$ —and its direction (from Trigonometry). There are an infinite number of vectors with the components {3,4}, all of which have the same magnitude and direction; they are considered equal. The concept of a vector can be extended to three or more dimensions. To add two vectors U and V, one can add their corresponding components to find the resultant vector R, or one can graph U and V on a set of coordinate axes and complete the parallelogram formed with U and V as adjacent sides to obtain R as the diagonal from the common vertex of U and V. The scalar, or dot, product of two vectors A and B is a nondirectional (scalar) quantity with a magnitude of $A \cdot B = |A| |B| \cos \theta$, where θ is the angle between A and B. The vector, or cross, product of A and B is a vector whose magnitude $A \times B = |A| |B| \sin \theta$ and whose direction is perpendicular to both A and B and pointing in the direction in which a right-hand screw would advance if turned from A to B through the angle θ .

Vehicle

In terms of space flight, a structure, machine or device, such as a rocket, designed to carry a burden through air or space; more restrictively, a rocket craft.

Velocity

- 1) Speed.
- 2) A vector quantity equal to speed in a given direction.

Venturi Tube

A short tube with varying cross sections and a constricted throat which controls flow velocity

Very Pistol

A firing device for pyrotechnical cartridges.

Viscosity

Viscosity, resistance of a fluid to flow. This resistance acts against the motion of any solid object through the fluid, and also against motion of the fluid itself past stationary obstacles. Viscosity also acts internally on the fluid between slower- and faster-moving adjacent layers. All fluids exhibit viscosity to some degree.

Viscosity And Consistency

Related but different rheological (pertaining to flow) terms.

VOD

Velocity of detonation, a measure of the rate at which the detonating wave travels through an explosive charge; the speed of detonation of a particular explosive. *Detonating Velocity*.

Volt

The unit of voltage or, more technically, of Electric Potential and Electromotive Force. It is defined as the difference of electric potential existing across the ends of a conductor having a resistance of 1 OHM when the conductor is carrying a current of 1 AMPERE.

Volume Strength

Same as *Cartridge Strength* or *Bulk Strength*.

W

Return to [top](#) of page.

Warhead

That portion of a rocket, guided missile or torpedo containing the destructive load which the vehicle is to deliver.

Warning Signal

A visual or audible signal that is used for warning personnel in the vicinity of the blast area of the impending explosion.

Water

Water, odorless, tasteless, transparent liquid that is colorless in small amounts but exhibits a bluish tinge in large quantities. It is the most abundant liquid on earth. In solid form (ice) and liquid form it covers about 70% of the earth's surface. Chemically, water is a compound of hydrogen and oxygen whose formula is H₂O. The two H—O bonds form an angle of about 105°—an arrangement that results in a polar molecule, because there is a net negative charge toward the oxygen end (the apex) of the V-shaped molecule and a net positive charge at the hydrogen ends. Consequently, each oxygen atom is able to attract two nearby hydrogen atoms of two other water molecules. These hydrogen bondings keep water liquid at ordinary temperatures. Because water is a polar compound, it is a good solvent. Because of the hydrogen bondings between molecules, the latent heats of fusion and of evaporation and the Heat Capacity of water are all unusually high. For these reasons water serves both as a heat-transfer medium (e.g., ice for

cooling and steam for heating) and as a temperature regulator (the water in lakes and oceans helps regulate the climate). Water is chemically active, reacting with certain metals and metal oxides to form bases, and with certain oxides of nonmetals to form acids. Although completely pure water is a poor conductor of electricity, it is a much better conductor than most pure liquids because of its self-ionization, i.e., the ability of two water molecules to react to form a hydroxyl ion (OH⁻) and a hydronium ion (H₃O⁺).

Water Gel

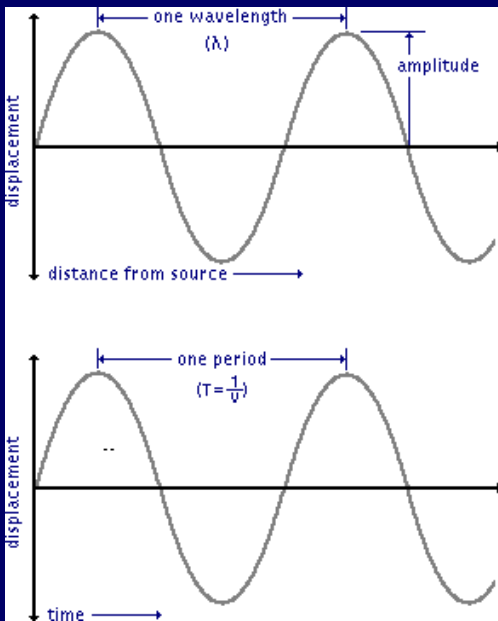

An explosive material containing substantial portions of water, oxidizers, and fuel, plus a cross-linking agent.

Watt

A unit of electrical power equal to 1 joule/sec.

Wave

Wave in physics, the transfer of Energy by some form of regular vibration, or oscillatory motion, either of some material medium (*Sound*) or by the variation of intensity of the field vectors of an electromagnetic field (*Electromagnetic Radiation*). In longitudinal, or compressional, waves the vibration is in the same direction as the transfer of energy; in transverse waves the vibration is at right angles to the transfer of energy. The amplitude of a wave is its maximum displacement. The distance between successive crests or successive troughs is the wavelength λ of a wave. One full wavelength of a wave represents one complete cycle, that is, one complete vibration in each direction. All waves are referenced to an imaginary synchronous motion in a circle; thus one complete cycle is divided into 360 degrees. The phase is that part of the cycle, expressed in degrees, that is completed at a certain time. The various phase relationships between combining waves determine the type of interference that takes place. The frequency n of a wave is equal to the number of crests (or troughs) that pass a given fixed point per unit of time. The period T of a wave is the time lapse between the passage of successive crests (or troughs). The speed v of a wave is determined by its wavelength and its frequency according to the equation $v = \lambda n$. Because the frequency is inversely related to the period T , this equation also takes the form $v = \lambda/T$.

Wavefront

Surface which is the locus of all molecules having motion in identical phase in a propagating wave.

Weather-Resistant

Construction designed to offer reasonable protection against weather.

Web, Web Size, Web Thickness

- 1) Alternate terms describing the minimum distance between any two specified burning surfaces of a propellant grain.
- 2) Terms used in describing portions of structural "I" beams and "H" beams.

Web Range

Tolerance of web thickness to allow for manufacturing limitation.

Weight

The force with which an earth-bound body is attracted toward the earth. Weight, a measure, commonly expressed in pounds or grams, of the force of gravity on a body ([Gravitation](#)), which is more correctly measured in newtons. Because the weights of different bodies at the same location are proportional to their masses, weight is often used as a measure of [Mass](#). Unlike the mass, the weight of a body depends on its location in the gravitational field of the earth or of some other astronomical body.

Weights And Measures

Weights and measures, units and standards for expressing the amount of some quantity, such as length, capacity, or weight; the science of measurement standards and methods is known as metrology. Crude systems of weights and measures probably date from prehistoric times. Early units were commonly based on body measurements and on plant seeds or other agricultural objects. As civilization progressed, technological and commercial requirements led to increased standardization. Units were usually fixed by edict of local or national rulers and were subdivided and multiplied or otherwise arranged into systems of measurement. Today the chief systems are the *English Units Of Measurement* and the [Metric System](#). The United States is one of the few countries still using the former system.

Weight Strength

The energy of an explosive material per unit of weight expressed as a percentage of the energy per unit of weight of a specified explosive standard.

White Phosphorous (WP)

Yellow waxy solid which ignites spontaneously when exposed to air. It is used as a filling for various projectiles as a smoke-producing agent and has an incendiary effect. White phosphorous may be mixed with a xylene solution of synthetic [rubber](#) to form plasticized white phosphorous.

Window

A type of confusion reflector consisting essentially of metal foil ribbon, but sometimes metalized on one side only. Also known as "chaff." Similar to, but shorter in length than rope. [Rope](#).

Windshield

Ballistic Cap.

Work

Work, in physics, transfer of Energy by a force acting against a resistance or a body and resulting in displacement. Work W has a magnitude equal to the scalar product ([Vector](#)) of the force F and the distance d of the resulting movement; thus $W = Fd \cos \theta$; where θ is the angle between the directions of the force and the movement. The foot-pound ([English Units of Measurement](#)), the erg (cgs system), and the joule (mks system) are the units of work or energy expended, respectively, by a 1-lb force acting through a distance of 1 ft, by a 1-dyne force through 1 cm, and by a 1-newton force through 1 m. One foot-pound equals 1.356 joules; 1 erg equals 10^{-7} joules.

X

Return to [topof](#) page.

X-Ray

Electromagnetic radiation of very short wavelength, lying within the wavelength interval of 0.0 to 100 angstroms (between gamma rays and ultra-violet radiation). Also called "X-radiation", "Roentgen ray." (X-rays penetrate various thicknesses of all solids and they act upon photographic plates in the same manner as light. Secondary X-rays are produced whenever X-rays are absorbed by a substance; in the case of absorption by a gas, this results in ionization.)

Xenon

(Xe), gaseous element, discovered spectroscopically in 1898 by William Ramsay and M.W. Travers. It is a rare, colorless, odorless, tasteless Inert Gas used in certain photographic-flash lamps, in high-intensity arc lamps for motion-picture projection, in high-pressure arc lamps to produce ultraviolet light, and in numerous radiation-detection instruments.

Y

Return to [topof](#) page.

Yaw

- 1) The lateral rotational or oscillatory movement of an aircraft, rocket or the like about a transverse axis.
 - 2) The amount of this movement, i.e., the angle of yaw.
-

Z

Return to [topof](#) page.

Zero G

Weightlessness.

OFFICE CONSOLIDATION

CHAPTER C-23

Canadian Security Intelligence Service Act

An Act to establish the Canadian Security Intelligence Service

Short Title

Short title

1. This Act may be cited as the Canadian Security Intelligence Service Act, 1984, c. 21, s. 1.

Interpretation

Definitions

2. In this Act,

"department"

"department", in relation to the government of Canada or of a province, includes

- (a) any portion of a department of the Government of Canada or of the province, and
- (b) any Ministry of State, institution or other body of the Government of Canada or of the province or any portion thereof;

"Deputy Minister"

"Deputy Minister" means the Deputy Solicitor General and includes any person acting for or on behalf of the Deputy Solicitor General;

"Director"

"Director" means the Director of the Service;

"employee"

"employee" means a person who is appointed as an employee of the Service pursuant to subsection 8(1) or has become an employee of the Service pursuant to subsection 66(1) of the *Canadian Security Intelligence Service Act*, chapter 21 of the Statutes of Canada, 1984, and includes a person who is attached or seconded to the Service as an employee;

"foreign state"

"foreign state" means any state other than Canada;

"Inspector General"

"Inspector General" means the Inspector General appointed pursuant to subsection 30(1);

"intercept"

"intercept" has the same meaning as in section 183 of the *Criminal Code*;

"judge"

"judge" means a judge of the Federal Court designated by the Chief Justice thereof for the purposes of this Act;

"Minister"

"Minister" means the Solicitor General of Canada;

"place"

"place" includes any conveyance;

"Review Committee"

"Review Committee" means the Security Intelligence Review Committee established by subsection 34

(1);

"security assessment"

"security assessment" means an appraisal of the loyalty to Canada and, so far as it relates thereto, the reliability of an individual;

"Service"

"Service" means the Canadian Security Intelligence Service established by subsection 3(1);

"threats to the security of Canada"

"threats to the security of Canada" means

(a) espionage or sabotage that is against Canada or is detrimental to the interests of Canada or activities directed toward or in support of such espionage or sabotage,

(b) foreign influenced activities within or relating to Canada that are detrimental to the interests of Canada and are clandestine or deceptive or involve a threat to any person,

(c) activities within or relating to Canada directed toward or in support of the threat or use of acts of serious violence against persons or property for the purpose of achieving a political objective within Canada or a foreign state, and

(d) activities directed toward undermining by covert unlawful acts, or directed toward or intended ultimately to lead to the destruction or overthrow by violence of, the constitutionally established system of government in Canada,

but does not include lawful advocacy, protest or dissent, unless carried on in conjunction with any of the activities referred to in paragraphs (a) to (d). 1984, c. 21, s. 2.

[Top](#)

PART I

CANADIAN SECURITY INTELLIGENCE SERVICE

Establishment of Service

Establishment of Service

3. (1) The Canadian Security Intelligence Service is hereby established, consisting of the Director and employees of the Service.

Principal office

(2) The principal office of the Service shall be in the National Capital Region described in the schedule to the National Capital Act.

Other offices

(3) The Director may, with the approval of the Minister, establish other offices of the Service elsewhere in Canada. 1984, c. 21, s. 3.

Director

Appointment

4. (1) The Governor in Council shall appoint the Director of the Service.

Term of office

(2) The Director shall be appointed to hold office during pleasure for a term not exceeding five years.

Re-appointment

(3) Subject to subsection (4), the Director is eligible, on the expiration of a first or any subsequent term of office, to be re-appointed for a further term not exceeding five years.

Limitation

(4) No person shall hold office as Director for terms exceeding ten years in the aggregate.

Absence or incapacity

(5) In the event of the absence or incapacity of the Director, or if the office of Director is vacant, the Governor in Council may appoint another person to hold office instead of the Director for a term not exceeding six months, and that person shall, while holding that office, have all of the powers, duties and functions of the Director under this Act or any other Act of Parliament and be paid such salary or other remuneration and expenses as may be fixed by the Governor in Council. 1984, c. 21, s. 4.

Salary and expenses

5. (1) The Director is entitled to be paid a salary to be fixed by the Governor in Council and shall be paid reasonable travel and living expenses incurred by the Director in the performance of duties and functions under this Act.

Pension benefits

(2) The provisions of the *Public Service Superannuation Act*, other than those relating to tenure of office, apply to the Director, except that a person appointed as Director from outside the Public Service, as defined in the *Public Service Superannuation Act*, may, by notice in writing given to the President of the Treasury Board not more than sixty days after the date of appointment, elect to participate in the pension plan provided by the *Diplomatic Service (Special) Superannuation Act*, in which case the provisions of that Act, other than those relating to tenure of office, apply to the Director from the date of appointment and the provisions of the *Public Service Superannuation Act* do not apply. 1984, c. 21, s. 5.

Management of Service

Role of Director

6. (1) The Director, under the direction of the Minister, has the control and management of the Service and all matters connected therewith.

Minister may issue directions

(2) In providing the direction referred to in subsection (1), the Minister may issue to the Director written directions with respect to the Service and a copy of any such direction shall, forthwith after it is issued, be given to the Review Committee.

Directions deemed not to be statutory instruments

(3) Directions issued by the Minister under subsection (2) shall be deemed not to be statutory instruments for the purposes of the *Statutory Instruments Act*, 1984, c. 21, s. 6.

Consultation with Deputy Minister

7. (1) The Director shall consult the Deputy Minister on

- (a) the general operational policies of the Service; and
- (b) any matter with respect to which consultation is required by directions issued under subsection 6(2).

Idem

(2) The Director or any employee designated by the Minister for the purpose of applying for a warrant under section 21 or 23 shall consult the Deputy Minister before applying for the warrant or the renewal of the warrant.

Advice by Deputy Minister

(3) The Deputy Minister shall advise the Minister with respect to directions issued under subsection 6(2) or that should, in the opinion of the Deputy Minister, be issued under that subsection. 1984, c. 21, s. 7.

Powers and duties of Director

8. (1) Notwithstanding the *Financial Administration Act* and the *Public Service Employment Act*, the Director has exclusive authority to appoint employees and, in relation to the personnel management of employees, other than persons attached or seconded to the Service as employees,

- (a) to provide for the terms and conditions of their employment; and
- (b) subject to the regulations,
 - (i) to exercise the powers and perform the duties and functions of the Treasury Board relating to personnel management under the *Financial Administration Act*, and
 - (ii) to exercise the powers and perform the duties and functions assigned to the Public Service Commission by or pursuant to the *Public Service Employment Act*.

Discipline and grievances of employees

(2) Notwithstanding the *Public Service Staff Relations Act* but subject to subsection (3) and the regulations, the Director may establish procedures respecting the conduct and discipline of, and the presentation, consideration and adjudication of grievances in relation to, employees, other than persons

attached or seconded to the Service as employees.

Adjudication of employee grievances

(3) When a grievance is referred to adjudication, the adjudication shall not be heard or determined by any person, other than a full-time member of the Public Service Staff Relations Board established under section 11 of the *Public Service Staff Relations Act*.

Regulations

(4) The Governor in Council may make regulations

(a) governing the exercise of the powers and the performance of the duties and functions of the Director referred to in subsection (1); and

(b) in relation to employees to whom subsection (2) applies, governing their conduct and discipline and the presentation, consideration and adjudication of grievances. 1984, c. 21, s. 8.

Process for resolution of disputes of support staff

9. (1) Notwithstanding the *Public Service Staff Relations Act*,

(a) the process for resolution of a dispute applicable to employees of the Service in a bargaining unit determined for the purposes of that Act is by the referral of the dispute to arbitration; and

(b) the process for resolution of a dispute referred to in paragraph (a) shall not be altered pursuant to that Act.

Public Service Superannuation Act

(2) Employees of the Service shall be deemed to be employed in the Public Service for the purposes of the *Public Service Superannuation Act*. 1984, c. 21, s. 9.

No suspension of arbitration

9.1 (1) Notwithstanding section 62 of the *Public Service Staff Relations Act* but subject to subsection (2), the operation of sections 64 to 75.1 of that Act is not suspended in respect of the resolution of any dispute applicable to employees of the Service.

Limit on maximum rate of increase

(2) During the period referred to in section 62 of the *Public Service Staff Relations Act*, an arbitration board, as defined in subsection 2(1) of that Act, shall, in rendering an arbitral award, limit the aggregate amount of any increase in pay and other benefits in respect of any dispute applicable to employees of the Service to that concluded through collective, bargaining or otherwise by a comparable bargaining unit in the Public Service, within the meaning of that Act, after the compensation plan applicable to that bargaining unit ceased to be continued by virtue of the *Public Sector Compensation Act*. 1996, R.S., c. F-11

Oaths

10. The Director and every employee shall, before commencing the duties of office, take an oath of allegiance and the oaths set out in the schedule. 1984, c. 21, s. 10.

Certificate

11. A certificate purporting to be issued by or under the authority of the Director and stating that the person to whom it is issued is an employee or is a person, or a person included in a class of persons, to whom a warrant issued under section 21 or 23 is directed is evidence of the statements contained therein and is admissible in evidence without proof of the signature or official character of the person purporting to have issued it. 1984, c. 21, s. 11.

Duties and Functions of Service

Collection, analysis and retention

12. The Service shall collect, by investigation or otherwise, to the extent that it is strictly necessary, and analyse and retain information and intelligence respecting activities that may on reasonable grounds be suspected of constituting threats to the security of Canada and, in relation thereto, shall report to and advise the Government of Canada. 1984, c. 21, s. 12.

Security assessments

13. (1) The Service may provide security assessments to departments of the Government of Canada.

Arrangements with provinces

(2) The Service may, with the approval of the Minister, enter into an arrangement with

(a) the government of a province or any department thereof, or

(b) any police force in a province, with the approval of the Minister responsible for policing in the province,

authorizing the Service to provide security assessments.

Arrangements with foreign states

(3) The Service may, with the approval of the Minister after consultation by the Minister of Foreign Affairs, enter into an arrangement with the government of a foreign state or an institution thereof or an international organization of states or an institution thereof authorizing the Service to provide the government, institution or organization with security assessments. R.S., 1985, c. C-23, s. 13; 1995, c. 5, s. 25(1)(d).

Advice to Ministers

14. The Service may

(a) advise any minister of the Crown on matters relating to the security of Canada, or

(b) provide any minister of the Crown with information relating to security matters or criminal activities, that is relevant to the exercise of any power or the performance of any duty or function by that Minister under the Citizenship Act or the Immigration Act. 1984, c. 21, s. 14.

Investigations

15. The Service may conduct such investigations as are required for the purpose of providing security

assessments pursuant to section 13 or advice pursuant to section 14. 1984, c. 21, s. 15.

Collection of information concerning foreign states and persons

16. (1) Subject to this section, the Service may, in relation to the defence of Canada or the conduct of the international affairs of Canada, assist the Minister of National Defence or the Minister of Foreign Affairs, within Canada, in the collection of information or intelligence relating to the capabilities, intentions or activities of

(a) any foreign state or group of foreign states; or

(b) any person other than

(i) a Canadian citizen,

(ii) a permanent resident within the meaning of the *Immigration Act*, or

(iii) a corporation incorporated by or under an Act of Parliament or of the legislature of a province.

Limitation

(2) The assistance provided pursuant to subsection (1) shall not be directed at any person referred to in subparagraph (1)(b)(i), (ii) or (iii).

Personal consent of Ministers required

(3) The Service shall not perform its duties and functions under subsection (1) unless it does so

(a) on the personal request in writing of the Minister of National Defence or the Minister of Foreign Affairs; and

(b) with the personal consent in writing of the Minister. R.S., 1985, c. C-23, s. 16; 1985, c. 5, s. 25(1)(d).

Cooperation

17. (1) For the purpose of performing its duties and functions under this Act, the Service may,

(a) with the approval of the Minister, enter into an arrangement or otherwise cooperate with

(i) any department of the Government of Canada or the government of a province or any department thereof, or

(ii) any police force in a province, with the approval of the Minister responsible for policing in the province; or

(b) with the approval of the Minister after consultation by the Minister with the Minister of Foreign Affairs, enter into an arrangement or otherwise cooperate with the government of a foreign state or an institution thereof or an international organization of states or an institution thereof.

Copies of arrangements to Review Committee

(2) Where a written arrangement is entered into pursuant to subsection (1) or subsection 13(2) or (3), a copy thereof shall be given forthwith to the Review Committee. R.S., 1985, c. C-23, s. 17; 1985, c. 5, s. 25(1)(d).

Offence to disclose identity

18. (1) Subject to subsection (2), no person shall disclose any information that the person obtained or to which the person had access in the course of the performance by that person of duties and functions

under this Act or the participation by that person in the administration or enforcement of this Act and from which the identity of

- (a) any other person who is or was a confidential source of information or assistance to the Service, or
- (b) any person who is or was an employee engaged in covert operational activities of the Service can be inferred.

Exceptions

(2) A person may disclose information referred to in subsection (1) for the purposes of the performance of duties and functions under this Act or any other Act of Parliament or the administration or enforcement of this Act or as required by any other law or in the circumstances described in any of paragraphs 19(2)(a) to (d).

Offence

(3) Every one who contravenes subsection (1)

- (a) is guilty of an indictable offence and liable to imprisonment for a term not exceeding five years; or
- (b) is guilty of an offence punishable on summary conviction. 1984, c. 21, s. 18.

Authorized disclosure of information

19. (1) Information obtained in the performance of the duties and functions of the Service under this Act shall not be disclosed by the Service except in accordance with this section.

Idem

(2) The Service may disclose information referred to in subsection (1) for the purposes of the performance of its duties and functions under this Act or the administration or enforcement of this Act or as required by any other law and may also disclose such information,

- (a) where the information may be used in the investigation or prosecution of an alleged contravention of any law of Canada or a province, to a peace officer having jurisdiction to investigate the alleged contravention and to the Attorney General of Canada and the Attorney General of the province in which proceedings in respect of the alleged contravention may be taken;
- (b) where the information relates to the conduct of the international affairs of Canada, to the Minister of Foreign Affairs or a person designated by the Minister of Foreign Affairs for the purpose;
- (c) where the information is relevant to the defence of Canada, to the Minister of National Defence or a person designated by the Minister of National Defence for the purpose; or
- (d) where, in the opinion of the Minister, disclosure of the information to any minister of the Crown or person in the public service of Canada is essential in the public interest and that interest clearly outweighs any invasion of privacy that could result from the disclosure, to that minister or person.

Report to Review Committee

(3) The Director shall, as soon as practicable after a disclosure referred to in paragraph (2)(d) is made, submit a report to the Review Committee with respect to the disclosure. R.S., 1995, c. C-23, s. 19; 1985, c. 5, s. 25(1)(d).

Protection of employees

20. (1) The Director and employees have, in performing the duties and functions of the Service under this Act, the same protection under the law as peace officers have in performing their duties and functions as peace officers.

Unlawful conduct

(2) If the Director is of the opinion that an employee may, on a particular occasion, have acted unlawfully in the purported performance of the duties and functions of the Service under this Act, the Director shall cause to be submitted a report in respect thereof to the Minister.

Report and comments to Attorney General of Canada

(3) The Minister shall cause to be given to the Attorney General of Canada a copy of any report that he receives pursuant to subsection (2), together with any comment that he considers appropriate in the circumstances.

Copies to Review Committee

(4) A copy of anything given to the Attorney General of Canada pursuant to subsection (3) shall be given forthwith to the Review Committee. 1984, c. 21, s. 20.

PART II

JUDICIAL CONTROL

Application for warrant

21. (1) Where the Director or any employee designated by the Minister for the purpose believes, on reasonable grounds, that a warrant under this section is required to enable the Service to investigate a threat to the security of Canada or to perform its duties and functions under section 16, the Director or employee may, after having obtained the approval of the Minister, make an application in accordance with subsection (2) to a judge for a warrant under this section.

Matters to be specified in application for warrant

(2) An application to a judge under subsection (1) shall be made in writing and be accompanied by an affidavit of the applicant deposing to the following matters, namely,

- (a) the facts relied on to justify the belief, on reasonable grounds, that a warrant under this section is required to enable the Service to investigate a threat to the security of Canada or to perform its duties and functions under section 16;
- (b) that other investigative procedures have been tried and have failed or why it appears that they are unlikely to succeed, that the urgency of the matter is such that it would be impractical to carry out the investigation using only other investigative procedures or that without a warrant under this section it is

likely that information of importance with respect to the threat to the security of Canada or the performance of the duties and functions under section 16 referred to in paragraph (a) would not be obtained;

(c) the type of communication proposed to be intercepted, the type of information, records, documents or things proposed to be obtained and the powers referred to in paragraphs (3)(a) to (c) proposed to be exercised for that purpose;

(d) the identity of the person, if known, whose communication is proposed to be intercepted or who has possession of the information, record, document or thing proposed to be obtained;

(e) the persons or classes of persons to whom the warrant is proposed to be directed;

(f) a general description of the place where the warrant is proposed to be executed, if a general description of that place can be given;

(g) the period, not exceeding sixty days or one year, as the case may be, for which the warrant is requested to be in force that is applicable by virtue of subsection (5); and

(h) any previous application made in relation to a person identified in the affidavit pursuant to paragraph (d), the date on which the application was made, the name of the judge to whom each application was made and the decision of the judge thereon.

Issuance of warrant

(3) Notwithstanding any other law but subject to the Statistics Act, where the judge to whom an application under subsection (1) is made is satisfied of the matters referred to in paragraphs (2)(a) and (b) set out in the affidavit accompanying the application, the judge may issue a warrant authorizing the persons to whom it is directed to intercept any communication or obtain any information, record, document or thing and, for that purpose,

(a) to enter any place or open or obtain access to any thing;

(b) to search for, remove or return, or examine, take extracts from or make copies of or record in any other manner the information, record, document or thing; or

(c) to install, maintain or remove any thing.

Matters to be specified in warrant

(4) There shall be specified in a warrant issued under subsection (3)

(a) the type of communication authorized to be intercepted, the type of information, records, documents or things authorized to be obtained and the powers referred to in paragraphs (3)(a) to (c) authorized to be exercised for that purpose;

(b) the identity of the person, if known, whose communication is to be intercepted or who has possession of the information, record, document or thing to be obtained;

(c) the persons or classes of persons to whom the warrant is directed;

(d) a general description of the place where the warrant may be executed, if a general description of that place can be given;

(e) the period for which the warrant is in force; and

(f) such terms and conditions as the judge considers advisable in the public interest.

Maximum duration of warrant

(5) A warrant shall not be issued under subsection (3) for a period exceeding

- (a) sixty days where the warrant is issued to enable the Service to investigate a threat to the security of Canada within the meaning of paragraph (d) of the definition of that expression in section 2; or
- (b) one year in any other case. 1984, c. 21, s. 21.

Renewal of warrant

22. On application in writing to a judge for the renewal of a warrant issued under subsection 21(3) made by a person entitled to apply for such a warrant after having obtained the approval of the Minister, the judge may, from time to time, renew the warrant for a period not exceeding the period for which the warrant may be issued pursuant to subsection 21(5) if satisfied by evidence on oath that
- (a) the warrant continues to be required to enable the Service to investigate a threat to the security of Canada or to perform its duties and functions under section 16; and
 - (b) any of the matters referred to in paragraph 21(2)(b) are applicable in the circumstances. 1984, c. 21, s. 22.

Warrant authorizing removal

23. (1) On application in writing by the Director or any employee designated by the Minister for the purpose, a judge may, if the judge thinks fit, issue a warrant authorizing the persons to whom the warrant is directed to remove from any place any thing installed pursuant to a warrant issued under subsection 21(3) and, for that purpose, to enter any place or open or obtain access to any thing.

Matters to be specified in warrants

- (2) There shall be specified in a warrant issued under subsection (1) the matters referred to in paragraphs 21(4)(c) to (f). 1984, c. 21, s. 23.

Warrant to have effect notwithstanding other laws

24. Notwithstanding any other law, a warrant issued under section 21 or 23
- (a) authorizes every person or person included in a class of persons to whom the warrant is directed,
 - (i) in the case of a warrant issued under section 21, to exercise the powers specified in the warrant for the purpose of intercepting communications of the type specified therein or obtaining information, records, documents or things of the type specified therein, or
 - (ii) in the case of a warrant issued under section 23, to execute the warrant; and
 - (b) authorizes any other person to assist a person who that other person believes on reasonable grounds is acting in accordance with such a warrant. 1984, c. 21, s. 24.

Crown Liability and Proceedings Act not to apply

25. No action lies under section 18 of the Crown Liability and Proceedings Act in respect of
- (a) the use or disclosure pursuant to this Act of any communication intercepted under the authority of a warrant issued under section 21; or
 - (b) the disclosure pursuant to this Act of the existence of any such communication. R.S., 1985, c. C-23, s. 25; 1993, c. 34, s. 49.

Exclusion of Part VI of Criminal Code

26. Part VI of the Criminal Code does not apply in relation to any interception of a communication

under the authority of a warrant issued under section 21 or in relation to any communication so intercepted. 1984, c. 21, s. 26.

Hearing of applications

27. An application under section 21, 22 or 23 to a judge for a warrant or the renewal of a warrant shall be heard in private in accordance with regulations made under section 28. 1984, c. 21, s. 27.

Regulations

28. The Governor in Council may make regulations

- (a) prescribing the forms of warrants that may be issued under section 21 or 23;
- (b) governing the practice and procedure of, and security requirements applicable to, hearings of applications for those warrants and for renewals of those warrants; and
- (c) notwithstanding the Federal Court Act and any rules made thereunder, specifying the places where those hearings may be held and the places where, and the manner in which, records or documents concerning those hearings shall be kept. 1984, c. 21, s. 28.

PART III

REVIEW

Interpretation

Definition of "deputy head"

29. In this Part, "deputy head" means, in relation to

- (a) a department named in Schedule I to the Financial Administration Act, the deputy minister thereof,
- (b) the Canadian Forces, the Chief of the Defence Staff,
- (c) the Royal Canadian Mounted Police, the Commissioner,
- (d) the Service, the Director, and
- (e) any other portion of the public service of Canada, the person designated by order in council pursuant to this paragraph and for the purposes of this Part to be the deputy head of that portion of the public service of Canada. 1984, c. 21, s. 29.

Inspector General

Inspector General

30. (1) The Governor in Council shall appoint an officer to be known as the Inspector General, who is responsible to the Deputy Minister.

Functions

(2) The functions of the Inspector General are

- (a) to monitor the compliance by the Service with its operational policies;
- (b) to review the operational activities of the Service; and
- (c) to submit certificates pursuant to subsection 33(2). 1984, c. 21, s. 30.

Access to information

31. (1) Notwithstanding any other Act of Parliament but subject to subsection (2), the Inspector General is entitled to have access to any information under the control of the Service that relates to the performance of the duties and functions of the Inspector General and is also entitled to receive from the Director and employees such information, reports and explanations as the Inspector General deems necessary for the performance of those duties and functions.

Compelling production of information

(2) No information described in subsection (1), other than a confidence of the Queen's Privy Council for Canada in respect of which subsection 39(1) of the Canada Evidence Act applies, may be withheld from the Inspector General on any grounds. 1984, c. 21, s. 31.

Compliance with security requirements

32. The Inspector General shall comply with all security requirements applicable by or under this Act to an employee and shall take the oath of secrecy set out in the schedule. 1984, c. 21, s. 32.

Periodic reports by Director

33. (1) The Director shall, in relation to every period of twelve months or such lesser period as is specified by the Minister, submit to the Minister, at such times as the Minister specifies, reports with respect to the operational activities of the Service during that period, and shall cause the Inspector General to be given a copy of each such report.

Certificates of Inspector General

(2) As soon as practicable after receiving a copy of a report referred to in subsection (1), the Inspector General shall submit to the Minister a certificate stating the extent to which the Inspector General is satisfied with the report and whether any act or thing done by the Service in the course of its operational activities during the period to which the report relates is, in the opinion of the Inspector General,

- (a) not authorized by or under this Act or contravenes any directions issued by the Minister under subsection 6(2); or
- (b) involves an unreasonable or unnecessary exercise by the Service of any of its powers.

Transmission to Review Committee

(3) As soon as practicable after receiving a report referred to in subsection (1) and a certificate of the Inspector General referred to in subsection (2), the Minister shall cause the report and certificate to be transmitted to the Review Committee. 1984, c. 21, s. 33.

Security Intelligence Review Committee

Security Intelligence Review Committee

34. (1) There is hereby established a committee, to be known as the Security Intelligence Review Committee, consisting of a Chairman and not less than two and not more than four other members, all of whom shall be appointed by the Governor in Council from among members of the Queen's Privy Council for Canada who are not members of the Senate or the House of Commons, after consultation by the Prime Minister of Canada with the Leader of the Opposition in the House of Commons and the leader in the House of Commons of each party having at least twelve members in that House.

Term of office

(2) Each member of the Review Committee shall be appointed to hold office during good behaviour for a term not exceeding five years.

Re-appointment

(3) A member of the Review Committee is eligible to be re-appointed for a term not exceeding five years.

Expenses

(4) Each member of the Review Committee is entitled to be paid, for each day that the member performs duties and functions under this Act, such remuneration as is fixed by the Governor in Council and shall be paid reasonable travel and living expenses incurred by the member in the performance of those duties and functions. 1984, c. 21, s. 34.

Chairman of the Review Committee

35. (1) The Chairman of the Review Committee is the chief executive officer of the Committee.

Acting Chairman of the Review Committee

(2) The Chairman of the Review Committee may designate another member of the Committee to act as the Chairman in the event of the absence or incapacity of the Chairman and, if no such designation is in force or the office of Chairman is vacant, the Minister may designate a member of the Committee to act as the Chairman. 1984, c. 21, s. 35.

Staff of Review Committee

36. The Review Committee may, with the approval of the Treasury Board,
(a) engage a secretary and such other staff as it requires; and
(b) fix and pay the remuneration and expenses of persons engaged pursuant to paragraph (a). 1984, c. 21, s. 36.

Compliance with security requirements

37. Every member of the Review Committee and every person engaged by it shall comply with all

security requirements applicable by or under this Act to an employee and shall take the oath of secrecy set out in the schedule. 1984, c. 21, s. 37.

Functions of Review Committee

38. The functions of the Review Committee are

(a) to review generally the performance by the Service of its duties and functions and, in connection therewith,

(i) to review the reports of the Director and certificates of the Inspector General transmitted to it pursuant to subsection 33(3),

(ii) to review directions issued by the Minister under subsection 6(2),

(iii) to review arrangements entered into by the Service pursuant to subsections 13(2) and (3) and 17(1) and to monitor the provision of information and intelligence pursuant to those arrangements,

(iv) to review any report or comment given to it pursuant to subsection 20(4),

(v) to monitor any request referred to in paragraph 16(3)(a) made to the Service,

(vi) to review the regulations, and

(vii) to compile and analyse statistics on the operational activities of the Service;

(b) to arrange for reviews to be conducted, or to conduct reviews, pursuant to section 40; and

(c) to conduct investigations in relation to

(i) complaints made to the Committee under sections 41 and 42,

(ii) reports made to the Committee pursuant to section 19 of the *Citizenship Act* or sections 39 and 81 of the *Immigration Act*, and

(iii) matters referred to the Committee pursuant to section 45 of the *Canadian Human Rights Act*. 1984, c. 21, s. 38.

Committee procedures

39. (1) Subject to this Act, the Review Committee may determine the procedure to be followed in the performance of any of its duties or functions.

Access to information

(2) Notwithstanding any other Act of Parliament or any privilege under the law of evidence, but subject to subsection (3), the Review Committee is entitled

(a) to have access to any information under the control of the Service or of the Inspector General that relates to the performance of the duties and functions of the Committee and to receive from the Inspector General, Director and employees such information, reports and explanations as the Committee deems necessary for the performance of its duties and functions;

and

(b) during any investigation referred to in paragraph 38(c), to have access to any information under the control of the deputy head concerned that is relevant to the investigation.

Idem

(3) No information described in subsection (2), other than a confidence of the Queen's Privy Council for Canada in respect of which subsection 39(1) of the *Canada Evidence Act* applies, may be withheld from the Committee on any grounds. 1984, c. 21, s. 39.

Review

40. For the purpose of ensuring that the activities of the Service are carried out in accordance with this Act, the regulations and directions issued by the Minister under subsection 6(2) and that the activities do not involve any unreasonable or unnecessary exercise by the Service of any of its powers, the Review Committee may

- (a) direct the Service or Inspector General to conduct a review of specific activities of the Service and provide the Committee with a report of the review; or
- (b) where it considers that a review by the Service or the Inspector General would be inappropriate, conduct such a review itself. 1984, c. 21, s. 40.

Complaints

Complaints

41. (1) Any person may make a complaint to the Review Committee with respect to any act or thing done by the Service and the Committee shall, subject to subsection (2), investigate the complaint if

- (a) the complainant has made a complaint to the Director with respect to that act or thing and the complainant has not received a response within such period of time as the Committee considers reasonable or is dissatisfied with the response given; and
- (b) the Committee is satisfied that the complaint is not trivial, frivolous, vexatious or made in bad faith.

Other redress available

(2) The Review Committee shall not investigate a complaint in respect of which the complainant is entitled to seek redress by means of a grievance procedure established pursuant to this Act or the *Public Service Staff Relations Act*. 1984, c. 21, s. 41.

Denial of security clearance

42. (1) Where, by reason only of the denial of a security clearance required by the Government of Canada, a decision is made by a deputy head to deny employment to an individual or to dismiss, demote or transfer an individual or to deny a promotion or transfer to an individual, the deputy head shall send, within ten days after the decision is made, a notice informing the individual of the denial of the security clearance.

Idem

(2) Where, by reason only of the denial of a security clearance required by the Government of Canada to be given in respect of an individual, a decision is made to deny the individual or any other person a contract to provide goods or services to the Government of Canada, the deputy head concerned shall send, within ten days after the decision is made, a notice informing the individual and, where applicable, the other person of the denial of the security clearance.

Receipt and investigation of complaints

(3) The Review Committee shall receive and investigate a complaint from

- (a) any individual referred to in subsection (1) who has been denied a security clearance;
or
(b) any person who has been denied a contract to provide goods or services to the Government of Canada by reason only of the denial of a security clearance in respect of that person or any individual.

Time within which complaint is to be made

(4) A complaint under subsection (3) shall be made within thirty days after receipt of the notice referred to in subsection (1) or (2) or within such longer period as the Review Committee allows. 1984, c. 21, s. 42.

Member of the Committee authorized to act alone

43. A member of the Review Committee may exercise any of the powers or perform any of the duties or functions of the Committee under this Part in relation to complaints. 1984, c. 21, s. 43.

Complaints submitted on behalf of complainants

44. Nothing in this Act precludes the Review Committee from receiving and investigating complaints described in sections 41 and 42 that are submitted by a person authorized by the complainant to act on behalf of the complainant, and a reference to a complainant in any other section includes a reference to a person so authorized. 1984, c. 21, s. 44.

Written complaint

45. A complaint under this Part shall be made to the Review Committee in writing unless the Committee authorizes otherwise. 1984, c. 21, s. 45.

Statement and notice of hearing to be sent to the complainant

46. The Review Committee shall, as soon as practicable after receiving a complaint made under section 42, send to the complainant a statement summarizing such information available to the Committee as will enable the complainant to be as fully informed as possible of the circumstances giving rise to the denial of the security clearance and shall send a copy of the statement to the Director and the deputy head concerned. 1984, c. 21, s. 46.

Investigations

Notice of intention to investigate

47. Before commencing an investigation of a complaint referred to in paragraph 38(c) other than an investigation under section 41, the Review Committee shall notify the Director and, where applicable, the deputy head concerned of its intention to carry out the investigation and shall inform the Director and the deputy head of the substance of the complaint. 1984, c. 21, s. 47.

Investigations in private

48. (1) Every investigation of a complaint under this Part by the Review Committee shall be conducted

in private.

Right to make representations

(2) In the course of an investigation of a complaint under this Part by the Review Committee, the complainant, deputy head concerned and the Director shall be given an opportunity to make representations to the Review Committee, to present evidence and to be heard personally or by counsel, but no one is entitled as of right to be present during, to have access to or to comment on representations made to the Review Committee by any other person. 1984, c. 21, s. 48.

Canadian Human Rights Commission may comment

49. In the course of an investigation of a complaint under this Part, the Review Committee shall, where appropriate, ask the Canadian Human Rights Commission for its opinion or comments with respect to the complaint. 1984, c. 21, s. 49.

Powers of Review Committee

50. The Review Committee has, in relation to the investigation of any complaint under this Part, power

- (a) to summon and enforce the appearance of persons before the Committee and to compel them to give oral or written evidence on oath and to produce such documents and things as the Committee deems requisite to the full investigation and consideration of the complaint in the same manner and to the same extent as a superior court of record;
- (b) to administer oaths; and
- (c) to receive and accept such evidence and other information, whether on oath or by affidavit or otherwise, as the Committee sees fit, whether or not that evidence or information is or would be admissible in a court of law. 1984, c. 21, s. 50.

Evidence in other proceedings

51. Except in a prosecution of a person for an offence under section 133 of the Criminal Code (false statements in extra-judicial proceedings) in respect of a statement made under this Act, evidence given by a person in proceedings under this Part and evidence of the existence of the proceedings are inadmissible against that person in a court or in any other proceedings. 1984, c. 21, s. 51.

Report of findings

52. (1) The Review Committee shall,

- (a) on completion of an investigation in relation to a complaint under section 41, provide the Minister and the Director with a report containing the findings of the investigation and any recommendations that the Committee considers appropriate; and
- (b) at the same time as or after a report is provided pursuant to paragraph (a), report the findings of the investigation to the complainant and may, if it thinks fit, report to the complainant any recommendations referred to in that paragraph.

Idem

(2) On completion of an investigation in relation to a complaint under section 42, the Review Committee

shall provide the Minister, the Director, the deputy head concerned and the complainant with a report containing any recommendations that the Committee considers appropriate, and those findings of the investigation that the Committee considers it fit to report to the complainant. 1984, c. 21, s. 52.

Reports

Annual reports

53. The Review Committee shall, not later than September 30 in each fiscal year, submit to the Minister a report of the activities of the Committee during the preceding fiscal year and the Minister shall cause the report to be laid before each House of Parliament on any of the first fifteen days on which that House is sitting after the day the Minister receives it. R.S., 1985, c. C-23, s. 53; R.S., 1985, c. 1 (4th Supp.), s. 7.

Special reports

54. The Review Committee may, on request by the Minister or at any other time, furnish the Minister with a special report concerning any matter that relates to the performance of its duties and functions. 1984, c. 21, s. 54.

Protection of confidential information

55. The Review Committee shall consult with the Director in order to ensure compliance with section 37 in preparing

- (a) a statement under section 46 of this Act, subsection 45(6) of the *Canadian Human Rights Act*, subsection 19(5) of the *Citizenship Act* or subsection 39(6) or 81(5) of the *Immigration Act*; or
- (b) a report under paragraph 52(1)(b), subsection 52(2) or section 53 of this Act, subsection 46(1) of the *Canadian Human Rights Act*, subsection 19(6) of the *Citizenship Act* or subsection 39(10) or 81(8) of the *Immigration Act*. 1984, c. 21, s. 55.

PART IV

REVIEW BY PARLIAMENT

Review of Act after five years

56. (1) After July 16, 1989, a comprehensive review of the provisions and operation of this Act shall be undertaken by such committee of the House of Commons or of both Houses of Parliament as may be designated or established by Parliament for that purpose.

Report to Parliament

(2) The committee referred to in subsection (1) shall, within a year after a review is undertaken pursuant to that subsection or within such further time as Parliament may authorize, submit a report on the review

to Parliament including a statement of any changes the committee recommends. 1984, c. 21, s. 69.

SCHEDULE

(Section 10)

OATH OF OFFICE

I,, swear that I will faithfully and impartially to the best of my abilities perform the duties required of me as (the Director, an employee) of the Canadian Security Intelligence Service. So help me God.

OATH OF SECRECY

I,, swear that I will not, without due authority, disclose or make known to any person any information acquired by me by reason of the duties performed by me on behalf of or under the direction of the Canadian Security Intelligence Service or by reason of any office or employment held by me pursuant to the Canadian Security Intelligence Service Act. So help me God.

1984, c. 21, Sch.

Extreme right-wing parties around the world

Extreme right-wing is a collection label for nationalist, xenophobic and fascist(oide) parties. Nationalist parties are defined here as parties strongly emphasizing national values. National emancipation parties are not listed in this category. Xenophobic parties are defined here as parties which are hostile to national minorities. Fascist is only used for parties officially adhering fascist (mussolini'ist) ideas.

Only official sites of political parties are added to this list. Parties which do not participate in elections or have only a small amount of support are not listed. Parties boycotting elections are listed if they have more than a small amount of support.

Inclusion of a link **does not in any way mean endorsement of or support for** the listed parties.

15 MAY ORGANIZATION

DESCRIPTION

Formed in 1979 from remnants of Wadi Haddad's Popular Front for the Liberation of

Palestine-Special Operations Group (PFLP-SOG). Led by Muhammad al-Umari, who is known throughout Palestinian circles as Abu Ibrahim or the bombman. Group was never part of PLO. Reportedly disbanded in the mid-1980s when several key members joined Colonel Hawari's Special Operations Group of Fatah.

ACTIVITIES

Claimed credit for several bombings in the early-to-mid- 1980s, including hotel bombing in London (1980), El Al's Rome and Istanbul offices (1981), and Israeli Embassies in Athens and Vienna (1981). Anti-US attacks include an attempted bombing of a Pan Am airliner in Rio de Janeiro and a bombing on board a Pan Am flight from Tokyo to Honolulu in August 1982. (The accused bomber in this last attack, Mohammed Rashid, is currently jailed in Greece following his conviction for the bombing, which killed a Japanese teenager.)

STRENGTH

50 to 60 in early 1980s.

LOCATION/AREA OF OPERATION

Baghdad until 1984. Before disbanding, operated in Middle East, Europe, and East Asia, Abu Ibrahim is reportedly in Iraq.

EXTERNAL AID

Probably received logistic and financial support from Iraq until 1984.

[Top](#)

REVOLUTIONARY ORGANIZATION 17 NOVEMBER (17 November)

Description

A radical leftist group established in 1975 and named for the November 1973 student uprising protesting the military regime. Anti-US, anti-Turkish, anti-NATO; committed to violent overthrow of the regime, ouster of US bases, removal of Turkish military presence from Cyprus, and severing of Greece's ties to NATO and the EC. Organization is obscure, possibly affiliated with other Greek terrorist groups.

Activities

Initial attacks were selected handgun assassinations against senior US officials , including US Embassy official Richard Welch in 1975 and US Navy Captain George Tsantes in 1983. Began assassinating Greek officials and public figures in 1976 and added bombings, including attacks against US military buses in 1987 and assassination of US defense attache William Nordeen in 1988. Since 1990 has expanded targeting to include EC facilities and foreign firms investing in Greece, and added improvised rocket attacks to its methods. In 1991 was responsible for at least five of the 15 terrorist attacks against coalition targets in Greece during the Gulf War, including the assassination in March of a US Army sergeant. Also stepped up attacks against Turkish interests with attempted murder of Turkish Embassy official in July and assassination of Turkish Embassy press attache in October.

Strength

Unknown, but presumed to be small.

Location/Area of Operations

Greece, primarily in Athens metropolitan area.

External Aid

May receive support from ELA and other Greek terrorist group cadres.

[Top](#)

FIRST OF OCTOBER ANTIFASCIST RESISTANCE GROUP (GRAPO)

DESCRIPTION

Small, Maoist urban terrorist group established in 1975. Loosely associated with the Spanish Communist Party-Reconstituted. Seeks to remove US military forces from Spain and establish a revolutionary regime.

ACTIVITIES

Carried out small-scale bombing attacks on US and NATO facilities in early 1980s; capabilities reduced by arrests since 1985. During 1991, GRAPO claimed responsibility

for bombing a rail line outside Madrid and segments of the NATO pipeline in Spain.

STRENGTH

Probably fewer than a dozen operatives.

LOCATION/AREA OF OPERATION

Spain.

EXTERNAL AID

Reported to have had ties to the French Action Directe and the Italian Red Brigades. The German RAF has sought ties to the group.

[Top](#)

FORCE 17

DESCRIPTION

Formed in early 1970s as a personal security force for Arafat and other PLO leaders.

ACTIVITIES

According to press sources, in 1985 expanded operations to include terrorist attacks against Israeli targets. No confirmed terrorist activity outside Israel and the occupied territories since September 1985, when it claimed responsibility for killing three Israelis in Cyprus, an incident that was followed by Israeli air raids on PLO bases in Tunisia.

STRENGTH

Unknown.

LOCATION/AREA OF OPERATION

Based in Beirut before 1982. Since then, dispersed in several Arab countries. Now operating in Lebanon, other Middle Eastern countries, and Europe.

EXTERNAL AID

PLO is main source of support.

[Top](#)

ABU NIDAL ORGANIZATION (ANO)

aka: Fatah REvolutionary Council, Arab Revolutionary Council, Arab Revolutionary Brigades, Black September, Revolutionary Organization of Socialist Muslims.

DESCRIPTION:

International terrorist organization led by Sabri alBanna. Split from the PLO in 1974. Made up of various functional committees, including political, military , and financial.

ACTIVITIES:

Has carried out over 90 terrorist attacks since 1974 in 20 countries, killing or injuring almost 900 people. Targets the United States, the United Kingdom, France, Isreal, moderate Palestinians, the PLO. and various Arab countries, depending on which state is sponsoring it at the time. Major attacks include Rome and Vienna airports in December 1985, the Neve Shalom synagogue in Istanbul, the Pan Am Flight 73 hijacking in Karachi in September 1986, and The City of Poros day-excursion ship attack in July 1988 in Greece. Suspected of carrying out assasination on 14 January 1991 in Tunis of PLO deputy chief Abu Iyad and PLO security chief Abu Hul. ANO members also attacked and seriously wounded a senior ANO dissident in Algeria in MArch 1990

STRENGTH:

Several hundred plus "militia" in Lebanon and overseas support structure.

LOCATION/AREA OF OPERATION

Headquartered in Irag (1974-83) and Syria (1983-87); currently headquartered in Libya with substantial presence in Lebanon (in the Bekaa Valley and several Palestinian refugee camps in coastal areas of Lebanon). Also has presence in Algeria. Has demonstrated ability to operate over wide aream including Middle East Asia and Europe.

EXTERNAL AID:

Has received considerable support, including safe haven, training, logistical assistance, and financial aid from Iraq and Syria (until 1987); continues to receive aid from Libya, in addition to close support for selected operations.

[Top](#)

PALESTINE LIBERATION FRONT (PLF)

DESCRIPTION

Terrorist group that broke away from the PFLP-GC in mid- 1970s. Later split again into pro-PLO, pro-Syrian, and pro- Libyan factions. Pro-PLO faction led by Muhammad Abbas (Abu Abbas), who became member of PLO Executive Committee in 1984, but left the Executive Committee in 1991.

ACTIVITIES

Abu Abbas-led faction carried out abortive seaborne attack staged from Libya against Israel on 30 May 1990. Abbas's groups were also responsible for October 1985 attack on the cruise ship Achille Lauro and the murder of US citizen Leon Klinghoffer. A warrant for Abu Abbas's arrest is outstanding in Italy. Others who were involved in the hijacking are wanted elsewhere. Openly supported Iraq during Persian Gulf war.

STRENGTH

At least 50.

LOCATION/AREA OF OPERATION

PLO faction based in Tunisia until Achille Lauro attack. Now based in Iraq.

EXTERNAL AID

Receives logistic and military support mainly from PLO, but also Libya and Iraq.

[Top](#)

AL-FATAH

aka: Al-'Asifa.

DESCRIPTION:

Headed by Yasser Arafat, Fatah joined the PLO in 1968 and won the leadership role in 1969. Its commanders were expelled from Jordan following violent confrontations with Jordanian forces during the period 1970-71, beginning with Black September in 1970. The Israeli invasion of Lebanon in 1982 led to the group's dispersal to several Middle Eastern countries, including Tunisia, Yemen, Algeria, Iraq, and others. Maintains several military and intelligence wings that have carried out terrorist attacks, including Force 17 and the Hawari Special Operations Group. Two of its leaders, Abu Jihad and Abu Iyad, were assassinated in recent years.

ACTIVITIES:

In the 60s and the 1970s, Fatah offered training to a wide range of European, Middle Eastern, Asian, and African terrorist and insurgent groups. Carried out numerous acts of international terrorism in Western Europe and Middle East in the early-to-mid-1970s.

STRENGTH:

6,000 to 8,000.

LOCATION / AREA OF OPERATION:

Headquartered in Tunisia, with bases in Lebanon and other Middle Eastern countries.

EXTERNAL AID:

Has had close, longstanding political and financial ties to Saudi Arabia, Kuwait, and other moderate Persian Gulf states. These relations were disrupted by the Gulf crisis of 1990-91. Also has had links to Jordan. Received weapons, explosives, and training from the former USSR and the former Communist regimes of East European states. China and North Korea have reportedly provided some weapons.

[Top](#)

ARMENIAN SECRET ARMY FOR THE LIBERATION OF ARMENIA (ASALA)

aka: The Orly Group, 3rd October Organization

DESCRIPTION:

Marxist-Leninist Armenian terrorist group formed in 1975 with stated intention to compel Turkish Government to acknowledge publicly its alleged responsibility for the deaths of 1.5 million Armenians in 1915, pay reparations, and cede territory for an Armenian homeland. Led by Hagop Hagopian until he was assassinated in Athens in April 1988.

ACTIVITIES:

Initial bombing and assassination attacks directed against Turkish targets. Later attacked French and Swiss targets to force release of imprisoned comrades. Made several minor bombing attacks against US airline offices in Western Europe in early 1980s. Bombing of Turkish airline counter at Orly Airport in Paris in 1983 --eight killed and 55 wounded--led to split in group over rationale for causing indiscriminate casualties. Suffering from internal schisms, group has been relatively inactive over past four years, although recently claimed an unsuccessful attack on Turkish Ambassador to Hungary.

STRENGTH

A few hundred members and sympathizers.

LOCATION/AREA OF OPERATION

Lebanon; Western Europe, Armenia, United States, and Middle East.

EXTERNAL AID

Has received aid, including training and safehaven, from Syria. May also receive some aid from Libya. Has extensive ties to radical Palestinian groups, including the PFLP and PFLP-GC.

[Top](#)**BASQUE FATHERLAND AND LIBERTY (ETA)***DESCRIPTION*

Founded in 1959 with the aim of creating an independent homeland in Spain's Basque region. Has muted commitment to Marxism. In 1974 split into two factions--ETA/ Political- Military and ETA- Military; the former has been inactive since limited home

rule granted in 1982. Despite the arrest of several leaders and terrorist cells in Spain and France over the past two years, ETA-Military has continued to conduct lethal attacks.

ACTIVITIES

Chiefly bombings and assassinations of Spanish Government targets, especially security forces. Finances activities through kidnappings, robberies, and extortion . Bombings are sophisticated, lethal, and sometimes indiscriminate. Over 40 people were killed and over 200 injured in ETA attacks during 1991.

STRENGTH

Unknown; may have hundreds of members, plus supporters.

LOCATION/AREA OF OPERATIONS

Operates primarily in Spain and France, but conducted low- intensity bombings against Spanish diplomatic, commercial, and cultural facilities in Italy and Germany in 1991.

EXTERNAL AID

Has received training at various times in Libya, Lebanon, and Nicaragua. Also has close ties to PIRA.

[Top](#)

CHUKAKU-HA

aka: Nucleus or Middle-Core Faction

DESCRIPTION

An ultraleftist/radical group with origins in the fragmentation of the Japanese Communist Party in 1957. Largest domestic militant group; has political arm plus small, covert action wing called Kansai Revolutionary Army. Funding derived from membership dues, sales of its newspapers, and fundraising campaigns.

ACTIVITIES

Participates in mass protest demonstrations and snake- dancing in streets; supports

farmers' protest of construction of Narita airport, among other causes; sabotaged part of Japanese railroad system in 1985 and 1986; sporadic attacks usually designed to cause only property damage through use of crude rockets and incendiary devices; anti-US attacks include small-scale rocket attempts against US military and diplomatic targets; no US casualties so far.

STRENGTH

3,500.

LOCATION/AREA OF OPERATION

Japan.

EXTERNAL AID

None known.

[Top](#)

CNPZ

see Nestor Paz Zamora Commission

[Top](#)

DEMOCRATIC FRONT FOR THE LIBERATION OF PALESTINE (DFLP)

DESCRIPTION

Marxist group that split from the PFLP in 1969. Believes Palestinian national goals can be achieved only through revolution of the masses. In early 1980s, occupied political stance midway between Arafat and the more radical rejectionists. Split into two factions in 1991, one pro- Arafat and another more hardline faction headed by Nayif Hawatmah.

ACTIVITIES

In the seventies, carried out numerous small bombings and minor assaults and some more spectacular operations in Israel and the occupied territories, concentrating on Israeli

targets such as the 1974 massacre in Ma'alot in which 27 Israelis were killed and over 100 wounded. Involved only in border raids since 1988.

STRENGTH

Estimated at 500 (total for both factions).

LOCATION/AREA OF OPERATION

Syria, Lebanon, and the Israeli--occupied territories; attacks have taken place entirely in Israel and the occupied territories.

EXTERNAL AID

Receives financial and military aid from Syria and Libya.

[Top](#)

DEV RIMCI SOL

aka: DEV SOL

DESCRIPTION

Formed in 1978 as a splinter faction of the Turkish People's Liberation Party/Front. Espouses a Marxist ideology, intensely xenophobic, and virulently anti-US and anti-NATO; seeks to unify the proletariat to stage a national revolution. Finances its activities chiefly through armed robberies and extortion.

ACTIVITIES

Conducted attacks against US, Turkish, and NATO targets until weakened by massive arrests during 1981-83. Methods of attack include handgun assassinations and bombings. Since reemergence during late 1980s, has concentrated attacks against current and retired Turkish security and military officials; responsible for the murders of four active and retired generals and nearly 30 police officers in 1991. Resumed operations against foreign interests during 1991, claiming responsibility for assassinating two American contractors and one British businessman; attempted the murder of a US Air Force officer and over 30 bombings against Western diplomatic, commercial, and cultural facilities.

STRENGTH

Several hundred members, several dozen armed militants.

LOCATION/AREA OF OPERATION

Carries out attacks in Turkey--primarily in Istanbul, Ankara, Izmir, and Adana . Conducts fundraising operations in Western Europe.

EXTERNAL AID

Possible training support from radical Palestinians.

[Top](#)

REVOLUTIONARY ARMED FORCES OF COLOMBIA (FARC)

Description

Established in 1966 as military wing of Colombian Communist Party; is largest guerrilla group there. Goal is to overthrow government and ruling class; anti-US. Organized along military lines, includes at least one urban front.

Activities

Armed attacks against Colombian targets, bombings of US businesses, kidnappings of Colombians and foreigners for ransom, and assassinations. Traffics in drugs and has well-documented ties to drug traffickers. Peace talks with Colombian Government have proved unsuccessful.

Strength

Approximately 4,500 to 5,500 armed combatants and 10,000 supporters.

Location/Area of Operation

Colombia.

External Aid

FARC has ties to Cuba; amount of aid unknown.

[Top](#)

FARABUNDO MARTI NATIONAL LIBERATION FRONT (FMLN)

DESCRIPTION

Formed in 1980 with Cuban backing, the guerrilla umbrella organization is composed of five leftist groups: Central American Workers' Revolutionary Party (PRTC), People's Revolutionary Army (ERP), Farabundo Marti Popular Liberation Forces (FPL), Armed Forces of National Resistance (FARN), and the Communist Party of El Salvador's Armed Forces of Liberation (FAL). The group reached a peace agreement with the Government of El Salvador on 31 December 1991.

ACTIVITIES

Bombings, assassinations, economic sabotage, arson, among other rural and urban operations. Since 1988 the FMLN increased urban terrorism in the capital.

STRENGTH

6,000 to 7,000 combatants.

LOCATION/AREA OF OPERATION

El Salvador, limited activity in Honduras.

EXTERNAL AID

Has received direct support from Cuba and receives support from the Sandinistas in Nicaragua, where it maintains an office. The FMLN also receives significant financial support from front groups and sympathetic organizations in the United States and Europe.

[Top](#)

HAWARI GROUP

aka: Fatah Special Operations Group, Martyrs of Tal Al Za'atar, Amn Araissi

DESCRIPTION

Part of Yasser Arafat's Fatah apparatus, the group is named after its leader commonly known as Colonel Hawari, who died in an automobile crash in May 1991 while traveling from Baghdad to Jordan. The group has ties historically to Iraq. Membership includes former members of the radical Palestinian 15 May organization.

ACTIVITIES

Carried out several attacks in 1985 and 1986, mainly in Europe and usually against Syrian targets. Has also targeted Americans, most notably in the April 1986 bombing of TWA Flight 840 over Greece in which four Americans were killed. Future of group uncertain following Hawari's death.

STRENGTH

Unknown.

LOCATION/AREA OF OPERATION

Middle Eastern countries and Europe.

EXTERNAL AID

PLO is main source of support.

[Top](#)

HIZBALLAH (Party of God)

aka: Islamic Jihad, Revolutionary Justice Organization, Organization of the Oppressed on Earth, Islamic Jihad for the Liberation of Palestine

DESCRIPTION

Radical Shia group formed in Lebanon; dedicated to creation of Iranian-style Islamic republic in Lebanon and removal of all non-Islamic influences from area. Strongly anti-West and anti-Israel. Closely allied with, and often directed by, Iran. Dissidents, however, have conducted rogue operations that were not approved by Tehran.

ACTIVITIES

Known or suspected to have been involved in numerous anti-US terrorist attacks, including the suicide truck bombing on the US Marine barracks in Beirut in October 1983 and the US Embassy annex in September 1984. Elements of the group were responsible for the kidnapping and continuing detention of most, if not all, US and other Western hostages in Lebanon.

STRENGTH

Several thousand.

LOCATION/AREA OF OPERATION

Operates in the Bekaa Valley, the southern suburbs of Beirut, and southern Lebanon; has established cells in Western Europe, Africa, and elsewhere.

EXTERNAL AID

Receives substantial amounts of financial, training, weapons, explosives, political, diplomatic, and organizational aid from Iran.

[Top](#)

JAPANESE RED ARMY (JRA)

aka: Anti-Imperialist International Brigade (AIIB)

DESCRIPTION

An international terrorist group formed about 1970 after breaking away from Japanese Communist League Red Army Faction. Now led by Fusako Shigenobu, believed to be in Syrian-garrisoned area of Lebanon's Bekka Valley. Stated goals are to overthrow Japanese Government and monarchy and to help foment world revolution. Organization unclear, but may control or at least have ties to Anti-Imperialist International Brigade (AIIB); may also have links to Antiwar Democratic Front--an overt leftist political organization--inside Japan. Details released following November 1987 arrest of leader Osamu Maruoka indicate that JRA may be organizing cells in Asian cities, such as Manila and Singapore. Has had close and longstanding relations with Palestinian terrorist groups--based and operating outside Japan--since its inception.

ACTIVITIES

Before 1977, JRA carried out series of brutal attacks over wide geographical area, including the massacre of passengers at Lod airport in Israel (1972) and two Japanese airliner hijackings (1973 and 1977). Anti-US attacks include attempted takeover of US Embassy in Kuala Lumpur (1975). Since mid-1980s has carried out several crude rocket and mortar attacks against a number of US embassies. In April 1988, JRA operative Yu Kikumura was arrested with explosives on the New Jersey Turnpike, apparently planning an attack to coincide with the bombing of a USO Club in Naples, a suspected JRA operation that killed five, including a US servicewoman. He was convicted of these charges and is serving a lengthy prison sentence in the United States.

STRENGTH

About 30 hardcore members; undetermined number of sympathizers.

LOCATION/AREA OF OPERATION

Based in Syrian-controlled areas of Lebanon; often transits Damascus.

EXTERNAL AID

Receives aid, including training and base camp facilities, from radical Palestinian terrorists, especially the PFLP. May also receive aid from Libya. Suspected of having sympathizers and support apparatus in Japan.

[Top](#)

KURDISH WORKER'S PARTY (PKK)

aka: Kurdish Labor Party

DESCRIPTION

Marxist-Leninist terrorist group composed of Turkish Kurds established in mid-1970s. Seeks to set up Marxist state in southeastern Turkey, which has a large population of Kurds.

ACTIVITIES

Primary targets are Turkish Government forces and civilians in southeastern Turkey, but is becoming increasingly active in Western Europe against Turkish targets and rival Kurdish groups. In 1986, attacked NATO target in Mardin, Turkey. Last summer the PKK carried out a spate of kidnappings of Westerners; all were released unharmed.

STRENGTH

3,000, plus 2,000 to 5,000 supporters.

LOCATION/AREA OF OPERATIONS

Iran, Syria, and Iraq. Operates in Turkey and Western Europe; training facilities in Lebanon's Bekaa Valley.

EXTERNAL AID

Probably still receives some aid and safehaven from Syria, Iran, and Iraq.

ADDITION

The leader Ocelan has been sentenced to death in Turkey in June 1999

[Top](#)

EMANUEL RODRIGUEZ PATRIOTIC FRONT (FPMR)

DESCRIPTION

The FPMR was founded in 1983 as the armed wing of the Chilean Communist Party. Named for a hero in Chile's war of independence against Spain. The main movement announced it was laying down arms to become a political movement on 1 June 1991. The group splintered in 1987 into two factions, of which the dissident wing (FPMR/D) is now one of Chile's most active terrorist groups.

ACTIVITIES

FPMR/D is responsible for numerous bombing attacks against domestic and foreign targets and assassinations of Chileans. Responsible for many attacks on Mormon churches and US businesses from 1986 through 1991. In November 1990 an FPMR/D bomb concealed in a softball bat killed a Canadian and injured a US Embassy officer. The

group attacked a Marine guard van at the US Embassy on 16 February with an antitank rocket that did not detonate and automatic weapons fire, injuring one US Marine.

STRENGTH

1,000 to 1,500.

LOCATION/AREA OF OPERATION

Chile.

EXTERNAL AID

Received training and weapons support from Cuba in past years, none in 1991. May cross-train with Peru's MRTA.

[Top](#)

MJL

see *Lautaro Youth Movement*

[Top](#)

MORAZANIST PATRIOTIC FRONT (FPM)

DESCRIPTION

A radical, leftist terrorist group that first appeared in the late 1980s. Attacks made in protest of US intervention in Honduran economic and political affairs.

ACTIVITIES

Attacks on US, mainly military, personnel in Honduras. Claimed responsibility for attack on a bus in March 1990 that wounded seven US servicemen. Claimed bombing of Peace Corps office in December 1988, bus bombing that wounded three US servicemen in February 1989, attack on US convoy in April 1989, and grenade attack that wounded seven US soldiers in La Ceiba in July 1989.

STRENGTH

Unknown, probably relatively small.

LOCATION/AREA OF OPERATION

Honduras.

EXTERNAL AID

Had ties to former Government of Nicaragua and possibly Cuba.

[Top](#)

LAUTARO YOUTH MOVEMENT (MJL)

aka: The Lautaro faction of the United Popular Action Movement (MAPU/L) or Lautaro Popular Rebel Forces (FRPL)

DESCRIPTION

Violent, anti-US, extremist group that advocates the overthrow of the Chilean Government. Leadership largely from leftist elements, but includes criminals and alienated youths. Recruits from poorer areas of cities. The leftist group became active in late 1980s. Its assaults during 1990 increased in number and sophistication and have continued through 1991.

ACTIVITIES

Has been linked to several assassinations of policemen, bank robberies, and bombings and burnings of Mormon chapels.

STRENGTH

Unknown.

LOCATION/AREA OF OPERATION

Chile; mainly in Santiago.

EXTERNAL AID

May have ties to Cuba.

[Top](#)

MOZAMBICAN NATIONAL RESISTANCE (Resistencia Nacional Mocambicana, or RENAMO)

DESCRIPTION

Established in 1976 by the Rhodesian security services, primarily to operate against anti-Rhodesian guerrillas based in Mozambique. South Africa subsequently developed RENAMO into an insurgent group opposing the Front for the Liberation of Mozambique (FRELIMO).

ACTIVITIES

Operates as a guerrilla insurgency against Mozambique Government and civilian targets; frequently and increasingly runs cross-border operations into Zimbabwe, Malawi, and Zambia, where it has murdered and kidnapped numerous civilians and destroyed property.

STRENGTH

20,000 guerrillas.

LOCATION/AREA OF OPERATION

Mozambique; border areas of Zimbabwe, Malawi, and Zambia.

EXTERNAL AID

Assistance previously received from South Africa as well as from private Individuals and groups in Europe and elsewhere.

[Top](#)

MRTA

see *Tupac Amaru Revolutionary Movement*

NATIONAL LIBERATION ARMY (ELM)--Bolivia*DESCRIPTION*

Claims to be revived ELN that was established by Che Guevara in the 60s and was active into the early 70s. Holds traditional Marxist-Leninist revolutionary ideologies. Operates as an umbrella group over numerous small Bolivian subversive movements that includes the CNPZ.

ACTIVITIES

During 1991 focused on domestic Bolivian targets. See Nestor Paz Zamora Commission (CNPZ) for further information on ELN activities. Threats against US interests continued through 1991. Probably responsible for fake bomb placed in US Embassy elevator in April 1991.

STRENGTH

Unknown.

LOCATION/AREA OF OPERATION

Bolivia.

EXTERNAL AID

May receive training, logistic, and other limited support from Peru's MRTA.

NATIONAL LIBERATION ARMY (ELN)--Colombia*DESCRIPTION*

Rural-based, anti-US, Maoist-Marxist-Leninist guerrilla group formed in 1963. Engaged in unsuccessful peace talks with the Government of Colombia during 1991.

ACTIVITIES

Periodically kidnaps foreign employees of large corporations and holds them for very large ransom payments. Extortion and bombing attacks against US and other foreign businesses in Colombia, particularly the petroleum industry. Has inflicted major damage on oil pipelines since 1986.

STRENGTH

1,000 to 2,000.

LOCATION/AREA OF OPERATION

Colombia.

EXTERNAL AID

In the past received limited arms and training from Cuba and training from Nicaragua.

[Top](#)

NESTOR PAZ ZAMORA COMMISSION (CNPZ)

Description

Radical leftist terrorist organization that first appeared in October 1990. Named after deceased brother of President Paz Zamora. Currently operates under the ELN (Bolivia) umbrella. Violent, extremely anti-US, Marxist-Leninist organization.

ACTIVITIES

The group attacked the US Embassy Marine guardhouse on 10 October 1990 with automatic weapons and a bomb. One Bolivian policeman was killed and another seriously injured in the attack.

STRENGTH

Unknown. Probably fewer than 100.

LOCATION/AREA OF OPERATION

Bolivia.

EXTERNAL AID

Peru's MRTA has provided training, limited funding, and logistic support.

[Top](#)

NEW PEOPLE'S ARMY (NPA)

Description

The guerrilla arm of the Communist Party of the Philippines, an avowedly Maoist group formed in December 1969 with the aim of overthrowing the government through protracted guerrilla warfare. Although primarily a rural-based guerrilla group, the NPA has an active urban infrastructure to carry out terrorism; uses city-based assassination squads called sparrow units. Derives most of its funding from contributions of supporters and revolutionary taxes extorted from local business.

Activities

In addition to guerrilla activities, has used urban terrorism, including attacks on government officials, police, and military officers in Manila and other major cities. Has vowed to kill US citizens who allegedly are involved in the government's counterinsurgency campaign. The NPA has killed 10 US military members and private American citizens in the Philippines since 1987. Attacked some US businesses located in rural areas who refused to pay so-called revolutionary taxes.

Strength

16,000, plus support groups.

Location/Area of Operations

The Philippines.

External Aid

Receives funding from overseas fundraisers in Western Europe and elsewhere; also linked to Libya. Diverts some funding of humanitarian aid.

[Top](#)

POPULAR FRONT FOR THE LIBERATION OF PALESTINE-GENERAL COMMAND (PFLP-GC)

Description

Split from the PFLP in 1968, claiming that it wanted to focus more on fighting and less on politics. Violently opposed to Arafat's PLO. Led by Ahmad Jabril, a former captain in the Syrian Army. Closely allied with, supported by, and probably directed by Syria.

Activities

Claims to have specialized in suicide operations. Has carried out numerous cross-border terrorist attacks into Israel, using unusual means, such as hot-air balloons and motorized hang gliders. Hafiz Kassem Dalkamoni, a ranking PFLP-GC official, was convicted in Germany in June 1991 for bombing US troop trains. He faces additional charges in Germany for other terrorist offenses, including manslaughter.

Strength

Several hundred.

Location/Area of Operations

Headquarters in Damascus with bases in Lebanon and cells in Europe.

External Aid

Receives logistic and military support from Syria, its chief sponsor. Financial support from Libya. Safehaven in Syria. Support also from Iran.

[Top](#)

PALESTINIAN ISLAMIC JIHAD (PIJ)

Description

The PIJ originated among militant Palestinian fundamentalists in the Gaza Strip during the 1970s. The PIJ may be a series of loosely affiliated factions, rather than a cohesive group. The PIJ is committed to the creation of an Islamic Palestinian state and the destruction of Israel through holy war. Because of its strong support for Israel, the United States has been identified as an enemy of the PIJ. The PIJ also opposes moderate Arab governments that it believes have been tainted by Western secularism.

Activities

The PIJ demonstrated its terrorist credentials when it attacked a tour bus in Egypt in February 1990 and killed 11 people, including nine Israelis. The PIJ also has carried out cross-border raids against Israeli targets in the West Bank and Gaza Strip. A PIJ leader in Jordan has publicly threatened to attack US interests. PIJ agents were arrested in Egypt in September 1991 while attempting to enter the country to conduct terrorism.

Strenght

Unknown.

Location/Area of Operations

Primarily Israel and occupied territories and other parts of the Middle East, including Jordan and Lebanon.

External Aid

Uncertain, possibly Iran and Syria.

[Top](#)

POPULAR FRONT FOR THE LIBERATION OF PALESTINE SPECIAL COMMAND (PFLP-SC)

Description

Marxist-Leninist group formed by Abu Salim in 1979 after breaking away from the now-defunct PFLP-Special Operations Group.

Activities

Has claimed responsibility for several notorious international terrorist attacks in Western Europe, including the bombing of a restaurant frequented by US servicemen in Torrejon, Spain, in April 1985. Eighteen Spanish civilians were killed in the attack.

Strength

50.

Location/Area of Operation

Operates out of southern Lebanon, in various areas of the Middle East, and in Western Europe.

External Aid

Probably receives financial and military support from Syria, Libya, and Iraq.

[Top](#)

PALESTINE LIBERATION ORGANIZATION (PLO)

Description

Founded in 1964 as a Palestinian nationalist umbrella organization dedicated to the establishment of an independent Palestinian state. After the 1967 Arab-Israeli war, control devolved to the leadership of the various fedayeen militia groups, the most dominant of which was Yasser Arafat's Al-Fatah. In 1969, Arafat became chairman of the PLO's Executive Committee, a position he still holds. In the early 1980s, PLO became fragmented into several contending groups but remains the preeminent Palestinian organization. The United States considers the PLO an umbrella organization that includes several constituent groups and individuals holding differing views on terrorism. At the same time, US policy accepts that elements of the PLO have advocated, carried out, or accepted responsibility for acts of terrorism. PLO Chairman Arafat publicly renounced terrorism in December 1988 on behalf of the PLO. The United States considers that all PLO groups, including Al-Fatah, Force 17, Hawari Group, PLF, and PFLP, are bound by Arafat's renunciation of terrorism. The US-PLO dialogue was suspended after the PLO failed to condemn the 30 May 1990 PLF attack on Israeli beaches. PLF head Abu Abbas left the PLO Executive Committee in September 1991; his seat was filled by another PLF member.

Activities

In the early 1970s, several groups affiliated with the PLO carried out numerous international terrorist attacks. By the mid-1970s, under international pressure, the PLO claimed it would restrict attacks were later carried out by groups affiliated with the PLO/Fatah, including the Hawari Group, the Palestine Liberation Front, and Force 17, against targets inside and outside of Israel.

Strength

See numbers for affiliated groups.

Location/Area of Operation

Tunis, other bases in various countries in the Middle East.

External Aid

See affiliated groups. Accurate public information on financial support for the PLO by Arab governments is difficult to obtain.

[Top](#)

POPULAR STRUGGLE FRONT (PSF)

Description

Radical Palestinian terrorist group once closely involved in the Syrian-dominated Palestinian National Salvation Front. Led by Dr. Samir Ghosheh. Rejoined the PLO in September 1991.

Activities

Terrorist attacks against Israeli, moderate Arab, and PLO targets.

Strength

Fewer than 300.

Location/Area of Operation

Mainly Syria and Lebanon, and elsewhere in the Middle East.

External Aid

Receives support from Syria and may now receive aid from the PLO.

[Top](#)

RED ARMY FACTION (RAF)

Description

The small and disciplined RAF is the successor to the Baader Meinhof Gang, which originated in the student protest movement in the 1960s. Ideology is an obscure mix of Marxism and Maoism; committed to armed struggle. Organized into hardcore cadres that carry out terrorist attacks and a network of supporters who provide logistic and propaganda support. Has survived despite numerous arrests of top leaders over the years.

Activities

Bombings, assassinations, kidnappings, and robberies. Targets German Government and private sector and US interests. Among the latter, attempted assassination in Belgium of NATO Commander (1979); bombing of NATO Air Force headquarters in Ramstein (1981); rocket attack of USAREUR Commander in Heidelberg (1981); and bombing of Rhein-Main Air Force Base (1985). In February 1991, the RAF fired approximately 250 assault rifle rounds at the US Embassy in Bonn, and in April the group assassinated the German Trust Agency director, Detlev Karsten Rohwedder.

Strength

Ten to 20, plus several hundred supporters.

Location/Area of Operations

Germany.

External Aid

Basically self-sustaining, but during Baader-Meinhof period received some support from Middle Eastern terrorist groups; some ties may still exist. The RAF received logistic support, sanctuary, and training from the German Democratic Republic during the early 1980s. The RAF appears to be developing closer ties to GRAPO in Spain.

[Top](#)

REVOLUTIONARY PEOPLE'S STRUGGLE (ELA)

Description

Formed in 1971 to oppose the Greek military junta; is a self described leftwing revolutionary, anticapitalist, anti- imperialist group. Organization is unclear, but probably consists of a loose coalition of several very small and violent groups or affiliates, possibly including 17 November.

Activities

Before 1974, was nonviolent; turned to terrorism after removal of junta. Has targeted US military and business facilities and, since 1986, stepped up attacks on Greek Government and commercial interests; primary method has been bombings of buildings, apparently without intent to endanger life. Safehouse raid in November 1990 revealed weapons cache and direct contacts with 1 May and Revolutionary Solidarity; during 1991, ELA and 1 May claimed joint responsibility for over 20 bombings.

Strength

Unknown, perhaps up to 20 or 30, plus supporters.

Location/Area of Operation

Greece.

External Aid

No known foreign sponsors.

[Top](#)

SENDERO LUMINOSO (Shining Path, SL)

Description

Peru's largest subversive organization is among the world's most dangerous and ruthless terrorist groups. Formed in late 1960s by then university professor Abimael Guzman Reynoso. Goal is to destroy existing Peruvian institutions and replace them with a peasant revolutionary regime as well as to rid Peru of foreign influences. Has extensive ties to narcoproducers and narcotraffickers working in Peru.

Activities

Killed 10 foreigners in 1991. Engages in particularly brutal forms of terrorism. Originally rural based, but has increasingly operated in urban areas since 1986 . Has attacked diplomatic missions of nearly every country represented in Peru, foreign businesses, foreign and domestic humanitarian aid projects, in addition to Peruvian Government and private-sector targets.

Strength

4,000 to 5,000 combatants. Strong rural support base.

Location/Area of Operation

Peru.

External Aid

No known foreign sponsors. Receives money from drug trade including Colombian narcotics traffickers.

[Top](#)

TERRA LLIURE (TL) (Free Land)

Description

Leftwing Catalonian separatist terrorist group formed in the 1970s with the goal of establishing an independent Marxist state in the Spanish Provinces of Catalonia and Valencia. Leadership announced in July 1991 that the group had ceased terrorist

operations, but hardcore members may remain active.

Activities

Mainly small-scale bombing attacks against property in northeastern Spain. Targets include foreign banks and travel agencies. Reportedly renounced terrorism in July 1991.

Strength

Unknown.

Location/Area of Operation

Spain.

External Aid

None known.

[Top](#)

TUPAC AMARU REVOLUTIONARY MOVEMENT (MRTA)

Description

Traditional Marxist-Leninist revolutionary movement in Peru formed in 1983. Led by Nestor Cerpa and Victor Polay. Objective is to rid Peru--and perhaps region--of "imperialist" influence and establish a Marxist regime.

Activities

Responsible for more anti-US attacks than any other group in Latin America. In 1990 and 1991, attacked the US Ambassador's residence, bombed the US Consulate and US-Peruvian Binational Center, attacked US businesses and Mormon churches. Attacked Peru's Presidential Palace, and President Fujimori's airplane in 1991.

Strength

1,000 to 2,000 combatants.

Location/Area of Operation

Peru. Bolivia in conjunction with the ELN.

External Aid

Has received training in Cuba. May have ties to Libya.

[Top](#)

PROVISIONAL IRISH REPUBLICAN ARMY (PIRA)

aka: The Provos

Description

A radical terrorist group formed in 1969 as the clandestine armed wing of Sinn Fein, a legal political movement dedicated to removing British forces from Northern Ireland and then to unify Ireland. Has a Marxist orientation. Organized into small, tightly knit cells under the leadership of the Army Council.

Activities

Bombings, assassinations, kidnappings, extortion, and robberies.

Targets government and private-sector interests--including senior British officials and British military targets in Western Europe--and Northern Irish Protestant paramilitary organizations.

Has become increasingly indiscriminate in its spectacular bombing attacks. PIRA has stepped up operations on mainland Britain over the past two years, conducting over 20 attacks there during 1991. In February, a mortar attack against No. 10 Downing Street was launched while Prime Minister Major and senior members of his Cabinet were meeting. Bombing at two busy railway stations in central London resulted in the death of one civilian and injury to dozens more. In December, PIRA exploded a 2,000-pound bomb outside a police station in Northern Ireland, injuring over 60 civilians, and launched a wave of bomb attacks against rail lines and shopping centers on the British mainland.

Strength

Several hundred, plus several thousand sympathizers.

Location/Area of Operation

Northern Ireland, Irish Republic, Great Britain, and Western Europe.

External Aid

Has received aid from a variety of groups and countries and considerable training and arms from Libya and, at one time, the PLO. Also is suspected of receiving funds and arms from sympathizers in the United States. Maintains links to ETA.

[Top](#)

Europäischer Rechtsextremismus

Der nachfaschistische Rechtsextremismus in Europa kann zunächst als nationalstaatlich orientierter und organisierter Rassismus begriffen werden. Sein Subjekt ist nicht länger der "Arier" oder "(Indo-)Germane", sondern der "Inländer" als Produkt ideologischer Zuschreibungen und materieller Zuweisungen.

- ["Neue Rechte"](#)
- [Regionalismus und Reichsschwärmerei](#)
- [Geopolitik, wiederaufgelegt](#)
- [Verteidigung Europas](#)
- [Rechtsextremismus im Europaparlament](#)

[*Return to Home*](#)

Zwar wird die Dichotomie "Inländer-Ausländer" nach wie vor überlagert von den klassischen rassistischen Vorstellungen, ihre Energie bezieht sie jedoch vorrangig aus den aktuellen Diskursen über Migration. Rechtsextreme Kader und Gruppen sind in diesen Diskursen nur AkteurInnen neben anderen, wobei insbesondere der Nationalsozialstaat als institutionalisierte Gewalt wie auch die "ideologische Macht" (Friedrich Engels) zu nennen wäre. Und genau auf diesen Staat, beziehungsweise auf dessen imaginierte Stärke, Souveränität und ethnische Homogenität bezieht sich der moderne Rechtsextremismus. Nur von daher wird auch der Schwenk der FPÖ zum Austropatriotismus verstehbar.

Die nationalen Partikularismen, welche die extreme Rechte in Europa unter anderem gegen eine Einigung Marke Maastricht und den Euro agitieren lassen, verhinderte bis dato die Ausbildung eines europäischen Rechtsextremismus. Dies betrifft sowohl die konkrete Zusammenarbeit über Ländergrenzen hinweg als auch die Ausformulierung einer kohärenten Ideologie. Auch internationale Zusammenrottungen wie im belgischen Diksmuide, am Kärntner Ulrichsberg oder sonst wo machen noch keine nationale Internationale aus. Eine gewisse Ausnahme bildet hier der Neonazismus, der am Konzept der "weißen Rasse" festhielt.

Daneben gibt es jedoch seit 1945 Versuche rechtsextremer Intellektueller, "Europa" im Rückgriff auf präfaschistische Ideologen, den "Befreiungskampf" der SS und den "arischen Mythos" zu rekonstruieren. Auch wenn heute der Erfolg dieser Anstrengungen, eine derartige "Nation Europa" zu schaffen, nicht absehbar ist, sollen sie uns im folgenden besonders interessieren. Sie treffen sich nämlich durchaus mit Anstrengungen der politischen wie ökonomischen Eliten, die EU samt ihrem Hinterhof im

Osten als Weltmacht zu festigen. Konkret könnte etwa der Antiamerikanismus der extremen Rechten Aufnahme finden in die offiziöse ideologische Begleitmusik zum Konkurrenzkampf mit den USA. Die faschistische Ideologie der "Festung Europa" hat bereits durchaus eine Entsprechung auf der Ebene eines gesamteuropäischen Migrationsregimes. Der nationalsozialstaatliche Rassismus scheint sich zu einem "europäischen" zu transformieren. Wie überhaupt die vielerorts ständig strapazierte Idee "Europa" "im Kern, wenn schon nicht mit ihr gleichsetzbar, zwei spezifisch rassistische ideologische Schemata (enthält), die fortwährend kollektive Gedächtnis- und Wahrnehmungseffekte hervorbringen können: das koloniale und das antisemitische Schema." In der popularisierten und radikalisierten "Kulturkampfthese", welche hierzulande vor allem von rechten Militärs zu eigenen Legitimationszwecken propagiert wird, kommen diese Schemata deutlich zum Vorschein.

In Anlehnung an diese offiziösen Diskurse führt auch die extreme Rechte "Europa" als Kampfbegriff im Munde. Zur Verteidigung eines "christlichen Abendlandes" tritt der konservative Flügel an. Die alte Rechte verwendet "Europa" als Synonym für ein Großdeutschland, während die sogenannte "Neue Rechte" einen kontinentalen Unabhängigkeitskampf gegen die "raumfremde" Macht USA und die im Westen verorteten Ideen der bürgerlichen Revolution propagiert. Ihr neuheidnischer Flügel kämpft zudem gegen das behauptetermaßen uneuropäische "Judäo-Christentum".

"Neue Rechte"

Im Gegensatz zur etatistischen alten Rechten, die in ihrem wütenden Antikommunismus und Revanchismus zu Zeiten des Kalten Krieges immer wieder Bündnisse mit der westlich orientierten politischen Mitte eingehen konnte, wurde in der "europäischen" Fraktion des Faschismus die Position einer kontinentalen Revolution gegen beide Supermächte eingenommen. Hinter diesem Europa-Konzept steht jener befreiungsnationalistische Ansatz, der meint, der Kontinent sei sowohl in militärischer als auch in ideologischer Hinsicht kolonialisiert. Und zwar seit 1945, als eine "Linie (...) von Nichteuropäern quer durch unseren Kontinent gezogen wurde". Die neuheidnische Abteilung der "Neuen Rechten" hingegen setzt den Zeitpunkt für die "Kolonisation der europäischen Mentalität" schon mit der Christianisierung fest. Sie beginnt hier mit der Herrschaft des Monotheismus, auf dessen jüdische Wurzeln zu verweisen die neuheidnische Rechte nicht müde wird. Mit dem "Judäo-Christentum" habe sich die Auffassung der Gleichheit aller Menschen breit gemacht, um dann in der Aufklärung und im Marxismus ihren Höhepunkt und Abschluß zu finden.

Bei der angesagten geistigen Emanzipation Europas kommt - wenig überraschend - Großdeutschland wieder zentraler Stellenwert zu: Die ersehnte unabhängige "Nation Europa" habe bei ihren germanischen Ursprüngen anzuknüpfen, liege doch in der vorchristlichen Blut- und Bodenreligion das durchzusetzende Abstammungs- und Identitätsprinzip begründet.

Diese neofaschistische Ideologie einer "Nation Europa", die sich zur dritten Weltmacht aufschwingt, geht auf die britische Szenegröße Sir Oswald Mosley zurück, der sich damit bereits 1948 an die Reorganisation einer braunen Internationalen machte. Die strategische Bezugnahme auf Europa im neofaschistischen Projekt knüpft wiederum bruchlos an die Nazi-Propaganda von der SS als

"Vorkämpfer für des vereinte Europa" und der deutschen Aggression als "Kampf für die Freiheit Europas" an.

1951 gilt hier als Jahr der Weichenstellungen: In Malmö versammelte sich die faschistische Elite Europas, um die "Europäische Soziale Bewegung" (ESB) ins Leben zu rufen. In der BRD gründete der vormalige SS-"Sturmbannführer" und oberste "Bandenbekämpfer" Hitlers, Arthur Erhardt, die bis heute erscheinende, zentrale Zeitschrift "Nation (und) Europa. Monatsschrift im Dienst der europäischen Neuordnung". In seinem mit "Die Idee wird siegen" übertitelten "Politischen Testament" meint Erhardt, eine "europäische Großnation" um die natürliche Führungsmacht Deutschland - notwendig aufgrund einer "blutsmäßig bedingten weitgehenden Wesensgleichheit unserer Völker" - sei 1945 im Kampf der "europäischen Kameraden, der französischen Legion im Kampf um Berlin und der nordischen, flämischen, osteuropäischen SS-Kameraden an allen Fronten (...) mit Blut getauft" worden.

Erhardts "europäische Großnation" umfaßt bei Haider auch Gebiete, die Hitlers Mörderbanden 1938ff gar nicht betreten hatten: "Wir müssen den Mut aufbringen, Europa vom Atlantik bis zum Ural und im Grunde bis Wladiwostok zu sehen."

Mit dem Zusammenbruch des Realen Sozialismus sehen zwar viele wieder mit Haider bis Wladiwostok, doch "befreit" ist Europa noch lange nicht. "Die Zeit ist reif", heißt es etwa beim "Nation & Europa"-Chefredakteur und "Aula"-Autor Karl Richter, "für eine grundlegende Umorientierung der europäischen Völker - weg vom raumfremden, überstaatlichen Weltpolizisten, hin zu einer neuen kontinentalen Großraumordnung, die europäischen Interessen endlich Vorrang einräumt und Europa wieder in den Rang einer souverän handelnden Größe erhebt." Die geistige Urheberchaft derartiger Forderungen tritt offen zu tage: Carl Schmitt formulierte bereits 1939 eine "Völkerrechtliche Großraumordnung mit Interventionsverbot für raumfremde Mächte" als Monroe-Doktrin des deutschen Faschismus.

FPÖ-Führer Haider, der Österreich ja noch immer an die (europäisierte) Nato binden will, formuliert den Antiamerikanismus kulturalistisch, wenn sich ihm "die Dürftigkeit des europäischen Geisteslebens offenbart, das sich in der Tendenz als oberflächliche, amerikanisierte Einheitskultur darstellt." Auch Haider stellt einem europäischen Bundesstaat nach dem Vorbild der USA ein ethnopluralistisches Staatengefüge gegenüber, "das der Buntheit und Vielfalt der besten Tradition des Reiches Karls des Großen gerecht wird."

Regionalismus und Reichsschwärmerei

Auch die "Neue Rechte", deren Nationalismus nicht mehr auf den Staat abzielt, bekämpft die Maastricht-EU als "amerikanische" Form der Integration. Aber während Le Pen, Haider oder Schönhuber darauf noch mit einem "Europa der Vaterländer" (i.e. der Nationalstaaten) antworten, strapaziert man hier die "Regionen" und das "Reich".

Der Regionalismus des in nationalrevolutionärer Tradition stehenden Flügels der Rechten setzt der EU als "Breachreiz-Einheitsbrei" und "McDonald-Paradies" eine unmittelbare Heimeligkeit entgegen. Auch

die alten Figuren der Blut und Boden-Erzählungen finden hier Anwendung: "Das Europa der Regionen bedeutet Verwurzelung in der Heimat." Ihren Revanchismus drapiert die "Neue Rechte" mit regionalistischen und separatistischen Parolen. Adressaten für diese Parolen gibt es zuhauf: "In Europa überlappen einander die Lebensräume der Völker." An welche Grenzen denkt wohl ein "Deutscher" in Österreich, wenn er hofft, daß mit einer "Neuordnung Europas (...) die ungerecht und willkürlich gezogenen Grenzen (...) revidiert werden (können)?"

Aber nicht nur "Volks-" und "Auslandsdeutsche" sind Subjekte dieser Neuordnung Europas, das Einklagen von "Volksgruppenrechten" auch für andere Minderheiten ist "seit den 20er Jahren ein beliebtes Instrument zur Zerlegung der deutschen Nachbarstaaten in territoriale Einzelteile." Wie sehr die territoriale Integrität der Staaten Mittel- und Osteuropas den deutschen Imperialismus bis heute am Ausleben hindert, wird weiter unten der Geopolitiker Jordis von Lohausen belegen. Christoph Pan, Präsident der "Föderalistischen Union Europäischer Volksgruppen" (FUEV), jenes Vereins, der sich gegenwärtig um den "Volksgruppenschutz" kümmert, steckt im politischen Jahrbuch der FPÖ dessen Einsatzgebiet ab: "Ohne die westeuropäischen Zwergstaaten (...) zählt Europa (einschließlich Großrußland) gegenwärtig 39 Staaten mit insgesamt rund 70 Sprachen (nur diesseits des Ural) und über 200 nationale Minderheiten (in dieser Zahl nicht berücksichtigt sind Juden und Sinti-Roma), worunter Völker ohne eigentliche Staatlichkeit (...) sowie Volksgruppen (als Teile von Völkern, die vom jeweiligen Muttervolk durch Staatsgrenzen getrennt leben) zu verstehen sind."

Tatsächlich ist es als Drohung zu verstehen, wenn der Führer der FUEV mit "der Inanspruchnahme des in letzter Konsequenz und unter bestimmten Voraussetzungen im Selbstbestimmungsrecht enthaltenen Sezessionsrechts" winkt und behauptet, daß das "Grundproblem (der "nationalen Frage", Anm.) nach zwei Weltkriegen noch nicht gelöst worden ist."

So wollen RegionalistInnen heute wieder dem "Pseudo-Nationalstaat" an den Kragen, weil er nicht vermochte, "alle Angehörigen eines Volkes in einem Staat zu vereinen". Doch bleibt der Regionalismus, jene Form des völkischen Nationalismus, mit der bewußt an alternativ-ökologische Diskurse angeschlossen wird, nicht bei der Denunziation der "Pseudo-Nationalstaaten" stehen. Vielmehr soll er als Nationalismus an der Basis im Prozeß der Formation einer "Nation Europa" aufgehen: "Heute geht es um die kontinentale Behauptung eines europäischen Großraumes, andererseits aber um eine festere oder auch neue Verwurzelung der Identitäten. Um die europäischen Probleme lösen zu können, ist der Nationalstaat zu klein. Um Identitäten herzustellen, ist er wiederum zu groß. (...) Deswegen muß der Nationalstaat zerschlagen werden, damit die Nationen tiefer wurzeln können."

Als Vorbild für die Integration Europas wird hier gerne das "Heilige Römische Reich Deutscher Nation" präsentiert. Ihr neues altes, föderalistisches Reich unter der Hegemonie des deutschen Blockes bleibt als rückwärts gewandte Utopie aber äußerst vage. Es wird kaum als politisch-institutionelles System präzisiert, sondern als Stimmung angerufen. So wird zum Beispiel gefragt, wo "wir Bürger der Europäischen Union (...) unser Vaterland mit der Seele suchen (können)". Die Suche endet beim "Reich" als "Restauration des vornationalstaatlichen Europas", das eben auch ein vordemokratisches ist. Diese Vorstufe zur "Nation Europa" sei somit "kein Staat, in dem sich das Staatsvolk zu allem souverän ermächtigt", sondern ein "göttlicher Auftrag, (...) das Gemeinwohl der europäischen Völker zu sichern".

Geopolitik, wiederaufgelegt

Während die extreme Rechte in ihren Anstrengungen, die Grenzen Europas neu zu zeichnen, vor 1989 vor allem mit den Konzepten des Regionalismus und Ethnopluralismus operierte, wird in der wiedererlangten Position der Stärke Deutschlands nun die sogenannte Geopolitik erneut relevant. Entwickelt wurde dieses neoimperialistische Konzept von der Weimarer Rechten um den Münchener Geographen Haushofer, der verlangte, Mitteleuropa solle als Deutsches Reich gemeinsam mit Asien und Rußland gegen die westlichen Mächte antreten. Haushofer, der als Vorsitzender der pangermanistischen Kampftruppe "Volksbund für das Deutschtum im Ausland" (VDA) im deutschen Faschismus an der Realisierung der Geopolitik mitarbeitete, theoretisierte für die Nazis die natürliche Führungsrolle Deutschlands in einem autarken kontinentaleuropäischen Machtstaat. Der bis 1945 boomende Begriff "Mitteleuropa", der Deutschland in den Grenzen von 1939 und die von Deutschen kolonialisierten und ehemals von Berlin oder Wien regierten Länder meint, taucht ab den 70er Jahren wieder in der Agitation von deutsch-österreichischen Revanchisten aller Schattierungen auf.

Ihre maßgebliche Wiederaufbereitung erfuhr die Geopolitik durch den österreichischen General a.D. Jordis von Lohausen. Dieser beschreibt in seinem schon 1980 erschienenen Machwerk "Mut zur Macht. Denken in Kontinenten", wie Völker, Länder bzw. Großräume durch ihre Lage zum außenpolitischen Handeln quasi gezwungen werden. Für das FPÖ-Jahrbuch 1995 untersucht er "Zwischeneuropa", ein weiteres Theorem der Geopolitik: "Länder, die, seit es sie als geschichtlich gewachsene Einheiten gibt, eindeutig immer 'Abendland' waren, wie etwa Schlesien, Pommern, Ostpreußen oder die deutschen Sudetengebiete, sind heute - nicht für immer, aber doch zur Zeit - eindeutig Zwischeneuropa. Die meisten zwischeneuropäischen Grenzen wurden durch Diktate gezogen, vornehmlich durch die des Jahres 1919. Und durch sie überhaupt entstand erst der Begriff 'Zwischeneuropa', als Inbegriff von etwas bloß Versuchtem, Unterfertigem (? , Anm.), Mißglücktem und Unerlöstem, jedenfalls Provisorischem und in keiner Hinsicht Endgültigem - herumliegende Bausteine künftiger Umgestaltung."

Lohausen, der selbst an den Feldzügen der Wehrmacht zur "Befreiung Zwischeneuropas", diesem völkermörderischen Aufgreifen "herumliegende(r) Bausteine künftiger Umgestaltung", teilnahm, macht in bester Antisemiten-Manier "New Yorker Bankhäuser" für die "Zerstörung Mitteleuropas" verantwortlich. Da die "zwischeneuropäischen Länder (...) Deutschlands natürliche Ergänzung (bildeten)" und die beiden übrigen "möglichen Ergänzungen" - durch Frankreich und Rußland - kaum realisierbar erscheinen, verlangt der greise General a.D. schon wieder den "Anschluß der kleinen Völker Zwischeneuropas an Deutschland, umgekehrt die Aufrundung Deutschlands zu Mitteleuropa."

Auch der Haider-Berater Andreas Mölzer meint da, die Zeichen der Zeit erkennen zu können: "Hier wird auch das neue Deutschland wieder auf seine klassische, abendländische Rolle verwiesen werden: Mittler der westlichen Kultur, politischer Schutzherr und wirtschaftlicher Förderer zu sein für die Nationen des östlichen und südöstlichen Mitteleuropa. Der Weg für die Kroaten, Slowaken, Ungarn, Rumänen, aber auch jener der Ukrainer und Russen - zurück ins Abendland - wird über Deutschland führen." Dies ist die - von der neuen alten "Mittellage" abgeleitete - Verantwortung Großdeutschlands

für Europa.

Bei Otto Habsburg liest sich diese Verobjektivierung imperialistischer Interessen in der Geopolitik - hier in der österreichischen Version - wie folgt: "Durch Jahrhunderte war Wien das Herz des Erdteils. In der Europäischen Gemeinschaft wird Österreich wieder zu seiner historischen Mission finden."

Der Kaiser-Sproß und CSU-Europaparlamentarier Habsburg erfüllt für die extreme Rechte eine wichtige Brückenfunktion unter Konservativen. So verdanken ihm etwa Haider's Abgeordnete im Europaparlament die (ergebnislose) Kontaktnahme mit der neogaullistischen Minifraktion "Vereinigung Europäischer Demokraten" (RDE). Insbesondere als Präsident der 1947 reanimierten "Paneuropa-Union" hält der "VDA-Intimus" Habsburg den Reichs-Mythos am Leben und kämpft für einen hegemonialen deutschen Block in einem vereinten Europa. Dabei trifft er sich mit Andreas Mölzer, der das umstrittene "Kerneuropa"-Papier des damaligen CDU/CSU-Fraktionsführers Schäuble als Wiederkehr seines alten Reiches feiert. Unter dem Pseudonym F. X. Seltsam freut sich Reichsschwärmer Mölzer, "daß ein solches Kerneuropa" als geopolitisch legitimes Machtzentrum "das Europa Karls des Großen wäre". "Seltsam" wäre nicht Mölzer, würde er es sich verkneifen, die politisch-ökonomische Vormachtstellung der "Hartwährungszone", wie sie im Europa der zwei Geschwindigkeiten zementiert werden sollte, deutschvölkisch zu interpretieren: "Ohne nunmehr in alldeutsche Phantastereien auszubrechen, darf doch daran erinnert werden, daß diese Hartwährungszone als ein Bereich besonderer ökonomischer Leistungskraft und finanzpolitischer Disziplin auf ganz kuriose Weise mit dem alten deutschen Volksboden identisch ist."

Auch Jürgen Hatzenbichler begrüßt Schäubles "Kerneuropa" als "Rückkehr zur Geopolitik", geht dabei jedoch auf Distanz zur Deutschtümelei der alten Rechten. Statt an Mölzers deutschem Wesen soll Europa hier an der "franco-germanische(n) Kontinental-Achse" genesen. Haider selbst kann in seinem "freiheitlichen Europa" auf die Franzosen verzichten, vielmehr attestiert er ihnen ein "gestörtes Verhältnis gegenüber dem Streben nach nationaler Identität und ethnischer Vielfalt."

Verteidigung Europas

Bekanntlich setzt die FPÖ-Mehrheitslinie (noch) auf einen Beitritt Österreichs zur Nato. Zwar bedauert man, daß diese "unter der Fuchtel der raumfremden Macht USA steht", aber mangels einer eigenständig agierenden Weu geben sich die Freiheitlichen hier pragmatisch. Doch ist das Ziel abgesteckt: Auf Perspektive braucht die dritte Weltmacht Europa eine von den USA unabhängige Sicherheitspolitik. So schreibt Mölzer entlang des eingangs skizzierten Befreiungsnationalismus von der "Apokalypse des Jahres 1945", welche die "totale politische Entmachtung Europas zur Folge (hatte); auch die Idee Europas hatte aufgehört, zu existieren." Wohlgermerkt, Mölzer behandelt das Jahr 1945 und nicht die vorangegangenen Ereignisse, wenn er behauptet: "Abgetreten war nach Jalta und Potsdam aber auch die Freiheit der Völker und Nationen Europas."

Jedoch weiß sogar Mölzer, daß Europa, will es "als handelndes Subjekt der Weltgeschichte" wiedererstehen, auf bereits existierende militärische Strukturen nicht verzichten kann: "Es bleibt also

derzeit nur die Nato." In die selbe Kerbe schlägt auch Nato-General a.D. Günter Kießling, einer der prominentesten Wortführer der nationalneutralistischen Strömung in der BRD, wenn er über die Nato schreibt: "(...) sie ist im Augenblick die einzige Realität, aus der heraus man eine europäische Sicherheitsorganisation entwickeln könnte. Aber so unverzichtbar sie für kurz- oder mittelfristige Lösungen ist, sie taugt nicht für längerfristige Lösungen, wenn sie sich nicht grundlegend ändert."

Im FPÖ-Jahrbuch 1995 hält Franz Uhle-Wettler, ein weiterer Ex-Militär, "Ein Plädoyer für die Nato". Dieses verbindet er ebenfalls mit der Forderung nach einem germanisierten Bündnis: "Die neue Nato wäre schlecht beraten, wollte sie den Amerikanern und Briten helfen, den westlichen Liberalismus und Individualismus wie ein Richtschwert weltweit über fremden Völkern und Kulturen zu schwingen."

Es bleibt wieder mal der Grazer "Aula" überlassen, andere Saiten aufzuziehen. In der Ausgabe 2/94 agitiert der deutsche Rechtsextremist Rigolf Hennig gegen die Westbindung der BRD. Nach einer Replik von Hans Merkel (CSU) in der "Aula"-Sommernummer fragt Hennig, ganz Geopolitiker: "Versteht sich Deutschland als Mittelmacht oder sucht es sein Heil in einer einseitigen Westbindung?" Nach der "klein-deutsche(n) Wiedervereinigung" müßten sich die Deutschen "eiligst aus ihren westlichen Verstrickungen lösen", denn eine andauernde Nato-Mitgliedschaft der BRD schade deren "nationalen Interessen". Hennig, der Nazi-Deutschland zum "Opfer" eines "Überfalls" durch die USA erklärt, steht in bester Tradition faschistischer Ostorientierung, wenn er verlangt, die BRD soll wieder mehr in Richtung Wladiwostok blicken. Denn: "Weit mehr als die USA jenseits des Atlantik ist Rußland der natürliche Partner Deutschlands."

Rechtsextremismus im Europaparlament

1984 zog der "Front National" (FN) mit zehn, der "Movimento Sociale Italiano" (MSI) mit fünf Abgeordneten sowie ein griechischer Rechtsextremist in das europäische Parlament (EP) ein. Kurz darauf durch den Abgeordneten der nordirischen "Ulster Unionist Party" verstärkt, bildeten diese Abgeordneten die "Fraktion der europäischen Rechten" unter dem Vorsitz von Le Pen. Während sich bei der vorangegangenen Wahl unter der Ägide italienischer NeofaschistInnen eine (erfolglose) gemeinsame Plattform ("Eurodestra") bildete, waren die rechtsextremen Parteien 1984 getrennt in den Wahlkampf gezogen. Gleiches gilt für die Wahl 1989, aus welcher der FN mit zehn, der MSI mit vier, die deutschen "Republikaner" mit sechs und der belgische "Vlaams Blok" (VB) mit einem EP-Abgeordneten hervorging. Mit Ausnahme der italienischen NeofaschistInnen schlossen sich die MandatarInnen der genannten Parteien zur "Technischen Fraktion der europäischen Rechten" zusammen. Neben dem unverhohlenen Führungsanspruch Le Pens liegt der Grund für den Nicht-Beitritt des MSI im "Südtirolproblem", über dessen Lösung sich deutsche und italienische NationalistInnen naturgemäß nicht verständigen konnten. Aber auch ohne MSI sah sich die Fraktion nicht als inhaltlicher Zusammenschluß, was schon durch das Beiwort "technisch" signalisiert wurde. Bei aller feierlichen Betonung der "deutsch-französischen Achse" prallten hier die eingangs erwähnten nationalen Partikularismen aufeinander. Verschärft wurden die Spannungen durch den unterschiedlichen Charakter der Nationalismen: Während VB und Reps der völkischen Linie anhängen und den Regionalismus hochhielten, argumentierte der FN zunächst etatistisch und zentralistisch. Jedoch näherte sich der FN

unter dem Einfluß "neurechter" Intellektueller seit dem Ende der achtziger Jahre dem völkischen Nationsbegriff an. So formulierte der FN-Chefideologe Bruno Mégret in deutlicher Anlehnung an die "Neue Rechte" bereits 1988 seine Zustimmung zur "Festung Europa": "Wir sind für Europa, für die Grenzniederlegungen zwischen unseren Staaten, unter der Bedingung, daß die Grenzen zwischen Europa und dem Rest der Welt tatsächlich aufrecht erhalten werden."

Derartige Wortspenden beziehen sich jedoch nur auf die gemeinsame Flüchtlingsabwehr, am Konzept eines "Europa der Vaterländer" wurde seitens der Euro-Rechten weiterhin festgehalten. Dieses Konzept läßt die RechtsextremistInnen das EP grundsätzlich ablehnen. Deutsche Mitglieder der "Technischen Fraktion" meinten etwa 1992: "Nach der gegenwärtigen Lage müssen wir geradezu froh sein über die begrenzten Befugnisse des Europäischen Parlaments." Aus dem selben Grund steht übrigens auch die FPÖ einer "Befugnisserweiterung" des EP "kritisch gegenüber", ginge diese doch zu Lasten der nationalen Souveränität. In der Agitation wird aber gleichzeitig das Demokratiedefizit der EU kritisiert: Mächtige Industrielobbies und sonstige Verschwörungen (etwa Haiders Feindbild vom angeblichen Geheimbund der "Bilderberger") würden in Brüssel regieren.

Die Europawahlen 1994 brachten schließlich deutliche Gewinne für die rechtsextremen Parteien mit Ausnahme der deutschen: Die zuvor durch Streitigkeiten und Austritte arg ramponierten Reps zogen nicht wieder ins EP ein. Der in "Alleanza Nazionale" (AN) umbenannte MSI konnte seinen Stimmenanteil mehr als verdoppeln und ist nun mit 11 Abgeordneten vertreten. FN und VB gewannen je ein Mandat dazu und verfügen nun über elf bzw. zwei Sitze im EP. Mit einem Abgeordneten neu vertreten ist die belgische Version des FN. Im Unterschied zu 1989 kam diesmal eine gemeinsame Fraktion jedoch nicht zustande. Neben den persönlichen Animositäten ist dafür die strategische Umorientierung der AN verantwortlich zu machen: Die Salon- und Regierungsfähigkeit verträgt sich nun mal nicht mit einem Bündnis mit dem polternden Le Pen. Wie kurz darauf die FPÖ versuchte die AN statt dessen in der gaullistischen RDE-Fraktion Aufnahme zu finden.

Die seit der österreichischen EP-Wahl 1996 mit sechs Abgeordneten in Brüssel und Straßburg vertretene FPÖ distanzierte sich ebenfalls vom FN. So unterstützte etwa Peter Sichrovsky die Forderung der SozialdemokratInnen nach Ausschluß Le Pens aus dem EP, nachdem dieser die Morde in den Gaskammern des "Dritten Reiches" als "Detail der Geschichte" abgetan hatte. Zuvor bejubelte der FN den Erfolg der Haider-Partei und lud die FPÖ-Abgeordneten zur Fraktionsbildung ein, was diese - gerade am europäischen Parkett ebenfalls auf Salonfähigkeit bedacht - jedoch ablehnten. Mittlerweile zieht es Le Pen in seinen Versuchen, eine Euro-Rechte unter französischer Dominanz zu etablieren, mehr nach Osten. Das 1997 etablierte Bündnis "Europa der Nationalisten" ("Euronat") wird in erster Linie von osteuropäischen Parteien wie der "Großrumänien-Partei" oder der "Slowakischen Nationalpartei" unterstützt. Auch der ungarische Nationalist Istvan Csurka führt seinen Kampf gegen "Plutokratie", "internationales Finanzkapital" und "Kosmopolitismus" in enger Tuchfühlung mit Le Pen. Ob diesen Vernetzungsversuchen mehr Erfolg als allen vorangegangenen beschieden sein wird, darf angesichts der in Osteuropa noch stärker ausgebildeten nationalen Partikularismen allerdings bezweifelt werden.

Doch kehren wir wieder auf das EU-Parkett zurück: Im Unterschied zum FN distanzierte sich die AN

von Anfang an von der FPÖ. Wenig Erfolg war auch den Anbiederungsversuchen an die britischen Konservativen beschieden: Lancierte Meldungen, wonach FPÖ und Tories über eine Zusammenarbeit verhandeln würden, haben letztere als "böartigen Nonsens" zurückgewiesen. Die populistische Anti-Maastricht-Fraktion "Europa der Nationen" betonte ebenfalls umgehend, daß es ihr "unmöglich" sei, "mit Herrn Haider's Partei zusammenzuarbeiten." Gleiches gilt für "Forza Italia" und "Lega Nord": Vertreter beider Parteien betonten schon vor der österreichischen EP-Wahl, daß sie nicht im Entferntesten daran dächten, mit der FPÖ in Kontakt zu treten. Zumindestens von der "Lega" und ihrem Anführer Bossi hielt Haider aber plötzlich ohnehin nichts mehr. So meinte der FPÖ-Führer im Interview mit "Nation & Europa", ihm störe Bossis "Bereitschaft, mit den Linken zusammenzuarbeiten."

Die Fraktionslosigkeit möchte die FPÖ aber nicht als Zeichen der Isolierung verstanden wissen. So macht man aus der Not eine Tugend und betont den "Vorteil der Unabhängigkeit vom Klubzwang", was eine Vertretung "nationaler Interessen" erst ermögliche. Der freiheitliche Neo-Europaparlamentarier Gerhard Hager war da offensichtlich mit der Sprachregelung noch nicht so vertraut, meinte er doch, die Fraktionslosigkeit sei ein "Manko, das wir durch Mehrarbeit ausgleichen müssen".

U.S. Institute of Peace working group report, May 1999

Briefly...

- The nature of the grievance matters. Ethnically based terrorist campaigns can be harder to end decisively than politically based ones, because they often enjoy broader support among a population they seek to represent.
- Political violence by itself can rarely achieve its aims, but it can sometimes do so in conjunction with less violent political action.
- By the same token, deterring terrorism and prosecuting terrorists may be insufficient to end terrorism, especially when a large population supports the terrorists' cause. In such situations, negotiated settlements may provide the only solutions.
- In Sri Lanka, the government appears to have concluded from its victory over the Maoist JVP that law enforcement and compulsion can end a terror campaign. However, the LTTE has a much broader base of support than the JVP ever did, and the LTTE is unlikely to go away simply through government-applied force.
- One of the most effective strategies at governments' disposal may be to split off pragmatists from radical rejectionists. Such efforts can diminish public support for the terrorists and deny them a strong base from which to operate.

- In the cases of the IRA and the PLO, the initiation of political negotiations has not conclusively ended terrorism, but it has swung public support behind a peaceful solution and helped diminish popular support for the terrorists.
- Making concessions to causes espoused by terrorists can arouse hostility from those who believe that terrorism is "being rewarded." Weak governments find it difficult to make such concessions.
- Peace overtures must be well-timed. Ideally, they should come at a time when the government is strong and the terrorist organization is undergoing a period of introspection. Good intelligence can make a difference in these cases.

In an attempt to better understand what governmental actions can hasten the end of political violence, on April 12, 1999, the United States Institute of Peace, together with the British-based Airey Neave Trust, convened a working group meeting on the subject "How Terrorism Ends." The workshop began with an overview of the problem by Martha Crenshaw. Her presentation was followed by three case studies. In the first, Paul Wilkinson of St. Andrews University discussed the Irish Republican Army (IRA), and in the second, Jon B. Alterman of the United States Institute of Peace discussed the Palestine Liberation Organization (PLO). Both were considered "successful" case studies, because the organizations in question have embraced political dialogue instead of violence to pursue their aims. In the third case study, Teresita Schaffer of the Center for Strategic and International Studies discussed the Liberation Tigers of Tamil Eelam (LTTE), who have been fighting for autonomy for Tamil-populated areas in Sri Lanka for almost two decades. The LTTE was considered a "failed" case because government actions have been unable to end the violence.

Martha Crenshaw on How Terrorism Ends

As we try to create governmental policies aimed at ending terrorism, it is useful to enumerate some of the variables that distinguish different situations.

The first set of variables involves the terrorist groups themselves.

- **Internal factors.** How does the organization make decisions? How does the organization perceive its environment? What are the internal psychological dynamics? Is the organization divided internally? All of these things are important to know but often difficult to ascertain.
- **External factors.** How does the relative strength of the terrorist organization compare with that of the government it opposes? Are the terrorists ideologically or ethnically motivated? What kinds of ties do they have to outside groups who may

support them? Is the conflict best characterized as a secessionist movement's civil war, or does the conflict involve a battle over civil society and representation?

The second set of variables involves the tools that a government uses to respond to terrorism. Many of these options can be pursued simultaneously.

- **Deterrence.** Governments can use their coercive capacity to make terrorism too costly for those who seek to use it. They can do this by military strikes against terrorist bases, assassinations of key leaders, collective punishment, or other methods. There are several drawbacks to this approach, however. On the one hand, it can lead to unacceptable human rights violations. In addition, groups may not come to government attention until movements are so well developed that efforts to contain them through deterrent methods are insufficient.
- **Criminal justice.** Governments can treat terrorism primarily as a crime and therefore pursue the extradition, prosecution, and incarceration of suspects. One drawback to this approach is that the prosecution of terrorists in a court of law can compromise government efforts to gather intelligence on terrorist organizations. In addition, criminal justice efforts (like deterrent efforts) are deployed mostly after terrorists have struck, meaning that significant damage and loss of life may have already occurred.
- **Enhanced defense.** Governments can make targets harder to attack, and they can use intelligence capabilities to gain advance knowledge of when attacks may take place. As targets are hardened, however, some terrorist groups may shift their sights to softer targets. An example is the targeting of U.S. embassies in Kenya and Tanzania in August 1998 by truck bombs. Although the attacks are strongly believed to have been coordinated by individuals with Middle Eastern ties, targets in Africa were chosen because of their relatively lax security compared with targets in the Middle East.
- **Negotiations.** Governments can elect to enter into negotiations with terrorist groups and make concessions in exchange for the groups' renunciation of violence. While governments are often reluctant to do so at the beginning of terror campaigns, negotiations may be the only way to resolve some long-standing disputes.

Given the above sets of variables, the end of terrorism may result from one or more of the following situations:

- **Success.** The terrorists may have accomplished their objectives, such as the overthrow of a government or the end of an occupation. Terrorism per se cannot

achieve long-term goals such as revolution or independence, but it can sometimes do so in conjunction with less violent political action.

- **Preliminary success.** A corollary to achieving objectives is having at least achieved public recognition for an organization and the cause it espouses. In this case, continued terrorist actions may alienate supporters, sponsors, or key third-country actors for whom continued violence is unacceptable.
- **Organizational breakdown.** Terrorist organizations, like any organizations, must constantly work to maintain themselves. If recruiting dries up, or if funding becomes unavailable, the organization may be unable to sustain itself. On the other hand, self-preservation may in fact force organizations to continue terrorist activities even if the leadership otherwise wishes to give them up. It may be that the only way for the organization to continue to attract new recruits and financial support is to continue to gain publicity for its terrorist actions.
- **Dwindling support.** Organizations may lose the support of their various constituencies--the populations they seek to represent or the governments or other organizations that support them. They can do so for reasons of ideological or strategic differences, personality clashes, or simple fatigue. Terrorist actions can also provoke moral outrage and undermine support.
- **New alternatives.** At times, other options for political change emerge. They can include more traditional forms of warfare or revolution, mass protests, or political negotiations.

As suggested above, many of the factors and consequences outlined above may occur simultaneously. Both governments and terrorist organizations can pursue many tracks at once, and organizations may confront a wide series of challenges simultaneously.

Governmental decisions about how to confront terrorism are made more difficult by the frequently high degree of uncertainty governments have about the nature of terrorist organizations, their motivations, and the effects of government actions on those organizations. The need for understanding terrorist organizations is highlighted by the fact that such groups' calculations are based on the groups' perceptions of costs and rewards, not those of the authorities confronting them or of objective observers.

So called "get-tough" measures against terrorist groups can have unintended consequences. Trying to "decapitate" a movement may radicalize the whole movement or some splinter faction. Assassinations and military force can provoke a desire for revenge, and raids and arrests can reinforce martial images, create mythologies of martyrdom, or feed paranoia and secretiveness (which makes the movements even harder to penetrate for reasons of either understanding motivations or foiling actions).

In the event that organizations are primarily motivated by a desire for recognition, how should policymakers respond? Should the government recognize the organizations and eliminate their motivation for terrorism? Since terrorist actions most often are considered newsworthy events by media organizations, it is beyond governments' control whether the actions garner attention or not. Governments can play an effective role, however, in influencing how terrorist events are portrayed to the public, and thus influence (but not control) how the public interprets those events.

Public opinion is important because it strongly affects the amount of financial and operational support the terrorists enjoy. In some cases, support comes from abroad and is difficult for governments to control. In other cases, however, governments have control over populations sympathetic to the terrorists. In this event, they must walk a difficult line. On the one hand, repressive measures can encourage antigovernment hostility and support for the terrorists. On the other, fear of punishment for the terrorists' excesses can undermine a population's willingness to support terrorist activities. In this balance, the terrorists have two weapons on their side. The first is their own ability to mete out punishment against those who do not support their actions, and the second is their ability to build on group solidarity to overcome reservations about their methods.

One effective tactic against many terrorist organizations may be to promote their disintegration from the inside. Governments can demonstrate to groups that their support among the populations those groups supposedly represent is waning. Even if such allegations are true, however, groups may be resolute in believing they enjoy support even after that support has dissipated. Governments can also split off members from a group, either by offering large rewards for information that undermines group solidarity or by making promises of leniency for imprisoned group members. Finally, governments can unilaterally enact reforms that reduce public support for the terrorists without rewarding the terrorists directly, or even negotiating with them.

Another tactic may be to put pressure on states sympathetic to a terrorist group's goals, even if the states are not outright sponsors of the group. Expulsion from a haven often causes financial pressures or logistical difficulties and can sometimes end a group's viability. In many cases, however, affected countries lack the necessary ties to effect such pressure, or laws governing free expression make it very difficult to crack down on an organization's activities.

If efforts to eliminate a terrorist group through compulsion fail, however, governments are left trying to reach a peaceful settlement with that group. In civil conflicts, such a settlement will entail negotiations for amnesty on both the individual and group levels.

Governments must confront opposition on two fronts: among rank-and-file members, who may be more disposed toward violence than the leadership, and among their own populations, who may oppose the government's sitting down with killers and "rewarding violence." Groups opposed to a peaceful reconciliation at that time will act to undermine the peace, often by undertaking terrorist actions of their own. In this event, governments that have only a precarious grip on power will find it difficult to move decisively toward peace.

In addition, governments must time their peace overtures carefully, first by making such gestures when their ability to reward good behavior and punish bad is strong, and second, by making them when the terrorist organization is going through some period of internal questioning. In such situations, effective intelligence can be crucial, since it can both identify auspicious times for a peaceful gesture and help inform the nature of that gesture.

Paul Wilkinson on the IRA

Of Martha Crenshaw's models presented above, we can discount three with regard to the IRA.

- We cannot let the terrorists win on their own terms. The prospect of conceding the future of Northern Ireland to those who have shown little regard for democratic processes is simply horrifying.
- We cannot wait for the terrorists to discount themselves. The idea of the IRA just "withering away" in the medium term or even the long term is highly unlikely because through a long process of socialization, predilections toward extreme violence are deeply embedded in some elements of society in Northern Ireland.
- State use of "draconian military force" is unacceptable because it suspends democratic rights and allows terrorist groups a victory at the expense of democratic institutions.

These options eliminated, three main areas for maneuver remain. The first is what might be called "politics, diplomacy, and prophylaxis." That is, to use democratic processes to address the underlying grievances of various groups in the region. Such a response is an important tool for any democratic government. In fact, a democratic government should be responding to the kinds of grievances that lead to violent conflict before that conflict turns violent at all. That being said, once violence has broken out, it is possible for a democratic system to address the causes of violence and reduce the violence that results from people's grievances.

Along these lines, the example of the Basque population in Spain is instructive. The new democratic government in Spain in the late 1970s made a bold and farsighted decision to grant autonomy to the Basque regions. Consequently, popular support for the Basque terror group ETA (Euskadi Ta Askatasuna, or Basque Fatherland and Liberty) has been reduced enormously. ETA has become so fragile in recent years that it has decided to investigate following the Northern Ireland example. The Spanish government is understandably cautious about negotiating, but negotiating may represent a way forward in that conflict.

It is important to remember, however, that political rapprochement cannot end violence entirely. It is unrealistic to expect that, after decades of violence, a single document can put an end to every violent act. A political agreement can, however, attract the support of a large segment of a population, and that support can be a very important component in ending a cycle of violence.

The second model to be considered involves criminal justice and law enforcement. The United States and other democratic countries reach for this model almost instinctively, and rightly so, for terrorist actions are crimes. The criminal justice system is an important weapon in both reducing and deterring violence, and it remains an important tool to combat terrorism in Northern Ireland.

As part of its execution, the criminal justice model may have to include military aid to the civilian power if the civilian police are unable to maintain order on their own. In such a case, it is important that the military assistance remain under the firm authority of the civilian police, because, if unchecked, the military power threatens to destroy democratic rights and processes.

The third model is enhanced international cooperation against terrorism. Even though many terrorist groups carry out their actions in a narrowly defined geographical area, groups waging violence have developed increasingly sophisticated international support structures. Such support may be in terms of political and diplomatic support abroad but could also include significant fund-raising and arms procurement activities. Even localized terrorism can have a crucial international element, and it takes international cooperation to diminish the terrorist threat.

In the case of Northern Ireland, all three of these models are being used. Since the Downing Street declaration and the start of the Northern Ireland peace process, there has been a very heavy stress on prophylaxis and politics. The Good Friday Agreement worked out by George Mitchell expresses well the fears of both sides in the Northern Ireland conflict, and it enjoys overwhelming support in the communities affected by it.

Nonetheless there remain threats to the Good Friday Agreement. The most important is neglect of the key relationship between peace and security. A broadly inclusive political settlement must include groups with a long and brutal terrorist past that lack a genuine commitment to democratic principles. In the case of the IRA, its political wing, Sinn Fein, is highly experienced and committed to making political progress. But its military wing, especially at the grass roots, is much more skeptical about progress through a political process and has wanted to keep its traditional weapon--force--ready and waiting if politics does not gain it the results it wants.

Consequently, there has been deadlock over the issue of decommissioning weapons. The IRA maintains a large stockpile of highly destructive weapons, including the explosive Semtex, mortars, and machine guns. While perhaps not numerically larger than the stockpiles of the Loyalists, the IRA stockpiles contain more destructive weapons. The Good Friday Agreement provides a two-year time frame for decommissioning forces, but more than one year into the agreement, not a single weapon has been handed in on either side. The IRA argues that giving up any weapon is an act of surrender. Still,

decommissioning of weapons is the litmus test of the Agreement, not only for its practical effects but also for its psychological effects on the parties.

Given the present state of affairs, the respective governments may wish to link various events in the Northern Ireland peace process to increase the incentive for terrorists' cooperation. For example, the original agreement does not link the release of large numbers of prisoners to the decommissioning of weapons. This strategy may bear revisiting.

Another way out may be to try to split Sinn Fein off from the IRA. Sinn Fein may decide that progress at the political level is important enough that it will distance itself from the armed wing of the IRA and sever links with that wing if it refuses to cooperate with the political process. Such an outcome occurred with the Basques.

Whatever the IRA, Sinn Fein, or the Loyalist terrorists decide, democratic parties must continue the political process. The political framework must function even if some factions remain attached to terrorist groups. Along these lines, it is hard to imagine one terrorist group completely making the transition to a political party; perhaps a split is the best we can hope for.

Some groups are not on board in this peace process, so we have not eliminated the problem of terrorist groups. Therefore, our best option now may be to use public opinion to marginalize the terrorists while using the criminal justice system to punish those who continue to pursue terrorism.

John Dillon carries one of his son's coffins on Tuesday, July 14, 1998, as the three coffins of Richard, Mark, and Jason Quinn, are moved to the Catholic church at Rasharkin, Northern Ireland. The three brothers were killed in a sectarian arson attack on their home on July 12. Their deaths shocked the province and led to serious soul-searching about the future of Northern Ireland's shaky peace. Their funeral highlighted the emotional distress that more than 20 years of violence have wrought on individual families. AP Photo/Alastair Grant

Jon B. Alterman on the PLO

Although originally established in 1964 by the Arab League, the PLO absorbed a number of other movements in the aftermath of the 1967 war and has been an umbrella organization dominated by Fateh in general and Yasser Arafat in particular. Arafat's constant effort to build coalitions between Fateh and other organizations has made the PLO something of a less rational actor on the one hand, but more responsive to changes in Palestinian public opinion on the other hand.

A second characteristic of the PLO is that since an early period it has resembled a government, with a large resource base (perhaps exceeding \$1 billion per year in the late 1980s), its own bureaucracy and entitlement programs, and the recognition of at least some world governments.

A third characteristic is that it has been able to rely on sympathetic regional governments for logistical support. Moving from Jordan to Lebanon to Tunisia (and with fighters in an even wider array of countries), the PLO has been able to rebound from setbacks.

The decision to abandon armed struggle has not been unanimous, but the idea has garnered increasing support within the organization since it first surfaced in the early 1970s. Several developments accelerated that move:

- **Soviet policy.** The Soviet Union was a strong ally of the PLO for many years, but Mikhail Gorbachev made it clear to Arafat in the late 1980s that Soviet support for Palestinian armed struggle was diminishing (as indeed were the larger fortunes of the Soviet Union).
- **Intifada.** The Palestinian uprising against the Israeli occupation occurred without PLO coordination and forced the PLO leadership to move quickly to reassert their centrality to Palestinian life. In so doing, they were forced to choose between those favoring a violent solution to the Arab-Israeli conflict (many of whom were in exile) and those favoring a negotiated one. They chose the latter (in the process incorporating such local leadership as Hanan Ashrawi and Faisal Husseini) but have been careful not to crack down too hard on the former, especially Hamas.
- **Gulf war.** By all accounts, the PLO's embrace of Saddam Hussein following the latter's invasion of Kuwait was a horrible miscalculation that led to the expulsion of huge numbers of Palestinian workers from the wealthy Gulf monarchies and a dramatic cut in those countries' subsidies to the PLO.
- **Madrid.** In exchange for Arab support in Desert Storm, the Bush Administration orchestrated a conference in Madrid to find a permanent solution to the Arab-Israeli conflict. While the Madrid Conference itself did not produce progress, it created an environment in which the Oslo Accords could be struck.

While many of the factors in the PLO's turn to diplomacy are specific to that case, there appear to be several generalizable lessons.

- The PLO had an **unusually rich resource** base to draw on. It was not merely a terrorist organization but also a government in exile, a business conglomerate, and a source of significant patronage--it had durability.

- The PLO was a **responsive organization**. As a loose confederation of nationalist organizations, it often had to (and did) shift policy to reflect the opinions of its constituency or rebound from changes in the international environment.
- **U.S. diplomacy** played an important role. As early as the 1970s, PLO leaders began to understand that they could not achieve their goals without at least tacit support from the United States. American conditions for a dialogue shaped to some degree PLO behavior in the 1980s and even 1990s.

Israeli law enforcement measures appear to have played little role in the PLO's decision to turn toward a negotiated solution to the Arab-Israeli conflict. Broader strategies such as the village council plan of 1980-81 were ineffectual, and Israel's widely reported support for Hamas in its earliest phases appears to have backfired.

Two Israeli decisions have played a crucial role in the PLO's transformation, however. The first was the Israeli invasion of Lebanon, which at one stroke denied the PLO territoriality and removed it from Israel's borders. Although Lebanon has turned into a quagmire for Israel, it marked a decisive end to any PLO illusions about victory through force. Second, the government of Israel was willing to negotiate when the opportunity presented itself at Oslo. Despite having ignited a political backlash at home, it helped pave the way for an as yet to be achieved negotiated end to the Arab-Israeli conflict.

Teresita Schaffer on the LTTE

Sri Lanka has the distinction of having had two civil wars going on at the same time; and in a number of ways, Sri Lanka's two different experiences with terrorist organizations have complicated the task of dealing with its terrorist problems. One of Sri Lanka's terrorist experiences has happened two times. The government has twice put down a majority Sinhalese group called the JVP (Janatha Vimukthi Peramuna, or National Liberation Front) using police action verging on military force. The government has also battled for a decade and a half with the LTTE, although that effort has been markedly less successful.

Of the Sri Lankan population of 18 million, 75 percent are Sinhalese and 19 to 20 percent are Tamil. The two groups are ethnically and linguistically distinct, and Sinhalese are predominantly Buddhist while the Tamils are predominantly Hindu. More than half of the Tamils live in the North and East, with smaller concentrations in major cities such as Colombo. Other Tamils are plantation workers whose ancestors were brought over from India about 100 years ago by the British to work on the tea plantations; they are known as "Hill Tamils" or "Estate Tamils." The remainder of the population consists primarily of Tamil-speaking Muslims who tend to oppose the Tamil militants.

The experience of twice putting down a group with extreme political views has left an unfortunate legacy of allowing people in the Sri Lankan government to think that they know how to deal with

terrorism. First founded in the 1960s, the Maoist JVP had ties to the Chinese Communist Party but was philosophically closer to Peru's "Shining Path." The organization was avowedly revolutionary, and its support in the early years came mainly from university students and frustrated high school graduates. In the late 1960s these youth mobilized politically and also armed themselves. In the 1970 Sri Lankan election, they threw their support to the Sri Lankan Freedom Party, which was victorious. By April 1971, however, they had grown disaffected with mainstream politicians, and one night they coordinated simultaneous attacks on five police stations, followed by a series of political killings. The JVP was put down by military action supported by India, Pakistan, China, and the United States. Members were either jailed or killed, and the group virtually ceased to exist.

In 1977, politicians seeking to show that the JVP could not survive in the political arena allowed the party to reestablish itself legally. The experiment appeared to work; in a 1981 election the group registered less than 5 percent of the vote nationally, and in its strongest district received just 13 percent of the vote. In university elections, however, the group enjoyed significant support.

In 1987 the Indian government sent 100,000 troops to Sri Lanka to enforce a peace agreement following four years of Sinhalese-Tamil armed strife. The presence of Indian troops on Sri Lankan soil agitated members of the ferociously nationalist JVP, and the organization's militant opposition to those troops helped it gain support among many Sri Lankan nationalists.

By the late 1980s, the JVP's membership was almost completely different than it had been twenty years before. Although Rohana Wijeweera still led the JVP, most of its old members had gone on to more mainstream political affiliations, and a new crop of young, unemployed graduates once again comprised the rank and file. The group's first actions were a series of general strikes, but in late 1988 the JVP began to target the families of police officers. In response, the government closed ranks behind the police and attacked the JVP mercilessly. At the height of the conflict, the weekly death toll topped 300 people. By early 1990, the entire JVP leadership had been killed and the organization was destroyed.

Almost a decade later, the legacy of the JVP remains. Many Sri Lankans lost friends or relatives in the violence, and memories of those days remain fresh in many people's minds. In addition, many Sri Lankans harbor resentment over what they perceived to be lectures by Western officials demanding that they respect human rights in their deadly battle against the JVP. Finally, many Sri Lankans have concluded that the government did what it had to do against the JVP and that they now understand how to counter terrorist campaigns.

In fact, the government's campaign against the JVP succeeded in part because the JVP lacked a broad constituency. Put quite simply, the JVP's grievances did not capture the imagination of any major concentrations of people. Even at the height of its popularity, there was no district in which the JVP would have won an election. As a consequence, the JVP's campaign of terror got it more attention and influence than it would have gotten through political means. At the same time, the JVP failed because there was never a huge reservoir of people who said, "We don't like their methods but at least they've gotten us on the map." It makes a difference how much resonance the underlying grievance has.

The LTTE has been a different phenomenon. Ethnic rivalry has a long history in Sri Lanka, but the roots of the present-day ethnic conflict lie in the period after its independence from Britain in 1948. For centuries, intercommunal ties between Tamils and Sinhalese have been close at the elite level, but Sri Lanka's first post-independence government made a catastrophic decision. In a blatant attempt to tighten the Sinhalese grip on power, the government wrote a nationality law that effectively disenfranchised the Hill Tamils, who constitute almost half of the Tamil population. The error was compounded in 1956 when a prime ministerial candidate, S.W.R.D. Bandaranaike, decided to campaign on a call for the primacy of Sinhalese language, culture, and religion in Sri Lanka. The two moves served to heighten intercommunal tension and led first to Tamil militancy and later to separatist sentiments.

The first Tamil militant groups were founded in the 1960s, and they took as their goal greater rights for the Tamil population. By 1976, the Tamil United Liberation Front (TULF) had emerged as the first political group calling for a separate Tamil state. In 1983, however, the Sri Lankan government adopted a constitutional amendment criminalizing advocacy of a separate state within Sri Lankan territory and requiring that all members of parliament swear an oath not to support separatism in any way. That decision forced the TULF out of the parliament and deepened the alienation between the Tamil population and the government. As a result, support for the LTTE increased.

In the early years, much of the support for Tamil independence came from individuals in their thirties who were primarily motivated by the language issue. Starting in the 1970s, the cause of Tamil independence began to attract a younger crowd, in part because of quotas on university admissions aimed at limiting the number of Tamils with access to higher education. In the 1990s, the trend toward youth has accelerated. Some members are as young as thirteen or fourteen years old. Many of these younger members are fanatical; they are issued a cyanide capsule on completion of their basic training with the LTTE, and they have been engaged in suicide bombing.

The LTTE's first acts of terrorism were directed against Tamils who opposed the LTTE's policies; LTTE leader Velupillai Prabhakaran got his start assassinating the mayor of the predominantly Tamil city of Jaffna in the mid-1970s. Since 1985, the four targets of frequent terrorism have been:

- VIPs, such as Indian Prime Minister Rajiv Gandhi in 1991 and Sri Lankan President Ranasinghe Premadasa in 1993;
- Tamil rivals;
- isolated Sinhalese and Muslim populations on the borders of Tamil-majority areas;
- civilian population centers, such as mosques and the Temple of the Tooth Shrine.

In combating the LTTE, the Sri Lankan government has employed three strategies.

- **Law enforcement efforts** have placed constraints on the LTTE and have imprisoned a number of their followers and sympathizers, but at the same time have alienated many Tamils.
- **Military efforts** have been inconclusive, in part because the Sri Lankan military has not proven particularly competent, and in part because it does not appear to possess a clear strategy. The military has never been able to hold the main Tamil population centers in the North and East of the country simultaneously.
- **Efforts to negotiate a political settlement** have generally been cases of too little, too late. A 1995 peace proposal started out with great promise but is now moribund.

The Sri Lankan government has not tried three strategies that may hold out the promise of ending the long-running conflict.

- **Engage in public diplomacy.** The Sri Lankan government could launch a major "hearts and minds" campaign to win the support of large segments of the Tamil population away from LTTE sympathy. The present government mounted a limited effort along these lines in the so-called "White Lotus" campaign, but a major campaign has yet to be tried.
- **Demonstrate that autonomy can work.** The Sri Lankan government could mount a major effort to show that autonomy can work. Constitutional amendments introduced in 1987 provided for a degree of decentralization of power. This could have been an opportunity to show that the Sri Lankan government was capable of allowing local authorities, including Tamil-dominated ones, to run their own affairs effectively. The near-normalization of life in the East in 1994 and the government's taking control of Jaffna in 1995 could have led to similar "demonstration projects" in devolution. In each case, the opportunity slipped away, reinforcing the concerns of skeptics in the Tamil community about whether devolution could work.
- **Conclude a peace settlement.** The Sri Lankan government could reach a peace agreement with the LTTE. There have, of course, been a whole series of negotiating efforts, which thus far have come to naught.

The chief lesson to be learned here is that if we focus only on the criminal side of terrorism, then we will fail to solve even that side of terrorism. In the Sri Lankan case, resolving the terrorism arising out of the ethnic conflict will require at least two approaches: a political negotiation and an integrated military strategy. This government understood the importance of the political part of the package but was unable to deliver on it. It then turned to the military arm as a separate response but, despite its success in capturing the LTTE's stronghold in Jaffna, was not able to put the military and political parts of its strategy together. The LTTE, of course, had by then lost interest in the negotiation, leaving the conflict

in a new and bloodier stalemate.

Success in the initial political negotiations might not have eliminated terrorism. When one is dealing with hard-bitten adversaries, some of whom see little personal advantage in a peaceful settlement, the risk is high that extremist elements will continue to use terrorism even if the mainstream has settled. However, under these circumstances, terrorism would be reduced to its criminal element. With the underlying grievances at least headed for resolution, the terrorism problem would assume manageable proportions.

[Top](#)

Conclusions

One of the hardest problems facing government officials dealing with terrorism is deciding when to employ what strategy. Negotiations with those perpetrating violence are not the solution to every problem; by the same token, many terrorist campaigns cannot be stopped by law enforcement actions alone. Many participants suggested a decisive factor determining the sufficiency of law enforcement activities is the support that the terrorist groups have among the populations in which they are based. Narrowly based terrorist groups can be rooted out, but groups that rely on a broad base of support (some of which can come from beyond a nation's borders) have a durability that may defy such efforts. For that reason, ethnically based groups may be harder to eliminate through force than class-based groups, since ethnicity has proven a stronger tie than class in most cases.

If negotiations are pursued, two conditions should be present. The first is that the government should enjoy a strong popular mandate. Political opponents often portray negotiating with terrorists as "giving in to terrorism." Such an attack can topple weak governments or, short of that, stymie whatever agreement has been reached through negotiations.

The second condition is that the terrorist organization is going through a period of self-evaluation. In such circumstances, the government may be able to successfully split off pragmatists from hard-line terrorists, bring the population along with the pragmatists, and dry up popular support for those continuing to pursue violence.

Throughout, participants stressed the importance of intelligence. In confronting terrorism, the nature of the grievance does matter, and the nature of the organization putting forth the grievance matters as well. Intelligence is important not only to prevent terrorist attacks but also to understand how the organization works and how its decision making processes can be affected.

A consistent theme in all of the presentations was the extent to which terrorism is an international problem. Money and weapons flow across borders, and supporters of terrorism (if not the terrorists themselves) often have established bases in other countries. Increasingly, law enforcement efforts aimed at stemming terrorism have an international component, and such a strategy will require more

international cooperation in the future.

About the Report

Political violence remains a serious threat to life in much of the world, and it can have a corrosive effect on the political processes that contribute to domestic and international peace. On April 12, 1999, the United States Institute of Peace, together with the British-based Airey Neave Trust, convened a working group meeting on the subject "How Terrorism Ends." The workshop, which attracted the participation of academic experts, current and former government officials, and security consultants, was conducted as an activity of the International Research Group on Political Violence, which the Institute co-sponsors with the Airey Neave Trust and which is chaired by the Rt. Hon. Sir Adam Butler.

Panelists at the workshop included:

Professor Martha Crenshaw, the John E. Andrus Professor of Government at Wesleyan University in Middletown, CT. She is the author of a number of works on political violence and terrorism and was co-editor of *The Encyclopedia of World*.

Professor Paul Wilkinson, professor of international relations and chairman of the Centre for the Study of Terrorism and Political Violence at the University of St. Andrews in Scotland. He is the author of several authoritative works on terrorism and political violence. His most recent book, *Terrorism and Liberal Democracy*, will be published shortly.

Jon B. Alterman, program officer in the United States Institute of Peace's Research and Studies Program, where he covers the Middle East. His most recent book is *New Media, New Politics? From Satellite Television to the Internet in the Arab World*.

Ambassador Teresita Schaffer, director of the South Asia Program at the Center for Strategic and International Studies. She is a thirty-year veteran of the Foreign Service and served as U.S. Ambassador to Sri Lanka from 1992 to 1995.

Institute President Richard H. Solomon moderated the meeting, which was attended by some forty authorities in the field of political violence. This report, written by Dr. Alterman with the help of former research assistant Sara Simon summarizes, the points made by the panelists.

About the United States Institute of Peace

The United States Institute of Peace is an independent, nonpartisan federal institution created by Congress to promote research, education, and training on the peaceful resolution of international conflicts. Established in 1984, the Institute meets its congressional mandate through an array of programs, including research grants, fellowships, professional training programs, conferences and workshops, library services, publications, and other educational activities. The Institute's Board of Directors is appointed by the President of the United States and confirmed by the Senate.

Press Briefing on Russian Diplomat Declared Persona Non Grata Washington, DC, December 9, 1999

U.S. Department of State

David Carpenter, Assistant Secretary for Diplomatic Security

And Neil J. Gallagher, Assistant Director in Charge of the FBI National Security Division

MR. FOLEY: Welcome to the State Department. Let me just note for the record, before we move to the subject matter at hand that we have scheduled a briefing for 11 o'clock on the State Department's release today of its Ethnic Cleansing in Kosovo Report. That may slip by a few minutes because we have pressing business at hand, but we need that to start by 11:15 so I'm going to try to bring this briefing to an end by about 11 o'clock, maybe 11:05, if some of you may need a few minutes, and we'll need to allow time to transition to the next briefing.

As to the purpose of this briefing, as you know, we announced last evening that a Russian diplomat has been declared persona non grata here in Washington. I would make a correction for the record. He was listed as a Second Secretary in the announcement. He is not a Second Secretary. He's an embassy employee enjoying diplomatic immunity of the embassy of the Russian Federation.

With us today are two gentlemen who have worked very closely together on this matter over the past period, namely Mr. Neil Gallagher, who is the Assistant Director of the FBI and Mr. David Carpenter, who is Assistant Secretary for Diplomatic Security here in the State Department. Assistant Secretary Carpenter will begin with brief remarks. Assistant Director Gallagher will also have brief opening remarks and then we will open the floor to your questions.

Obviously, the matter at hand is sensitive. It's a matter involving intelligence. It's a matter that is subject to ongoing investigation so there are inherent limits as to the degree of specificity with which they can answer your questions. But we felt it was opportune to give you an opportunity to ask those questions.

David.

ASSISTANT SECRETARY CARPENTER: As Jim said, I just want to read a brief statement, then Neil has some comments, then we'll answer your questions. Counter-intelligence agents of the FBI and the State Department's Diplomatic Security Service have worked jointly to neutralize this intelligence-gathering effort. This counter-intelligence operation could only have been accomplished through the cooperative efforts of these two outstanding organizations.

Secretary Albright takes this opportunity to acknowledge the superb investigative work of the FBI

throughout this operation. In the Secretary's view, the successful resolution of this case is a classic example of what can be accomplished when law enforcement agencies cooperate with each other.

This episode should be a stark reminder to all of us at government that, despite the thawing of tensions between competing nations, government facilities and personnel remain a desirable target for foreign intelligence services. This matter reinforces the Department's belief that its counter-intelligence program must remain a cornerstone of its overall security posture.

Neil.

ASSISTANT DIRECTOR GALLAGHER: Let me at the beginning also introduce Assistant Director Jimmy Carter from our Washington Field Office and, sitting off on the side, should be on the side, SAC Tim Caruso of our Washington Field Office responsible for counter-intelligence in Washington Field Office.

At a time when we talk about sensitive technologies and advancements, I want to tell you a story of a classic counter-intelligence investigation. This is also a story of very good street work by a group of professional surveillance team members assigned to Washington Field Office.

When you think of the FBI's counter-intelligence mission, our mission is to identify and to neutralize hostile intelligence service activity in the United States, and I would like to go back over the two main parts of this, identify and neutralize.

Back in the summer, several months ago, a Washington Field Office surveillance team on a routine surveillance, completely unrelated to this matter, made an observation. They made an observation that Stanislav Gusev was standing in the vicinity of State Department. And it took them as a little bit odd and they just remembered that very brief observation and came back and developed a surveillance strategy to determine if there was any significance to this, again, very brief observation.

Over a period of some time, what they identified was that on a rather frequent basis, each week, Mr. Gusev would show up in the vicinity of State Department, literally just walking around the surrounding street. They also noticed that his manner in parking his car and the way that he located it, where he located his car, was a little bit unusual and it suggested to them that this may take on some more significance.

We initiated some extensive coverage of Mr. Gusev. We also identified every time that he showed up in the area of Department of State. We documented his activity around the State Department and concluded at the time that this may, in fact, be some sort of a technical operation. That assumption was based upon the frequency of his presence around the State Department, his personal movement, and the activity surrounding his car.

Obviously, because of the association with the Department of State and the proximity of the Department

of State, it was necessary to then consider could there be a technical penetration in the State Department, and where could it be. It was literally attempting to find a needle in a haystack and to do so without compromising the investigation, without alerting unnecessarily all of the employees in State Department, so we began a technical survey utilizing very sophisticated, very sensitive, technical equipment and were able to locate what we believed to be a listening and transmittal device.

The goal was to clearly establish whether or not there was, in fact, a Russian intelligence service technical penetration of the Department of State. We left the device in place. We took steps to protect it. We took steps to minimize any loss that would result of its continued presence in State Department.

We also utilized the technical expertise of several different U.S. Government agencies to attempt to fully understand and to exploit this device while it remained within State Department. That led to the second part of the FBI's counter-intelligence program, the neutralization of the device and that is, in essence, what occurred yesterday.

Again, we needed and wanted to clearly establish that this was a Russian intelligence technical penetration and then stop it, and to prevent any further loss from Department of State. What this depended upon was one individual, and that's Mr. Gusev, to in fact show up at the vicinity of State Department. So as to the timing of when we would take this down, it was completely dependent upon him showing up at Department of State and, for the first time in a period of several days, that was December 8th.

At 11:34 a.m. yesterday morning, Mr. Gusev was detained by FBI and Diplomatic Security agents. He was transported to the Washington Field Office, arriving there at 11:50 a.m. After being informed that he claimed diplomatic immunity, at 1:32 p.m. I contacted the Russian embassy and informed them that we had an individual that was at our Washington Field Office who claimed to be both a Russian and a diplomat. I asked that they dispatch someone over to our Washington Field Office to confirm both events.

They did so. They called back at 1:56 p.m. and we made arrangements for them to arrive and identify themselves at our Washington Field Office. This occurred at 2:30 p.m. Two Russian embassy officials arrived at our Washington Field Office and by 2:39 p.m., we had turned Mr. Gusev over to their custody. At 5:10 p.m. last night, I was contacted by the Russian embassy confirming that, in fact, it was a diplomat assigned to the Russian embassy that was turned over to the two consular officials.

There are several parts of this investigation that I would now like to address and tell you about that remain outstanding. First of all, I should have said it at the beginning. Not only is this a classic counter-intelligence story, it is also a classic story of cooperation between the Diplomatic Security and the FBI. Because when we first made these observations several months ago, we came to Diplomatic Security, we came to them with a serious problem of a potential penetration within the State Department and the obvious difficulties of conducting this investigation in a covert manner to protect the investigation and be able to get to the ultimate resolution, and that is whether or not it was a Russian intelligence

penetration.

That demanded and received the fullest of cooperation between Diplomatic Security and the FBI and we were able to do that investigation without unnecessarily alerting the Russian intelligence service or the general public that we were conducting this investigation.

What remains is we need to fully understand how the device was introduced into State Department. With the Diplomatic Security we initiated a series of interviews and investigation yesterday in a more overt fashion immediately upon Mr. Gusev being detained, and not only are we conducting the investigation to understand how it was introduced, the second part of that is to do a damage assessment with Diplomatic Security as to what potentially could have been lost by the introduction of this device.

The last issue is a very obvious issue. We have recovered the device in State Department and will be doing a very extensive technical exploitation of that device to fully understand and appreciate it. Perhaps, in conclusion, a simple statement that this is not only a story of effective counter-intelligence and cooperation but it is also a very important story of the aggressive activity of Russian intelligence presence inside the United States. The fact remains that a foreign intelligence service introduced a device within Department of State on U.S. soil.

We'll entertain any questions.

Q: Could you tell us where the device was located? There have been reports that it was in a conference room.

ASSISTANT DIRECTOR GALLAGHER: Let me, because that is part of the ongoing investigation, it would be inappropriate for me to give the specific location of where the device was located, but perhaps Dave can address some other concerns because there has been some speculation as to where it could have been located that may help answer the question.

ASSISTANT SECRETARY CARPENTER: To further confuse you, what I'll try to do here is tell you where it wasn't. Some of the reports, that at least I read, was that it was in the Secretary's suite of offices, what we call our executive section. It clearly was not in that area or any other principal's office or suite of offices.

Q: Can you tell us what floor it was on, David?

ASSISTANT SECRETARY CARPENTER: Under the same provision that Mr. Gallagher just mentioned, I would prefer to not while this investigation is ongoing.

Q: Can you tell us where he was arrested, specifically what he was doing at the time?

ASSISTANT DIRECTOR GALLAGHER: Mr. Gusev had driven up to the vicinity of State

Department, had parked his car--based upon our understanding of his prior activity--, had activated some equipment, and had begun a collection operation within eyesight of Department of State, and it was at that point that we detained him.

Q: Mr. Gallagher, you say the timing of the arrest was dependent on the Russian's arrival. Are you saying that there is no connection then with the recent case in Moscow of the American diplomat?

ASSISTANT DIRECTOR GALLAGHER: Absolutely not. This was a long-term FBI investigation. What drove the decision to bring this investigation to closure was the need to ensure that there would be no continued loss of any information from Department of State. We were working against, on one side, allowing the Russian intelligence service to continue to attempt to collect information; at the same time, trying to clearly establish that this was a Russian operation.

Once I met my threshold, I had no reason to ask the Department of State or Diplomatic Security that we continue to allow this operation to continue. There was no other further intelligence benefit that I was going to get.

Q: Could you spell his last name, please?

ASSISTANT DIRECTOR GALLAGHER: It's in his statement.

Q: Mr. Carpenter, I wonder if you can tell us if DS is going to institute any additional security measures in the building, given that this appears to be a penetration inside the building itself.

ASSISTANT SECRETARY CARPENTER: First of all, let me just say that the method by which this penetration was accomplished is still under investigation so that's one thing that should be made very clear. As all of you should be aware that come to work here at this building every day, we are in the process right now and have been in the process for the last year and a half since I've been here of upgrading our security here, both our physical security and our technical systems, but to suggest that we are doing anything in addition to those upgrades would be wrong at this point.

Q: Can you tell us whether the timing of Mr. Gusev's arrival to activate the listening devices keyed to some knowledge of activities inside State that would suggest some sort of sophisticated knowledge of the operations inside the State Department? Can you tell us the make of the car and can you tell us whether when he was in the car he, you know, had headphones on or had a tape recorder going? Can you give us any kind of physical picture of what he was doing in the car?

ASSISTANT DIRECTOR GALLAGHER: A lot of questions. Let me try to answer them. First of all, your first question?

Q: Whether he had some knowledge of what was going on in State that keyed him to arrive at a certain time?

ASSISTANT DIRECTOR GALLAGHER: No. That was an issue that we looked at extensively because we asked ourselves many of the same questions that you're asking yourself. Our assessment was that he did not have inside information as to what was happening at the location where the device was located. It was somewhat sporadic coverage.

I don't have the exact description of his car and I would defer to, I guess, the Russian embassy if they want to provide that to you. The activity around his car, there was some activity that suggested that he was utilizing and adjusting technical equipment at various times. That was one of the developments that caused us to determine that, in fact, this appeared to be a technical collection operation.

I wouldn't want to go into other details because, obviously, we are continuing our evaluation of the technical equipment associated with this operation.

Q: You said that one of your concerns was obviously to prevent any further loss, which implies that you believe there certainly was a loss before that time. Can you give me an idea or an estimation of how long the device had been in place before you discovered it and also what kind of conversations generally take place in the room where it was discovered?

ASSISTANT SECRETARY CARPENTER: Again, the nature--and I think Jim said it early on before he introduced us--the nature of this type of investigation, counter-intelligence, really prohibits us discussing exactly those issues that you bring up. Those are under investigation. The answers will be made available but, at this point, we are not in a position to discuss those.

Q: (Inaudible) --about the device, or a year? Can you give us any sort of estimate?

ASSISTANT DIRECTOR GALLAGHER: We've known about the device for several months. And in direct response to your question, recognize that we have had the device for less than 24 hours so, as far as the full understanding of the length of time in the room, there are technical examinations which may begin to answer some of those questions. But you'll have to bear with us because we need to have a very sophisticated evaluation of that piece of equipment and we just need time.

Q: Is there a search underway for other potential devices?

ASSISTANT SECRETARY CARPENTER: That has already been accomplished. We expanded--we have a program here that deals with this type of issue. Once this device became known to us, we began a very, very aggressive sweep of our principals' offices in this building to ensure that there was not another device.

Q: Mr. Gallagher, you had said that there was a particularly aggressive presence of Russian intelligence in the United States. Could you give us some sense of the extent of that, the aggressiveness of that and how disturbing that is to the FBI?

ASSISTANT DIRECTOR GALLAGHER: I think this incident, by itself, sends a strong message that there is a very aggressive Russian intelligence presence operation inside the United States. That is an issue that the U.S. Government has and continues to be concerned about.

As to the numbers and extent, that is probably a larger issue that is beyond this particular operation. There have been some discussions concerning the Russian intelligence presence and I'm sure they'll continue, but it just points to the seriousness and the need for the FBI to maintain a very aggressive counter-intelligence program. I know, SAC Caruso will probably ask me to remind--he reminds me that we also need a very professional surveillance capability in and around the Washington, DC area and will probably ask me for more resources.

Q: (Inaudible) --technology changing, fast-moving, there is something that seems rather crude about the operation you have described in the sense that someone was walking around the building, parking a car, sitting right outside the State Department. Why would it be necessary to engage in this type of surveillance that could so obviously be discovered, as opposed to something, longer-range listening devices or like that?

ASSISTANT DIRECTOR GALLAGHER: The initial assessment, the equipment is very sophisticated.

Q: Recovered inside?

ASSISTANT DIRECTOR GALLAGHER: Right. We may describe his movements as crude. However, you've got to be careful here. It was effective.

What he did--think yourself of someone seeing someone sitting on a park bench outside State Department or along anywhere on these streets during the summer. Do you really take a second look at them? You had trained professionals that saw something different than what the ordinary citizen may see and it was the fact that they knew of him, knew him to be an intelligence officer and saw him sitting there that draws attention.

His activities, in itself, wouldn't have drawn unusual attention either by State Department or the ordinary citizen walking back, seeing someone walking up on a sunny day for an hour or so.

Q: The activities he was involved in were not actually listening but perhaps adjusting the device in some form or fashion?

ASSISTANT DIRECTOR GALLGHER: It would appear that.

Q: Can you confirm that Mr. Gusev was, in fact, arrested from a bench or was it from his car? And, secondly, you said that he was not a Second Secretary? What's his title? Do any of the State Department records reflect that he had access to the room in which the device was found?

MR. FOLEY: In terms of the title, I've been informed that he was referred to as an attache of the embassy. If that requires further refinement I'll get back to you later, but we just learned that before coming in.

Q: How long has he been in Washington?

ASSISTANT DIRECTOR GALLAGHER: Since March of this year.

Q: What about the bench? Was he arrested from a bench or from his car?

ASSISTANT DIRECTOR GALLAGHER: He was detained in the vicinity of his car.

Q: (Inaudible) --records of his access to the State Department, do you show that he was in the location where the device was found? Did he work with somebody else who may have had access and he monitored the device?

ASSISTANT SECRETARY CARPENTER: We're still going over those access records. To date, we don't show a record of him being in the building.

Q: Mr. Gallagher, your description of the device as still requiring more sophisticated analysis indicates that it's some sort of device you haven't seen before, if you could confirm that. And, secondly, since it seems to give sporadic coverage, did it have any recording capability and was putting out maybe voice-actuated bursts?

ASSISTANT DIRECTOR GALLAGHER: The device--I wouldn't want to characterize that we have not seen a device of that sophistication before. Using our engineering research facility, we are certainly going to afford it very extensive technical evaluation to understand its full capabilities.

The second part of your question?

Q: Whether it might have had some recording capability where the recordings picked up later when Gusev came.

ASSISTANT DIRECTOR GALLAGHER: We know that there were technical emanations coming out of State Department at the time that Mr. Gusev was in the vicinity. That would suggest that it's not a recording but it's a transmitter, but I wouldn't want to go any further than that.

Q: You talk about an aggressive program that you've had over the last year and a half to improve security and, yet, I'm wondering if you regularly sweep principals' offices and conference rooms for devices and, if so, how come you didn't pick this one up. And does that suggest that you need to improve your program?

ASSISTANT SECRETARY CARPENTER: The answer to your first question, do we regularly sweep, the answer to that is yes, we do--albeit, I would prefer not to get into where we do sweep and where we don't sweep, for obvious reasons. We are somewhat limited in our capabilities to be--I think you used the word "aggressive" or I used the word "aggressive" in this by our manpower. We do have limitations. This is a big building. So I don't want to understate the difficulty in doing something like this, but we have a program that ensures specific offices that we feel would be most vulnerable are, in fact, swept on a regular basis, on a reoccurring basis.

Q: A couple of small questions. You said you had an aggressive search for other devices. You didn't say whether you actually found any. Did you find any in this effort and how often do you find them on your other sweeps?

And then, also, I was wondering if you could give us an idea of how big this device was and where was it in the conference room, under a piece of furniture or whatever--something like that?

ASSISTANT SECRETARY CARPENTER: Your first part is have we found any other devices?

Q: In the search that was prompted by the discovery of this device and, secondly, how often do you find devices when you do these regular sweeps?

ASSISTANT SECRETARY CARPENTER: Clearly, if we found other devices we'd probably be meeting on a much more frequent basis. The answer is we have not. As a result of the search that was done after this device was discovered, we did not find other devices.

Again, it's an ongoing process. I might be--I might try to be brutally honest with you. There are some instances if a device were to be found, because of the investigative leads that would come out of that, it might take quite some time before it would be made public and we would not publish that fact that other devices had been found until that investigation had been, in this case, concluded.

Neil.

ASSISTANT DIRECTOR GALLAGHER: As to the size and disguise of the device, I mean, let's step around it just a little bit. It was an extremely sophisticated device and was professionally introduced into State Department. I would not want to go any further until we complete our full technical evaluation. It's just not slapped on here where we're looking at it. You would not--an ordinary person would not see it.

Q: So was it in a wall or a ceiling?

ASSISTANT DIRECTOR GALLAGHER: Again, I would not want to go any further until we complete - what began yesterday at noon, Diplomatic Security and the FBI was able, for the first time, to go

aggressively into an overt investigation to begin to understand how the device was introduced into State Department. We're less than 24 hours into the investigation. We need as much time as we can to begin to answer many of the questions that both you and I have.

Q: Two quick questions. Mr. Gallagher, can you tell us, you said that there was some pattern that he used parking his car. Can you tell us what this pattern was, or the strange way in which he parked his car?

ASSISTANT DIRECTOR GALLAGHER: Oh, his pattern?

Q: Yes. And also, if I may, how often were his visits around the building?

ASSISTANT DIRECTOR GALLAGHER: Okay. His pattern of activity was such that on times he would park his car, he would move his car around the block and come back to another location. It appeared to us that he was trying to position his car in an ideal location. It's not an observation that you see just on one visit or two visits. It comes over a period of time that you begin to see this repeated time and time again.

We also--as to the visits, they varied. He had several days of the week that he favored. Whenever he showed up, we knew it. He would go for periods of time that he would not come. So there was no unique pattern that either suggested he had inside information or was there a unique pattern that he always showed up on the same day, the same time. It was, again, the difficulty was developing this pattern over an extended period of time to fully understand it.

Q: Is this diplomatic license plates or plates that could identify him as a member of--

ASSISTANT DIRECTOR GALLAGHER: Yes, his car had diplomatic plates.

Q: Do you have any reason to believe that this was installed after he arrived in March or was it before March?

ASSISTANT DIRECTOR GALLAGHER: It's far too premature to even speculate. That's the whole focus of the Diplomatic Security-FBI investigation to understand how the device was introduced. And what's ongoing today in State Department, there are teams of FBI agents working with Diplomatic Security agents conducting interviews, reviewing records, trying to get an answer to that question.

(The briefing concluded at 11:05 A.M.)

Right-wing Extremist Activities on the Internet

März 1998

Comment:

The addresses of Internet sites used by extremists are not listed for obvious reasons. Attention is drawn to the fact that this report does not purport to be a comprehensive listing of right-wing extremist activities in Internet.

Contents

1. Introductory Remarks

- [1.1 Creation of Internet](#)
- [1.2 Internet as a means of communication](#)
- [1.3 Use of Internet by Extremists](#)
 - 1.3.1 Propaganda and communication
 - 1.3.2 Encryption and conspiracy

2. Right-wing extremist endeavours in Internet

- [2.1 Focal points](#)
- [2.2 Use of Internet to link the right-wing extremist scene](#)
- [2.3 Right-wing extremist mailboxes in Internet](#)
- [2.4 Right-wing extremist home pages in Germany](#)
 - 2.4.1 Neo-Nazi home pages
 - 2.4.2 Nationaldemokratische Partei Deutschlands (NPD)/Junge Nationaldemokraten (JN)
 - 2.4.3 Die Republikaner (REP)
 - 2.4.4 Die "Berlin-Brandenburger Zeitung" (BBZ)
- [2.5 Right-wing extremist homepages from abroad](#)
 - 2.5.1 The National Socialist German Workers' Party/ Foreign and Construction Organisation (NSDAP/AO)
 - 2.5.2 "Storm Front"
 - 2.5.3 Ernst ZÜNDEL
 - 2.5.4 Other revisionists
 - 2.5.5 Skinheads
 - 2.5.6 Other right-wing extremist organisations

3. Conclusion

1. Introductory Remarks

1.1 Creation of Internet

The basis for the creation of Internet was the establishment of the computer network "ARPANET" (Advanced Research Projects Agency Network) in the USA, which linked four computers together by means of new network software. In the ensuing period ARPANET served as a prototype for the development of additional computer networks, especially in the university and administrative fields. In 1982 a supra-regional data link system under the designation "Internet" came into being through the linking of various networks; since the early 1990s this has become more accessible to users through modern software products - in particular in the field of home personal computers - and the fall in price of software and hardware.

Today, Internet is a world-wide system linking computers and computer networks of the most varying kinds and consequently it is the largest data link system with more than 50 million linked equipments. These, however, are not all linked simultaneously to one another. It is estimated that at any one time more than three million computers are connected in on-line dialogue over 40,000 networks in more than 70 countries. Parallel to Internet, there exists a large number of national and international networks.

1.2 Internet as a means of communication

In contrast to other computer networks, Internet has no recognisable central unit - no "central computer" exists. Rather it consists of various processing units, so-called HOSTS, connected by a direct, permanent "fixed line" which, as a rule, are connected to individual networks. The connected computers and networks therefore work together to realise and maintain the Internet system. This decentralised structure has as a consequence that, with the loss of one line path for the transmission of data, a second, functioning path is chosen independently. Ultimately, this is a result of the military origin of Internet, where it was intended that any outside interference on the flow of data would be avoided as far as possible. This integrity intended at that time explains, on the other hand, the limited opportunity for control on Internet by state agencies.

The average Internet user generally acquires access to the net via a provider, who as the operator of one or more HOSTS offers access facilities and memory capacity (e.g. for operating a homepage) in Internet. Providers may also be online services such as CompuServe or America Online (AOL), if they in addition to offers of their own information and communications services also allow access to Internet. The type and extent of Internet access is governed by commercial providers through the type of contract

signed with the user. The extent to which a provider can influence Internet is limited of course only to its own computer or network.

In the recent past, Internet has crystallised into the medium of the "communications age", by means of which the individual can not only obtain almost unlimited information but is also able to communicate across frontiers worldwide. This opens social and economic perspectives of immense proportions. With the increase of computers in the home - with falling prices and simpler operation - the significance of Internet will increase considerably in the future.

1.3 Use of Internet by extremists

However, this positive trend is also associated with less agreeable attendant symptoms. The worldwide data network almost represents an "arbitrary area" in which the posting of criminal content cannot be effectively prevented or prosecuted under national law, and which allows an almost uncontrollable flow of information.

1.3.1 Propaganda and Communications

Thus, Internet offers extremists a welcome platform for the propagation of their anti-constitutional aims and concepts; extremists can reach a disproportionately larger public in comparison with conventional methods of propaganda (e.g. printed media, demonstrations). By surfing through the information on offer in Internet a person, who until then had not harboured any anti-constitutional thoughts, can - either by accident or on purpose - come across extremist content, which he would not have obtained through conventional means. Agreedly, the effectiveness of extremist propaganda is limited as far as the average Internet user is concerned. In isolated cases, however, an "extremist career" can have its origins in this way. Also included in Internet are detailed instructions for the construction of explosive and incendiary devices and other methods of sabotage. They are immediately available to all and sundry; by conventional methods access to such information would be extremely difficult. Internet therefore represents for extremists a qualitative big step forward in their opportunities. One may assume that these activities - in view of the described advantages of Internet as opposed to conventional media - will increase.

1.3.2. Encryption and Conspiracy

In the past, it has repeatedly been demonstrated how flexibly, target-orientatedly and professionally extremists have exploited the opportunities afforded by technology. As a consequence, the BfV is also concerned with the development of encryption technology and its use by extremists. Currently this problem does not play a major role. It is, however, to be expected that the use of cryptological items in the field of communications will be a foregone conclusion in the near future as a result of technological advances. Those very extremists would benefit to a great extent from the opportunity offered by encrypted communications inaccessible to the security authorities.

It must be fully realised that extremist content in Internet can only be successfully countered to a certain extent within the national framework. Internet is a universal medium, which in the end effect calls for an international solution, and this is improbable at present, given the differing legal considerations in individual countries.

Attention is drawn to the fact that this report does not represent any conclusive listing of right-wing extremist activities.

2. Right-wing extremist activities in Internet

2.1 Focal points

Since the middle of last year, German right-wing extremists have been making increased use of Internet, where the World Wide Web field (WWW) in particular is the main area of interest because of its creative opportunities. Whilst German right-wing extremists installed 30 homepages in Internet in 1996, the BfV today is aware of at least 90 homepages of German right-wing extremists. In addition, there are about 90 further homepages from European and about 150 from American right-wing extremists.

A large number of right-wing extremist groups of persons and individuals are in the meantime present in Internet with their own declarations. Right-wing extremist parties are represented even down to area and district association level. The number of homepages from right-wing extremist parties and sub-organisations has risen from 6 in 1996 to 40.

In recent months the visual and technical form of the homepages has also been improved. On the homepage of the party "Die Republikaner" (The Republicans - REP), for example, several sections can only be accessed by using a password.

The main emphasis in the homepages is placed on pertinent literature, propaganda material from home and abroad, information on right-wing extremist organisations, their postal addresses and telephone numbers, along with lists of additional Internet contents of right-wing extremist reference. Links offer the Internet user automatic connection to a considerable number of other right-wing extremist homepages. In individual cases, Internet has also been used for the mobilisation of the right-wing extremist scene. For example, the homepage of the Augsburg District Association of the "Nationaldemokratische Partei Deutschlands" (National Democratic Party of Germany - NPD) called for attendance at a demonstration in Nuremberg on 1 May 1997.

Commercial providers in Germany have already repeatedly banned homepages with a right-wing extremist content. As a consequence of this, right-wing extremist parties are now appearing as providers themselves (e.g. the NPD) and offer interested parties the opportunity of becoming involved in Internet with their assistance.

Information content entered into Internet by German right-wing extremists is generally so formulated

that the right-wing extremist basic attitude remains recognisable but allows no facet for legal action to be taken. Right-wing extremists wishing to disseminate criminal texts, on the other hand, make increasing use of providers abroad.

2.2 Use of Internet for linking the right-wing extremist scene

The use of modern communications media is an element of right-wing extremist strategy: right-wing extremists consider this compensation for their structural deficiencies. Right-wing extremists who are orientated towards an alliance especially are sanguine of being able to overcome the organisational divide in the right-wing scene through the use of these methods of communication. At a press conference in Munich on 27 March 1996, the Federal Chairman of the NPD, Udo VOIGT, even described the intensification of electronic networking and the increased use of the Internet communications system as one of the main political aims of the party.

In addition, right-wing extremists hope to be able to popularise right-wing extremist concepts especially with Internet. Thus, the right-wing extremist "Gesellschaft für Freie Publizistik e.V." (Society for Free Journalism - GFP) intends using Internet as a weapon against "Homogenizing, Falsification of History and Exclusion" (Gleichschaltung, Geschichtsfälschung und Ausgrenzung) ¹⁾.

Within the neo-Nazi scene the use of modern communications methods also has a strategic significance: As a consequence of the numerous state measures taken against right-wing extremist activities (especially the ban on associations), neo-Nazis are attempting to find new forms of action. Leading neo-Nazis work for the creation of new structures and push for the establishment of "autonomous" comradeships. In this way, loose structures free of any organisation are to be created instead of firm, association organisations. Their cohesion and coordination of nationwide actions is to be guaranteed through an "information network", i.e. the use of modern communications systems:

Nevertheless, there are indications that the strategy of "information networking" has not yet led to an improvement in the mobilisation and action capability within the neo-Nazi scene. Within the rest of the right-wing extremist spectrum was an organisational ideological network by no means achieved with the assistance afforded by Internet: as a result of the plethora of information on offer, Internet as a mobilisation instrument for demonstrations or actions is only suitable to a limited extent. Primarily, Internet is currently of use for information focusing. But here again, its use is limited, as Internet does not yet have global coverage within the right-wing extremist scene. Therefore Internet cannot yet be considered as the most important linking element within the right-wing extremist scene.

Right-wing extremists have also had as little success to date in establishing a mass base with the aid of modern communications methods. The fact that right-wing extremist propaganda can not only be distributed by traditional means but also via the new media has not effected any increasing acceptance of content outside the right-wing extremist scene. To date, texts in Internet, which had often been previously published by "conventional" methods, have not in any case contained any indication of new concepts within the right-wing extremist discourse.

2.3 Right-wing extremist Mailboxes in Internet

The mailbox multi-computer system "Thule Network", which has been in existence since spring 1993, offers the right-wing extremist scene the opportunity for a fast, screened exchange of information. In comparison to Internet, however, such mailbox networks pertaining to the scene only reach a limited circle of users. In addition, the mailboxes have only limited styling capabilities (they cannot have any graphic or acoustic content).

The integration of the mailbox contents into Internet on the other hand unites the advantages of both communications systems: For this reason the provider of the (former) "Thule Network" mailbox "Elias.BBS" introduced an Internet homepage in the WWW area in March 1996. Since June 1996, the "Thule Network" has its own domain (=address) in Internet.

The domain is operated through a provider in Canada and offers extensive written documents via the "Thule Network". In addition, it contains a large number of links to other right-wing extremist homepages. It is also possible to access commentaries on the encryption software "Pretty Good Privacy" (PGP). The "Thule Network" homepage is currently brought up to date by the user "Torwaechter" ["doorman"] via the Mailbox "Janus.BBS" located in Munich

After the barring of the mailboxes "Elias.BBS" and "Asgard.BBS" from the "Thule Network" in March 1997, their users joined together to form the "Nordland Network", which is represented with its own homepage as a sub-page of the domain of "Nationaler Widerstand"(National Resistance). In the meantime, "Elias.BBS" has returned to the "Thule Network" and has its own homepage in Internet.

2.4 Right-wing extremist homepages in Germany

Several right-wing extremist organisations and individuals represented in Internet are named here as examples:

2.4.1 Neo-Nazi homepages

In October 1996 the "**NIZ Verlag**" (**the Publishing House NIZ - "National Information Centre"**)²⁾ **Publishing House** under the designation "The Occident Project" (Das Abendland Projekt - DAP) established its own homepage in WWW. Recorded texts of the "Nationales Info-Telefon" (National Information Telephone" - NIT) Hamburg can be accessed through the homepage. In February 1997 NIT announced that the Provider "America Online"(AOL) had banned the homepage because of the spread of national socialist propaganda. Subsequently, the homepage could be accessed on AOL under the address "Oxzident" (Occident). Here again, AOL cancelled the membership on grounds of unacceptable homepage content. Since September 1997 a domain under the title "homepages of progressive Nationalists" has been in existence, which contains statements from NIT Hamburg and Schleswig-Holstein in addition to contents of the NIZ Publishing House and the publication "Progress". Moreover,

the user offers an online radio programme of about one hour under the designation "North-Rock-Radio".

Since February 1997 the right-wing extremist songsmith Frank RENNICKE has been running an Internet homepage with the title "Heimatseite" (Homepage: Songs for Family, Nation and Fatherland). RENNICKE introduces himself as a "national bard", "persecuted" and "patriotic songsmith". His ideal was the "flier for peace" and "longest-serving political prisoner of modern times", Rudolf Heß. Some songs can be accessed as sound data files. To preclude possible censorship of his homepage, RENNICKE has in the meantime had the same content published in the domain of the Swedish right-wing extremist "Nordland".

2.4.2 "Nationaldemokratische Partei Deutschlands"(National Democratic Party of Germany - NPD)

"Junge Nationaldemokraten (Young National Democrats - JN)

The NPD entered Internet with its own homepage in February 1996, which was created by a functionary from the Augsburg District Association. In a self-portrait, it is stated that contacts to kindred spirits are to be established via the homepage and the formation of political opinion within the national camp should be advanced.

On 20/21 July 1996 the NPD District Association in Augsburg held an "Internet Congress" under the title "Cooperation and Networking of the national groups participating in modern information technology". Primarily, the aim of the congress, at which operators of the "Thule Network" mailboxes and neo-Nazis were present, was the synchronisation of homepages in Internet. A further aspect was data encryption with PGP. Those attending the conference formed the "Arbeitskreis Internet der NPD und JN" (Internet Working Circle of the NPD and JN). The main role of the working circle is the introduction and coordination of "national Internet projects", providing assistance to new participants and carrying out training. The NPD was unsuccessful in its attempts to establish itself as the organisational control for the "Thule Network".

In July 1996, the NPD district association in Cologne also initiated a homepage. This was followed in September 1996 by the NPD state association of North Rhine-Westphalia, whose homepage was banned in December 1996 by the American provider AOL. AOL took this step to circumvent any damage to its reputation caused by right-wing extremist homepages. In the meantime, the homepage can be accessed through another address.

In early 1997, at the instigation of a sub-contractor - "Online Service" in Nuremberg, the provider "WWW-Service", located in the USA, cancelled the contract with the NPD for the appearance of a homepage. As a consequence, in February 1997, the NPD established its own domain in the WWW field, through which all homepages of the NPD and its associated organisation can be accessed through links. The purpose of the domain is, according to its own claims, to provide "comprehensive information on events in Germany from the national German viewpoint". Its establishment is not only a measure

taken by the NPD to improve its image promoted in the new media, but also to safeguard the party's Internet activities against action which may be taken by a provider. Worthy of note were the initial links established to the American homepages "Stormfront" and "The National Alliance", which, after accessing, also contained national socialist texts and emblems, and were later removed probably for legal considerations.

In 1997 additional homepages were established for the NPD and JN, for example, by the NPD Executive Committee, the JN Federal Committee and the JN State Association of Baden-Württemberg. Whereas sub-pages for the JN were included in the first NPD homepages, nowadays there are increasingly dedicated homepages for the JN. Information on the "Nationaldemokratische Hochschulbund" (National Democratic High School Union - NHB) can be accessed over a link to the "Thule Network" homepage.

Since mid-April 1997 the NPD appears in Internet as a service provider under the designation "NPD.net - National Provider Deutschlands - Das Deutsche Netzwerk" (Germany's National Provider - The German Network). In addition to Internet access, it also offers homepage storage and the opportunity to telephone over Internet. In this respect, it assumes the function of a provider and consequently a pioneer role in the right-wing extremist scene: By offering other right-wing extremists access to Internet, these are able to use Internet without having to fear a ban by the provider. In addition, the party has an additional source of income with slight financial risk.

2.4.3 "Die REPUBLIKANER" (The Republicans - REP)

The first Internet domain of the REP has been available for access since August 1996. The domain, for which the REP State Association of Lower Saxony is responsible, contains sub-pages of the Federal Association and the State Associations. There are also five additional REP domains in existence:

Details of these statements can be found on the following pages

- the domain of the District Association of Berlin-Neukölln, which offers information of State and Federal relevance on its pages;
- the domain introduced in April 1997 by the REP faction in the State Parliament of Baden-Württemberg which has rather a regional relevance;
- the main page of the Party which has no content of its own but shows links;
- the domain, no longer used since October 1997, of the State Association of Lower Saxony of mainly regional relevance.
- The domain of the State Association of Bavaria with contents of state and federal relevance, which was also established in 1997.

Since early 1997 the REP have considerably increased their activities in Internet. A large number of party members and functionaries have also established their own homepages.

In accordance with the policy of differentiation pursued by the party leadership towards other right-wing

extremist organisations, the REP refrain from links to other right-wing extremist homepages, although these do contain links to the Internet homepages of the REP. e.g. on the homepage of the "Thule Network".

2.4.4 Berlin-Brandenburger Zeitung (The "Berlin-Brandenburg Newspaper" BBZ)

In November 1997, the domain "Berlin-Brandenburg Newspaper for national Revival" was established, which, however, is less comprehensive than the printed versions. The main contents are the alleged state persecution of Nationalists and economic and social problems.

The masthead - as in the printed edition - gives Frank SCHWERDT as the publisher and Hans-Christian WENDT as chief editor.

2.5 Right-wing extremist homepages from abroad

German right-wing extremists can obtain in Internet right-wing extremist propaganda material, which is banned in Germany, quickly and without any problem when it was set up by fellow travellers abroad.

To circumvent prosecution in Germany, ever more German right-wing extremists - some of whom use pseudonyms - arrange for their homepages to be included via a provider abroad, especially in the USA and Canada. Whilst in 1996 only two homepages were operated by German right-wing extremists via foreign providers, today there are already ten. Of special mention are the homepages of the "Nationaler Widerstand" (National Resistance), "Adolf Hitler's Hass-Seiten" ("Adolf Hitler's Hate Pages"), the "WolfzerkersOi-88/14-Homepage" [sic] and the "InterNet Waffen SS", which disseminate seditious propaganda. On the homepage "Adolf Hitler's Hate Pages" produced in the USA, the propaganda runs

Consequently, I ask myself would the Jewish race exist at all today, if we had really executed 4,000,000 Jews during the Third Reich, I do not think so! Because in my opinion this figure is pure propaganda. Firstly, it must be proved that this figure is accurate. As far as I am concerned, it would have been alright if we had gassed all JEWS." (Text taken from the original)

The pages contain a considerable number of illustrated swastikas and deal with subjects such as "Adolf Hitler", "Heroes of the German Race" (forthcoming reports on Joseph Goebbels and Heinrich Himmler), "Anti Wops" [Kanaken - Turks], Jokes for Germans, against inferior [foreigners]" and "Anti Jews and anti foreigners".

A commentary on the computer game "Schutzstaffel 3D - Das Reich schlägt zurück" [SS 3 D - The Reich hits back], on offer until January 1998, states:

"A special train to Auschwitz is derailed. Many Jews have escaped and have armed themselves. Your difficult mission as an individual soldier of the SS is to liquidate the escaped Jews. No prisoners are to be taken. While you are at it, shoot the children of the Jews as well!"

By using a server abroad and a pseudonym, the operators consider themselves safe from prosecution in Germany for their aggressive, racist and anti-Semitic agitation. Increasingly, however, foreign right-wing extremists disseminate German language propaganda in Internet.

Thus, for example, since early October 1997, a German language homepage using the domain "National Journal" can be accessed using the same designation and containing extensive revisionist texts in German.

The domain is operated by Ahmed RAMI, a right-wing extremist resident in Sweden, using a US provider. RAMI is also the operator of an associated homepage in the same domain designated "Radio Islam", which contains articles in ten different languages.

Language used and the contents make the origin and aim of "Deutschland" [Germany] apparent and point towards the involvement of persons from the Federal Republic of Germany.

So you can read on the homepage "Starting it":

2.5.1 "Nationalsozialistische Deutsche Arbeiterpartei/Auslands- und Aufbauorganisation" (The National Socialist German Workers' Party/Foreign and Structure Organisation - NSDAP/AO)

The NSDAP/AO is led by the US neo-Nazi Gary Rex LAUCK and is based in Lincoln/ Nebraska.³⁾

In early July 1995, the NSDAP/AO publication "NS-Kampftruf" [National socialist Warcry] was published (No.113 of May-June 1995) for the first time on a newsboard in Internet. Initially, the NSDAP/AO published exclusively English texts through the provider AOL in the WWW field. In the meantime, it offers its own homepage through the American provider "Alpha",

The homepages accessible under the designations "The New Order" and "NSDAP/AO" contain National Socialist texts and symbols (including photographs of leading figures of the Third Reich) in addition to links to other right-wing extremist homepages, such as "Stormfront" and "The National Alliance". The Internet activities of the NSDAP/AO are primarily intended for American users; with the extension of the material on offer into several languages (German, English, French, Spanish) it is available to interested persons throughout the world. The German language version of the "NS Kampftruf" in the

WWW area first became available in November 1996.

The provider `Alpha' also offers links to other right-wing extremist homepages. On Alpha sub-pages are also instructions for the manufacture of bombs, e.g. "Making Plastic Explosives from bleach", "How to make a landmine/dynamite", "Nitroglycerine Recipe".

2.5.2 "Stormfront"

The homepage of the American mailbox "Stormfront" is an important instrument for the international network of right-wing extremists in Internet. By means of extensive links, it provides access to a considerable number of Internet pages.

The homepage contains right-wing extremist texts, "Internet mailing lists", pointers towards various pertinent "news groups" and mailbox addresses in the USA and Europe, some of which are accessible directly via links. Attention is also drawn to the "Thule Network". Some sub-pages contain pictures and graphics, the dissemination of which is forbidden in Germany (e.g. Nazi symbols). There are German and Spanish language areas within the homepage. German texts provide concrete support for political activities by right-wing extremists (e.g. "How to organise?", "The political deed").

2.5.3 Ernst ZÜNDEL

Ernst ZÜNDEL, the German revisionist living in Canada, is internationally considered to be one of the leading revisionists. For decades he has been disseminating right-wing extremist propaganda material through his "Samisdat Publishers Ltd" and other media, especially radio and television. Since spring 1995 he has also been represented in Internet with his homepage "Zündelsite" in the WWW area. After having to change providers, he could be contacted through the Internet page of the "Institute for Historical Review", but is once more available with his own homepage on Internet through another provider. He offers wide-ranging texts and illustrated documents as well as sound and video sequences.

At the end of September 1996 the Bundesprüfstelle für jugendgefährdende Schriften (Federal Examination Agency for Texts which could endanger Minors - BPjS) banned seven of the revisionist articles disseminated via the "Zündelsite"; these continue, however, to be accessible.

In October 1996 ZÜNDEL managed to obtain transmission time for his radio programme "Stimme der Freiheit" (Voice of Freedom) from a station in Kaliningrad (Russia). When the transmission of his (German language) programme was stopped after two weeks only, ZÜNDEL announced that he would in future offer his programmes via Internet.

2.5.4 Other Revisionists

In addition to ZÜNDEL other persons/organisations maintain homepages in WWW, which deal with revisionist subjects and are connected to one another through links, e.g.:

- the American "**Institute for Historical Review**" (IHR),
- the American "**Committee for Open Debate on the Holocaust**" (CODOH),
- the Australian "**Adelaide Institute**",
- the Belgian foundation "**Vrij Historisch Onderzoek**" (V.H.O.).

2.5.5 Skinheads

In the American domain "Hatewatch" access is available through links to five different Skinhead homepages in the USA and Great Britain and 17 record labels under the designation "White Power Music". "Hatewatch" describes itself as an organisation, which monitors the growing threat from (left-wing) "hate groups" in Internet. The five homepages contain offers of texts, photographs and music and order opportunities as well as a large number of links to other organisations.

One of these homepages - "New Jersey Skinheads" - contains a link to the "German National Socialist and Hammerskin Page" There the German Skinhead scene is described and German fan magazines of the "Hammerskins"⁴⁾ are on offer. It is written in English, in order - according to the operator - to enable them to reach more people throughout the world. In May 1997 a German language version was on offer for a time.

2.5.6 Other right-wing extremist Organisations

The homepage of the "**British National Party**" offers a series of links to "national" homepages in Europe and North America, in addition to a short self-portrayal and several English texts.

The "**Norwegian Patriot Page**" offers texts in English and Norwegian as well as links to nationalist organisations in Europe and North America, to revisionists, to the "Ku Klux Klan", to the American organisation "Christian Nationalists", to pagan sects and to two homepages with left-wing extremist content.

The homepage "**Radio Islam**" from Sweden contains Swedish, Norwegian, English, German, French, Italian, Russian, Arabic, Portuguese and Spanish texts with anti-Semitic content.

In **North America**, there exists a large number of homepages through which right-wing extremist concepts are disseminated. To a certain extent these can be assigned to political organisations. As far as Germany is concerned, to a great extent, they merely play a subordinate role. For example:

- US Parties

e.g.: "National Socialist White Peoples Party", "National Front", "Women for Aryan Unity", "National Socialist White Revolutionary Party";

- - Canadian Organisations/Mailboxes

e.g.: "Heritage Front", "Politically Incorrect BBS", "Digital Freedom BBS", "Canadian Patriots Network Homepage";

- - "Ku Klux Klan"

e.g.: "Knights of the Ku Klux Klan", "Ku Klux Klan, White Pride, Christian Identity", "Missouri Federation of Klans";

- - "Christian Identity Movement"

e.g.: "Aryan Nations/Church of Jesus Christ", "Christian identity Online WWW Page", "American Christian Nationalism";

- - "Militias"

e.g.: "Militia Page on WWW", "Frugal Squirrel's Militia Information Page", "Michigan Militia Corps".

3. Conclusion

In view of the significance of Internet for extremist organisations and individuals, the BfV is seriously involved with this problem within the framework of its legal competence. To this also belongs, as far as possible, comprehensive coverage and evaluation of data in Internet of extremist relevance. The BfV has also held discussions with providers in Germany in order to make them aware of activities and contents of relevance for the agencies for the Protection of the Constitution. As Internet also represents a "new medium" for the security authorities, a particularly close cooperation with these agencies is necessary to avoid information gaps and to remove common technical and practical difficulties when processing publications of security relevance in Internet. The BfV is fully integrated in this cooperation. Insofar as BfV is required to comment on the drafting of legislation on communications technology, it introduces the security interests of the agencies for the Protection of the Constitution, so that these agencies can carry out their role as laid down in the "Law on Cooperation between the Federal Republic and the States on Matters pertinent to the Protection of the Constitution and on the Federal Office for the Protection of the Consitution (Law on Federal Office for the Protection of the Constitution)" as effectively as possible.

1) Page 131, GFP "Minutes of Congress 1997" ..

2) The publishing house was established in June 1995 by a former functionary of the "Freiheitliche Deutsche Arbeiterpartei" (Liberal German Workers' Party) (FAP) and prominent activist of the "Norddeutsche Bewegung" (North German Movement).

3) At present LAUCK is serving a prison sentence in Germany for crimes including sedition.

4) The "Hammerskin" Movement which originates from the USA may be considered as a collective ideological movement with a partially national socialist conception. The "Hammerskins", whose logo - two crossed hammers - is intended to represent the power and strength of the white workers' movement, have an elitist, racist and partially national socialist world view. Their aim is the global unification of all white Skinheads into a "Hammerkin Nation". Since 1995 the "Hammerskin" Movement has experienced increased popularity especially in the Berlin area, Brandenburg and Baden-Württemberg.

[Return to Home](#)

[According to the Phrack editor, this is the complete manual, except that it is, of course, missing the NSA director's photo. According to subsequent investigation, it was found that the manual is indeed the real thing. NSA says it is not classified, but could only be officially obtained through Freedom of Information Act action. History of dissemination, according to Jeff Davis:

Chris Goggans received the NSA Employee's Manual anonymously in the mail. He digitized it and published it in Phrack. Grady ward found it there and posted it to Usenet. The NSA called him to find out where he got it.

At that point, Jeff Davis mass mailed it to all the media contact email addresses listed in Adam Gaffin's "EFF's Guide to the Internet".]

"NSA says it is not classified"... Therefore I don't see why I shouldn't have put it here.

SECURITY GUIDELINES

This handbook is designed to introduce you to some of the basic security principles and procedures with which all NSA employees must comply. It highlights some of your security responsibilities, and provides guidelines for answering questions you may be asked concerning your association with this Agency. Although you will be busy during the forthcoming weeks learning your job, meeting co-workers, and becoming accustomed to a new work environment, you are urged to become familiar with the security information contained in this handbook. Please note that a listing of telephone numbers is provided at the end of this handbook should you have any questions or concerns.

INTRODUCTION

In joining NSA you have been given an opportunity to participate in the activities of one of the most important intelligence organizations of the United States Government. At the same time, you have also assumed a trust which carries with it a most important individual responsibility-the safeguarding of sensitive information vital to the security of our nation.

While it is impossible to estimate in actual dollars and cents the value of the work being conducted by this Agency, the information to which you will have access at NSA is without question critically important to the defense of the United States. Since this information may be useful only if it is kept secret, it requires a very special measure of protection. The specific nature of this protection is set forth in various Agency security regulations and directives. The total NSA Security Program, however, extends beyond these regulations. It is based upon the concept that security begins as a state of mind. The program is designed to develop an appreciation of the need to protect information vital to the national defense, and to foster the development of a level of awareness which will make security more

than routine compliance with regulations.

At times, security practices and procedures cause personal inconvenience. They take time and effort and on occasion may make it necessary for you to voluntarily forego some of your usual personal prerogatives. But your compensation for the inconvenience is the knowledge that the work you are accomplishing at NSA, within a framework of sound security practices, contributes significantly to the defense and continued security of the United States of America.

I extend to you my very best wishes as you enter upon your chosen career or assignment with NSA.

Philip T. Pease
Director of Security

INITIAL SECURITY RESPONSIBILITIES

ANONYMITY

Perhaps one of the first security practices with which new NSA personnel should become acquainted is the practice of anonymity. In an open society such as ours, this practice is necessary because information which is generally available to the public is available also to hostile intelligence. Therefore, the Agency mission is best accomplished apart from public attention. Basically, anonymity means that NSA personnel are encouraged not to draw attention to themselves nor to their association with this Agency. NSA personnel are also cautioned neither to confirm nor deny any specific questions about NSA activities directed to them by individuals not affiliated with the Agency.

The ramifications of the practice of anonymity are rather far reaching, and its success depends on the cooperation of all Agency personnel. Described below you will find some examples of situations that you may encounter concerning your employment and how you should cope with them. Beyond the situations cited, your judgement and discretion will become the deciding factors in how you respond to questions about your employment.

ANSWERING QUESTIONS ABOUT YOUR EMPLOYMENT

Certainly, you may tell your family and friends that you are employed at or assigned to the National Security Agency. There is no valid reason to deny them this information. However, you may not disclose to them any information concerning specific aspects of the Agency's mission, activities, and organization. You should also ask them not to publicize your association with NSA.

Should strangers or casual acquaintances question you about your place of employment, an appropriate reply would be that you work for the Department of Defense. If questioned further as to where you are employed within the Department of Defense, you may reply, "NSA." When you inform someone that

you work for NSA (or the Department of Defense) you may expect that the next question will be, "What do you do?" It is a good idea to anticipate this question and to formulate an appropriate answer. Do not act mysteriously about your employment, as that would only succeed in drawing more attention to yourself.

If you are employed as a secretary, engineer, computer scientist, or in a clerical, administrative, technical, or other capacity identifiable by a general title which in no way indicates how your talents are being applied to the mission of the Agency, it is suggested that you state this general title. If you are employed as a linguist, you may say that you are a linguist, if necessary. However, you should not indicate the specific language(s) with which you are involved.

The use of service specialty titles which tend to suggest or reveal the nature of the Agency's mission or specific aspects of their work. These professional titles, such as cryptanalyst, signals collection officer, and intelligence research analyst, if given verbatim to an outsider, would likely generate further questions which may touch upon the classified aspects of your work. Therefore, in conversation with outsiders, it is suggested that such job titles be generalized. For example, you might indicate that you are a "research analyst." You may not, however, discuss the specific nature of your analytic work.

ANSWERING QUESTIONS ABOUT YOUR AGENCY TRAINING

During your career or assignment at NSA, there is a good chance that you will receive some type of job-related training. In many instances the nature of the training is not classified. However, in some situations the specialized training you receive will relate directly to sensitive Agency functions. In such cases, the nature of this training may not be discussed with persons outside of this Agency.

If your training at the Agency includes language training, your explanation for the source of your linguistic knowledge should be that you obtained it while working for the Department of Defense. You should not draw undue attention to your language abilities, and you may not discuss how you apply your language skill at the Agency.

If you are considering part-time employment which requires the use of language or technical skills similar to those required for the performance of your NSA assigned duties, you must report (in advance) the anticipated part-time work through your Staff Security Officer (SSO) to the Office of Security's Clearance Division (M55).

VERIFYING YOUR EMPLOYMENT

On occasion, personnel must provide information concerning their employment to credit institutions in connection with various types of applications for credit. In such situations you may state, if you are a civilian employee, that you are employed by NSA and indicate your pay grade or salary. Once again, generalize your job title. If any further information is desired by persons or firms with whom you may be dealing, instruct them to request such information by correspondence addressed to: Director of Civilian Personnel, National Security Agency, Fort George G. Meade, Maryland 20755- 6000. Military

personnel should use their support group designator and address when indicating their current assignment.

If you contemplate leaving NSA for employment elsewhere, you may be required to submit a resume/ job application, or to participate in extensive employment interviews. In such circumstances, you should have your resume reviewed by the Classification Advisory Officer (CAO) assigned to your organization. Your CAO will ensure that any classified operational details of your duties have been excluded and will provide you with an unclassified job description. Should you leave the Agency before preparing such a resume, you may develop one and send it by registered mail to the NSA/CSS Information Policy Division (Q43) for review. Remember, your obligation to protect sensitive Agency information extends beyond your employment at NSA.

THE AGENCY AND PUBLIC NEWS MEDIA

From time to time you may find that the agency is the topic of reports or articles appearing in public news media-newspapers, magazines, books, radio and TV. The NSA/CSS Information Policy Division (Q43) represents the Agency in matters involving the press and other media. This office serves at the Agency's official media center and is the Director's liaison office for public relations, both in the community and with other government agencies. The Information Policy Division must approve the release of all information for and about NSA, its mission, activities, and personnel. In order to protect the aspects of Agency operations, NSA personnel must refrain from either confirming or denying any information concerning the Agency or its activities which may appear in the public media. If you are asked about the activities of NSA, the best response is "no comment." You should the notify Q43 of the attempted inquiry. For the most part, public references to NSA are based upon educated guesses. The Agency does not normally make a practice of issuing public statements about its activities.

GENERAL RESPONSIBILITIES

ESPIONAGE AND TERRORISM

During your security indoctrination and throughout your NSA career you will become increasingly aware of the espionage and terrorist threat to the United States. Your vigilance is the best single defense in protecting NSA information, operations, facilities and people. Any information that comes to your attention that suggests to you the existence of, or potential for, espionage or terrorism against the U.S. or its allies must be promptly reported by you to the Office of Security.

There should be no doubt in your mind about the reality of the threats. You are now affiliated with the most sensitive agency in government and are expected to exercise vigilance and common sense to protect NSA against these threats.

CLASSIFICATION

Originators of correspondence, communications, equipment, or documents within the Agency are responsible for ensuring that the proper classification, downgrading information and, when appropriate, proper caveat notations are assigned to such material. (This includes any handwritten notes which contain classified information).

The three levels of classification are Confidential, Secret and Top Secret. The NSA Classification Manual should be used as guidance in determining proper classification. If after review of this document you need assistance, contact the Classification Advisory Officer (CAO) assigned to your organization, or the Information Policy Division (Q43).

NEED-TO-KNOW

Classified information is disseminated only on a strict "need-to-know" basis. The "need-to-know" policy means that classified information will be disseminated only to those individuals who, in addition to possessing a proper clearance, have a requirement to know this information in order to perform their official duties (need-to-know). No person is entitled to classified information solely by virtue of office, position, rank, or security clearance.

All NSA personnel have the responsibility to assert the "need-to-know" policy as part of their responsibility to protect sensitive information. Determination of "need-to-know" is a supervisory responsibility. This means that if there is any doubt in your mind as to an individual's "need-to-know," you should always check with your supervisor before releasing any classified material under your control.

FOR OFFICIAL USE ONLY

Separate from classified information is information or material marked "FOR OFFICIAL USE ONLY" (such as this handbook). This designation is used to identify that official information or material which, although unclassified, is exempt from the requirement for public disclosure of information concerning government activities and which, for a significant reason, should not be given general circulation. Each holder of "FOR OFFICIAL USE ONLY" (FOUO) information or material is authorized to disclose such information or material to persons in other departments or agencies of the Executive and Judicial branches when it is determined that the information or material is required to carry out a government function. The recipient must be advised that the information or material is not to be disclosed to the general public. Material which bears the "FOR OFFICIAL USE ONLY" caveat does not come under the regulations governing the protection of classified information. The unauthorized disclosure of information marked "FOR OFFICIAL USE ONLY" does not constitute an unauthorized

disclosure of classified defense information. However, Department of Defense and NSA regulations prohibit the unauthorized disclosure of information designated "FOR OFFICIAL USE ONLY." Appropriate administrative action will be taken to determine responsibility and to apply corrective and/or disciplinary measures in cases of unauthorized disclosure of information which bears the "FOR OFFICIAL USE ONLY" caveat. Reasonable care must be exercised in limiting the dissemination of "FOR OFFICIAL USE ONLY" information. While you may take this handbook home for further study, remember that it does contain "FOR OFFICIAL USE ONLY" information which should be protected.

PREPUBLICATION REVIEW

All NSA personnel (employees, military assignees, and contractors) must submit for review any planned articles, books, speeches, resumes, or public statements that may contain classified, classifiable, NSA-derived, or unclassified protected information, e.g., information relating to the organization, mission, functions, or activities of NSA. Your obligation to protect this sensitive information is a lifetime one. Even when you resign, retire, or otherwise end your affiliation with NSA, you must submit this type of material for prepublication review. For additional details, contact the Information Policy Division (Q43) for an explanation of prepublication review procedures.

PERSONNEL SECURITY RESPONSIBILITIES

Perhaps you can recall your initial impression upon entering an NSA facility. Like most people, you probably noticed the elaborate physical security safeguards—fences, concrete barriers, Security Protective Officers, identification badges, etc. While these measures provide a substantial degree of protection for the information housed within our buildings, they represent only a portion of the overall Agency security program. In fact, vast amounts of information leave our facilities daily in the minds of NSA personnel, and this is where our greatest vulnerability lies. Experience has indicated that because of the vital information we work with at NSA, Agency personnel may become potential targets for hostile intelligence efforts. Special safeguards are therefore necessary to protect our personnel. Accordingly, the Agency has an extensive personnel security program which establishes internal policies and guidelines governing employee conduct and activities. These policies cover a variety of topics, all of which are designed to protect both you and the sensitive information you will gain through your work at NSA.

ASSOCIATION WITH FOREIGN NATIONALS

As a member of the U.S. Intelligence Community and by virtue of your access to sensitive information, you are a potential target for hostile intelligence activities carried out by or on behalf of citizens of

foreign countries. A policy concerning association with foreign nationals has been established by the Agency to minimize the likelihood that its personnel might become subject to undue influence or duress or targets of hostile activities through foreign relationships.

As an NSA affiliate, you are prohibited from initiating or maintaining associations (regardless of the nature and degree) with citizens or officials of communist-controlled, or other countries which pose a significant threat to the security of the United States and its interests. A comprehensive list of these designated countries is available from your Staff Security Officer or the Security Awareness Division. Any contact with citizens of these countries, no matter how brief or seemingly innocuous, must be reported as soon as possible to your Staff Security Officer (SSO). (Individuals designated as Staff Security Officers are assigned to every organization; a listing of Staff Security Officers can be found at the back of this handbook).

Additionally, close and continuing associations with any non-U.S. citizens which are characterized by ties of kinship, obligation, or affection are prohibited. A waiver to this policy may be granted only under the most exceptional circumstances when there is a truly compelling need for an individual's services or skills and the security risk is negligible.

In particular, a waiver must be granted in advance of a marriage to or cohabitation with a foreign national in order to retain one's access to NSA information. Accordingly, any intent to cohabit with or marry a non-U.S. citizen must be reported immediately to your Staff Security Officer. If a waiver is granted, future reassignments both at headquarters and overseas may be affected.

The marriage or intended marriage of an immediate family member (parents, siblings, children) to a foreign national must also be reported through your SSO to the Clearance Division (M55).

Casual social associations with foreign nationals (other than those of the designated countries mentioned above) which arise from normal living and working arrangements in the community usually do not have to be reported. During the course of these casual social associations, you are encouraged to extend the usual social amenities. Do not act mysteriously or draw attention to yourself (and possibly to NSA) by displaying an unusually wary attitude.

Naturally, your affiliation with the Agency and the nature of your work should not be discussed. Again, you should be careful not to allow these associations to become close and continuing to the extent that they are characterized by ties of kinship, obligation, or affection.

If at any time you feel that a "casual" association is in any way suspicious, you should report this to your Staff Security Officer immediately. Whenever any doubt exists as to whether or not a situation should be reported or made a matter of record, you should decide in favor of reporting it. In this way, the situation can be evaluated on its own merits, and you can be advised as to your future course of action.

CORRESPONDENCE WITH FOREIGN NATIONALS

NSA personnel are discouraged from initiating correspondence with individuals who are citizens of foreign countries. Correspondence with citizens of communist-controlled or other designated countries is prohibited. Casual social correspondence, including the "penpal" variety, with other foreign acquaintances is acceptable and need not be reported. If, however, this correspondence should escalate

in its frequency or nature, you should report that through your Staff Security Officer to the Clearance Division (M55).

EMBASSY VISITS

Since a significant percentage of all espionage activity is known to be conducted through foreign embassies, consulates, etc., Agency policy discourages visits to embassies, consulates or other official establishments of a foreign government. Each case, however, must be judged on the circumstances involved. Therefore, if you plan to visit a foreign embassy for any reason (even to obtain a visa), you must consult with, and obtain the prior approval of, your immediate supervisor and the Security Awareness Division (M56).

AMATEUR RADIO ACTIVITIES

Amateur radio (ham radio) activities are known to be exploited by hostile intelligence services to identify individuals with access to classified information; therefore, all licensed operators are expected to be familiar with NSA/CSS Regulation 100-1, "Operation of Amateur Radio Stations" (23 October 1986). The specific limitations on contacts with operators from communist and designated countries are of particular importance. If you are an amateur radio operator you should advise the Security Awareness Division (M56) of your amateur radio activities so that detailed guidance may be furnished to you.

UNOFFICIAL FOREIGN TRAVEL

In order to further protect sensitive information from possible compromise resulting from terrorism, coercion, interrogation or capture of Agency personnel by hostile nations and/or terrorist groups, the Agency has established certain policies and procedures concerning unofficial foreign travel. All Agency personnel (civilian employees, military assignees, and contractors) who are planning unofficial foreign travel must have that travel approved by submitting a proposed itinerary to the Security Awareness Division (M56) at least 30 working days prior to their planned departure from the United States. Your itinerary should be submitted on Form K2579 (Unofficial Foreign Travel Request). This form provides space for noting the countries to be visited, mode of travel, and dates of departure and return. Your immediate supervisor must sign this form to indicate whether or not your proposed travel poses a risk to the sensitive information, activities, or projects of which you may have knowledge due to your current assignment.

After your supervisor's assessment is made, this form should be forwarded to the Security Awareness Director (M56). Your itinerary will then be reviewed in light of the existing situation in the country or countries to be visited, and a decision for approval or disapproval will be based on this assessment. The

purpose of this policy is to limit the risk of travel to areas of the world where a threat may exist to you and to your knowledge of classified Agency activities.

In this context, travel to communist-controlled and other hazardous activity areas is prohibited. A listing of these hazardous activity areas is prohibited. A listing of these hazardous activity areas can be found in Annex A of NSA/CSS Regulation No. 30-31, "Security Requirements for Foreign Travel" (12 June 1987). From time to time, travel may also be prohibited to certain areas where the threat from hostile intelligence services, terrorism, criminal activity or insurgency poses an unacceptable risk to Agency employees and to the sensitive information they possess. Advance travel deposits made without prior agency approval of the proposed travel may result in financial losses by the employee should the travel be disapproved, so it is important to obtain approval prior to committing yourself financially. Questions regarding which areas of the world currently pose a threat should be directed to the Security Awareness Division (M56).

Unofficial foreign travel to Canada, the Bahamas, Bermuda, and Mexico does not require prior approval, however, this travel must still be reported using Form K2579. Travel to these areas may be reported after the fact.

While you do not have to report your foreign travel once you have ended your affiliation with the Agency, you should be aware that the risk incurred in travelling to certain areas, from a personal safety and/or counterintelligence standpoint, remains high. The requirement to protect the classified information to which you have had access is a lifetime obligation.

MEMBERSHIP IN ORGANIZATIONS

Within the United States there are numerous organizations with memberships ranging from a few to tens of thousands. While you may certainly participate in the activities of any reputable organization, membership in any international club or professional organization/activity with foreign members should be reported through your Staff Security Officer to the Clearance Division (M55). In most cases there are no security concerns or threats to our employees or affiliates. However, the Office of Security needs the opportunity to research the organization and to assess any possible risk to you and the information to which you have access.

In addition to exercising prudence in your choice of organizational affiliations, you should endeavor to avoid participation in public activities of a conspicuously controversial nature because such activities could focus undesirable attention upon you and the Agency. NSA employees may, however, participate in bona fide public affairs such as local politics, so long as such activities do not violate the provisions of the statutes and regulations which govern the political activities of all federal employees. Additional information may be obtained from your Personnel Representative.

CHANGES IN MARITAL STATUS/COHABITATION/NAMES

All personnel, either employed by or assigned to NSA, must advise the Office of Security of any changes in their marital status (either marriage or divorce), cohabitation arrangements, or legal name changes. Such changes should be reported by completing NSA Form G1982 (Report of Marriage/Marital Status Change/Name Change), and following the instructions printed on the form.

USE AND ABUSE OF DRUGS

It is the policy of the National Security Agency to prevent and eliminate the improper use of drugs by Agency employees and other personnel associated with the Agency. The term "drugs" includes all controlled drugs or substances identified and listed in the Controlled Substances Act of 1970, as amended, which includes but is not limited to: narcotics, depressants, stimulants, cocaine, hallucinogens and cannabis (marijuana, hashish, and hashish oil). The use of illegal drugs or the abuse of prescription drugs by persons employed by, assigned or detailed to the Agency may adversely affect the national security; may have a serious damaging effect on the safety and the safety of others; and may lead to criminal prosecution. Such use of drugs either within or outside Agency controlled facilities is prohibited.

PHYSICAL SECURITY POLICIES

The physical security program at NSA provides protection for classified material and operations and ensures that only persons authorized access to the Agency's spaces and classified material are permitted such access. This program is concerned not only with the Agency's physical plant and facilities, but also with the internal and external procedures for safeguarding the Agency's classified material and activities. Therefore, physical security safeguards include Security Protective Officers, fences, concrete barriers, access control points, identification badges, safes, and the compartmentalization of physical spaces. While any one of these safeguards represents only a delay factor against attempts to gain unauthorized access to NSA spaces and material, the total combination of all these safeguards represents a formidable barrier against physical penetration of NSA. Working together with personnel security policies, they provide "security in depth."

The physical security program depends on interlocking procedures. The responsibility for carrying out many of these procedures rests with the individual. This means you, and every person employed by, assign, or detailed to the Agency, must assume the responsibility for protecting classified material. Included in your responsibilities are: challenging visitors in operational areas; determining "need-to-know;" limiting classified conversations to approved areas; following established locking and checking procedures; properly using the secure and non-secure telephone systems; correctly wrapping and packaging classified data for transmittal; and placing classified waste in burn bags.

THE NSA BADGE

Even before you enter an NSA facility, you have a constant reminder of security-the NSA badge. Every person who enters an NSA installation is required to wear an authorized badge. To enter most NSA facilities your badge must be inserted into an Access Control Terminal at a building entrance and you must enter your Personal Identification Number (PIN) on the terminal keyboard. In the absence of an Access Control Terminal, or when passing an internal security checkpoint, the badge should be held up for viewing by a Security Protective Officer. The badge must be displayed at all times while the individual remains within any NSA installation.

NSA Badges must be clipped to a beaded neck chain. If necessary for the safety of those working in the area of electrical equipment or machinery, rubber tubing may be used to insulate the badge chain. For those Agency personnel working in proximity to other machinery or equipment, the clip may be used to attach the badge to the wearer's clothing, but it must also remain attached to the chain.

After you leave an NSA installation, remove your badge from public view, thus avoiding publicizing your NSA affiliation. Your badge should be kept in a safe place which is convenient enough to ensure that you will be reminded to bring it with you to work. A good rule of thumb is to afford your badge the same protection you give your wallet or your credit cards. DO NOT write your Personal Identification Number on your badge. If you plan to be away from the Agency for a period of more than 30 days, your badge should be left at the main Visitor Control Center which services your facility.

Should you lose your badge, you must report the facts and circumstances immediately to the Security Operations Center (SOC) (963-3371s/688-6911b) so that your badge PIN can be deactivated in the Access Control Terminals. In the event that you forget your badge when reporting for duty, you may obtain a "non-retention" Temporary Badge at the main Visitor Control Center which serves your facility after a co-worker personally identifies you and your clearance has been verified.

Your badge is to be used as identification only within NSA facilities or other government installations where the NSA badge is recognized. Your badge should never be used outside of the NSA or other government facilities for the purpose of personal identification. You should obtain a Department of Defense identification card from the Civilian Welfare Fund (CWF) if you need to identify yourself as a government employee when applying for "government discounts" offered at various commercial establishments.

Your badge color indicates your particular affiliation with NSA and your level of clearance. Listed below are explanations of the badge colors you are most likely to see:

| | |
|----------------------|---|
| Green (*) | Fully cleared NSA employees and certain military assignees. |
| Orange (*) (or Gold) | Fully cleared representative of other government agencies. |
| Black (*) | Fully cleared contractors or consultants. |
| | |

| | |
|------|--|
| Blue | Employees who are cleared to the SECRET level while awaiting completion of their processing for full (TS/SI) clearance. These Limited Interim Clearance (LIC) employees are restricted to certain activities while inside a secure area. |
| Red | Clearance level is not specified, so assume the holder is uncleared. |

* - Fully cleared status means that the person has been cleared to the Top Secret (TS) level and indoctrinated for Special Intelligence (SI).

All badges with solid color backgrounds (permanent badges) are kept by individuals until their NSA employment or assignment ends. Striped badges ("non-retention" badges) are generally issued to visitors and are returned to the Security Protective Officer upon departure from an NSA facility.

AREA CONTROL

Within NSA installations there are generally two types of areas, Administrative and Secure. An Administrative Area is one in which storage of classified information is not authorized, and in which discussions of a classified nature are forbidden. This type of area would include the corridors, restrooms, cafeterias, visitor control areas, credit union, barber shop, and drugstore. Since uncleared, non-NSA personnel are often present in these areas, all Agency personnel must ensure that no classified information is discussed in an Administrative Area.

Classified information being transported within Agency facilities must be placed within envelopes, folders, briefcases, etc. to ensure that its contents or classification markings are not disclosed to unauthorized persons, or that materials are not inadvertently dropped enroute.

The normal operational work spaces within an NSA facility are designated Secure Areas. These areas are approved for classified discussions and for the storage of classified material. Escorts must be provided if it is necessary for uncleared personnel (repairmen, etc.) to enter Secure Areas, and all personnel within the areas must be made aware of the presence of uncleared individuals. All unknown, unescorted visitors to Secure Areas should be immediately challenged by the personnel within the area, regardless of the visitors' clearance level (as indicated by their badge color).

The corridor doors of these areas must be locked with a deadbolt and all classified information in the area must be properly secured after normal working hours or whenever the area is unoccupied. When storing classified material, the most sensitive material must be stored in the most secure containers. Deadbolt keys for doors to these areas must be returned to the key desk at the end of the workday.

For further information regarding Secure Areas, consult the Physical Security Division (M51) or your staff Security Officer.

ITEMS TREATED AS CLASSIFIED

For purposes of transportation, storage and destruction, there are certain types of items which must be treated as classified even though they may not contain classified information. Such items include carbon paper, vu-graphs, punched machine processing cards, punched paper tape, magnetic tape, computer floppy disks, film, and used typewriter ribbons. This special treatment is necessary since a visual examination does not readily reveal whether the items contain classified information.

PROHIBITED ITEMS

Because of the potential security or safety hazards, certain items are prohibited under normal circumstances from being brought into or removed from any NSA installation.

These items have been grouped into two general classes. Class I prohibited items are those which constitute a threat to the safety and security of NSA/CSS personnel and facilities. Items in this category include:

- a. Firearms and ammunition
- b. Explosives, incendiary substances, radioactive materials, highly volatile materials, or other hazardous materials
- c. Contraband or other illegal substances
- d. Personally owned photographic or electronic equipment including microcomputers, reproduction or recording devices, televisions or radios.

Prescribed electronic medical equipment is normally not prohibited, but requires coordination with the Physical Security Division (M51) prior to being brought into any NSA building.

Class II prohibited items are those owned by the government or contractors which constitute a threat to physical, technical, or TEMPEST security. Approval by designated organizational officials is required before these items can be brought into or removed from NSA facilities. Examples are:

- a. Transmitting and receiving equipment
- b. Recording equipment and media
- c. Telephone equipment and attachments
- d. Computing devices and terminals
- e. Photographic equipment and film

A more detailed listing of examples of Prohibited Items may be obtained from your Staff Security Officer or the Physical Security Division (M51).

Additionally, you may realize that other seemingly innocuous items are also restricted and should not be brought into any NSA facility. Some of these items pose a technical threat; others must be treated as restricted since a visual inspection does not readily reveal whether they are classified. These items

include:

- a. Negatives from processed film; slides; vu-graphs
- b. Magnetic media such as floppy disks, cassette tapes, and VCR videotapes
- c. Remote control devices for telephone answering machines
- d. Pagers

EXIT INSPECTION

As you depart NSA facilities, you will note another physical security safeguard—the inspection of the materials you are carrying. This inspection of your materials, conducted by Security Protective Officers, is designed to preclude the inadvertent removal of classified material. It is limited to any articles that you are carrying out of the facility and may include letters, briefcases, newspapers, notebooks, magazines, gym bags, and other such items. Although this practice may involve some inconvenience, it is conducted in your best interest, as well as being a sound security practice. The inconvenience can be considerably reduced if you keep to a minimum the number of personal articles that you remove from the Agency.

REMOVAL OF MATERIAL FROM NSA SPACES

The Agency maintains strict controls regarding the removal of material from its installations, particularly in the case of classified material.

Only under a very limited and official circumstances classified material be removed from Agency spaces. When deemed necessary, specific authorization is required to permit an individual to hand carry classified material out of an NSA building to another Secure Area. Depending on the material and circumstances involved, there are several ways to accomplish this.

A Courier Badge authorizes the wearer, for official purposes, to transport classified material, magnetic media, or Class II prohibited items between NSA facilities. These badges, which are strictly controlled, are made available by the Physical Security Division (M51) only to those offices which have specific requirements justifying their use.

An Annual Security Pass may be issued to individuals whose official duties require that they transport printed classified materials, information storage media, or Class II prohibited items to secure locations within the local area. Materials carried by an individual who displays this pass are subject to spot inspection by Security Protective Officers or other personnel from the Office of Security. It is not permissible to use an Annual Security Pass for personal convenience to circumvent inspection of your personal property by perimeter Security Protective Officers.

If you do not have access to a Courier Badge and you have not been issued an Annual Security Pass, you may obtain a One-Time Security Pass to remove classified materials/magnetic media or admit or remove prohibited items from an NSA installation. These passes may be obtained from designated personnel in your work element who have been given authority to issue them. The issuing official must also contact

the Security Operations Center (SOC) to obtain approval for the admission or removal of a Class I prohibited item.

When there is an official need to remove government property which is not magnetic media, or a prohibited or classified item, a One-Time Property Pass is used. This type of pass (which is not a Security Pass) may be obtained from your element custodial property officer. A Property Pass is also to be used when an individual is removing personal property which might be reasonably be mistaken for unclassified Government property. This pass is surrendered to the Security Protective Officer at the post where the material is being removed. Use of this pass does not preclude inspection of the item at the perimeter control point by the Security Protective Officer or Security professionals to ensure that the pass is being used correctly.

EXTERNAL PROTECTION OF CLASSIFIED INFORMATION

On those occasions when an individual must personally transport classified material between locations outside of NSA facilities, the individual who is acting as the courier must ensure that the material receives adequate protection. Protective measures must include double wrapping and packaging of classified information, keeping the material under constant control, ensuring the presence of a second appropriately cleared person when necessary, and delivering the material to authorized persons only. If you are designated as a courier outside the local area, contact the Security Awareness Division (M56) for your courier briefing.

Even more basic than these procedures is the individual security responsibility to confine classified conversations to secure areas. Your home, car pool, and public places are not authorized areas to conduct classified discussions—even if everyone involved in the discussion possesses a proper clearance and "need-to-know." The possibility that a conversation could be overheard by unauthorized persons dictates the need to guard against classified discussions in non-secure areas.

Classified information acquired during the course of your career or assignment to NSA may not be mentioned directly, indirectly, or by suggestion in personal diaries, records, or memoirs.

REPORTING LOSS OR DISCLOSURE OF CLASSIFIED INFORMATION

The extraordinary sensitivity of the NSA mission requires the prompt reporting of any known, suspected, or possible unauthorized disclosure of classified information, or the discovery that classified information may be lost, or is not being afforded proper protection. Any information coming to your attention concerning the loss or unauthorized disclosure of classified information should be reported immediately to your supervisor, your Staff Security Officer, or the Security Operations Center (SOC).

USE OF SECURE AND NON-SECURE TELEPHONES

Two separate telephone systems have been installed in NSA facilities for use in the conduct of official Agency business: the secure telephone system (gray telephone) and the outside, non-secure telephone system (black telephone). All NSA personnel must ensure that use of either telephone system does not jeopardize the security of classified information.

The secure telephone system is authorized for discussion of classified information. Personnel receiving calls on the secure telephone may assume that the caller is authorized to use the system. However, you must ensure that the caller has a "need-to-know" the information you will be discussing.

The outside telephone system is only authorized for unclassified official Agency business calls. The discussion of classified information is not permitted on this system. Do not attempt to use "double-talk" in order to discuss classified information over the non-secure telephone system.

In order to guard against the inadvertent transmission of classified information over a non-secure telephone, and individual using the black telephone in an area where classified activities are being conducted must caution other personnel in the area that the non-secure telephone is in use. Likewise, you should avoid using the non-secure telephone in the vicinity of a secure telephone which is also in use.

HELPFUL INFORMATION

SECURITY RESOURCES

In the fulfillment of your security responsibilities, you should be aware that there are many resources available to assist you. If you have any questions or concerns regarding security at NSA or your individual security responsibilities, your supervisor should be consulted. Additionally, Staff Security Officers are appointed to the designated Agency elements to assist these organizations in carrying out their security responsibilities.

There is a Staff Security Officer assigned to each organization; their phone numbers are listed at the back of this handbook. Staff Security Officers also provide guidance to and monitor the activities of Security Coordinators and Advisors (individuals who, in addition to their operational duties within their respective elements, assist element supervisors or managers in discharging security responsibilities). Within the Office of Security, the Physical Security Division (M51) will offer you assistance in matters such as access control, security passes, clearance verification, combination locks, keys, identification badges, technical security, and the Security Protective Force. The Security Awareness Division (M56) provides security guidance and briefings regarding unofficial foreign travel, couriers, special access, TDY/PCS, and amateur radio activities. The Industrial and Field Security Division (M52) is available to provide security guidance concerning NSA contractor and field site matters.

The Security Operations Center (SOC) is operated by two Security Duty Officers (SDOs), 24 hours a day, 7 days a week. The SDO, representing the Office of Security, provides a complete range of security services to include direct communications with fire and rescue personnel for all Agency area facilities. The SDO is available to handle any physical or personnel problems that may arise, and if

necessary, can direct you to the appropriate security office that can assist you. After normal business hours, weekends, and holidays, the SOC is the focal point for all security matters for all Agency personnel and facilities (to include Agency field sites and contractors). The SOC is located in Room 2A0120, OPS 2A building and the phone numbers are 688-6911(b), 963-3371(s). However, keep in mind that you may contact any individual or any division within the Office of Security directly. Do not hesitate to report any information which may affect the security of the Agency's mission, information, facilities or personnel.

SECURITY-RELATED SERVICES

In addition to Office of Security resources, there are a number of professional, security-related services available for assistance in answering your questions or providing the services which you require.

The Installations and Logistics Organization (L) maintains the system for the collection and destruction of classified waste, and is also responsible for the movement and scheduling of material via NSA couriers and the Defense Courier Service (DCS).

Additionally, L monitors the proper addressing, marking, and packaging of classified material being transmitted outside of NSA; maintains records pertaining to receipt and transmission of controlled mail; and issues property passes for the removal of unclassified property.

The NSA Office of Medical Services (M7) has a staff of physicians, clinical psychologists and an alcoholism counselor. All are well trained to help individuals help themselves in dealing with their problems. Counseling services, with referrals to private mental health professionals when appropriate, are all available to NSA personnel. Appointments can be obtained by contacting M7 directly. When an individual refers himself/herself, the information discussed in the counseling sessions is regarded as privileged medical information and is retained exclusively in M7 unless it pertains to the national security.

Counselling interviews are conducted by the Office of Civilian Personnel (M3) with any civilian employee regarding both on and off-the-job problems. M3 is also available to assist all personnel with the personal problems seriously affecting themselves or members of their families. In cases of serious physical or emotional illness, injury, hospitalization, or other personal emergencies, M3 informs concerned Agency elements and maintains liaison with family members in order to provide possible assistance.

Similar counselling services are available to military assignees through Military Personnel (M2).

A FINAL NOTE

The information you have just read is designed to serve as a guide to assist you in the conduct of your security responsibilities. However, it by no means describes the extent of your obligation to protect information vital to the defense of our nation. Your knowledge of specific security regulations is part of a continuing process of education and experience. This handbook is designed to provide the foundation of this knowledge and serve as a guide to the development of an attitude of security awareness. In the final analysis, security is an individual responsibility. As a participant in the activities of the National Security Agency organization, you are urged to be always mindful of the importance of the work being accomplished by NSA and of the unique sensitivity of the Agency's operations.

Note: Any typos found in this document are transposition errors due to retyping and not necessarily an error in the original document.

[According to the Phrack editor, this is the complete manual, except that it is, of course, missing the NSA director's photo. According to subsequent investigation, it was found that the manual is indeed the real thing. NSA says it is not classified, but could only be officially obtained through Freedom of Information Act action. History of dissemination, according to Jeff Davis:

Chris Goggans received the NSA Employee's Manual anonymously in the mail. He digitized it and published it in Phrack. Grady ward found it there and posted it to Usenet. The NSA called him to find out where he got it.

At that point, Jeff Davis mass mailed it to all the media contact email addresses listed in Adam Gaffin's "EFF's Guide to the Internet".]

Subject: NSA employee's security manual

SECURITY GUIDELINES

This handbook is designed to introduce you to some of the basic security principles and procedures with which all NSA employees must comply. It highlights some of your security responsibilities, and provides guidelines for answering questions you may be asked concerning your association with this Agency. Although you will be busy during the forthcoming weeks learning your job, meeting co-workers, and becoming accustomed to a new work environment, you are urged to become familiar with the security information contained in this handbook. Please note that a listing of telephone numbers is provided at the end of this handbook should you have any questions or concerns.

INTRODUCTION

In joining NSA you have been given an opportunity to participate in the activities of one of the most important intelligence organizations of the United States Government. At the same time, you have also assumed a trust which carries with it a most important individual responsibility—the safeguarding of sensitive information vital to the security of our nation.

While it is impossible to estimate in actual dollars and cents the value of the work being conducted by this Agency, the information to which you will have access at NSA is without question critically important to the defense of the United States. Since this information may be useful only if it is kept secret, it requires a very special measure of protection. The specific nature of this protection is set forth in various Agency security regulations and directives. The total NSA Security Program, however, extends beyond these regulations. It is based upon the concept that security begins as a state of mind. The program is designed to develop an appreciation of the need to protect information vital to the national defense, and to foster the development of a level of awareness which will make security more than routine compliance with regulations.

At times, security practices and procedures cause personal inconvenience. They take time and effort and on occasion may make it necessary for you to voluntarily forego some of your usual personal prerogatives. But your compensation for the inconvenience is the knowledge that the work you are accomplishing at NSA, within a framework of sound security practices, contributes significantly to the defense and continued security of the United States of America.

I extend to you my very best wishes as you enter upon your chosen career or assignment with NSA.

Philip T. Pease
Director of Security

INITIAL SECURITY RESPONSIBILITIES

ANONYMITY

Perhaps one of the first security practices with which new NSA personnel should become acquainted is the practice of anonymity. In an open society such as ours, this practice is necessary because information which is generally available to the public is available also to hostile intelligence. Therefore, the Agency mission is best accomplished apart from public attention. Basically, anonymity means that NSA personnel are encouraged not to draw attention to themselves nor to their association with this Agency. NSA personnel are also cautioned neither to confirm nor deny any specific questions about NSA activities directed to them by individuals not affiliated with the Agency.

The ramifications of the practice of anonymity are rather far reaching, and its success depends on the cooperation of all Agency personnel. Described below you will find some examples of situations that you may encounter concerning your employment and how you should cope with them. Beyond the situations cited, your judgement and discretion will become the deciding factors in how you respond to questions about your employment.

ANSWERING QUESTIONS ABOUT YOUR EMPLOYMENT

Certainly, you may tell your family and friends that you are employed at or assigned to the National Security Agency. There is no valid reason to deny them this information. However, you may not disclose to them any information concerning specific aspects of the Agency's mission, activities, and organization. You should also ask them not to publicize your association with NSA.

Should strangers or casual acquaintances question you about your place of employment, an appropriate reply would be that you work for the Department of Defense. If questioned further as to where you are employed within the Department of Defense, you may reply, "NSA." When you inform someone that you work for NSA (or the Department of Defense) you may expect that the next question will be, "What do you do?" It is a good idea to anticipate this question and to formulate an appropriate answer. Do not act mysteriously about your employment, as that would only succeed in drawing more attention to yourself.

If you are employed as a secretary, engineer, computer scientist, or in a clerical, administrative, technical, or other capacity identifiable by a general title which in no way indicates how your talents are being applied to the mission of the Agency, it is suggested that you state this general title. If you are employed as a linguist, you may say that you are a linguist, if necessary. However, you should not indicate the specific language(s) with which you are involved.

The use of service specialty titles which tend to suggest or reveal the nature of the Agency's mission or specific aspects of their work. These professional titles, such as cryptanalyst, signals collection officer, and intelligence research analyst, if given verbatim to an outsider, would likely generate further questions which may touch upon the classified aspects of your work. Therefore, in conversation with outsiders, it is suggested that such job titles be generalized. For example, you might indicate that you

are a “research analyst.” You may not, however, discuss the specific nature of your analytic work.

ANSWERING QUESTIONS ABOUT YOUR AGENCY TRAINING

During your career or assignment at NSA, there is a good chance that you will receive some type of job-related training. In many instances the nature of the training is not classified. However, in some situations the specialized training you receive will relate directly to sensitive Agency functions. In such cases, the nature of this training may not be discussed with persons outside of this Agency.

If your training at the Agency includes language training, your explanation for the source of your linguistic knowledge should be that you obtained it while working for the Department of Defense.

You Should not draw undue attention to your language abilities, and you may not discuss how you apply your language skill at the Agency.

If you are considering part-time employment which requires the use of language or technical skills similar to those required for the performance of your NSA assigned duties, you must report (in advance) the anticipated part-time work through your Staff Security Officer (SSO) to the Office of Security's Clearance Division (M55).

VERIFYING YOUR EMPLOYMENT

On occasion, personnel must provide information concerning their employment to credit institutions in connection with various types of applications for credit. In such situations you may state, if you are a civilian employee, that you are employed by NSA and indicate your pay grade or salary. Once again, generalize your job title. If any further information is desired by persons or firms with whom you may be dealing, instruct them to request such information by correspondence addressed to: Director of Civilian Personnel, National Security Agency, Fort George G. Meade, Maryland 20755-6000. Military personnel should use their support group designator and address when indicating their current assignment.

If you contemplate leaving NSA for employment elsewhere, you may be required to submit a resume/job application, or to participate in extensive employment interviews. In such circumstances, you should have your resume reviewed by the Classification Advisory Officer (CAO) assigned to your organization. Your CAO will ensure that any classified operational details of your duties have been excluded and will provide you with an unclassified job description. Should you leave the Agency before preparing such a resume, you may develop one and send it by registered mail to the NSA/CSS Information Policy Division (Q43) for review. Remember, your obligation to protect sensitive Agency information extends beyond your employment at NSA.

THE AGENCY AND PUBLIC NEWS MEDIA

>From time to time you may find that the agency is the topic of reports or articles appearing in public news media—newspapers, magazines, books, radio and TV. The NSA/CSS Information Policy Division (Q43) represents the Agency in matters involving the press and other media. This office serves at the Agency’s official media center and is the Director’s liaison office for public relations, both in the community and with other government agencies. The Information Policy Division must approve the release of all information for and about NSA, its mission, activities, and personnel. In order to protect the aspects of Agency operations, NSA personnel must refrain from either confirming or denying any information concerning the Agency or its activities which may appear in the public media. If you are asked about the activities of NSA, the best response is “no comment.” You should the notify Q43 of the attempted inquiry. For the most part, public references to NSA are based upon educated guesses. The Agency does not normally make a practice of issuing public statements about its activities.

GENERAL RESPONSIBILITIES

ESPIONAGE AND TERRORISM

During your security indoctrination and throughout your NSA career you will become increasingly aware of the espionage and terrorist threat to the United States. Your vigilance is the best single defense in protecting NSA information, operations, facilities and people. Any information that comes to your attention that suggests to you the existence of, or potential for, espionage or terrorism against the U.S. or its allies must be promptly reported by you to the Office of Security.

There should be no doubt in your mind about the reality of the threats. You are now affiliated with the most sensitive agency in government and are expected to exercise vigilance and common sense to protect NSA against these threats.

CLASSIFICATION

Originators of correspondence, communications, equipment, or documents within the Agency are responsible for ensuring that the proper classification, downgrading information and, when appropriate, proper caveat notations are assigned to such material. (This includes any handwritten notes which contain classified information). The three levels of classification are Confidential, Secret and Top Secret. The NSA Classification Manual should be used as guidance in determining proper classification. If after review of this document you need assistance, contact the Classification Advisory Officer (CAO) assigned to your organization, or the Information Policy Division (Q43).

NEED-TO-KNOW

Classified information is disseminated only on a strict “need-to-know” basis. The “need-to-know” policy means that classified information will be disseminated only to those individuals who, in addition to possessing a proper clearance, have a requirement to know this information in order to perform their official duties (need-to-know). No person is entitled to classified information solely by virtue of office, position, rank, or security clearance.

All NSA personnel have the responsibility to assert the “need-to-know” policy as part of their responsibility to protect sensitive information. Determination of “need-to-know” is a supervisory responsibility. This means that if there is any doubt in your mind as to an individual’s “need-to-know,” you should always check with your supervisor before releasing any classified material under your control.

FOR OFFICIAL USE ONLY

Separate from classified information is information or material marked “FOR OFFICIAL USE ONLY” (such as this handbook). This designation is used to identify that official information or material which, although unclassified, is exempt from the requirement for public disclosure of information concerning government activities and which, for a significant reason, should not be given general circulation. Each holder of “FOR OFFICIAL USE ONLY” (FOUO) information or material is authorized to disclose such information or material to persons in other departments or agencies of the Executive and Judicial branches when it is determined that the information or material is required to carry out a government function. The recipient must be advised that the information or material is not to be disclosed to the general public. Material which bears the “FOR OFFICIAL USE ONLY” caveat does not come under the regulations governing the protection of classified information. The unauthorized disclosure of information marked “FOR OFFICIAL USE ONLY” does not constitute an unauthorized disclosure of classified defense information. However, Department of Defense and NSA regulations prohibit the unauthorized disclosure of information designated “FOR OFFICIAL USE ONLY.” Appropriate administrative action will be taken to determine responsibility and to apply corrective and/or disciplinary measures in cases of unauthorized disclosure of information which bears the “FOR OFFICIAL USE ONLY” caveat. Reasonable care must be exercised in limiting the dissemination of “FOR OFFICIAL USE ONLY” information. While you may take this handbook home for further study, remember that it does contain “FOR OFFICIAL USE ONLY” information which should be protected.

PREPUBLICATION REVIEW

All NSA personnel (employees, military assignees, and contractors) must submit for review any planned articles, books, speeches, resumes, or public statements that may contain classified, classifiable, NSA-derived, or unclassified protected information, e.g., information relating to the organization, mission, functions, or activities of NSA. Your obligation to protect this sensitive information is a lifetime one. Even when you resign, retire, or otherwise end your affiliation with NSA, you must submit this type of material for prepublication review. For additional details, contact the Information Policy Division (Q43) for an explanation of prepublication review procedures.

PERSONNEL SECURITY RESPONSIBILITIES

Perhaps you can recall your initial impression upon entering an NSA facility. Like most people, you probably noticed the elaborate physical security safeguards—fences, concrete barriers, Security Protective Officers, identification badges, etc. While these measures provide a substantial degree of protection for the information housed within our buildings, they represent only a portion of the overall Agency security program. In fact, vast amounts of information leave our facilities daily in the minds of NSA personnel, and this is where our greatest vulnerability lies. Experience has indicated that because of the vital information we work with at NSA, Agency personnel may become potential targets for hostile intelligence efforts. Special safeguards are therefore necessary to protect our personnel.

Accordingly, the Agency has an extensive personnel security program which establishes internal policies and guidelines governing employee conduct and activities. These policies cover a variety of topics, all of which are designed to protect both you and the sensitive information you will gain through your work at NSA.

ASSOCIATION WITH FOREIGN NATIONALS

As a member of the U.S. Intelligence Community and by virtue of your access to sensitive information, you are a potential target for hostile intelligence activities carried out by or on behalf of citizens of foreign countries. A policy concerning association with foreign nationals has been established by the Agency to minimize the likelihood that its personnel might become subject to undue influence or duress or targets of hostile activities through foreign relationships.

As an NSA affiliate, you are prohibited from initiating or maintaining associations (regardless of the nature and degree) with citizens or officials of communist-controlled, or other countries which pose a significant threat to the security of the United States and its interests. A comprehensive list of these designated countries is available from your Staff Security Officer or the Security Awareness Division. Any contact with citizens of these countries, no matter how brief or seemingly innocuous, must be reported as soon as possible to your Staff Security Officer (SSO). (Individuals designated as Staff Security Officers are assigned to every organization; a listing of Staff Security Officers can be found at the back of this handbook).

Additionally, close and continuing associations with any non-U.S. citizens which are characterized by ties of kinship, obligation, or affection are prohibited. A waiver to this policy may be granted only under the most exceptional circumstances when there is a truly compelling need for an individual's services or skills and the security risk is negligible.

In particular, a waiver must be granted in advance of a marriage to or cohabitation with a foreign national in order to retain one's access to NSA information. Accordingly, any intent to cohabit with or marry a non-U.S. citizen must be reported immediately to your Staff Security Officer. If a waiver is granted, future reassignments both at headquarters and overseas may be affected.

The marriage or intended marriage of an immediate family member (parents, siblings, children) to a foreign national must also be reported through your SSO to the Clearance Division (M55).

Casual social associations with foreign nationals (other than those of the designated countries mentioned above) which arise from normal living and working arrangements in the community usually do not have to be reported. During the course of these casual social associations, you are encouraged to extend the usual social amenities. Do not act mysteriously or draw attention to yourself (and possibly to NSA) by displaying an unusually wary attitude.

Naturally, your affiliation with the Agency and the nature of your work should not be discussed. Again, you should be careful not to allow these associations to become close and continuing to the extent that they are characterized by ties of kinship, obligation, or affection.

If at any time you feel that a "casual" association is in any way suspicious, you should report this to your Staff Security Officer immediately. Whenever any doubt exists as to whether or not a situation should be reported or made a matter of record, you should

decided in favor of reporting it. In this way, the situation can be evaluated on its own merits, and you can be advised as to your future course of action.

CORRESPONDENCE WITH FOREIGN NATIONALS

NSA personnel are discouraged from initiating correspondence with individuals who are citizens of foreign countries. Correspondence with citizens of communist-controlled or other designated countries is prohibited. Casual social correspondence, including the “penpal” variety, with other foreign acquaintances is acceptable and need not be reported. If, however, this correspondence should escalate in its frequency or nature, you should report that through your Staff Security Officer to the Clearance Division (M55).

EMBASSY VISITS

Since a significant percentage of all espionage activity is known to be conducted through foreign embassies, consulates, etc., Agency policy discourages visits to embassies, consulates or other official establishments of a foreign government. Each case, however, must be judged on the circumstances involved. Therefore, if you plan to visit a foreign embassy for any reason (even to obtain a visa), you must consult with, and obtain the prior approval of, your immediate supervisor and the Security Awareness Division (M56).

AMATEUR RADIO ACTIVITIES

Amateur radio (ham radio) activities are known to be exploited by hostile intelligence services to identify individuals with access to classified information; therefore, all licensed operators are expected to be familiar with NSA/CSS Regulation 100-1, “Operation of Amateur Radio Stations” (23 October 1986). The specific limitations on contacts with operators from communist and designated countries are of particular importance. If you are an amateur radio operator you should advise the Security Awareness Division (M56) of your amateur radio activities so that detailed guidance may be furnished to you.

UNOFFICIAL FOREIGN TRAVEL

In order to further protect sensitive information from possible compromise resulting from terrorism, coercion, interrogation or capture of Agency personnel by hostile nations and/or terrorist groups, the Agency has established certain policies and procedures concerning unofficial foreign travel.

All Agency personnel (civilian employees, military assignees, and contractors) who are planning unofficial foreign travel must have that travel approved by submitting a proposed itinerary to the Security Awareness Division (M56) at least 30 working days prior to their planned departure from the United States. Your itinerary should be submitted on Form K2579 (Unofficial Foreign Travel Request). This form provides space for noting the countries to be visited, mode of travel, and dates of departure and return. Your immediate supervisor must sign this form to indicate whether or not your proposed travel poses a risk to the sensitive information, activities, or projects of which you may have knowledge due to your current assignment.

After your supervisor's assessment is made, this form should be forwarded to the Security Awareness Director (M56). Your itinerary will then be reviewed in light of the existing situation in the country or countries to be visited, and a decision for approval or disapproval will be based on this assessment. The purpose of this policy is to limit the risk of travel to areas of the world where a threat may exist to you and to your knowledge of classified Agency activities.

In this context, travel to communist-controlled and other hazardous activity areas is prohibited. A listing of these hazardous activity areas is prohibited. A listing of these hazardous activity areas can be found in Annex A of NSA/CSS Regulation No. 30-31, "Security Requirements for Foreign Travel" (12 June 1987). From time to time, travel may also be prohibited to certain areas where the threat from hostile intelligence services, terrorism, criminal activity or insurgency poses an unacceptable risk to Agency employees and to the sensitive information they possess. Advance travel deposits made without prior agency approval of the proposed travel may result in financial losses by the employee should the travel be disapproved, so it is important to obtain approval prior to committing yourself financially. Questions regarding which areas of the world currently pose a threat should be directed to the Security Awareness Division (M56).

Unofficial foreign travel to Canada, the Bahamas, Bermuda, and Mexico does not require prior approval, however, this travel must still be reported using Form K2579. Travel to these areas may be reported after the fact.

While you do not have to report your foreign travel once you have ended your affiliation with the Agency, you should be aware that the risk incurred in travelling to certain areas, from a personal safety and/or counterintelligence standpoint, remains high. The requirement to protect the classified information to which you have had access is a lifetime obligation.

MEMBERSHIP IN ORGANIZATIONS

Within the United States there are numerous organizations with memberships ranging from a few to tens of thousands. While you may certainly participate in the activities of any reputable organization, membership in any international club or professional organization/activity with foreign members should be reported through your Staff

Security Officer to the Clearance Division (M55). In most cases there are no security concerns or threats to our employees or affiliates. However, the Office of Security needs the opportunity to research the organization and to assess any possible risk to you and the information to which you have access.

In addition to exercising prudence in your choice of organizational affiliations, you should endeavor to avoid participation in public activities of a conspicuously controversial nature because such activities could focus undesirable attention upon you and the Agency. NSA employees may, however, participate in bona fide public affairs such as local politics, so long as such activities do not violate the provisions of the statutes and regulations which govern the political activities of all federal employees. Additional information may be obtained from your Personnel Representative.

CHANGES IN MARITAL STATUS/COHABITATION/NAMES

All personnel, either employed by or assigned to NSA, must advise the Office of Security of any changes in their marital status (either marriage or divorce), cohabitation arrangements, or legal name changes. Such changes should be reported by completing NSA Form G1982 (Report of Marriage/Marital Status Change/Name Change), and following the instructions printed on the form.

USE AND ABUSE OF DRUGS

It is the policy of the National Security Agency to prevent and eliminate the improper use of drugs by Agency employees and other personnel associated with the Agency. The term “drugs” includes all controlled drugs or substances identified and listed in the Controlled Substances Act of 1970, as amended, which includes but is not limited to: narcotics, depressants, stimulants, cocaine, hallucinogens and cannabis (marijuana, hashish, and hashish oil). The use of illegal drugs or the abuse of prescription drugs by persons employed by, assigned or detailed to the Agency may adversely affect the national security; may have a serious damaging effect on the safety and the safety of others; and may lead to criminal prosecution. Such use of drugs either within or outside Agency controlled facilities is prohibited.

PHYSICAL SECURITY POLICIES

The physical security program at NSA provides protection for classified material and operations and ensures that only persons authorized access to the Agency’s spaces and classified material are permitted such access. This program is concerned not only with the Agency’s physical plant and facilities, but also with the internal and external procedures for safeguarding the Agency’s classified material and activities. Therefore, physical security safeguards include Security Protective Officers, fences, concrete barriers, access control points, identification badges, safes, and the compartmentalization of physical spaces. While any one of these safeguards represents only a delay factor against attempts to gain unauthorized access to NSA spaces and material, the total combination of all these safeguards represents a formidable barrier against physical penetration of NSA. Working together with personnel security policies, they provide “security in depth.”

The physical security program depends on interlocking procedures. The responsibility for carrying out many of these procedures rests with the individual. This means you, and every person employed by, assign, or detailed to the Agency, must assume the responsibility for protecting classified material. Included in your responsibilities are: challenging visitors in operational areas; determining “need-to-know;” limiting classified conversations to approved areas; following established locking and checking procedures; properly using the secure and non-secure telephone systems; correctly wrapping and packaging classified data for transmittal; and placing classified waste in burn bags.

THE NSA BADGE

Even before you enter an NSA facility, you have a constant reminder of security—the NSA badge. Every person who enters an NSA installation is required to wear an authorized badge. To enter most NSA facilities your badge must be inserted into an Access Control Terminal at a building entrance and you must enter your Personal Identification Number (PIN) on the terminal keyboard. In the absence of an Access Control Terminal, or when passing an internal security checkpoint, the badge should be held up for viewing by a Security Protective Officer. The badge must be displayed at all times while the individual remains within any NSA installation.

NSA Badges must be clipped to a beaded neck chain. If necessary for the safety of those working in the area of electrical equipment or machinery, rubber tubing may be used to insulate the badge chain. For those Agency personnel working in proximity to other machinery or equipment, the clip may be used to attach the badge to the wearer's clothing, but it must also remain attached to the chain.

After you leave an NSA installation, remove your badge from public view, thus avoiding publicizing your NSA affiliation. Your badge should be kept in a safe place which is convenient enough to ensure that you will be reminded to bring it with you to work. A good rule of thumb is to afford your badge the same protection you give your wallet or your credit cards. **DO NOT** write your Personal Identification Number on your badge.

If you plan to be away from the Agency for a period of more than 30 days, your badge should be left at the main Visitor Control Center which services your facility.

Should you lose your badge, you must report the facts and circumstances immediately to the Security Operations Center (SOC) (963-3371s/688-6911b) so that your badge PIN can be deactivated in the Access Control Terminals. In the event that you forget your badge when reporting for duty, you may obtain a “non-retention” Temporary Badge at the main Visitor Control Center which serves your facility after a co-worker personally identifies you and your clearance has been verified.

Your badge is to be used as identification only within NSA facilities or other government installations where the NSA badge is recognized. Your badge should never be used outside of the NSA or other government facilities for the purpose of personal identification. You should obtain a Department of Defense identification card from the Civilian Welfare Fund (CWF) if you need to identify yourself as a government employee when applying for “government discounts” offered at various commercial establishments.

Your badge color indicates your particular affiliation with NSA and your level of clearance. Listed below are explanations of the badge colors you are most likely to see:

- Green (*) Fully cleared NSA employees and certain military assignees.
- Orange (*) (or Gold) Fully cleared representative of other government agencies.
- Black (*) Fully cleared contractors or consultants.
- Blue Employees who are cleared to the SECRET level while awaiting completion of their processing for full (TS/SI) clearance. These Limited Interim Clearance (LIC) employees are restricted to certain activities while inside a secure area.

Red Clearance level is not specified, so assume the holder is uncleared.

* - Fully cleared status means that the person has been cleared to the Top Secret (TS) level and indoctrinated for Special Intelligence (SI).

All badges with solid color backgrounds (permanent badges) are kept by individuals until their NSA employment or assignment ends. Striped badges ("non-retention" badges) are generally issued to visitors and are returned to the Security Protective Officer upon departure from an NSA facility.

AREA CONTROL

Within NSA installations there are generally two types of areas, Administrative and Secure. An Administrative Area is one in which storage of classified information is not authorized, and in which discussions of a classified nature are forbidden. This type of area would include the corridors, restrooms, cafeterias, visitor control areas, credit union, barber shop, and drugstore. Since uncleared, non-NSA personnel are often present in these areas, all Agency personnel must ensure that no classified information is discussed in an Administrative Area.

Classified information being transported within Agency facilities must be placed within envelopes, folders, briefcases, etc. to ensure that its contents or classification markings are not disclosed to unauthorized persons, or that materials are not inadvertently dropped enroute.

The normal operational work spaces within an NSA facility are designated Secure Areas. These areas are approved for classified discussions and for the storage of classified material. Escorts must be provided if it is necessary for uncleared personnel (repairmen, etc.) to enter Secure Areas, and all personnel within the areas must be made aware of the presence of uncleared individuals. All unknown, unescorted visitors to Secure Areas should be immediately challenged by the personnel within the area, regardless of the visitors' clearance level (as indicated by their badge color).

The corridor doors of these areas must be locked with a deadbolt and all classified information in the area must be properly secured after normal working hours or whenever the area is unoccupied. When storing classified material, the most sensitive material must be stored in the most secure containers. Deadbolt keys for doors to these areas must be returned to the key desk at the end of the workday.

For further information regarding Secure Areas, consult the Physical Security Division (M51) or your staff Security Officer.

ITEMS TREATED AS CLASSIFIED

For purposes of transportation, storage and destruction, there are certain types of items which must be treated as classified even though they may not contain classified information. Such items include carbon paper, vu-graphs, punched machine processing cards, punched paper tape, magnetic tape, computer floppy disks, film, and used typewriter ribbons. This special treatment is necessary since a visual examination does not readily reveal whether the items contain classified information.

PROHIBITED ITEMS

Because of the potential security or safety hazards, certain items are prohibited under normal circumstances from being brought into or removed from any NSA installation. These items have been grouped into two general classes. Class I prohibited items are those which constitute a threat to the safety and security of NSA/CSS personnel and facilities. Items in this category include:

- a. Firearms and ammunition
- b. Explosives, incendiary substances, radioactive materials, highly volatile materials, or other hazardous materials
- c. Contraband or other illegal substances
- d. Personally owned photographic or electronic equipment including microcomputers, reproduction or recording devices, televisions or radios.

Prescribed electronic medical equipment is normally not prohibited, but requires coordination with the Physical Security Division (M51) prior to being brought into any NSA building.

Class II prohibited items are those owned by the government or contractors which constitute a threat to physical, technical, or TEMPEST security. Approval by designated organizational officials is required before these items can be brought into or removed from NSA facilities. Examples are:

- a. Transmitting and receiving equipment
- b. Recording equipment and media
- c. Telephone equipment and attachments
- d. Computing devices and terminals
- e. Photographic equipment and film

A more detailed listing of examples of Prohibited Items may be obtained from your Staff Security Officer or the Physical Security Division (M51).

Additionally, you may realize that other seemingly innocuous items are also restricted and should not be brought into any NSA facility. Some of these items pose a technical threat; others must be treated as restricted since a visual inspection does not readily reveal whether they are classified. These items include:

- a. Negatives from processed film; slides; vu-graphs
- b. Magnetic media such as floppy disks, cassette tapes, and VCR videotapes
- c. Remote control devices for telephone answering machines
- d. Pagers

EXIT INSPECTION

As you depart NSA facilities, you will note another physical security safeguard—the inspection of the materials you are carrying. This inspection of your materials, conducted by Security Protective Officers, is designed to preclude the inadvertent removal of classified material. It is limited to any articles that you are carrying out of the facility and may include letters, briefcases, newspapers, notebooks, magazines, gym

bags, and other such items. Although this practice may involve some inconvenience, it is conducted in your best interest, as well as being a sound security practice. The inconvenience can be considerably reduced if you keep to a minimum the number of personal articles that you remove from the Agency.

REMOVAL OF MATERIAL FROM NSA SPACES

The Agency maintains strict controls regarding the removal of material from its installations, particularly in the case of classified material.

Only under a very limited and official circumstances classified material be removed from Agency spaces. When deemed necessary, specific authorization is required to permit an individual to hand carry classified material out of an NSA building to another Secure Area. Depending on the material and circumstances involved, there are several ways to accomplish this.

A Courier Badge authorizes the wearer, for official purposes, to transport classified material, magnetic media, or Class II prohibited items between NSA facilities. These badges, which are strictly controlled, are made available by the Physical Security Division (M51) only to those offices which have specific requirements justifying their use.

An Annual Security Pass may be issued to individuals whose official duties require that they transport printed classified materials, information storage media, or Class II prohibited items to secure locations within the local area. Materials carried by an individual who displays this pass are subject to spot inspection by Security Protective Officers or other personnel from the Office of Security. It is not permissible to use an Annual Security Pass for personal convenience to circumvent inspection of your personal property by perimeter Security Protective Officers.

If you do not have access to a Courier Badge and you have not been issued an Annual Security Pass, you may obtain a One-Time Security Pass to remove classified materials/magnetic media or admit or remove prohibited items from an NSA installation. These passes may be obtained from designated personnel in your work element who have been given authority to issue them. The issuing official must also contact the Security Operations Center (SOC) to obtain approval for the admission or removal of a Class I prohibited item.

When there is an official need to remove government property which is not magnetic media, or a prohibited or classified item, a One-Time Property Pass is used. This type of pass (which is not a Security Pass) may be obtained from your element custodial property officer. A Property Pass is also to be used when an individual is removing personal property which might be reasonably be mistaken for unclassified Government property. This pass is surrendered to the Security Protective Officer at the post where the material is being removed. Use of this pass does not preclude inspection of the item at the perimeter control point by the Security Protective Officer or Security professionals to ensure that the pass is being used correctly.

EXTERNAL PROTECTION OF CLASSIFIED INFORMATION

On those occasions when an individual must personally transport classified material between locations outside of NSA facilities, the individual who is acting as the courier must ensure that the material receives adequate protection. Protective measures must include double wrapping and packaging of classified information, keeping the material under constant control, ensuring the presence of a second appropriately cleared person when necessary, and delivering the material to authorized persons only. If you are designated as a courier outside the local area, contact the Security Awareness Division (M56) for your courier briefing.

Even more basic than these procedures is the individual security responsibility to confine classified conversations to secure areas. Your home, car pool, and public places are not authorized areas to conduct classified discussions—even if everyone involved in the discussion possesses a proper clearance and “need-to-know.” The possibility that a conversation could be overheard by unauthorized persons dictates the need to guard against classified discussions in non-secure areas.

Classified information acquired during the course of your career or assignment to NSA may not be mentioned directly, indirectly, or by suggestion in personal diaries, records, or memoirs.

REPORTING LOSS OR DISCLOSURE OF CLASSIFIED INFORMATION

The extraordinary sensitivity of the NSA mission requires the prompt reporting of any known, suspected, or possible unauthorized disclosure of classified information, or the discovery that classified information may be lost, or is not being afforded proper protection. Any information coming to your attention concerning the loss or unauthorized disclosure of classified information should be reported immediately to your supervisor, your Staff Security Officer, or the Security Operations Center (SOC).

USE OF SECURE AND NON-SECURE TELEPHONES

Two separate telephone systems have been installed in NSA facilities for use in the conduct of official Agency business: the secure telephone system (gray telephone) and the outside, non-secure telephone system (black telephone). All NSA personnel must ensure that use of either telephone system does not jeopardize the security of classified information.

The secure telephone system is authorized for discussion of classified information. Personnel receiving calls on the secure telephone may assume that the caller is authorized to use the system. However, you must ensure that the caller has a “need-to-know” the information you will be discussing.

The outside telephone system is only authorized for unclassified official Agency business calls. The discussion of classified information is not permitted on this system. Do not attempt to use “double-talk” in order to discuss classified information over the non-secure telephone system.

In order to guard against the inadvertent transmission of classified information over a non-secure telephone, and individual using the black telephone in an area where classified activities are being conducted must caution other personnel in the area that the non-secure telephone is in use. Likewise, you should avoid using the non-secure telephone in the vicinity of a secure telephone which is also in use.

HELPFUL INFORMATION

SECURITY RESOURCES

In the fulfillment of your security responsibilities, you should be aware that there are many resources available to assist you. If you have any questions or concerns regarding security at NSA or your individual security responsibilities, your supervisor should be consulted. Additionally, Staff Security Officers are appointed to the designated Agency elements to assist these organizations in carrying out their security responsibilities. There is a Staff Security Officer assigned to each organization; their phone numbers are listed at the back of this handbook. Staff Security Officers also provide guidance to and monitor the activities of Security Coordinators and Advisors (individuals who, in addition to their operational duties within their respective elements, assist element supervisors or managers in discharging security responsibilities).

Within the Office of Security, the Physical Security Division (M51) will offer you assistance in matters such as access control, security passes, clearance verification, combination locks, keys, identification badges, technical security, and the Security Protective Force. The Security Awareness Division (M56) provides security guidance and briefings regarding unofficial foreign travel, couriers, special access, TDY/PCS, and amateur radio activities. The Industrial and Field Security Division (M52) is available to provide security guidance concerning NSA contractor and field site matters.

The Security Operations Center (SOC) is operated by two Security Duty Officers (SDOs), 24 hours a day, 7 days a week. The SDO, representing the Office of Security, provides a complete range of security services to include direct communications with fire and rescue personnel for all Agency area facilities. The SDO is available to handle any physical or personnel problems that may arise, and if necessary, can direct you to the appropriate security office that can assist you. After normal business hours, weekends, and holidays, the SOC is the focal point for all security matters for all Agency personnel and facilities (to include Agency field sites and contractors). The SOC is located in Room 2A0120, OPS 2A building and the phone numbers are 688-6911(b), 963-3371(s).

However, keep in mind that you may contact any individual or any division within the Office of Security directly. Do not hesitate to report any information which may affect the security of the Agency's mission, information, facilities or personnel.

SECURITY-RELATED SERVICES

In addition to Office of Security resources, there are a number of professional, security-related services available for assistance in answering your questions or providing the services which you require.

The Installations and Logistics Organization (L) maintains the system for the collection and destruction of classified waste, and is also responsible for the movement and scheduling of material via NSA couriers and the Defense Courier Service (DCS). Additionally, L monitors the proper addressing, marking, and packaging of classified material being transmitted outside of NSA; maintains records pertaining to receipt and transmission of controlled mail; and issues property passes for the removal of unclassified property.

The NSA Office of Medical Services (M7) has a staff of physicians, clinical psychologists and an alcoholism counselor. All are well trained to help individuals help themselves in dealing with their problems. Counseling services, with referrals to private mental health professionals when appropriate, are all available to NSA personnel. Appointments can be obtained by contacting M7 directly. When an individual refers himself/herself, the information discussed in the counseling sessions is regarded as privileged medical information and is retained exclusively in M7 unless it pertains to the national security.

Counselling interviews are conducted by the Office of Civilian Personnel (M3) with any civilian employee regarding both on and off-the-job problems. M3 is also available to assist all personnel with the personal problems seriously affecting themselves or members of their families. In cases of serious physical or emotional illness, injury, hospitalization, or other personal emergencies, M3 informs concerned Agency elements and maintains liaison with family members in order to provide possible assistance. Similar counselling services are available to military assignees through Military Personnel (M2).

A FINAL NOTE

The information you have just read is designed to serve as a guide to assist you in the conduct of your security responsibilities. However, it by no means describes the extent of your obligation to protect information vital to the defense of our nation. Your knowledge of specific security regulations is part of a continuing process of education and experience. This handbook is designed to provide the foundation of this knowledge and serve as a guide to the development of an attitude of security awareness.

In the final analysis, security is an individual responsibility. As a participant in the activities of the National Security Agency organization, you are urged to be always mindful of the importance of the work being accomplished by NSA and of the unique sensitivity of the Agency's operations.

Preface

By LIEUTENANT GENERAL RICHARD A. CHILCOAT, U.S. ARMY
President, National Defense University

Over the past few years the Department of Defense has been intensifying its study of the global security situation, U.S. force posture, and future defense requirements. The National Defense University contributes to this dialogue through *Strategic Assessment*, an annual publication which applies the expertise of this institution through the leadership of its interdisciplinary research arm, the Institute for National Strategic Studies, with the assistance of specialists from elsewhere in government and academe. Offering such analyses, in both general and particular areas of interest to the national security community, is an important aspect of the NDU mission. This volume examines various approaches that the United States might adopt to shape the strategic environment of the future.

The current environment is characterized by instability and change. The U.S. Government needs to apply the full range of options at its disposal to achieve national goals and ensure the peace and stability required to preserve our rights to "life, liberty, and the pursuit of happiness." But such options must be studied and conceptualized for years (and in some cases, decades) in advance to take advantage of the opportunities presented by a changing global environment.

The recent Quadrennial Defense Review (QDR) recommended a series of defense posture changes. This volume reviews these recommendations and takes the next analytical step, to propose what is entailed by such changes. *Strategic Assessment 1998: Engaging Power for Peace* should prove useful beyond the defense establishment, to all readers with an interest in national security affairs. We emphasize that this report is not a statement of official policy, nor does it represent the views of the Department of Defense or the Joint Chiefs of Staff. Rather than to state policy, the role of National Defense University is to stimulate discussion and research among both policymakers and analysts.

Foreword

By HANS BINNENDIJK *and* DAVID C. GOMPERT

This is the fourth volume in the annual *Strategic Assessment* series produced by the Institute for National Strategic Studies at the National Defense University, and undertaken to contribute to the

national effort to understand more clearly the nature of, and the U.S. role in, the new international system. This volume complements the *Strategic Forum* series (issue papers on key national security topics), *Joint Force Quarterly* (a professional military journal published for the Chairman of the Joint Chiefs), and other titles issued by INSS. While *Strategic Assessment* is not an official government publication, we trust that it will inform and influence policymakers and academics alike.

Each previous volume has had a specific theme. *Strategic Assessment 1995: U.S. Security Challenges in Transition* described a new international system which held much promise and new security concerns for the United States. Some of the first volume's conclusions were:

- The world is dividing into market democracies, transitional states, and troubled states. Market democracies form the core of the U.S. international strength. Transitional states will determine the nature of the international system. Troubled states generate many new security concerns.
- The most likely conflicts in the emerging system are the least dangerous to U.S. security.
- Proliferation of weapons of mass destruction is increasingly a current rather than a future concern.
- The U.S. domestic focus is limiting our national security capabilities.
- Information technology is displacing heavy industry as the source of national power.
- International organizations are assuming an important legitimizing role, despite their limited capabilities.
- Globalization is creating transitional threats as well as benefits.
- To deal with this complex new world, the United States needs to set national security priorities--ensure peace among the major powers, engage selectively in regional conflicts, respond to transnational threats, and assist failed states.

Strategic Assessment 1996: Instruments of U.S. Power reviewed 15 different types of means of exercising U.S. power (ranging from the diplomat in the field to the nuclear weapon in its silo) and analyzed their capabilities and relevance in the post-Cold War era. Despite real budget reductions of more than one-third over the previous decade, both U.S. defense and international affairs instruments were rapidly adapted to meet many of the new challenges identified in the volume published last year. But the budget cuts were concentrated in areas like defense procurement and security assistance, which, if not reversed, could cause lasting damage to our national interests. Some of the specific conclusions of this second volume were:

- U.S. military forces are currently far more capable, better equipped, and better trained than those of any conceivable adversary. The U.S. military stands at a crossroads in deciding how much of this capable force it wants to trade in for the kind of stand-off precision warfare inherent in the systems-of-systems approach to future warfare.
- U.S. military capabilities are increasingly being used for peacetime engagement and peace operations in ways that shape the new strategic environment. These are important functions that tend to affect the operations and personnel tempo of a small number of units.
- U.S. alliances are shifting to become the cornerstone around which ad hoc coalitions can be formed. But the U.S. ability to share its information dominance with allies is not well developed

and could create problems.

- The United States needs to consider reorganizing its diplomatic structure.
- The United States has been very creative in finding alternative ways to fund international security requirements: seeking foreign contributions for U.S. initiatives, using old accounts for new purposes, and drawing on international organizations for things like weapons inspections.
- There is an enhanced role for the private sector in national security affairs. Examples include non-governmental organizations in peace operations, the news media, and efforts at Track II diplomacy.
- Closer interagency coordination is needed to make maximum use of the resources and instruments of national power.

Strategic Assessment 1997: Flashpoints and Force Structure categorized key strategic focal points as major powers, regional contingencies, troubled states, and transitions problems. The volume concluded that the "two nearly simultaneous Major Regional Contingencies" concept had become a less useful primary planning scenario than in 1993. The study suggested a broader basis for the Quadrennial Defense Review (QDR), and then assessed three alternative force structures. Some specific conclusions drawn were:

- The United States faces what might be called a strategic lull, but it is nonetheless confronted with a more complex and diverse set of smaller threats. It must both deal with those threats and take advantage of the strategic lull to exploit the revolution in military affairs.
- Russia will be preoccupied with internal economic and political turmoil. Its conventional forces have deteriorated rapidly and present no threat, but nuclearization of Russia's defense policy should raise concerns.
- China's leadership is focused on domestic politics, but the cultivation of nationalism, new energy needs, and rapid economic growth make it a potential theater competitor.
- While both North Korea and Iraq remain dangerous, their conventional military capabilities have declined substantially relative to that of the United States. That makes more likely their use of weapons of mass destruction, should conflict start.
- Radical Islam will remain a potentially destabilizing factor throughout the Middle East and North Africa during the next decade.

With regard to force structure alternatives, *Strategic Assessment 1997* analyzed the following:

- A recapitalization force model to emphasize procurement and modernization, but at the cost of modest force structure reductions.
- An accelerated RMA force model which aggressively implements the system-of-systems, but at the cost of major force structure reductions.
- A full spectrum force model which maintains force structure and slowly integrates RMA technology, but at the cost of a larger defense budget.

No alternative was recommended, but it was clear from the threat analysis that the full spectrum force

model was preferable if the budget financing could be found.

This background was used to prepare *Strategic Assessment 1998: Engaging Power for Peace*. Many of the conclusions drawn in earlier volumes in this series found resonance in the report of the Quadrennial Defense Review, signed by Secretary of Defense William Cohen in May of 1997. The QDR looked at three military challenges facing the United States: shaping the strategic environment, responding to aggression, and preparing now for an uncertain future. It recommended a force structure somewhere between the recapitalization and full spectrum force models laid out in last year's assessment. This year's volume is organized under the rubrics of shaping, responding, and preparing, in order to amplify and extend the QDR conclusions.

Acknowledgments

Responsibility for any errors found in this document rests wholly with the editors. Credit for all insights belongs to the able team of analysts who contributed the various chapters. The principal authors include:

Conclusions, David C. Gompert, INSS

Thanks are also due to many military officers, civilian officials, and outside analysts who provided thoughtful comments on early drafts of this volume. Special thanks go to James Zackrison, who served as managing editor during the initial stages of this project; Ron Nazzaro, who conducted background research and produced the graphics; Patrick Clawson and Ellin Sarot for their editorial input and review; members of the INSS staff for their assistance, including James Swihart, Walter Vanderbeek, and James Brusstar; Jerry McGinn, research assistant at The RAND Corporation; Erwin Godoy, INSS research assistant; and William Rawley, Kathy Goldynia, Deborah Rhode, and other members of the Typography and Design Division at the U.S. Government Printing Office. Finally, the editorial staff of the Publication Directorate within INSS under the supervision of Robert Silano proofed the final version of the volume and saw it through the final stages of production.

Strategic Assessment 1998 is neither a statement nor a critique of U.S. Government policy. The opinions, conclusions, and recommendations, either expressed or implied, are solely those of the contributors. They do not necessarily reflect the views of the National Defense University, the Department of Defense, or any other agency of the U.S. Government.

Research and writing for *Strategic Assessment 1998* was completed in late 1997 and revised to include developments through the end of March 1998.

[Return to My D-Base](#)

1998 Strategic Assessment

Engaging Power for Peace

Key

Findings

* The United States now enjoys a secure and promising position in the world, because of its economic, technological, and military strengths. The other most successful nations are its closest friends; its few enemies are comparatively weak, isolated, and swimming against the current of the information age. That current--globalization--is both integrating and extending the core of free-market democracies, thus favoring U.S. interests and winning converts to the norms of state behavior.

*Great uncertainties still exist: the future of China and other large transition states; the role of U.S. core partners, especially the nations of Europe and Japan; the spread of dangerous technologies, particularly weapons of mass destruction (WMD); the extent of state failures, like those of central Africa and the Balkans; the reach of terrorism, international crime, and other nonstate threats; and the security of economic resources. Because of its capabilities, the United States has considerable influence, and a crucial stake, on how these uncertainties are resolved.

*In the best plausible case, an expanded core or commonwealth of peaceful democracies could encompass most of the planet--with U.S. partners shouldering an increased share of the burden of defending common interests and norms. China would reform and integrate into the core, rogue states and nonstates would be defanged, state failures would be averted, and energy and infrastructure would be secure. In the worst case, U.S. friends could be free riders instead of responsible partners, China's reforms would founder, state failures would multiply, and rogues armed with WMD and nonstate actors would threaten the energy supplies and infrastructure of the core--leaving the United States superior but beleaguered. Well-armed enemies would be tempted to threaten the interests of the United States, using the fear of high casualties and possible attacks on the state itself to degrade America's ability to project power and national will.

*To improve the odds of reaching the desirable future, the United States should pursue four key interests to affect the design and use of its military capabilities:

- Recast *core* alliances as more balanced partnerships
- Encourage the reform and integration of *transition states* into the core
- Weaken or coopt *rogues*
- Reduce the effects, incidences, and causes of *state failures*.

*Based on the Quadrennial Defense Review (QDR), the United States should:

- *Shape* its core partnerships and the progress of transition states toward inclusion in the core
- *Respond* to rogues posing asymmetric threats in major theater wars (MTWs), and to small-scale contingencies (SSCs) caused by state failures
- *Prepare* for a less desirable future.

*U.S. shaping strategy should be one of *presence plus...engagement*. An interactive approach is needed to recast core partnerships, encourage yet caution transition states, and increase strategic and operational flexibility. What U.S. forces do will come to matter as much as how many are permanently based where. The involvement of U.S. forces with those of core partners and transition states should stress practical strengths--power projection, information dominance, strike capability, and excellence in defense management--not numbers or U.S. supremacy.

*The purposes of U.S. military engagement vary from one region to another. The main rationale in Europe (via NATO) and East Asia (especially Japan) should be to improve the military effectiveness and responsibility sharing of core partnerships (e.g., staging to less secure adjacent areas; expanding contact; conducting combined operations with China, Russia, and other transition states; fostering defense reform; and signaling that Americans are not deployed to threaten friends). U.S. forces in the greater Middle East should demonstrate the capacity to project overwhelming strike power and deter sudden aggression. Elsewhere--in Latin America, the former Soviet Union, and Africa--the objective of engagement is mainly to foster defense and political reform. In every region,

engagement can improve cooperation against nonstate threats.

*U.S. forces are well-honed to respond to rogues in MTWs. As rogues in turn respond with asymmetric threats, or as SSCs persist, confidence in the adequacy of U.S. forces will drop unless they adapt. The QDR report correctly highlighted these two near-term concerns.

*The most severe asymmetric threats of the next 10 years are weapons of mass destruction, selective advanced weapons (e.g., surface-to-air missiles and sea mines), and information warfare (IW). Of these, WMD are the most dangerous because they can erode U.S. ability, will, and credibility to project power to protect national interests and international security. To counter such threats, the United States should:

- Underscore the possibility of nuclear retaliation for nuclear, biological, and chemical attacks
- Deploy theater missile defense, passive defense, and counterforce
- Reduce reliance on vulnerable forward bases, force flows, and troop concentrations
- Improve intelligence on the status of WMD programs and location of stockpiles and weapons.

*Small-scale contingencies present starkly different operational challenges than major theater wars. They require restrained, small-unit operations to prevent war. Because they are usually multinational, the United States should improve coalition preparations, especially in NATO. Because SSCs are seldom purely military operations, the United States should improve its civil-military coordination and capacity to provide and restore the civil infrastructure. SSCs place severe strains on the forces used, especially if those forces are also expected to be ready for MTWs. Thus, the United States should consider such options as spreading the responsibility for SSCs across more of the total force, segmenting and specializing forces for SSCs and MTWs, or developing some hybrid capability of these extremes.

* U.S. forces must also be prepared for a less desirable future. Three potential developments could pose serious and different military problems. The United States should consider these factors over the long term (10-20 years):

- Adversaries could be much *larger* (e.g., major transition states turned hostile)
- Adversaries like today's rogues, or new non-state actors, could present *nastier* dangers (e.g., an arsenal of asymmetric threats)
- Conditions in which U.S. forces operate (MTWs or SSCs) could be *messier* (e.g., urban, jungle, or politically ambiguous).

* The United States is unclear but not clueless about the future. Globalization will continue, with important consequences: worldwide interests will still need protection; technology will spread relentlessly; transition states that abandon reform and integration will have economic, technological, and military handicaps; states with no place in the global economy could fail and spawn nonstate threats (e.g., in Africa and parts of Eurasia). In light of such "clues," the United States should:

- *Prepare* for the need to project power against nastier, WMD-armed rogues and to conduct operations in messier conditions
- *Plan* for long-range WMD, terrorist, and IW threats to the U.S. homeland
- *Watch* for signs that a large new adversary is emerging, in which case ample time should exist to "scale up" U.S. capabilities.

The United States needs greater military contributions from, and improved capabilities with, its core partners.

Preface

By LIEUTENANT GENERAL RICHARD A. CHILCOAT, U.S. ARMY
President, National Defense University

Over the past few years the Department of Defense has been intensifying its study of the global security situation, U.S. force posture, and future defense requirements. The National Defense University contributes to this dialogue through *Strategic Assessment*, an annual publication which applies the expertise of this institution through the leadership of its interdisciplinary research arm, the Institute for National Strategic Studies, with the assistance of specialists from elsewhere in government and academe. Offering such analyses, in both general and particular areas of interest to the national security community, is an important aspect of the NDU mission. This volume examines various approaches that the United States might adopt to shape the strategic environment of the future.

The current environment is characterized by instability and change. The U.S. Government needs to apply the full range of options at its disposal to achieve national goals and ensure the peace and stability required to preserve our rights to "life, liberty, and the pursuit of happiness." But such options must be studied and conceptualized for years (and in some cases, decades) in advance to take advantage of the opportunities presented by a changing global environment.

The recent Quadrennial Defense Review (QDR) recommended a series of defense posture changes. This volume reviews these recommendations and takes the next analytical step, to propose what is entailed by such changes. *Strategic Assessment 1998: Engaging Power for Peace* should prove useful beyond the defense establishment, to all readers with an interest in national security affairs. We emphasize that this report is not a statement of official policy, nor does it represent the views of the Department of Defense or the Joint Chiefs of Staff. Rather than to state policy, the role of National Defense University is to stimulate discussion and research among both policymakers and analysts.

Foreword

By HANS BINNENDIJK *and* DAVID C. GOMPERT

This is the fourth volume in the annual *Strategic Assessment* series produced by the Institute for National Strategic Studies at the National Defense University, and undertaken to contribute to the

national effort to understand more clearly the nature of, and the U.S. role in, the new international system. This volume complements the *Strategic Forum* series (issue papers on key national security topics), *Joint Force Quarterly* (a professional military journal published for the Chairman of the Joint Chiefs), and other titles issued by INSS. While *Strategic Assessment* is not an official government publication, we trust that it will inform and influence policymakers and academics alike.

Each previous volume has had a specific theme. *Strategic Assessment 1995: U.S. Security Challenges in Transition* described a new international system which held much promise and new security concerns for the United States. Some of the first volume's conclusions were:

- The world is dividing into market democracies, transitional states, and troubled states. Market democracies form the core of the U.S. international strength. Transitional states will determine the nature of the international system. Troubled states generate many new security concerns.
- The most likely conflicts in the emerging system are the least dangerous to U.S. security.
- Proliferation of weapons of mass destruction is increasingly a current rather than a future concern.
- The U.S. domestic focus is limiting our national security capabilities.
- Information technology is displacing heavy industry as the source of national power.
- International organizations are assuming an important legitimizing role, despite their limited capabilities.
- Globalization is creating transitional threats as well as benefits.
- To deal with this complex new world, the United States needs to set national security priorities--ensure peace among the major powers, engage selectively in regional conflicts, respond to transnational threats, and assist failed states.

Strategic Assessment 1996: Instruments of U.S. Power reviewed 15 different types of means of exercising U.S. power (ranging from the diplomat in the field to the nuclear weapon in its silo) and analyzed their capabilities and relevance in the post-Cold War era. Despite real budget reductions of more than one-third over the previous decade, both U.S. defense and international affairs instruments were rapidly adapted to meet many of the new challenges identified in the volume published last year. But the budget cuts were concentrated in areas like defense procurement and security assistance, which, if not reversed, could cause lasting damage to our national interests. Some of the specific conclusions of this second volume were:

- U.S. military forces are currently far more capable, better equipped, and better trained than those of any conceivable adversary. The U.S. military stands at a crossroads in deciding how much of this capable force it wants to trade in for the kind of stand-off precision warfare inherent in the systems-of-systems approach to future warfare.
- U.S. military capabilities are increasingly being used for peacetime engagement and peace operations in ways that shape the new strategic environment. These are important functions that tend to affect the operations and personnel tempo of a small number of units.
- U.S. alliances are shifting to become the cornerstone around which ad hoc coalitions can be formed. But the U.S. ability to share its information dominance with allies is not well developed

and could create problems.

- The United States needs to consider reorganizing its diplomatic structure.
- The United States has been very creative in finding alternative ways to fund international security requirements: seeking foreign contributions for U.S. initiatives, using old accounts for new purposes, and drawing on international organizations for things like weapons inspections.
- There is an enhanced role for the private sector in national security affairs. Examples include non-governmental organizations in peace operations, the news media, and efforts at Track II diplomacy.
- Closer interagency coordination is needed to make maximum use of the resources and instruments of national power.

Strategic Assessment 1997: Flashpoints and Force Structure categorized key strategic focal points as major powers, regional contingencies, troubled states, and transitions problems. The volume concluded that the "two nearly simultaneous Major Regional Contingencies" concept had become a less useful primary planning scenario than in 1993. The study suggested a broader basis for the Quadrennial Defense Review (QDR), and then assessed three alternative force structures. Some specific conclusions drawn were:

- The United States faces what might be called a strategic lull, but it is nonetheless confronted with a more complex and diverse set of smaller threats. It must both deal with those threats and take advantage of the strategic lull to exploit the revolution in military affairs.
- Russia will be preoccupied with internal economic and political turmoil. Its conventional forces have deteriorated rapidly and present no threat, but nuclearization of Russia's defense policy should raise concerns.
- China's leadership is focused on domestic politics, but the cultivation of nationalism, new energy needs, and rapid economic growth make it a potential theater competitor.
- While both North Korea and Iraq remain dangerous, their conventional military capabilities have declined substantially relative to that of the United States. That makes more likely their use of weapons of mass destruction, should conflict start.
- Radical Islam will remain a potentially destabilizing factor throughout the Middle East and North Africa during the next decade.

With regard to force structure alternatives, *Strategic Assessment 1997* analyzed the following:

- A recapitalization force model to emphasize procurement and modernization, but at the cost of modest force structure reductions.
- An accelerated RMA force model which aggressively implements the system-of-systems, but at the cost of major force structure reductions.
- A full spectrum force model which maintains force structure and slowly integrates RMA technology, but at the cost of a larger defense budget.

No alternative was recommended, but it was clear from the threat analysis that the full spectrum force

model was preferable if the budget financing could be found.

This background was used to prepare *Strategic Assessment 1998: Engaging Power for Peace*. Many of the conclusions drawn in earlier volumes in this series found resonance in the report of the Quadrennial Defense Review, signed by Secretary of Defense William Cohen in May of 1997. The QDR looked at three military challenges facing the United States: shaping the strategic environment, responding to aggression, and preparing now for an uncertain future. It recommended a force structure somewhere between the recapitalization and full spectrum force models laid out in last year's assessment. This year's volume is organized under the rubrics of shaping, responding, and preparing, in order to amplify and extend the QDR conclusions.

Conclusions, David C. Gompert, INSS

Thanks are also due to many military officers, civilian officials, and outside analysts who provided thoughtful comments on early drafts of this volume. Special thanks go to James Zackrison, who served as managing editor during the initial stages of this project; Ron Nazzaro, who conducted background research and produced the graphics; Patrick Clawson and Ellin Sarot for their editorial input and review; members of the INSS staff for their assistance, including James Swihart, Walter Vanderbeek, and James Brusstar; Jerry McGinn, research assistant at The RAND Corporation; Erwin Godoy, INSS research assistant; and William Rawley, Kathy Goldynia, Deborah Rhode, and other members of the Typography and Design Division at the U.S. Government Printing Office. Finally, the editorial staff of the Publication Directorate within INSS under the supervision of Robert Silano proofed the final version of the volume and saw it through the final stages of production.

Strategic Assessment 1998 is neither a statement nor a critique of U.S. Government policy. The opinions, conclusions, and recommendations, either expressed or implied, are solely those of the contributors. They do not necessarily reflect the views of the National Defense University, the Department of Defense, or any other agency of the U.S. Government.

Research and writing for *Strategic Assessment 1998* was completed in late 1997 and revised to include developments through the end of March 1998.

1998 Strategic Assessment

Engaging Power for Peace

CHAPTER ONE

The Global Environment

History's most violent century is ending under conditions of general peace, cooperation, and progress. The integration of the world economy and spread of democracy have combined to create a strong sense of common interest among the most advanced powers. There is a growing respect for the norms of responsible international behavior. The successful free-enterprise democracies serve as a beacon for those states emerging from communism and other forms of authoritarianism.

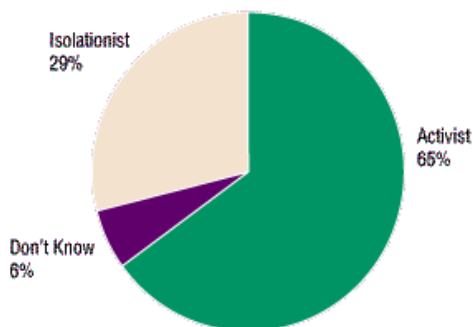

This global security environment is favorable to the United States: to its interests, ideals, and friends. The Nation's survival and territory are not threatened; its way of life is secure. As a result, the U.S. population now concerns itself mainly with the quality of life. Thanks to a growing involvement in the world economy, success in information technology, and the streamlining of industry and government, the United States is experiencing economic resurgence and sustained growth. This has helped eliminate the Federal budget deficit and enabled the country to afford its current defense budget.

The other great economic powers, the European Union (EU) and Japan, despite occasional friction, are close and trusted allies and friends of the United States. Together, the three have built a democratic, free-market core, which is now spreading throughout the Americas, Europe, and Asia. Consequently, an expanding area of the globe is increasingly peaceful and prosperous. The flow of goods, capital, and know-how throughout this area is growing and being freed from barriers and threats of interruption.

Just as the current security environment is positive, so are most (but not all) trends promising. There is no sign that great-power rivalry will displace comity as the essence of U.S.-European or U.S.-Japanese relations, despite the collapse of the Soviet Union. The three largest states outside this core--China, India, and Russia--have embarked on a transition of economic reform and integration. They know that cooperation with the leading core democracies is key to national prospects. By contrast, rogue regimes that reject the norms of the core must rely on oppression to survive and therefore face a bleak future.

The enemies of the United States are thus few, isolated, and relatively weak. No global challenger or hostile alliance is on the horizon. America's ability to maintain robust military capabilities is not in doubt, thanks to its technology, the quality of its personnel, and the scale of its defense effort.

Foreign Policy Preferences of the American Public

Source: Chicago Council on Foreign Relations, 1996

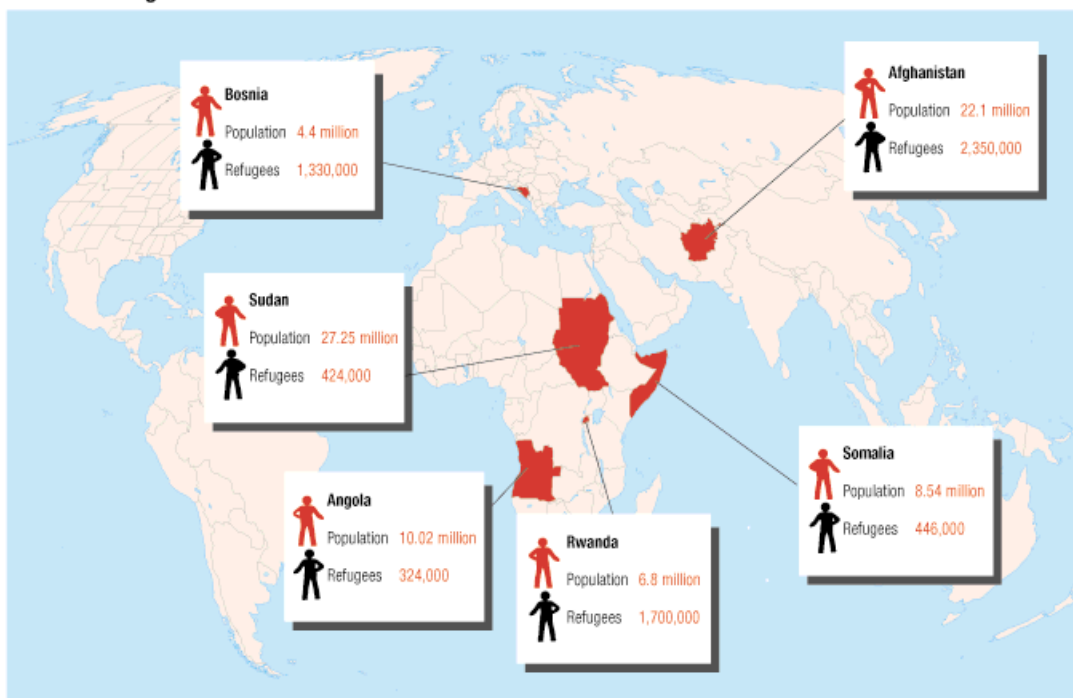

These favorable conditions and trends do not mean the United States should retire from its international responsibilities or further reduce defense outlays (down by 40 percent since the end of the Cold War). On the contrary, U.S. military strength and international engagement are essential in preserving and shaping conditions favorable to U.S. interests--and well worth the cost. The U.S. public accepts this fact and is therefore willing to support a defense budget of roughly \$250 billion, as well as continued commitments abroad. Warnings of a revival of U.S. isolationism underestimate the good sense of its citizens, most of whom appreciate that the Nation cannot be indifferent to an outside world on which its prosperity increasingly depends. While hesitant about intervening militarily where national interests are not clearly at stake, the American public has nonetheless been willing to support the use of U.S. forces in defense of important norms, provided other core states share in the risk.

The defense effort and international role of the United States are warranted not only to sustain today's conditions, but also to prepare for a potentially bright but quite possibly hazardous future. The United States can shape the international security environment but cannot control it and would be ill advised to try. In time, new adversaries could appear on the scene, possibly even large transition states "gone bad," perhaps in league with rogue states. The United States can slow but not reverse the spread of technologies that could make potential adversaries more dangerous, including the means to make and deliver weapons of mass destruction (WMD), cheap high-technology weapons, and the know-how to disrupt information networks. Predatory states could threaten their neighbors or escalate their struggles against the democratic core. Energy supplies on which the world economy depends could fall under hostile control or otherwise become inaccessible because of turmoil in the Middle East and former Soviet Union. Fanatical or criminal groups, operating transnationally, could proliferate, feasting on weak and failing states and striking practically anywhere, with only the signature they chose to leave. The U.S. society, territory, and infrastructure could be threatened directly by state and non-state actors with the reach, cause, and nerve to try.

For all the encouraging developments of recent years--victories over communism, apartheid, and despots--such perils must be recognized. So great is the uncertainty surrounding these dangers that it is impossible to say whether U.S. interests will be more or less secure in 10 years than today. Because of its strong position, the United States can affect its security environment, making it less likely to face a more dangerous future if it remains strong and engaged.

But the United States should also be motivated by an affirmative goal for the century to come. In essence, it seeks an expansive community of responsible democracies, bound together by the free flow of goods, resources, and knowledge, encompassing all the world's great powers, and safe from rogues with hostile ideas and dangerous technologies. Whether such a vision is realistic depends on the skillful use of U.S. influence.

Selected Failing States

SOURCE: United Nations and International Committee of the Red Cross, 1996

For all its strength, the United States seeks the respect of other countries, not hegemony over them. While it possesses a unique set of

capabilities, the United States is not determined to be superior to others. Power is not its purpose; defending its primacy is not its strategy. The United States has a major equity in the effectiveness of international institutions. It needs partnerships with others of means who share the same goals and are prepared to accept more responsibility.

U.S. Interests

The security strategy of the United States in this new era ought to promote and protect its growing equity in a promising, changing world, aiming toward the prosperous and secure community of responsible democracies just described. This equity takes different forms, depending on the stage of progress of the other world actors:

- *The first group consists of *core partners*--successful democracies that can join the United States in shouldering the burdens of the core's security and expansion. This group has less than one-fifth of the world's population but four-fifths of its economic capacity.
- *The fate of the second group, *transition states*, will determine how much farther the core will grow and therefore whether the future will be fundamentally more or less secure. This group accounts for most of the world's population.
- *The third group, *rogues* (state and nonstate), rejects the ideals and, given the means and the chance, would attack the interests of the United States and its core partners. Rogue states are especially eager to acquire WMD and other dangerous technologies.
- *The fourth group, *failing states*, is typically ravaged by upheaval and war. While relatively few and small, these states could impose huge humanitarian demands on the United States and its partners.

Economic Security

U.S. security and prosperity have benefited greatly from the success of its Cold-War allies--free-enterprise democracies in Western Europe and Northeast Asia. The United States and these core partners have common concerns, including access to the one vital resource that lies mainly beyond their control, petroleum, and safety from WMD and other unconventional threats to their societies and economies. These concerns give the United States an interest in adapting the alliances it built with Europe and Japan originally to block Soviet expansion.

Core Military and Foreign Aid Expenditures

Source: U.S. Arms Control and Disarmament Agency, *World Military and Social Expenditures*, 1996

Within the framework of those alliances, the United States wants its partners to accept greater responsibility for the security of core interests. Divergent security policies, especially in the context of global commercial competition, could tear apart the community of leading economic powers upon which the global economy and the advancement of other U.S. interests depend. As well, a perception in the United States that wealthy allies are not bearing a fair share of the risks and costs of common security could undermine cohesion, as could a perception by U.S. allies that the United States wants followers, not partners. U.S. unilateralism and lack of fair allied burden sharing could become a vicious circle. The political health of the core is thus crucial to its economic health and its security.

Core Enlargement

The core is now expanding, in part because of its economic and political attractiveness and in part because of the heavy flow of private investment into value-added industry in emerging nations. The globalization of both production and markets, enabled by information technology and fostering economic and political reform, is working its way (somewhat unevenly) through Eastern Europe, Latin America, and Southeast Asia. As it does, it is improving living standards, political legitimacy, stability, and security in regions previously among the world's most troubled. Most of the states of these three regions are poised to join the core. From Chile and Argentina to the Czech Republic, Hungary, and Poland, to Malaysia and Thailand, the roots of reform have grown sturdy, and acceptance of core norms has solidified. The United States has an interest in making these gains irreversible and, in time, getting these emerging nations also to accept greater international responsibilities--that is, to become new core partners.

Of course, the U.S. interest in enlarging the core is especially great with regard to the largest transition states, above all China, but India and Russia, too. The Chinese and Indian economies will rank third and fourth in the world by the year 2000. All three have nuclear weapons, which in Russia's case number in the thousands and are vulnerable to weakened state control. While they are vastly different--China is already a major trading power, India is a democracy, and Russia is the main remnant of a failed superpower--the United States welcomes the success and integration of all three.

At the same time, the United States cannot assume, much less assure, the transition of these three states, let alone of the rest of Eurasia and the Middle East. So it must be prepared to discourage any aggressive tendencies exhibited by states, even the largest, that reject reform and international norms. This broad interest includes ensuring that the use of China's growing power does not upset stability in East Asia, containing the spread of dangerous materials and technologies if disorder weakens Russia, and safeguarding oil supplies in a turbulent Middle East.

Survey of the Global Refugee Situation

- 1 Asylum in Europe:** About 5 million people have sought asylum in Europe since the early 1980s and more are making their way into countries in the central and eastern parts of the continent.
- 2 War in the former Yugoslavia:** More than 3.7 million people have been displaced or affected by the war and are receiving assistance from the United Nations.
- 3 Conflicts in the Caucasus:** Continuing political and communal conflicts have caused the displacement of more than 1.5 million people.
- 4 The Palestinian question:** The future of about 2.8 million people is one of the most complex issues in the Middle East.
- 5 Reconstruction in Afghanistan:** Lasting peace and additional reconstruction are needed to enable the return of about 2.5 million refugees in Pakistan and Iran.
- 6 Repatriation to Myanmar:** By the end of 1996, the remaining 50,000 of the 250,000 people who fled to Bangladesh in 1991 and 1992 were repatriated to Myanmar.
- 7 Vietnamese boat people:** About 40,000 refugees remain in camps throughout Southeast Asia.
- 8 Displaced Sri Lankans:** More than 75,000 Sri Lankan Tamil refugees remain in India, and at least 800,000 people in the north of the island have been displaced because of the war between government and rebel forces.
- 9 Relief and repatriation in the Horn of Africa:** The United Nations assists in the repatriation of about 1.6 million Eritrean refugees in the Horn of Africa who fled to the Sudan more than 30 years ago.
- 10 Rwanda and Burundi:** Political crisis in Rwanda and Burundi has created one of the largest concentrations of displaced people in the world, and efforts are being made to repatriate more than 2 million Rwandans.
- 11 Reintegration in Mozambique:** Between 1992 and 1996, 1.7 million refugees returned from other countries in southern Africa and are trying to support themselves and rebuild their own communities.
- 12 West African Refugees:** Nearly a million refugees have been created by the conflicts in Liberia and Sierra Leone, and thousands more are displaced within these countries.
- 13 Guatemalan repatriation:** About 20,000 Guatemalans returned to their homes between 1984 and 1996.

Protecting the Core

Rogue states are dwindling in number and are weakened by flawed economic policies, isolation, and illegitimacy. Globalization and the spread of information technology are gradually encircling them. As the core grows and prospers, rogue states will be forced to choose between reform (thus progress) and oppression as the way to deal with domestic discontent. They can be brutal, resilient, extremist, desperate--and dangerous. To maintain their grip on power, coerce their neighbors, and carry on their battle against the United States and its partners, these states might threaten to use any means of destruction they can acquire, including nuclear, biological, and chemical (NBC) weapons of mass destruction, cheap high-tech weapons, and information warfare (IW). If Iran, Iraq, North Korea, Libya, or Serbia, for example, displays menacing behavior, the United States will have to protect itself, its interests, and its friends.

Because rogue states can threaten the security of the core, the United States has an interest in rallying its partners and key transition states,

including China and Russia, to isolate these states and hasten their demise. This will not come easily. The recent past provides many instances of Russia, China, and even U.S. allies trafficking in dangerous technologies with the likes of Iran--a proven sponsor of terrorism that hardly conceals its aim of acquiring nuclear weapons. Rogues can be counted on to exploit any differences between the United States and its partners; thus, a united front, at least among the United States and its NATO allies, is imperative.

Nonstate Rogues: Selected Problem Areas

SOURCE: Department of Defense

At the same time, the United States cannot exclude the possibility that even the worst regimes can change, or be changed. Zaire's Mobutu fled at the first sign of serious internal opposition, abetted by the country's neighbors, his failing health, and the withdrawal of Western backing. From time to time, reform seems a possibility in Serbia; and some U.S. partners argue that the Iranian and Cuban regimes could be moderated if engaged. When there is concrete evidence that a rogue state is ending its hostile ways, the United States can afford to offer encouragement without lowering its guard. In the meantime, however, a rogue state's behavior must be policed and its grip on power loosened.

Rogues need not be states. Separatists, militant fundamentalists, drug cartels, and other criminal and paramilitary groups can obtain the means to attack society and governments--means that might include WMD, information warfare, and more conventional weapons targeted on innocent people. Compared to national governments, these shadowy actors are hard to track, punish, and deter, especially if they take the form of networks utilizing the latest communications technology. Moreover, the core's growing economic integration, connectivity, and reliance on a common infrastructure are creating vulnerabilities that are difficult to gauge, let alone prevent. Being elusive, fanatical, and cunning, rogue groups determined to strike directly at U.S. territory or citizens could become a serious national security problem. The United States has an interest in controlling and defeating such transnational threats, especially if they involve chemical or biological weapons. Sometimes, this will entail a role for U.S. military forces, and sometimes not. In any case, given the character of these threats, the United States needs the cooperation of its core partners and transition states alike.

The Failed State

Worldwide, millions of humans cannot count on their own states to govern and protect them, or in some cases even let them live in peace. The recent chaos in Central Africa gruesomely shows what can happen when states collapse or turn against their citizens. Birth rates are high and economic growth low or negative among these countries, with many people crowding into megacities that can provide for them no better than could the land they left. When order and infrastructure crumble, prolonged suffering is often punctuated by large-scale humanitarian crises. When, in addition, tribal violence erupts, massacres can ensue, either despite or at the hand of the failing regimes.

The consequences of these spiraling human crises are not always confined to the victims' agonies, as when refugees flood across borders, destabilizing entire regions. Terrorism, international crime, drug trade, ecological ruin, disease, and other transnational dangers can be caused and spewed by these conditions. The aggregate effect of such situations could entail major risks and costs for the core states. Of course, if state failure were to occur in one of the large transition states such as Russia, or in a heavily armed rogue state such as North Korea, the consequences could include the loss of control over WMD and rampaging rabble from disintegrating armies.

The interest of the United States and its partners in preventing these sorts of effects suggests a need to address the economic and political conditions that breed state failure-- a task mainly for U.S. foreign and aid policies. But the refusal of many regimes to reform and to seek productive employment for their people hinders the value of external help. Corporations in search of safe and profitable investments treat failing states with extreme caution, so there will be a number of states that find no niche in the world economy. The United States must expect more situations such as these in Somalia, Rwanda, Liberia, Sierra Leone, and Zaire.

Core States: Economic Output (regional comparisons of output and growth)

| | 1985 Output
Billions (U.S. \$) | 1995 Output
Billions (U.S. \$) | 10-Year Growth
Billions (U.S. \$) | Population
Millions |
|------------------------------|-----------------------------------|-----------------------------------|--------------------------------------|------------------------|
| Western Europe | 4,230 | 6,565 | 2,335 | 417 |
| North America | 4,791 | 7,473 | 2,682 | 290 |
| East Asia | 4,267 | 7,603 | 3,336 | 250 |
| Core total | 13,288 | 21,641 | 8,353 | 957 |
| World total | 17,951 | 28,202 | 10,251 | 5,757 |
| Core share
of world total | 74% | 77% | 81% | 17% |

Source: International Monetary Fund, *World Economic Outlook*, 1996

Because it can neither ignore nor handle this problem by itself, the United States has an interest in improving multilateral options to stop and relieve mass suffering and to contain other effects of state failure. This interest is sometimes argued on economic or security grounds, namely that the United States and its partners will one day face serious material consequences if they permit the deterioration of a significant part of the world, where population growth is outpacing productive potential and where states either fail or assault their people. In any case, the credibility of the great democracies suffers when genocide and other mass suffering go unchecked. Thus, the United States has an interest not only in the health, security, and expansion of the core but also in its ability to act out of moral integrity and political responsibility.

Norms

The interest of the United States and its partners in limiting the damage from failing states highlights the fact that the U.S. stake in the world cannot be reduced to purely physical interests. The core democracies observe and champion a set of norms that flow from their ideals and buttress their interests. Promotion of these norms does not mean the imposition of "Western" values on other nations and cultures, but rather a growing acceptance of basic standards of decent behavior by legitimate governments.

Broadly stated, the norms of the core include:

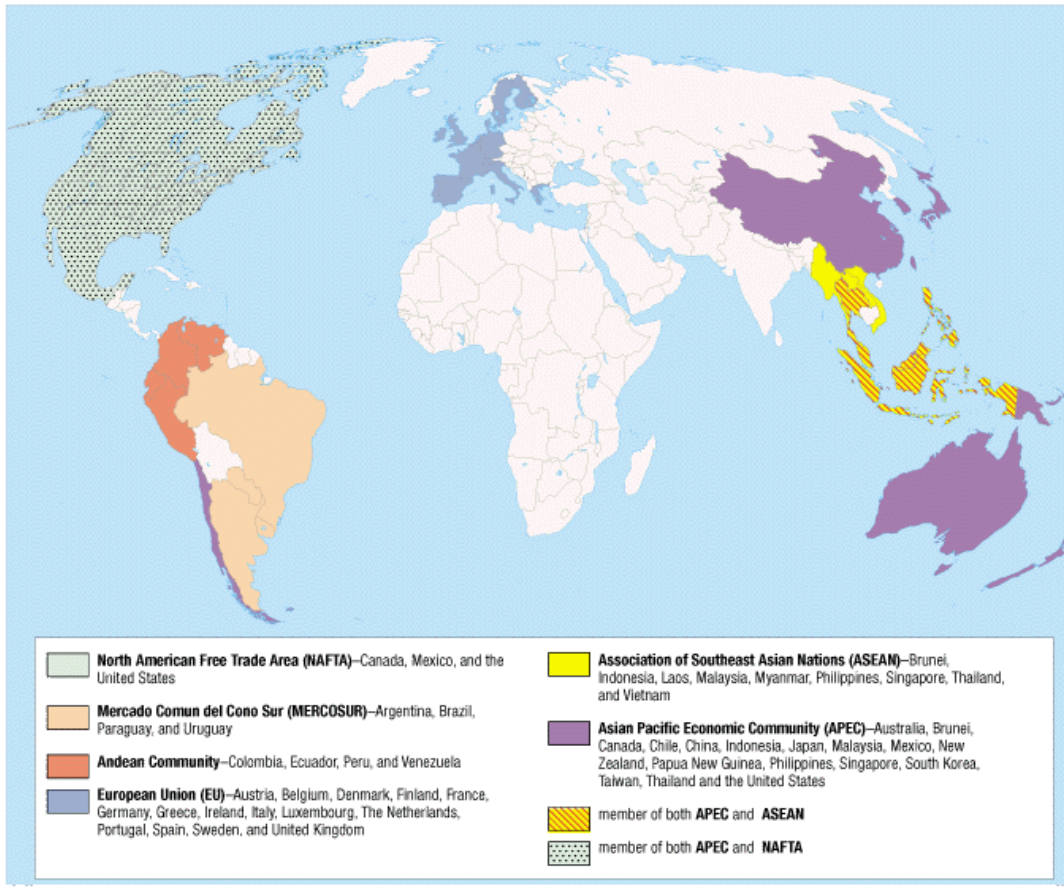

**Those that bolster international peace:* nonaggression, the right of collective self-defense, the laws of war, arms control, peaceful settlement of disputes, antiterrorism covenants, respect for the authority of the UN Security Council, and respect for other instruments and institutions that affect directly whether and how conflicts occur.

**Those that govern the functioning of the international economy:* freedom of commerce, law of the sea, access to resources, noninterference with the flow of information, environmental protection, the rules of open multilateral trading, and cooperation in addressing transnational problems.

**Those that bear on the treatment of people by states:* human rights, the rule of law, representative and accountable government, individual liberties, freedom of the press, and other tenets of civil societies and states.

All three classes of norms affect the international security environment. The first applies directly to state behavior in peace and war. The second can help ensure that economic activity is a force for peace and not war. The third addresses underlying conditions that can cause or reduce instability and conflict.

Major International Economic Organizations

While deviations remain all too frequent, and sometimes flagrant--Saddam Hussein has flouted all three categories--these norms are in fact increasingly honored and enforced. The collapse of communism, the expansion of the core, and the democratization of many developing nations open up the possibility of near-universal acceptance. At the same time, these norms are demanding more of states, constraining their freedom of action, and intruding into their sovereignty. While the rules governing international security are well established (if not always observed), those concerning the international economy are being developed as that economy becomes integrated. Those affecting internal politics and human rights are the most sensitive and difficult to guarantee.

Generally speaking, these norms support the ideals of the core democracies and reflect the progress of those societies no less than does their enrichment. The United States therefore has an interest in sharing with its partners the responsibilities and sacrifices not only of abiding by the norms but also of enforcing them against rogue states and of helping peoples whose states fail.

Growing Western Dependence on Petroleum Imports

Source: British Petroleum, *BP Statistical Review of World Energy*, 1997

States in transition are still ambivalent about these norms. In their ideological days, Russians and Chinese saw some of the norms as serving Western, and thus adversary, interests. The United States has a stake in gaining acceptance of the norms by transition states, as part of the wider process of reform and integration. This is, of course, especially critical for the large transition states--China, Russia, and India--which are less likely to challenge U.S. interests as they come to accept as their own the principles that currently guide the core nations.

Rogue states reject many of these norms, in deed if not in word. Iran's support of terrorism, North Korea's illicit quest for chemical and biological weapons, and Iraq's assaults on its Kurdish and Shiite minorities, for example, place these states outside not only the core but also the broader international community. If they are allowed to operate with impunity, the norms could be

generally eroded.

When states fail, norms are often trampled, as has happened repeatedly in sub-Saharan Africa. The United States, its partners, and others may choose to provide relief and protection of human beings in such circumstances. Such responsibility cannot be accepted lightly, since it can lead to the use of U.S. forces in circumstances, hostile or not, where vital U.S. interests are not at risk. At a minimum, the leading democracies must appreciate that any tolerance of genocide--which they have all sworn is intolerable--will affect the core's integrity and credibility, however difficult it may be to stop.

U.S. norms and U.S. interests are linked. Whether using its forces in war, in operations short of war, or in shaping the perceptions and behavior of others in peacetime, the United States is most effective when guided by a combination of interest and principle. The use of deadly force to uphold these norms is rarely required, though in peacekeeping and other operations short of war the United States might have to take up arms to reinforce the norms.

Where the United States perceives that it *must* use force because vital interests are at risk, it must preserve the option to do so unilaterally, if need be, and therefore should maintain the independent capacity to do so. But where the United States might *choose* to engage its forces--such as enforcing norms despite the absence of a direct threat to national interests--it will want, perhaps even need, to do so multilaterally and therefore should concentrate on building a coalition military capacity to do so.

Arms control has figured importantly in U.S. national security policy at least since the early days of the nuclear age and the Cold War. Although arms control has been used to promote international political understanding, its success has commonly flowed *from* rapprochement rather than produced it, as evidenced by the waning years of East-West confrontation. Still, arms control can help diminish military threats and build confidence, thus improving the security environment, as the recent START II and chemical weapons treaties are intended to do. But it is only prudent to admit that arms control has not stopped those determined to acquire WMD from doing so. While the United States remains a champion of the norms and pursuit of arms control, it remains to be seen whether major agreements like those that accompanied the end of the Cold War will play a role in the new security environment.

Conditions and Trends

Core States

For much of the 20th century, Western Europe and Northeast Asia were two of the world's most explosive regions. They are now among the most prosperous, stable, and secure. With important exceptions--Korea and Taiwan--the core is generally free from the threat of territorial aggression and from the enmity of a competing bloc. Moreover, nearly a decade after the disappearance of the Soviet threat, and despite the fierce economic competition of their firms for world markets, the United States and the other leading economic powers continue to be friends and to collaborate on shared interests. This unity is encouraged, though not guaranteed, by the merging of the economies of the leading democracies, resulting from growing trade and investment, the free flow of ideas, and the integration of financial markets. It is reinforced by a commonality of values and norms that has been unaffected by the end of the Cold War.

At the same time, there is an understandable tendency on the part of the leading partners of the United States to exercise increasing independence in world and regional affairs, owing to their economic success and the absence of a mortal threat that only the United States can counter. This tendency is accentuated in Europe by significant, if at times halting, progress toward EU-based security collaboration to accompany economic union. In Eastern Asia, Japan and its neighbors are approaching the matter of greater Japanese security responsibilities more cautiously. In general, the United States is searching for a balance between asserting its political leadership in its partners' regions and shifting more of the burden and, necessarily, more independence in their direction. Those partners, in turn, welcome greater independence while wanting the United States to stay in their regions and displaying ambivalence about accepting more responsibility. The U.S. force posture in Europe and Eastern Asia will both affect and be affected by its new relationships with old friends.

The experience of NATO in Bosnia points toward a general solution emerging in Europe: Europeans will take on more responsibility to respond to security dangers, albeit within their alliance with the United States and with significant U.S. involvement. In Eastern Asia, the keystone remains the U.S.-Japanese security relationship, which is being reoriented from protection of Japan to bolstering broader regional security.

The expansion of the core is as important as the recasting of ties among its charter members. As noted earlier, a group of nations--from Europe's new democracies to the democratizing states of Latin America and Eastern Asia--has progressed and integrated to the point it is essentially part of the core, politically and economically. In some cases (e.g., Poland, Hungary, and the Czech Republic), the nations are becoming formal allies; in other cases, South Korea (already an ally) and Taiwan, they play significant roles in the global economy.

The emergence of these new partners is fundamentally reshaping the security environment by enlarging the expanse of interests the United States might feel compelled to defend, and also by propagating outward from the core the conditions of prosperity, stability, and legitimate government undergirding peace. While external threats to the core are not on the order of the old Soviet threat to the West, a de facto security perimeter is pressing beyond the Cold War frontier--with potentially new demands on U.S. military capabilities. At the same time, an ever-growing circle of societies and states is living and acting in ways that engender international security. What remains to be seen is whether this circle is also willing to share in the responsibility for preserving international security commensurate with its success.

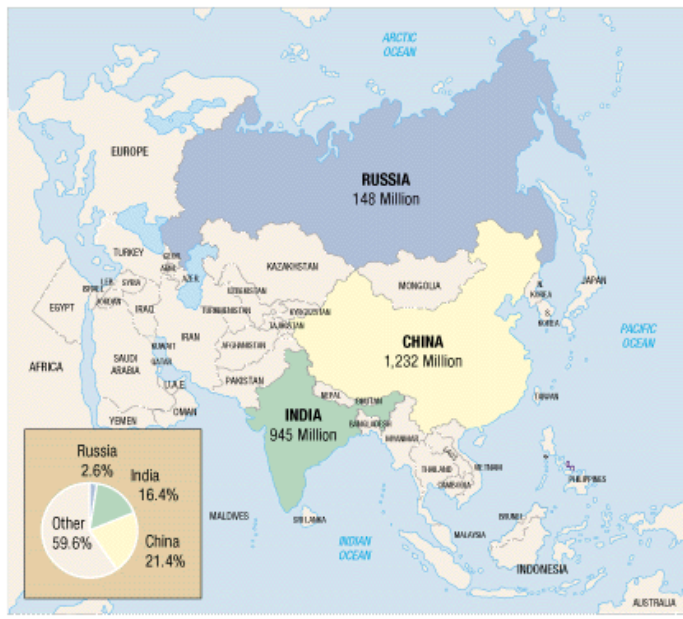

Transition States

Globalization of production, markets, capital, know-how, and reform might or might not reach all parts of the globe over the next 20 years or so. The forces behind these phenomena are mainly private and not managed, propelled, nor even fully understood by states--not even the U.S. Government. This process has considerable momentum in regions adjacent to the established core: Eastern Europe, Latin America, and Southeast Asia. But it would be an error simply to extrapolate this trend, at the same rapid pace, throughout all of Eurasia, including China, Russia, and India.

China is the most important transition state, by virtue of its size, aspirations, untapped human potential, prosperous expatriate community (some 150 million strong), and location in the world's most vibrant region. The overarching goals of the Chinese leadership are political stability and economic progress. These goals explain their commitment to aggressive economic reform, their drive to integrate China into the world economy as its largest source of labor-intensive production, and even their grudging acceptance of the need for (gradual) political reform--democracy "within 50 years," in the words of Jiang Zemin. But China's growing power and resolve to reunify Taiwan with the mainland will increase the likelihood of friction, or outright conflict, with the United States, especially if the Chinese become convinced that the aim of U.S. regional presence and global strategy is to block China's rise. Moreover, the gradual growth of Chinese power-projection capabilities will unsettle regional security and demand U.S. attention, even if no hostile Chinese intentions are evident.

India, already democratic, has recently begun to institute economic reforms and to invite foreign direct investment. Having been friendly with but not dependent on the Soviet Union, India has not suffered with the end of the Cold War. On the contrary, India's advantages over Pakistan are growing, and Indian hegemony in South Asia has become realistic if not a reality. Sino-Indian relations are currently quiescent, which serves China's interest in focusing its attention on national unification with Hong Kong and Taiwan. But the growing economic and strategic power of India and China--neighbors with old feuds, as well as nuclear weapons--could be a source of serious future instability that the United States will find hard to ignore but just as hard to influence.

Large Transition States (by state and percentage of world population)

SOURCE: World Bank, World Development Indicators, 1997

Russia's transition has been as difficult as could be expected for a people who have never known economic or political freedom. Whether Russia can follow the path cut by Poland and other former Soviet satellites is clouded by the dangers of self-isolation, organized crime, corruption, and disintegration, as well as the seductiveness of authoritarianism. Russia is unlikely to emerge as a major threat to the core: the free-fall of industrial production, the lack of domestic investment, inhospitable conditions for value-added enterprise, and the country's deteriorating human capital point toward a continued contraction, not a rebound, of Russian power. Apart from the danger Russia could present to its weaker neighbors in the "near abroad"--themselves at best nations in transition--the greatest problem for the United States and its partners is that Russia could become a source of dangerous technologies for rogues. The trends are worrisome: arms and dangerous technologies are among the few Russian-made products that others will buy--especially rogues who often have nowhere else to shop.

A number of other states are especially important because of their geographical proximity to the core: Ukraine, the Baltics, the Balkans, states of North Africa, and much of Latin America. The key to their future lies in their relationship with the advanced democracies--investment, trade, and technology transfer--and their own determination to get through the often-painful process of reform. While the outlook for this class of states is generally bright, the failure of even a few to complete the transition--Algeria and Turkey, for example--could cause such transnational problems as migration and drugs for the core.

Rogue States

The information revolution and the integration of the world economy could, in time, sweep over most rogue states. As their people learn what is happening outside and inside their countries, it is becoming difficult for all but the most brutal of these regimes to cling to power. North Korea's Stalinist regime may be near the end of the line, perhaps foreshadowing what is in store for others who resist the trend toward openness and integration. Iran, Iraq, and Cuba are suffering economically, though the regimes that rule them are clearly more resilient than the East European communists who were jettisoned by their subjects the moment Soviet protection was withdrawn.

Cuba illustrates the despot's dilemma: either reform, and risk losing economic and political control; or reject reform, and face a grim and potentially explosive future. Ideology is used to maintain power in Iran and could breed new radical rogues (hence the concern about Algeria). At the same time, the strongmen of Iraq, Syria, and Serbia have no genuine ideology and instead rely on ruthless politics, palace cliques, and the manipulation of information to remain in power. How long they can hang on is a crucial question. Even if economically weakened and politically isolated--or perhaps because they are weakened and isolated--they can be vicious, desperate, and reckless. While their ranks might shrink, a few very dangerous outlaw states could last indefinitely.

Key National Indicators

Source: Economist Intelligence Unit, 1996, and International Institute for Strategic Studies, *The Military Balance 1997-98*

For this reason, the most disturbing trend in today's security environment is the growing access of embattled rogue states to technologies and weapons that could be used--perhaps in desperation--against their neighbors, the core, and possibly the United States. North Korean ballistic missiles and WMD pose an increased threat to South Korea, Japan, and American troops, even as many North Koreans near starvation. The danger posed by such states could be compounded as the core's economy and infrastructure become more integrated and interconnected, making them vulnerable to acts that shock markets, sever circuits, and disable nodes, whether physically or electronically.

The diffusion of technology is one of the defining trends in world economics, politics, and security at this turn of the century. For the most part, the spread of technology improves the global economy, enables less developed states to emerge, and benefits the United States and its partners. This is especially true of information technology, which has the added benefit of fostering the exchange of ideas and thus democracy. The risk is that rogues will acquire the tools and techniques that can disrupt the information networks of the U.S. and the global economy. In any case, as the core economy integrates and expands, it is hard and getting harder to restrict the diffusion of these technologies.

The most acute problem of technology diffusion is the growing availability of the knowledge and materials to make WMD, as well as delivery systems. Stemming the spread of nuclear weapons is both more crucial and more straightforward than limiting access to other WMD technology. Biological and chemical weapons are easier to assemble and might be considered less risky than nuclear weapons to possess and use. In general, nonproliferation conventions, while worth having, are porous, especially where determined rogue states are involved. The only prudent assumption is that rogues will acquire and threaten to use WMD as the surest perceived way of neutralizing and deterring superior U.S. might.

Flow of Investment: United States, European Union, and Japan (1990-93)

Billions (U.S. \$)

Source: Organization of Economic Cooperation and Development, *International Direct Investment Handbook*, 1996

Thus, the general trend is toward increased destructive power in the hands of fringe regimes that can strike asymmetrically at the powerful democracies they oppose. The pace set by the United States in inventing and applying new technology to strengthen international security will be fast. But the pace at which this technology spreads will also be fast, especially as the world economy integrates.

Not only rogue states but also rogue groups other than states can create havoc for international security by acquiring devices of mass destruction or terror and information "weapons." Nonstate terrorists and criminal organizations pose especially pernicious transnational threats because they cannot easily be held accountable to international norms. Unlike rogue states, they face no problem of domestic dissent--no pressure to reform. These threats could increase as information networks enable such groups to increase their reach and efficiency without becoming easier to find and extinguish. Thus, while rogue states are experiencing heightened challenges in the information age, abroad and at home, potentially destructive nonstate actors are on the rise.

Failing States

It is possible to imagine two widely divergent alternative futures concerning the number and impact of failed states--both consistent with present conditions. In the best case, only a handful of sub-Saharan states and none outside Africa will fail in the way that Somalia, Haiti, Bosnia, Cambodia, and others failed. This scenario requires the assumption that nearly all regimes and elites throughout Africa and elsewhere eschew corruption, adopt economic reforms, find a niche in the world economy, and, with the help of the core democracies, invest in their human capital and infrastructure. In the alternative scenario, most of Africa, along with some heavily populated nations elsewhere, could fail to take these steps and slip into the familiar pattern of crumbling infrastructure, declining living standards, anarchy, and tribal violence, which scares away potential investors and makes external aid futile.

Imagine the problems posed for the United States and its core partners if states the size of, say, Pakistan, Indonesia, and Nigeria, sank into chaos. Not only would the security and stability of their regions be threatened by chaos, but also severe transnational threats (e.g., drugs, criminal organizations, paramilitary forces, and migrations) could rise, persist, and menace the international system as a whole. The difference in the consequences of these two scenarios for U.S. and global security underscores the importance of inducing as many states as possible to embark on the reforms and integration that could save them from failure.

Well short of the worst-case scenario, the failure of states can have significant implications regarding the demands U.S. forces might be called upon to meet. An increase in large-scale humanitarian crises, especially involving genocide, would leave the United States and its partners--especially its European allies--little choice but to organize coalition capabilities to intervene on the side of humanity and order. Because such demands are most likely to appear beyond the pale of vital U.S. interests, public support cannot be assured, though it could be more easily marshaled if U.S. partners were prepared to take their share of the responsibility.

Core State Technology Expenditure versus Combined GNP of All African Nations

Whether in defusing tribal war or battling 21st century pirates, U.S. forces could be involved in demanding and dangerous operations, even if not "war" in the classical sense. This prospect must be taken into account in designing, building, and managing those forces for the near and long term.

Potential Futures

The new security environment is far too fluid to believe that the future can be predicted by extrapolating trends or calculating point outcomes based on a Newtonian interaction of international forces. At best, an entire "space" of possible futures can be imagined in which to doublecheck whether U.S. capabilities and policies can cope with such conditions. With this in mind, it is illuminating to bracket the range of plausible futures.

In the best case, the core economy would continue its steady integration and growth. America's partners would accept increased international responsibilities. Enlargement would not slow but instead gain speed, extending from Southeast Asia into South Asia, from Eastern Europe into the former Soviet Union, and from Europe into the Middle East. China's growing economic and military power would be used responsibly and thus contribute to Asian stability and global security, as China comes to value its stake in the core and acts increasingly as a partner. Instead of failing, African states would embark on reform and economic growth, finding a place in the world economy. Technologies would continue to spread throughout that integrated economy, but the number of rogue and revisionist states that might misuse these technologies would decline sharply. The expansion of the core and wide sharing of responsibility for international security would present a near-global united front against transnational terrorists and criminals. Norms would prevail, so widely accepted that they rarely would need to be enforced, but with the strengthened core able to enforce them if need be.

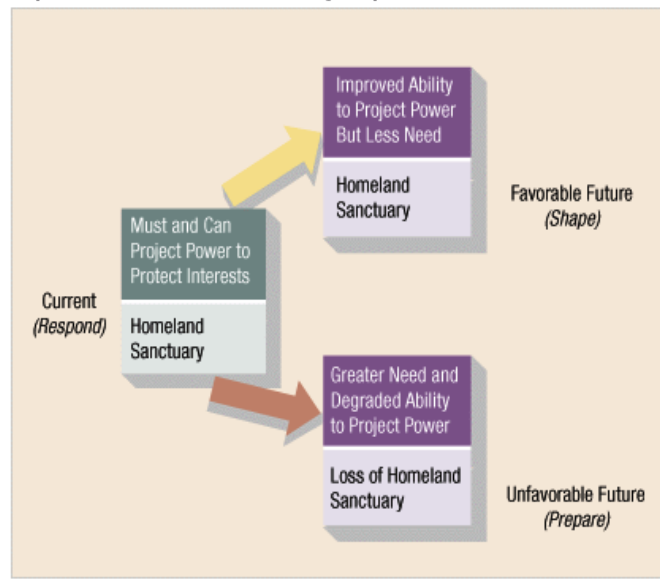

In the worst case--at least a very bad one--the expansion of the democratic core might stall. Rivalry and dissension among the United States, the European Union, and Japan could fracture their security alliances and sap their shared prosperity. Emerging nations and new democracies, including the large transition states, might lapse into stagnation, authoritarianism, and ethnic conflict. Lacking the support of its erstwhile partners, the United States would be less able to dissuade China from becoming a hostile, revisionist power, dominating or at least destabilizing Asia. China's enormous energy needs could lead to close ties with Iran and other rogue states, in turn giving them a new lease on life, access to dangerous technology, and greater ability to threaten U.S. interests.

A desperate Russia, its reform having stalled, might participate in this unfriendly constellation via the sale of its WMD technologies. Hope would be lost for the transition of scores of other states, and a growing number of failing states would produce human suffering on a biblical scale, with the democracies too preoccupied and too divided to respond. In the absence of international cooperation, predatory nonstate actors could proliferate, with access to weapons of mass destruction and information warfare and incentives to use these technologies to challenge U.S. interests and neutralize U.S. forces. All three classes of norms, described earlier, would be unenforceable and collapse.

In both cases, the United States possesses unmatched technological, military, and political power. But in the best case, the world's other powers are friends that share responsibilities, whereas in the worst case, the United States is nominally "superior" but beleaguered. In both cases the United States has and needs the ability to project power to protect its global interests. But in the best case its interests are secure and its ability to protect them is great, whereas in the worst case its interests are insecure and its ability to protect them is degraded. In the best case the U.S. homeland is essentially a sanctuary from international violence; in the worst case, it is a target.

This exercise in best and worst scenario spinning illustrates that the gap between polar but plausible outcomes is vast--and the implications for U.S. interests profound. It underscores the importance of an active, skillful engagement of U.S. power, including military forces, whether in influencing the security environment or in response to emergencies.

Implications for Basic U.S. Military Requirements

U.S. Military Power

The complex interplay of U.S. interests and norms on one hand, and international conditions and trends on the other, as presented in this chapter, will determine the choice, use, and role of U.S. forces. *Strategic Assessment 1998* examines how U.S. military power, as prescribed by the recent *Quadrennial Defense Review (QDR)*, can:

Shape an even more favorable international security environment

Respond to operational demands in today's world

Prepare for whatever the future holds.

In this volume, the timeframe for the *shape* and *respond* perspectives is 10 years (to 2008), and for the *prepare* perspective, 20 years (to 2018).

Shaping the international security environment means, quite simply, advancing and safeguarding U.S. interests without having to fight--the essence of successful national security strategy. While the strategy also includes crucial foreign and international economic policies, which are not elaborated, U.S. forces and other defense resources play a key role. In addition to being used in military contingencies, they

can help:

Deter potential aggressors and encourage all states to resolve their differences peacefully

Promote a climate of international confidence, trust, and cooperation

Improve coalitions by encouraging U.S. partners to accept greater responsibility for international security

Limit the threat from hostile and potentially hostile states

Promote political and military reform among transition states.

Chapters two through eight examine how U.S. forces and other defense resources can achieve such results across regions. They will spell out U.S. interests, regional trends bearing on those interests, and regional defense postures that can shape those trends. These chapters will confront the challenge of how to take advantage of U.S. military capacity to influence world politics in a positive direction without appearing hegemonic in goals or methods.

The ability to *respond to operational military contingencies* is the sine qua non of U.S. defense policy. Even successful shaping strategies will not eliminate the need to be prepared to use U.S. forces in large conflicts or, more likely, small-scale operations. In turn, shortcomings in operational capabilities not only pose risks to U.S. interests and forces, but also devalue those forces in shaping the attitudes and behavior of partners, transition states, and adversaries. The U.S. stake in the world in the new era imposes a wide range of possible operational demands, in contrast to the Cold War, when containing Soviet power was the overriding interest and defined a relatively straightforward (though by no means easy) test for determining the requirements for U.S. forces. The new era imposes not only a wide range of demands but also a broad band of uncertainty which surrounds each possible demand. Gone are the days when it was acceptable to plan on one or two war scenarios: U.S. forces must be adequate for many contingencies, and contingencies within contingencies.

As the interests described earlier suggest, U.S. forces might have to respond to wars in the conventional sense, to other contingencies, to adversaries using unconventional and asymmetric threats, and to unconventional adversaries. Chapters nine, ten, and eleven explore how the U.S. military would cope with such a welter of military demands. Chapter nine analyzes U.S. strategy for the use of deadly force in "major theater wars"; chapter ten examines the demands of peace operations and other "small-scale contingencies"; chapter eleven anticipates how adversaries might attempt to outflank U.S. military superiority and how, in turn, the United States should respond. Chapter twelve considers U.S. nuclear posture and policy in the new era, and chapter thirteen analyzes threats from non-state actors and how they can be countered.

Chapters fourteen, fifteen, and sixteen explore how trends or shifts in strategic conditions could affect the requirements for and nature of U.S. military power to the year 2018. *Preparing for the dangers and demands of the more distant future* is not something that can wait. The forces chosen today will be in use well into the 21st century, so they must be designed for the future insofar as its contours can be grasped. Since that grasp is unavoidably a weak one--the flux and uncertainty of today make precise forecasting of the future little more than a lottery--the forces built for today and planned for tomorrow should be adaptable by design, at least to reduce the cost and potentially dangerous delay in order to make them suitable for different conditions. Chapter seventeen summarizes the key ideas of the volume regarding the roles U.S. forces play in protecting America's stake in the world.

The recent reviews conducted by the Department of Defense and the National Defense Panel are meant to be the beginning, not the end, of a journey to transform U.S. military capabilities for the next century. In that context, *Strategic Assessment 1998* is intended to inform the debate and add to the knowledge that will guide us on that journey.

CHAPTER TWO

Instruments for Shaping

Upheavals of the late 20th century--the information revolution and the related collapse of communism--have released forces of change that have benefited the United States. Now, capitalizing on its economic and technological resurgence, its open political system, and its military strength, the United States can influence further change in a direction fruitful for itself and for others that embrace political and economic freedom. When required to use military power, the United States must do so effectively and judiciously. The Armed Forces, when engaged abroad in peacetime, can exert a positive influence on other states and thus on the international security environment.

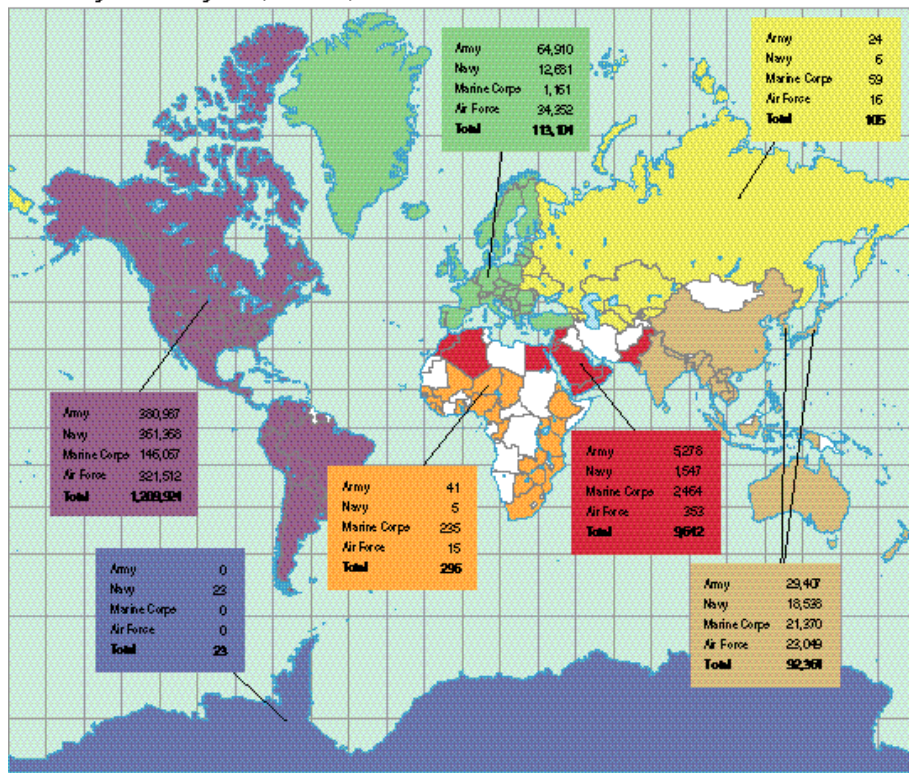

Flexible Power

While conditions and trends are currently favorable to the United States, uncertainties abound in the international environment. Will the allies of the United States become true partners or instead free riders? Will the large transition states complete their reforms and integration, or will China turn hostile and Russia begin to unravel? Will rogue states be swept away by forces of political and economic freedom, or will they become more dangerous because of their access to the technology spreading through the global economy? Will the number and severity of failing states diminish or grow, as states are either drawn into or left out of the global economy?

The answers are of course profoundly important for U.S. interests, including the goal of an expansive, secure, responsible commonwealth of free-enterprise democracies. If the answers turn out well, the goal is achievable. If they turn out badly, the international security environment will be significantly worse than today's. So the stakes are very high for the United States to use its strong position to shape the environment--not only the perception and behavior of rogues but of core partners and transition states as well.

The *shaping* and *responding* (e.g., operational) functions of forces must be in harmony. Peacetime deployments must support U.S. plans for reacting to contingencies. If as well the United States is purposeful in tailoring those deployments to improve the international security environment, it is less likely to be faced with the need to use force yet more likely to succeed if it must. For instance, had all U.S. forces been removed from Europe after the collapse of the Soviet Union, NATO's successful peacekeeping in Bosnia might have been precluded and war might today rage throughout southeastern Europe. To avert future Bosnias, the United States must continue to adapt its military engagement in Europe to the changing political landscape there and to NATO's changing purposes.

U.S. Military Personnel by Area (June 1997)

Note: Excludes the temporary deployment of U.S. military personnel in the Persian Gulf and other regions of the world.
Source: Department of Defense

During the Cold War, the functions of U.S. forces in *shaping* and *responding* were inseparable, though simpler concepts--deterrence and defense--sufficed in those simpler, static times. The forward defense posture that was then maintained to reassure allies, increase American influence, and give the Kremlin pause, was also right, if deterrence failed, to mount a defense against Soviet aggression. The United States placed large forces at contested points along the East-West frontier (the inter-German and inter-Korean borders, the Mediterranean, Southeast Asia, and the Indian Ocean) where the danger was greatest. Because the United States could not project enough power fast enough to thwart Soviet power wherever it was massed, deterrence came from the combination of forward presence and, if that were breached, the threat of nuclear weapons.

In contrast, the United States now has superior conventional military means over every foreseeable adversary. It can project sufficient power worldwide to protect its interests. In a fluid age, with the United States increasingly integrated into the global economy, such reach and flexibility are indispensable. The United States cannot predict who will be tomorrow's adversaries, which of its far-flung interests might need protection, and thus where it may need to dispatch its forces. It lacks the sharply drawn defense perimeter it had when East confronted West. Today's core already extends beyond the free world of Cold War years and is still expanding.

Southeast Asia is a good illustration of the demands of the new era. Whether that region was of vital interest during the Cold War became a source of bitter national debate. Today, despite their current financial woes, Singapore, Malaysia, Thailand, Indonesia, and the Philippines are considered important parts of the world economy; their surrounding waters increasingly are essential trade routes. Would the United States use force to defend these countries or waters? Perhaps. Does it need the capability to protect its interests if threatened in this emerging region? Yes. Yet neither regional politics nor the U.S. defense budget permits permanent basing in that region of the forces that might one day be called on to respond to contingencies there. Nor, thanks to the U.S. ability to project power, is it militarily critical to keep forces there. Of course, reliance on flexibility must be, and is, accompanied by U.S. intelligence capabilities that can detect potential crises, keep threats under surveillance, and discern subtle trends.

Generally speaking--there are important exceptions--the *military* logic of stationing fixed forward forces is less compelling in the late 1990s than in the past and could become even less so tomorrow. Today's uncertainty about the location of threats grows sharply as one peers into the future. In response, U.S. forces are built for rapid deployment. New technologies and joint warfare doctrine permit U.S. forces to pack, or call in, greater punch per unit. As these forces are made more lethal, they become leaner and still more mobile, reducing the purely military necessity for U.S. dependence on large-scale forward presence.

From Presence to Engagement

While global economics has replaced global confrontation as the justification for a robust international role for the United States, the need remains as great as ever. The engagement of U.S. forces abroad is part and parcel of that role. As the world watches for signs that the United States may drift toward isolationism, as it did between the two world wars, peacetime deployment of its military forces is read as a litmus test of its intentions. The involvement of U.S. forces in key regions--Europe, Eastern Asia, and the greater Middle East--is essential to preserving U.S. influence with its core partners, having a voice in regional institutions, and maintaining power balances. The end of U.S. military engagement could trigger competition for power in Eastern Asia, coercion of oil-producing states by regional bullies in the Middle East, and unraveling of European cohesion. Fortunately, the prevailing view in the United States is that international retreat would be imprudent and that any shifts in where and how U.S. forces are engaged should be incremental.

But the desire for continuity cannot obscure the need for change. The primary rationale for U.S. military engagement abroad is shifting--the defense of South Korea being the main exception--from protecting allies against invasion to building new partnerships within the core and encouraging transition countries to join it. This rationale justifies large permanent concentrations of U.S. forces in Western Europe and Northeast Asia, where the United States has its strongest friends (NATO and Japan) and can engage the biggest transition states (Russia and China), even though these regions are not the most threatened. In the greater Middle East, where the most severe threats exist, the United States can operate smaller forces, thanks to its ability to project power. Thus, there is by design a generally looser fit in U.S. plans for responding to military contingencies and the location of a permanent U.S. presence overseas.

Although U.S. troops no longer need to defend Western Europe, where more than 100,000 remain based, they can stage from there to defend any of Eastern Europe's new democracies, protect the vital oil supplies of the Persian Gulf, or restore peace in the southern Balkans, areas where no large U.S. forces are permanently based. Of course, if it had to do so, the United States could respond to most plausible military contingencies in and around Europe with forces dispatched from U.S. soil. But such forces could not foster cooperation with NATO allies, interact with transition states, and avert future Bosnias. Staging from Europe increases the likelihood that U.S. troops would have the forces of its European partners alongside, operating in a well-prepared coalition.

Similarly, although the direct threat to Japan has faded, U.S. forces stationed there play a wide role in regional security, both because they can stage from there and because they can work with their Japanese counterparts. The case for maintaining U.S. forces in Japan is therefore based on the need not only to anchor an enduring core relationship but also to respond to potential military contingencies in the region with the support of this key partner.

With the end of the Cold War, the purpose and function of U.S. forces abroad have moved *beyond deterrence* to *shaping a world in flux*, with deterrence but one aspect of a more dynamic strategy. Stationary presence, implying fixed forces facing a predictable threat along immutable lines, is no longer a sufficient concept. To *shape*, U.S. forces need to *engage*. A world too fluid for future military contingencies to be pinpointed is also fluid enough to offer the United States opportunities to affect international politics. With the core of free-market democracies expanding, once-threatened allies becoming capable partners, and over half the world, including China, India, and Russia, in transition, the engagement of U.S. forces includes permanent overseas stationing but increasingly depends on how those forces operate.

Shape and Respond

A key challenge of the late 1990s is to harmonize the crisis-response and environment-shaping functions of U.S. forces. Sizable forces should in any case be deployed internationally for operational reasons; no military logic would confine them to U.S. territory while they are welcome elsewhere. Even with advances in mobility and lethality, U.S. forces staging from Europe, East Asia, or elsewhere can intervene more quickly than U.S.-based forces in nearby contingencies, thus strengthening deterrence. Logistics and C⁴ISR infrastructures must also be widely distributed to enable U.S. combat forces to respond to crises worldwide. Consequently, the United States can maintain and even improve its ability to shape the international security environment in a manner consistent with its military operational requirements, without relying exclusively on fixed stationing

USS Nimitz, Persian Gulf

If stationary defense no longer represents the essence of U.S. military power, as it did during the Cold War, what does? The ability of the United States to project robust joint forces virtually anywhere and to maneuver and strike decisively, with the benefit of information dominance, is now the defining U.S. capability. It is backed up by an able national defense establishment, characterized by strong civilian authority, responsive military professionalism, efficient allocation of resources, and effective personnel policies. Combined, these essential operational and institutional capabilities can, if skillfully stressed, play a central role in U.S. strategy to shape the international security environment.

To understand how these U.S. capabilities can shape that environment, the place to begin is by analyzing the environment, globally and regionally and how U.S. military power can affect it. The forces of the United States currently stationed overseas reflect where its vital interests are clearest, its troops most welcome, and its most capable coalition partners located, but not necessarily where the most acute dangers are, apart from Korea. In contrast, U.S. forces are not stationed in two unstable and potentially dangerous regions--the former Soviet Union and Africa--where they would not be especially welcome and where the U.S. people would not be keen to have them based. Finally, in what is now the most insecure region of all, the greater Middle East, the United States maintains some forces but only a fraction of those it might use in a major crisis there. This is not to suggest that there ought to be some grand realignment of U.S. peacetime military presence and activities; the current overall pattern remains the right one. But it does suggest a need to refine U.S. environment-shaping strategies for key regions.

Russian bomber destruction

General Framework Goals

Overall, international change has favored and should continue to favor U.S. interests and ideals. Therefore, the United States should not assume the classic stance of a status-quo power. Nor should its goal be to defend "unipolarity," since doing so could cast the United States in the futile role of trying to stymie the rise of other powers, such as China. Indeed, if U.S. efforts to shape the world with its power are seen as heavy handed or hegemonic, the backlash would not only frustrate those efforts but also damage the standing of the United States despite its power.

Rather, the United States should use its opportunity and means to help build a prosperous, secure, and responsible commonwealth of nations, committed to political and economic freedom, encompassing most of the planet. As suggested in chapter one, the U.S. stake in the world can be described as four key interests:

- The vitality and security of the democratic, free-market *core*
- The integration of *transition* states into that core
- The defeat or marginalization of *rogue* states and groups that threaten the core's interests and values
- Limiting the damage from *failing* states.

The U.S. stake also includes norms of responsible state behavior that reinforce these interests and represent what this Nation stands for--norms that are shared by U.S. partners, offered to the transition states, rejected by rogue states, and the basis of multilateral action to help peoples whose states fail.

These global interests are evident in the objectives of U.S. environment-shaping strategies in the world's regions:

Dismantling Russian missile

*In Europe, the goal is to draw U.S. friends--some still in transition--into a new partnership, based on a recast Atlantic alliance, in order to consolidate security in Europe and project security elsewhere.

*In the greater Middle East (including Southwest Asia), it is to avert conflict in a region fraught with instability, rogues, terrorist networks, weapons of mass destruction (WMD), and dangers to the oil supplies on which the world economy depends.

*In East Asia, it is to defuse the remaining Cold War confrontation in Korea, build a new partnership with Japan, and encourage the transformation, integration, and responsible behavior of a more powerful China.

*In the former Soviet Union, it is to foster reform and integration of the new independent states, while protecting against the potentially dangerous consequences of a failure of transition in Russia.

*In the Western Hemisphere, it is to bring the region firmly into the core and, more broadly, to strengthen reform by engaging Latin American military establishments in a partnership of increasingly shared interests within and beyond the region. Reducing the threat from nonstate actors is a major concern for all the states in the hemisphere.

*In Africa, it is to work with core partners and responsible African states to prevent state failure, promote reform and transition where possible, and enhance multilateral means to come to the aid of human beings when such failures occur.

Ways

The United States can advance its interests and norms in many ways. For example, promoting free trade can improve the health of the core, avoid rivalry among the three great economic powers, draw in emerging nations, including China and India, and help ease the abject poverty that can cause states to fail. Similarly, peacetime international engagement of U.S. military forces, as part of a larger strategy, can affect attitudes,

conditions, and trends in many ways. Here are some examples:

*Iran, Iraq, Libya, and other rogues might find it easy to coerce their neighbors, especially moderate Arab states, were it not for the awareness that the United States will not stand for it. The demonstration of U.S. military power in the greater Middle East heightens that awareness, thereby encouraging would-be victims to resist coercion while causing rogues to contemplate the risks of their recklessness.

*The ability of the United States to chart new directions for its alliances in Europe and Northeast Asia depends on an active role for U.S. forces in planning, exercises, and operations side-by-side with its partners' forces. That involvement can help induce partners to accept greater international security duties in ways that complement U.S. responsibilities.

*Intraregional initiatives, like the European Union (EU), the Gulf Cooperation Council (GCC), and the ASEAN Regional Forum (ARF), will develop with both confidence and an interest in cooperating with the United States, if its force posture conveys that U.S. engagement in regional security is neither less nor more than what the countries of those regions want.

*Proliferation of nuclear, biological, and chemical (NBC) weapons would accelerate if every nation that perceived a threat from these weapons were to acquire them in order to fend for itself. By giving confidence to friends and allies, through the engagement of its conventional and, where relevant, nuclear forces, the United States can slow the spread of weapons of mass destruction.

*Reform of the military establishments of former Warsaw Pact countries, a crucial element of the larger process of political transformation, can be facilitated by their peacetime exposure to the operational and institutional qualities of U.S. forces and military personnel.

Such examples suggest that U.S. forces can shape the international environment in five basic ways:

- Deterring conflict
- Promoting international confidence and cooperation
- Improving coalitions with partners
- Limiting the strategies and capabilities of real and potential adversaries
- Promoting defense reform.

Deterring Conflict

During the Cold War, avoiding conflict essentially meant deterring the Soviet Union and its proxies from trying to expand communism's dominion. Today, it still includes that sort of deterrence--convincing would-be aggressors that the risks of threatening U.S. interests outweigh possible gains--but it does not end there. It also means using U.S. power to dampen instabilities, cool tempers, win acceptance of norms against aggression, and discourage the violent settlement of disputes.

The formula for deterrence is not complicated. U.S. forces engaged abroad remind rogue states that aggressive behavior can produce a punishing U.S. response. Iraq, Libya, and Serbia have experienced it, and others surely have taken note. Although basing large U.S. forces everywhere conflict could occur is no longer feasible or necessary, they can be deployed in a way that permits the prompt arrival of enough force to convince a rogue that aggression would precipitate war with the United States. Designing forces for rapid deployment--lean, highly mobile, and able to summon heavy remote firepower--is essential to the new security environment.

Avoiding conflict with the large transition states faces the United States with a delicate and more complex challenge--and, given their size, a profoundly important one. The United States is attempting to persuade and help these states to complete their transformation. It does not wish them to perceive U.S. power as aimed at them. In the cases of China and Russia, the United States is careful not to suggest that its forces in Eastern Asia and Europe, respectively, threaten their national security or are part of a strategy of containment. This sensitivity largely explains why the United States does not intend to station significant forces on the soil of new members of NATO, close to Russia, as well as U.S. caution regarding intervention in Russia's "near abroad." It also explains U.S. assurances to Beijing that the United States and Japan are not aligned against China.

But the U.S. force posture should also convey a message to transition states that threatening, rather than joining, the core could lead to confrontation with stronger forces. The need to send this dual message argues for having U.S. forces interact with their Chinese and Russian counterparts, as they are working with Russian forces in NATO's Bosnia operations. The U.S. intent is cooperation, yet its forces' qualities will not escape the notice of their counterparts. Engagement can strengthen deterrence without being provocative, which is particularly important vis-à-vis China.

U.S. Military Strength in Europe (June 1997)

Promoting Cooperation

Bolstering confidence was not complicated during the Cold War: America's allies knew that any attempt to coerce or attack them would immediately involve the United States. Although this still holds for a few cases today--South Korea, Kuwait, Saudi Arabia--most U.S. partners no longer have reason to feel threatened by direct aggression. The awareness of available U.S. forces can help convince Japan, Germany, France, the United Kingdom, and other key friends that the United States remains steadfast in its interest in their security and in the stability of their regions. Such confidence helps the United States persuade those partners that they need not pursue other security arrangements, such as a European alliance based on the EU outside NATO.

Does instilling confidence still require the fixed stationing of large combat forces on the soil of secure allies? The United States has no such presence in the United Kingdom, Israel, or Canada, yet in British, Israeli, or Canadian minds the durability of their special relationships is unquestioned. Why does this not apply to Germany and Japan, where the largest concentrations of U.S. forces abroad are? Are these two countries still different today because of the damage they did to world security half a century ago? In a sense, yes--not because either is a shaky democracy or cannot be trusted, but because both are now major economic-political powers that, owing to the continuing role of the United States in their security, have eschewed nuclear weapons. Although the United States wants Germany and Japan to be viewed and treated as ordinary countries, each accepting a greater, fairer share of the responsibilities of international security, it does not wish to disturb a formula that works.

Confidence within the core today has less to do with territorial security than with the safety and smooth functioning of international markets, transportation links, energy grids, information networks, and other systems that make up the anatomy of the global economy. Because these systems are transnational, they are inherently vulnerable to threats from rogue states, modern "pirates," and sinister non-state actors. The argument in some circles that the United States has no business using its forces unless vital interests are at stake ignores the fact that any unraveling of the world economy from lost confidence could be devastating. Military capabilities alone cannot guarantee economic security; but international engagement of U.S. forces, supported by intelligence systems to detect dangers, discourages attacks and bolsters confidence.

The formula for imparting confidence to friends has included deployment of nuclear weapons in Europe--thousands of them during the Cold War, a few hundred now. Although these weapons were once considered crucial to deter attack by massive Soviet forces a stone's throw from West Germany, the question is whether they still are needed today, in radically different and more secure circumstances. The presence of U.S. nuclear weapons in Germany, under dual-key controls, satisfies nearly all Germans that their state does not need its own nuclear weapons. Yet the formerly prominent role of U.S. nuclear weapons around the world is greatly diminished. Chapter twelve addresses the future of U.S. nuclear weapons in shaping the security environment, given the proliferation of nuclear and also biological and chemical weapons.

Improving Coalitions

The United States has declined to be the world's sheriff. Its friends need to bear international security responsibilities commensurate with their wealth and their equity in the core's health, security, and norms. If they assume that the United States will support both their burdens and its own, they may not rise to the task. Yet if they lose confidence in the resolve or capacity of the United States, the effect may be much the same. This situation requires that the United States engage its partners in creating a new core security coalition, retaining their confidence while disabusing them of complacency.

Thus, the main justification for maintaining large U.S. forces in Europe and Japan has shifted from protecting allies to fostering defense partnerships. Even when the United States has vital interests at stake, as when Saddam Hussein invaded Kuwait and menaced Saudi Arabia, U.S. citizens expect allies who share those interests to sacrifice as well. This demand will grow if the spread of weapons of mass destruction threatens higher casualties. At some point, U.S. willingness to use force could hinge on the willingness and ability of its core partners to do so also.

It is not enough for coalition forces to satisfy the politics of equitable burden-sharing, they must also be militarily effective. U.S. forces in Europe, under the NATO flag, are critical to preparing with allied forces for effective combined defense of common interests, within or outside Europe. European skeptics wonder whether the U.S. interest in building a new military coalition means that the United States wants to provide the leadership, command and control, strike power, and mobility while its European allies provide the ground troops--and thus the casualties. Such a division of labor would be neither militarily nor politically sensible. Instead, the allies should improve the mobility, technology, and joint doctrine of their own land, air, and naval forces, so that they and U.S. forces might operate seamlessly.

The prospects for increased allied contributions to global security are best in Europe, although U.S. forces in Japan and Korea also can encourage improved, complementary allied capabilities. Without raising worries about Japan's independent offensive capabilities or overstepping its legal and political self-restraints, Japanese forces could contribute more to both regional security and peace operations within the U.S.-Japan security agreement.

As chapter eleven explains, adversaries may try to outmaneuver the United States by exploiting its vulnerabilities or changing the mode of conflict to de-emphasize their own deficiencies. U.S. forces can constrain such asymmetric threats by convincing adversaries that attempting to gain an edge is fruitless and risky. To take a key example (addressed in chapter twelve), rogues seeking weapons of mass destruction must be made to believe that, in any event, the United States can still project power while protecting its forces (such as with theater missile defense). The peacetime engagement of U.S. forces also can help convince at least "rational" rogues that using such weapons will bring devastating (possibly nuclear) retaliation. If the use of these weapons comes to be seen as prohibitively risky, rogues may be less inclined to acquire them.

Tailoring the U.S. force posture so it does not provoke unnecessarily a threat greater than might otherwise exist requires walking a fine line, especially with the large transition states. China, for example, needs to know that an attempt to unite Taiwan with the mainland by force would risk war with the United States. Yet were the U.S. force posture in East Asia to appear threatening to China, irrespective of Chinese behavior, the People's Liberation Army (PLA) might escalate investment in its power-projection capabilities and in strategic nuclear forces that could be targeted on U.S. territory. The end result could be a diminished U.S. ability to help Taiwan defend itself.

Similarly, although Russia now lacks the means to field conventional forces capable of threatening U.S. interests, were it to regard U.S. forces in Europe, Eastern Asia, and the greater Middle East as a threat to Russia, it might further increase its reliance on nuclear, and perhaps chemical and biological, weapons. The engagement of U.S. forces in peacetime inevitably sends a message to the large transition countries. Simply stated, the United States wants to make clear that its forces would be threatening only if these countries threaten U.S. interests, U.S. friends, or regional and global security.

Reforming Defense

Efforts to reform defense establishments have been a U.S. priority since the end of the Cold War, when the opportunity first appeared to help new democracies transform their economies and politics. Because in the old communist states the military establishments were entrenched, pampered, inbred, and bloated, reforming them, however crucial, has been frustratingly slow. While unreformed militaries can act as a brake on larger processes of transformation, reformed militaries are more likely to honor international norms and cooperate with counterparts in the core. The need for defense reform may be clearest among the former Warsaw Pact nations, yet reform is desirable among all formerly authoritarian states, whether in Latin America, East Asia, the Middle East, or Africa.

While reform has many facets, its *sine qua non* is civilian control of the military. Without that, democratization can be derailed by "old-guard" officers, to whom change is anathema. No other defense reforms can be implemented until civilian authorities have the confidence, clout, and information to set direction and ensure that it is followed. Once an officer corps is ready to answer to elected leaders, it can help implement other reforms: restructuring forces in line with legitimate national defense needs; improving quality by, if necessary, reducing the size of forces; instituting efficient and accountable management of resources; creating personnel systems that reward only merit; and staying out of politics altogether.

U.S. forces embody the professionalism, accountability, and efficiency other defense establishments can emulate to benefit their own countries, their neighbors, and the United States itself. The more deeply U.S. forces are engaged in helping stimulate and mold reform in the militaries of transition states, the more likely these states are to become capable coalition partners as their transition proceeds. Yet only a few transition states--mainly, the former Warsaw Pact members--admit to the need for reform. Others consider such "internal" matters to be off-limits to U.S. efforts. Paradoxically, the greater a nation's need to reform its military establishment and strengthen civilian control, the less forthcoming it may be in seeking help. In Latin America, for example, political leaders sometimes are not confident enough to demand reform, including U.S. help, if their militaries resist. The engagement of U.S. forces with their counterparts, sensitively and without condescension, can strengthen reform-minded military officers and political leaders, thus improving the climate for basic reform.

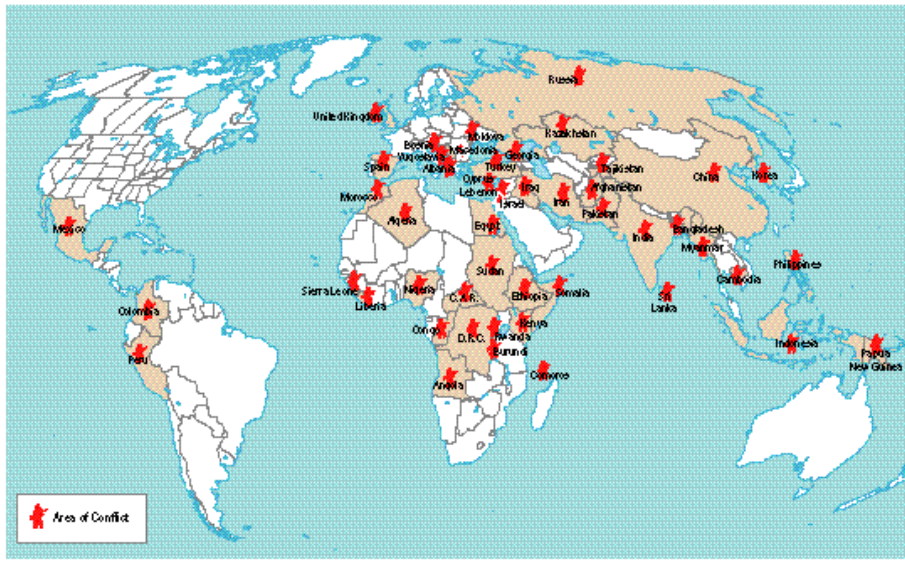

Means

With these as the purposes, how can U.S. forces--built and maintained to *respond* to both major theater wars (MTW) and smaller scale contingencies (SSC)--*shape* the international security environment? Where should they be deployed? How and with whom should they operate in peacetime? How can their capabilities be showcased both to impress and reassure, to appear threatening to some states but not to others? What mix of permanent basing, rotational deployment, maneuvers, and other training, coalition operations, distributed infrastructure, C⁴ISR networks, and personnel exchanges would serve U.S. purposes in shaping the environment, while also supporting its military strategy and plans for responding to actual contingencies?

To succeed over the long haul, strategies for shaping environment should emphasize key U.S. military strengths and reflect U.S. strategy for responding to operational demands. The goal is to remind others of essential U.S. qualities and that the United States can and will bring them to bear if need be. During the Cold War, the United States sought to demonstrate that Soviet aggression would automatically collide with U.S. power--conventional, and if necessary nuclear. Large, fixed forces posted along the East-West divide were central to this military and political strategy. In contrast, during the 19th century, Great Britain made certain that the rest of the world knew it had the means to control the seas, protect its empire, and intervene to ensure a balance of power on the European continent. British strategy depended on naval supremacy and crack expeditionary forces, not on a large-scale fixed presence in Europe or elsewhere. In both cases, success was achieved peacefully, because the capabilities to prevail if tested were known to exist. War-fighting and strategies for shaping the environment were integrated--as those of the United States in the post-Cold War era must be.

As mentioned earlier, the U.S. capability to *respond* to a full spectrum of operational military demands centers on several key features of combat power.

Current or Potential Conflicts in the Post-Cold War World

Troops boarding C-141 Starlifter

Power Projection Capacity

Much of the total U.S. defense program is dedicated to the capabilities to deliver military power wherever required, specifically depending on four things:

- Sufficient lift capacity
- Combat units designed, equipped, and trained to deploy quickly and to fight where needed, irrespective of distance, geography, and conditions
- Logistics systems to sustain operations without limiting or burdening them
- Doctrines, skills, training, planning, and management for deploying huge sophisticated forces.

Information Technology

As the world leader in information technology, the United States has an edge in:

- Incorporating it into military systems
- Integrating and operating complex systems
- Collecting, processing, and using information to control its forces and dominate the battle.

Superiority in information technology enhances the other defining aspects of U.S. combat power, and its superior intelligence systems provide enough warning to enable the United States to avert or respond to crises in a timely manner without having to station forces everywhere conflict might occur.

Joint Doctrine

From the battlefield to the corridors of the Pentagon, from strategy and programs to operational command and execution, the value of jointness among the several services has been proved. In effect, each component of the adversary's forces is up against the combined potential of all U.S. force components. This advantage will be even more pronounced in the future, as individual sensors, platforms, and weapons are melded into a "system of systems," with ground, sea, air, and space dimensions.

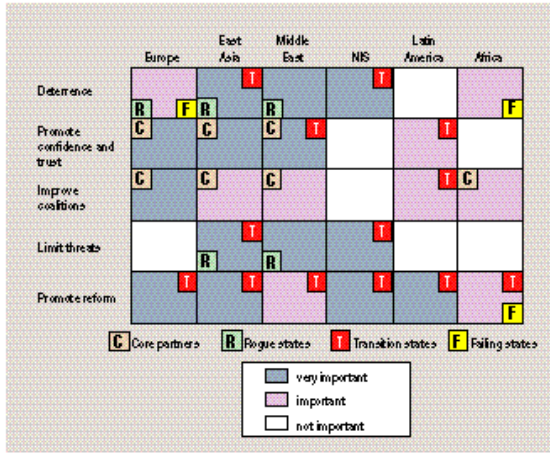

Lethality

The ability of U.S. forces to maneuver into position and strike deep, with precision, often from platforms beyond enemy range, permits the projection of power into hostile battlefields. It multiplies the power of forces on the battlefield and enables U.S. units to overpower and destroy large units, leaving an enemy defenseless. Strike power depends on having an abundant arsenal of accurate weapons distributed among an array of delivery platforms and, of course, on having C⁴ISR to orchestrate their use.

Robust Forces

Although the United States does not maintain the world's largest military, its forces, when concentrated, are sufficiently imposing in size, quality, and readiness to achieve victory quickly. With technology added to this large force structure, U.S. strength is compounded. Given the complex demands on U.S. military personnel and the growing role of knowledge technologies, the quality of personnel, already a distinct edge, will be even more important in the future.

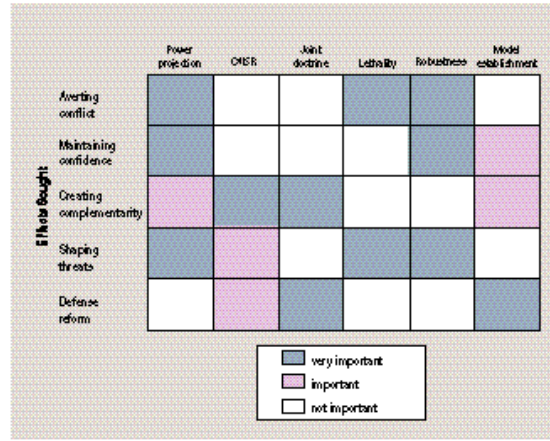

Figure 1: Different Shaping Effects for Different Regions

A Model Establishment

The reality as well as the image of U.S. military strength is bolstered by the effective management of the U.S. defense establishment. Other countries--core and transition--recognize the virtues of political accountability and of the transparency and efficiency with which the Department of Defense allocates resources and makes procurement decisions. They are impressed, too, by the professionalism of the U.S. military, its unquestionable subordination to civilian management, and its ability to recruit, motivate, and retain high-quality people. Because other states may wish to adopt such a model, these attributes of effective defense management, although not combat capabilities, have a role in U.S. strategy for shaping the international environment.

Figure 2: Different Aspects of U.S. Power

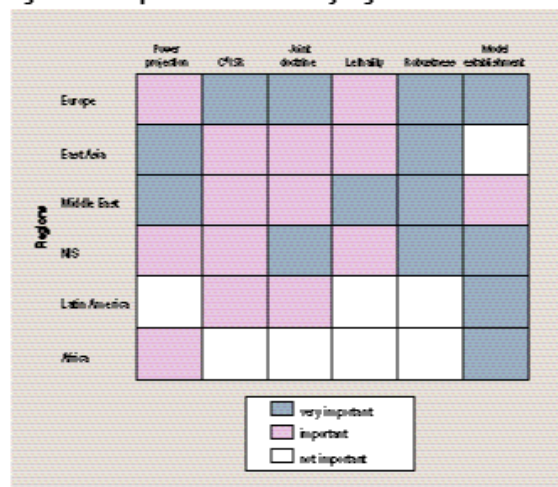

These defining aspects--five operational, one institutional--are relevant not only during wars and other military contingencies, but every day. When other states think about U.S. military power, these are the strengths the United States wants them to ponder. The current peacetime deployments of U.S. forces provide ample opportunities to engage and demonstrate these capabilities. Sizable forces are permanently stationed abroad, mainly in Europe and Northeast Asia. Other forces have been deployed to and may remain in crisis-prone regions, particularly the Persian Gulf and the Indian Ocean. Naval, air, and ground units routinely operate internationally to train, maintain readiness, and exercise with allied forces. The United States can share with other states and their armed forces the principles, methods, and systems that undergird sound defense management and military professionalism. Joint planning and military intelligence offer insights into how the United States sees the world and operates in it. Military-to-military contact, including exchanges and visits, can create personal rapport, understanding, and even lasting ties.

The next six chapters examine, region by region, U.S. interests, conditions, and trends bearing on those interests, and on the Nation's defense capabilities and activities that may advance and protect them without recourse to deadly force. Each regional strategy represents the nexus between U.S. foreign policy and military strategy. The goal is an overall strategy for shaping the international environment under American leadership that is as sound, coherent, and successful as that of Great Britain in the 19th century and of the United States in the second half of the 20th century.

Weaving the Strands

A strategy for shaping the security environment requires consideration of how several key aspects of U.S. power can be applied to produce desirable effects among *core*, *transition*, *rogue*, and *failing* states in each

Figure 3: U.S. Capabilities Accentuated by Region

region. Although the challenges involved are complex and cannot be reduced to simple display, the representations on this page and the following page illustrate how environment-shaping strategies can be constructed:

- Different effects are sought vis-à-vis different types of states (figure 1)
- Different aspects of U.S. power produce different effects (figure 2)
- Consequently, different aspects of U.S. power should be stressed in different regions (figure 3).

These notional strategies correspond well to the current patterns of U.S. overseas force deployments and related activities: the concentration of forces in Europe and East Asia; the need to stress robust power projection in the Middle East; and cooperative initiatives in the NIS, Latin America, and Africa. They indicate the importance of engaging U.S. forces and other defense resources in support of reform and transition which nations in every region have undertaken. Finally, they are careful not to flex U.S. military muscle where it is unnecessary and could be counterproductive, as in the NIS, Africa, and Latin America. Overall, these perspectives emphasize the importance of a dynamic approach in which the U.S. military interacts with core and transition states, thus providing the theme: *beyond presence, to engagement*.

The chapters that follow detail strategies by region and make the case for an interactive approach. The flux in post-Cold War international politics--especially the emergence of core partners and uncertainties surrounding the large transition states--suggests that this approach is imperative.

The Quadrennial Defense Review (QDR) on Shaping

"In addition to other instruments of national power, such as diplomacy and economic trade and investment, [U.S. forces] have an essential role to play in shaping the international security environment in ways that promote and protect U.S. interests. Our defense efforts help to promote regional stability, prevent or reduce conflicts and threats, and deter aggression and coercion on a day-to-day basis in many key regions of the world. To do so, the Defense Department employs a wide variety of means, including: forces permanently stationed abroad; forces rotationally deployed overseas; forces deployed temporarily for exercises, combined training; military-to-military interactions; and programs such as defense cooperation, security assistance, IMET [International Military Education and Training program], and international arms cooperation."

Credibility: Still Important, but a Different Calculus

The demonstrable ability to project superior forces must be accompanied by credibility. In the Cold War, the key to credibility was the physical presence of U.S. troops in the presumed paths of Soviet aggression. Now it depends more on when and how that military power is used than on where it is garrisoned--as the Gulf War, Bosnia peacekeeping mission, and Taiwan Strait crisis show. Cold War allies might have worried about whether the United States would be willing to risk a global nuclear war, unless U.S. forces were literally on the front line. Allies and adversaries today have less reason to doubt that the United States would send its forces against inferior enemies, provided its interests are important enough to warrant the expected casualties

Shaping Strategies for Space

The region of space has extensive economic, political, and military implications for U.S. national security. The principles that apply to the use of space include the following:

- Maintain the exploration and use of outer space by all country for peaceful purposes
- Reject any limits to the rights to acquire data from space
- Affirm that space systems are state property
- Assert that purposeful interference on the ability of any countries to access its space property is an infringement of sovereign rights
- Reject claims to space sovereignty by any state
- Affirm the unimpeded right of passage and operation in and through space.

Strategies for shaping the security environment in outer space include the following:

*Avert conflict. Global or virtual presence in space requires placing monitoring devices in space rather than on the ground, to provide a continuous, non-intrusive presence worldwide. This enhances the ability to easily and cost-efficiently monitor treaty compliance, troop and equipment movement, WMD development, testing, and deployment, while denying enemies the ability to achieve strategic surprise.

*Enhance confidence and cohesion within the core. The primary area of cooperation is the shared early warning of ballistic or theater missile launches. A secondary area includes the sharing of

imagery, weather data, and ensuring communications interoperability. By engaging with countries that have no space forces, the United States can cooperate and maintain a global presence despite the absence of terrestrial forces deployed. Agreements within the core of allies designed to permit the denial of space capabilities to future potential adversaries, coupled with the effective demonstration and application of space power, could go a long way in curbing international and regional adventurism.

*Create complementary military capabilities. Global partnership and cooperation are necessary for the future of space capability development through joint ventures between states and commercial entities. Promoting access to space among core partners ensures increased interoperability, further reducing demands on U.S. systems worldwide.

*Shape the strategies and capabilities of real and potential adversaries. The ability to monitor events in near real time provides a significant advantage over conventional means of monitoring. Promoting the expansion of commercial systems increases the economic dependence on space, limiting the ability of rogue states to deny the use of space to a single state by spreading responsibility for the security of everyone's space assets.

The region of space is integral to the core states' efforts to attain security and maintain military, civil, and economic interests. Protecting this asset is vital. While adversaries accelerate efforts to attain the capability to interrupt or destroy space systems, the United States can exert shaping forces on their strategies by ensuring that an increasing proportion of the world community is interdependent on space capabilities. This increases the safety and security of U.S. forces, thus enhancing national security interests.

Strategic Assessment

Engaging Power for Peace

CHAPTER THREE

Asia

The health and security of the core of market democracies are inseparable from those of the Asia-Pacific region. Despite the present economic difficulties, early in the 21st century the center of global economic activity may shift to this region. Japan already is the world's second largest economy and a leading source of the investment capital and managerial expertise that sustain the global economy. Since the late 1980s, China's economy has grown at an average rate of 10 percent a year and may become the world's largest economy as well as its largest market. Strategically, the region's population, resources, and command of sealanes make close ties a vital core interest. The United States and Europe cannot sustain themselves without access to the Asia-Pacific region, just as the Asia-Pacific states cannot sustain themselves without access to the United States and Europe.

Most states in this region are undergoing transition. Although almost all accept the economic values of the core, some regional leaders continue to resist, in certain cases even reject, its democratic political values. Of all the transition states, China is the most significant, because it will eventually develop a degree of comprehensive national strength sufficient to challenge the values of the core, should it choose to do so. Present signs are encouraging, but there is no certainty that these transition states will embrace core values and norms.

As a leader in the Asia-Pacific region, the United States has a fundamental interest in shaping an environment in which the states of the region will be encouraged to complete their respective transitions and become firmly integrated into the core. If the United States and its partners fail to meet this challenge, or if the Asia-Pacific region becomes unstable, core interests will be damaged.

Marines in Okinawa

U.S. Interests

Japan as Equal Partner

The health of the core could be greatly enhanced if Japan were to play a political and security role more appropriate than at present to both its economic strength and regional and global interests. More important, Japan could take greater responsibility for the defense of the core by providing support and a staging area and by undertaking some defensive operations in the event of crisis or conflict in Northeast Asia.

Concerns raised by memories of Japan's imperial past can be offset if Japanese activities develop within the framework of a strong alliance with the United States and firm commitment to core norms and values. Tokyo's willingness to assume the responsibilities of an active partner, particularly greater responsibility for its own defense, would substantially increase support for the alliance within the United States, while also contributing to Japan's standing as a core state.

Relations among members of the core are much less developed in Asia than in Europe, where history and strategic necessity mandated and facilitated cooperation and integration. Core solidarity and cohesion would benefit were the cooperation, integration, and trust between Washington and Tokyo to move closer to the levels that exist between the United States and its European allies.

Korean Reunification

Because the interests of three core states--the United States, Japan, and the Republic of Korea (ROK)--and two key transition states--China and Russia--intersect on the Korean peninsula, developments there have a significant effect on efforts to expand and defend the core.

The Democratic People's Republic of Korea (DPRK) is a rogue state that may be failing. Although its nuclear weapons program now appears to be under control, the possibility of chemical and biological programs, a potential missile threat, and the constant threat of regime instability or collapse remain causes for concern. Another possibility is that not only an asymmetric military threat but also a major conventional conflict would disrupt the stability of the region and threaten the economic gains achieved by the other regional powers.

Continued deterrence is obviously essential, but in the longer term the core states also have an interest in establishing a way that the peninsula can be unified gradually and incrementally. The sudden collapse of North Korea would produce great economic and political disruption, with conflict as a possible byproduct. It is therefore in everyone's interest, including China and Russia, to minimize this likelihood. Cooperation, or at least coordination of policies and actions, would enhance core solidarity and simultaneously present an opportunity to cement relations among the core and provide the two transition states with the greatest capacity to affect core interests.

China as Full Member of the Core

Within the next 20 years or so, China has the greatest potential to challenge U.S. and core interests in the region by economic, political, and military means. Its potential for such a challenge already exceeds that of Russia. The ultimate direction of China's transition is therefore very important.

The task for the United States is to use its formidable array of economic, political, and military instruments to persuade Beijing that cooperative and friendly relations are more in its interest than overt competition and conflict. Washington and the other members of the core, especially Japan, are challenged to persuade China that its interests are best served by organizing its international activities to comport with core values and norms.

Enhanced Ties with ASEAN

The nine states of the Association of Southeast Asian Nations (ASEAN) are primarily transition states whose integration into the core is essential for continued regional stability. Taken together, ASEAN economies are among the most dynamic in the world. Annual trade by the organization's members with core states amounts to \$286 billion and continues to grow. In the future, the importance of such trade with the core can only increase.

These nine transition states are also of crucial geostrategic importance for three reasons. First, the ASEAN states adjoin or straddle sea lines of communication (SLOC) with Northeast Asia, the Indian Ocean, and the Persian Gulf. Trade and the need to respond to crises require that the SLOC be readily accessible to core states. The victory over Iraq in the Persian Gulf War was facilitated by the ability to stage through Southeast Asia.

Second, Southeast Asia has long had an ambiguous relationship with China. Traditionally, Chinese strategists have defined Southeast Asia as a strategic buffer zone in which China should be the dominant external influence. Political leaders in the subregion have been sensitive to this demand, often accommodating China when the absence of a countervailing power has enabled Beijing to press its preferences credibly. Core relations with ASEAN, therefore, bear directly on both its present health and security and its ability to expand and consolidate.

Finally, the states in ASEAN are rapidly building modern military establishments. Most have moved beyond the need to deal with internal threats and are building modern forces better suited to reinforcing their respective quests for the new international interests that attend economic prosperity. The health and security of the core would be enhanced were these new capabilities exercised within the framework of core values and norms.

Current Trends

Japan's Growing Role

The issue of Japan's role as a "normal state" has occupied its political leadership for more than a decade. Although the bursting of the "Bubble Economy" in the early 1990s took the edge off the willingness of various elites to grapple with new regional and global roles, this theme remains visible in present political discourse.

Major U.S. Forces in Japan (March 1997)

Yokota Air Base
 + COMUSJAPAN Headquarters
 + Logistics transport hub
 + 374th Airlift Wing

Yokosuka Naval Base
 + USS Independence battle group
 + 9 surface combatants (cruisers, destroyers, and frigates)
 + 7th Fleet flagship (USS *Blue Ridge*)
 + Major ship-repair facilities

Atsugi Naval Air Facility
 + Carrier Air Wing 5 (USS Independence air wing)
 + Light Helicopter Anti-Submarine Squadron 51

Camp Zama
 + U.S. Army, Japan Headquarters/9th Theater Army Area Command (TAMCOM)
 + 1 (U.S.) Corps (Forward) Liaison Detachment
 + 17th Area Support Group (ASG)
 + Army Medical Department Activity Japan (MEDDAC/JAPAN)

Sasebo Naval Base
 + Amphibious Ready Group (ARG) Bravo (4 ships)
 + 2 minesweepers

Misawa Air Base (northern Japan)
 + 25th Fighter Wing (26 F-16 aircraft)
 + Fleet Electronic Reconnaissance Detachment (2ES-3 aircraft)
 + Deployed maritime patrol squadron (Navy, 7 P-3C aircraft)

Iwakuni Marine Corps Air Station
 + Marine Air Group 12 (EA-6B aircraft and FM-18 aircraft)

Okinawa
 + III Marine Expeditionary Force (3rd Marine Division, less detachments)
 + Marine Aircraft Group 26 with CH-53 and CH-46 helicopters, and KC-130 aircraft

Kadena Air Base (Okinawa)
 + 18th Wing (54 F-15 aircraft, E-3 AWACS, KC-135 tankers)
 + 253rd Special Operations Group (SOG)

Torii Station (Okinawa)
 + 1st Battalion, 1st Special Forces Group
 + 10th Area Support Group (ASG)

Japanese Host Nation Support
 Direct support = \$3.2 billion
 Indirect support = \$1.3 billion

Sources: Department of Defense and Report on Allied Contributions to the National Defense, 1997

The April 1996 Joint Declaration on Security focused the U.S.-Japanese alliance away from the defense of Japan and toward cooperation in maintaining regional security. Subsequent revision of the Guidelines for U.S.-Japan Defense Cooperation, which established principles for cooperation in crisis situations, can be seen as a significant step toward a greater political and military role for Tokyo in regional affairs. Its regional role and influence will almost certainly continue to grow, but a combination of internal and external factors may cause change to come extremely slowly.

Of the two, internal factors are more important. Since the end of the Cold War, economic difficulties, official corruption, doubts (now largely compensated for) about U.S. constancy, and a perception of the potential challenge of rising Chinese power have combined to force a change in the content and structure of Japanese politics.

In 1996, the Socialist Party formed a coalition government under Prime Minister Murayama, their first accession to power since 1948. But the price of a majority vote was renunciation of the party's long-held opposition to the U.S.-Japan Security Treaty and acceptance of the legitimacy of the Japanese Defense Forces. In 1997, the Socialists were relegated to a secondary role in the coalition, and their influence seems likely to decline further in the future.

Over the next few years, this evolution toward a new political center in Japan will continue, and issues related to Japan's role in the U.S.-Japan alliance will be an essential issue. Indeed, issues of "role in the world" will probably emerge as a key element of the debate. If, as seems likely, present domestic political trends continue and if successive Japanese governments can demonstrate that the expanded alliance truly increases Japan's security, the strength of domestic political leaders who support an expanded role for Japan in regional political and security affairs will grow.

External constraints on Japan's role in core security, on the other hand, may diminish. At present, mindful as they are of Japan's imperial past as well as Tokyo's consistent refusal to deal with it, regional states (especially China and the ROK) remain wary of any increase in Japan's military or security roles.

This opposition, however, is by no means solid or united. Protestations notwithstanding, both Beijing and Seoul understand that even an expanded alliance serves their interests by enhancing stability and by keeping Japan firmly tied to core values and norms. The states of Southeast Asia are concerned less about a more active Japan than about the emergence of Chinese military power, and, accordingly, they see the alliance as a means of countering Beijing's regional influence. Despite the braking effect of historical memory, the trend points toward acceptance of a more active engagement by Japan in the security affairs of the region.

Instability on the Korean Peninsula

The DPRK is a rogue state that is evidently also failing. This combination means that conflict is a constant possibility and that the peninsula may be entering a period in which the risk of an unintended war exists due to a collapse in the North. If deterrence continues to work, however, the decline of the DPRK points to decreased likelihood of a Korean conflict. The challenge for the United States is to use deterrence as a shield under which other countervailing trends can develop.

Several external and internal factors support this assessment. The four major powers of the region share vital interests:

- Avoiding a new Korean War
- Maintaining stability on the peninsula
- Fostering continued economic growth
- Preventing the proliferation of weapons of mass destruction (WMD)
- Preventing the peninsula from being ruled by a hostile government.

The policies of those four powers appear to work, if only coincidentally, to limit the likelihood of conflict. For example, Russia has served notice that it will no longer aid Pyongyang in the event of conflict. China has used its influence to help control North Korea's nuclear weapons program and has encouraged the United States to approach Pyongyang diplomatically. China also provides to North Korea a reported one-third of its small foreign aid, thus helping to reduce the possibility of conflict produced by the "spasm reflex" of a dying regime. In December 1997, the Four Party Discussions--among the two Koreas, China, and the United States--were convened, with a second session planned for spring 1998. Insofar as external powers can consciously influence developments in Korea, that influence is being directed toward reducing the likelihood of conflict.

North Korean weakness also points to reduced possibility of conflict. In the mid-1970s, the balance of economic strength shifted permanently to the South. The 1996 increase in South Korean GDP--amounting to U.S. \$27 billion--exceeded the total of North Korea's economic output by some \$21 billion. Although North Korea remains able to wreak great havoc on its adversary to the south, the combination of South Korean strength and U.S. support means that Pyongyang cannot reunify the peninsula on its own terms militarily.

Similarly, North Korea's economy remains in a state of collapse. The *juche* regime in Pyongyang is incapable of providing even bare essentials for its population. The extent of North Korea's economic decline is striking. The loss of major power sponsors, along with the structural deficiencies of its command economy and a series of natural disasters, has led to economic retraction over the past seven years, with no end in sight. In nearly every area of competition, with the exception of the military, South Korea, with strong backing from America, has emerged as the clear winner in this rivalry.

While the United States and the ROK should continue to try to capitalize on the potential opportunities afforded by Pyongyang's willingness to engage diplomatically, they must never lose sight of the fundamental requirement to maintain forces sufficiently powerful to deter and, should deterrence fail, to fight and win. North Korea still poses a significant military threat, ranging from a last gasp attempt to reunify the peninsula via military conquest, through more limited aggression intended for political gain or diplomatic leverage, to a purely punitive assault launched with the sole purpose of inflicting maximum damage on the South as North Korea goes down fighting.

Security Implications of the Asian Economic Crisis

The Asian economic crisis will generate a number of potential problems for U.S. security relations with the nations of the region. For example,

demonstrations in Indonesia and Malaysia raise the specter of political instability. Also, unanticipated shortfalls in revenue may complicate or even prevent the efforts of regional allies and friends to fulfill prior commitments to purchase arms, participate in planned exercises, and, of greatest importance, continue to provide the full measure of expected support for U.S. military forces. Third, the crisis has already caused some diminution of U.S. status and prestige, because certain centers of political opinion with different regional nations view the United States as a major cause of the crisis. In any case, owing to its close identification with the International Monetary Fund, Washington is viewed as the force behind the often unpopular measures advocated by the IMF.

Thus far, because of its nonconvertible currency and the fortunate fact that most of its investment capital is derived from foreign direct investment rather than loans, China has avoided the major negative effects of the crisis. However, all the conditions that prompted events elsewhere in Asia--a large number of nonperforming loans, cronyism, and the practice of basing economic decisions on political expediency--exist in China. If the reforms announced at the March national People's Congress are not fully successful, China too could encounter slowed rates of economic development and resultant political instability.

A challenge for U.S. policy will be to resist any temptation to react negatively to regional complaints and provide the political and economic support that will enable regional governments to persevere through the present difficulties, implement necessary reforms, and ultimately consolidate their positions within a more stable regional and global economic order. In other words, the crisis provides opportunities for shaping the regional environment in ways consistent with the economic values of the core.

Fluctuation in Sino-American Relations

China is a key transition state. Beijing already plays a defining role in regional affairs, and its influence will only increase. In 1992, after more than a decade of preparation, the Chinese began in earnest to modernize the People's Liberation Army (PLA). Although equipment modernization is proceeding slowly, the PLA is clearly on the path to greater modernity. Within two decades or so, China will have reached sufficient comprehensive national strength to mount a regional challenge to core values, should it choose to do so. Relations with the United States are thus a matter of vital interest to both Beijing and Washington.

Economic development is China's main national priority, and Beijing has slowly come to accept many core economic values. In February 1992, Deng Xiaoping's "Southern Journey" signaled acceptance of market mechanisms. After the 15th National Congress of the Chinese Communist Party (CCP) in October 1997, President Jiang Zemin used his political strength to intensify efforts to complete reform by privatizing the 400 or so state-owned enterprises (SOEs). Although these comprise but 15 percent of the total, the need to subsidize inefficient SOEs had long imposed a major burden on China's fiscal resources. This recent emphasis on privatization suggests that the Chinese may be more willing to implement other reforms required for World Trade Organization (WTO) accession and then to observe the norms of the rule-based global trading system. The National People's Congress is likely to reinforce these trends in spring 1998. At the same time, if the Asian financial crisis weakens the Chinese economy, painful reforms (e.g., privatizing state-owned enterprises) could be slowed.

Despite Beijing's willingness to deal with core economic values, however, China's relations with the United States are not smooth. After the Tiananmen Square incident of June 1989 and the collapse of the Soviet Union in 1991, long-repressed stresses in U.S.-Chinese relations surfaced; since then bilateral ties have had ups and downs. These respond to disagreements on a wide range of issues, including Taiwan, a growing trade deficit, proliferation of WMD, and human rights. These strains will continue, and U.S. ties with China could become increasingly competitive.

Beijing is extremely suspicious of Washington's long-range strategic intentions. Chinese leaders see U.S. support for Taiwan, alleged resistance to China's WTO accession, pressures to change its arms sales policies, and the recent expansion of the U.S.-Japan Security Alliance as evidence of Washington's desire to contain China. This, in turn, slows Chinese economic development, prolongs its division, and prevents Beijing from exercising its proper regional role and influence.

At the same time, many influential political figures in the United States are similarly suspicious of Beijing's intentions. There is concern that as China's comprehensive national strength increases, Beijing will challenge U.S. regional and global leadership, a course that if adopted could directly threaten vital national and core interests.

As the October 1997 meeting of the two presidents indicates, however, neither side wishes to see relations deteriorate. Given the high priority China assigns to economic development, good economic and strategic relations with the United States and the other core states are a vital national interest and will continue to be so for decades to come. On one hand, Beijing must engage with the core to gain economic benefit, but on the other it remains concerned about the potential impact of core political values on its future stability. The United States and the other core states place a similarly high value on economic relations with China but retain varying degrees of concern about its political system and strategic intentions.

China's response to this impasse has been to keep its economic and political options open while protecting its core interests in Taiwan by all available means, including military options and, more significantly, shaping a regional security framework that will best meet China's future interests. Both efforts lead to direct competition with the United States and, under certain circumstances, might risk confrontation and armed conflict.

In March 1996, Beijing conducted military exercises in the Taiwan Strait. The PLA tested a number of M9 missiles by firing them near Taiwan's northern and southern port cities of Keelung and Kaohsiung. The Chinese were not attempting to compel Taiwan to accept immediate reunification but rather were signaling their determination to arrest the growth of sentiment favoring Taiwan's independence.

The Chinese clearly misjudged U.S. reaction and were surprised by the successive deployments of two aircraft carrier battle groups. Yet Beijing would almost certainly use military means again if it considered them necessary to prevent a Taiwanese declaration of independence. Many circles in China, particularly the PLA, continue to see the U.S. response as an indication of its support for Taiwan's independence. The issue of Taiwan will continue to vex U.S.-China relations and, were one side to miscalculate the other's intentions, could lead to armed conflict.

Beijing's effort to build a separate regional security framework also is developing. During March and April 1997, through bilateral strategic dialogues, the official English-language press, and discussions on confidence-building measures convened by the Conference on Security and Cooperation in the Asia-Pacific (CSCAP), the Chinese began to promulgate a new paradigm for regional security that emphasizes multilateral security structures and regimes. Beijing's approach appears to challenge directly the present architecture's reliance on bilateral security alliances and forward military deployments. "Security Cooperation Partnerships" similar to those between China and Russia now form part of the proposed Chinese vision.

The new approach is risky for Beijing because it flies in the face of overwhelming regional satisfaction with the present security structure. Nevertheless, Chinese strategists view this approach as an effective means of circumscribing the U.S.-Japan Security Alliance, fostering the development of multipolarity within the region, and undercutting Washington's primacy in regional security affairs. This challenge to the U.S. regional position will very probably emerge as a regular element of Beijing's overall position. This manner of low-intensity, low-risk competition with the United States is also highly likely to continue into the future and to contribute to the persistent pattern of pendulum swings in the relations between Washington and Beijing.

Recurrent Pan-Asianism

Although transition states, particularly those in Southeast Asia, clearly accept core economic values, their positions on such political norms as pluralism, the value of civil society, and legitimate government are ambiguous. As the 1996 and 1997 ministerial sessions of the ASEAN Regional Forum (ARF) showed, considerable disagreement exists between the United States and other ARF participants over issues such as the right of political expression, working conditions, and free elections.

The regional response to perceived U.S. pressure on human rights is defensive, which is often manifested as a reflexive assertion of "Asian Values." China and Singapore are the most vocal examples. Malaysia, Indonesia, and Thailand share this resentment. From time to time in the past, these stresses have proved damaging to U.S. security relations with such states.

U.S. International Military Education and Training (IMET) and arms sales to Indonesia, the largest and most powerful member of ASEAN, for instance, remain curtailed in response to Jakarta's military suppression of the East Timor separatists. Washington also imposed sanctions after Megawati Sukarnoputri was removed as head of the leading opposition party on the eve of the May 1997 parliamentary elections. Similarly, protests over the caning of an American boy in February 1994 brought bilateral relations with Singapore to a near standstill. They also slowed efforts to energize bilateral agreements to provide U.S. military forces with access to repair facilities in Singapore. Finally, disagreement on imposing sanctions on Myanmar in response to human rights abuses has become almost a permanent sore point between Washington and other ARF members. Should such stresses become the norm, problems would clearly intensify. Washington is challenged to adopt proactive policies for dealing with this potential problem.

Shaping the Strategic Environment

Averting Conflict

The Korean peninsula and the Taiwan Strait are the two most probable sites of conflict in the Asia-Pacific region. Unresolved territorial claims include:

- The South China Sea which involves China and Vietnam, Malaysia, the Philippines, and Brunei
- Jurisdictional and sovereignty disputes over islands in Northeast Asia, involving China, Japan, and the ROK.

The powers involved have consistently demonstrated a commitment to preventing situations from escalating into sustained conflict and, in all cases, have resorted to political means to contain tensions within nonconflictual bounds. This commitment will continue into the future.

The dynamics of the Korean peninsula and the Taiwan Strait are very different and therefore require different strategies to avert conflict. With respect to the Korean peninsula, the potential adversary is a rogue state that may be on the edge of failure. Averting conflict there requires, first and foremost, maintaining and strengthening deterrence. It must be made clear to Pyongyang that the use of military means for any purpose will inevitably result in total destruction of the *juche* regime.

Republic of Korea

The principal means of averting conflict on the Korean peninsula is to maintain an actively engaged U.S. military presence. This presence must be large and vigorous enough to serve several interrelated functions. First, for example, even though the military balance may in many respects have shifted in favor of the ROK, it is unrealistic to expect that the armed forces of the South could prosecute and win a major conflict against the North entirely on their own. By design, as reflected in the concept of the Combined Forces Command, South Korean and U.S. military forces complement, rather than duplicate, each other's capabilities. As a result, the intelligence, naval, air, and logistical assets of ROK military forces are insufficient to deal with a determined North Korean assault without complementary U.S. strength.

Second, presence is similarly the best means of dealing with a relatively new element in the peninsular military equation, the threat posed by possible North Korean WMD. Although the nuclear dimension of this threat appears to be under control, questions remain about the chemical and biological weapons capabilities of the North. Presence needs to include capabilities for dealing with this potential threat.

Finally, deterrence through presence is an effective means of supporting and encouraging new political and diplomatic developments of the inter-Korean situation. The United States needs to demonstrate that it is engaged for the long haul and is an enduring, consistent presence that remains relatively well-insulated from political currents.

While continuing to maintain an appropriate force presence, innovative approaches to defining and maintaining presence must be explored. Here, the experience of the U.S. military in the Middle East may be useful. As noted in chapter four, U.S. forces in the Middle East are required to be lethal and active but also to retain a relatively low profile in order to avoid sparking nationalist or religion-based opposition. Thus the United States relies heavily on prepositioning, demonstrating the ability to surge, and rotating forces and assets. Its forces in Korea will continue to have far more latitude than their counterparts in the Middle East. These forces may prove useful for developing proactive strategies to maintain deterrence while avoiding the frictions produced by social and political developments.

ASEAN Military Budgets (1995 constant U.S. \$)

| | Defense Expenditures | | | | | | Percent of GDP | | | Strength of Armed Forces | | Reservists (estimate) | Para-military |
|-------------|----------------------|-------|-------|----------------------|-------|-------|----------------|------|------|--------------------------|-------|-----------------------|---------------|
| | millions (U.S. \$) | | | per capita (U.S. \$) | | | 1985 | 1995 | 1996 | 1985 | 1996 | (000) | (000) |
| | 1985 | 1995 | 1996 | 1985 | 1995 | 1996 | 1985 | 1995 | 1996 | 1985 | 1996 | 1996 | 1996 |

Taiwan

Averting conflict in the Taiwan Strait poses a different challenge. Conflict there is probable only if Taiwan declares independence. The cross-strait problem is political and best resolved by interaction between Beijing and Taipei. Yet the United States is involved: the Taiwan

Relations Act, which has the force of U.S. law, mandates that Washington provide Taiwan with the materiel required to defend the island. Moreover, any U.S. administration would come under significant pressure to defend Taiwan were conflict to occur, no matter the cause.

Estimated Chinese Missile Threats

NOTE: Boundary representations are not necessarily authoritative.

Visits to Taipei and Beijing by mid-level Taiwanese and Chinese officials in June and August 1997 suggested that the stage is being set for a resumption of the cross-strait dialogue suspended by Beijing after Taiwan President Lee Teng-hui's visit to the United States in June 1995. In the circumstances, the best means available to Washington to avert conflict is to continue to reassert its insistence on a peaceful settlement by encouraging and supporting resumption of that dialogue and by using arms sales to Taiwan to maintain the military balance across the strait. The United States might also use political channels to convey its concern to Taipei about any unilateral attempt to alter the status quo in the Taiwan Strait.

Other than regular transits of the strait to assert the right of innocent passage by U.S. naval vessels through international waters (freedom of navigation operations, or FONOPS), there is no requirement for routine presence by U.S. forces. Deployments are necessary only in times of crisis and would serve as a convincing demonstration of U.S. insistence on a peaceful resolution, helping to assure other states in the region of U.S. determination and constancy. Of course, deployments during a crisis must be wisely managed because, as the U.S. deployment of two carrier battle groups to the Taiwan Strait area in March 1996 showed, both Taipei and Beijing interpret such actions as supporting Taiwan and thus opposing Beijing. Other regional powers express concern that such deployments may provoke an accidental conflict.

Enhancing Confidence

Japan, South Korea, the members of ASEAN, and even China acknowledge that the balancing function of the U.S. military presence has been and remains crucial to maintaining the order and stability of the region. If the United States were to withdraw or to reduce its role significantly, the consequences for regional stability would be unpredictable. In every corner of the Asia-Pacific, the United States is challenged to enhance confidence in its intention and ability to remain a commanding economic, political, and military presence. Put

differently, Washington is challenged to enhance confidence in its ability to function *primus inter pares* as the effective source of regional leadership. The United States aims to enhance such confidence to keep the region peaceful, stable, and secure.

During the Cold War, enhancing confidence meant maintaining an overwhelming preponderance of military force in the region. Alliances with Japan, South Korea, Australia, the Philippines, and the remnant SEATO connection with Thailand, many strategically located permanent bases, and frequent periodic exercises such as RIMPAC (Northeast Asia), *Cobra Gold* (Southeast Asia), and *Team Spirit* (Korea), all served convincingly to demonstrate U.S. strength and resolve, despite a temporary decline after the Vietnam conflict. Regional confidence in the United States was demonstrated by the remarkable economic development that occurred. Even China acknowledged the considerable benefit of the U.S. military presence and role.

Since 1991 and the collapse of the Soviet Union, regional confidence in the United States has fluctuated. It hit a low point in late 1995 and early 1996 when the U.S. regional economic role was challenged by Japan, severely straining U.S. ties with both China and Japan. The reconstituted alliance with Japan indicates a renewed sense of common purpose, and the exchange of presidential visits suggests the possibility of improvement in U.S.-China relations.

These changes provided strong evidence that the effectiveness of U.S. leadership is now judged in the region according to criteria that include a new, larger measure of political and economic elements than during the Cold War. In present circumstances, enhancing confidence involves:

- Maintaining a superior military strength
- Redefining the U.S.-Japan Alliance
- Avoiding regional fears about new Japanese military roles
- Managing China's integration into the core
- Fostering a peaceful process of Korean reunification
- Preventing economic frictions with regional powers from escalating into trade wars
- Managing pressures to develop a new security architecture.

This is not to suggest that the role of the Department of Defense in enhancing confidence in the United States in this region is shrinking, but rather that it may face pressure for change. Military presence will continue to be the most important means of supporting confidence-enhancing goals and the one that provides a basis for efforts in the political and economic spheres. Japanese and Korean willingness to adjust their treaty relations with Washington according to new realities imposed by the end of the Cold War demonstrates that the region views military presence as the most potent symbol of U.S. commitment. The potential diminution of the North Korean threat and the willingness of ASEAN members to allow U.S. forces access to their facilities are further indications of this view. However, the forces, trends, and requirements of the confidence-enhancement agenda noted above suggest a need for greater activism in demonstrating the constancy of the U.S. commitment. Pressures exist to consider means of making credibly deliverable capabilities the measure of presence, rather than numbers of military personnel and permanently deployed weapons systems.

Engagement is a key to such a transition. The United States can share its superior capabilities with its allies and, as with Japan, can join with them to develop new capabilities. Washington might also develop an incremental program of exercises to enhance interoperability and joint and combined operations and to develop the revised defense cooperation guidelines with Japan. It would also be useful to begin exercises with the PLA in peacekeeping operations, if only as an initial effort. Then, too, professional military education channels are useful in developing an appreciation of joint doctrine. In sum, an active engagement with the militaries of the region by the Department of Defense would demonstrate not just the superiority of its military power but also its willingness to use it in support of core interests.

Creating Complementarity

If present trends, including a perception of a reduced threat from North Korea and recurring cycles of pan-Asianism, continue, the United States will face increasing pressure to reduce the size of its regional military deployments. This, in turn, may require considering measures to maintain presence while simultaneously reducing the number of forces, but it would not require reducing either the visibility of U.S. forces or the ability of the United States to bring its power to bear. A key factor is building greater complementarity with the military forces of the region.

A high level of complementarity already exists between the forces of the United States and those of its Australian, Japanese, and Korean allies. In the event of crisis on the Korean peninsula, the combination of U.S. and ROK forces will hold the line until U.S. power projection capability can be brought to bear with help from Japan and Australia. In Southeast Asia, the situation is different. Except for Thailand, considerably less complementarity exists between U.S. forces and those of the ASEAN transition states. The likelihood of

armed conflict within the subregion is small.

Thus the issue for Washington is to fine-tune complementarity with Canberra, Tokyo, and Seoul in order to deal with a regional threat. The United States must simultaneously build complementarity with the members of ASEAN, to the extent that political conditions permit, to safeguard the future. The process of revising the Defense Cooperation Guidelines with Japan shows that such efforts will be complicated by the need to avoid threatening China and provoking regionwide concern about new roles for Japan.

For this reason, the division of labor with allied and friendly military forces should not be changed. Superior American intelligence and power-projection capabilities, the lethality of U.S. forces, and the proven effectiveness of joint doctrine should continue to provide the basis for any potential activities by combined military forces.

The United States is extremely well positioned to build complementarity in the Asia-Pacific region for the following reasons:

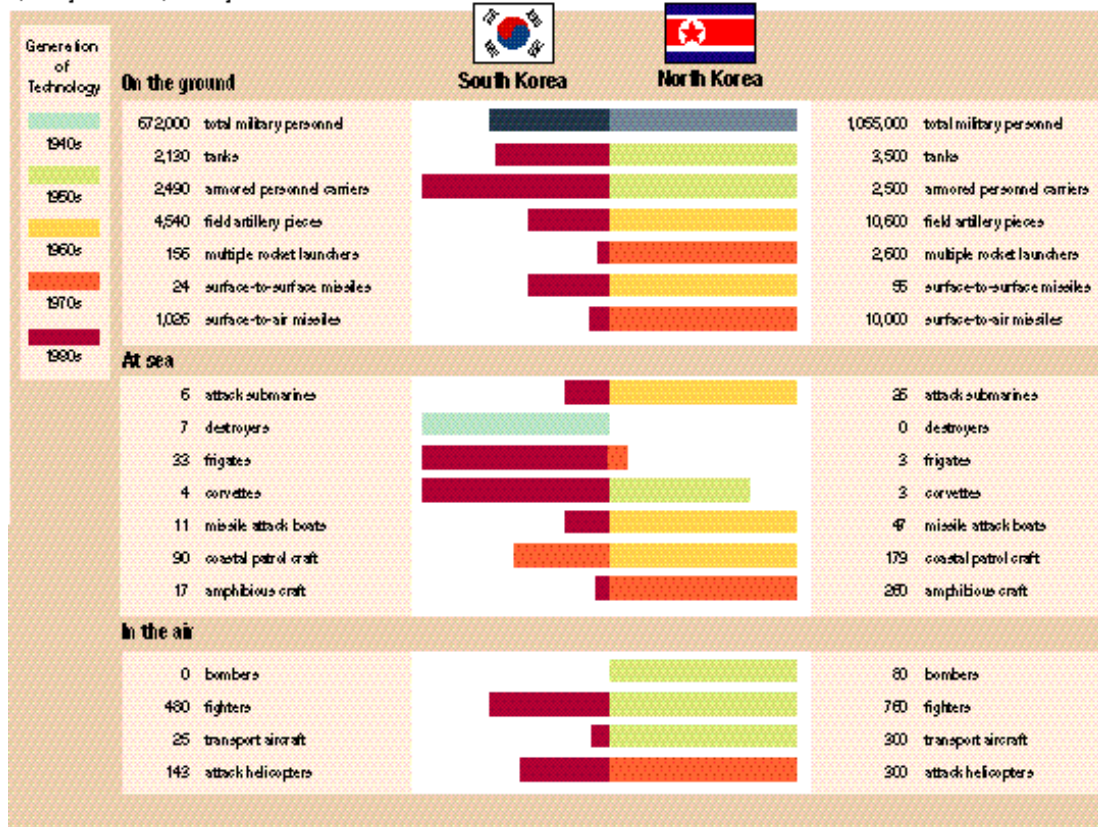

- Robust alliances already provide a framework for activity
- There is an appreciation of the U.S. military presence
- There is a desire in the region that the U.S. military presence remain
- The effectiveness of U.S. weapon systems is well known
- U.S. joint doctrine is acknowledged.

The key to progress, then, is to intensify active engagement between the United States and regional military establishments.

Arms sales are an obvious and central means to building complementarity. But translating weapons systems into credible military capabilities is also essential, as is an active pattern of engagement. The need to master identical systems requires education and training, which Washington provides through its IMET programs. The Pentagon might consider expanding these and drawing more foreign military officers into the IMET and professional military education networks. Washington might also consider:

- Expanding the frequency of military exercises
- Holding exercises to enhance peacekeeping operations capabilities
- Enhancing capabilities for military operations other than war
- Increasing military-to-military contacts.

Quality versus Quantity

Hostile and Transition States

With respect to the Korean peninsula, the United States may already have achieved some success in shaping the strategy of the DPRK. The combination of deterrence and diplomacy led to the 1994 Agreed Framework. Although severely criticized at the time, the agreement seems to have blunted North Korea's attempt to neutralize U.S. power with the threat of nuclear weapons. Pyongyang's reprocessing plant has been closed, it is cooperating with IAEA inspectors, and initial work on the reactor for power generation has begun. Similarly, Pyongyang's participation in the Four Party Talks suggests a new willingness to use political and diplomatic means to achieve its goal of prolonging the existence of the regime. Thus far, and despite uncertainties about potential chemical and biological capabilities, nothing indicates that U.S. strategies are pushing North Korea to adopt additional asymmetric measures. The challenge for the United States now is to encourage this tendency and to translate it into concrete gains in further reducing the threat of conflict on the peninsula.

Certainly, the U.S. military presence there has been essential to gains achieved thus far and must be maintained into the future. If, however, the North Korean threat continues to recede, pressure will grow to reduce U.S. forces in Korea. This pressure will pose certain dilemmas. Continued presence will remain essential to supporting diplomatic efforts to maintain deterrence. It will be essential, too, to reassure Japan and the region of U.S. commitment and remind China of Washington's vital interests there. Finally, the United States may wish to consider redefining the alliance with Korea as it has done with Japan, to focus it away from defense and toward maintaining regional peace and stability. Korea would thus join Japan as a base from which U.S. forces could stage to deal with crises elsewhere.

Cobra Gold '97, Thailand

It is possible to retain an adequate level of military presence on the peninsula, to adjust it in response to changing conditions and requirements, and to use those adjustments to secure additional gains. For example, the United States might introduce the issue of reducing the threat of military conflict into the diplomatic processes now unfolding on the peninsula. North Korea might be persuaded that aid, establishing diplomatic contacts, and support for joining the Asian Development Bank are available, but only if it were willing to reduce military tensions. If its condition further weakens, North Korea could be required to reposition certain categories of forces away from the DMZ and to participate in several threat-reduction, confidence-building measures. Washington and Seoul might offer roughly equivalent actions, in addition to aid and assistance.

Defense against any aggression is the immediate purpose of U.S. engagement in the region. In the longer run, the chief purpose will be to shape the strategy of China, a transition state that holds the key to the future of the Asia-Pacific region. For Washington, shaping China's strategy means persuading Beijing that its best interests lie in adopting the values of the core and that it has little to gain by attempting to build military capabilities equal to those of the United States and using them to challenge the U.S. regional position.

The U.S. strategy toward China is to demonstrate its overall strategic capability through alliances and forward military deployments. This capability will deter Chinese military adventurism and simultaneously engage it in ways designed to enmesh Beijing in a web of relationships that serve mutual interests. Eventually, it is hoped, the combination of approaches will produce the desired result.

Yet a contradiction between the two approaches seriously challenges the ability of the United States to realize its aims. China's deep suspicion of U.S. strategic intentions makes relations between the two states fundamentally competitive. Thus actions designed to demonstrate U.S. power and resolve to maintain regional peace and stability are interpreted by Beijing as evidence of efforts by Washington to create hedges against China's future behavior or, more seriously, to prevent its rise to the status of a great power.

At the regional level, Beijing sees U.S. efforts to avert conflict in Taiwan, to enhance confidence in and cohesion with Japan, Korea, and Southeast Asian states, to build complementary capabilities, and, indeed, to shape strategies all as efforts aimed against China. Some Chinese believe they are a target of U.S. actions. Similarly, at the bilateral level, efforts by Washington to engage Beijing in such areas as proliferation, entry into the WTO, or human rights, or to secure a peaceful transition in the Taiwan Strait are viewed as intrusions into China's internal affairs or infringements on Chinese sovereignty.

Resolving this dilemma completely may not be possible. The United States can neither abrogate its responsibilities nor reject its interests. The most appropriate course may be to accept the contradictions and try to limit their negative effects. The United States might reaffirm engagement with a new focus on the major issues and also emphasize areas of agreement.

Within that context, the major contact points between the United States and China in the next 10 years will probably involve Taiwan, the Korean peninsula, proliferation, and multilateralism. Taiwan is the most significant friction point. If it were to cease being the defining issue in U.S.-China relations, the way would be clear for progress in other areas. If the United States is to shape Chinese strategies, it will need to interact with China on these issues and problems. Efforts by DoD will necessarily be supportive of those mounted in the political and economic relationship. Nonetheless, the U.S. military has an important role to play.

Beijing points to U.S. arms sales to Taiwan as evidence of negative U.S. intentions, while seeking reassurances that the United States does not support Taiwan independence. Washington can neither provide such assurances nor deny that Taipei's case for continued arms sales is strengthened by such Chinese behavior as the March 1996 military exercises and missile tests.

Two developments may provide some latitude. First, Taiwan is now acquiring 150 F-16 and 50 Mirage fighter aircraft. Its navy is acquiring six LaFayette-class and seven Perry Class frigates and is actively seeking submarine purchases. With the exception of air defense systems, the Taiwanese Armed Forces are at the end of a procurement cycle, and time is needed to assimilate the new systems. For the next three years or so, realistic pressure by Taiwan for new sales will diminish. Second, evidence suggests that cross-strait dialogue may resume sometime in 1998. The combination of these events might reduce the rationale for new sales and thereby provide Washington with grounds for a more agnostic approach to arms sales. At the same time, the U.S. military must also stand ready to reaffirm U.S. insistence on a peaceful settlement, should tensions flare up again.

On the Korean peninsula, China and the United States share an interest in helping to resolve any problems created by the failure of the North Korean state, such as refugee flows and disarming the North Korean military. The U.S. military might enter into discussions with Chinese counterparts on these subjects. A more sensitive topic would be the U.S. presence on the peninsula after reunification. China would probably insist on a major reconsideration of the U.S. presence after reunification or of a greatly reduced threat from North Korea, but would also assume the continued existence of some manner of security tie between the United States and a unified Korea. Discussions might help to clarify the thinking of both sides and to define proactive policies for the future.

Beijing demonstrates increasing willingness to participate in efforts to control the proliferation of WMD by subscribing to or signing the following:

- The Nuclear Non-Proliferation Treaty
- The Comprehensive Test Ban Treaty
- The Chemical and Biological Weapons Conventions
- The Missile Technology Control Regime
- The organization of a Proliferation Group within the Ministry of Foreign Affairs.

In addition, China has placed the most objectionable portion of the peaceful nuclear technology agreement with Iran on hold. Only the relationship with Pakistan, of high geostrategic importance to Beijing, will continue uninterrupted. Despite this, Beijing has informally signaled willingness to join with the United States to consider ways and means to reduce the potential for conflict in South Asia. This, too, might prove a fertile field for exploration by Washington.

The United States must also deal with the challenge of China's call for a new regional security framework with a high component of multilateralism. Bilateral relations aside, the alliance management and relations with ASEAN require a firm response by Washington. At present, alliances with Australia, Japan, and Korea are stronger than at any time since the late 1980s. These three states would most probably not be willing to trade the certain benefits of alliances for uncertain potential benefits of a multilateral security regime. The DoD would be unlikely to lose by expanding engagement with regional military forces to include discussion of a range of multilateral confidence-building measures and participating in combined exercises.

In Southeast Asia, the strategies of the ASEAN states are evolving toward consonance with U.S. interests. ASEAN military forces routinely share intelligence on such matters as piracy and refugee movements, and annual exercises help to develop complementarity and interoperability. The task for the United States is to encourage these trends and to build and consolidate ties with the military establishments of the subregion.

Qualities of U.S. Power Accentuated in the Asia-Pacific Region

To accomplish this, Washington will have to move carefully. The ASEAN states are sensitive to the fact that U.S. military presence created an environment in which they could take the first tentative steps toward military cooperation. Yet they are equally sensitive to the prospect of future relations with China requiring that U.S. presence be neither too visible nor too active. Thus, the U.S. role in shaping ASEAN strategies lies in engagement once removed from the region itself and heavily infused with professional military education and strategic consultation.

Conclusion

Shaping the environment of the Asia-Pacific region presents the United States and its core partners with two major challenges. The first involves a contradiction; the second involves means.

The first challenge suggests it is absolutely essential to consolidate ties with Japan and the transition states of Southeast Asia. U.S. efforts to do so, however, have already generated tension in U.S.-China relations and will continue to do so into the next decade. Security ties between Washington, its alliance partners, and ASEAN are closer than ever before, at the cost of a strained relationship with Beijing. If such stresses continue, they might spill over, exerting a negative influence on relations. Managing the integration of China into the community of core states will increasingly occupy the attention of U.S. officials as they seek to shape the regional environment for the future. It will require the greatest coordination of military, political, and economic instruments.

The question of means is very significant. To shape the environment most effectively, the United States will continue demonstrating its ability to project power into the region, although present trends indicate that the changing regional political environment will make it increasingly difficult to accomplish this by means of permanent bases and forward deployments. For that reason, in the next decade, U.S. forces will be challenged to maintain necessary capabilities while simultaneously reducing their size in the region. A new emphasis is highly likely on sharing roles and missions with regional allies, developing interoperability, preparing for rapid reinforcement, and prepositioning materiel for use in emergencies.

THE INDIAN OCEAN REGION

The modern states of India, Pakistan, Nepal, Bhutan, Bangladesh, and Sri Lanka comprise the area commonly referred to as South Asia or the Indian Ocean region. However, attention is usually turned toward the two principal states, India and Pakistan. These states have fought three wars against each other since independence from Great Britain in 1947 and are perhaps the most likely flashpoint for conflict involving nuclear weapons. Any confrontation between the two armies of over a million troops evokes world attention, and yet this is a region where U.S. influence is minimal.

Background

The history of India and Pakistan is a blood-hued mosaic of invasions through Central Asia. The most successful invaders were Muslims using Mameluke blades as persuasively to convert as to conquer. For Muslims and the indigenous Hindus, zealous believers both, their foods, places of worship, tolerances, even attitudes toward animals challenge each other: there is little middle ground and little room for compromise. In addition to historic animosities, the region echoes the general Asian challenges to the core's values, including issues such as human rights, economic practices, and terrorism. Also, India has an indigenous nuclear weapons capability, and Pakistan is suspected of receiving Chinese nuclear technology to assist in developing its own.

Indo-Pakistani Tension

Colonial India was fragmented among nearly 600 princely states and provinces, led by powerful Hindu or Muslim rulers. Perhaps 200 years' experience in India convinced the British of the need to separate Hindu from Muslim. On August 15, 1947, Great Britain granted independence to the Republics of India and Pakistan, and the Indo-Pakistani conflict was born. Pakistan was further divided into East and West Pakistan, separated by nearly 1,000 miles of northern India. The provinces could join either India or Pakistan, and their rulers were sent the draft Instrument of Accession upon which to affix their nation of choice. For the most part, states voted with their religious majority--Hindus to India and Muslims to Pakistan--but an estimated 12 million refugees fled across new borders, and nearly a million more are estimated to have died in associated hostilities. The artificial peace enforced by the British between Hindus and Muslims disintegrated with the demise of the Raj.

Kashmir, the largest of the princely states, was unique in that it was a cultural composite of Hindu and Muslims, contiguous to both India and Pakistan. The maharajah of Kashmir refused to sign the Instrument of Accession, though a full-scale attack by Pakistan within a month prompted a decision to join with India, as a precondition for military assistance. Pakistan did not accept the legality of the document and continued fighting. India referred the conflict to the newly formed United Nations in December 1947. In January 1949, India and Pakistan agreed to a cease-fire line along existing positions, a withdrawal of forces, and a Kashmiri plebiscite to make a final determination of its future. Fifty-one years, two more Indo-Pakistani conflicts (1965 and 1971), and thousands of casualties later, Kashmir is no nearer a solution than in 1947.

U.S. Interests

Encourage Regional States to Resolve Their Differences Peacefully

While the United States has no interest in mediating the Kashmir issue, India's desire to assume greater regional influence hinges upon an Indo-Pakistan political rapprochement. An impartial U.S. support for peaceful resolution will avoid alienating either state and may improve relations with both.

Contain WMD Proliferation

Both India and Pakistan are essentially members of the nuclear power club, but Pakistan is increasingly linked to the covert receipt (at least from China) of various components required to enhance its nuclear capability. While the United States recognizes the sovereign right of states to determine their defense needs, in the case of India and Pakistan there remains global concern that a future Kashmir conflict would involve tactical nuclear weapons, significantly lowering the threshold of nuclear use.

Promote a Climate of Regional Trust and Cooperation

Economic power and security have gained global importance as tools of policy in the post-Cold War environment, especially in the Indian Ocean region. Although India's United Front (UF) coalition government failed late in 1997, caretaker Prime Minister I.K. Gujral's "Gujral Doctrine" of peace and cooperation with India's neighbors--to include Pakistan--endured until early 1998, when new elections brought in a Bharatiya Janata

Party (BJP) government. Additionally, both India and Pakistan can make use of historical links and current economic ties to the Persian Gulf region to assist in enhancing stability within that key region.

Encourage Regional States to Embrace Core Values

The Indo-Pakistani dispute generates little interest within most of Asia but does detract from the regional image both countries wish to project. India has already realized tangible benefits from its Association of Southeast Asian Nations (ASEAN) and ASEAN Regional Forum (ARF) partnerships.

Trends

Peaceful Resolution of Differences Evolving Slowly

For India the Kashmir dispute remains a sufficiently threatening national security issue. It has eclipsed virtually all other defense-related concerns and has contributed to the growth of nationalistic political parties like India's Bharatiya Janata Party, and to rounds of fragile coalition building among political splinter groups. With the fading of the Nehru and Gandhi legacies, the dominating, unifying role played by the Congress (I) party has essentially disappeared. Nevertheless, India has moved proactively to ease tensions with Pakistan, to improve its relations with other regional neighbors, and to play a more active regional economic and strategic role.

WMD Proliferation Covertly Continuing

Weapons of mass destruction, particularly nuclear weapons, are making a comeback as traditional approaches to nonproliferation have an increasingly weaker effect on aspiring regional powers. While many factors influence a state's decision to pursue WMD capabilities, worst case assumptions concerning a rival state's activities or intentions all too often are the deciding factor. India's 1974 detonation of a nuclear device, for example, prompted Pakistan to develop a nuclear weapons program. Policymakers in both India and Pakistan have concluded that a nuclear weapons capability serves their national security and political interests. While India's nuclear development is indigenously supported, Pakistan's program has relied on foreign assistance, principally from China.

India Seeking Broader Role

India has turned its strategic interest from Pakistan to the South Asia region. It recently gained ARF membership and seeks to join in other regional security and economic fora. Owing to efforts by both New Delhi and Beijing, Indian relations with China are stable. India looks forward to closer economic ties and political parity, while maintaining subregional dominance.

Core Values Gradually Spreading

Over a third of the population of this region still lives in abject poverty. Over 40 percent (primarily women) cannot read or write. Famines and drought still ravage the population of the subcontinent. However, measurable advances are taking place, particularly in India, where the government is taking more responsibility for the human rights of its populace and taking steps to avert the major crises that affect the region. Furthermore, increased interest in expanding economic ties through membership in regional fora is an indicator that India and Pakistan are gradually accepting the globalization of markets and are at least willing to address economic and political reform to further integrate into the global economy.

Shaping Forces Available to the United States

Traditionally, the United States has considered South Asia a strategic backwater. Developing relations with the core poses a strategic dilemma for India: on the one hand, New Delhi is aware of the economic benefits of such ties, but it also recognizes the many strings attached, such as changes to nuclear weapons policy.

India is in the U.S. Pacific Command area of responsibility (AOR); Pakistan is in the U.S. Central Command AOR, which causes some problems of coordination of policy. Given the lack of strategic interests in the region, such shaping factors involving force projection, robustness, or lethality do not play a major role in relations with the Indian Ocean region. Diplomacy and increased military-to-military relations are the most likely venues for enhancing regional stability and encouraging local nations to join or improve relations with the core. These are long-range factors, depending on a gradual increase in confidence and simultaneous decrease in tensions. As defense strategies are developed over time without resorting to armed conflict, the heavy reliance on nuclear WMD as a policy will mature, preferably into a policy similar to that developed by the rest of the "nuclear club," most of which are in the core.

Model Establishment

The Indian armed forces have nearly a million troops and sufficient combat platforms to mount a credible defense of national interests. There have been combined exercises with the U.S. 7th Fleet over the past three years. Pakistan maintains a large land force of half a million troops,

with a primary mission to protect the long land border with India and the contested Siachen Glacier region. U.S. contacts with the Pakistani armed forces have dropped in recent years, with military sales nearly dried up after decades of heavy investment during the Afghanistan civil war.

Unlike Pakistan, India possesses the manpower, expertise, and raw materials to support a growing defense industry. To India's possible disadvantage, however, military leaders play no role in the formulation of defense policy, and for the most part, bureaucrats within India's Ministry of Defence know little about national security and defense issues. As a result, India has neither a national strategy planning process nor strategic defense doctrine. The United States provides a training environment for selected South Asia military students at senior professional military education institutions such as the National War College and the Industrial College of the Armed Forces. Additionally, India and Pakistan have asked U.S. military leaders to share knowledge gained through force structure and mission analyses such as the Quadrennial Defense Review to improve their own military planning strategies.

Strategic Assessment

Engaging Power for Peace

CHAPTER FOUR

Greater Middle East

The region from North Africa through the Levant to the Persian Gulf, including Afghanistan, Iran, and Turkey, has important similarities from the perspective of U.S. interests and the security challenges it faces.

From the perspective of U.S. global strategy, the basic characteristics of the Middle East are that it is an indispensable source of energy for the core states and that it has a concentration of rogue regimes, along with some failed states. The region is characterized by instability, including:

- Frequent major conventional wars, including three in the last 25 years--the October 1973 Arab-Israeli war, the Iran-Iraq war in 1980-88, and *Desert Shield/Desert Storm* in 1990-91
- Bitter civil wars in Afghanistan, southern Sudan, and the Kurdish regions of Iraq and Turkey
- Five of the world's seven terrorist-sponsoring states--Iran, Iraq, Libya, Sudan, and Syria
- Bloody nationalist and religious conflicts, as in Algeria and the Palestinian area

Armed conflicts will remain a danger in the Middle East for the foreseeable future. A heavy concentration of weapons--including weapons of mass destruction (WMD)--is located primarily in the Arab-Israeli theater and the Persian Gulf. While serious, Arab-Israeli tensions may be less likely to involve the United States than was the case during the Cold War, when the superpowers several times were toe-to-toe on behalf of their respective friends.

U.S. forces are heavily committed to the defense of energy-rich states from rogues. Energy shocks from the Middle East can shake the core states: twice in the last 25 years (in 1973 and 1979/80), wild oil price fluctuations cut annual Western economic output on the order of 2 percent (approximately \$400 billion). On the other hand, the stable oil prices of 1987-97 have contributed to taming inflation and reducing fears about resource shortages. Besides the obvious desire to avoid another oil price shock, the core states must be concerned about the uses to which a rogue regime might put windfall oil income, specifically, that it would be able to acquire advanced weaponry and a formidable WMD capability.

U.S. Interests

Securing Energy Needs

The core industrial democracies share a vital interest in ready access to ever-more energy supplies at stable and reasonable prices. The U.

S. goal for energy security is an environment in which energy is available from a variety of types and sources and in which market forces, rather than political factors, determine availability.

Such an environment offers the best prospect for market stability, because it minimizes the impact of disruption in any one supplier, both by providing alternative sources and allowing markets to quickly pass through price adjustments. An additional part of the U.S. energy security interest is ensuring that the other core states share the burdens of energy security.

Deterring Iran and Iraq

Both Iran and Iraq remain committed to revising the status quo in their favor, and the core states have an interest in preventing that from happening. Iran is a revolutionary regime, with an ideology that justifies meddling in other countries' affairs and destabilizing moderate Arab states (as in Bahrain) and disrupting the Middle East peace process. Iraq's ruler, Saddam Hussein, has invaded two of his neighbors (Iran in 1980 and Kuwait in 1990) and shows every indication he will try again.

Oil Prices
(Arabian Light/Dubai)

Source: British Petroleum, *Statistical Review of World Energy*, 1997

The Middle East faces a distinct threat of nuclear, biological, and chemical (NBC) weapons, as witnessed during the Iran-Iraq war. The United States has an interest in preventing their use, especially against allied or U.S. forces. While the U.S. goal is eventually to rid the region of WMD, the pace and modality may differ depending upon the weapon and the country. As far as country-specific targets go, there is a strong international consensus that Iraq's past aggression shows it cannot be trusted with WMD, and so a mandatory international inspection regime is required. On the other hand, nuclear weapons have proven a useful deterrent against states that would otherwise threaten Israel's right to exist.

Securing Arab-Israeli Peace

Besides Turkey, Israel is the only country in the region that can be considered to be fully part of the core, sharing values such as democracy as well as historic ties. The United States has a long-standing commitment to defending Israel's right to exist and has invested heavily in diplomacy to promote Middle East peace. The United States has, however, few interests in the shape of final Arab-Israeli accords except that they should be agreed to by all parties and should be sustainable.

The United States has developed close relations with several Arab states, especially Egypt, Jordan, Saudi Arabia, and the smaller Gulf Cooperation Council (GCC) countries. It wants these transition states to be fully integrated over time into the core democratic world and, to that end, has an interest in the political reform of moderate Middle East regimes. That includes such goals as deepening and broadening civil liberties, reinforcing the rule of law, encouraging civil society, and making government more transparent and accountable. However, that may not translate into early full parliamentary rule in every Middle Eastern country. Monarchic rule has become consistent with partial parliamentary power in Morocco, Jordan, and Kuwait; it has been a better system of government than what replaced it in Iran and Iraq.

Preventing State Failure

Prevention of state failure, such as has recently occurred in Afghanistan, is a U.S. interest, not least because the failure of a state such as Algeria could spill over into Europe, either into the NATO allies or into the former Soviet Union.

The most vibrant challenge to domestic tranquility in the region comes from radical Islamists, who claim a religious basis for their violent opposition to core interests. The United States thus has an interest in demonstrating that it can work with devout Muslims, as it does with the Saudi Government. The problem with radical Islamists is their violent political agenda, not their religion; friendship toward the United

Possible Routes for Oil

States can be fully consistent with devout Islamic belief and practice. At the same time, Washington thinks that other governments should follow its example in not distinguishing among citizens on religious grounds and not promoting or discouraging any religion.

Current Trends

Oil Generally Plentiful

The world oil market continues to have an ample supply and therefore relatively low prices. While prospects are good for sustained increases in oil output, the price of oil will also depend upon demand.

If demand continues to rise quickly, then the Middle East share in world oil output could continue its recent rise, from the historic low of 27 percent in 1986 to 32 percent in 1991 and then 35 percent in 1996. On the other hand, if demand grows more slowly, the technological revolution in oil production and the more welcoming attitude toward foreign investment elsewhere could lead non-Middle East output to grow enough to stabilize or reduce the Middle East's share. In either case, the pattern of world oil trade will continue to shift, with more Persian Gulf oil going to Asia while Europe and North America import oil from Africa and South America.

While the role of market forces in the oil and gas industry is increasing, one area where geopolitics remains primary is the Caspian basin. Azerbaijan, Kazakhstan, and Turkmenistan could have 5 percent of the world's oil

reserves and by 2008 might produce 5 million barrels per day (mbd), primarily from Azeri offshore fields in the Caspian Sea and the Kazakh Tengiz field northeast of the Caspian. Those three countries plus Uzbekistan have 5 percent of the world's gas reserves, with Turkmenistan having the largest reserves. U.S. firms are committed to billions of dollars in investment, primarily in the Azeri offshore and Kazakh Tengiz fields. The problem is how to get the oil and gas to market from the landlocked Caspian countries. Some pipelines are already under construction or renovation, including a 1.2 mbd oil pipeline from Kazakhstan via Russia to the Black Sea, two 0.1 mbd pipelines from Azerbaijan to the Black Sea (one via Russia and one via Georgia), and short gas pipelines to hook the Iranian gas network on one end to Turkmenistan and on the other end to Iran. While the Kazakh pipeline will carry most of that country's projected oil capacity, additional major pipelines will be needed for Azeri oil and Turkmen gas. All the projected routes have problems, which will make the choices difficult:

*Existing pipelines go via Russia. Adding more capacity to those pipelines raises fears of excessive dependence on Russia.

*Transport via Iran faces U.S. opposition and Azerbaijani suspicions of Iranian irredentism.

*Turkey is lobbying vigorously for pipelines across its territory to the Mediterranean. But the political geography is complicated: a pipeline from any of the producing countries would have to cross at least one transit country before getting to Turkey, plus the best pipeline routes inside Turkey cross unstable Kurdish areas.

*Other transport routes are equally difficult politically (to India via Afghanistan and Pakistan) or challenging economically (to China).

The Oil Supply

The world oil market continues to have ample supply and therefore relatively low prices. Despite an upward blip in 1996, crude oil prices in the mid-1990s have been about the same as in the mid 1980s, while the average price level for other goods rose about 30 percent over that decade. The cost of producing oil has been dropping, thanks to the reduced cost of drilling and to technology that has made possible a 40 or even 50 percent recovery instead of 30 percent in the past. As costs drop, more output is coming from less attractive oil fields, for example, deep offshore fields in Norway and the U.S. Gulf of Mexico. After years of decline, U.S. oil production is increasing. At the same time, more countries are welcoming foreign investment in the oil industry, with fewer protectionist restrictions. For example, because of foreign investment, Venezuela is on track to increase its oil output capacity from 3.5 to 6 mbd by 2002.

Middle East countries are also increasing their oil production capacity. Saudi Arabia has underway a program to raise its capacity from the current 9 to 14 mbd within the decade. The other GCC states--Kuwait, Bahrain, Qatar, the United Arab Emirates, and Oman--are increasing their capacity from 7 to at least 9 mbd. Were Iraq to abandon the stubborn opposition to UN resolutions, it could increase from the current 3 to 6 mbd within five years. Iran's plans to expand its capacity face serious financial constraints, not least among them U.S. threats of secondary boycotts against firms investing in Iranian oil and gas.

Responding to Iraq and Iran

The U.S. policy of dual containment has had only modest success. The policy has not always been well received by U.S. allies, particularly in Europe.

*Iraq. Saddam Hussein's hold on power seems secure. His ruthless security services make coup or assassination attempts extraordinarily difficult. The exile Iraqi opposition is divided and largely ineffective, despite political and clandestine financial support from the United States for two of the larger groupings. Three northern governates are controlled by two Kurdish parties, the Kurdish Democratic Party (KDP) of Massoud Barzani and the Patriotic Union of Kurdistan (PUK) of Jalal Talabani, which have been fighting each other intermittently since 1994.

Saddam Hussein's intentions are not entirely clear. There is strong reason to believe he wants to control Kuwait if the opportunity presents itself. As witnessed by the 1998 inspection crisis, his most troubling behavior is the refusal to cooperate fully with the UN Special Commission on Iraq (UNSCOM), which is responsible for ensuring Iraq does not produce WMD or ballistic missiles with a range over 150 km.

The UN Security Council has unanimously supported UNSCOM, though it has of late become more reticent to act. Since late 1995, it has not declared Iraqi violations to be material breaches of the ceasefire; in the past, following such declarations, the U.S. use or threat of force has resulted in Iraqi cooperation. Regional support is dropping too: the Gulf States were unenthusiastic or critical of U.S. limited air strikes and an extension of the southern no-fly zone from the 32 degrees north latitude to 33 degrees against Hussein after his September 1996 move into Kurdistan. While they want an end to the Hussein problem, regional states other than Kuwait seem to have become relaxed about the threat from Iraq.

*Iran. The regime in Tehran faces popular discontent and the indifference of the senior clergy, who have little to do with the minority of the clerics active in politics. But the Islamic Republic is unlikely to fall, in part because it adapts to domestic pressure, expressed through hotly contested elections fought between candidates carefully screened to ensure their loyalty to the revolution. However, socio-economic discontent may grow, as the baby boom after the 1979 revolution reaches the

Proposed oil routes
Proposed gas routes
Under construction

labor force at the same time as the country's oil exports fall. Iran is caught between growing domestic oil demand, fed by massive subsidies, and aging fields; its official forecast is that the country will cease exporting oil in 15 to 25 years. Foreign financing and technology could extend oil exports, but Iran has not offered particularly good terms to investors, and the United States has banned involvement of U.S. companies. Furthermore, under the 1996 Iran-Libya Sanctions Act, Washington has threatened secondary boycotts against foreign firms investing in Iranian oil and gas. While Iran has the world's second-largest gas reserves after Russia, the potential for finding markets in the next decade is rapidly shrinking.

There is a struggle underway for control of Iran's foreign policy, between the government of President Mohammad Khatemi and Ayatollah Ali Khamenei. On the one hand, Khamenei supports policies such as the *fatwa* calling for Salman Rushdie's murder and support for terrorism against Israel as crucial to the Islamic Republic's legitimacy as heir to Ayatollah Ruhollah Khomeini. Furthermore, Iran's claim to represent the world's radical Muslims can be seen as a powerful force-multiplier for Iran, providing it with access to places such as Bosnia in which it would otherwise never be a player, even though it has also tarnished Iran's image with

moderates and made it a pariah in some circles. On the other hand, Khatemi has made overtures which can be interpreted as an effort at rapprochement with the United States. Iran's overall orientation, however, remains anti-American for the moment.

The United States has had limited success in generating support for its campaign against Iran's behavior. Russia is building a nuclear power plant and continues arms deliveries; President Yeltsin's agreement not to enter into new arms contracts has had little practical effect, since so much remains undelivered under a 1989 agreement, which Iran had to stretch out as its finances deteriorated. China seems to regard arms sales to Iran as a useful retaliation for U.S. arms sales to Taiwan. European Union (EU) members and Japan enforce their bans on sales to Iran of arms and dual-use technology, but they reject U.S. arguments and pressure for economic isolation of Iran. After the verdict in the 1997 Mykonos murder case in Berlin, the EU suspended its critical dialogue with Iran, but the EU remains committed to encouraging Iranian moderates rather than the U.S. policy of sanctions. GCC states regard Iran as their main long-term security threat but want to maintain dialogue with it. In other words, the United States is losing the propaganda war about Iran. Washington is seen as the barrier to dialogue, though in fact Ayatollah Khamenei and the other senior clerics categorically refuse to talk to the U.S. Government. U.S. sanctions are seen as ineffective, though in fact Iran has been unable to attract the foreign financing it needs to remain an oil exporter over the long run.

Iraq as a Potential Threat

Iraq remains a potent military threat. Although degraded by the Gulf War and sanctions, Iraq's land force is larger than and qualitatively superior to all the GCC states combined or Iran. With an active ground force of over 350,000 (and a reserve of 650,000), over 2,000 battle tanks, and 4,500 armored vehicles, Iraq dwarfs the GCC, although the Saudi Royal Air Force with over 300 modern combat aircraft is more than a match for Iraq's 316 aging aircraft, of which as few as 80 may be serviceable. Iraq retains sufficient ground forces near Basra to break out and overrun Kuwait quickly, unless there is adequate warning to reinforce the standing forces there. Furthermore, Iraq has demonstrated the ability to load and move forces quickly over substantial distances.

Iran as a Potential Threat

Iran appears to be pursuing unconventional weapons. Its nuclear weapons program is apparently advancing slower than had been believed in the early 1990s. However, after years of little progress, its missile program is finally moving ahead. Iran has a substantial inventory of missiles that can reach GCC states, including 400 SCUDs and SS-8s. It is on track to develop domestic production of missiles in the next decade, quite possibly including missiles with the 1,000-km range needed to reach Israel.

As for conventional forces, Iran has focused on upgrading its naval and missile capabilities in the Gulf. Its assets include:

- * 3 Russian KILO-class submarines
- * 10 fast-attack craft with 4 C802 missiles each and 10 patrol boats being fitted with C802s
- * Shore-based antiship missiles: Some C-802s (95-km range), 100 C-801s (40-km range), and 100 H-42s (20-km range)
- * 2,000 modern mines
- * 51 Swedish Boghammer boats capable of harassing shipping
- * 3 frigates and 3 light frigates
- * 6 landing ships of more than 2,000 tons each.

Iran has 297 combat aircraft, of which about 175 are operational. Iranian military leaders have described Iran's strategy in the event of a U.S. attack as being to block shipping through the Strait of Hormuz. While it might seem irrational for Iran to impede shipping through a strait vital to itself, that is in fact exactly what it tried to do in the "tanker war" of 1987-88, during the Iran-Iraq war. Although Iran could not close the Strait, it could pose considerable danger to shipping that could affect world oil markets and the willingness of civilian ships to bring in supplies vital to U.S. forces.

Stalled Peace Process

Both Israelis and Palestinians have become dissatisfied with the basic bargain underlying the 1993 Oslo Declaration of Principles, namely, Palestinian self-rule in return for Palestinian suppression of terrorism. Palestinians expected Oslo to be the beginning of a process leading to a Palestinian state in Gaza and nearly all the West Bank, but that is not the intention of the government of Benjamin Netanyahu, who

became prime minister in June 1996. Instead, both sides engaged in behavior that enraged the other: the Netanyahu government permitted construction of new Jewish housing in East Jerusalem and in settlements on the West Bank, while Palestinian Authority (PA) police initially stood by or joined in deadly riots aimed at Israeli forces in September 1996.

In 1997, Palestinian anger over the peace process spilled over into reaction against the U.S. role. Much of the Palestinian mainstream came to see the United States more as a supporter of Israeli positions in the negotiations than as a neutral broker. The spillover of anger at the Netanyahu government into dissatisfaction with the United States became common in the Arab world. Open criticism of U.S. peace process policy became common even from moderate governments generally friendly to the United States. As Arab governments and public opinion coalesced in anger at the state of the peace process, the positions of moderate Arab governments and hardliners such as Syria became closer not only on the peace process but on foreign policy in general.

On several issues besides the peace process, 1997 saw increased disquiet with the positions advocated by the United States. Several Arab governments friendly to the United States (Egypt, the United Arab Emirates, and Qatar) called for reconsidering the sanctions on Iraq. Popular opinion in many Arab states indicates unhappiness with the impact on the Iraqi people of the UN sanctions, as well as with UN sanctions against three Arab countries (Iraq, Libya, and Sudan). Furthermore, owing largely to the credibility of American power, Arab public opinion has become less concerned about the threat of external aggression in the Persian Gulf, paradoxically eroding support for U.S. presence. There is a desire for a more vigorous Arab role, for less reliance on the West, and for a more unified stance among Arab states--in short, a revival of Arab nationalism.

Radical Islam

The great majority of Muslims reject radical Islamism, which is doing poorly in most of the Middle East. Some governments have effectively responded to the threat of violent Islamism, using a mixture of repression and accommodation, typically cracking down hard on the organized violent opposition, while absorbing parts of the social agenda and allowing an opposition that works within the existing system. Jordan has been particularly successful, thanks to the development of moderate, nonviolent Islamism and to economic growth that tempered criticism of social injustice. Economic growth in Egypt has also drained the recruiting pool for radical Islamism, while effective (if at times strong-armed) police work broke the back of the violent groups, though they can still mount isolated attacks like that which killed 45 foreign tourists in Luxor in November 1997.

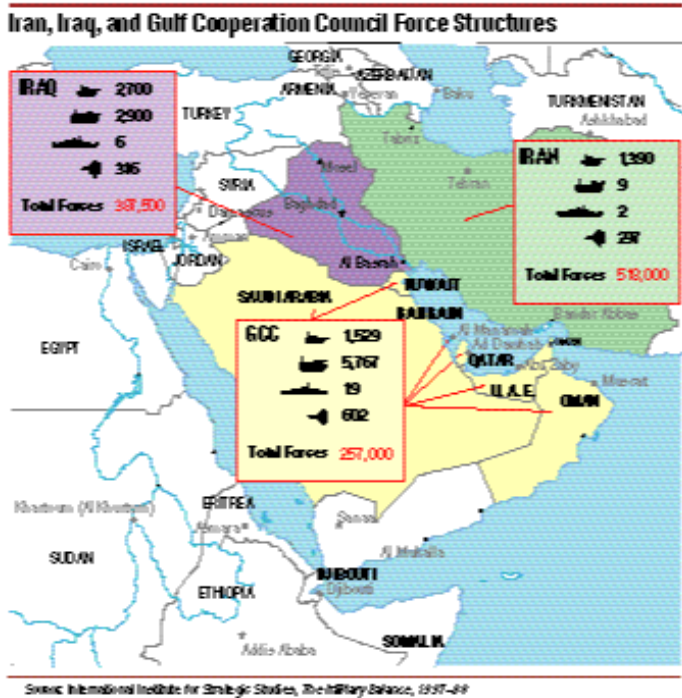

World Oil Production
(million barrels per day)

Source: British Petroleum, *Statistical Review of World Energy*, 1997

In Turkey, the Islamist Refah (Welfare) party became the lead governing party in June 1996. In order to hold together his coalition and to work with the military, Refah Prime Minister Necmettin Erbakan had to abandon an anti-Western stance, agreeing not only to remain in NATO but also to extend the allied monitoring of the northern Iraq no-fly zone, and even to deepen military cooperation with Israel. The Turkish military, which takes seriously its role as protector of the secular state founded by Ataturk in the 1920s, demanded that Erbakan stop or reverse policies seen as promoting Islam in government affairs. Faced with increasing military pressure and other political problems, enough members of the junior coalition partner defected to cause the Erbakan government to fall in June 1997. The overall effect of this experience was to show that Refah cannot change Turkish foreign policy and to harden non-Islamist opposition to Refah.

The revolutionary Iranian model has become increasingly less attractive to people throughout the Middle East. The May 1997 Iranian presidential election was won by the underdog candidate, Mohammad Khatemi, who soundly defeated the candidate widely seen as the official choice, with 20 million votes, accounting for 69 percent of those voting (33 percent of the population). Khatemi emphasized the need for the rule of law, implicitly criticizing revolutionary vigilantes, and for moderation in culture and lifestyle--such as allowing blue jeans for men and lipstick for women. It is not clear if the pressure for moderation extends to foreign policy as well.

In the Arabian Peninsula, religious fundamentalism is the main outlet for criticism of the rulers. The GCC monarchies face serious domestic problems of the sort that are certain to give rise to political discontent, including:

- Succession to a new generation of rulers (only Qatar has a young monarch)
- Providing suitable employment for the young adults raised in the era of the oil boom who expect high incomes without much work
- Trimming the generous welfare state to fit within the more limited revenues per capita as populations rise and oil incomes stagnate.

In some parts of the Middle East, violent Islamism remains an acute problem. In Algeria, 70,000 people were killed in 1992-97 in the confrontation between the government and the Islamist opposition. President Liamine Zeroual won a second term with 61 percent of the vote in the November 1995 presidential election, in which three-fourths of the electorate cast their ballots despite the Islamic Salvation Front (FIS) and Armed Islamic Group (GIA) call for a boycott. Violent attacks stepped up in early 1997 after the pro-government National Democratic Rally won 155 of 380 seats in the parliamentary elections.

The threat of violent Islamism remains high where there is a poor record of economic growth in the region. In the last decade, the Middle East (excluding Turkey and Pakistan) has had an economic track record almost as bad as that of sub-Saharan Africa. According to a 1995 World Bank study, the region is plagued by bad governance and inappropriate economic policies, which have led to \$350 billion in capital flight. Plus, it is overly dependent on oil: the Middle East's nonoil exports are smaller than Finland's. The most politically explosive problem is acute youth unemployment. While population growth rates are declining throughout the Middle East, past high fertility means that the working-age population will grow by 3 million a year, nearly doubling in the next 20 years. Those countries with the best economic performance--Jordan, Morocco, and Tunisia--are those that have the best governance and the most reliance on market forces. It is no accident that they are among the West's best friends in the area.

Shaping the Strategic Environment

A basic U.S. goal for the next decade is to demonstrate that it has the means and the will to make rogues pay dearly for their aggression. The United States will certainly have sufficient forces globally eventually to reverse aggression by any potential Middle East rogue intent on monopolizing control over Gulf oil and gas. However, the most desirable environment would be one in which rogue states realize they could not prevail even in the initial confrontation, for otherwise they may falsely expect to get away with a *fait accompli*. The problem will be ensuring that the United States has sufficient presence and capability to surge forces into the area. The United States also wants to reach consensus with its core partners, especially those in Europe, on how to respond to the challenges from rogue regimes, such as in Iraq and Iran.

The main military-related environment-shaping goal relating to Arab-Israeli peace is to create confidence on all sides that borders can be

secure after a peace treaty. This may involve some minimal use of foreign military units, similar to the Sinai Multilateral Force and Observers (MFO). But the key military instrument is the U.S. commitment to Israel's technological superiority, accomplished through technology transfer and military aid.

Preserving stability in the Persian Gulf is central to U.S. global strategy. For the first two decades after the British withdrawal from the Gulf in 1971, the United States tried to preserve stability without a direct role. Washington first tried supporting Iran's bid to be regional superpower, and then promoted a balance of power among the three major Gulf powers, Iran, Iraq, and Saudi Arabia. These strategies were unsuccessful, leaving the United States no apparent option but to assume a direct security role in the Gulf.

Potential Missile Threat Ranges

Note: Illustration assumes that Libya or Iran acquires North Korea-style Oryon-1 (1,000 km), TD-1 (2,000 km), or TD-2 (3,000 km) missiles

Deter Aggressors

The U.S. military has to be concerned about two major theater war (MTW) scenarios in the Gulf: a land attack by Iraq or a naval attack by Iran. The Gulf could also see small-scale contingencies (SSCs), such as subversion conducted by a foreign power (e.g., what Iran tried in Bahrain), but the U.S. military is less likely to be directly involved in such a conflict.

The principal means to avert a clash is to demonstrate U.S. will and ability to respond to aggression in the Gulf. It is unrealistic to expect the Gulf monarchies to be able to defend themselves, or that a multilateral force--say, from Arab states--will fulfill that role. The United States is well positioned to provide the forces needed to defeat aggression in the Gulf because of the key features of U.S. forces analyzed in earlier chapters, particularly:

- Power projection--forces designed to deploy quickly, lift to get them there, and logistics to sustain them
- Strike power into even the most hostile battlefields, with an abundant arsenal of accurate weapons
- Robust forces, imposing in quality and size.

The U.S. interest is to deter potential aggressors through a combination of presence and demonstrated ability and will to reinforce with larger forces from beyond the region. A particularly thorny issue is the presence required. The United States may be able to defend its interests in the Gulf with power projection and strike power to the point that little onshore permanent presence is needed. But a small and transient presence might be falsely interpreted as a lack of ability and will to defend the Gulf. At the same time, too prominent a presence could inflame nationalist or religious sensibilities. The Middle East has a history of such reactions to Western military presence. For instance, the creation of the Baghdad Pact in 1955 was one reason for the overthrow of the Iraqi monarchy, and the status-of-forces agreement with the United States was an important factor in the bloody rioting that shook Iran in 1963. The most important example was the Iranian Revolution, aggravated by the presence of 50,000 U.S. military contractors and trainers, as well as the popular Iranian perception that the Shah had become an American puppet. U.S. interests would be ill served were the presence in the GCC states to lead to

a similar reaction.

The demonstration of power projection and strike power convincing enough to deter but without a permanent presence so large as to destabilize requires innovative techniques rather than the large, permanent bases used in Europe and East Asia. Thus, the United States relies heavily on pre-positioned equipment to demonstrate its ability to surge into the area.

U.S. power projection is also accomplished through extensive use of rotated units. In Kuwait, there has been a near-continuous presence of a battalion, with frequent presence of a brigade, often engaged in live-fire exercises. Air Expeditionary Forces (AEF), which are deployments for some months of a squadron or more along with all support equipment and personnel, have been sent to Bahrain, Qatar, and Jordan. Along similar lines, intensive use has been made of commercial ports, including about 200 calls a year at the Jebel Ali port in the United Arab Emirates. Several thousand airmen have been based in Saudi Arabia since *Desert Storm*, but the United States has not constructed any permanent facilities, so as to demonstrate that its presence is strictly a function of the continuing threat from Saddam Hussein.

Promote Confidence

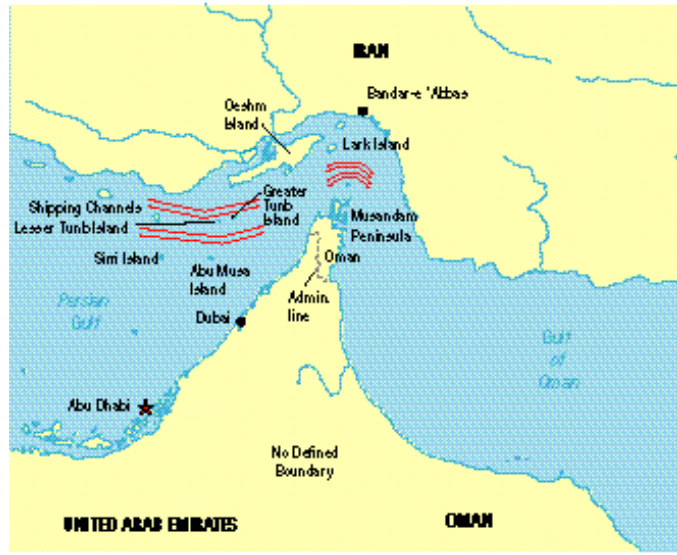

To reassure the core states about access to oil, the United States aims to sustain confidence in the free flow of oil through the Strait of Hormuz. It could be argued that this can be accomplished in a variety of environments. For instance, the United States has placed priority on preserving free use of the Strait of Hormuz. The Strait has taken on a symbolic importance for world oil markets that may exceed its actual economic role. Using the two pipelines across Saudi Arabia to the Red Sea (one built for Iraq) and chemicals that speed flow through pipelines, Gulf oil exports could quickly be at two-thirds their current level without use of the Strait. Nevertheless, the Strait of Hormuz remains important because of its role in commercial shipping of all kinds,

including the access to ports essential to surging men and materiel into the region during a crisis.

In the Persian Gulf, the United States faces the challenge of inspiring confidence simultaneously in two not entirely consistent aims: repelling aggression and treading lightly. GCC elites are worried about how lasting the U.S. commitment is, recalling that the British left in 1971 despite the fact that Gulf powers wanted them to stay. They are also concerned about the U.S. departure from Beirut in 1984 and Mogadishu in 1993 after taking casualties. At the same time, these same elites are worried that the United States may have too high a profile in the region. Cultural or religious conservatives, already concerned about what they see as the corrosive effect of American mass culture, worry about the impact of thousands of young Americans, including working women. Based on the historical experience of colonialism and special status for foreigners, local feeling is sensitive to perceived slights to local sovereignty, be it the need for overflight on short notice or for a status-of-forces agreement.

Strait of Hormuz

In the Levant, enhancing confidence means:

Note: Shipping lane boundaries are marked.

*Support for the peace process. In addition to the high-level diplomatic attention, support for the peace process includes aid. The \$2.1 billion a year in aid to Egypt since the late 1970s, including \$1.3 billion in military aid, has substantially increased acceptance of peace with Israel, by providing tangible evidence of a peace dividend. The \$3.0 billion a year in aid to Israel, including \$1.8 billion in military aid, is seen by the Israeli public as a barometer for American support for Israeli security.

*Maintaining Israel's qualitative edge over its Arab neighbors in military technologies. U.S. willingness to share technologies and to promote cooperation between Israeli and American defense industries has been more important than U.S. cash aid.

The more confident Israeli public opinion is about Israel's superiority over Arab militaries, the more likely Israelis are to take risks in the peace process, such as to withdraw from the Golan Heights or to reduce military presence in the Jordan Valley.

Improve Coalitions

For the Middle East, the main issue is inducing partners to complement U.S. forces. The friends whom the United States would call upon for defense of the Gulf can be arrayed in three tiers.

*The GCC states will not be able on their own to repel external aggression from either Iraq or Iran. However, if resources are used more effectively than now, their forces could make a distinct contribution to a joint effort with the United States. These forces could provide some of the first line of defense while U.S. forces arrive in number. If that first line does not hold, the U.S. forces in theater will be forced to trade space for time.

*Other regional states that could contribute include:

- Egypt, which could provide substantial forces as well as politically important support
- Syria, which has the forces and the proximity, but is not likely to agree to work closely with the United States; even during *Desert Storm* it maintained a distant relationship
- Turkey, which is geographically situated to make it useful as a bridge to the Gulf and potentially as a theater from which Iraq or Iran could be pressured in the event they engaged in aggression in the Gulf
- Israel, which possess the ability and will to help in a Gulf crisis, also faces political constraints that will strictly limit its role, probably to that of logistical support during a Gulf deployment. Israeli and U.S. forces have little operational experience together, which would limit their ability to function in a coalition.

*NATO states already make a small contribution to Gulf security, with French and British forces participating in Operation *Southern Watch* overflights of Iraq from Saudi bases. Given Europe's reliance on Gulf energy and its general ability to contribute to global security, many U.S. analysts are encouraging Europe to share more of the responsibility for Gulf

security, as well as to agree with the United States on a common approach to rogues. Common NATO procedures and training provide the basis for forming a coalition in a crisis. European militaries generally lack the power projection capability to deploy quickly to the Gulf, so they may be looking for U.S. assistance at precisely the moment when U.S.

Recent and Projected Oil Consumption (million barrels per day)

| | 1990 | 1995 | 2000 | 2005 | 2010 | 2015 |
|---------------------|------|------|------|------|------|-------|
| United States | 17.0 | 17.7 | 19.4 | 20.7 | 21.6 | 22.1 |
| Western Europe | 12.9 | 13.9 | 14.3 | 14.8 | 15.1 | 15.4 |

transport assets are stressed. At the very least, the United States would want ready use of European facilities, such as airports and ports, during a crisis.

Limit Potential Threats

The quandary for the United States is that by demonstrating its overwhelming ability and will to prevail in any conventional confrontation, it inadvertently pushes rogues to adopt asymmetric strategies. It is no coincidence that this region has most of the states of proliferation concern and most of the world's state sponsors of

terrorism. The problem for the United States is to find ways to make WMD and terrorism less attractive to rogues.

At the same time, the United States wants to encourage currently hostile states to change their basic security orientation. The principal defense instruments to this end are sanctions and the prospect of threat reduction measures.

*WMD dissuasion. The most important U.S. goal for shaping Iran and Iraq is to make acquisition of WMD and their delivery systems less possible, more risky, and less attractive. Regarding Iraqi WMD, the principal environment-shaping instrument is UNSCOM, which has established a monitoring program combining periodic inspections and on-site monitoring devices. The U.S. military supports UNSCOM with intelligence, and in 1992-95, America threatened or carried out military strikes against Iraq to force compliance with UNSCOM demands.

To slow down the development of Iranian WMD, the United States relies primarily on technology transfer limits. Iran has been uninterested in quid-pro-quo deals to alleviate Western concerns about its WMD. Iran has never seen its proliferation-troubling nuclear power plant at Bushehr as a bargaining chip for negotiations with the West. The United States has stated that regimes would suffer for use of WMD, though Washington has been ambiguous about how it would retaliate.

*Antiterrorism. To shape the environment and reduce the value of terrorism, the United States has implemented a wide array of initiatives to protect military forces in the Gulf. That, however, has left the problem of the vulnerability of American civilians, especially the 20,000 U.S. citizens in the Eastern Province of Saudi Arabia (the province in which the Khobar Towers bombing occurred). There is also a potential for terrorist attacks inside the United States, as was done at the World Trade Center in 1992.

It is unclear who has been behind recent terrorist episodes, such as the November 1995 bombing of the U.S. assistance team to the Saudi National Guard in Riyadh and the June 1996 bombing of the Khobar Towers housing facility used by the U.S. Air Force in Dhahran. The United States has particular problems responding to ambiguous sponsorship of terrorism. Washington wants broad international support for any retaliation, in order to accomplish the goal of isolating the perpetrator and persuading it that terrorism does not pay, but such support is likely only if the evidence is overwhelming. The United States has found it useful to approach terrorism as a criminal matter in order to gain cooperation from other governments that might not otherwise be available. But treating terrorism as a crime committed by individuals makes it difficult to take action against a sponsoring government, since the latter can always claim the terrorists acted without authorization.

*Sanctions. Sanctions have limited success in persuading regimes to change policy but have been more successful at

Distribution of Oil Reserves (1996) (billion barrels)

Source: British Petroleum, *Statistical Review of World Energy*, 1997

weakening the ability of targeted governments to carry out aggressive measures, such as reducing the resources Iran has available to purchase modern weapons. Despite the limited power of sanctions, they continue to be used against Middle East recalcitrants primarily because there are no obvious better nonmilitary measures and because there is strong domestic political support for such efforts.

*Case-specific sanctions. Syria is on the State Department list of terrorism-sponsoring nations, which by law means that the United States cannot provide aid and opposes loans from international organizations. As a result of government complicity with airplane hijackers in the 1980s, Lebanon and Afghanistan airlines are not permitted to fly to the United States. Because of the risk of kidnapping by terrorists, Lebanon

was subject to a U.S. travel ban from 1985 until July 1997.

The U.S. military will continue to enforce sanctions in the Middle East. The United States has been the main participant in the Multinational Interdiction Force (MIF) that monitors ship traffic in and out of Iraq. The U.S. Navy provides on average 10 ships dedicated full time to this mission.

In addition to sanctions, the United States has used aid to induce countries into cooperation. After Egyptian President Anwar Sadat agreed to a peace treaty with Israel in 1979, Egypt began receiving \$2.1 billion in aid annually. Similarly, after the Palestinian Liberation Organization and Israel reached agreement in 1993 on their Declaration of Principles, the United States sponsored a donors' conference at which \$2.5 billion in aid over five years was pledged for the Palestinian Authority. The political climate in the United States is less receptive to aid now, but there is more interest in potential economic cooperation measures, such as access to Western markets on preferential terms and policies to encourage private sector loans and investment. There is a prospect Syria could get some such economic rewards were it to make peace with Israel.

*Threat reduction. Considerable threat reduction has been achieved in the Arab-Israeli theater:

- As part of the Camp David treaty, Israel and Egypt agreed to a mutual withdrawal of forces, which is monitored by U.S.-supplied observers and by the Multinational Force in the Sinai, to which the United States contributes two brigades.
- After decades of effort, Syria abandoned the pursuit of strategic parity with Israel and decided to join the peace process when it realized that it could not terminate the existence of Israel.
- Since 1991, the United States has sponsored Arms Control and Regional Stability (ACRS) talks as part of the multilateral talks accompanying the Arab-Israeli peace process, but they have been stalled since 1994.

Arms Deliveries by Supplier (1993–96) millions (U.S. \$)

| Recipient Country | United States | Western Europe | Other |

Source: Congressional Research Service, *Conventional Arms Transfers to Developing Nations, 1989–96*

In the Gulf, the principal threat reduction means so far has been to deprive rogue regimes of money and technology, in the case of Iraq combined with no-fly and no-drive zones plus a rigorous WMD inspection regime. In the future, especially if Iran or a post-Saddam Iraq becomes less hostile to the West, other means, such as arms control, might be considered. Conceivably, the United States might gain an advantage from applying, in the Persian Gulf, arms-control techniques similar to those in the Conventional Forces in Europe (CFE) agreement (e.g., limits on the numbers of major military items, establishing limits on armaments in zones near borders, prior notification about military exercises, and observation of large exercises). The United States holds an important means to induce Iran and Iraq to agree to such CFE-like measures, namely, the offer to remove economic restrictions. For instance, the United States could support larger Iraqi oil sales in return for a permanent and monitored reduction in Iraqi forces in the zone near the Kuwaiti border.

Sanctions

The United States uses economic sanctions more often in the Middle East than anywhere else:

* Iraq. The sanctions imposed by the United Nations on Iraq in 1990 were among the most comprehensive ever put on a country both in the rigor with which they have been monitored and the breadth of items covered—everything except food and medicines. Concerned about the impact of the sanctions on ordinary Iraqis, the UN Security Council ever since August 1991 offered Iraq limited oil sales to finance humanitarian imports. In 1996, Iraq finally accepted the latest offer, made in Resolution 986, and humanitarian imports began in early 1997 at the rate of about \$2.6 billion a year, including several hundred million earmarked for the Kurdish-controlled north.

* Libya. For its refusal to hand over the suspects in the bombing of U.S. and French civilian airliners, Libya was made subject in 1992 to certain sanctions by the United Nations, including reductions in number of Libyan diplomats, a ban on airplane flights, and a ban on imports of specified equipment for petroleum production. The United States took a tougher stance than the United Nations by imposing a ban on trade in 1984. The United States has urged more extensive UN action, and in 1996 Congress authorized secondary boycotts of firms breaking the UN import restrictions or investing in Libyan oil and gas.

* Sudan. Because the Sudanese government harbors fugitives from a 1993 assassination attempt against Egyptian President Hosni Mubarak while visiting Ethiopia, the UN Security Council imposed restrictions on Sudanese diplomats.

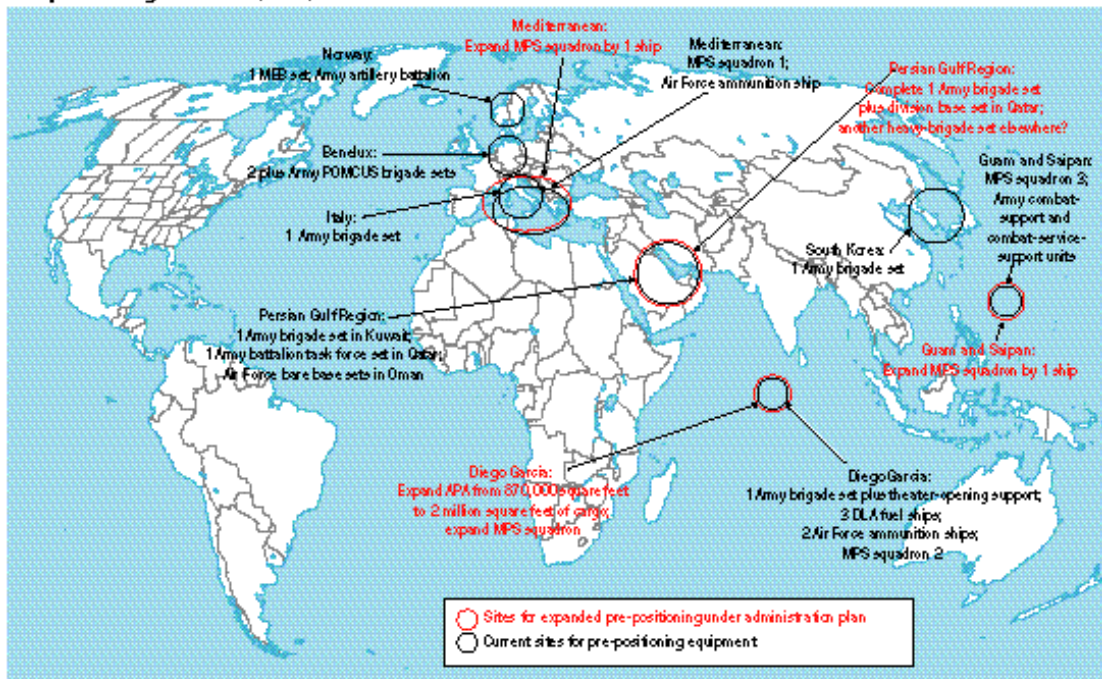

* Iran. The United States imposed a unilateral ban on trade with Iran in 1995. In 1996, the Iran-Libya Sanctions Act authorized a secondary boycott of foreign firms investing in Iran's oil and gas.

Promote Political-Military Reform

GCC states could make more efficient use of the resources they devote to their militaries. Much of the problem is attracting skilled, motivated manpower, which is not easy in countries with generous social welfare programs, acute shortages of technically trained workers, and a poor work ethic. The manpower problem is not made easier by the perception that, in the end, the defense of the GCC depends on U.S. forces. The United States encourages vigorous training programs and cooperates closely in exercises and military education, but it would be unrealistic to anticipate that the manpower problem is going to improve sharply soon.

Arms deliveries to GCC countries are running at about \$10 billion a year, much of which is not spent as well as it could be. The United States has limited leverage to influence the size and composition of arms purchases because GCC leaders are quite ready to buy elsewhere

Pre-positioning Site Plan (1997)

 Source: Congressional Budget Office, *Intervening U.S. Forces: Options for Strategic Mobility* 1997

if the United States does not sell. The United States does not always use the influence it has and is frequently in the position of urging a GCC government to buy American. GCC public opinion suspects that arms sales are designed primarily to reward friends like the United States and to provide a vehicle for corruption, rather than to make GCC militaries more effective.

The prospects are mixed that U.S. allies throughout the Middle East could work together:

- The GCC states are of mixed minds about cooperation, reflecting traditional rivalries and the smaller states' concerns about Saudi domination. Various plans for combined forces remain in limbo.
- Cooperation between Israel and Egypt has been difficult to achieve. Even military-to-military contact remains low.

Jordan and Israel, by contrast, have established professional contacts.

- In the context of the multilateral peace process talks, the United States has promoted some agreements and de facto cooperation (e.g., search and rescue at sea).
- The Israeli-Turkish military-to-military cooperation includes joint training and defense industrial joint ventures. Growing cooperation since the Israeli-Turkish defense agreement of November 1996 has unsettled Iran, Iraq, and Syria, suggesting to the first two that they could face Israeli forces and to the third that failure to make peace with its two neighbors could find Syria caught in a vise between them.

In countries where the military is responding to domestic disturbances, the United States can encourage militaries to respect human rights:

Qualities of U.S. Power Accentuated in the Greater Middle East

*The most important such situation for the United States is in Turkey, where the southeastern quarter of the country is under direct military rule in face of the Kurdish insurgency led by the PKK terrorist group.

*In other parts of the Middle East, the United States has less influence. For instance, it has few means to influence how the Algerian military responds to terrorism.

Conclusion

To accomplish the environment shaping strategies, the principal U.S. military activity in the Middle East will be to demonstrate the ability to project power into the region by bringing to bear robust forces and lethal strike power. The aim will be to deter aggression while, in line with the region's cultural and nationalist sensitivities, maintaining a presence with as small and unobtrusive a footprint as possible. The principal instruments will be a strong naval presence in the Gulf and nearby waters, extensive use of pre-positioning, and temporary deployment of units, sometimes on a continuing rotational basis. The level of presence will be continuously adjusted to meet the threat, always bearing in mind that the goal is to deter, not just respond to, a crisis. It is quite possible that the presence will at times be below the mid-1990s average of 25,000 personnel, either because the threat from Iran and Iraq is reduced or because those rogue states can be deterred with a smaller presence.

The U.S. military will also be involved in large-scale arms sales to the Middle East. Most of the sales will be to GCC states, which are determined to acquire weaponry they can afford. The U.S. aim will be to steer GCC acquisition to equipment that best meets their defense needs. Besides the sales to GCC states, the United States will also sell arms to Israel and Egypt, as continuation of the aid begun after the Camp David peace treaty and in light of the U.S. commitment to maintaining Israel's qualitative edge over Arab militaries.

Smaller scale activities by the U.S. military will include:

- Combined operation exercises with individual GCC states, with core states contributing to the defense of the Gulf, and with Levant states, as well as occasional multilateral exercises, e.g., United States-Israel-Turkey
- Traditional peacekeeping, principally the two brigades committed to the separation of forces in the Sinai
- Sanctions enforcement, such as the Multinational Interdiction Force operation underway against Iraq since 1990
- Possibly some small-scale contingency in the event of state failure or humanitarian disaster.

Strategic Assessment

Engaging Power for Peace

CHAPTER FIVE

Europe

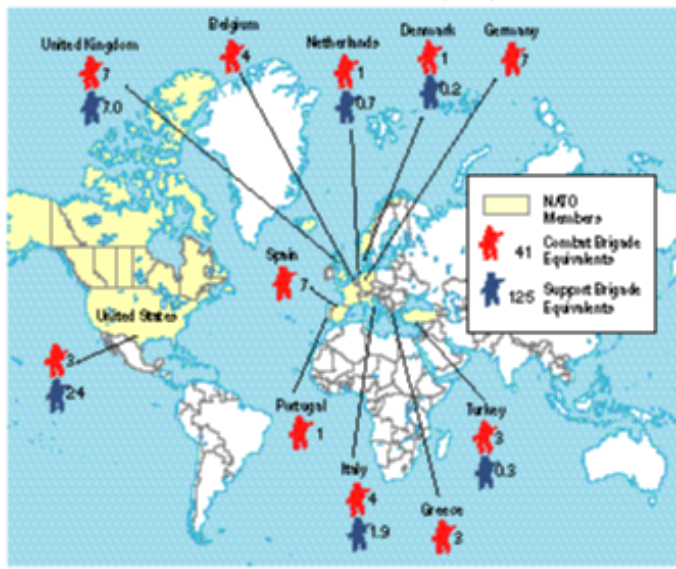

Two world wars and more than 40 years of the Cold War indicate that Europe was a dangerous place for most of this century. Today this region is the greatest success of U.S. security policy. With no major threat to its security, the continent enjoys a situation unprecedented since the Roman Empire. Except for the Southern Balkans--an important exception--peace and cooperation prevail. The North Atlantic Treaty Organization (NATO) is the foundation of this European peace, as well as of the integration of Europe under way since the mid-1950s. In July 1997, the Alliance opened itself to new members, inviting Poland, the Czech Republic, and Hungary to begin negotiations. This policy of NATO enlargement has allowed historical animosities in Central and Eastern Europe to be set aside. Political, economic, and military reforms have proceeded in the sometimes fragile transition to a post-Communist world with general success. A framework has begun to emerge under which Europeans will take increased responsibility for regional security and that could complement U.S. forces in military operations outside the continent.

U.S. Interests

The end of the Cold War increased sentiment at home favoring disengagement from overseas commitments. But the United States has a fundamental interest in consolidating security in Europe and in capitalizing on it to create security elsewhere, alongside European core partners. Europe in the 20th century tended toward competition and conflict, but with a U.S. force presence of just over 100,000 troops and the resultant credibility the United States has brought to European security, Washington has a tremendous opportunity to shape the environment in Europe as the next century opens. Through NATO and key relationships with other transatlantic and European institutions, the United States seeks to consolidate and expand a core of democratic and free-market states that can share the burdens of safeguarding common interests in Europe and beyond.

National Contributions to NATO Ground Forces (1996)

This core has already expanded beyond the traditional territorial boundaries of NATO and the European Union (EU, which includes formerly neutral countries); some emerging democracies of Central and Eastern Europe have fully entered the core--in particular, Poland, Hungary, and the Czech Republic. A number of states in transition are close to entering the core, including Slovenia, Romania, and the Baltic countries of Lithuania, Latvia, and Estonia.

Other states in Europe, such as Serbia and to a lesser extent Belarus, are potentially hostile to U.S. interests. No country there, however, has the will or capabilities to challenge the existing security order in the next decade. Instead, the challenge to stability there in the immediate future comes from the potential of failed states, such as Bosnia-Herzegovina and Albania, to require intervention, which could stretch the resources and political will of the United States and its allies and produce transatlantic fissures within NATO.

Developments in the two largest transition states, Ukraine and Russia, also will affect the overall security climate in Europe. Although implausible in the near term, a regime might emerge in Russia that could raise tensions in surrounding states and affect Central Europe; yet the prospect of renewed Russian hegemony over the region is nearly nonexistent. More likely, challenges to European security and stability will come from rogue states outside the region that could threaten U.S. and European interests, particularly in the Persian Gulf and the Mediterranean region.

Reshaping the Alliance

The primary U.S. interest in Europe is reshaping the transatlantic core of countries that share strategic interests and values into a strategic partnership capable of assuming wider international security responsibilities. Key NATO allies, and the capabilities and cooperative arrangements formed in the Alliance, provide the foundation of this partnership. The United States has an interest in ensuring that its core partners remain committed to the Alliance and that greater cooperation in European defense, including a European Security and Defense Identity (ESDI), remains under the NATO umbrella. In military terms, NATO's most obvious success has been the promotion of transparent national defense planning, integrated through the multilateral sharing of information. This cooperative effort, which has reduced the need of states to invest in costly national defense programs, is a key function of NATO and its Partnership for Peace Program.

Consolidating Reform

The core is not limited to members of NATO. Some Eastern European states have indicated their Western identity in terms of future membership in NATO. The United States shares interests with many different countries emerging into a post-communist national identity as well as with neutral states that have not sought membership in NATO. Defense reform to the east can continue to include countries shaping their policies in order to join the core, particularly Ukraine and the three Baltic democracies. Although none of these countries is likely to join NATO soon, ongoing bilateral and multilateral efforts will keep open institutions that enhance and stabilize reform. The Partnership for Peace and the effort to open NATO activities (especially NATO Charter Article 4) to partners are keys to larger U.S. goals.

Comparative Cost Estimates of NATO Enlargement billions (U.S. \$)

| Reinforcement Option ¹ | 1 Year | | | 12 Years |
|-----------------------------------|-----------|------------|-------------|--------------------|
| | U.S. | Other NATO | New Members | Total Cost |
| Clinton Administration (1997) | 150-200 | 950-1,300 | 1,250-1,420 | 27,000-25,000 |
| RAND Corporation | 420-1,400 | 520-1,500 | 867-1,423 | 20,000-82,000 |
| Congressional Budget Office | 1,028 | 3,500 | 3,992 | 110,900 |
| NATO Headquarters | - | - | - | 1,500 ² |

¹ Reinforcement Option: New members modernized their forces enough to defend themselves until reinforced by other NATO members.

² NATO estimates that common investment and infrastructure costs through 2010 will be 1.5 billion dollars, a figure which is supported by the Clinton administration.

Stabilizing Failed States

An important security challenge in Europe will be to stabilize states that face disintegration or civil conflict. Ensuring long-term stability in the Balkans will prevent the possible spillover of conflict into areas of vital interest to the United States, while maintaining international confidence in the institutions charged with preserving security in Europe and helping European partners take on more (but not all) the responsibility. In Europe, the problem of failed states, although limited, directly affects the interests of the core states.

Deterring Rogue States

Rogue states--those that do not conform to minimal international norms and standards of behavior--may pose a threat to U.S. and European interests, both on the continent and outside Europe. Iran, Iraq, Libya, and Syria may be considered rogue states. Inside Europe, Serbia, and to a lesser extent Belarus neither share nor aspire toward core values. At the end of 1997, the threat of intra-European conflict

appears highly unlikely, but maintaining a minimal insurance policy for collective defense of shared interests remains important. Creating the means to deter present and future rogues is a key premise of maintaining forward-deployed U.S. forces in Europe. Any rogue that threatens core interests outside Europe will face the prospect of an Atlantic coalition and therefore find it difficult, if not impossible, to play off Europe against the United States.

Current Trends

Intra-Alliance Relationships

In 1997, tensions developed in the transatlantic relationship that may have made it difficult for the United States to influence future actions of its allies. Failure to reach agreement on European command of Allied Forces South (AFSOUTH) caused France to freeze reintegration into the NATO military command structure.

Disputes between Spain and the United Kingdom over Gibraltar and between Spain and Portugal over surveillance of the waters near the Canary Islands, although minor, nevertheless complicated Spain's return to the NATO military command structure.

Some European allies resented the process by which the United States built consensus for the invitations to Poland, Hungary, and the Czech Republic to begin negotiations on NATO membership. To many European political leaders, the U.S. diplomacy appeared heavy handed. Specifically, some key allies preferred to strengthen the strategic foundation of NATO by including Romania and Slovenia in the first round. Fissures grew within the Alliance over costs associated with enlargement. Influential members of the U.S. Congress insisted that Europeans pay most of the costs, while European allies stated emphatically that they were in no position to fund the development of the power-projection capabilities required for successful defense of new members. French President Chirac said so publicly, and other European allies expressed similar sentiments.

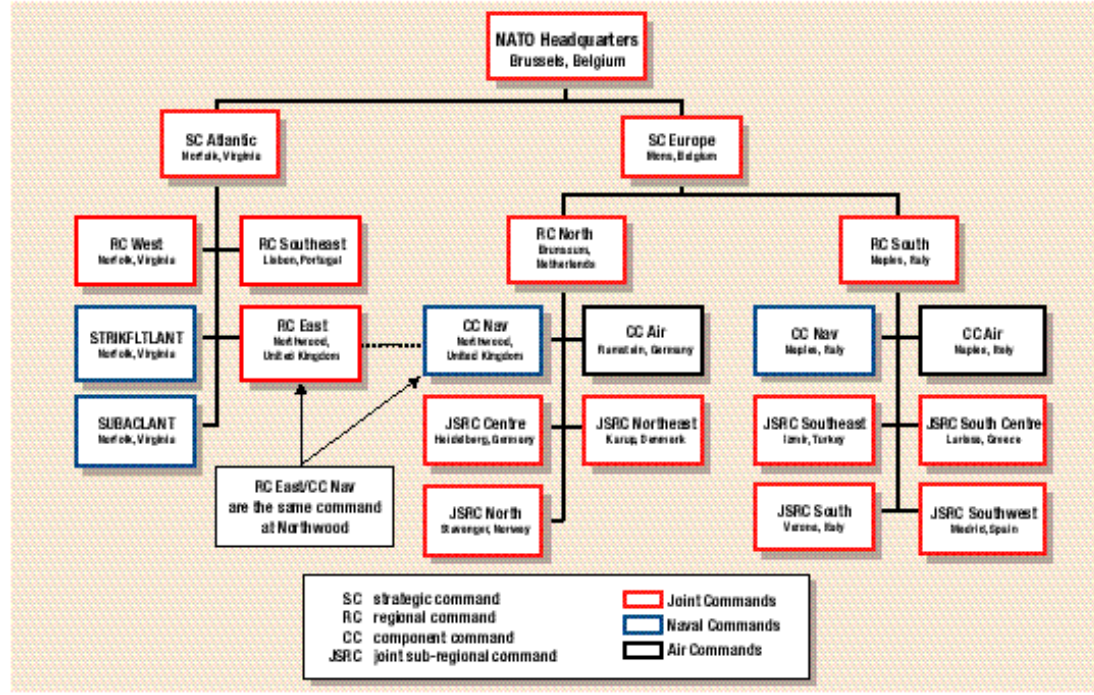

Equally important, European military capabilities have declined, creating a military imbalance within the Alliance that threatens to exacerbate transatlantic tensions. European defense spending has been directed toward maintaining a traditional force structure designed to defend the former NATO borders. European forces have taken significant measures in developing a "Euro-Force" but have not made much progress in developing an out-of-sector force projection capability. The trend is toward Europe's growing dependence on the United States for support in any intervention outside Europe.

Declining defense budgets in Europe, together with a continuing emphasis on territorial defense, yields a vicious circle. Unless these governments are able to formulate a contemporary purpose (e.g., power projection), there is insufficient public motivation in support of any defense spending. Reprogramming toward power projection is more difficult when budgets decline.

Without modernization of the military or investment in their defense industries, European allies will find it increasingly difficult to act in conjunction with the United States. With its rapidly evolving, high-technology modernization, particularly in command, control, and communication (C³), America has moved ahead, and as a result, its allies may not be able to communicate effectively with one another. The failure of Europe to keep pace with the U.S. progress in research and development may turn current and future allies into second-class citizens of NATO.

This gap in modernization can be adjusted by complementing the efforts of European nations. For example, the United States and Germany are creating an integrated air defense unit for mission deployments and to protect NATO's air space. To be known as the German-American Air Defense Unit, it will be equipped with Patriot, Hawk, and Roland missiles from both countries. Germany will provide up to 300 soldiers, and the United States will complement that number with two Patriot missile battalions and troops of a number yet to be specified. Command will be shared by officers from both countries and will rotate every three years, beginning in 1998, with the goal of being operational by the turn of the century.

New NATO Command Structure (December 1997)

Note: The formal titles of the commands are yet to be determined, pending a decision on MC/SEC4, "The NATO Military Command Structure." Each nation is depicted in only one region but may participate in multiple regions.

Source: Department of Defense and General Klaus-Naumann, "NATO's New Military Command Structure," *NATO Review* (Spring 1998)

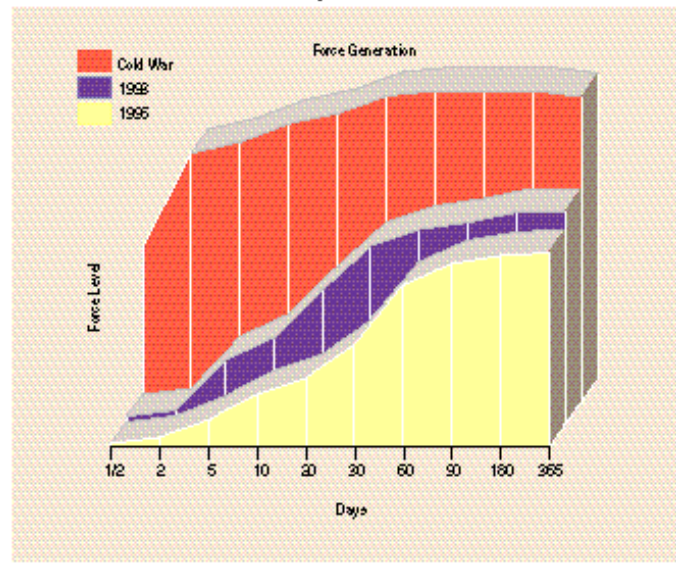

Another example of complementarity was the NATO exercise IVITEX '97, which included more than 25 ships from the United States, Greece, the Netherlands, Germany, Italy, France, and the United Kingdom. Its goal was to test communications links and establish common ground for communications of the naval forces. But the exercise, rather than providing solutions, demonstrated problems. For instance, commanders were forced to use the lowest common denominator in communications technology to ensure uninterrupted communication among the different navies.

The gap in modernization and overall force reductions impair NATO readiness. The Alliance can currently mobilize only a small percentage of its overall combat potential on short notice--a substantial decline since the end of the Cold War. The United States and its allies at this point are marching to different drummers: global power projection is animating U.S. but not European efforts, causing considerable divergence, which a common strategy with key partners, and with derived force goals, might help reduce.

This trend is liable to exacerbate transatlantic tensions within the core in the coming decade, as European economies struggle to meet their commitments to the European Monetary Union. Fiscal austerity will further strain defense budgets. European allies play a greater role in operations in Europe than the United States. Europeans provided two-thirds of the forces to IFOR and SFOR. The United States furnishes three combat brigade equivalents to NATO's Reaction Forces (Ground), while other allies contribute 38.

Current trends reinforce congressional concern that key allies are not prepared to share the burden of developing a power projection capability. Germany, with current defense spending in the area of 1.7 percent GDP, plans to cut defense spending by \$5 billion over four years. In the United Kingdom, the Labour government is conducting a defense review, looking at long-term strategy through the year 2015 to challenge assumptions about defense policy, and will probably address such unconventional threats as drug trafficking. Although British transatlantic policy probably will remain unchanged fundamentally, it may assume both a more European orientation and increasing reliance on U.S. power-projection capabilities. The 1997-2002 French defense plan will reduce procurement spending by 20 percent, and its equipment budget will suffer the greatest ongoing cuts in 1998, to meet EMU criteria.

Force Level and Readiness Comparison

Generally, Europe is falling behind the United States in technological capabilities. Despite early talk of an independent ESDI, the trend, as said above, is toward increased dependence on the force capabilities of the United States, particularly in the areas of strategic lift, logistical sustainability, and the gathering, processing, and dissemination of intelligence. The trend stems largely from the reluctance of European allies to invest in defense programs for power projection or from an inability to agree on the source of the necessary equipment. Similarly, the gap in technology reflects the divergence in R&D strategies of the United States and European defense establishments. If this gap continues, the United States may find itself so advanced in critical warfighting skills--for example, in command, control, communication, computers, and intelligence (C⁴I) operations--that it will not be able to function with core partners.

Although the United States has emphasized an increased role for Europeans in and out of Europe through the Combined Joint Task Forces (CJTF) concept, Europeans remain reluctant to act without U.S. leadership, as was illustrated by European insistence on either continuing U.S. engagement in Bosnia or withdrawal if the United States withdraws. In the other major crisis affecting stability in Europe--Albania--neither NATO nor the WEU was prepared to engage the belligerent parties directly and thereby forced a coalition of the willing to emerge without institutional support of either NATO or the WEU.

Transition, Reform, and Integration

The U.S. strategy of supporting NATO enlargement while building special partnerships with Russia and the Ukraine has contributed to consolidating reform in Central and Eastern Europe. Countries such as Romania, Bulgaria, and the former Yugoslav Republic of Macedonia have made substantial progress toward democracy and free-market reforms. The long-term picture in Russia remains

uncertain, but Moscow has held Russia's first democratic presidential election, and reform-oriented politicians now head the Yeltsin government. Indeed, although critics had warned that NATO enlargement could hinder reform in Moscow, reformers still hold all key positions in the Russian government.

In an effort to balance Russian concerns, keep Europe undivided, and encourage positive trends, in January 1994 NATO initiated the Partnership for Peace (PfP) program, developing specific principles for NATO enlargement. NATO leaders determined that new members would have to conform to basic principles of democracy, individual liberty, and the rule of law; demonstrate a commitment

to economic liberty and social justice; and adhere to the norms and principles of the Organization on Security and Cooperation in Europe (OSCE). Conditions for candidacy include effective democratic control of the military and some degree of military capability and interoperability. In addition to active participation in Partnership for Peace (PfP), new members would have to assume the financial obligations of joining and of developing necessary interoperability, including defense management reforms in transparent defense planning, resource allocation and budgeting, appropriate legislation, parliamentary and public accountability, and minimal standards in collective defense planning to pave the way for more detailed operational planning with the Alliance. Finally, new members should not

"close the door" to future candidate members. By creating such quantifiable standards, the United States and its allies sought to enhance stability in Central and Eastern Europe. Most of the countries that want to join NATO have made considerable progress toward meeting these goals.

Heads of state of member countries agreed at the Madrid Summit that Poland, Hungary, and the Czech Republic most closely met these goals. They also noted the positive developments towards democracy and the rule of law in a number of southeastern European countries, especially Romania and Slovenia, and agreed to review the enlargement process at the April 1999 summit in Washington. Special mention was given to the three Baltic countries for their important contributions to security in that region.

NATO enlargement continues a trend of adapting the Alliance to meet post-Cold War challenges. Where this trend may lead in the long term is unclear, though NATO may be moving away from its traditional mission of collective defense and toward a hybrid of cooperative security and more active involvement in regions outside its traditional area of operations.

NATO may evolve into a standing institution that facilitates military operations after a consensus has been reached among coalitions of the willing. Because it makes international cooperation easier to attain, the Alliance does not require an immediate threat to survive. Yet NATO is only one part of a broad, complementary institutional framework for European security.

One important element of the trend toward cooperative security is the Alliance's effort to expand contacts with Russia. During the negotiations with Russia following the decision to enlarge NATO, the United States and NATO agreed to establish a NATO-Russia Permanent Joint Council. Participants will consult and coordinate regularly and, where possible and appropriate, act jointly--as in the Bosnia-Herzegovina operations. In negotiating the Founding Act, NATO stated that for now and in the foreseeable security environment, the Alliance will carry out collective defense and other missions through interoperability, integration, and a capability for reinforcement, rather than increasing the existing permanent stationing of substantial combat forces on the territory of new members. Russia was granted a "voice but not a veto" in NATO decisionmaking processes. Significantly, the Alliance has no clear mechanism to determine when crises with Russia might prove sufficient to force an end to the relationship.

The immediate trend is toward enhancing a cooperative security environment that favors coalition building. For example, the IFOR and SFOR experiences in Bosnia have become models of multilateral security cooperation based on an inclusive strategy of using the military resources of the Western core and integrating transition countries into the Western system of multilateral military operations. The NATO model of cooperative security will probably continue to be important to the future of Europe and beyond, particularly if Russia plays a positive role. Other cooperative efforts include the newly created Euro-Atlantic Partnership Council (EAPC), which replaced the North

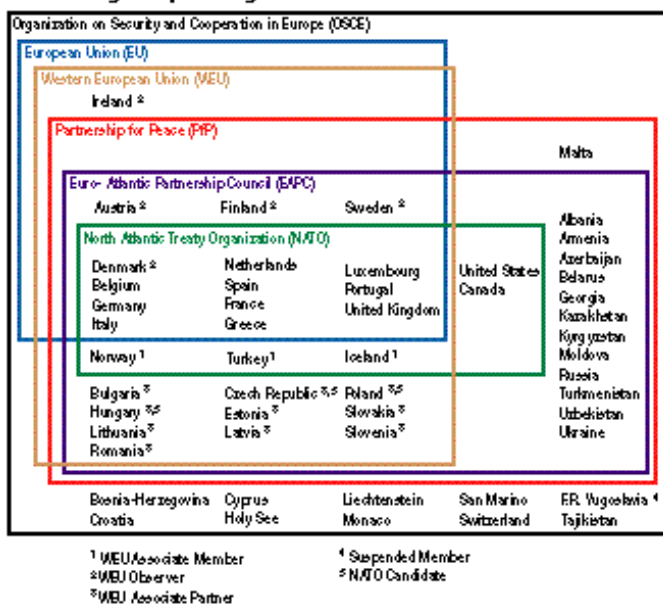

Atlantic Cooperation Council, and continued strengthening of the OSCE. Such initiatives contribute to a functioning arrangement of mutually reinforcing institutions, among which the United States plays a key role.

Stabilizing Failed States, Avoiding New Failures

Efforts to stabilize failed states have been mixed. In the Balkans, the trend has been toward stability without security. Peace in Bosnia-Herzegovina after the 1995 Dayton Accords is a peace without security, one that forced increased involvement of NATO states through the arrest of the primary indicted war criminals, beginning in mid-summer 1997. Whether a single Bosnia can exist remains an unsettled question. Peaceful reconciliation and renewed integration appear possible, but partition or a return to full-scale war cannot be ruled out.

In Albania, the other failed state, the outlook seems to hold greater promise, although further international attention is required. Operation *Alba* restored a basic sense of security there, following the collapse of political and economic structures in early 1997. After the operations ended, the United States and allies, complemented by the NATO PfP program, began to search for ways to rebuild the Albanian military along democratic lines, which may take years.

Interlocking European Organizations

Deterring Rogues

Rogue states on Europe's periphery pose potential threats to European interests as much as or more than to U.S. interests. Rogue states have been known to sponsor terrorism capable of striking Europe. They also seek access to weapons of mass destruction (WMD) and long-range delivery systems that ultimately could threaten Europe. If rogues gain control of the Persian Gulf or major oil fields in the region, they would have the means to blackmail if not directly threaten NATO allies. Within Europe, Serbia has become an outcast in the European system and might well harbor ambitions of obtaining chemical weapons, if not other WMD. Belarus, another outcast in the European system, openly espouses antidemocratic and anti-market principles and is capable of selling weapons and key materials for the manufacture of WMD to rogue states. Deterrence of rogue states is an important purpose of the U.S. presence in Europe.

Shaping the Strategic Environment

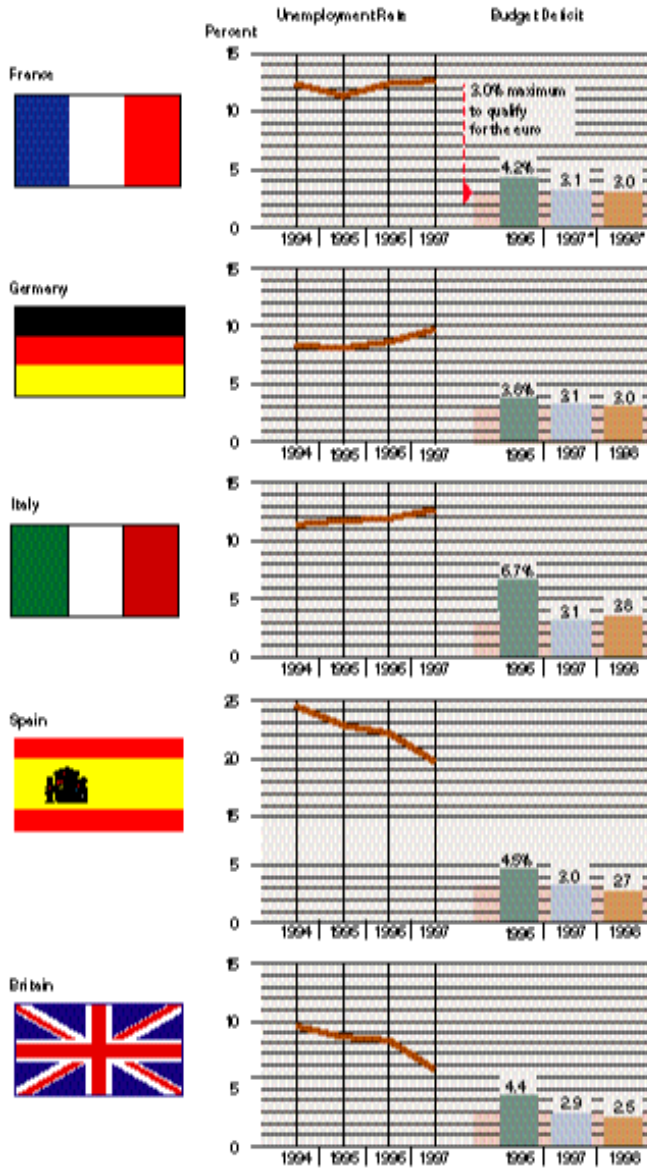

In Europe, the United States has an opportunity to shape the strategic environment to ensure stability well into the 21st century.

Avert Conflict

Enlarging NATO to include Poland, Hungary, and the Czech Republic is a fundamental element of a long-term preventative strategy to avert conflict in 21st century Europe. In the 20th century, two major wars were fought over security competition between Germany and Russia and the security vacuum that lay between them. A cautious and deliberate enlargement of NATO will virtually eliminate the

Toward European Monetary Union Criteria

Stubbornly high unemployment in many Western European countries has made it politically difficult for some governments to cut their budget deficits enough to meet the criteria for monetary union. Here is how the five leading European Union members are faring:

* Figures for 1997 and 1998 are forecasts

Source: Organization of European Cooperation and Development and Bloomberg Financial Markets

possibility of nationalization of armed forces in Europe and inhibit the interest of any country in seeking regional power. An enlarged NATO would help ensure that the United States need not again shed blood and expend resources in Europe and would inhibit the ambition of any state to pursue its aims through force.

Another goal of the United States in Europe is to manage and contain crises such as in the former Yugoslavia. Working closely with its allies, the United States helped implement the Dayton Peace Accords and served as a deterrent against the spread of fighting. Extension of the NATO mandate in Bosnia demonstrated American willingness to sustain the peace. In the longer run, the United States may continue to help shape the environment, however, by maintaining some involvement in the region through "over-the-horizon" forces which exercise on the territory of Bosnia-Herzegovina. As a result, it would complement efforts by its allies to deter conflict on the ground independent of a long-term commitment of U.S. forces. Attaining such a compromise between the United States and its allies would be of strategic significance, because the U.S. Senate may find it difficult to support conflict aversion strategies in Europe if America's allies are not seen as committed partners willing to exercise responsibility for security on the continent.

The United States will seek to use its force presence and diplomatic influence to avert conflict between two historic enemies, Greece and Turkey. In 1997, it took substantial steps complementary to those of NATO Secretary General Javier Solana to promote confidence and security-building mechanisms between these countries. The appointment of Special Envoy Richard Holbrooke sent a strong signal that the United States will use its resources to shape a lasting stability between them. Small steps, including U.S. provision of a secure communications systems at NATO Headquarters to link Ankara and Athens with the NATO Secretary General's office, provide enhanced confidence there that small misunderstandings will not lead to a major conflict.

Collec

self-defense (Article 5) issues are increasingly not the day-to-day activity of NATO, because there is no threat to any current or future member. Nonetheless, the credibility of the collective defense principle underpins the security of its current and future members. Thus, as NATO enlarges and its internal collective defense apparatus transforms, maintaining credible deterrence forces will be essential to make its commitment valid. The United States successfully convinced its NATO allies that, while new member states will not need large-scale infrastructure investment, it would be important not to negotiate away their infrastructure rights and obligations. These rights remain important in the unlikely event that a threat may require a rapid defense facilitated by such basic infrastructure needs as command and control, intelligence, and logistics for rapid deployment of forces in these new member states. Such infrastructure issues are central to credibility in the process of NATO's enlargement.

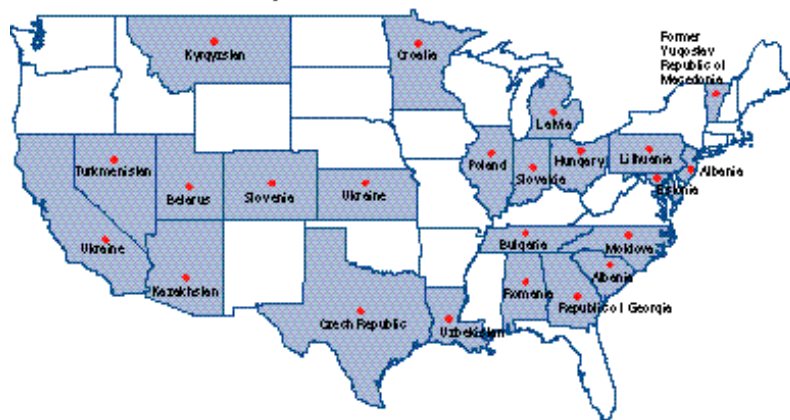

Although NATO cannot commit in advance to confront threats to members' common interests outside Europe (e.g., in North Africa or the Persian Gulf), the habits of cooperation, command and control, and joint exercises increase the likelihood that coalitions that include the United States and its European allies will be formed to meet such threats.

Enhance Confidence

NATO has a proven record in promoting reconciliation between adversaries. Institutionalization of transparent defense budgeting and force planning has contributed to confidence and security among European allies. Small members of NATO, such as the Netherlands, Belgium, Luxembourg, Denmark, and Norway, today feel secure in the shadow of their large German neighbor because of the defense-planning practices institutionalized in NATO. The U.S. nuclear umbrella in Europe also prevents European states--particularly Germany--from needing to develop independent nuclear capabilities.

NATO's greatest achievement since the end of the Second World War is the confidence, security, and stability that have developed in Western Europe. A major challenge at the opening of the 21st century is to expand the institutionalized zone of confidence, security, and stability to Europe's eastern half and to facilitate the region's return to Europe. NATO cannot do this alone. The European Union (EU), too, has facilitated common political and economic practices among its members, and it will continue to complement NATO in this endeavor. A further challenge to both will be to encourage key European partners to contribute more broadly to common security.

State-to-State Partnerships

Source: NATO Review 45, no. 3 (May-June 1997)

significantly in adapting and shaping the strategic environment in Europe. Together, the allies presented an ambitious proposal in February 1998, including the following key components:

*Equipment reductions: A call by the 16 current members for lower equipment entitlements in the CFE area and a specific commitment to total ground-equipment entitlements under an adapted treaty that will be "significantly less" than members of the Alliance are allowed under the 1996 treaty. Such reductions in standing forces, accompanied by restructuring NATO forces to make them more mobile, deployable, and operationally capable, are consistent with CFE commitments.

*New treaty structure: NATO's proposal established a system of national equipment ceilings to replace the CFE's structure of bloc limits. It also replaced the treaty's regime of zonal limits with nationally based territorial ceilings, which constrain the amount of ground equipment on the territory of any one CFE state. The new structure would preserve the existing regime of constraints covering the treaty's "flank" region.

*Prevention of destabilizing concentrations of forces: The proposal included a measure to ensure that under an adapted treaty--even in the context of NATO's enlargement--no increase in ground equipment would be permitted on the territory of states at the geographic center of Europe (Belarus, the Czech Republic, Hungary, Poland, Slovakia, Ukraine outside the flank, and the Kaliningrad Oblast of the Russian Federation).

CFE Treaty

| | Tanks | Artillery | Armored Combat Vehicles |
|---------------------|-------|-----------|-------------------------|
| Original Fank Limit | 1,900 | 2,400 | 3,700 |
| Permitted to 1999 | 1,937 | 2,422 | 4,397 |
| New Fank Limit | 1,280 | 1,680 | 1,380 |

Note: Changes in the treaty limits of items in fank zones.

*Responsiveness to new security challenges: CFE states retain flexibility to conduct cooperative military exercises, participate in peacekeeping operations, and deploy forces temporarily in emergency situations. These activities would be subject to consultation with other CFE states.

The result of the CFE adaptation negotiations should be to transfer limits on the number of heavy weapons that countries could hold in Europe from "groups of states parties"--meaning NATO (and the former Warsaw Pact)--to individual states. In this way the security of all treaty parties will be protected, and in response, NATO flexibility or defense planning will not be undermined. The CFE Treaty thus continues to be central to security within Europe.

Since the inception of Partnership for Peace in January 1994, NATO has reoriented its outreach programs and developed new institutions to manage the program. Despite initial reservations of many Central and East European states, which had hoped for an early decision on enlargement, PfP has become a very popular and successful program. Open to all members of OSCE, in just four years PfP has been adopted by 27 widely diverse countries, including the former Soviet Union and Yugoslavia, non-Soviet Warsaw Pact states, and neutrals.

The political principles reflected in PfP are drawn from the Washington Treaty of April 4, 1949. NATO began to apply these principles through the PfP program. Former Secretary of Defense William Perry's "five principles" emphasized democracy, free market economies, good relations with neighbors, democratic control of the military, and the establishment of a military compatible with the standing forces of NATO as a prerequisite for joining the program.

To enhance confidence, these principles have been building blocks for developing security in Central Europe. As in the Franco-German reconciliation, historic reconciliations are occurring between Germany and both Poland and the Czech Republic and between Slovenia and Italy, all of them established by treaties that recognize borders as well as by combined military activities and cooperation. Similarly, Poland has expanded the zone of confidence building and cooperation to Lithuania and Ukraine.

A few other examples nurtured by PfP and NATO enlargement include the basic treaties between Hungary and Slovakia and among Romania, Hungary, and Ukraine. Such treaties not only recognize existing borders, but also establish standards for the governance of ethnic minorities. All these agreements enhance confidence within the region.

Promote Defense Reform

Building on enhanced confidence, NATO has encouraged military cooperation and reform not only at the Partnership Coordination Cell (PCC) at SHAPE headquarters in Mons, Belgium, but through the Planning and Review Process (PARP) at NATO headquarters in Brussels. In January 1994, the PCC initially coordinated military planning and activities for partners in order to develop both NATO-compatible procedures and interoperability for combined peacekeeping, search and rescue, and humanitarian assistance operations. To prepare partners to deploy the Implementation Force in Bosnia, in December 1995 NATO expanded the terms of reference to include "peace enforcement measures." Again in 1997, military cooperation was broadened to include general defense planning.

PARP is an effort to provide transparency in defense planning, much as the Defense Planning Questionnaire does among NATO members. Since 1994, it has formed the institutional basis for developing real confidence in Europe's eastern half.

In addition, the United States, through outreach to Central and Eastern Europe, has undertaken substantial assistance programs to ensure that NATO's objectives are successful. In 1997, the Foreign Military Financing program was increased for the first time in 13 years, to include:

- A \$60 million grant for PfP countries, \$30 million of which will go to Poland, Hungary, and the Czech Republic
- \$242.5 million for the Central European Defense Loans (CEDL), to be repaid at U.S. Treasury loan rates
- \$120 million for the Warsaw Initiative Program
- \$12 million for International Military Education and Training (IMET).

Complement Friends

The United States continues to complement its allies' infrastructure and interoperability within the NATO command structure. The most important element of this effort is the strong U.S. support for the evolution of a European Security and Defense Identity (ESDI) within NATO. At first, the United States was reluctant to endorse proposals for an ESDI based on the EU, but declining resources and force commitment in Europe (reduced to just over 100,000 U.S. troops) have given the United States cause to reassess, particularly since NATO has replaced the EU as the cornerstone for the initiative. The Berlin Accords of 1996 paved the way for the development of an ESDI within the NATO context, and they embodied the concept of a separable but not separate ESDI from the Alliance.

As the ESDI develops, it will have increasing impact on NATO-wide standards that incorporate the most effective and efficient technological advances in order to deter and meet various levels of challenges to security within and outside Europe. Enhancements to interoperability and infrastructure--areas currently neglected--will be essential to the complementarity of military equipment within

NATO for present and new members alike. To date, however, the existing situation has not translated into either a political willingness or a military capability to put theory into action to solve contemporary crises. A primary lesson learned from Bosnia is that although NATO adapted considerably as an alliance, it functioned in a crisis only when led by the United States. European capacity to handle low- to mid-level crises (with significant assistance from the United States) will be essential to a politically sustainable transatlantic relationship into the 21st century.

Shape Potentially Hostile Actors

Because current and future threats to Europe come from outside rather than from within the continent, credible efforts are needed to signal potentially hostile states that the United States cannot be separated from its core allies--even when immediate policies may appear to diverge. The primary deterrence mechanism will be to establish a clearly defined transatlantic bargain in which the United States and its allies signal shared responsibility for responding to global challenges. During the Cold War, Soviet strategy sought to divide the United States and its allies in the European theater as a political means of weakening the NATO alliance. Such a strategy may appeal to states that cannot threaten Europe hegemonically but might nonetheless have an interest in dividing the West as a means of attaining national interregional objectives. For example, Iran might seek to play allies off one another as a way to limit any international response to its growing regional influence in the Middle East. A potentially hostile China might pursue similar strategies.

Military steps can be taken to send a message to hostile countries that asymmetric challenges to the core carry risks and, if pushed too far, could backfire. Successful internal transformation of NATO is key to transparent defense planning and preparation for potential asymmetric challenges such as hostage taking or proliferation of weapons. Using allied military planning to shape the strategic environment beyond Europe, however, will mean a new strategic doctrine within the Alliance to provide clear political guidelines for military planning to meet asymmetric threats to the Alliance. Identification of a number of potential threats, along with combined training to respond to them in a transparent manner within the Alliance, will send any potentially hostile country a strong message of deterrence. At the same time, these efforts will give NATO a clear military sense of purpose in the absence of an immediate standing military threat, such as existed in the Cold War.

Qualities of U.S. Power Accentuated in Europe

Conclusion

Since the end of the Cold War, the U.S. military presence in Europe has been dramatically reduced. The overall number of U.S. troops stationed there has fallen from 320,000 to about 100,000 and will stay at that level for the foreseeable future. In addition, 90 percent of the nuclear weapons under NATO control have been withdrawn from the theater. The level of U.S. forces in Europe during 1997 was 109,000 (excluding naval and marine forces stationed in nearby seas), the lowest level that the Department of Defense has determined is sufficient both to respond to a plausible crisis and to provide tangible evidence of U.S. commitment to preserving regional stability. This level permits active participation in multinational training events while minimizing the likelihood of *needing to deploy* additional forces from the United States in early stages of an emerging regional crisis.

Maintaining a sufficient level of U.S. forces in Europe is essential to responding to contingencies on and around the continent, as well as in Africa and the Middle East, and to securing U.S. influence in Europe. Command familiarity, training, and interoperability between NATO forces and the U.S. European Command enhance the effectiveness and plausibility of future multinational coalitions. Without a full spectrum of U.S. forces operating in Europe, Washington would have to discard the goal of more effectively shared contributions from key partners.

Despite the overall reduction of ground forces in Europe, remaining units are very active. European-based formations provided the bulk of U.S. ground forces for the NATO peacekeeping mission in Bosnia and Herzegovina and for operations in Africa and the Middle East. The U.S. European Command is forging links with partner-country militaries through the PfP and other bilateral programs.

As the United States continues to adapt its force structure to address multiple challenges, the key question is no longer how many troops are needed in Europe but, rather, what are they doing? For example, if the primary security challenges are viewed as coming from the south, the disproportionate number of U.S. forces stationed in Germany may be called into question. Alternatively, the role of German armed forces may expand to include further deployments outside German territory. In that environment, Americans working alongside and supporting German forces w>

Transfer interrupted!

y come with such activity. In the future, the role of U.S. forces in regional operations in Europe may be both larger and more complementary to allied forces.

Former Secretary of Defense William Perry's Five Principles for Prospective NATO Members:

- *Commitment to democratic government and rule of law
- *Commitment to a free-market economy
- *Establishment of effective civil control of the military
- *Development of good regional relations
- *Establishment of minimal standards of interoperability with NATO forces

1998 Strategic Assessment

Engaging Power for Peace

CHAPTER SIX

The New Independent States

The overarching U.S. goal in the New Independent States (NIS) is to assure the successful transition of these states toward open-market democracies. Although U.S. interests in this region are less vital than they were 10 years ago, Russia, Ukraine, and the other Soviet successor states remain of great strategic importance. If their transition occurs as the United States hopes, a vast region of great economic and geopolitical potential will join the community of core states in promoting shared goals, values, and objectives. If, however, it does not, the resultant instability could give rise to new threats that will distract the core states and impinge on their health and security. Since the demise of the Soviet Union, the United States and its allies have therefore

made major diplomatic efforts and expended significant resources in the region.

U.S. Interests

The U.S. long-term interest in the NIS is in their development from transition to core states, rather than a decline to rogue or failed states. By 2008, Russia is not likely to have emerged as a peer competitor to the United States. If transition falters during this time, however, one or more of the NIS may concentrate its limited resources and energies on rogue activities. If transition fails, one or more of these states may become sufficiently unstable to cause multiple unpredictable security problems.

In considering U.S. interests, and therefore strategy toward the NIS, Russia and Ukraine clearly represent the most important challenges. They share many attributes: they have come furthest on the path toward reform, each has a complex history in relation to the other, and both present important security concerns for the United States. Much of this chapter therefore focuses on issues especially relevant to Russia and Ukraine.

The second group consists of the Caucasus and the energy-rich Central Asian states, which also have many common characteristics, complicated and intertwined histories, and shared security issues. Although core states' interests in this group are not now vital, the importance of these interests will grow as these states develop their energy resources. Countries as diverse as China, Iran, Turkey, Russia, and the United States have invested in the region, becoming involved in complex relationships, based on both competition and cooperation, whose key dimensions and dynamics will become apparent in the next decade.

Belarus also could pose a security challenge. Political and economic trends there have been a tremendous disappointment. Belarus verges on failing and has the ability to export instability beyond its borders to the Baltic States, Poland, Ukraine, and Russia. There is little reason to believe that Belarus has achieved a sustainable equilibrium and many reasons to believe that in the next decade it will face serious political and economic stresses affecting both its stability and the interests of the core.

Control and Reduce Weapons

Since the collapse of the Soviet Union, the primary security threat has been and remains the control and reduction of weapons of mass destruction (WMD). Progress toward resolution of this problem has been significant, although there is still much to be done. Remaining

issues include the following:

- Ratification of Strategic Arms Reduction Treaty (START II) by Russia
- Shifting to START III
- Compliance and transparency of the Chemical Weapons Convention (CWC)
- Compliance and transparency of the Biological Weapons Convention (BWC).

Develop Stability

Internal stability in the New Independent States has direct ramifications for the security interests of the core states. It would imply a successful transition to open-market democracies, that is, the expansion of core states. Instability in the new independent states would raise the possibility of numerous security problems, from proliferation to armed conflict. In the worst case, strategic nuclear weapons may again become tools of diplomacy.

Given its size and arsenal of WMD, Russia's stability is obviously important. The stability of Ukraine is also critical, but for reasons less straightforward. Ukraine's geographic, cultural, and economic proximity to Central Europe makes it the "keystone" of the arch between Europe and Eurasia as well as an important link between the core states in Europe and the Soviet successor states. Further, Ukraine may prove an important center of political and economic gravity independent of Russia and, with a successful transition, may influence events and export stability and reform to smaller states in the region.

Finally, regional stability implies respect for sovereignty and boundaries, with no state pursuing its perceived interests by threatening another.

Promote Integration

Integration into the political, economic, and security systems espoused by the core states serves two broad purposes. Domestically, integration with the West promotes stability by supporting the development of efficient markets and reliable social and political institutions. Internationally, it encourages transparency on a variety of bilateral and multilateral issues, including security. In the long term, integration with the West helps redefine existing interests and reveals new ones shared with the core states. Among these are proliferation, human rights, and the sovereignty of neighboring states. In essence, integration encourages the development of transition states into core states.

Create New Markets

Given the potential size of the economic space the NIS represent, their existing energy and raw materials reserves, and their potential manufacturing and financial power, those new markets will be increasingly important to core states. Secure and dependable access to energy resources in the region will further promote stability and foster cooperation with the core states in the long run.

Secretary William Cohen in Kiev, Ukraine

Current Trends

The situation in and among the New Independent States is complex and dynamic. Change is the only constant. Discerning the medium-term outlook is difficult, but several trends are already identifiable.

Reduction of WMD

Although there are forces impeding arms control efforts in Russia, they are outweighed by the momentum generated by recent arms control achievements. Since the collapse of the Soviet Union, Russia and the United States have collaborated to make Kazakhstan, Ukraine, and Belarus free of nuclear weapons. The START I treaty has entered into force, and its implementation is ahead of schedule. Russian and U.S. strategic weapons have been detargeted. The Nuclear Non-Proliferation Treaty (NPT) was extended indefinitely in May 1995, and the Comprehensive Test Ban Treaty was signed by both countries in September 1996. In September 1997, Vice President Al Gore negotiated an agreement with Russia to convert its last three plutonium-producing plants to facilities that generate uranium for civilian uses.

The most important next step in arms control is START II. If implemented, START II will define the basic parameters of arms control efforts for the next 10 years. In January 1996, the U.S. Senate ratified the treaty, but ratification in the Russian Duma has been stalled owing to concerns about the military and economic ramifications of implementation. To address these concerns, in September 1997, the United States and Russia reached important agreements on refining the ABM Treaty, theater missile defense, and issues concerning implementation of START II. They also outlined ways to begin negotiations on START III. Russian President Boris Yeltsin committed his government to working with the Duma to achieve ratification, but the outcome remains far from certain. How the United States would respond to either further Russian delay in ratification or a failure to ratify could be an important issue in the near term.

Russian opponents to START II focus on the following arguments. First, START II hits at Russia's only remaining strength, its land-based ICBMs. It bans all land-based ICBMs with multiple, independently targeted reentry vehicles (MIRVs), the backbone of Russia's strategic arsenal. The United States, in contrast, has many more submarine-based missiles, which are not banned by the treaty. Fully implemented, START II would leave Russia with approximately 3,000 warheads deployed. The United States would have approximately 3,500. More important to the Russians is the fact that because of technical considerations and the terms of the treaty, the United States might be able to upload and breakout of the treaty limits much faster than Russia. Finally, many in the Duma feel that the Russian government has not done enough to factor the impact of START II reductions into its overall defense and force structure planning. The Duma will need strong evidence from the government that it has adequately dealt with these issues.

A second important Russian argument is based on a disagreement about the economics of the treaty. Many Duma members focus on the short-run costs of implementing the treaty rather than the longer term advantage that START II saves both sides money. One of the agreements reached between Presidents Clinton and Yeltsin in September 1997 was to extend the implementation period of the treaty from 2003 to 2007 to lower the average annual cost of implementation, although the total cost, of course, increases.

Although far from certain, a two-phase approach to these problems is likely to evolve over the next 10 years. First, eventual Duma ratification of START II is likely, though it may be delayed. The political pressure on the Duma from the Russian government and from the core states will be tremendous. The economic pressure will also become increasingly clear as more and more Russians come to understand that implementing START II makes economic sense. Moreover, from a strategic perspective, the reasons for ratification are also compelling. Many of Russia's SS-18 and SS-24 missiles are nearing retirement age and replacing them would be expensive and controversial. It is almost a given that the overall levels of Russia's warheads and missiles will drop to below START II targets on their own, unless the Russians field an expensive new system. In sum, logic suggests that it is better for Russia to ratify START II and thereby commit the United States to the cuts as well.

START III represents the second major phase in arms control efforts for the next decade. The major contours of the Treaty were agreed to by Presidents Clinton and Yeltsin at the Helsinki summit in March 1997. The initial parameters of START III are to reduce warhead levels to 2,000-2,500.

Russian progress in other areas of arms control has not been so impressive and is less likely in the near future. In particular, the government's ability to adequately control WMD and related technologies and personnel has raised questions. The precarious economic situation of the Russian defense establishment is widely known. Production and storage enterprises for nuclear, chemical, and biological weapons continue to engage in activities that contradict various nonproliferation regimes, including both the chemical and biological weapons conventions. Until and unless the Russian government can reimpose order and accountability on its defense industries, such problems and questions will persist.

Arms control issues in the other NIS are of less concern, even though specific problems do exist. In particular in Kazakhstan and Belarus,

lingering biological research and development activities may not be in compliance with the BWC. The challenge will be to engage these and other countries in the region in efforts to correct and prevent future proliferation transgressions. Yet control of the flow of technologies, expertise, and personnel relevant to WMD will continue to be a problem, especially for Ukraine, Belarus, and Kazakhstan because of the breakdown of control systems and ongoing restructuring of the economies.

Uneven and Uncertain Transition

Russia, Ukraine, and most of the other New Independent States have made progress in their transition from the Soviet socialist system, but where these countries are headed remains unclear. This question is of enormous importance to the core states. Should their transition falter, the emergence of new failed or rogue states would affect U.S. interests and present new security challenges.

Of all the NIS, Russia has gone furthest toward reform. It has stabilized its currency, privatized approximately 70 percent of its economy, and created a fledgling and promising capital market. It has held several rounds of democratic elections, and the fate of reform no longer appears to depend on any one person. There is no credible way for Russia to fall back on the Soviet model: the question now is what kind of capitalism Russia will create.

Ukraine has been slower to reform than Russia but has achieved some of the same successes. Like Russia, it has tamed inflation and, in the process, successfully introduced its own currency. Although its privatization programs have been less successful than those of Russia, slightly more than half of its economy now is in private hands. Ukraine has made noticeable progress in developing key democratic institutions.

Despite these successes, the transition of Russia and Ukraine to core states is still far from certain. Three fundamental dynamics conspire to imperil this process to core states in the next decade:

*The first is the battle for political and economic primacy among advocates of reform. In the late 1980s and early 1990s, the debate in the former Soviet Union was about *whether*, rather than *how*, to reform. Now that the reformers have become established as the leading political force, they are divided into small groups that compete to set the agenda. The competition can be ruthless; unlike political competition in the core states, there are few rules in the competition for political primacy in the New Independent States. Contract murder seems to have sometimes become an option. The resulting policies are designed by and in the interests of a narrow group of extremely powerful actors.

*The relationship between center and periphery presents a second worrying dynamic. One example of center-periphery tensions is the war in Chechnya. It has had a chilling effect on other Russian regions, as well as on neighboring countries, and shook the core states' confidence in the Russian government. Tens of thousands died in the Chechen conflict. Although the problem is far more severe in Russia, with its multiethnic republics and oblasts spread over 10 time zones, than for Ukraine, Kiev's relations with its regions are also problematic. In Ukraine, Crimea continues to stand out as a regional problem, in part because it has an important influence on Ukraine's relationship with Russia.

*The third dynamic threatening to the transition in Russia and Ukraine is the fluid relationship among actors in business, government, and organized crime. Crime and corruption undermine confidence in the state and ultimately weaken legitimate leaders' ability to govern. Organized crime from Russia, Ukraine, and the NIS generally has broadened to take on global proportions. Drug smuggling, money laundering, and arms trafficking by Russian organized crime groups are growing problems with wide impact and have received increased attention at senior government levels in Russia, the United States, and other core states. The strength and influence of these groups will undoubtedly grow as they amass wealth, employ new technologies, and expand their networks.

Russia and Ukraine suffer from wide and growing wealth gaps that are creating a resentful underclass. Entrepreneurs uncertain of the long run seek short-term rents rather than investing in long-range projects. Center-periphery relationships are tense and unsustainable. Crime and corruption undermine reform and reformers, as well as the legitimacy of the state.

MI-35 HIND attack helicopter

Russia has two assets working in its favor. In the short run, oil and gas will attract Western investment, bringing capital, technology, and management expertise to Russia. Already economic giants, Russian oil and gas companies will only become stronger than most other sectors of the economy. The challenge will be to transfer capital, technology, and expertise to other industries, so that the Russian economy can develop and the export of manufactured goods as well as natural resources can increase.

Russia's longer term asset is precisely the long term. Its demographic complexion is changing in important ways. Most significant, by the 2008 presidential elections, an entire generation of voters will not remember the Soviet Union or socialism. Recent public opinion polls show decisively that younger Russians are much less consumed by issues of Russian nationalism and competition with the West. In contrast, Western liberal ideals resonate with this younger population better than with older Russians.

Ukraine does not have the energy resources Russia has and cannot therefore rely on that sector for economic recovery. Instead, Ukraine will be challenged to push further and faster toward real marketization and integration with the emerging markets in Central Europe. These markets, which are increasingly tied to the core states of Western Europe, could prove an important source of economic dynamism for Ukraine. Before that can happen, however, Ukraine will need to make serious progress in consolidating achieved reforms, dealing effectively with its illegal and underground economies, and increasing openness and transparency. Sound fiscal and monetary policy will be key, as will liberalization of the energy and agro-industrial sectors. Like Russia, Ukraine's youth is Western oriented and sees its futures as increasingly tied to the core states of Europe.

Russia's Network of Nuclear Complexes

Growing Integration

The extent to which Russia and Ukraine have been integrated into regional and global institutions is impressive. Both countries have joined numerous political and economic institutions, including the Council of Europe, and Russia is a member of the Paris Club and "The Eight." Both have yet to meet the criteria for accession to the European Union (EU) or the World Trade Organization (WTO), although in

the next decade one or both countries might join these world bodies.

The region has gained valuable experience from working with security organizations and institutions such as the Organization on Security and Cooperation in Europe (OSCE), International Atomic Energy Agency (IAEA), and Partnership for Peace (PfP). Bilateral and multilateral military exercises with core states have contributed to the understanding by the transition countries of core state military principles, strategies, and objectives as well as improving transparency on both sides.

The most important security institution linking the NIS to the core states is NATO. In July 1997 in Madrid, the leaders of NATO's member states took a historic step by agreeing to extend invitations to three Central European countries to join NATO--Poland, the Czech Republic, and Hungary. NATO signed important documents with Russia and with Ukraine that expanded and formalized relations between these countries and the organization. The NATO-Russia Permanent Joint Council and the NATO-Ukraine Commission provide for the further development and integration of these countries with the European security system.

Ukraine in particular has taken advantage of these opportunities, stating unequivocally that it wishes further integration into the Atlantic security system up to and including membership in NATO. Ukraine has been a key participant in and benefactor of the PfP program. Although Russia remains opposed to enlargement of NATO for states of the former Soviet Union, it will have to understand that its interests, too, will best be served by working with, rather than against, the core states.

On a bilateral basis, the United States has engaged the NIS in important security-related initiatives. One prominent example is support for the Central Asian Combined Peacekeeping Battalion, or CENTRASBAT. This initiative on the part of Kazakhstan, Uzbekistan, and Kyrgyzstan to cooperate and develop their peacekeeping capabilities to UN standards is an important step in the political-military development of Central Asia. The United States has supported this effort and encouraged Russia to play a responsible role. In September 1997, CENTRASBAT concluded its first peacekeeping exercises with U.S. and Russian military officials in attendance. Initiatives of this type are likely to promote further cooperation and integration and could well develop their own momentum in the coming decade.

Limited New Markets

The NIS are unlikely to achieve their full potential as trading partners with the core states in the next decade. Russia has begun to show signs of recovery: its 1997 GDP may have grown by as much as 1.5 percent. Services, mostly financial, are becoming a larger factor in the overall economy, and industries such as telecommunications are performing strongly. Ukraine has been slower to reform and is very likely to face a number of financial crises in 1998. It should move now to make progress on its transition. Russia and perhaps Ukraine are likely to continue to develop their markets and to open them to global competition, but even so, the challenges of economic restructuring are large enough to require two to three decades.

Uzbeki troops

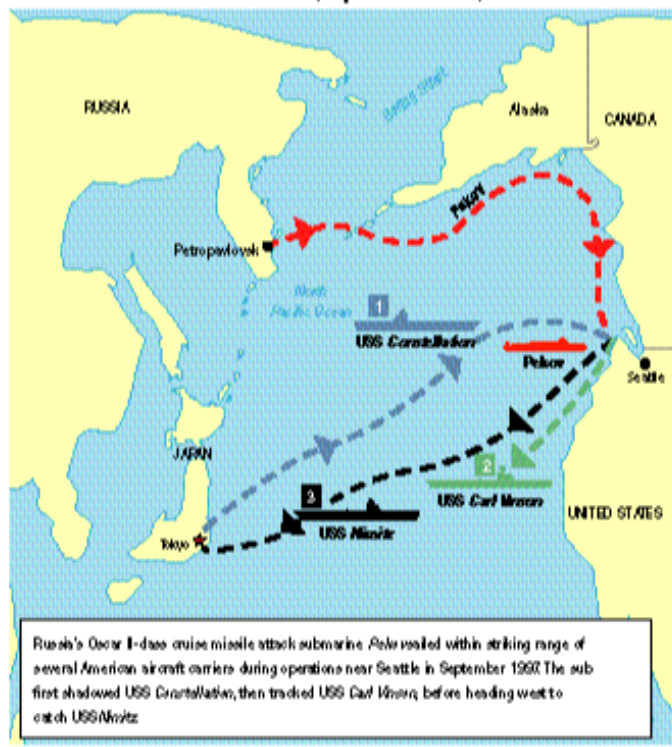

Serious reform efforts will need to be made on a number of fronts where Russia and Ukraine are only beginning to address them, and most of the other NIS have yet to grapple with them. The first front is property rights, especially those for foreign direct investors. Without clear and secure property rights, the NIS will not attract foreign direct investment in the quantity needed for economic recovery. A second front is integration into the EU and WTO. Russia and Ukraine are still far from accession to either body, mostly because their economies and policies do not meet accession criteria.

Most other NIS are quite further behind Russia and even Ukraine. There are pockets of economic stability and even recovery from time to time in places such as Georgia and Uzbekistan, but often these are false signals and are not associated with the types of fundamental economic reform that will sustain growth and stability in the longer term. Even in many of these countries, however, the benefits from marketization and privatization are becoming apparent, and some of the governments are beginning to turn their focus to real reform. In

sum, the prospects are good for slow progress in the development of new markets in the NIS. Progress will be uneven, however, and success is far from certain.

Russian Submarine Maneuvers (September 1997)

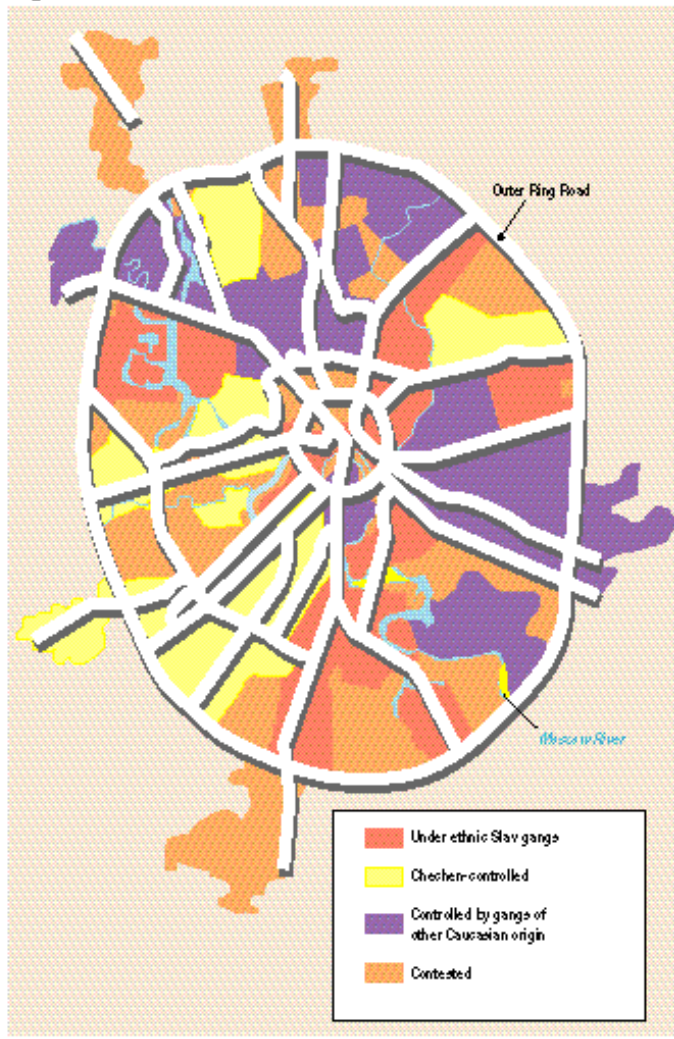

Shaping the Strategic Environment

The primary objective of U.S. military diplomacy in the near term will be to reduce the threat posed by the proliferation of WMD and related technologies and information. A second objective will be to shape Russian strategies to promote security cooperation and integration with the core states. Last, the core states can contribute to the stability in and around the NIS by working with their military establishments on military reform and civil-military relations in a sustained, coherent way.

Although engaging all the NIS is an important goal, the main focus of U.S. shaping factors in the former Soviet Union will be Russia and Ukraine. U.S. objectives and strategies toward these countries will overlap considerably, but in two areas Russia may pose the more difficult or complex problem. The first concerns questions about Russia's ability to control WMD and related technologies. Ukraine has far fewer such technologies and therefore presents a lesser, and less complicated, problem. The second area concerns alignment: Ukraine has stated its desire to become a full member of Europe, even to join NATO, whereas Russia views NATO's enlargement as a major political flashpoint.

Organized Crime in Moscow

Source: Jane's Intelligence Review, *Intelligence: Organized Crime in Russia* (Special Report No. 10), June 1996

After the collapse of the Soviet Union, only the four "nuclear" states--Russia, Kazakhstan, Belarus, and Ukraine--were the focus of U.S. proliferation programs. Following successes there and progress on the part of other NIS, in March 1997, seven states in the Caucasus and Central Asia became eligible for support under the Nunn-Lugar program. Although these countries, along with Kazakhstan, Belarus, and Ukraine, present important proliferation challenges, the main challenge remains Russia (although much of the discussion regarding Russia also applies in other cases).

In shaping Russia's proliferation agenda, the core states will need to work in concert to:

- Improve Russian understanding of proliferation and its threat to Russia's interests
- Reduce the quantity of WMD and related technologies
- Take a more forward leaning stance on specific proliferation transgressions.

The United States has already initiated a broad agenda to engage Russia on proliferation issues and has achieved notable successes. In large measure, the future agenda will build on what is happening now.

Improving Russia's understanding of the threat of weapons proliferation will be the responsibility of all core states working together, even though the United States will inevitably play the leading role. Many in the West assume that the logic of arguments for nonproliferation will be as compelling in Russia as elsewhere. This is not a safe assumption. The gap between the United States and Russia on the issue of the Iranian nuclear reactor is only the most obvious example.

NIS proliferation has two dimensions. The first is that "official" proliferation results from legitimate activities and policies of a government, of which Russian support for the Iranian reactor is one example. The second is that "unofficial" proliferation occurs illegally

and is not the result of official policy. Both dimensions will challenge core states' interests over the next 10 years, and any comprehensive plan will need to address them.

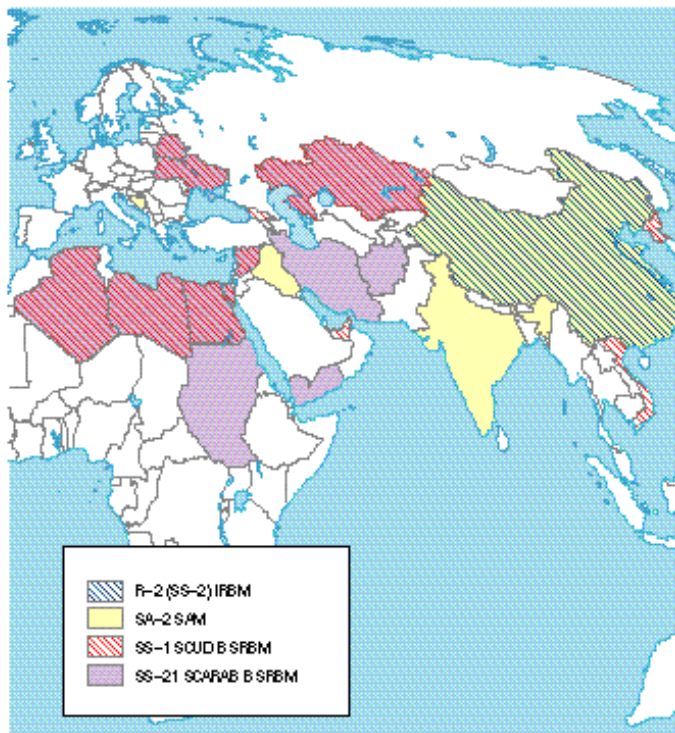

BTR in Sakotici, Bosnia-Herzegovina

Several aspects of the proliferation agenda concerning Russia are worth consideration for the medium-term future. Two focus on "unofficial" proliferation. The decentralization of political and economic decisionmaking in Russia permits and argues for a broad discussion of the problem of proliferation. In Russia and to a lesser extent Ukraine, two interrelated groups deserve special attention. One consists of responsible officials at the defense plants, labs, design bureaus, and facilities that produce or store weapons and produce related technologies and information. They and their organizations often operate on the edge of bankruptcy and face constant financial and economic stress in trying to maintain production of military hardware and restructure to meet the demands of the new market environment. Economic stress prompted some of them to take advantage of the market for weapons and related technologies through sales outside formal channels for arms trade.

Increasing efforts to address this source of the problem more resolutely thus makes good sense.

Russian Missile Transfers

Source: Center for Defense and International Security Studies, 1997

The other key group consists of the new "business-political elite" who have profited from Russia's reforms and its ties to outside markets, have a vested interest in the stability and prosperity of the NIS, and understand the importance of integration with the core states to these objectives. They also hold increasing power and influence over politics and policy in the NIS and should prove useful interlocutors on issues of proliferation. Because they know very little about the economic, political, and security consequences of proliferation, this group represents an important target for engagement and education on these issues.

Another aspect of furthering the nonproliferation agenda is cooperation with Russia, Ukraine, and other NIS countries in relevant intelligence activities, though this tactic admittedly carries some risks. Serious questions concerning the knowledge of key NIS officials about proliferation problems persist. Sharing information and intelligence will reduce these questions and lead these officials to deal with issues head on.

Reducing threats of proliferation is a strong focus of current U.S. policy. The United States should continue efforts such as the Nunn-Lugar program and highlight the positive sum outcome it produces. A major initiative to expand efforts in this area would be to encourage other core states to increase their contributions and activities.

82nd Airborne, CENTRAZBAT '97

Encouraging Cooperation

A significant number of bilateral and multilateral military initiatives are under way to encourage security cooperation and increase transparency with the NIS. These efforts have so far met with varying degrees of success, but the general trend has been very positive. In the coming years, it will be imperative to maintain and further these contacts because doing so will give the United States tremendous opportunities to lessen potential challenges. Depending on the level of NIS engagement in cooperative activities, these initiatives will afford the United States influence in the development of the structure, composition, and disposition of the militaries of the NIS.

Another important benefit of these initiatives is to demonstrate U.S. and core state interest in the region and to display our military capabilities constructively. Any regional actor that questions the core's interests or abilities will have few doubts after witnessing our sustained involvement at serious levels of engagement and the superiority of personnel, equipment, and organization. Although staged exercises are important, real security operations, including NIS militaries (IFOR and SFOR are excellent examples), are best for these purposes, because they demonstrate real U.S. interests and capabilities in the region.

U.S. military efforts have generally been planned, prepared, and conducted under the aegis of NATO's PfP program, though the United States has impressive bilateral military-to-military programs as well. Since its inception at the January 1994 NATO Summit, PfP exercises, conferences, and other events have worked to increase stability, diminish threats to peace, and build strengthened relationships by promoting the spirit of practical cooperation.

The PfP program provides a strong foundation on which the United States can build relations with NIS countries in the medium and long terms. NATO's objectives for this program include increasing transparency in national defense planning and budgeting processes, ensuring democratic control of the military, maintaining the capability and readiness to contribute to operations under UN or OSCE auspices, and developing interoperability with NATO members over the long term. The PfP program is also an excellent way to encourage the core states to work on such problems together. Progress will be gradual but noticeable, and success in the PfP program will link the NIS militaries to those of core states in important ways.

CENTRAZBAT '97

Beyond the PfP, the United States and other core states will find it advantageous to themselves to continue bilateral programs of assistance with the NIS in order to further encourage the shaping of the NIS militaries. The United States, for example, sponsors exercises and activities "in the spirit of PfP," such as support for the BALTBAT and CENTRASBAT peacekeeping activities. Other core states should ideally participate bilaterally with the NIS militaries to make it clear that they have their own independent interests in the region and are more than passive participants in NATO's agenda.

Currently, the Caucasus and Central Asian regions are stressed by recurrent instability and conflict. For this reason especially it is important that U.S. programs designed to engage the militaries of the region do so not only bilaterally but also multilaterally. By bringing the militaries of the region together in a constructive way the United States will be promoting better regional understanding and more stable relations. CENTRASBAT is a major example of such a program. Washington has not taken this approach in the Caucasus but should find ways to engage the countries multilaterally there as well.

Finally, the core states should be aware of opportunities to use other transition states as collaborators or even surrogates in shaping exercises. By sharing their experience, for example, with the Central European militaries, the NIS militaries may gain important insights into NIS needs and paths toward reform.

Russian BTR-70 amphibious assault vehicle

Civil-Military Relations

A fundamental component of a stable, successful democracy is solid civil-military relations generally and effective civilian control of the military in particular. The core states have done much to achieve these objectives in Central and Eastern Europe, with positive results. A similar agenda can be applied in the NIS, although progress there may be slower because of a greater resistance to change.

The militaries of the core states should take every opportunity to engage all three branches of power--executive, legislative, and judicial--on issues of civil-military relations. These include, for example, budgeting and military reform, of special interest to the Duma, which has extremely limited information or experience in such issues. Establishing a civilian-controlled ministry of defense is primarily the responsibility of the executive branch. Media relations and public affairs are also issues of great value to the military. NIS militaries have little expertise on these areas but a great need to develop it. Core states have much to offer, at least by way of example.

Since the end of the Cold War, the United States and other core states have undertaken serious reviews of their own defense and security doctrines, operations, and organizations. In the United States such reviews include:

- The Bottom-Up Review
- Army after Next
- Commission on Roles and Missions
- The Quadrennial Defense Review
- The National Defense Panel.

Versions of these and similar exercises might be successfully transplanted to the NIS, where defense planning and strategy in the post-Cold War environment have been slow to develop.

In sum, civil-military relations in the NIS need reform. Whether the issue is chain of command, parliamentary oversight, budgetary transparency, or the development of competent civilian defense managers, work is needed. The militaries of the core states have a great deal of relevant experience, expertise, and interest in seeing that progress is made on these fronts. More quickly reforming militaries in Central Europe also have a great deal of relevant experience to share with the NIS, and integrating them into core efforts would be both an excellent way to help them to meet their responsibilities as emerging core states and an efficient way to address the needs of the NIS militaries.

Conclusion

The next decade will present important opportunities and challenges for the NIS and their relations with the core states. In Russia the economic depression appears to have bottomed out, and at least some sectors of the economy are beginning to grow. Moscow is taking important steps to open its economy through reforms designed to meet the accession criteria of the WTO and is doing more to work with the EU on issues that will facilitate trade and investment. Despite these successes, Russia's relations with the core states, especially in the security arena, will require sustained engagement and attention in the next 10 years. Much of the thinking in Moscow on Russia's place and role in the world still focuses on Russia as a counterbalance to the West. Within this framework it is difficult for Russia and the United States to reach agreement on complex issues such as Iran's nuclear program, Iraq's threats to security in the Gulf, or the future of European security.

Qualities of U.S. Power Accentuated in the New Independent States

The core states' best strategy for Russia in the next 10 years is sustained cooperative engagement. The most important vehicle through which to pursue these types of initiatives is the new NATO-Russia Permanent Joint Council (PJC). This body must not become a forum for argument and discord. To the contrary, its primary purpose should be to foster cooperation and understanding on issues where Russia and the core states have shared interests. Although many of these interests will be international in scope (regional security, proliferation, etc.), the PJC should also serve as a body that advocates and supports Russia's badly needed military reforms. One of the most important things the United States and other NATO members can

do is to encourage and support Russia to initiate ideas and projects within the PJC framework. If Russia takes the lead more frequently, it will feel more a subject of European security and less of an object, more of a contributor to the process and less of a consumer of core states' initiatives.

Ukraine will also continue to be a focus of core state attention in the coming decade. Its transition to an open-market democracy is not as developed as Russia's, but it has made important progress. There is reason to believe that in the very short term the economic crisis and international engagement will motivate leaders in Kiev to intensify and accelerate their reforms. If successful, these reforms will enhance Ukraine's international position and strengthen its relations with the core states. An additional challenge for Ukraine is the modernization of its armed forces. In its current financial situation, these reforms will prove exceptionally challenging. But in many respects the largest challenges to military reform in Ukraine are not financial. Instead, Ukrainian leaders must exert the political will necessary to follow through on the early progress they have already made. Through bilateral programs with the U.S. Department of Defense and through the PfP program, the Ukrainian armed forces have been exposed to modern military practices, management, policies, and capabilities. Particularly among some of the junior and midlevel officers, there are signs that the examples have taken hold. Like Russia, Ukraine should focus its efforts on using its new partnership with NATO to initiate ideas for cooperative programs, especially those that will encourage and undergird Ukraine's military reforms. Finally, it is important for the core states to work with Ukraine to develop serious bilateral relationships outside of the Commonwealth of Independent States. Although Russia and the other successor states will continue to be important political, economic, and security partners for Ukraine, these relationships need to be supplemented by strengthened relationships with countries like Poland, the Czech Republic, Estonia, and Romania. Initiatives designed to support the developments of these relationships will not only help anchor Ukraine in East-Central Europe, but they will give these other transition countries opportunities to play important roles within the broader European security system.

In the Caucasus and Central Asia, the security challenges to the core states are less immediate, but important opportunities to support healthy interstate relations within the region and to avoid the development of new security risks exist and should be exploited. For the next 10 years the economics, politics, and security of energy resources and transportation routes will define the region's development and,

largely, its relations with Russia and the core states. By 2010, it is possible that the Caspian region may emerge as the fourth- or fifth-largest energy producing region in the world. It is in the interest of core states that countries within the region are stable internally and that their relations are built on politically and commercially sound footings. Moreover, it is necessary that the countries in the region are well integrated into the global economic and energy markets.

In the short term, the chief consumers of Caspian energy will be in Europe and the Mediterranean. Ukraine and other NIS countries will also be important markets, depending on how well their reforms go. The core states should move jointly to encourage the cooperative development of the energy resources of the region. This means strong support of market and democratic reforms, including a focus on conflict avoidance and resolution. A second priority should be fostering constructive relations with key countries such as China, Pakistan, and India, who are likely to be important consumers of Caspian energy in the longer term. Turkey will have an important role to play in terms of Caspian energy consumption and transport, as well as regional security, and should therefore factor significantly into policies toward the region.

The processes of transition to core states in the NIS are complex and often unpredictable. The United States and its allies must not shrink from the challenges but seize every opportunity to engage the NIS and support their development into long-term partners with many shared political, economic, and security interests. Serious investments in the security and stability of these new countries will pay important dividends over the next decade. The task is tremendous, however, and no one country can shoulder the burden alone. The task will require sustained cooperation among all the core states, a process that has the added benefit of strengthening relations among them as well.

1998 Strategic Assessment

Engaging Power for Peace

CHAPTER SEVEN

The Americas

The Americas present the United States with many opportunities and challenges, ranging from a trend toward increasing democratization, international stability, economic growth, and integration, to chronic corruption, insurgencies, human rights violations, deeply rooted organized crime, and, partly in consequence, economic migration. To northern ears, the image traditionally suggested by the moniker Latin America is one of more internal commonality and cohesion than should be assumed. To this mix can be added a history of inconsistent relations with the region, from "benign neglect" to unilateral military intervention. From the Latin American perspective, the intentions of Washington (especially the Department of Defense) in the hemisphere are often unclear and sometimes suspect. In keeping with the general theme of *Strategic Assessment 1998*, this chapter will review the primary U.S. interests in the Western Hemisphere, trends related to those interests, and shaping factors available to DoD to affect those trends. The resulting tone of the chapter is not optimistic, in part because national policy in the region has followed ideas and concepts acceptable to a northern European culture, which do not always translate well to this predominantly Hispanic culture. Nevertheless, long-term trends in the region point to a more optimistic (though not guaranteed) outcome.

Primary U.S. interests include enhancing hemispheric cooperation through increased economic integration, expanding core values through efforts to increase political and defense transparency, reducing the serious threat from non state actors, and perpetuating interstate security and stability through increased military contact and interaction with U.S. forces.

Brazilian carrier *Minas Gerais* in Rio de Janeiro

Means available to the DoD for shaping the security environment in this region include the use of force to contain state failure, deterrence to avoid conflict with nonstate actors, the enhancement of coalitions through increased military contact (intra-region and with the United States), and advocacy for defense reform both by example and through training opportunities. The most important factor in relations with Latin America, however, is policy. In the past, DoD has relied on efforts to provide regional policy writ large, rather than on recognizing the differences among states

on the basis of size, political maturity, culture, and geography. Although regional fora--such as the Organization of American States (OAS) and the Inter-American Defense Board (IADB)--are available to settle differences and provide educational opportunities, bilateral relations often are more successful because of easier agreement on the definition of specific policies, whether economic, security, or political.

U.S. Interests

There are four categories of U.S. interests in the region: economy, core values, security, and defense reform. Although these apply generally to all states of the region, geography plays an important role. Economic interests vary from trade integration (Brazil, Argentina, Chile, Mexico), reform (Mexico, Brazil), and economic expansion (Central America, Caribbean), to salvage (Haiti, Cuba, and occasionally Mexico). The expansion of core values also applies unevenly. The English-speaking Caribbean, for example, has a long tradition of values compatible with the core, and most of this region accepts these values intellectually, if not always in actuality; Cuba rejects most civil liberties; Haiti has failed to implement even basic values. Security interests also vary dramatically. The most glaring difference is an inability to agree on what constitutes security. Different subregions have different concerns, which vary from state to state, including border security (Cuba, Venezuela, Peru, Ecuador, Chile), domestic stability (Argentina, Central America), counterinsurgency (Colombia, Peru, Mexico), economic stability (Central America, Mexico), trade policy (the Caribbean), and ecosystem security (Brazil, Colombia, Costa Rica, Haiti, Panama). Defense reform is applicable to all, largely because of the tradition throughout the region of viewing the armed forces as the "savior of the state," responsible for ensuring stability and defending sovereignty from all threats (foreign and domestic). The U.S. agenda calls for reform in the following areas:

- Professionalization
- Human rights policy
- Civil-military relations
- Confidence building through increased budgetary transparency
- Resource management
- Materiel modernization
- Defense organization.

Developing Trade and Integration

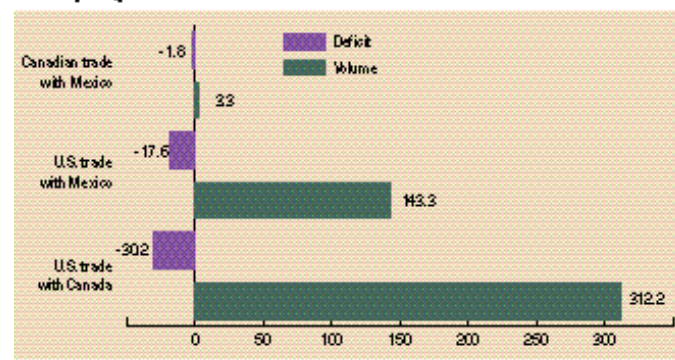

The expansion of trade has had a significant impact on U.S. foreign policy considerations in the hemisphere. Examples of policy reacting to economic pressure include:

- The North American Free Trade Agreement (NAFTA) with Canada and Mexico
- Warming of relations with Chile, including negotiations for NAFTA accession
- The 1994 Miami Summit and its emphasis on a hemispheric free-trade association
- The negative impact of an increase in the illegal drug trade and money laundering
- Grossly unequal income distribution, which brings increased attention to human rights issues.

Trade and investment are now viewed in the context of a global framework. The level of trade within the Western Hemisphere has grown consistently over the past decade, and the move to greater regional economic integration has accelerated that trend. The single largest U.S. trading partner is still Canada, and the largest regional trade bloc remains Latin America. Upward of 40 percent of Latin America's trade flows north, and 40 percent of U.S. (non-NAFTA) exports stay in the hemisphere. The U.S. merchandise trade surplus with the region surpassed \$3.5 billion in 1996. A hemispheric free-trade zone was declared the centerpiece of U.S. policy in 1994, though as yet little tangible commitment is evident. The White House continues to seek fast-track negotiating authority from Congress, though there are serious domestic objections to overcome. Competition from Europe and Asia is increasing as Central and South American markets seek to expand into a region abandoned by the United States. This trend may not continue if fast-track negotiating authority is not achieved anytime soon.

NAFTA Trade Balance (1996-97)*

Millions \$ U.S.

* Last two quarters of 1996 and first two quarters of 1997 only
 Source: International Monetary Fund, *Direction of Trade Statistics*, 1998

The interest in regional markets will not change in the long run, except what will result from political links of trade to other issues, such as performance on human rights or counterdrug policies. There will be minor variations in trade patterns and these will be temporary, but fast-track negotiating authority is much more important than such conditionality.

Expanding the Core

Democracy

The hemisphere is for the most part in the process of democratization, though commitment is not yet complete. The U.S. objective of encouraging democratic governance has advanced rapidly, although over a rocky path. Recent overviews point out dramatic differences between current popularly elected governments and those of only 15 years ago, when the majority were authoritarian or military dictatorships. Although the region does boast of democratically elected governments in all but one state, civil-military relations remain uneven, and civil unrest is now more prevalent than in recent decades. Latin America's tradition of personality-based governance is strong: Fidel Castro has been in power in Cuba since 1959; Presidents Carlos Menem in Argentina, Alberto Fujimori in Peru, and Fernando Henrique Cardoso in Brazil all have changed their national constitutions to perpetuate their tenure in office; the presidents of Chile and Nicaragua cannot remove the head of the armed forces; the presidents of Ecuador, Colombia, Peru, Venezuela, and Guatemala rely heavily on the military for support; President Hugo Banzer Suarez of Bolivia is a former dictator; and in 1998, Paraguay may elect as president a former Army general who attempted a coup against the current president. That these examples persist despite the increase in democratization is evidence of the strong tradition of personality-based power politics. Some analysts argue that the current wave of democratization is cyclical and will fall to a new wave of personality-based authoritarian regimes.

Air and Maritime Drug Trafficking

Source: Central Intelligence Agency

A decrease in defense budgets or reduction in military forces has accompanied the move toward democratically elected governments in Latin America. In many countries, the armed forces and police are a major component of the government presence outside the major cities, and reductions have resulted in increased common street crime. A second impact has been a change in economic policy toward a market-based system, accompanied by a decrease in the living standard, especially among the better educated middle classes, as well as high unemployment rates. The general impression is that civilian-led governments mean economic ruin and less personal security. Many agree that civil liberties are a good goal but that the economic costs may outweigh the benefits, at least in the short run.

Cuba, the region's fading rogue state, continues to be opposed to the democratic values and free-market practices that now characterize the Southern Hemisphere. Washington continues to isolate Cuba economically and diplomatically, forcing the issue and encouraging change through such measures as the 1996 Helms-Burton Act. This controversial approach has forced other states (particularly in Europe) to become themselves more active in promoting political and economic change on the island. A change of regime in Cuba does not appear imminent. Although expectations were raised by Pope John Paul II's visit in January 1998, significant political change is not likely to occur before Castro leaves power.

Human rights

A major factor guiding U.S. foreign policy toward Latin America has been an emphasis on human rights. The U.S. experience with counterinsurgency operations and its past support for, recognition of, and relations with military dictators and rumors of complicity in human rights violations have given rise to many nongovernmental organizations (NGOs) intent on monitoring such behavior. Particular attention is now paid to the connection between the U.S. military and its counterparts in the region and on demanding accountability from either the White House or Congress. It is in Washington's interest to highlight this factor as part of its effort to expand core values to transition states. Cuba is the primary recipient of human rights attention at the policy level; Colombia and Mexico are on the list as well because of the on-going insurgencies--the Revolutionary Armed Forces of Colombia (FARC) and National Liberation Army (ELN) in the former, the Zapatista National Liberation Army (EZLN) in the latter--while the populations of Argentina and Chile deserve support for clearing up past abuses. And yet the United States must write policy with the understanding that these situations (especially in Argentina and Chile) have not been fully resolved. Judicial reform is required to increase the rule of law and order and to strengthen the concept of justice and equality in governance.

Sailors from USS *Callaghan* with seized cocaine

While there are indications that much work is yet to be done in this important area, democratic governments have all shown a commitment to improving their performance. It is important, however, to note that many of the cases of human rights abuse have not been perpetrated by agents of the government, but rather by such nonstate actors as terrorists, insurgents, paramilitary organizations, and organized crime groups.

Reducing the Threat of Nonstate Actors

Drugs

One major strategic interest for the United States is to reduce the flow of illegal drugs throughout the hemisphere and across its own borders. Drug-trafficking and money-laundering operations are conducted with such sophistication and involve such large sums of money that they penetrate (or at least threaten) every law enforcement institution, judicial system, and bank and financial institution in all the Americas. Although the degree of access, impunity, and corruption may vary, states of immediate concern include Mexico, Canada, Colombia, Peru, and Bolivia. The growing consensus is that cooperation, both bilateral and multilateral, is a large component of the fight against this transnational threat. But, as in all things, style can be as important as substance in cooperation: respect for sovereignty is the starting point for effective cooperation.

Apart from the deleterious effects on society, the underground culture created by the illegal trade fosters a mentality and creates forces that work against civil governance. Though this section overlaps with the discussion of nonstate threats in chapter 13, the effect of drugs on security in the hemisphere is worth emphasizing. Illegal drugs are a serious component of instability in the Andean region (where plants used to make drugs are grown), the Caribbean and Central America (transit zones), and North America (consumption and transit). One element common to all these regions is the violence associated with the drug trade, which threatens the stability and sovereignty of several states, including Colombia, Mexico, and several Caribbean island states, and also threatens domestic safety and governance both in transit states such as Brazil, Argentina, Chile, and Canada, and consumption states such as the United States, Japan, and most of Europe.

Migration

Within the Western Hemisphere migration is generally caused by the impact of economic policy, rather than by issues of security and safety as was the case a decade ago throughout Central America. The states primarily affected (apart from the United States) include Mexico, Haiti, Cuba, the Dominican Republic, and those of Central America; rampant poverty and inadequate property laws are generally cited as reasons to emigrate to the United States. A major complicating factor is the volume of remittances from migrants (legal and illegal); Mexico and El Salvador estimate that over \$2 and \$3 billion a year, respectively, are provided by their "economic refugees" in the United States. The volume may be lower in the Caribbean, but the percentage of GDP is much higher, given the Caribbean's lower overall volume of economic activity. Every year about 275,000 illegal migrants manage to elude Immigration and Naturalization Service (INS) efforts to stop them and join the 5.4 million illegal aliens already in the country. States affected most are (in order) California, Texas, New York, Florida, Illinois, New Jersey, and Arizona. About 80 per cent of the immigrants come from within the hemisphere.

Yearly Patterns of Migration

Source: United Nations

U.S. policy is linked closely to migration. People fleeing poverty or violence at home are motivated by "push" factors, while the U.S. policy on migration acts either as a "pull" or "stop" factor, inviting migrants to leave or preventing them from leaving home in hope of finding a better way of life. Without the pull factor, many would prefer to wait out push factors in hope of improving their lot at home. For instance, U.S. policy toward Haitian refugees during General Cedras' dictatorship was one of acceptance, so the number of Haitians taking to boats was high. When the administration changed its policy to one of either returning migrants to Haiti or sending them to holding camps in Guantanamo or Guyana, the number of refugees plummeted.

U.S. Coast Guard intercepting Haitian refugees

Maintaining a Secure Environment

During the Cold War, U.S. defense policy toward Latin America was oriented toward keeping the region a neutral security environment that required little attention from DoD. Containment of communism was a major mission, but U.S. policy recognized that national militaries within the region would dictate their own versions of just what constituted containment. With the end of Cold War, the goal of maintaining a security-neutral region is still difficult to achieve. Border conflicts (Peru and Ecuador), insurgent instability (Colombia, Peru, Mexico), and illegal drug production operations (Colombia, Venezuela, Brazil, Peru, Ecuador, Bolivia) are difficult to contain. What

remains is the effort to maintain stability, a difficult enough prospect in a region struggling to define the proper balance of relations between civilian governance and armed forces. The traditional U.S. geostrategic view emphasizes a special relationship with the Caribbean Basin because of the traditional sea lines of communication (SLOC) between, for instance, New Orleans and Europe, or transiting the Panama Canal. Any threat to those SLOC directly affects U.S. trade with the world, increasing the threat to U.S. sovereignty. That nonstate actors use these same SLOC cannot be lost on Washington, given the tremendous cost and effort involved in locating the thousands of islands and shipping routes and protecting them from criminal activity.

Current Trends

Economic Integration

The economic trend of the region is toward increasing trade integration, though not necessarily regional integration. The Mercado Comun del Coro Sur (MERCOSUR) will remain the premier South American grouping, to which Chile may someday become a full member if accession to NAFTA is not forthcoming. But MERCOSUR has been showing signs of unrest: its principal members (Argentina and Brazil) recently negotiated an increase in tariffs without consulting the smaller or associate members. Disintegration is not on the horizon, however, if only for fear of losing out in the global arena of trading blocs.

Groupings other than MERCOSUR and NAFTA will arise. There have always been plans to combine the Central American markets. Mexico recently began negotiating to open its markets to Nicaragua initially, and to the other Central American markets shortly thereafter. The Andean Group may attain viability, following the pattern of MERCOSUR; CARICOM and other Caribbean groupings will intensify efforts to expand and succeed. The main thrust of this trend is the 1994 Miami Summit declaration of intent to form a hemispheric free-trade bloc by the year 2005. Such subregional groupings are attempts to integrate and form stronger negotiating positions prior to joining NAFTA or any new regional arrangement with North America.

Regional Trade Agreements

MERCOSUR Trade: Fast Abroad, Faster at Home in billions (U.S.\$)

Source: World Trade Organization

But not all is as idealistic as was expected after the Miami Summit. MERCOSUR, perhaps taking a cue from the U.S. Congress, now spends more in Europe than in the United States. Asian markets, despite the recent downtrend, have made significant inroads into South America as, for instance, Chile, Peru, and Colombia seek to increase relations across the Pacific. The failure of the Clinton administration to secure fast-track authority for Chilean admission to NAFTA was a major blow to the region's confidence that the United States was

finally beginning to pay significant, consistent economic attention to its immediate neighborhood. Should fast-track authority fail again in 1998, the objective of the Miami Summit of a regionwide free-trade zone by 2005 will crumble and South American markets will seek to join agreements elsewhere. In other words, though the trend appears favorable to U.S. interests, economic interests have not reached their fullest potential.

On the other hand, the region's economies performed in 1997 at their best level in 25 years. The combined average growth rate was 5.3 percent, with an inflation of less than 11 percent. Foreign investment totaled \$73 billion, though the trade gap with the United States grew to \$60 billion. Such growth spurred more export industries, especially in intraregional trade, which increases economic interdependence and trade integration.

Exceptions: Cuba and Haiti

Cuba and Haiti will be the exceptions. Fidel Castro still sees no reason to change his statist economic policy and will continue to limp along, blaming the United States for his lack of success while relying on remittances from Miami and the black market to feed and clothe the Cuban population. Haiti, the region's failed state, also will continue to rely on remittances, drug money, and foreign assistance to remain marginally viable as a state. Barring a drastic change in the philosophy of governance in both states, there is no hope for integration with regional associations, let alone global trading arrangements.

Corruption

The problem of corruption, in which formal political organizations are steadily undermined in their capacity to operate efficiently, cannot be overstated. Briefly, corruption may be defined as the misuse of public office for private interests. Political corruption is widespread in numerous states in the hemisphere and is accompanied by violence that weakens the state's capacity to operate effectively. For example, bribery of officials has long been a successful method of operating in the political life of most of the region. It has been used to pay for immunity from criminal prosecution by the members of organized crime as well as to distort the workings of a variety of public offices. This situation is compounded by society's tolerance of illegality: respect for the law tends to deteriorate when exposed to blatant disregard. Colombian economist Dr. Francisco Thoumi describes corruption as an illegality and dishonesty trap: in a society in which dishonesty and corruption are rampant, behaving honestly becomes costly.

Where organized crime has made a significant inroad, as in Mexico, Colombia, Jamaica, Haiti, and Bolivia, corruption has so undermined legitimacy that these states have at times been unable to guarantee even the most basic order for their citizens. Coupled with the use of extreme violence, this has not only led to a crisis of legitimacy in the criminal justice systems but also has allowed criminal groups to operate with relative impunity for a long time.

One of the most prevalent forms of corruption in the region is *clientelismo*, or patron-client relationships, in which people are placed in positions of authority on a basis other than merit. Rather than being agents of government, in a region where an effective civil service does not exist such individuals *are* the government. Private individuals use public offices for personal aggrandizement or favorable advantage to themselves and their friends and associates. Many government offices tend therefore to be overstaffed with persons whose particularistic loyalties lie in roles and relations, rather than in rules and regulations. Nepotism, connections, petty bribery, and other means of acquiring private influence and advantage glut the public realm and do little to advance policies needed by the state. Official transactions abound with red tape, requiring seals and signatures to conform to detailed, archaic legal formalities. This practice slows the process of systems such as justice to the advantage of individuals who expedite matters for a fee.

In Colombia and Mexico (and formerly in Peru), there is the added threat of *plomo ó plata* (bullets or money), in which officials are forced at gunpoint to use their position to help criminals--making a bribe the more acceptable option.

Democracy in Transition

Numerous Latin American states have been characterized as democratic or as riding the "third wave" of democratization, but the use of the word democracy has led to confusion about the actual situation in these countries. Elections are regularly held, and opposition parties exist in most Latin American states. Nonetheless, politics are often largely elitist and based on clientelism and skewed patterns of income and wealth. Perhaps the gravest obstacle to true democracy is the lack of a comprehensive, coherent system of justice (including courts, police, and corrections) to deal with escalating problems of organized crime, violence, and corruption.

Some easily definable obstacles to the formulation of effective systems of justice are the problems they confront. Much of the success of a justice system depends on the methods the society employs to achieve social control and on whether these methods are compatible with one another. In Latin America, the traditional strategies of deterrence and retribution in law and order often conflict, rather than work in coordination: the demand for deterrence steadily increases, while the demand for retribution remains relatively weak. Retribution involves actively seeking out and punishing those who break the laws of the society, but many who deserve punishment are so efficient at intimidating and suborning members of the justice systems that the fear of violence as well as the prevalence of corrupt personnel disrupt the system.

Such a setting is a magnet for private power brokers. Presumably, operating illegal businesses and bypassing a system are easier where order is lacking and public institutions are rife with patronage and graft. The problem for law and order is that whenever some brave and honest government officials do attempt to halt the spread of illegal activity, broken links in the chain of command make extortion and bribery effective in countering such efforts.

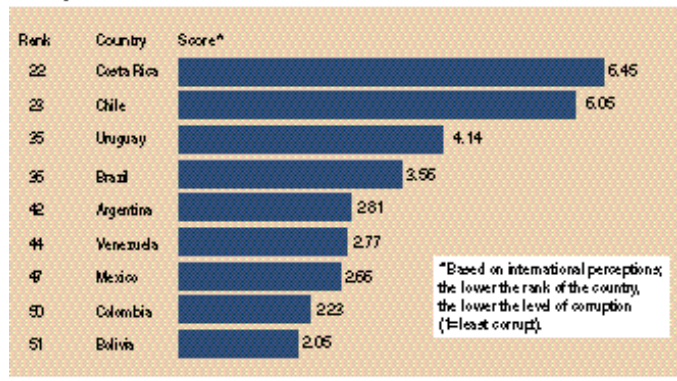

When the instruments of coercion land in the hands of groups other than the government, communities are subject to still more arbitrary and personally motivated interests. An informal sector parallel to government institutions exists at lower levels throughout society in Latin America. Entire towns or portions of large cities do not exist on official government maps or tax rolls, having sprung up from squatters' rights movements on unused government or private land, e.g., Brazil's *favelas* or Colombia's *tuburios*. These informal governments have all the trappings of a formal sector, such as police, justice, services, medical institutions, transportation. In some parts of Colombia, Mexico, and Peru, insurgents and drug mafias have replaced the state as the governing authority. Drug barons have penetrated these countries' political and legal institutions to the point where they virtually form a "state within a state," fostering relations with the local government or providing the populace with housing and social services. However magnanimous the acts of these groups are, these self-appointed leaders were not democratically chosen by the people. Rather, they have insinuated themselves, using large quantities of money, operating with relative impunity, and using the "law of the jungle" to dispense their largesse and justice.

One unfortunate result of these systemic and insidious problems is that governments attempting to democratize are foundering. Their chronic inability to stop the escalation of violence and corruption has led to their legitimacy being increasingly brought into question. Not only must a government be constrained in its ability to carry out its policies by a constitution and the rule of law, and thereby held accountable for its actions; it must also fulfil the first duty of government--to maintain order. Equality and liberty, the essentials of a liberal democracy, can be exercised only in the presence of a peaceful social order.

When the state loses legitimacy, the government begins to fracture along personal or familial lines where persons or parties jockey for position and control over diminishing resources. Such loyalties, in turn, take precedence over the commitment to public policies, even the constitution, diverting the energy and attention of those working in the public realm to a free-for-all.

Foremost consideration must be given to building on and preserving existing law and legal institutions. Antiterrorist policies in liberal democracies should not involve reprisals against segments of the population thought to be sympathetic to outlaws. Governments that respond to violence by using indiscriminate force will not only be resorting to the same practice as the terrorists but also strengthening whatever support the outlaw groups may enjoy. Security forces and police or military units given the task of combating violence should be closely monitored to ensure that they operate within the law to whose defense they are committed. Civilian control must be retained over their activities through executive policy, legislative oversight, and judicial constraints. All these are necessary: no one or two will suffice.

But all is not gloom and doom. NGOs have sprung up throughout the hemisphere, demonstrating the strength of democracy through grass-roots movements to demand proper governance. The call for opening or liberalizing party systems is strong, raising the hope and expectation that democracy is not merely a periodic fad. Optimism is moderated by a healthy dose of realism. Democratic rule is bucking 500 years of authoritarianism, a tradition that will take more than a decade to overcome.

Corruption Index (1997)**Civil-Military Relations**

Source: Transparency International

Implicit in the suggestion of increased oversight of the region's armed forces is the concept of civilian control over those forces. Latin America does not have a tradition of balanced civil-military relations, as understood by the core. The regional tradition of vesting the armed forces with the role of "savior of the state" and "guarantor of the constitution and the people's rights" flies in the face of the core definition of civil-military relations based on civilian supremacy and guidance, two factors marginally present in or completely absent from most of the hemisphere. Most of the region's armed forces are charged by national charter to be the final arbiter of state sovereignty, with a mission of preserving order from all threats, foreign and domestic, at the expense, if necessary, of the civilian government. U.S. guidance to increase professionalization--that is, to emphasize technical expertise, organization, and training in the arts of war--has been interpreted as increasing emphasis of traditional missions, including the military operating politically in a praetorian manner, taking power as an unaccountable political broker maintained through the use or threat of force. The standard answer of the Latin American militaries has been that they are indeed professional and always have been.

The trend in civil-military relations has been slowly changing as the militaries grow more comfortable with the concept of not retaining responsibility for guiding civilian governments, but the absence of civilian expertise on security issues remains a major problem. U.S. pressure to subordinate authority to the civilian government may succeed in form but not function, unless civilian expertise and guidance increase markedly. Thus far, not one defense policy in the region has been issued from a civilian ministry of defense or the presidency. The case of Argentina is illustrative: after five years of consecutive reductions in the defense budget, the Menem administration has yet to provide a defense policy on which the ministry of defense can base a credible reorganization to match what amounts to an 80 percent budget cut. Colombia's situation is worse; it is fighting a war on at least three fronts with no stated defense policy from either the ministry of defense or the civilian government. In a sense, past experience is at fault. Authoritarian regimes in Chile, Argentina, Paraguay, and Uruguay wrote defense policies later used to justify "dirty wars" and other depredations on the civilian population. This experience provides a disincentive for either civilian governments or military institutions: civilians fear a repeat of the misuse of such policy, and the military fears a repeat of the justice imposed after the fact for doing what it considered the ruling elites' dirty work.

EZLN insurgents in Mexico

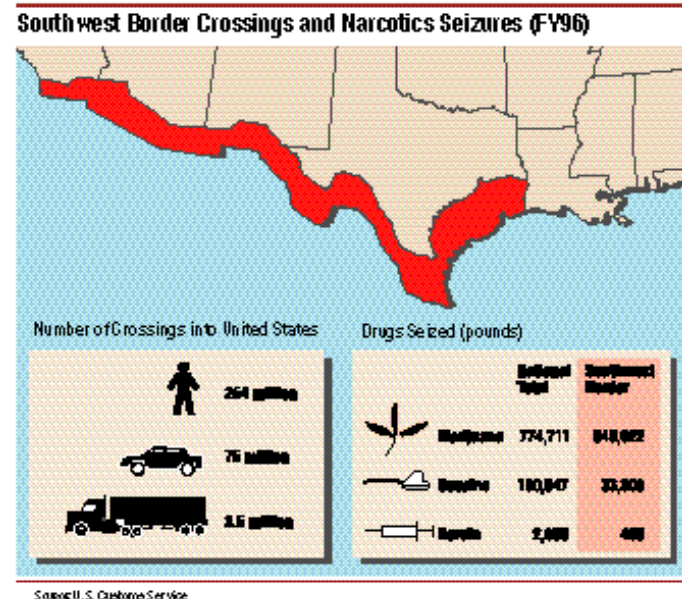

There is no strong trend in the hemisphere toward improving civil-military relations, other than the inertia of getting used to dealing with each other in an environment of liberal democratic governance. Civilian demands to reform the military to curb human rights abuses negate the inability of the civil sector to reform the capacity of judicial systems for oversight or justice. Military complaints of civilian ignorance of defense issues is negated by the habit of ignoring civilian oversight or guidance. An optimistic scenario is for inertia to continue uninterrupted so that time can heal past wounds. In this area DoD can exert diplomacy, playing a key role as a model establishment, guiding by example, as well as providing training and education to both military and civilian personnel working on security issues. Brazil and Chile have produced "white papers" on security issues, an unprecedented step for the region. These papers' existence, together with an increase in the volume and quality of academic fora debating security issues, provides evidence of progress in improving civil-military relations, and more should be encouraged.

Drug Mafias

The illegal drug market long ago achieved stability and, in some cases, saturation, and that situation is unlikely to change any time soon. Without a major change in counterdrug policy and methodology, the only measurable change in the market will be in methods of smuggling or in market taste. There are indications that cocaine is no longer the drug of choice; heroin and synthetics have been making headway against "king coca." But the basic market forces are the same and the risk factors and smuggling methods remain almost static, while the profitability of synthetics provides the only dynamic change, as different suppliers and smugglers rise and fall with their success or failure in capturing market share.

Thus far, the switch to synthetics has assisted the Mexican mafias' rise in importance, based on proximity to the United States and ease of production. Colombian mafias have increased their market share of the heroin market, while U.S. producers have retained or gained some of the marijuana market. Extra-hemispheric groups are making inroads into the business almost in direct proportion to the loss of control by the Colombian groups. Nigerian, Russian, and Asian groups have begun to compete strongly for large shares in the smuggling and distribution networks. This dispersion of the market makes it all the more difficult for U.S. counterdrug forces (including DoD) to mount sustained successful interdiction.

The making of drug policy in the Americas, north and south, has to date been characterized by reactive and incremental initiatives. Decisions made during crises (including political crises or elections) are often not the best solution for resolving problems. States where illicit drugs are produced and transited in many cases make drug policies based on domestic pressure (e.g., labor unions, indigenous rights groups) and on retaliatory violence perpetrated by organized criminals. The result has been "quick fixes" (e.g., the certification process or nationalistic reaction to U.S. policy, transit vs. source interdiction operations, eradication) rather than long-term planning.

The primary security threat within the Hemisphere is international crime (e.g., arms and drug trafficking). DoD is not well suited to

resolving these threats, which are best dealt with through issue-specific multilateral or bilateral frameworks where the military has a supportive role. These frameworks should be judicial in nature, with strong law enforcement cooperation. Continued assistance to Latin America in developing professional judicial systems and law enforcement throughout the region is paramount.

Canada as a Transit Zone

The increasing problem of drug trafficking largely by Southeast Asian, Eastern European, and Middle Eastern criminal groups through Canada has been largely ignored. Criminals have managed to gain Canadian passports under the Immigrant Investor Category requiring them only to invest in Canada and employ Canadians, guaranteeing them a Canadian passport or Landed Immigrant Status. The Royal Canadian Mounted Police (RCMP) maintains a post in Hong Kong to check the credentials of all migrants, although severe budgetary cutbacks hamper its efficiency.

Organized crime groups in Hong Kong and Taiwan have traditionally trafficked in heroin from the Opium Triangle (Laos, Cambodia, and Viet- nam) and are increasingly using the unprotected border the United States has enjoyed with Canada for the past century. Vancouver has become a focal point for these Asian Triads for the redistribution of heroin destined for other parts of Canada and the larger, more lucrative U.S. market. The Canadian Government, in its cost-saving measures, disbanded the Vancouver Port Police, leaving the task of patrolling Canada's most important Pacific coast port of entry to private security agencies and the already overworked and under-funded Vancouver Police. These private security firms have been involved in illicit contraband scandals; future use of the port as an entry point for illegal narcotics is only likely to increase.

Many criminals find that access to the United States is as easy as declaring the intention of going "shopping" for the day. Law enforcement officials have worked hard to coordinate efforts with the different police agencies in Canada, but diminishing resources on both sides hamper these efforts (e.g., the closing of the Drug Enforcement Agency office in Vancouver).

Toronto and Montreal also have become important transit points for drugs from Eastern Europe and the Middle East. Again, while the RCMP has been attempting to stop the flow of narcotics by cooperating with agencies in Europe and Interpol, its budget is well below those of well-funded, organized criminals.

Diplomatic pressure must stress the point that more cooperation among law enforcement agencies will go far in upholding Canadian sovereignty in the long run. The current trend of using Canada as a transit point for illicit drugs pushes that country into the drug war more than it wishes, even to the point of harming the important trade between it and the United States, and perhaps permanently damaging the good relations the two countries currently enjoy.

Hemispheric Security

The trend in the United States is to think of hemispheric security as an over-arching framework (e.g., continuing or expanding the Defense Ministerial, improving the Inter-American Defense Board, or developing a new organization), but at the same time there is a trend also toward avoiding such comprehensive efforts, increasing subregional integration, and creating ad hoc groupings to deal with specific, time-limited issues.

From the Latin American viewpoint, the asymmetrical balance of power in favor of the United States has obstructed and will continue to hinder the formation of any multilateral military organization, for fear that the United States will dominate it. In a collective security framework such as the Rio Treaty or a cooperative framework such as the IADB, member states cede to that organization a measure of autonomy in military decisionmaking. States in the region have long viewed the military as a nation-building force and the final arbiter of national sovereignty, and they closely link national autonomy to national sovereignty. This link creates an almost insurmountable obstacle to the creation of coalition forces and implementation of the concept of shared command. An overarching multilateral framework in Latin America would be seriously undermined by the need of U.S. military strategy, because of its global responsibilities, always to reserve the right to act unilaterally. Military leaders throughout the hemisphere demand a similar right, thus reducing the credibility and effectiveness of any multilateral security organization. But the *idea* of a multilateral organization such as the OAS is attractive to Latin America, to reinforce international law and provide the possibility of a unified front against overwhelming U.S. influence.

Perhaps the most that can be accomplished is to strengthen subregional groupings. Latin America strongly adheres to the principle of nonintervention and respect for national sovereignty and has approached conflict resolution through limited military action, most involving only observers. During the Dominican Republic crisis of 1965, Latin American states viewed the OAS Inter-American Peace

Force as a multilateral disguise for U.S. unilateral intervention. Since then, the only missions to include a substantial number of Latin American forces have been UN peacekeeping and enforcement operations, such as the UN observer missions in El Salvador and Central America. OAS participation was most successful during the 1969 Soccer War but reverted to minimal activity during the coups in Haiti (1991), Peru (1992), and Guatemala (1994). Even after the strong solidarity demonstrated by the Declaration of Santiago (1991), the OAS resorted to generally ineffective political or economic action, eventually ceding authority to the United Nations.

Differing strategic and threat perceptions undermine U.S. efforts to form a collective security framework. Although U.S. military strategy involves reorienting traditional Latin American defense strategy away from a Cold War focus and toward cooperative security missions such as peacekeeping and counterdrug efforts, Latin American senior officers view these missions as secondary to protection of national borders and sovereignty. The political will might exist among the civilian leadership, but in nations where the military has gained a high level of autonomy and self-sufficiency, the military's prerogative to defend the nation's sovereignty cannot easily be changed. Military officers throughout the hemisphere (including the United States) have publicly expressed the feeling that multilateral operations within the region or outside (e.g., Croatia, Crete, Sinai) potentially weaken the military's ability to respond to primary security roles.

Naval Coalition Exercises

The navies of Latin America have led the way in establishing military-to-military contact, because they can do so without raising nationalistic issues such as sovereignty and constitutional bans on foreign military forces within state boundaries. The most successful coalition operation has been UNITAS, now in its 38th year. A U.S. Navy task force circumnavigates the continent, conducting bilateral or multilateral operations, practicing navigation, underway replenishment, gunnery, search and rescue, and occasionally missile-firing exercises. Similar naval operations include DRAGAO (Brazil, Argentina, Uruguay, and South Africa), ARAEX (Brazil and Argentina naval air), IBEREX (Brazil, Argentina, and Spain), Fuerzas Unidas (United States, Mexico, Guatemala, Honduras, and El Salvador), GREY GHOST (United States and Argentina), and FLEETEX exercises between the United States and Chile.

A major factor in the success of UNITAS is the absence of sovereignty issues, given that exercises take place in international waters. Were a method for adapting the UNITAS concept to army or air force exercises available, it could enhance military-to-military relations dramatically. But armies and air forces need land, which raises the sovereignty issue that so far has precluded anything more than occasional, temporary bilateral exercises.

Argentina, Brazil, and Chile have employed bilateral negotiations and confidence-building measures to diffuse any possible conflict. They have engaged, or have planned to engage, in bilateral military exercises: Brazil and Argentina have conducted joint naval exercises since 1976 and recently began joint peacekeeping and air force exercises; Chile and Argentina will conduct their first joint military exercises in 1998.

Shaping the Strategic Environment

Promoting Confidence

The best way to enhance regional confidence is to provide coherent, stable policy guidance and remain continually engaged in Latin America. At the same time the global role of the United States means that its strategic and security interests lie elsewhere. The concept of Latin America as a geopolitically secure area is still valid: as long as there is no overarching threat or lots of conflict, there is little reason to direct much DoD attention there.

Chilean submarine *Thompson*

The region's history has demonstrated that states will ultimately resort to resolving problems through ad hoc groups involving only the affected states. Such groups can be disbanded when their objectives have been met, leaving behind no framework that the United States (or anyone else) could use to push a unilateral agenda. Current security threats are localized and therefore viewed differently throughout the region. Localization can render attempts to create a formal multilateral organization ineffective owing to traditional concerns for sovereignty. Consensus will be

reached only on the lowest common denominator and thus will produce an insufficient response to security problems. Without a common definition of what constitutes a security problem, frequent defections occur, further eroding consensus.

The solution is to concentrate on improving bilateral relations throughout the region while encouraging ad hoc groupings based on shared or common interests. Specific issues, which will probably be decided by events, are likely to include counter-drug operations (one group for source countries such as Colombia, Peru, Bolivia, and Mexico, and three groups for transit areas, including the Caribbean, Central America, and South America) and counterinsurgency (Colombia and its immediate neighbors). Other missions include containment of state failure (Colombia and its immediate neighbors and Haiti, Cuba, and their Caribbean neighbors), and border conflicts (Military Observer Mission, Ecuador-Peru, or MOMEPE). The principal difference between what currently exists and what is proposed here is that ad hoc groupings, unlike overarching multilateral or bilateral arrangements, dissolve after the primary mission or objective has been met.

Although the United States has been reluctant to use current defense structures to address security issues in the hemisphere adequately, it has leeway for guiding the debate on security and influencing policy outside of these structures. Defense diplomacy need not be hemispheric in nature: it is possible to secure the U.S. objective of cooperation and stability through bilateral relations alone. But neither option is necessary, as experience has shown a hemispheric preference for subregional groupings with a mutual-interest agenda and short duration. U.S. policy, with a history of sporadic, short-attention-span incursions in the region, would need little to adapt to this style. For instance, defense diplomacy could focus on the Southern Cone to stress hemispheric cooperation in a global context (e.g., the free-trade area of the Americas by 2005). No comprehensive hemispheric policy need be written for counterdrug issues when only the Andean region is involved. The Caribbean is not cohesive either, and as a region for policy could be divided into at least three groupings: Cuba, English-speaking, and drug transit zone. Central America, too, lends itself to division because of states' different experiences and security requirements. Under this type of defense diplomacy, a need to work toward gradual coordination of defense interests, policies, and cooperation would be unnecessary. Such coordination would be required only among states (or militaries) with similar conditions and interests.

Revolutionary Armed Forces of Colombia (FARC) insurgents

That does not mean there is no use for forums such as defense ministerials, in which all parties coordinate general guidelines and debate broad-brush issues of general mutual concern. Moving relationships within the hemisphere to a more mature level will require the *patrón* to give up his absentee status and actually lead, where necessary, in a role the United States is naturally capable of filling. But security policy does not need to be conducted at the hemispheric level.

Diplomacy can be used to encourage bilateral agreements and promote confidence-building measures to foster understanding and to prevent regional conflicts. Joint exercises, like UNITAS, those taking place among Argentina, Brazil, and Chile, and those planned in Central America under the aegis of the Conferencia de Fuerzas Armadas de Centro America, should be encouraged. They will increase policy transparency and prepare neighbors for joint action, should the need ever arise.

Creating Complementary Capabilities

For ad hoc groupings of mutual interest to work, the armed forces of participant states must work well together, if not combine forces outright. In this respect, Latin America is closer to the Asian model of cooperation than to the European model. Interoperability is always a desirable objective to pursue in the hemisphere, though hard to justify in the absence of a unifying threat.

The principal reason for interoperability is to be able to combine complementary forces during operations conducted for mutual benefit, which include counterdrug actions, peacekeeping operations, containment of state failure, or border wars. Reduced defense budgets make shared responsibility for security an attractive option, although the current orders of battle in most cases require scrapping existing forces and buying new ones. As attractive as that is to weapons manufacturers, the initial driving force (budget reductions) precludes interoperability through replacement. Thus a longer term approach is needed.

The new U.S. policy on high-tech arms sales in Latin America will initially benefit U.S.-Chile relations (through the possible sale of F-16s) but in the long run will benefit the United States and its friends in South America by increasing interoperability through the simple expedient of selling them U.S. systems. Critics argue that such sales undermine security by providing expensive systems that answer no specific external threat and yet increase the strength and economic power of the military. But as the armed forces modernize through new acquisitions (based on domestic requirements), the United States will assist in creating complementary capabilities and enhancing ad hoc coalitions. Mutual trust will increase, because high-tech sales indicate a willingness to trust the armed forces of the region to use such materiel in a manner consistent with core values.

Promoting Defense Reform

The critical defense reform in Latin American countries is in civil-military relations. Governments need assistance reconciling a strongly held corporate tradition in defense and military affairs with an unfamiliar, liberal tradition more supportive of democratic norms. A key factor in supporting a transition is the competence of civilian officials with defense responsibilities in the executive and legislative branches of government and in the private sector. Aside from demonstrating the subordination of militaries to civil authorities whenever possible, U.S. defense capabilities need to become associated with regional engagement. Examples include the education of military officers and defense civilians at the Inter-American Defense College and the Center for Hemispheric Defense Studies, technical assistance establishing tailored defense management structures (use of contractors), and DoD-sponsored events (staff talks, conferences, seminars) in the region to facilitate civil-military dialogue.

Defense Expenditures

Source: International Institute for Strategic Studies, *The Military Balance 1997-98*

A major deficiency is Cuba, where currently DoD is precluded from direct engagement. An indirect approach is needed, possibly using defense diplomacy by encouraging or financially supporting core partners to interact with Cuban officers, such as attending their professional schools and increasing U.S. participation in expanded multilateral operations or projects.

Fora for debating security commonalities at all levels, such as the Inter-American Naval Conferences, the Defense Ministerial, Conference of American Armies, and Conference of American Air Forces, should also continue to be encouraged. The IADB should continue its role as an important organization for cooperation, consultation, research, and advice to the OAS on security issues. All these fora will help create a sense of trust among neighboring military establishments, which will foster a friendly environment in the hemisphere for U.S. forces, if ever required.

Using Force

Because of the history of forceful intervention in the region, the projection of force in the hemisphere is a tough topic to tackle. There are, nonetheless, specific situations in which the use of U.S. forces could be brought to bear.

Contain expansion of instability

This scenario involves two situations: a loss of sovereignty and the war on drugs. Should Colombia's future involve the loss of state sovereignty to insurgents or transnational organized crime, it is feasible that U.S. assistance would be sought to resolve the situation. But the call may not come directly from Colombia: instability along the borders could spill over to neighboring states, to the point where a coalition could be formed to either contain the fighting or assist government forces in regaining control from the FARC, ELN, or drug mafias.

Policy to combat the traffic in illicit drugs requires a comprehensive multifaceted plan to predict possible outcomes and alternatives. Relying on reactive policy to combat the problem (e.g., measuring success in terms of price and seizures) will not produce a solution. For example, counter-drug agreements take years of laborious diplomacy and negotiation, but a fluid criminal trafficking group can alter its transportation and routes in mere days. More attention is needed to international cooperation, mutual legal assistance in criminal matters, extradition to a third country, and harmonizing legal systems. The posturing of sovereign governments contributes to a mentality of "form over function" and should be avoided.

This could be accomplished by training crime-fighting units to use common operating procedures, to recognize that the enemies of one are the enemies of all, and to harmonize command structures. NATO was an efficient vehicle for combating Cold War enemies; a similar

structure would not be difficult to achieve to fight the common enemy in the war on drugs. Nationalism and diplomacy must be set aside in order to acknowledge that the new threat is transnational criminal groups and that only concerted, planned policy initiatives will bring about their demise.

Patrolling the Border

DoD is increasingly under pressure about its policy of patrolling the 2,000-mile border with Mexico. Along the border the military has assisted by providing a force 170 personnel, conducting over 3,000 operations since 1990. The military's role to date includes operating listening posts to assist the INS Border Patrol in tracking drugs and migrants, building fences and barriers, repairing roads, and assisting law enforcement agencies in counterdrug operations.

Congress has proposed legislation authorizing the deployment of up to 10,000 troops to the border, but following a shooting incident in May 1997, when a marine shot and killed a young boy, DoD cut operations. It is a difficult mission for DoD, because the basic problem is one of law enforcement, not military operations. Yet law enforcement routinely finds itself confronting smugglers who have better weapons and greater manpower, which leads to requests for military support.

As the drug war continues to increase in complexity, so, too, will DoD support for law enforcement. The Navy is involved in Caribbean and Pacific operations but could be called on also to assist the Coast Guard in patrolling all the coastlines in search of sea and air infiltrators. This would involve writing rules of engagement for confrontations, possibly involving lethal force (e.g., shooting down aircraft that do not respond to requests for identification). Ground forces could be called on to support increased border patrol operations not only along the Mexican border but also the Canadian border, as smuggling routes change to meet the challenges presented by increased patrolling elsewhere.

Control damage in Cuba

The principal scenario for force projection in Cuba involves a loss of state control caused by a sudden change in regime structure. In other words, Fidel Castro loses control or dies, causing a violent war of succession. The United States could be sucked into the power vacuum, most likely in a peacekeeping role, to separate warring parties and provide stability throughout a period of adjustment.

Contain damage of state failure

This scenario is a repeat of the 1994 involvement, restoring order from the chaos to which Haitian politics are wont to descend. As in the case of Cuba, the DoD role would be to separate the warring parties and provide stability so that other forces may work on restoring governance. This scenario would involve a heavy humanitarian component, providing food and clothing to the populace while the economic sector regained enough control to re-establish market forces.

Dramatically increase presence

The role of DoD in protecting the U.S. border by means of what is essentially a policing function remains highly debatable, but it is one that policymakers must at some point consider seriously if the effectiveness of the war on drugs is to be sustained in the future. The current emphasis on source and transit stage interdiction is not a complete plan, and stopping drugs at the border has not been effective. The drug smugglers are too sophisticated, fluid, and well armed for the existing border interdiction programs: DoD is an attractive option to policymakers to task with confronting this threat. This scenario involves using DoD assets to patrol all the U.S. borders (Canada, Mexico, the east and west coastlines, Puerto Rico, the Virgin Islands).

Conclusion

The Americas continue to be a region of tremendous potential for cooperation and coordination of mutual interests, ranging from economic (integration, expansion of trade), to governance (democracy, civil-military relations, human rights, migration), to security (border conflicts, insurgency), to nonstate threats (drug mafias, arms trafficking). Most trends associated with these interests are on a positive path in relation to U.S. strategic goals. Economic integration and expansion are on the rise; democratic governance is at record highs; strategic security interests do not threaten sovereignty anywhere in the region. Only the nonstate threats have produced cause for worry. Nevertheless, these trends are relatively weak. U.S. and Latin American policies related to issues of mutual interests do not always coincide; policy responds primarily to domestic pressure, resulting in self-serving or introspective rather than realistic solutions to problems or threats.

Corruption and different definitions of governance also work against mutual interests; although the rhetoric matches, practical application of policy often runs counter to the intention of laws and governance.

Thus, policy and reality are often in contradiction. Although in the past the United States has chosen to ignore the contradictions between law and practice inherent in the corruption in the region, the increasing regional integration makes it difficult to continue turning a blind eye.

Security policy has changed dramatically in recent years. Gone are the days requiring a coordinated, hemispheric policy. Gone, too, are the days of requiring a global mission from the regional military. Today's security policies concentrate on national priorities, to a great extent ignoring global or nonstate threats in favor of an increased emphasis on border disputes and domestic threats, not issues of interest to or involvement for DoD. These changes require a change in thinking, because they involve increased communications and coordination throughout the region, in the form of defense ministerials, conferences, and issue-specific liaison.

These changes also mean a new type of engagement in the region, one that emphasizes ad hoc, subregional groupings, instead of an overarching security framework. Dealing with the four principal threats requires engaging DoD assets or resources and must be approached with a new paradigm involving new actors or groupings:

- Resolving the problem of state failure in Haiti will mean working with Haiti's neighbors (Venezuela, Dominican Republic, and Cuba), rather than invoking an OAS or UN force
- Dealing with increased regional instability in Colombia will involve Venezuela, Ecuador, Brazil, Peru, and Panama
- Dealing with the increased crisis of governance in Mexico will primarily be a bilateral issue, although Canada may be engaged through the NAFTA mechanism
- Confronting the nonstate challenge posed by illegal drug mafias will require two groupings, one involving source countries (Colombia, Mexico, Peru, Bolivia, and the United States), the other involving transit states and subregions (Venezuela, the Caribbean, Canada, Mexico, and Central America).

1998 Strategic Assessment

Engaging Power for Peace

CHAPTER EIGHT

Sub-Saharan Africa

The United States views Africa today as a marginal security problem. No state or combination of states in Africa poses current or foreseeable threats to its key interests. Nor, with the end of the Cold War, is there a need to build coalitions against unfriendly external actors. Africa is of limited strategic importance to the United States. However the region's turbulence and recurrent crises, which have produced horrific violence and abuse of the local populace, demand frequent, costly external intervention. A sustained strategy for helping Africa cope with problems of conflict and underdevelopment is sorely needed to enable the continent to pull itself out of the misery and poverty besetting many of its countries. Action is needed there to continue to curb international terrorism and the growth of international trafficking in narcotics, but whether the international community has the political will, or willingness, to commit resources and mount serious efforts to attain such objectives in Africa is not clear.

U.S. Interests

During the Cold War, U.S. strategic interests in Africa were linked to pressures outside the continent, from the Soviet Union and the Middle East. The collapse of the Soviet Union eliminated concern over Soviet incursions (especially in central and southern Africa) and reduced the need for active measures to protect sea lines of communication in the Atlantic and Indian oceans; the shift to satellite communications has eliminated the need for communications posts in north and east Africa; and since the Gulf War, new agreements with Saudi Arabia and other states have moved the forward positions protecting Middle Eastern oil fields from east Africa into the Middle East itself. The absence today of major strategic threats or requirements offers an opportunity to focus on the true issues in Africa: basic survival, food security, peace, quality of life, and economic growth. The absence of vital interests does not in any way reduce the importance of historical, economic, social, and humanitarian interests in the African subcontinent.

Cementing Core Values

The main U.S. interest is to help Africa build stable, prosperous democracies that generally follow Western political and economic models and that will be open to and be major participants in international trade and investment. Attaining this general objective would enable the United States--and core partners--to meet their own national and commercial goals of expanded trade and investment, which include access to Africa's tremendous natural resources, in particular, minerals and oil. To focus on helping Africa accelerate its development, the United States would first need to address problems of security and stability, starting with the destabilizing activities of rogue states in Africa.

Containing Rogue States

Africa has had more than its share of rogue states, but the troublemakers have generally not posed serious, direct threats to U.S. security. Libya has been an exception, with its combination of support for terrorism, chemical weapons program, and military interference in neighboring states, but as those activities have diminished in recent years, the threat has dissipated. At present, continuing support of terrorist organizations and activities by the Sudan regime and the spread of international trafficking in narcotics through the ineptitude or

connivance of the Nigerian regime constitute the only threats to U.S. security. More generally, the fundamental and enduring interest of the United States lies in containing rogues so they will not frustrate the progress of neighboring states attempting to pursue policies more in line with those of the core.

Keeping Transition States on the Right Path

Military Personnel: Sub-Saharan Africa (1975-96)

Source: United Nations and International Institute for Strategic Studies, *The Military Balance, 1997-98*

Transition states need support to make sure they get on (or stay on) the right path. They need firm, detailed, and consistent attention by the international community working in concert to minimize unhelpful deviation and to prevent the emergence of new failed states, which would only destabilize their regional neighbors.

Removing the Causes of Failure

Immediate, mid-, and long-term efforts to promote stability and security on the African continent are needed to end the endemic violence that frustrates development, creates conditions ripe for humanitarian disaster, and sometimes leads to new failed states. Conflict, planned and spontaneous, is the main enemy of political, social, and economic progress and remains widespread in Africa. Africans acknowledge this and want to put an end to it, yet there is no end in sight. Indeed, for many African states, achieving security and stability remains the top policy concern, taking precedence over all other objectives. The region desperately needs international assistance in this effort.

It is in the U.S. interest to address the root causes of failed states and humanitarian crises in Africa for several reasons. The American public is concerned that the people of Africa are poorly served, which increases public pressure on DoD to intervene. Such intervention after a crisis is more expensive--in terms of dollars, political capital, and human life--than averting one in the first place.

Evacuees from Liberia in Sierra Leone

Current Trends

No Decisive Socio-Economic or Political Trends

Africa today is in a state of high ferment. Strategic, political, economic, and humanitarian trends across the continent vary; more crises, more explosions and implosions, and yet new opportunities will undoubtedly occur as events cascade in unpredictable and sometimes breathtaking ways. For now, although there are promising signs, it is too early to claim that Africa is firmly and finally embracing Western core values and institutions. In some countries, the promotion of democratic practices and economic reform leading to new growth are apparent; in others, democracy and economic reform lag. As yet, there are no decisive political and economic trends across the continent.

Tottering Rogue States

One of the major regional rogues in Africa, Mobutu's Zaire, was overthrown during 1997, and there is hope that the new regime can turn the new Democratic Republic of Congo onto a proper path as a transition state. Nigeria, with its antidemocratic practices, human rights abuses, and economy in collapse from corruption and mismanagement, is still a potential rogue, but the presidential election and return to civilian government planned to occur in 1998 may put it on the path to democracy and economic recovery. Sudan is the third major regional problem, and it arguably already has fallen into the category of rogue, owing to internal abuses, continuing support for terrorist groups, links to other rogues, and interference in the affairs of most of its neighbors. Containment of Sudan and encouragement of eventual installation of a responsible regime that would correct the abuses remain high priorities for the United States. Sudan's economic difficulties and recent military reversals in the south at the hands of the Sudanese People's Liberation Army indicate the possibility of a change in regime for the better in the near future.

Most Transition States on the Right Path

Sub-Saharan Conflicts (1980-96)

Source: Adapted from Barry and W. Cooper, *Africa's Wars and Prospects for Peace*

South Africa is both a state in transition and the pivotal state in southern Africa. The generally peaceful transition to a post-apartheid era has been encouraging, and a relatively smooth transition to a post-Mandela era is expected, in spite of concerns about possible rifts in the civil service and security services. The economy remains in the doldrums, with lagging foreign investment, making it difficult for the government to deliver on promises to expand social services to the disadvantaged sectors of society. The issue of the economy could prove explosive in the next national elections. Crime, particularly domestic and international narcotics trafficking, has grown to threatening levels. In general, however, South Africa remains a major success story. If it can raise its growth rate a bit, it could play its anticipated role as economic anchor for the entire subregion.

Other important transition states in Africa are Angola, the Democratic Republic of Congo, Mozambique, Liberia, and Rwanda. With the possible exception of the Democratic Republic of Congo, all these states appear to be moving away from war and economic collapse toward peace and development, although only Mozambique's transition is far enough along to seem relatively secure. Kenya may soon be added to the list, if its regime fully accepts the need to liberalize and democratize rather than pushing the country further into civil disorder, even conflict. Thus, on balance, most of Africa's states and societies in transition warrant a cautious optimism.

External Influence Declining

Some failed states in Africa--Somalia, Sudan, and possibly Sierra Leone if the current Nigerian-led intervention to oust the junta and restore democratic leadership falters--are still in decline and threaten to persist as regional rogues. Suffering in these cases has been great, from such basic humanitarian disasters as starvation and genocide to civil disasters such as harsh political repression and the imposition of martial law by failing regimes. Elsewhere in Africa, even though many nations wracked by violence seem to be emerging from crisis and getting onto the right track (e.g., Liberia and Rwanda), the long-term requirements for continuing international technical and financial assistance are substantial. The international community, however, exhausted by long and expensive efforts to deal with these regional crises, seems to have developed a severe case of compassion and donor fatigue that threatens to undermine essential efforts to support reconciliation and reconstruction in Africa.

In the face of continuing turmoil there, a tendency has developed for external actors--the United States included--to disengage from Africa's crises and yield the initiative to African actors. The United Nations has been reluctant to launch new UN operations, as is the United States to offer troops for African interventions. Even France has announced a new policy to reduce its security forces in Africa and to stop intervening to resolve political and security crises of its client states. Since the 1980s, funds for military assistance have nearly dried up, and funding for developmental assistance has fallen very sharply. Increasingly, external actors are encouraging African states to create enabling political-economic environments to attract private investment, emphasizing that private capital will need to replace the substantial official aid flows of the past.

C-141B taking off from Brazzaville, Congo

Africans Addressing Their Own Problems

The hesitation of the international community to deepen its engagement in Africa defies the reality of turmoil and humanitarian disasters expected to persist in various forms across the continent. In some cases the disasters are natural, such as subregional drought. In most cases, however, the cause is human violence, and no downward turn in the scale of that violence is in sight. Throughout the 1990s, Africa has been plagued with 20 or more violent conflicts per year, many with the potential to drag down political institutions of states affected and sink their economies. As mentioned, the most serious problems are those of the subregional giants, Nigeria, Sudan, and the Democratic Republic of Congo, whose fortunes--for good or ill--will profoundly affect developments throughout those subregions.

Lessening tangible international support and growing disagreement on many policy issues have led more and more African states--including those giants, Nigeria, Sudan, and the Democratic Republic of Congo--to ignore Western advice and suggestions for dealing with their political and security crises, whether advice is advanced through official channels or humanitarian and NGO channels. Focused violence has newly emerged as a tool to end abuse, anarchy, and tyranny. A new coalition of hard-eyed proto-democrats, having brought

substantial stability by force of arms to Uganda, Ethiopia, Eritrea, Rwanda, and Angola, are eyeing tyrannical, chaotic, or meddlesome neighbors for possible corrective action. This aggressive tendency by new regional power brokers--already manifested in bringing the Congo (Brazzaville) civil war to an abrupt end--has left the West divided and in confusion regarding policy.

Night operations, Somalia

Emerging Mechanisms to Deal with Disasters

The international community--sometimes taking the lead, sometimes supporting African efforts--has begun to develop coping mechanisms to identify, head off, or minimize the effects of recurrent crises and disasters. Considerable progress has been made in developing effective early-warning systems to predict and help prepare for natural disasters, particularly famine from drought. Most notable has been the U.S. Agency for International Development (USAID) Famine Early Warning System (FEWS), which collects data from 16 African countries considered susceptible to famine as well as from the UN's Food and Agriculture Organization and the National Oceanographic and Atmospheric Administration's Meteosat satellite, which orbits over Africa. Combining the collected meteorological, agricultural, and market data, FEWS publishes a monthly report updating the food security situation in vulnerable populations; that information is then used to devise appropriate responses for heading off or dealing with crises.

A number of African states are beginning to build an indigenous capacity to deal with humanitarian and other crises, to avoid the need to rely on external forces. In 1991, a summit of Heads of State and Government of the Organization of African Unity (OAU) acknowledged in its final communique that "there is a link between security, stability, development and cooperation in Africa." Leaders at the summit recognized that the problems of security and stability in many African countries had impaired their capacity to achieve the necessary cooperation to support regional integration and long-term socioeconomic development. Shortly after, OAU launched a program to encourage the prevention and resolution of conflicts. The program has dispatched monitors and observers to Burundi, Somalia, Liberia, Comoros, and has set up a Conflict Resolution Center within OAU headquarters in Addis Ababa.

Several African subregional organizations have taken on the task of planning and coordinating security matters. The Southern Africa Development Community (SADC) is by far the most advanced in capabilities, and in 1996 it established the SADC Political, Defense, and Security Organ to consult about and monitor crisis situations. In summer 1997, forces from SADC countries conducted a major training exercise--*Blue Hungwe*--in Zimbabwe, with technical assistance from a team of British military advisors. The lead has been taken, however, by the Economic Community of West African States (ECOWAS), which in 1990 authorized the creation and dispatch of a sizable all-African force, ECOMOG, to Liberia, where it has stayed. Although dominated by Nigeria, and limited in mission mainly to keeping the warlords out of Monrovia and some other coastal cities, it contributed to the stabilization of the situation and the conduct of the recent elections, won by Charles Taylor. In east Africa, the Inter-Governmental Authority on Development (IGAD) is seeking to mediate a peace agreement in Sudan, an on-again, off-again process. In each instance, the security function of this subregional organization was grafted onto an organization and charter that originally had a narrower politico-economic focus--a tendency that may be considered both a conceptual and political breakthrough for Africa.

Transition Outcomes in Sub-Saharan Africa (1997)

Shaping the Strategic Environment

The Goals

The main U.S. goals in Africa include ending violence (wars, genocide, human rights abuses), promoting stability and security (robust democracy, trade partnership), and averting the need for costly humanitarian interventions. A serious attempt to shape the environment in Africa to these ends would require the kind of total and massive U.S. Government initiative which has not been seen since the 1960s. Public and legislative support for such a comprehensive, multi-agency program probably is not attainable, but a more modest effort, imaginatively and actively pursued, may be possible. Specific goals include:

- Averting or minimizing conflict
- Fighting international terrorism, with special attention to Sudan
- Stemming narcotics traffic, with special attention to Nigeria and South Africa
- Supporting African capabilities to maintain peace and security
- Promoting defense reform.

Resources

Available forces

The United States has no forces--troops, ships, or aircraft--stationed in Africa. Its only ground presence there consists of about 200 Marine guards at U.S. embassies, and fewer than 100 defense attaché, security assistance, and other technical personnel. Only two small aircraft are stationed in sub-Saharan Africa to support DoD activities. Yet the United States has repeatedly shown it can deploy forces to Africa quickly when needed, usually to conduct a noncombatant evacuation operation (NEO) but also for humanitarian or peacekeeping tasks. Except for Somalia, such deployments have generally been small and brief.

Africans are well aware of--perhaps even exaggerate--the strength and reach of Washington's military forces. Although the main components of U.S. military power (power projection, lethal firepower, robust forces) have marginal day-to-day relevance, the reality of U.S. power offers a check on the behavior of rogues or would-be rogues. Recently, Washington's obvious and growing reluctance to make peace in Liberia, Somalia, and Rwanda has seriously eroded the credibility and thus the effectiveness of such a check. For actual and potential friends and allies, the important question is, why is the United States unwilling to use its assets to be more helpful on the continent? African militaries are well disposed to benefit from professional collaboration with the United States and can appreciate advanced information technology and joint doctrine. As a model defense establishment, the United States is highly valued, and, when

offered, its advice, training, and assistance are usually well received. But Africans are puzzled and, in some cases, resentful that when an African crisis looms, the United States is increasingly a source of diplomatic advice but only rarely a source of military assistance.

Two components of force structure are of particular importance and assure that Africa remains of interest while also providing a considerable cadre of well-informed Africa specialists: U.S. European Command (EUCOM) and 3^d Special Forces Group at Fort Bragg. EUCOM has become an invaluable intellectual locus for the development and conduct of the DoD program of military activities in Africa. The special forces make available a standing, quick-reaction force with training and advisory as well as extensive operational experience on the ground in Africa. When operational deployments are required, however, the usual response force is made up of U.S. Marines from the Mediterranean or the Persian Gulf, depending on the location of the crisis. Special operations personnel also are frequently involved, although not necessarily from 3^d Group. For humanitarian missions, different forces or specialized units are required, which usually deploy from the United States, with necessarily much longer timelines.

EUCOM Area of Responsibility: Sub-Saharan Africa

The U.S. force structure to pursue national objectives in Africa is generally adequate for peacetime activities and more than adequate for any war or combat operations--although a serious lack of defense attaché presence on the ground must be noted as a persistent and troubling gap in recent years. As in other troubled parts of the world, operational tempo at times makes mustering the technical personnel and units (psychological operations, civil affairs, engineers, military police) difficult, not because of a shortage--quantitative or qualitative--of forces, but because of the political will needed to commit them and the financial support needed to cover the costs of such international operations.

Programmatic resources

The United States has diverse but often austere resources to work with in Africa. Most peacetime activities needed to address the root causes of Africa's insecurity are civil, primarily foreign aid and international financial assistance. But the level of grants and loans for traditional foreign aid is declining, and many overseas USAID offices have been closed or merged into regional offices. The bulk of remaining aid resources tends to be drained off into emergency and humanitarian assistance, with only small amounts available for developmental projects. Some funding is available for special activities in counter-terrorism and counternarcotics, but it has been used sparingly. Policymakers and aid specialists seem to hope that the private sector will pick up the slack, and major efforts have been made to convince both Africans and corporate interests that the role of trade and investment should be greatly expanded in Africa, even as official development resources disappear. Skepticism about the limits of this approach has often been voiced.

DoD, for its part, has units, programs, and activities that pursue its goals in Africa. These might be characterized as high quality and low capacity, because of either an absolute limit in capability or in the amount that can be directed toward African affairs. For policymakers and planners, assets of note include:

- Concerned CINCs. EUCOM has the major role; other force providers include CENTCOM, ACOM, and PACOM
- Special Forces. The key contributor is 3^d Group at Fort Bragg; other personnel are engaged in exercise or operational modes; SOCOM follows Africa closely
- The West African Training Cruise is conducted annually by the U.S. Navy
- The DoD Humanitarian Assistance Program contributes or transports excess humanitarian supplies to needy African nations on an "as available" basis
- The Foreign Military Financing (FMF) and Foreign Military Sales (FMS) programs, administered by the Defense Security Assistance Agency (DSAA), provide cash sales and grant transfers of defense equipment and services, although the scale is tiny

- The International Military Education and Training (IMET) program, also administered by DSAA, provides professional military training for hundreds of African personnel annually, usually in the United States
- Expanded-IMET (E-IMET) emphasizes the professionalization of foreign militaries and their responsiveness to civil control in the context of responsible, democratic government. E-IMET courses, both in CONUS and on the ground, include specialized training by personnel from the U.S. Naval Justice School, the Naval Post-Graduate School, and the Defense Equal Opportunity Management Institute
- Occasional security assistance funding for peacekeeping and conflict-resolution efforts includes the African Crisis Response Initiative to build a peacekeeping capacity in selected African battalions and, since 1994, assistance to the OAU Crisis Resolution Center in Addis Ababa
- Under consideration is the establishment of an "African Center for Security Studies," modeled somewhat on the Marshall Center in Germany. Its focus would be similar to that of the E-IMET program, but with courses for key military and civil leaders with responsibilities for defense matters.

Operation Restore Hope, Somalia

Strategic Approaches

International community

To succeed in Africa, a challenge for the United States is to work closely with its core allies (mainly European) and with the United Nations. Close coordination with the ex-colonial powers--with which many African states have important and intimate ties--is particularly essential. For DoD, there is a specific need to draw on the doctrine and efforts of the United Kingdom, France, Scandinavia, and others in the common task of helping African states build their capacities to engage in humanitarian and peacekeeping interventions. Without such international cooperation and coordination, developing either a coherent approach or sufficient resources--monetary or political--for Africa is unlikely. The development and continuation of broad political and public support for Third-World initiatives are both heavily influenced by the perception that responsibilities are in fact shared within the international community. Such close coordination would also require focusing U.S. efforts, possibly through an interagency oversight mechanism. This would reduce redundancy, increase efficiency, and provide policy cohesion on which international policy coordination could be based.

Long-term multiorganizational approach

Africa's problems require complex, long-term approaches. Many essential activities will remain strictly in the civilian domain, including active preventive diplomacy, the development of civil society, and advice and assistance (as well as pressure, if necessary) to achieve political and economic reforms. A key aspect of this strategy would be to provide strong links with the United States and other members of the international community to Africa's political, military, economic, and civil society. Such activities would require a substantial, long-term commitment of both resources and leadership. Given the complex, multiorganizational (including public and private sectors) nature of the effort, new forms of coordination, information exchange, and orchestration would be needed.

Focus on major powers

Regional Issues in Managing Conflict

| Level of conflict | Major policy preoccupations* | Specific regional concerns |
|---------------------------|--|--|
| Normal conflict level | Using regional economic cooperation and integration to attain the long-term goals of conflict management | Reducing conflicts inherent in: <ul style="list-style-type: none"> ■ Choice of strategies and organizational frameworks for regional cooperation ■ Economic polarization ■ Unustainable crossborder labor movements ■ Production of regional goods ■ Sharing of natural resources |
| Escalating conflict level | Different parties to a conflict endeavor to have regional economic allies | <ul style="list-style-type: none"> ■ Factional arming and provisioning of parties to conflicts ■ Supporting conciliatory efforts aimed at forestalling escalation into violent confrontation |
| Violent conflict level | Ensuring the availability of adequate economic resources for purposes of the confrontation, including: <ul style="list-style-type: none"> ■ Repair, replacement, or expanded supply of arms ■ Provisioning of food, medications, and other essential materials | <ul style="list-style-type: none"> ■ Coping with problems of refugees ■ Reducing the supply of materials that fuel conflict ■ Supporting peacekeeping and peace-observing activities ■ Supporting peace-brokering activities |
| Reconstruction phase | <ul style="list-style-type: none"> ■ Ability to show material benefit, actual or prospective, to the demand-bearing constituency ■ Maintaining the potential to revert to violent conflict | <ul style="list-style-type: none"> ■ Supporting post-chaos activities, notably refugees, resettlement of displaced persons, military demobilization, and infrastructural rehabilitation ■ Military conversion ■ Supporting sustained peacekeeping and peace-observing activities |

*Viewed from the standpoint of the state and other domestic demand-bearing groups.

The United States cannot pursue a coherent policy that will give equal practical weight to the fortunes of each of the 48 sub-Saharan African states; instead, it will need to focus on key states and regional powers. These are not identical, and unfortunately, most of the major continental powers are not in a position to serve as subregional leaders. Although there are many examples of encouraging progress in the smaller countries, only one of the major regional powers--South Africa--is on the right track. Several others--especially Nigeria, Sudan, and the Democratic Republic of Congo (Africa's most populous, largest, and most mineral-rich countries, respectively)--are more correctly categorized as rogues than leaders, and all are spectacular failures. Further, instead of being able to work with these subregional powers, the United States has either opted for confrontation (Nigeria, Sudan) or initially chosen to remain aloof (the Democratic Republic of Congo). Consequently, it has had to look for other possible regional leaders and of necessity seems to favor Ethiopia for east Africa and perhaps Ghana or Côte d'Ivoire in west Africa. No suitable substitute for the Democratic Republic of Congo exists in Central Africa, although Uganda may prove a candidate because of its current political stability and strong economic growth; however, Uganda remains on the fringe of the area, focused more on relations with eastern rather than central Africa.

In dealing with Africa's successful regional leaders, the fundamental interests for the United States are to solidify gains and prevent backsliding. These nations have achieved relative political and economic stability, providing models for other African countries, and have the potential to become both catalysts for regional growth and helpful allies of the United States on the continent. Washington's announced desire to develop Africa as a major market for U.S. goods will tend to be implemented first in the larger or stronger and more stable states.

Loading supplies at Accra Airport, Ghana

In the 1990s, U.S. political involvement with South Africa has been substantial, and special initiatives taken will expand the role of the American private sector. Although military engagement has been slow to develop, recent important developments have tended to draw the two armed forces closer, including the July 1997 establishment of a Defense Committee to the Binational Commission chaired by Vice President Gore and South Africa's Deputy President Mbeki. Washington has made it clear that it has a substantial interest and will invest heavily in promoting South Africa's long-term development. For the other major powers that may become positive regional leaders, U.S. interests are more immediate and starker. Specifically, these include creating "soft landings" for Sudan and Nigeria as they

struggle to promote democratic and representative government, and supporting a successful transition in the troubled Democratic Republic of Congo. For the moment, however, the U.S. approach is necessarily focused more on trying to shape the behavior of rogues and potential adversaries.

Curb potential adversaries and rogues

Setting aside the special, continuing problem of Libya, Africa's rogues are all sub-Saharan: Sudan, Nigeria, and the just-ousted junta of Sierra Leone. Although several other states are in or near collapse or even failure (Somalia, the Democratic Republic of Congo, Congo-Brazzaville, Burundi), only these three rogues have been in open defiance of the international community as they continue their various depredations on their own citizenry. In Sudan, the problem takes on immediacy for the United States because of the regime's continuing support for international terrorism. Nigeria is an urgent case because of its extraordinary involvement in international narcotics trafficking, both directly and through intermediaries (including South Africa), which may thus become more deeply and dangerously involved.

So far, the international policy approach--consisting mainly of diplomatic dialogue and the threat or actuality of limited sanctions (limitations on issuance of visas, restricted military relations, air travel restrictions, some financial restrictions)--has not proved successful in changing either the thinking or behavior of any of the rogue regimes. Sudan is now faced with an increase in U.S. security assistance to several of its neighbors, which are involved in border conflicts and providing support to the Sudanese People's Liberation Army fighting against the Sudanese regime. At the time of this writing, the rogue regime of Sierra Leone has just been ousted and the elected President reinstalled by a dramatic military intervention led by Nigeria--a fresh reminder that occasionally military force will be required when diplomacy and sanctions fall short. Whether the positive effects of this intervention will persist despite continuing resistance by junta forces, and whether the Nigerian action will improve its standing with the broader international community, remain to be seen. In any case, actions against Nigeria have been mild, such as suspension from the Commonwealth. Given Nigeria's power and influence, the international community is not likely to increase pressure for substantial change.

The international community thus faces a crisis of self-confidence and credibility in attempting to deal with Africa's relatively few but dangerous rogues. Tough talk and weak sanctions have not succeeded and perhaps have only heightened defiance. Political support for either harsh sanctions (such as an oil embargo and a total freeze on investment and commerce) or military interventions is unlikely--even against a regime as weak as Sierra Leone. With official aid resources in decline, there is little prospect of substantial positive incentives to offer. This leaves diplomacy with neither carrot nor stick, a formula for continuing frustration and possibly failure. Clearly, new thinking is needed, as well as approaches carefully designed for each unique situation. Also clear is that U.S. military muscle has no immediate relevance to these problems, although the possibility that a provoked United States might take some limited military action puts some bounds on state behavior; this is probably most important in the case of Sudan.

U.S. and Belgian medics, Brazzaville, Congo

Avert crises and conflicts

Crisis and conflict will probably remain pervasive in Africa for years to come. Immediate, short-term efforts to try to avert, minimize, or terminate these disruptive affairs are needed. Some helpful mechanisms are emerging, addressing natural disasters (particularly famine) and providing early warning in order to plan emergency humanitarian relief efforts. Other mechanisms (especially at the OAU) address manmade crises, including early warning and plans for action.

The main problem in Africa is the huge discrepancy between required and actual African capabilities to confront crises. For necessary humanitarian activities, the international community can still be counted on generally to provide the essential response (food, medicine, transport, technicians). But when mass violence is present, recent events raise doubts about the willingness of this community either to intervene early and decisively or to stay the course when violence strikes at peacekeepers and humanitarian operations. A partial answer would be to help build and improve African competence and capacity for dealing with such violence. This is particularly necessary for conflict resolution and peacekeeping: although basic technical capacity needs to be built at the state level, organizational and political capacity for crisis management needs to be established at the levels of the United Nations, the OAU, and the subregion. The tendency is growing within the international community to view and treat African disasters as African problems that should be left to Africans for solution, despite occasional expressions of moral outrage at, for example, genocide in Rwanda. Africans therefore need to be assured that measures aimed at capacity building are not inspired mainly by a desire for international disengagement.

The African Crisis Response Initiative

In 1996, the United States proposed this initiative, to build capacity, through military training at the battalion level, for peacekeeping operations under Chapter VI of the UN Charter. Six countries (Ghana, Mali, Malawi, Ethiopia, Senegal, and Uganda) have so far agreed to participate, and training by 3^d Special Forces Group has been completed in Senegal, Uganda, and Malawi. Accompanying the training, limited amounts of equipment are donated, primarily communications gear, so that future deployed forces will be able to communicate horizontally and vertically across the force. In due course, preparations may be made to identify the components of a force brigade headquarters with all its specialized supporting units and staff

sections. Or, owing to bureaucratic and political sensitivities, this task may be left to other organizations or initiatives, or to the Africans to do for themselves. The hard questions will come still later: when, for what purpose, with what mission, for how long, and by whose authority (and funding) would the force, with its component battalions, actually be deployed?

DoD Contributions

Threatened and occasional use of force

Coping with Africa's disorder and stagnation will usually be attempted through active diplomacy and assistance for long-term development, but from time to time, sanctions and at least the credible threat of force will be required. In that sense, DoD must always be alert to events in Africa, for it is here that U.S. forces are most often deployed operationally, albeit generally on a small scale. The likely missions include NEOs, supporting or leading humanitarian or peacekeeping missions, and shows of force against a (temporarily) hostile African power.

Such activities are unusual. The use of force is quite common in Africa and is likely to remain so over the next decade. Certainly, most of the rogues and trouble-makers of Africa have shown little tendency to submit to anything except the use, or credible and immediate threat, of force. The source of that force has changed in the 1990s, and for the near future it is likely to be Africans themselves using force, rather than accepting the settlement of disputes through the intervention of French, American, mixed, or even UN forces. In any case, whether the force is African or external, the U.S. military will sometimes have a key role on behalf of the Nation.

Beyond careful observation and analysis and planning and directing occasional operational deployments, sometimes eventuating in the use of force, DoD can affect the military environment in Africa mainly by focusing on building capacity and shaping regional security forces and institutions.

U.S. trainer in Uganda

Building local capabilities

The elements needed by Africans to build and support their capabilities range from supporting specific peacekeeping and peacemaking operations at all levels to building conflict-resolution capabilities. These capabilities can be found primarily at the level of the OAU and several subregional organizations and include initiatives to build technical and managerial skills and unit and staff capacity. Two specific U.S. initiatives, listed below, are of interest for what they have already accomplished or targeted and for the models they offer for future initiatives:

- \$11,650,000 in financial support for the development of the OAU Conflict Resolution Center (1993-97)

- The African Crisis Response Initiative (ACRI) to build capacity, at the battalion level, for peacekeeping operations.

Such initiatives must be strongly encouraged. Funded only modestly up to now, they could well serve as the basis for expanded programs in the future. Helping Africans to prepare to help themselves, then helping them fund and execute specific missions, should be a central component of a new U.S. approach to Africa in the late 1990s and beyond. The African Crisis Response Initiative would not be merely a matter of building military capacity but, more important, of enhancing confidence on the part of the Africans that they have both the tools and techniques to handle most of their problems. This point, it should be emphasized, does not represent a desire in the West to disengage and leave the Africans to their own devices. Rather, emphasis would fall on the mutuality of responsibility and the cohesiveness that a common approach, with common doctrine, will lend to future combined operations.

U.S. forces in Somalia

Shaping institutions and promoting reform

A broader but perhaps more critical objective, for which DoD has the lead, is to encourage and shape African security institutions to embrace Western concepts of military professionalism and the role of the military in a democratic society. To a large extent, the effectiveness of shaping African military institutions is not possible to measure. In contrast, one of the most effective techniques may be one-on-one, military-to-military contact, in which Africans can observe and experience the commitment of U.S. military personnel of all ranks to professionalization, democratic practices, and respect for human rights. This kind of contact involves participation in combined exercises or operations (including peacekeeping), observing U.S. forces in operations or exercises, and exchange programs (including these between military educational institutions).

Training, whether under IMET, E-IMET, or as part of exercises with Special Forces teams deployed to Africa, is another powerful tool, but one with a cumulative impact that needs time to mature. Because it emphasizes professionalization and values, E-IMET should be particularly effective over time, especially for reaching senior ranks, and should promote such aspects as civilian control of the military, the military as guarantor of the constitution, respect for democratic processes and for the rule of law, preservation of human rights, and removal of the military from a country's economic life.

These programs are intended to encourage defense reform measures, to improve the behavior of the military toward the populace, and to curb irregular and corrupt financial practices endemic to both civil and military sectors. If the proposed African Center for Security Studies comes to fruition, it will underscore all these efforts, because it will be dedicated to and focused on professionalization and on principles governing military conduct in a modern democracy, and it will be available to serve the most senior levels of Africa's military institutions.

Given the low cost and long-term potential impact of these programs, all deserve to be supported energetically and imaginatively for the foreseeable future. Realistically, however, great changes should not be expected in the near term, because changes in attitude and behavior, which often may go against ingrained earlier training and experience, may therefore be profoundly countercultural. The difficulties inherited and now experienced by the new government of the Democratic Republic of Congo offer a poignant case in point.

Qualities of U.S. Power Accentuated in Africa

Conclusion

Africa provides a difficult but not at all hopeless case. Positive as well as troublesome forces are at work. The need now is for the international community to face Africa's problems squarely and, working in concert with emerging regional leaders, to develop and pursue sound, long-term approaches. Washington's main interests in Africa are not great, but attaining them would have substantial political and economic benefits, be consistent with humanitarian values, and eliminate the need for frequent wasteful and often bloody interventions.

Given a sustained commitment, and using programmatic and force structure elements already in place, DoD could play a leading role in a national effort to help Africa achieve stability and security and, given such stability and security, to implement sustained development. The U.S. military could also play an important role in encouraging Africa's critical security institutions to assist and support the emergence and preservation of an environment in which democracy and human rights are broadly and sincerely observed.

With such achievements, within another generation Africa could be a far more peaceful and productive continent. Absent that level of stability, the typical DoD mission in Africa would in all probability be the evacuation of noncombatants during a crisis.

Strategic Assessment

Engaging Power for Peace

CHAPTER NINE

Major Theater War

The ability to respond to operational military contingencies is the keystone of American defense policy. This chapter assesses the capability of U.S. forces to fulfill the Quadrennial Defense Review's (QDR) requirement of a posture to excel at combat operations and thereby prevail in contingencies liable to be encountered, especially major theater wars (MTWs) against rogue states.

Although risks undeniably exist, U.S. forces today offer confidence in their capacity to fight and win wars. Because of adequate size and high quality, they are superbly effective at operating on the modern battlefield. Current threats may be less severe than in the Cold War, but now is no time for complacency. Existing contingencies could pose serious challenges, and tomorrow's threats may be more dangerous than today's. U.S. forces must remain ready for near-term wars while constantly improving so they can win future conflicts. As argued elsewhere in this volume, the capacity to win MTWs is not the only consideration in U.S. defense strategy but it would require the United States to use force in order to achieve decisive victory.

Current U.S. Forces

In the event of war, American military strategy calls for decisive operations aimed at quickly defeating the enemy, attaining key political-military objectives, and minimizing casualties to U.S. and allied forces. The QDR calls for sufficient forces to handle two MTWs in distant theaters in overlapping time frames, in addition to many kinds of operations other than the event of two MTWs. For example, large forces are needed to carry out normal peacetime operations--including peace support missions and limited crisis interventions--in the three theaters of Europe, the Persian Gulf, and Asia. Similarly, sizable forces would be needed to wage a single MTW while also meeting normal requirements in the other two theaters. U.S. defense strategy is more complex than only being prepared for two MTWs, and U.S. force requirements are judged accordingly.

Principal Combat Forces

The QDR retained a force posture similar to that adopted by the 1992 Bottom-Up Review (BUR). This posture is about two-thirds the size of the Cold War posture and costs less than the big defense budgets of the late 1980s. The QDR cut overall DoD manpower by about 8 percent: active military personnel is to be 1.36 million by 2003; one Air Force wing will be shifted to reserve status; 35 Navy surface combatants and submarines will be retired; and up to 12 Army National Guard brigades will be eliminated, while other brigades will be transferred to logistic functions.

These combat forces are supplemented by important support assets. Army divisions are backed by large combat support (CS) and combat service support (CSS) units--at corps and higher echelons--which provide such essential services as artillery, helicopters, supply of ammunition and petroleum, oil and lubricants (POL), maintenance, and engineers. Air Force fighter wings are similarly supported by aircraft that perform several missions (e.g., command and control, reconnaissance, electronic warfare, and defense suppression). Navy carrier battle groups are accompanied by an underway replenishment group of logistics ships. These support assets play an unseen but critical role in making U.S. forces strong.

Why U.S. Forces Excel

Some observers may question whether the QDR has chosen the right force posture, but practically no one quarrels with the notion that U.

S. forces excel at carrying out combat operations and waging war. Why is this the case? What accounts for their military excellence? Clearly, the pillars are good people and effective technology, but even excellent personnel must be organized and used effectively. Excellence is relative. Today's forces may suffer shortfalls and deficiencies, yet they are better at modern combat operations than their potential enemies. The future challenge is to preserve and enhance excellence.

Principal Reasons for High Quality of U.S. Military

- Ability to project power globally
- Superior intelligence, planning, and information dominance
- Capacity for joint and combined doctrine
- Ability to wage decisive battlefield campaigns using modern operational concepts
- Robust forces with balanced assets and component strength

Attributes of High Quality

U.S. forces are large enough to meet warfighting requirements postulated by the QDR but not far larger than everybody else's. The United States has a large military posture and defense budget to meet global responsibilities, but in numerical terms its forces do not dominate the military balance in the three key theaters. Other countries have large forces; indeed, recent enemies have made a specialty of assembling quite large forces. In peacetime, the principal effect of U.S. forces is to shift regional balances at the margin in ways that have a high-leverage, stabilizing effect. In wartime, U.S. forces can concentrate, but even so they ordinarily aspire to defeat the enemy not by swamping it with large numbers but by outfighting it. Their excellence thus is not based on quantity but on quality. The following attributes account for this quality:

Global power projection

U.S. defense strategy is focused on protecting overseas interests and requires *the capacity* to project military power to key theaters. The United States has a good power-projection capability because of major improvements since the 1970s. Four reasons account for this capability. First, large U.S. forces are deployed in three theaters on a peacetime basis: 109,000 personnel in Europe; nearly 100,000 in Asia; and 25,000 in the Persian Gulf. U.S. overseas combat forces total eight Army and Marine ground brigades, six and a half fighter wings, three carrier battle groups, and three Navy Amphibious Readiness Groups (ARG) or Marine Expeditionary Units (MEU). This presence provides not only deployed combat forces available on short notice in key locations, but also well-developed military infrastructure and reception facilities. Initial defense operations can begin almost immediately, and reinforcements from the continental United States (CONUS) can begin to contribute on arrival in these theaters. The effect is to reduce vulnerability to surprise attacks while enabling the United States to amass large forces for decisive operations within a few weeks or months, not years.

The second reason is that most U.S. forces in CONUS are designed for overseas expeditionary missions. They are equipped with strong combat forces and large logistics assets that allow them to deploy overseas on short notice, operate for lengthy periods in austere environments, engage in intense combat, and conduct a full spectrum of defensive and offensive missions. No other nation has configured such a large portion of its military for this purpose. Indeed, most focus on their immediate regions and, consequently, can deploy only small forces (e.g., a single brigade or division, one to two air wings, and a few ships) far beyond their borders. The United States surpasses all of them in expeditionary capabilities.

The third reason for U.S. power-projection capability is that it has strategic mobility forces. These are important because of the vast tonnages that must be moved in deploying large forces: e.g., a three-division corps has thousands of vehicles and can weigh nearly a million tons. Without good mobility, moving large forces overseas would be very time consuming. Although current U.S. mobility assets may still suffer from shortfalls in some areas, even so they can deploy forces overseas far more rapidly than 10 or 20 years ago.

Mobility assets come in the form of pre-positioned equipment, intertheater airlift forces, and sealift forces, each important in the mobility equation. The United States has sizable pre-positioned assets in the three theaters: 10 ground brigade sets ashore and afloat, plus fuel and ammo stocks for ground and air forces. Its airlift forces include 314 heavy military transports backed up by civilian transports. Sealift forces include about 100 DoD-owned cargo ships plus access to commercial ships. Provided these assets are available, the United States could deploy a force of two to three divisions, four to five air wings, and one to two carriers to a distant overseas location within one to two months. Within several months, it could move virtually the entire available U.S. force posture of 13 divisions, 24 fighter wings, and 8 to 10 carriers. Further, it could distribute these forces among several theaters or concentrate them all in one.

The fourth reason is that the United States enjoys control of the air and sea lines of communication to the three key theaters--control

provided in part by U.S. forces and in part by allied forces. In Europe, for example, NATO allies provide military bases and escort forces as support for transit through the Mediterranean toward the Persian Gulf. In the Persian Gulf and Northeast Asia, allies provide local air defense and sealane defense for arriving forces. In consequence, enemy forces would be hard pressed to interrupt the flow of U.S. forces to key theaters threatened by war.

This capacity for global power projection is the foundation of defense strategy and all other capabilities are built on it. The United States is a Western Hemisphere nation faced with the task of protecting interests in three widely separated theaters in the Eastern Hemisphere. It is also a maritime nation that must be able to conduct demanding continental campaigns in each theater. Power projection allows the United States to be an effective superpower in Europe, the Persian Gulf, and Asia at the same time.

Intelligence, planning, and information dominance

U.S. Strategic Forces

| | |
|------------------|-----|
| Land-Based ICBMs | 550 |
| Heavy Bombers | 110 |
| SLEMs | 422 |

Note: U.S. posture combine strategic forces that, while smaller than during the Cold War, are important to the deterrence equation.

Large operations require intelligence, planning, and information dominance--areas in which U.S. forces excel.

Within the Pentagon, civilian and military staffs develop coordinated plans, programs, and budgets for each service component and theater. Regional commanders in chief develop operational plans (OPLANS) and associated time-phased force deployment data (TPFDD) for coordinating the flow of forces overseas. They also develop detailed campaign plans for employing forces in a variety of operations. The effect is to enhance the speed with which forces are deployed overseas and increase their effectiveness upon arrival. In addition, the U.S. intelligence community provides better information on each region than is available to any other nation, thereby giving U.S. forces an important advantage as they deploy and begin operations.

B-1 bomber

As has been the case since the late 1960s, U.S. forces enjoy information dominance because of superior C⁴ISR assets. No other nation comes close to matching the United States in these assets, in strategic terms or on the battlefield. New intelligence assets and digitized communications systems are accelerating information processing and increasing the speed with which far-reaching decisions can be made and complex military operations launched. Such data systems permit commanders to blend the operations of several divisions, wings, and CVBGs into a coordinated, swiftly moving campaign. They permit delegation of authority and initiative to lower echelons, enhancing force effectiveness. And they provide commanders with knowledge of enemy

forces and operations. The effect is to create major advantages in concentrating U.S. forces and using maneuver and firepower, increasing the likelihood that U.S. forces can win critical engagements decisively.

Joint and combined doctrine

Successful warfighting requires bringing the service components under the control of a single theater commander. The capacity to perform joint operations is key to combat effectiveness, because it means that separate service components can work together on behalf of a

common plan. Nations lacking this capability inevitably have weaker forces. Nearly all military establishments encounter trouble in trying to blend the operations of their land, sea, and air forces. The United States, although not immune to this problem, has by a wide margin made the greatest strides toward fostering joint doctrine, enhancing the capacity of its force components to work together. This progress started in the 1970s, when efforts were begun to better coordinate U.S. air and ground operations. In particular, air assets and operations were tailored not only to win the air battle but also to assist the ground battle. This emphasis on jointness has been expanded in the form of reorienting naval forces toward littoral operations. The Navy and Marine Corps now are increasingly capable of working with both the Army and Air Force in continental campaigns. For example, naval forces now perform air defense and deep-strike missions, and Marine units can operate alongside Army units in defensive and offensive operations.

Soldiers boarding C-130

The benefits of jointness were demonstrated in *Desert Storm*, when all three service components worked closely together to carry out a truly joint campaign. Critics point to the difficulties and deficiencies encountered, but, overall, the effort was a major success. U.S. forces decisively defeated a large, well-armed opponent with few losses to themselves. A victory this large would not have been possible in the past and was significantly influenced by joint operations. In particular, the early air campaign so eroded Iraqi forces that it set the stage for a sweeping ground campaign, which was conducted by the Army and Marine Corps working together and supported by the Navy and Air Force that speeded the advance.

The services currently have overlapping capabilities that foster joint operations. Critics charge that the effect is unnecessarily to inflate force requirements and have urged greater specialization of roles and missions as a way to trim budgets and forces. A common allegation, for example, is that the United States has four air forces, three air defense systems, and two armies when presumably only one of each is needed. If total assets match total needs, however, overlapping capabilities do not translate into unnecessary redundancy. Too much specialization may result in loss of jointness in ways that might sacrifice the synergy of all components working closely together. In earlier decades, the services specialized to the point of largely ignoring one another, to the detriment of their overall capability to wage war. The lesson of the recent past is that properly planned joint operations reduce, rather than inflate, force requirements, because they enhance force effectiveness. For this reason, emerging U.S. military doctrine emphasizes jointness.

The capability to conduct combined operations with allies and coalition partners is also quite important. It may determine the capacity of a multinational force to carry out a single, integrated campaign. U.S. forces are often viewed as operating by themselves, whereas in reality they work closely with foreign military forces in all three theaters. This is true not only in peace but also in crisis and war. In Europe, U.S. forces are embedded within the NATO integrated command and multinational formations in order to conduct a full-spectrum of missions. The Implementation Force/Stabilization Forces (IFOR/SFOR) mission in Bosnia is a classic example of a NATO operation in which the United States provided only about half of the forces or less. In the Persian Gulf, *Desert Storm* was a combined operation in which Arab and European coalition partners provided up to one-third of the total forces. Another Persian Gulf War might witness a similar pattern. In Asia, a new Korean War might find the United States providing only one-fourth of U.S.-ROK ground forces, albeit the bulk of air and naval forces. Recent developments suggest that Japan will have an increasing role in providing forces and bases to support the deployment of U.S. forces, thus increasing the emphasis on combined planning in Asia.

The trend toward combined operations is likely to grow in all three theaters, especially if global requirements increase while U.S. force levels are held constant or decline somewhat. Critics point to the problems and barriers that hamper progress. The capability for these operations has greatly improved in all three, but more needs to be done. In the future, one problem will be to encourage allies and partners to improve at power projection and to encourage the more willing to participate in missions in distant areas, so that the burdens will be fairly shared. Another problem will be how, as U.S. forces improve through the ongoing revolution in military affairs (RMA), they can remain interoperable and compatible with foreign forces. These are important challenges, but they are not reasons to scale back the combined planning compelled by military and strategic realities.

U.S. Combat Forces for MTWs (Illustrative)

| | Persian Gulf | Korea |
|-----------------------------------|--------------|-------|
| Army Divisions* | 5 | 5 |
| Navy Carrier Battle Groups (CVBG) | 4-5 | 4-5 |
| Marine Expeditionary Forces (MEF) | 1.5 | 1.5 |
| Air Force Fighter Wings | 10 | 10 |

*Ground deployments could be supplemented by 8 to 9 Reserve component, high-readiness brigades and other specialized assets.

Decisive battlefield campaigns

Success in combat requires mastery of the "operational art"--the ability to wage a decisive battlefield campaign that takes advantage of U.S. strengths and capitalizes on the enemy's weaknesses. This especially is the case when American and allied forces are fighting outnumbered yet must win quickly with minimal losses. This trend seems destined to accelerate as warfare becomes increasingly driven by agile forces, high technology, and swift operations. Most likely, victory will go to the side that can best concentrate forces through fast-paced maneuver and apply lethal firepower. U.S. forces are developing the new doctrines, weapons, and other assets that will allow them to increase excellence in this arena, yet enemy forces, too, have learned from *Desert Storm* and also will be improving.

A successful campaign requires the orchestration of many missions with many different forces, coordinated to have a strong combined effect in unraveling and defeating the enemy. Air forces must perform the missions of gaining control of the battlefield airspace, close air support destroying the enemy's air force and logistic support structure, and disrupting its efforts to reinforce front-line troops. U.S. ground forces must block the advance of enemy forces, destroy them through direct and indirect fire, and launch counterattacks to eject them from key terrain. Naval forces must seize control of key ports and waters, launch amphibious flanking attacks, and contribute air defense and strike forces to the battle. This combination of missions, conducted in synchrony at high tempo, is the basis of a successful wartime campaign.

Desert Storm demonstrated the professional skill that the Armed Forces have acquired. Improvement began in the late 1970s, when the emphasis in U.S. doctrine started to switch from linear defense and stationary firepower to nonlinear concepts, maneuver, and long-range fires. New weapons such as the Abrams tank, the Bradley infantry-fighting vehicle, combat aircraft with better avionics and munitions, and cruise missiles greatly aided this transition. In recent years, U.S. forces have begun to acquire new assets such as Joint Surveillance and Target Attack Radar System and Army Tactical Missiles (ATACMS) that allow them to fire deeply and effectively into enemy rear areas. The consequence is a steadily improving capability to blend nonlinear operations and deep strikes.

The QDR process and *Joint Vision 2010* called for using technological innovations and information superiority to help carry out four key operational concepts: dominant maneuver, precision engagement, focused logistics, and full dimensional protection. These concepts make effective use of existing weapons and prepare the way for new weapons and systems in coming years. The goal is to make U.S. forces even more effective at carrying out decisive battlefield campaigns against potential enemies who themselves will be improving.

Robust forces

Demanding battlefield campaigns and their missions can be successfully mounted only by robust forces. The more ambitious the campaign, the more robust must be the forces. Four pillars of strength are required: scale (i.e., sufficient numbers), readiness, modernization, and sustainment. Developing all four is difficult: most military establishments are strong in only one or two. U.S. forces today excel at all four.

Sufficient personnel is partly a product of mass: the presence of enough combat and support units to carry out the required missions in adequate strength. But it is also a product of balanced and diverse assets. For example, air campaigns require a mix of combat aircraft that can fly air superiority, deep strike, interdiction, and close-air support sorties. Ground campaigns require a mix of armored, mechanized, infantry, airborne, air assault, artillery, and attack helicopter formations. Naval campaigns require not only carriers but also other surface combatants (such as cruisers, destroyers, and frigates), submarines, and amphibious assault ships. The exact combination of required triservice assets will vary from one campaign to the next. *Desert Storm* was a classic armored battle, but a Korean War would include major infantry operations. An entirely different campaign might require fewer ground and air forces but more naval and marine forces. The U.S. force posture is marked by its diversity; it possesses enough forces to conduct almost any mission, or combination of missions, with considerable strength. It can carry out many different types of campaigns, a critical requirement for a nation with global responsibilities and many operating environments.

USS *Maine*

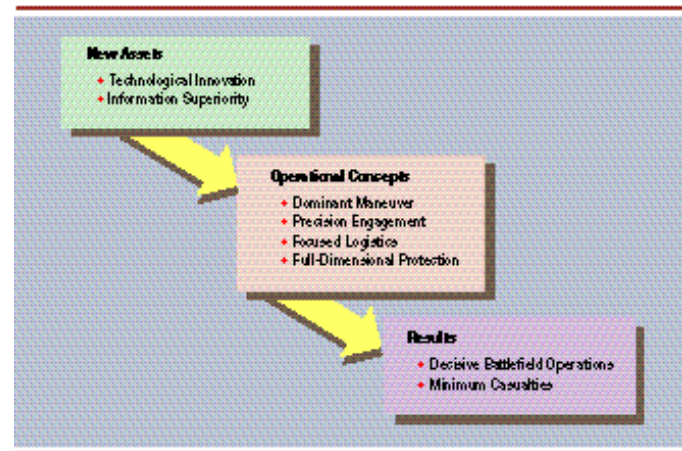

Readiness is a product of many factors: e.g., high-quality officers and enlisted personnel, full staffing by active troops, extensive training and exercises, well-maintained weapons, efficient procedures, and the capacity to operate at a fast tempo. Because U.S. forces emphasize all these factors, they have higher overall readiness than any other forces in the world. The consequences on the battlefield are immense. For example, Air Force and Navy pilots conduct training missions at an average of 220 hours per year. The NATO average is 170 hours. Air forces of potential enemies often train only about 50 hours per year. U.S. pilots are far better at flying the full spectrum of air missions and thus

better prepared to win the air battle decisively. Another example is ground operations. A U.S. Army heavy division can fire over 1,000 tons of ammunition per day, and its battalions can perform complex combined-arms operations at a high tempo. A typical enemy division might be able to fire and operate at only half this rate. These differences translate into U.S. dominance in ways numbers alone cannot suggest.

Modernization requires high-tech U.S. weapons and munitions that match or exceed those of an enemy in certain key features:

- Tanks will need high levels of firepower, mobility, and survivability
- Combat aircraft will need excellent range, payload, avionics, and maneuverability
- Ships will need to survive in a high-threat environment and to deliver lethal payloads at long ranges.

Since the early 1980s, when the defense buildup gathered full steam, U.S. forces have benefited from a sweeping modernization program that has given them the world's best weapons across the board. Critics debate the extent to which U.S. weapons are better than those of others--West European weapons are often of comparable quality--but *Desert Storm* suggested that U.S. models are superior to Russian-made weapons, more than had been realized. In recent years, the United States has not been acquiring new weapons in large numbers but has been developing better munitions, C⁴ISR assets, and other technologies. The effect has been to preserve a clear margin of superiority in overall modernization.

Sustainment is often overlooked as a determinant of power, but it ordinarily determines which side wins a prolonged slugfest and can be surprisingly important even in short wars of a few weeks. An air force that can fly each aircraft at a rate of one to two sorties per day for an extended period will have a large advantage over an enemy that can sustain fewer than one sortie per day. Similarly, an army's effectiveness is heavily influenced by whether it can supply its combat forces with fuel and ammo, repair damaged vehicles, keep roads open, and replace casualties with fresh troops. An army with capable assets in these areas will have the advantage over one less endowed. At the risk of simplifying a complex subject, U.S. forces are well known for their impressive sustainment. Some support assets may be too large, others too small, but specifics aside, the overall conclusion is that U.S. forces have better sustainment than almost any other military establishment.

Not One Factor, But Several

The reputation of U.S. forces for superb quality is due, therefore, not to any single standout factor but to several that work together cumulatively. U.S. forces excel today, but 25 years ago their readiness, modernization, and sustainment were by comparison low, and their strategic mobility assets were not nearly as capable. The huge transformation that took place in the intervening years is a product of adequate funding, careful planning and programming, innovative thinking, procurement of new technologies, development of new doctrine, and a great deal of hard work carrying out sweeping changes. These factors are the underlying reasons for the excellence of today's U.S. forces and they will determine whether they remain excellent tomorrow.

This qualitative superiority is not necessarily permanent. The effect of even minor changes in technology, doctrine, and training can be profound. For example, the ground battle could be transformed if enemies were to acquire new kinetic energy and high explosive, antitank (HEAT) munitions which could penetrate U.S. tank armor. The air battle could be transformed if enemies were to acquire air defense radars that could resist U.S. jamming and suppression and surface-to-air missiles (SAM) that could reliably shoot down U.S. aircraft. Enemy progress in developing better doctrine, higher readiness, and more effective structures also could narrow the U.S. margin of superiority. In the past, armies that triumphed in a war often found themselves defeated only years later--by the same enemy, who had learned from past mistakes. Vigilance is the best guarantee that U.S. forces will retain, and improve on, their excellence.

Dealing with Rogues

These U.S. military capabilities provide basic assets for fighting wars, but the exact manner in which they are used will depend on the specific situation. Excellence in combat operations does not in itself guarantee victory in war. Mounting decisive interventions to defend U.S. interests requires deploying to the scene with the right forces at the right time, and then employing them effectively. An MTW could occur in several places. The QDR called for a U.S. posture that can respond to expected events while preparing for the unexpected.

Tomahawk missile

Persian Gulf and Korea

The litmus test is the capability to win regional wars in the Persian Gulf and the Korean peninsula, where the possibility of conflicts exists today. How would U.S. and allied forces probably respond to these contingencies, and what would be the prospects for success?

Any attempt to examine these contingencies should take into account several factors that might affect the outcome: force commitments on each side, warning time, mobilization and deployment rates, strategy and doctrine, operational effectiveness, lethality of the weapons, and morale. Neither contingency can be viewed as predetermining a single, irreversible outcome. In each instance, many options are possible--for good or ill--but some are more probable than others.

In both theaters, the threats posed by possible adversaries are less severe (though potentially nastier) than a few years ago. Even so, were these contingencies to take the form of short-warning attacks, both could pose serious challenges to U.S. and allied forces. The principal requirement would be to mount an initial defense while rapidly deploying large U.S. reinforcements from CONUS. The principal risk

would be that some territory might be lost in the initial stages that might be hard to regain. Although U.S. and allied forces would probably win both wars, it might be after a costly struggle. Continued improvement to U.S. and allied forces, to reduce vulnerabilities in the initial defense, will reduce the risks remaining today.

F/A-18 firing Sidewinder missile

U.S. Commitments

This defense strategy is predicated on handling both these MTWs nearly at the same time. In all likelihood, only one war would erupt in any single moment, but, even then, the United States would be compelled to withhold sufficient forces to deter a second war, and to win should it occur. The United States would probably deploy only about half its available combat posture to each theater.

For both wars, separate or simultaneous, the outcome would hinge on the ability of U.S. reinforcements to deploy in a timely fashion. In event of a single conflict with no worry of a second one, U.S. mobility forces could be concentrated on that theater, thereby easing the task of responding. In event of concurrent conflicts, the task would of course be harder. But even then, U.S. air forces, light ground forces, and local naval forces could converge on the scene quickly. Larger forces would follow later, strengthening U.S. or allied defenses, or both. The principal challenge would be to defend successfully while such building is in progress.

Phases of Combat

In both contingencies, U.S. forces would join allied forces to mount a campaign likely to consist of three phases. Phase 1 would aim to halt the enemy invasion in forward areas and protect key assets and terrain features. Once the attack was halted, Phase 2 would be characterized by operations aimed at destroying enemy forces and pursuing related battlefield objectives while building large U.S. forces through reinforcement. Phase 3 would be a decisive counterattack aimed at destroying enemy forces, restoring borders, and achieving key political goals. In the aftermath, U.S. forces would withdraw in a manner reflecting postwar requirements.

During all three phases, U.S. forces would attempt to gain information dominance of the full breadth and depth of the battlefield. They would then employ the doctrinal principles of dominant maneuver, precision engagement, focused logistics, and full dimensional protection. Forces from all components would work together to carry out a coordinated, fast-tempo campaign of deep strikes and close engagements that take advantage of superior U.S. weapons and munitions. Using a combination of firepower and maneuver, their overall goal would be to fracture the enemy's cohesion and then defeat it.

A campaign depends on the war being fought. The Persian Gulf and Korean contingencies are similar in that both potential adversaries are medium powers that could pose short-warning attacks by large, well-equipped forces. But they differ in important ways. In the Persian Gulf, the terrain is flat and open; in Korea, it is rugged and closed. In the Gulf, an unyielding forward defense is a flexible goal; in Korea, it is imperative. In the Gulf, airpower and deep strikes would dominate the initial defense; in Korea, ground power and the close battle would dominate. In the Persian Gulf, U.S. forces would provide about two-thirds of the total ground and air assets; in Korea, they would provide only about one-third.

Data show that both Iraq and North Korea have enough forces to contemplate aggression with a multipronged attack. Their equipment may be less modern than that of U.S. forces, but it is serviceable, and both countries would enjoy numerical advantages over local U.S. and allied forces in the initial stages. Overall, the Persian Gulf contingency seems the more menacing, because so few U.S. and allied forces are deployed there in peacetime. But owing to Seoul's proximity to North Korea, war would pose serious dangers. Each conflict thus mandates an effective U.S. military response.

Although Iraq today has fewer forces than in 1990, its posture of 23 divisions and 316 combat aircraft provides enough strength for a well-

focused attack, assuming readiness is adequate. This posture permits a swift-moving, comprehensive offensive with limited but effective forces. In 1990, Iraq attacked with larger but ponderous forces, which paused at the Kuwait-Saudi border, giving the United States the time to respond. Since *Desert Storm*, Iraq may have developed better mastery of the operational art.

A Persian Gulf contingency might begin with a surprise attack by local Iraqi forces, but a full Iraqi mobilization would take days, allowing some warning. An Iraqi attack might aim not only to sweep through Kuwait but also to advance far southward in order to seize Gulf oilfields and major parts of Saudi Arabia. Such an attack would be conducted across flat desert. The initial battlefield would probably be up to 300 kilometers wide and 250 kilometers deep, but many Iraqi forces might be strung out in column formations on key roads. Iraq presumably would seek to rush southward, to defeat outnumbered U.S. and allied forces before U.S. reinforcements could arrive in strength, and thereby attempt to set the stage for a political settlement favorable to itself.

U.S. and allied defensive operations would be influenced by the open terrain, which invites mobile ground warfare and aggressive use of airpower. Because so few U.S. forces are ordinarily deployed in the Persian Gulf in peacetime, prompt deployment of large U.S. tactical air forces from CONUS would be key to Phase 1. These forces would try to defeat Iraq's outclassed air forces and then to inflict major destruction on enemy tank columns. Deep-strike operations, including near real-time targeting of armored forces, would thus be the centerpiece of Phase 1. Ground forces would establish blocking positions on key axes of advance while conducting a mobile defense in depth. Steady deployment of U.S. ground forces would strengthen the defense, broaden options during Phase 2, and permit a decisive counterattack in Phase 3, which could aim at destroying enemy forces and occupying enemy territory.

In Korea, the Democratic People's Republic of Korea (DPRK) possesses larger forces than Iraq, and they are already deployed along South Korea's border. A war could explode after a warning of only a few hours or days, not weeks. Unlike in the Persian Gulf, this attack would be prosecuted along a narrow peninsula on mountainous terrain. It would probably be accompanied by massed artillery fire, commando raids, and chemical weapons. Initially, the primary battlefield would be only about 125 kilometers wide and 100 kilometers deep. The DPRK attack would be conducted against well-prepared ROK forces in fortified positions and against larger U.S. forces than in the Persian Gulf. Most probably, the DPRK attack would aim at seizing nearby Seoul by advancing down the Kaesong-Munsan, Kumwa, and Chorwon corridors. If successful, North Korean forces might also try to conquer the entire peninsula before large U.S. reinforcements arrive.

The U.S.-ROK defense plan would be shaped not only by the threat but also by the mountainous terrain. Korea is commonly regarded as rugged infantry terrain that invites neither mobile ground warfare nor heavy air bombardment, but North Korea has assembled large armored forces that are critical to exploiting breakthroughs, and these forces would pass down narrow corridors that are potential killing zones for U.S. airpower. A new Korean War would bear little resemblance to the conflict of 1950-53.

During Phase 1, U.S.-ROK forces would conduct a vigorous forward defense aimed at protecting Seoul. Their campaign would be dominated by combined-arms ground battles waged with infantry, artillery, and armor. U.S. air and naval forces would conduct close air support, interdiction, and deep strike missions. After Phase 1, U.S.-ROK operations in Phase 2 would probably focus on seizing key terrain, inflicting additional casualties on enemy forces, and rebuffing further attacks. Phase 3, to start when the U.S. ground buildup was complete and ROK forces were replenished, would be a powerful counteroffensive aimed at restoring the ROK's borders and destroying the DPRK's military power.

Prospects for Success

U.S. and Russian Nuclear Warheads by Delivery System¹

| U.S. Strategic Forces | September 1999 | July 1997 |
|-----------------------------------|-----------------------------|------------------------|
| ICBMs | 2,460 | 2,400 |
| SLBMs | 5,700 | 3,778 |
| Bombers | 2,353 | 1,781 |
| Total Warheads | 10,513 | 7,959 |
| European-Russian Strategic Forces | September 1999 ² | July 1997 ³ |
| ICBMs | 8,012 | 3,700 |
| SLBMs | 2,804 | 2,488 |
| Bombers | 356 | 370 |
| Total Warheads | 11,172 | 6,558 |

¹ Warhead attributions are based on START I counting rules. This results in bombers having fewer warheads attributed to them than they actually carry. On the other hand, even though all nuclear warheads from Ukraine have been removed to Russia, they remain START-accountable until the delivery systems have been destroyed.

² Includes weapons in Belarus, Kazakhstan, Russia, and Ukraine.

³ Weapons in Russia only.

Source: START I Memorandum of Understanding, July 1997.

Either war could pose serious challenges that would stress U.S. responsiveness. In both, the length of the conflict and its ultimate cost would be influenced by fighting in the early stages. If initial enemy attacks were halted without serious losses, success might be attained quickly. If not, both wars might prove prolonged and difficult.

Prospects are good that U.S. and allied forces would win both wars. A principal reason is the ability of the United States to rush large reinforcements to these theaters and to mount decisive operations with its superior forces, which possess major qualitative advantages over an enemy. Both wars, nonetheless, could be costly, bloody affairs, although U.S. operations would aim to minimize casualties.

Both wars pose risks that are inevitably part of combat, almost irrespective of the quality of defensive preparations. One risk is that both conflicts could erupt at the same moment, not a few weeks apart. This development could strain the U.S. airlift and sealift capacity in the initial stages and could result in early shortages of specialized capabilities (such as combat service support). The effect might slow the U.S. buildup in one or both theaters, thereby weakening the early defense effort. The buildup could be further delayed if some U.S. forces were already committed to operations outside the two MTWs when a conflict erupts.

Another risk is political and more prevalent in the Persian Gulf than in Asia. It is that Iraq might recruit allies to its side and that Saudi Arabia and other Gulf countries might not respond adequately. This development could prevent the United States from deploying forces as quickly and efficiently as envisioned in current plans. In Asia, a lukewarm stance by Japan or opposition by China and Russia might have a similar effect.

M-1 Abrams tank, Bosnia

A third risk is military and comes in several guises. Iraq or North Korea or both might use weapons of mass destruction (WMD), if not nuclear weapons, then chemical and biological weapons (see chapter eleven). Even in purely conventional war, both enemies might show unexpected skill in employing asymmetric strategies that exploit vulnerabilities in the U.S. reinforcement plan (e.g., by destroying key airfields and mining ports). Another military risk is that allied forces, which are key in both theaters, might not fight so well as expected. Beyond these risks, war is inherently dynamic and unpredictable. The offense has the advantage of seizing the initiative, and sometimes the breaks go against the defender. Even a well-planned defense can be rocked back on its heels.

Although the United States will base its plans on expected events, it will need flexibility to respond effectively to different events, including the unexpected and unwelcome. Provided it retains such flexibility, the United States will be justified in having confidence in its capacity to prevail against today's rogues. It does not, to be sure, enjoy certainty, especially of quick and easy victories. But given the risks cited above, the principal danger is not that U.S. forces might be defeated but that early reversals might occur (e.g., Kuwait or Seoul might be temporarily lost). Phases 2 and 3 could then prove prolonged and high casualties could be incurred. Barring a calamity, the United States and its allies would eventually win--although at a higher cost than otherwise, because the arrival of large U.S. reinforcements would tip the warfighting balance decisively.

The prospect of eventual success does not diminish the importance of continuing to work hard at reducing the serious risks that still exist

in both theaters. The dangerous situation in the Persian Gulf particularly requires ongoing efforts to reduce vulnerability to short-warning attacks, to ensure entry of U.S. forces against opposition, and to upgrade U.S. and allied capabilities for the initial halt-phase of operations. Continuing improvements to U.S.-ROK defenses on the Korean peninsula also are needed. Both situations are volatile, and there is a difference between a confident defense and a perfect one. "Confident" defenses have done poorly or even lost on more than a few occasions when the unexpected occurred. Events may turn out better than expected or worse. Moreover, past "better than expectations" (i.e., the 1991 Gulf War) are not the best basis for gauging future wars. The case for improvement in the Gulf and Northeast Asia lies in the ability to help safeguard against the improbable while further enhancing the capacity of U.S. and allied forces to win the most probable wars.

AH-64 Apache

Conversely, today's rogues are not justified in having confidence at all. Their prospects of gaining early victories are low, and they face the near certainty of eventual defeat. By a wide margin, their best strategy would be to avoid war with the United States. For this reason, even though the Persian Gulf and Korea may remain dangerous places, wars in these locales seem unlikely to occur. The likelihood that deterrence will remain intact is based on the premise that U.S. forces will remain adequate to win both conflicts, singly or in combination. A weakened U.S. defense posture could produce less deterrence. Because the Persian Gulf and Korea are not the only places where major wars could erupt, the requirement for a powerful U.S. warfighting

capability probably will not disappear, even if in the coming year one or both of these contingencies were to erode significantly.

Operation Desert Storm

Other MTW Conflicts

Although wars in the Persian Gulf and Korea are the principal focus of current U.S. defense planning, unexpected conflicts plausibly could occur in other places. Europe is one possibility, as are other regions. Although these areas seem peaceful today, the rapid pace of global change makes them candidates for conflict not only for the long term but also, to some degree, in the next five years. After all, few people in early 1990 could foresee war breaking out in the Persian Gulf any time soon. But the unique features of these conflicts must be recognized in preparing U.S. forces for wars that might have to be fought.

There are several possible contingencies. One is an MTW conflict in a different place, that is, a regional war with a medium-size power that would require the use of U.S. forces similar to those planned for Korea and the Persian Gulf. A second possibility is a bigger war with a large state turned hostile or a large coalition of medium powers. A third possibility is a lesser conflict (i.e., a small MTW) that would require deployment of smaller but sizable U.S. forces on unfamiliar terrain.

For the near term, the prospect of a lesser MTW on unfamiliar terrain may be a contingency worth worrying about. Such a conflict could require commitment of up to two to four divisions, three to six fighter wings, and two to three CVBGs--a small but significant portion of the QDR posture. Deploying this force would be easy if the conflict were to occur at a location where the United States has been building a military infrastructure for many years, such as Western Europe, the Persian Gulf, or Northeast Asia. Deploying these forces to locations where an infrastructure does not exist would be a different matter. Possible sites might be Eastern Europe, Turkey, North Africa, the Middle East, Southeast Asia, or Cuba. The United States could deploy naval forces to locations along a seacoast but would be hard pressed to deploy large ground and air forces quickly if the necessary bases, facilities, and supply lines were not available. A small-scale contingency (SSC) of this sort might pose a serious challenge, not because the enemy threat would be large but because the United States would not be able to bring its combat power to bear in a timely fashion.

Each of these contingencies may be highly improbable, but the combined probability of one of them occurring is higher. Together they may not elevate requirements for U.S. forces, but they illustrate the importance of not becoming fixated on the Persian Gulf and Korea. At a minimum, they require military plans so that the DoD is aware of the force commitments that might be needed. They also call attention to the need to be prepared to deploy different packages of U.S. and allied forces from those envisioned for traditional scenarios. For example, one conflict might call for mostly ground and air forces, but another might require mostly naval and marine forces. Finally, they illuminate the importance of building a better military infrastructure in outlying regions, e.g., Central and Eastern Europe and Southeast Asia.

Preparing for the Future

Although this chapter has dealt with the near term, a brief mention of the future is appropriate for the simple reason that actions taken today can have a major impact on how the long term is handled. While current threats exist, they mandate continuing efforts to reduce vulnerabilities, particularly to surprise attack and resistance to entry of U.S. forces in both the Persian Gulf and Korea. Additional repositioning of ground equipment and air stocks would be a good way to lessen the risks in the Persian Gulf, for example. Improvements in allied readiness, modernization, and sustainment also make sense. The severity of both threats may increase because of ordinary modernization and unexpected breakthroughs in such areas as air defense, antiarmor weapons, offensive missiles, and WMD. These breakthroughs might allow enemy forces to pursue "asymmetric strategies" aimed at weakening U.S. and allied defensive capabilities. Such developments will need to be offset by commensurate improvements in U.S. forces not only in the distant future but also in the near term.

Beyond this, current threats may diminish or even disappear, but contingencies that appear improbable today might be quite real tomorrow. The change could happen by 2010, even by 2005. Success in confronting such threats depends on near-term actions to begin preparing for them. Better planning, more outlying infrastructure, and allied improvements can matter hugely, even if U.S. forces do not change a great deal. Steps to improve U.S. capabilities for the Persian Gulf and Korean contingencies also are important--for example, reducing vulnerability to asymmetric strategies--and can help U.S. forces prepare for other conflicts.

The overall size of U.S. forces may not change much, but major changes may occur in the U.S. overseas presence. The future might produce fewer forces in Europe, more forces in the Persian Gulf, and different forces in Asia if Korea stabilizes but trouble emerges with China. These changes may occur mostly in the long term, but initial steps in the short term can help set the stage. A dynamic stance toward overseas presence can induce allies to develop better power-projection capabilities. It can also help close the growing gap between high-technology U.S. forces that can carry out modern doctrine and allied forces that cannot.

USS *Constitution* underway in Massachusetts Bay

Equally important, the next few years will witness the initial stages of what may prove a major transition in the U.S. force posture. The QDR said that future U.S. forces will be different in character from those of today. They will rely on enhanced information dominance, new technologies, and new doctrines to increase their capability to carry out modern warfare significantly. The biggest changes will be felt by 2010, when such weapons as the F-22, the joint strike fighter, Comanche helicopters, and new C⁴ISR systems arrive in quantity. In the next few years, moreover, U.S. forces will be developing new doctrine, experimenting with new force structures, and absorbing digitized communications and other technologies.

The manner in which these changes are handled will have an important bearing on U.S. military capabilities five years from now. Equally important, such changes will lay the foundation for how the long term will be handled. They will determine whether the transition to a

new U.S. defense posture is a success or failure. Thus they underscore the theme of this chapter that although the United States can be confident of its warfighting capability, it cannot be complacent.

Strategic Assessment

Engaging Power for Peace

CHAPTER TEN

Small-Scale Contingencies

Although small-scale contingencies (SSCs) are not precisely defined in the 1997 Quadrennial Defense Review (QDR), they encompass a wide range of combined and joint military operations beyond peacetime engagement and short of major theater war (MTW). The primary rationale for SSC plans is to protect American citizens and interests, support political initiatives, facilitate diplomacy, promote fundamental ideals, or disrupt specified illegal activities. SSCs may include:

- Strikes and other limited intervention
- Noncombatant evacuation operations (NEOs)
- Counterdrug operations
- Shows of force
- Maritime sanction and "no fly" enforcement
- Peace accord implementation and other forms of peacekeeping
- Support for humanitarian operations and disaster relief (e.g., preventative deployments).

Such stability operations vary in size and duration (e.g., 100 to 30,000 personnel, from a few weeks to several years) and often are coalition operations that involve core states and other foreign forces, as well as U.S. and nongovernmental organizations.

The QDR report explicitly establishes SSCs as a new mission for military operational requirements and a major consideration in deciding on force structure:

In general, the United States, along with others in the international community, will seek to prevent and contain localized conflicts and crises before they require a military response. If, however, such efforts do not succeed, swift intervention by military forces may be the best way to contain, resolve, or mitigate the consequences of a conflict that could otherwise become far more costly and deadly.... Therefore, the U.S. military must be prepared to conduct successfully multiple concurrent smaller-scale contingency operations worldwide, and it must be able to do so in any environment, including one in which an adversary uses asymmetric means, such as NBC weapons. Importantly, U.S. forces must also be able to withdraw from smaller-scale contingency operations, reconstitute, and then deploy to a major theater war in accordance with required timelines.

This approach resulted from several studies showing that deployment of U.S. forces for SSCs has put heavier demand than anticipated on selected combat, combat support, and combat service support forces. For this reason, SSCs are specifically considered for force planning and force structure.

The QDR approach recognizes international political, military, and economic trends since the mid-1980s. In that time, U.S. (and international) action has been required to resolve or limit lesser conflicts, sometimes totally internal upheavals, and to respond to humanitarian emergencies, even when no vital interests of the United States were threatened directly. The use of military force as only one element of response was predicated on the belief that inaction can be costly over the long term or unacceptable to U.S. ideals, broad interests, and public opinion. SSCs have been facilitated by the availability of certain military forces no longer required for the Cold War or actual MTW operations. The frequency of SSCs and their demands on military forces have led to rethinking military doctrine, force structure, and training by many countries and regions, such as the United Kingdom, Canada, Italy, France, Scandinavia, Asia, Latin America, and most recently East Europe and Africa.

In the view of the United States, SSC plans have helped shape the international security environment, as well as the U.S. response to crises. Military activity, combined with political and diplomatic activity, can yield positive results, whereas alone, all activities are liable to fail. Failure allows a crisis to continue, risking the danger of expansion, and may damage the U.S. ability to influence those countries directly concerned.

As a general rule, participation in SSCs by other countries alongside the United States is seen as a distinct benefit, improving those nations' military capabilities and generating closer military-to-military relations with the United States. The U.S. public also strongly approves participation by other nations. The numerous exercises and training programs that the United States conducts with European, Asian, Latin American, and African military establishments to prepare for such contingencies (e.g., peace operations, humanitarian operations) are examples of positive effects on the international security environment.

Military Operations Other than War (MOOTW) or Small-Scale Contingencies

Various phrases and acronyms have been used to describe the long history of U.S. involvement in operations of this nature. U.S. Navy and Army actions in Mexico, Cuba, the Caribbean, the Philippines, and China in the latter part of the 19th century and between the two World Wars that then had no particular name now come under the heading of today's SSCs. The Marine Corps Small Wars Manual of 1940 contained a doctrine, based on experience in the Caribbean and Central America in the 1920s and 1930s, for what are now called SSCs. Examples during the Cold War were support for anti-Communist governments in the Dominican Republic in 1965, Vietnam and Central America in the 1960s and 1980s (first called counterinsurgency, then low-intensity conflict), and the Lebanese Multi-National Force (MNF) in 1982-83. Starting in 1993, operations of this kind were variously called peace operations or operations other than war (OOTW) and now are known as military operations other than war (MOOTW), as well as support to civil authorities.

UNPROFOR

The United Nations Protection Force (UNPROFOR) offered a prime example of U.S. nonparticipation among ground forces that led to reduced U.S. influence and less effective operations in Bosnia. The perception that the U.S. was using British, French, and Dutch troops to take greater risks while unwilling to do more than fly air strikes led to serious political problems, aggravating bilateral U.S. relations, creating strains within NATO, and risking an expansion of the Bosnian conflict into the Balkans. U.S. participation in Implementation Force (IFOR), by contrast, substantially enhanced the effectiveness of operations and increased U.S. influence while relieving tensions within NATO and generally enhancing relations with Russia and other Partnership for Peace nations that had contributed military contingents.

Background

What is Small Scale?

It is difficult to define SSCs because they include subcategories that vary according to the type of mission, size, and type of forces deployed and the rules of engagement (ROE). Yet they share some characteristics that distinguish them from MTWs. Decisions to intervene tend to be made quickly and unpredictably, often with little time for planning, preparation, and deployment. They can extend well beyond the initially envisioned duration, increasing projected strains on military forces. Operation *Provide Comfort* in northern Iraq (1991 to present), for example, was projected to last two to three months; Implementation Force/Stabilization Force (IFOR/SFOR) in Bosnia (1995 to present) was projected to last for one year. Few established facilities in the deployment area may be available at the same time that the operation may need to rely on lighter forces organized in a less-than-conventional manner--greater mobility, less firepower, and less use of airpower and standoff weapons. The commanders' objectives and the ROE emphasize avoiding casualties on all sides, along with a need, when possible, for dialogue and cooperation with local power groups.

U.S. troops in Somalia

SSCs are not "fight-and-win" operations designed to inflict maximum damage on the enemy, and the "enemy" is often ambiguous in its attitude and actions. This calls for a distinct change in attitude, conduct, and interpretation of the ROE, with an emphasis upon restraint whenever possible, while ensuring force protection and carrying out a more limited mission. One particularly difficult decision is whether or not to use deadly force and, if so, against what target. Given the high level of public and political attention focused upon theater operations, there is a potential for individual incidents (e.g., inadvertent killing of unarmed civilians) to undermine U.S. domestic support for military operations, as well as to create a much more dangerous indigenous

environment. This is one of the motivations behind increased interest in developing and using non-lethal weapons. To achieve success, SSCs must stress understanding local culture and politics and the combined use of political, diplomatic, humanitarian, economic, and information programs. Often they require significant cooperation with civilian organizations of the United States and the international community.

The variety of the challenges posed by SSCs in the number and type of forces required and the relevant foreign policy considerations often results in the involvement of combined or coalition military forces and civilian personnel from nongovernmental organizations (NGOs) and regional and international organizations (IOs).

- Some SSCs may require only a handful of military personnel for noncombat military observer missions [e.g., the Military Observer Mission, Ecuador/Peru (MOMEPE), during the Peru-Ecuador border conflict of 1995 required only 50 personnel].
- Some require military forces ready for combat, on a widely varying scale (e.g., from 500 personnel for the Somalia NEO in 1991, to the Taiwan Strait show of force in 1996--18,000 personnel).
- Some are basically nonmilitary (that is, humanitarian intervention and disaster relief as in Bangladesh, 1991), with, on occasion, limited military forces supporting and assisting large-scale civilian operations (as in *Provide Relief* in Somalia, 1993, and *Support Hope* in Rwanda, 1994).

In operations supporting large-scale civilian efforts, international and nongovernmental relief organizations [e.g., United Nations High Commission for Refugees (UNHCR), World Food Program (WFP), International Committee of the Red Cross (ICRC), CARE, Doctors without Borders, Oxfam, International Rescue Committee (IRC)] were present before, during, and after military intervention. Considerable liaison and coordination are required, much of it ad hoc since there are no firmly established U.S. procedures for C³I in combined military-civilian operations and even fewer internationally codified procedures.

Peace operations are complex contingency operations that require the commitment of sizable military forces ready for possible combat, in addition to supporting civilian activities (as in *Provide Comfort* in Iraq-Turkey, 1991; *Restore Hope* in Somalia, 1992-93; *Restore Democracy* in Haiti, 1994-95, and IFOR/SFOR, Bosnia 1995-98). The most adaptable forces for SSCs, including coordinated civilian activities, may be Marine expeditionary units (MEU), special operations forces (SOF), and civil affairs and psychological operations (PSYOP) units.

SSC Demands on Forces

The Department of Defense's Bottom-Up Review (BUR) of 1994 based its operational requirements on fielding forces sufficient to win

Two Different Businesses

| Major Theater Wars | Small-Scale Contingencies |
|-----------------------|--|
| Vital Interests | Interests and Responsibilities |
| Power Projection | Not Necessary |
| Highly Destructive | Restrained or Constructive |
| Independent (must do) | Multilateral (should do) |
| Joint Operations | Combined and Civil-Military Operations |
| Clear Missions | Ambiguous Missions |

two nearly simultaneous major regional conflicts (MRCs) and to provide for overseas presence. In determining force requirements, SSCs were not considered a separate mission; the BUR assumed they could be handled as lesser cases by forces earmarked for MRCs (now called MTWs), without any negative effect on their capabilities for the primary mission. Since 1989, however, the number of small-scale conflicts, humanitarian emergencies, and other similar contingencies rapidly grew in number, from 16 (1947-89, the Cold War period) to 45 (1989-97). The prospects for continued internal and regional unrest are clear, as discussed elsewhere in this book. Although decisions for U.S. response will probably be more limited than in the recent past, this cannot be assured. The U.S. military involvement in these contingencies must be assumed and prepared for; failure to prepare can hamper the successful completion of an SSC operation as well as the capabilities of U.S. forces to conduct MTWs.

Of course, the United States has the option of not responding to situations that do not affect its strategic or vital interests. Improvements in situation analysis have reduced the number of peace operations approved and participated in by the United States by allowing realistic assessments of the nature of the mission and of capabilities versus costs to achieve it for various situations. Limits on UN peacekeeping or peace enforcement capabilities, and to a lesser degree on those of ad hoc coalitions outside the UN framework but mandated by the Security Council, are now understood by the UN Secretary General, the Security Council, the United States, and other governments. As a result, fewer large peace operations have taken place than in 1990-93. But other SSCs (such as NEOs) have increased, and the demand for use of special operations forces (including civil affairs and PSYOP) and other army combat and combat service support units draws heavily on Reserve forces.

The longer an SSC lasts, the greater its negative effect on preparedness of forces that must be ready for MTW operations. This is particularly true for such units as light infantry and helicopter squadrons, which are deployed more frequently than other forces for peace operations, as well as combat support and combat service support units. These forces are usually engaged away from their home base at the outset of an MTW, and after SSC duty, most of them will require considerable retraining prior to deployment to an MTW. An inexact rule of thumb has been that 6 months of retraining are needed after SSC operations lasting 6 to 12 months. The time required to retrain is an important consideration in force planning and force structure, as well as in deciding initially whether to engage in an SSC.

Americans in Haiti

Public Support

Because SSCs do not call for a major commitment of military force and often may not visibly serve vital U.S. interests, such operations require of any U.S. administration a sustained effort to mobilize and maintain public and political support at home. Because they are of small scale, limited duration, and low expense, and are visibly directed at an accepted U.S. interest (e.g., protecting U.S. citizens), NEOs usually command such support. Similarly, short-term disaster relief operations tend to gain positive public support. In contrast, large, long-lasting, potentially dangerous, and expensive peace operations in remote regions with limited apparent relationship to U.S. vital interests have difficulty gaining such support, although support is stronger for coalition operations where core states are seen to be doing their fair share. The likelihood of U.S. casualties and high cost can determine public and political support, or their lack thereof. An excessive preoccupation with the public fear of casualties-- rather than proper concern for prudent force protection--can constrain the response of commanders in the field facing unpredictable and rapidly evolving situations. Such vacillation encourages potential enemies to conclude that by inflicting casualties, public opinion will force the United States to withdraw (e.g., Vietnam, 1974; Lebanon, 1983; Somalia, 1993). With proper justification and explanation, public and political opinion can be brought to support prudently conducted continuing operations for important objectives, despite some casualties (e.g., Iraq's attack on the USS *Stark* in 1987; the Khobar Towers bombing in 1996). Public information provided by the media is a major consideration in sustaining indispensable support at home, which requires, as a vital element, careful planning and execution in the field.

Flexible Use of Force

UN Civilian Police Contingents in the Americas

The U.S. military is often called on to participate in SSC operations that involve civilian organizations or basically civilian tasks and to participate in multinational forces (MNFs), either in ad hoc coalitions or UN peacekeeping missions, for two main reasons: its ability to deal with dangers posed by local military, militia, or armed gangs, and its unmatched lift, logistics, planning, and command, control, communications, and intelligence (C³I) capabilities for rapid, large-scale operations. These capabilities not only protect and support civilian activities but also enhance them by reducing time requirements, hastening the delivery of relief supplies, and improving coordination of disparate organizations. When large-scale humanitarian disasters strike, a combined national and international civilian response often is not adequate, and military assistance becomes critical. Extensive experience in training and exercising with almost all the world's armed forces makes U.S. forces very important in coalition management. Skills honed for preeminence on the battlefield are readily adjustable to the needs of various missions and cultural settings and to the nuances of particular operations.

The modern U.S. military, although developed essentially in response to the Cold War, has the personnel, weaponry, and supporting equipment to satisfy basic operational military requirements for all SSCs. In combined military-civilian operations, it has displayed a remarkable ability to adapt and improvise, often in an unplanned manner and in an unfamiliar operating environment, including the following (1994-97):

- To enforce naval embargoes simultaneously on Bosnia, Iraq, and Haiti
- To enforce no-fly zones over Bosnia and northern and southern Iraq
- To carry out a show of force in the Taiwan Strait, with two aircraft carrier battle groups
- To maintain an essential carrier presence in the Mediterranean Sea, Persian Gulf, and Indian Ocean
- To organize and provide a core of highly capable multinational forces in Haiti and Bosnia
- To use Marine expeditionary units and special operating forces for NEOs in Liberia, Sierra Leone, Zaire, Central African Republic, and Cambodia.

Some specialized U.S. units have proven themselves at least as valuable for SSCs, particularly peace and humanitarian operations, as for regular combat. Specifically, operations in Somalia, Haiti, and Bosnia used:

- Civil affairs, psychological operations, and special forces
- Combat engineers and Seabees
- Logistics and communication units
- Military police.

By the use of special operations forces, including civil affairs and psychological operations, units, engineers, military police, and Marine Corps units, the U.S. military has been able to contribute effectively to civilian programs critical to the success of the overall operation.

In the Haiti operation, including the UN force (United Nations Mission in Haiti, UNMIH), U.S. forces provided much of the coalition C³I and logistics. They also played a critical role in UN mechanisms for cooperation among the military force, U.S. civilian agencies, nongovernmental, regional, and international organizations, and the government of Haiti.

For the strictly humanitarian operation *Provide Hope* in Rwanda in 1994, the U.S. European Command provided essential airlift for food, water purification equipment, and medical supplies. It also coordinated the urgent, large-scale assistance delivery and distribution with the UNHCR, WFP, ICRC, and numerous NGOs and provided these organizations with limited engineering and logistics support. In all three instances--Somalia, Rwanda, and Haiti--the United States developed and adapted the Humanitarian Operations Center/Civil-Military Operations Center (HOC/CMOC) concept to civilian and military-humanitarian operations and communications.

UN Civilian Police Contingents in Africa

This broad range of military capabilities, particularly effectiveness in supporting and conducting essentially civilian missions, constitutes a potential downside for the Armed Forces. Given the weakness of most U.S. and international civilian organizations in rapid mobilization, surge capacity, planning, and logistics, it is all too easy for civilians to pass the burden onto the military, not only at the outset of an operation but even as it continues. Such an approach by civilian organizations places an unnecessary demand on military forces and delays the substantial effort required to increase local civilian capabilities.

Restore Hope, December 9, 1992 to May 4, 1993

During operation *Restore Hope* in Somalia, some 30,000 U.S. forces (plus 10,000 friendly forces under U.S. command) planned and initiated a military-humanitarian support coalition operation within 10 days after President Bush approved the basic idea. Within three weeks, it achieved its basic objectives of ending a major conflict and providing large-scale food and health assistance to millions of Somalis. In nearly all aspects of this operation, U.S. forces were central to coalition C³I and logistics, also coordinating effectively with civilian agencies and nongovernmental, regional, and international civilian organizations.

Capabilities

Unit-Level Assets

Current and projected total forces have adequate capabilities for the anticipated number and types of SSCs in the near future. However, as the QDR recognizes and as has been stressed in this chapter, continued deployment over the long term at the 1990s rate, with the existing force structure and organization, training, forward presence, and other requirements, will diminish capabilities to conduct SSCs as well as readiness to conduct MTWs. Since 1990, SSCs have imposed unexpectedly high demands on operations tempo, personnel tempo, and deployment tempo on several units, e.g., Fleet Marine Force and Special Operations Forces, with specific capabilities such as the Army modified table of organization and equipment (MTOE). These demands are expected to continue into the next century, with potentially negative effects on readiness, morale, personnel retention, and MTW capabilities. The units experiencing most of the demand are combat support, combat service support, light infantry battalions, and specific materiel such as helicopters and Airborne Warning and Control System (AWACS) aircraft. Given that roughly one-third of combat support and two-thirds of combat service support units are in the Reserves, an additional strain is put on those units particularly and the Reserves generally.

Studies have shown that deployable forces in all four services have spent close to or more than 50 percent of their nights away from home, involved in a variety of activities such as SSCs, formal presence, and training for MTW. This figure has not been precisely quantified by the individual services nor broken down by unit, but it is the most recent, most accurate measure of a key element of this much-discussed stress factor. Other studies projected that light infantry and military police would exceed expected deployment by a rough average of 20 to 25 percent and 30 to 35 percent, respectively. Deployment times must be taken into account with such factors as entitlements, quality of life, care for families when personnel are away, and training for force rotation by each service. These factors together have clearly had a stressful impact on the retention rate of the all-volunteer force as well as on readiness for MTW operations.

Treating Somali citizen

Training, Doctrine, and Planning

Since 1993, the U.S. military has made an intensive effort to develop doctrine, publications, and training programs for operations such as NEOs, limited intervention, and shows of force. The doctrine, training, and policy for these operations have now been standardized and are well-understood, and troops are regularly trained in them. Over those four years, for operations with a major civilian dimension, military professional schools, training centers, regional commanders in chief (CINCs), and lower level commands have all instituted programs and manuals to meet the challenge of SSCs, including the following:

- Field Manual 100-23, *Peace Operations* (U.S. Army Training and Doctrine Command), 1994
- *First Joint Task Force Commander's Handbook for Peace Operations* (Joint Warfighting Center) 1995 and 1997
- *Joint Doctrine on Civil Affairs* (Joint Pub 3-57)
- *U.S. Army Civil Affairs Manual*
- *Joint Publication on Inter-Agency Operations* (Joint Pub 3-08)
- *USMC Small Wars Manual* (under revision).

Many other training manuals, lessons-learned reports, and related materials have been produced and are now actively used for training.

On May 20, 1997, President Clinton created an explicit doctrine (PDD 56) for interagency management of "complex contingency operations" such as major peace operations and humanitarian emergencies, both of which fall under the category of SSCs. PDD 56 contains policy guidance for planning and training for use by civilian agencies and the Armed Forces and aimed at systematizing and significantly improving preparation for and execution of these operations. This directive came at a particularly opportune moment, given the QDR's emphasis on the same issue.

One of the document's major components is the requirement that a plan for political-military implementation be developed as an integrated tool for coordinating U.S. Government actions in a complex contingency operation. The burden of the plan is to write an overall mission statement, to include individual agency objectives, an exit strategy, and an integrated concept of operations for all agencies, covering major functional tasks, agency responsibility, and availability of resources. In practice, this approach has been used only once, in preparing for the Haitian intervention (September 1994). The planning process proved very useful, particularly for civilian agencies, even though a final, approved plan was never completed and many functional tasks and timelines for civilian agencies were only partially met or had to be revised. The Haiti "process" revealed large "culture gaps" between the outlook and capabilities of military and U. S. civilian agencies, and even larger gaps in relation to U.S. NGOs and international civilian organizations. IFOR/SFOR in Bosnia, neither of which had a political-military plan, showed that such gaps remain, constituting a major obstacle to coordinated action.

Considerable time and effort will be required before the May 1997 PDD becomes standard operating procedure for training and planning. Even so, two problems remain unresolved: first, it does not apply to regional CINCs, at whose level much of the operational planning takes place. Second, it does not address the difference between military and civilian material resources, planning and deployment capabilities, and organizational effectiveness (e.g., the much greater relative capability of the military compared to the civilian and how this affects planning and operation).

The emphasis and time devoted to training for peace and humanitarian operations vary considerably among the various commands and fluctuate depending on perceived priorities. New programs for SSC training compete for time and availability of units for training with many other programs, including those directed toward preparing for MTWs, which are always given higher priority. Publications, school curricula, and training and exercises have not yet been fully thought through or homogenized. Except for the *Joint Task Force (JTF) Commanders Handbook for Peace Operations*, most publications devote inadequate attention to preparing for combined military-civilian

planning, training, and conduct of operations and to coalition military operations--particularly coalition operations when the United States may not be in command.

The new look at training applies even more to civilian agencies of the U.S. Government, as well as to finding methods of including NGOs or IOs more frequently and systematically in training for SSC operations.

Standardized Procedures

Standardized military procedures can enhance communication and coordination among U.S. forces, systematic cooperation among U.S. and coalition military forces, and between them and participating civilian organizations. So, too, will procedures for dialogue and cooperation with indigenous power centers (e.g., governments, factions, militias, NGOs), even though their application inevitably differs for each SSC and civilian agencies may not necessarily be responsive to them. For these reasons, standardized procedures are best discussed with the larger international organizations and NGOs such as UNHCR, WFP, and ICRC before adoption and must be adapted for each individual operation. Another important area requiring systematic attention and procedures is the major enhancement or re-creation of an indigenous law enforcement capability (i.e., police, judiciary, penal system). This includes procedures for military cooperation with civilian assistance programs and personnel, and for improving the means whereby the United States and other countries can strengthen the capabilities of United Nations Civilian Police (UNCIVPOL) and provide coordinated bilateral assistance.

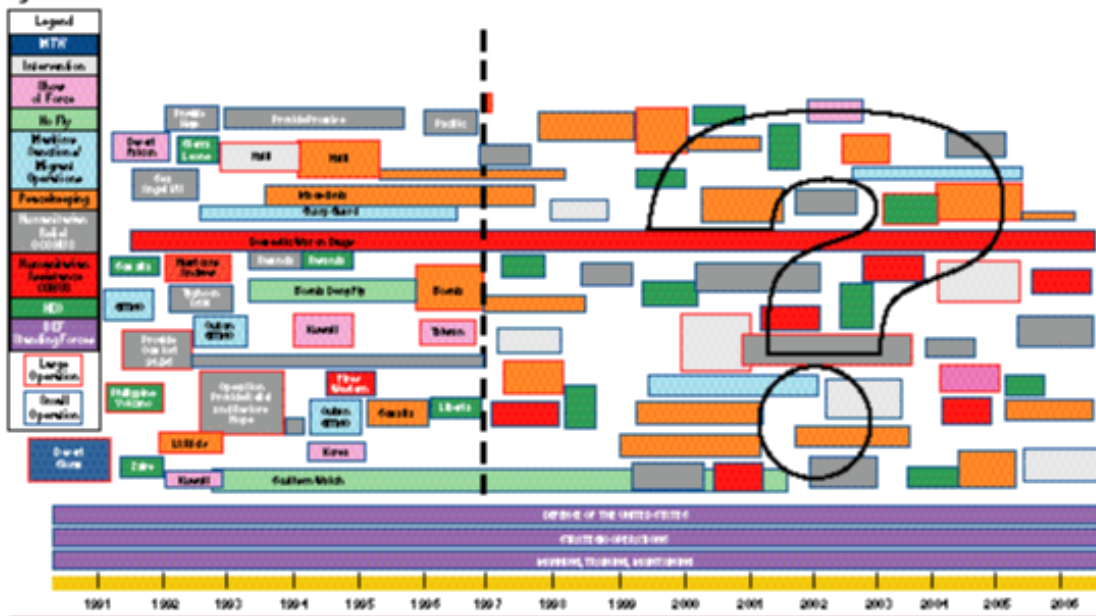

Force Structure

On the basis of a troops-to-task analysis, the greatest demand on combat forces that SSCs make is for flexible, rapidly deployable forces, such as SOFs, amphibious readiness groups, Marine expeditionary units, light infantry, and military police. But not all maintain adequate levels of training for peace operations, and often all are in short supply relative to demand. They are not always assigned in sufficient numbers to the geographic region where an SSC takes place, so the regional CINCs are predisposed to use forces already available, even if ill suited to the particular mission. Planning for specific forces at specific locations in a crisis is difficult, especially given that SSCs can happen almost anywhere, and especially difficult in regions where U.S. forces are not ordinarily based.

There are also problems with the size of individual components, which may not be suitable to SSC missions (i.e., too large, too small). For example, engineering units usually are important for such operations, but the smallest standard component, the battalion, often is more than what is needed. Similarly, combat service support units for aviation are sized for a squadron and are too large when only a few aircraft may be needed. In the case of headquarters components, the reverse is often true: SSCs put greater demands on and require more personnel for headquarters activities, such as communications, command and control, and coordination and liaison with civilian organizations, coalition forces, and local governments or factions. In Operation *Support Hope*, for example, the commander of the U.S. Army Europe stressed the need for what he termed "modulization of standard units" and for these smaller units to have a larger-than-standard headquarters staff (e.g., a battalion-size headquarters for a company of engineers).

Somalia, Haiti, and Bosnia made clear the special importance of civil affairs, PSYOPs, and military police units to the success of SSCs. But, as already emphasized here, these units are in short supply, and repeated, even simultaneous, calls for their mobilization from the Reserves, which incur problems of delay and expense, strain both units and personnel. Special forces units and personnel with a high ratio of active to Reserve components have been under similar, if less severe, constraints. The large preparation requirements of the Army and its different rotational concepts, which differ from those of the Navy and Marines--they are programmed for six months away from station every year--leave the Army more stressed than its sister services. In 1996, 10 percent of Army forces were deployed away from station in 100 separate locations--for an unacceptably high rate of deployment given the overall level of basic demand (e.g., forces stationed abroad, on maneuvers, or for other commitments).

Dynamic Commitment: Illustrative Vision of the Future

Intelligence and Information

Collection and, even more importantly, analysis of information about local culture and politics need substantial attention, along with the character and *modus operandi* of local military, paramilitary, and militia or irregular forces. Improved procedures can enhance sharing of intelligence and information with coalition military forces and participating civilian organizations. Experiences in Somalia, Haiti, and Bosnia have shown that civilian organizations often have valuable specific information along with a general understanding of the local scene; this can complement what can be obtained and analyzed by regular intelligence procedures and may even prove vital to the success of an operation. Civilian organizations include international, regional, and nongovernmental organizations, many of them humanitarian and apolitical, some of which are suspicious of close involvement with the military. Yet these organizations may welcome the sort of support (e.g., security, logistics) that the military can provide. An exchange of information--rather than formal intelligence cooperation--has often been beneficial for all concerned. Police assistance organizations, such as CIVPOL, the International Criminal Investigative Training Assistance Program (ICITAP), and International Police Monitors can be especially valuable for information exchange. Intelligence also requires a greater focus on preparation for irregular (asymmetric) warfare, especially in urban environments.

The role of information operations for SSCs warrants a high priority, on location and at home, with modification and adaptation for what is in most instances a low-tech environment. PSYOP is particularly important when the potential exists for violent clashes with local power groups. The small number of PSYOP units and trained personnel, 80 percent of them in the Reserves, and the absence of PSYOP capability in the forces of most core coalition countries increase the difficulties of intelligence collection for the United States.

Command, Control, and Communications

Humanitarian Assistance for Complex Emergencies (1996)

Note: The term "complex emergencies" does not encompass natural disasters. Total for the European Union does not include aid accorded by member states (amounting to approximately U.S. \$22 million) independent of their EU allotment. Total for Europe includes aid accorded by European states not members of the EU and by member states independent of their EU allotment.

Source: United Nations Department of Humanitarian Affairs, "Total Humanitarian Assistance in 1996 (Global) as of 1 January 1997."

SSCs that involve coalitions or civilian organizations seldom are tightly knit, highly technical operations with good C³ (and are rarely equipped with computers for C⁴). In several operations (e.g., Unified Task Force, UNITAF, in Somalia, or the MNF in Haiti), by ensuring that interoperable communications equipment and procedures were available, along with extensive use of liaison and coordination center arrangements, the United States assured effective coalition operations. It was also able to achieve a reasonable degree of cooperation and coordination with civilian (especially non-U.S.) organizations outside the command structure. In *Provide Comfort*, *Restore Hope*, and *Support Hope*, civil-military and humanitarian operations centers progressively improved to reach a high level of effectiveness in coordinating military and civilian humanitarian operations. Still, greater effectiveness can be achieved with more work on communications compatibility and coordination.

Ad hoc success ought not mask serious problems in establishing satisfactory communications, cooperation, and coordination for coalition military-civilian operations. Communications equipment and procedures vary widely among different military establishments, more so among different civilian organizations such as WFP, ICRC, UNHCR, United Nations International Children's Fund (UNICEF), United Nations Department of Humanitarian Affairs (UNDHA), and various NGOs, and even more widely between the civilian and military components. The "culture gap" between civilian relief organizations and military forces makes the former particularly resistant to taking orders from the latter. A technological gap also exists between NATO and non-NATO military forces, adding to the difficulty of coalition command and control. U.S. military communications equipment and procedures are much further advanced over those of even other NATO countries, and the emphasis on encryption aggravates the complicated problem of communications commonalities.

Materiel Shortages

Shortages are projected for certain types of equipment in high demand for SSCs, while other types of equipment need either to be developed or modified for this use. Operations that involve civilian organizations or coalitions make extra demands on both the amount and nature of materiel required. U.S. forces, interoperable with other participants, and can supplement participant capabilities by providing them with additional essential equipment (e.g., communications and helicopters), but any inability to do so may jeopardize the success of the overall operation and prolong deployment of U.S. forces. The growing technological asymmetry between U.S. and coalition capabilities and between military and civilian agencies needs to be addressed so that future operations will not be inhibited.

Improving Operations

Overall Capabilities

This section offers specific suggestions for improving the capabilities of military forces to conduct SSCs, while also taking into account these forces' simultaneous need to be ready to participate in MTWs at short notice and the problem of increasing costs within a fixed budget. These suggestions are not presented in detail and are not considered definitive, but they do take equally into account costs, effects on MTW operations, and readiness.

*Perhaps the single most important action that could enhance overall SSC capabilities would be to give a higher priority to training, planning, and equipping for an increased number of general-purpose forces (those trained for MTWs) for a variety

of operations. Mission success also requires stressing agility, flexibility, knowledge of area and culture, and on-the-spot decisionmaking. The QDR states that "U.S. forces must be multi-mission capable...[and] able to transition from peacetime activities and operations to enhanced deterrence in war," and that "this standard applies not only to the force as a whole but also to individual conventional units."

Current military training programs, planning procedures, and equipment are now adequate--except in the general area of military-civilian coordination. However, without substantial predeployment training, only the Marines and SOF are truly capable of meeting the QDR standard of being "multi-mission capable" for SSC operations as well as their role in MTWs, although Army light infantry divisions are close to it. Such an assessment means revisions in training for both active duty and reserve forces, including a decision on how and to what extent Army mechanized and armor divisions and other units will undergo regular (as opposed to predeployment) training for peace and humanitarian operations and limited interventions. Revision would not mean providing intensive peace operations training for entire mechanized and armor divisions, but it could mean, for example, designating elements of larger units (e.g., one regiment of a division), "SSC-ready units" for six or nine months, and giving them the extra resources that would make them more SSC-capable. It would also mean training for asymmetric conflict--facing an opponent willing to use NBC weapons, terrorism, exploitation of women and children, and urban warfare. Many SSCs, from NEOs to peace operations, will occur in cities, which will require special training and skills for U.S. military personnel.

*A second measure of great importance would be to reorganize the Army Reserve and National Guard in a direction already suggested but not specifically recommended by the QDR. This would be to increase the number, readiness, and rapid mobilization of combat support and combat service support units for such specialties as civil affairs, psychological operations, special forces, combat engineers, and military police. Reorganized Reserve or National Guard units could be structured and trained for rapid mobilization to supplement, and later replace, regular units with the same skills.

An alternative would be to increase the number of combat support and combat service support units and personnel in the active Army. Although this move might be less expensive and more effective, it might appear to undercut the National Guard or Reserve and therefore might be more difficult for Congress to approve. Either way, the need for greater strength in these areas is clear and immediate.

*A third general proposition would relax congressional, doctrinal, and accounting restrictions on shifting the allocation of funds or providing for a contingency reserve, in order to respond to unforeseen, unbudgeted contingencies.

Policy, Doctrine, and Training

Almost all categories of SSCs would benefit from improved coordination between U.S. military and civilian agencies in preparation and execution, with particular emphasis on the operational level (i.e., the regional CINC). Current procedure (after PDD 56) requires systematic training of and planning by civilian agencies, with the military, but implementation could be extended to the CINC level. Standardized procedures developed for use by both civilian agencies and the military in training for and conducting contingency operations, including civilian agencies, could enhance planning, readiness, and logistics capabilities. Increasingly systematic, combined military-civilian training and planning--including NGOs and international organizations--could be conducted in military schools and training centers and at the CINC level. Civilian agencies could designate personnel to participate in this training and then be on standby to be immediately available for contingency operations. A standing or on-call Inter-Agency Task Force Headquarters at the CINC level could expand the permanent joint task force headquarters units that already exist in some commands, with civilian agencies represented in order to ensure the proper training and regular exercising of their personnel alongside military colleagues.

Readiness of civilian agencies is essential to the success of several categories of SSCs and to enabling the agencies to carry out their functions without excessive reliance on military capabilities. The need for readiness goes beyond training, and includes such issues as the capability to rapidly mobilize and deploy personnel and equipment needed for an operation and to provide rapid, adequate lift and logistics support. It further includes an almost total revision in concepts, organization, training, and resource availability by civilian agencies to respond to sudden contingencies.

A model for civilian agencies to study in improving capabilities is the Federal Emergency Management Agency (FEMA), although it still has shortcomings.

Another need is for more systematic SSC coalition preparations--especially for peace and humanitarian operations--which might be accomplished by more intensive exercises with forces from other countries. Some regional CINCs are already doing this (e.g., U.S. Southern Command and the U.S. Pacific Command), and it has been a critical element of Partnership for Peace programs conducted by both U.S. Atlantic Command and U.S. European Command. These ad hoc methods can be studied and their best features emulated, especially for learning doctrine, tactics, techniques, appropriate weaponry and equipment, and for improving interoperability, small-unit

operations, civil affairs, and psychological operations. A specific need for language-capable personnel is key to successful interaction with coalition troops, local organizations, and the populace in general. Such training takes time and planning, though use of civilian agencies or contractors is a possible (but expensive) option.

The number of exercises for regular military units might be examined to reduce those not considered essential. This might take into account the QDR recognition that certain SSC deployments--particularly those shorter than six months--are less debilitating to readiness for MTWs and can even be a plus for certain skills, such as small-unit operations and civil affairs. During SSCs, commanders can try to make provision for any specialized MTW training that deployed units are missing. For instance, during IFOR in Bosnia, Major General Nash was periodically able to cycle 1st Armored Division units to Hungary for gunnery training. During UNITAF in Somalia, Lieutenant General Johnston set up a firing range for Marine and Army units, as well as a range to practice amphibious operations.

Coordination in Haiti

Haiti offers perhaps the best example of coordination, which in its first phase was built into the operations based on the leadership of the MNF commander and the U.S. Ambassador, and in the second phase, on that of Special Representative of the UN Secretary-General. In Bosnia, the loose coalition of IFOR, the UN High Representative in Bosnia-Herzegovina, Organization for Security and Cooperation in Europe (OSCE), UNHCR, and other organizations without a clear command or coordinating structure proved inadequate.

The type and number of units covered by Global Military Force Policy should be increased to provide greater flexibility and ease of movement among CINCs, to ensure that the most capable units are available for SSC deployment. Careful consideration should be given to preplanned phasing of redeployment for U.S. combat units and others designated for MTW response, replacing them in whole or in part after the initial deployment, as soon as military and psychological dominance have been established and the security threat has diminished. Replacements can be either Reserve, National Guard, coalition military forces, or in some cases civilian personnel (e.g., police mentors/monitors and logistics support). Substitution of units is another useful approach to greater flexibility in deploying for SSC duties (e.g., Seabees vs. army engineers; air expeditionary force vs. carrier battle group or MAG). Related to this is cross-training for substitution (training and deploying light infantry trained as military police, or mechanized troops as light infantry). Another means of providing proper forces for SSCs while minimizing the demand is to tailor or "modulize" the forces deployed (e.g., send a platoon of combat engineers rather than a battalion).

The Chairman visiting Tuzla

Cooperation and Coordination

Communications among U.S. military, coalition military units, and civilian organizations can be increased by several methods. Among military units, the United States and NATO, or the United Nations, or both, can designate types of radios (and computers) as well as frequencies and channels for use in the field during coalition operations, and can recommend all troop contributors be thus prepared. At deployment, the United States (or NATO, or the United Nations) could provide missing communications equipment and fill in the gaps of any units not fully prepared. In the same manner, civilian organizations can coordinate closely with the UN Department of Humanitarian Affairs, UNHCR, ICRC, WFP, and the UN Children's Fund, all of which have substantial communication capabilities and coordinate with most NGOs. During deployment, an agreed-on communication center for unclassified information (e.g., the Humanitarian Operations Center/Civil-Military Operations Center or HOC/CMOC) and procedures and could serve coalition forces and civilian organization personnel in the field with a designated communication link. Thus coalition forces and civilian organization personnel could report nonmilitary information to their headquarters and organizations. The UNDHA "relief net" (available on the Internet) provides a good example of ways nonmilitary information can be shared. Another approach might be for the United States and other willing governments, plus the UN and its agencies, ICRC, and NGOs, to purchase the same or fully compatible low-cost radios, which then would be available for major complex contingencies to set up a common net on the ground, separate from most military communications.

Shared communications, with central and regional HOC/CMOCs, go a long way toward adequate operational coalition cooperation and coordination between military and civilians, but these could be reinforced with mechanisms to coordinate policy at the appropriate level. Such mechanisms would usually include senior military and civilian representatives of the most important governments and organizations, with frequent regularly scheduled as well as ad hoc meetings, and would have clearly designated personnel in charge of integrated coordination and cooperation on the ground, if not military-style command and control. On the military side, liaison officers and linguists already required for coalition command and control would have interoperable communications equipment and procedures.

To handle the increased coordination functions, the headquarters component of combat units deployed for SSCs with civilian participation might be strengthened substantially (e.g., battalion headquarters component for a company, division headquarters for a brigade) and configured for joint operations.

Words and Deeds

Experience has demonstrated the overriding importance of both psychological operations and public information in the conduct of almost all categories of SSCs. Both can be, and have been, critical to the success or failure of the mission, and both can be planned for as integral to an SSC operation.

PSYOP components can be provided for deploying forces as well as in training headquarters components for their proper use. In many SSCs, because civilian and military personnel of U.S. embassies often can add important information through their greater knowledge of the local situation, they should be integrated into the PSYOP process. Public information is a separate activity, but should be treated similarly, to ensure that well-staffed joint information bureaus become components of deploying forces and that embassy personnel are integrated into the process. Intensive media coverage before, during, and for a few weeks after deployment can be prepared for, with easy access to senior officers, to stress openness and cooperation with the media as long as they do not interfere with operational activities. Mishandled public information can have a negative impact on domestic support for the mission. In Haiti and Bosnia, for example, PSYOP units were designated Military Information Support Teams to accommodate coalition sensitivities. Public affairs was redesignated public information.

A great deal of intelligence can be learned from local sources--embassies and selected international organizations-- NGOs and indigenous personnel to which are particularly useful for analyzing intelligence and putting it into context. Informal information exchanges often are best and can be provided for in advance and partially implemented in the planning stage, leaving full implementation to the deployment phase. There should be an emphasis on intelligence and PSYOP, with both focused on urban warfare--particularly on how to anticipate, deter, or defuse moves by an actual or potential adversary, using absolutely minimal violence--and on how to avoid alienating of the urban population.

Weapons and Equipment

The existing process of improving and developing new weaponry and equipment can satisfy the needs for materiel required for SSCs, particularly if it emphasizes the rapid deployment of nonlethal weaponry and techniques. Other requirements include equipment for reconnaissance, intelligence, and information operations in urban areas (e.g., various types of unmanned aerial vehicles. Nonlethal weaponry can be made available to units deployed for SSCs in sufficient quantity and for properly trained units, although the United States may need to make up for shortages in coalition military contingents. Similarly, in developing and providing communications equipment to U.S. units for SSC operations, interoperability with the equipment of other countries and with key civilian organizations is essential to the success of the operation.

1998

Strategic Assessment

Engaging Power for Peace

CHAPTER ELEVEN

Asymmetric Threats

During the next decade, the United States plans to maintain superior if not unique capabilities in the face of any potential military opponent. This capability, as described in chapter 9, has the following features:

- Global power projection
- Superior knowledge, planning, and information dominance
- Deep-strike capacity
- Joint and combined doctrine
- High-performance combat units.

However, present and future opponents may expend considerable intellectual and material resources to develop political-military responses designed specifically to upset or counter the great strengths inherent in the force posture advocated by the QDR. The Nation's great capability in high-technology power projection forces may lead future opponents to devise a variety of "asymmetric" counters or stratagems to frustrate, if not defeat, the U.S. military advantages.

Defining Asymmetry

Put simply, asymmetric threats or techniques are a version of not "fighting fair," which can include the use of surprise in all its operational and strategic dimensions and the use of weapons in ways unplanned by the United States. Not fighting fair also includes the prospect of an opponent designing a strategy that fundamentally alters the terrain on which a conflict is fought.

Historical examples of such strategies include the following:

- NATO's Cold War doctrine of first use of nuclear weapons to compensate for the nonnuclear superiority of the Red Army
- Operation *Anadyr*--the Soviet deployment of medium-range ballistic missiles (MRBM), and intermediate-range ballistic missiles (IRBM), and tactical nuclear weapons to Cuba in 1962
- Terrorism by proxy, used by various Islamic states against U.S. and European interests
- The Serbs taking UN personnel hostage to deter military escalation by NATO forces during 1994-95
- Exploitation of major nuclear-armed allies, such as the Soviet Union and China, by North Korea and North Vietnam to limit options for military escalation by the United States during their respective MTWs.

Future opponents will have many options for attempting to deter, disrupt, or defeat U.S. use of military power. Four broad options could be part of an asymmetric response to current and foreseeable U.S. superiority in regional combined-arms warfare capability. The first option is the acquisition of weapons of mass destruction (WMD) and long-range ballistic or cruise missiles. A future regional opponent could threaten U.S. and allied forces with a dramatic form of military escalation. Even without operational use, the mere presence of such capability would act as a regional-strategic shadow and might weaken the commitment of key allies to any future U.S. military response to regional aggression. The second is the selected acquisition of high-technology sensors, communications, and weapon systems. This is the strategy of the niche player. The third, the exploitation of cyberweapons, could be used to disrupt the next generation of information-technology (IT) military logistics systems or to bring the war home by attacking the national strategic infrastructure (NSI), itself rapidly exploiting IT in the name of economic efficiency. And in the fourth, opponents could choose to fight in environments, such as large cities or jungles, that degrade the U.S. capacity to find and attack militarily significant targets. This could include conducting acts of aggression

that purposely blur boundaries between actions considered crimes and those viewed as warfare.

U.S. and allied efforts failed to neutralize the threat of the Iraqi theater ballistic missile (TBM) during the Persian Gulf War. Saddam Hussein's only military success, and a limited one, lay in the failure of the American-led coalition to find and destroy mobile theater missiles. For potential opponents of the United States, developing long-range unmanned bombardment systems is a very high priority. Many nations have active programs for the development and deployment of ballistic missiles with a range of up to 3,000 kilometers. The SS-1C SCUD represents the 50-year-old technology of the V-2 TBM. New generations are in development or have been deployed, such as the Chinese M-9 series. Upgrades in accuracy and effectiveness of TBMs are likely during the next decade. All contemporary and future TBM launchers will be able to find their geolocation with high accuracy and convenience, owing to the global positioning system (GPS).

The theater-range, ground-launched cruise missile may mature as an alternative means of long-range bombardment. At present, the threat of long-range cruise missiles is less visible than that of TBMs. The use of the *Tomahawk*-class cruise missile during the Persian Gulf War highlighted the new role of nonnuclear armed land-attack cruise missiles--a technology that matured in the last decade of the Cold War. Future theater peers and regional powers will probably develop their own versions of the *Tomahawk*. Some of these states may choose to mass-produce cruise missiles on a scale similar to that of the German V-1 program, which led to the production of thousands of weapons. Relying on GPS guidance and made of inherently low-observable materials (fiberglass), a new generation of V-1 may appear in many potential MTWs. By using ballistic and cruise missiles in a combined-arms campaign, a regional opponent could place U.S. and allied expeditionary forces in danger of very long-range artillery fire.

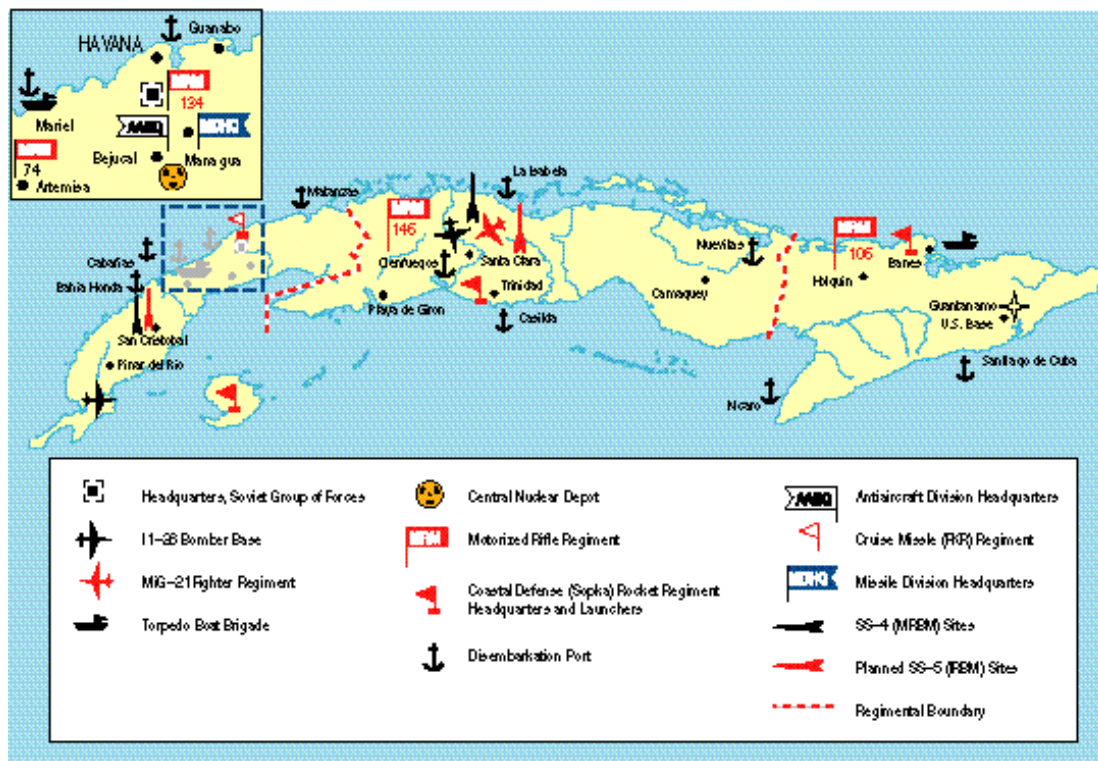

Adding to the danger to U.S. military capabilities in an MTW is the prospect of a regional opponent developing and deploying an array of WMD warheads for delivery on their ballistic and cruise missile arsenals. Even without accurate terminal guidance, both ballistic and cruise missiles armed with WMD present U.S. and allied forces with the potentially horrific threat of mass military and civilian casualties.

The lowest cost and heretofore apparently the most effective response to the threat of WMD weapons has been the threat of massive reprisals, including the use of nuclear weapons. This concept of extended deterrence has appeared to work well, especially during the Cold War stand-off between NATO and the Warsaw Pact nations. In the context of future MTWs in Eurasia, deterrence through the threat of retaliation could prove less effective prior to and after the use of WMD weapons. It is possible to imagine that a future opponent might brandish WMD weapons to intimidate one or more regional allies into dropping out of a pro-U.S. coalition. WMD could also be used as weapons of mass "disruption." Biological weapons might prove an attractive means of disguised warfare that in some future contingency might be used to induce widespread illness without mass fatalities. Developments in antimaterial, less-than-lethal chemical weapons, could lead to use of cruise missiles equipped with wide-area antimaterial aerosol warheads. Finally, nuclear weapons could be used in a less than lethal information-warfare mode. After acquiring even a small (fewer than 20) arsenal of nuclear weapons, some regional opponents might conclude that several could be used to generate wide-area electromagnetic pulse (EMP) effects during a critical phase of a military operation in order to damage a wide array of C⁴ISR assets deployed by the United States in an MTW.

Operation *Anadyr* (Cuban Missile Crisis)

In 1962, the Soviet political military leadership decided to shift the global geo-strategic correlation of forces and provide Cuba with a credible defense against an invasion by the United States. With limited air- and sealift assets, the Soviet military decided to deploy an expeditionary force that would rely heavily on the new revolution in military affairs nuclear weapons and long-range missiles. Operation *Anadyr* called for deployment of ballistic missiles--the SS-4 MRBM and SS-5 IRBM--to rapidly upgrade the Soviet transoceanic range nuclear arsenal in order to buy time for the delayed SS-7 ICBM program. A second feature--undetected by U.S. intelligence for some 30 years--was the deployment of tactical nuclear weapons for use by the relatively small Soviet expeditionary force as high-firepower, anti-invasion weapons. Recent revelations indicate that the Soviet political-military leadership designed *Anadyr* as an asymmetric response to the clear military nonnuclear superiority of the United States in the Caribbean region.

Soviet Forces on Cuba (October 22, 1962)

Source: Central Intelligence Agency

High-Tech Weapons

Potential military opponents of the United States may conclude that there are major political, strategic, and military risks in relying too heavily on nuclear, biological, and chemical (NBC) weapons as an answer to U.S. power-projection capabilities. Some of them may believe that they can acquire key elements of the systems associated with the RMA from the open arms market. And some may even have the high-technology wherewithal to develop and use indigenous production. This last capability may loom as a major difference in the capability of a theater peer and a regional power or rogue.

Chinese M-9 (Dong Feng-15) SRBM

The GPS navigation satellite constellation is an attractive global asset that many military powers can exploit in all of its dimensions, as revealed during the Persian Gulf War. In the next decade, several alternatives, such as the Russian GLONASS system, are likely to be deployed as backups to the U.S.-owned and -operated GPS.

By 2002, the space-based elements of cyberspace will have undergone a major upgrade with the deployment of several satellite constellations that provide high-bandwidth mobile communications, among which Iridium, Globalstar, and Teledesic offer the leading edge in the rapid proliferation of space-based mobile telephone and data systems.

SCUD missile

Also by 2002, several 1 meter resolution commercial imaging satellites will be operational. These commercial reconnaissance systems now rely on electro-optical sensors, but by 2008, one or more such systems may offer all-weather and night surveillance based on the use of active sensors such as synthetic aperture radar (SAR).

In a future contingency, U.S. forces will be monitored during any crisis by a wide range of players, including international news organizations and nongovernmental organizations (NGOs). The U.S. military will operate in a global fish bowl. At a minimum, future opponents may gain invaluable strategic and operational information about the location and disposition of U.S. and allied forces.

In most SSC or MTW contingencies, the U.S. military option to degrade these space-based assets will be very limited. Except in extreme military emergencies, the U.S. regional commander in chief is very unlikely to gain authorization to use physical violence to disable such global assets. Disabling EW or IO attacks may be authorized, but the military may face the possibility that in future military operations, including combat, U.S. and opposing forces may simultaneously be exploiting the same space-based infrastructure.

Any U.S. expeditionary force engaged in a future MTW along the global littoral will rely on the Navy to provide early reconnaissance fires, active missile defenses, operational surveillance, amphibious capability, and seaborne logistics. Air and ground units will simultaneously rapidly deploy by way of the large airlift fleet of wide-body jets. One of the responses of a regional power to this U.S. strategy will be to acquire sufficient RMA-type capabilities to be able to challenge the U.S. air and sea rapid deployment capability. Several of the following niche options will probably be available in the global arms market:

Enhanced reconnaissance strike systems, including long-range ground- and air-launched antiship cruise missiles and a variety of UAVs, Maritime Patrol Aircraft, and space-based surveillance platforms

- Advance conventional munitions (ACMs), to upgrade strike-aviation assets that might include high-performance aircraft, such as the SU-34
- Ground-based ACMs, including mobile surface-to-air missiles, guided munitions for multiple rocket launchers, and fiber-optic-guided munitions
- Nonnuclear EMP and high-powered microwave (HPM) munitions.
- Intelligent, if not brilliant, land and sea mines
- Advanced, low-observable platforms, including UAVs, antiship missiles, air-independent (AIP) submarines, and wheeled armored fighting vehicles.

A central feature of the strategy of the niche regional power will be to deploy sufficient regional capabilities to increase substantially the entry price to any U.S. expeditionary force without recourse to WMD weapons. Such an approach will be reinforced by the synergistic effect of a complementary WMD shadow.

Aside from exploitation of RMA-type systems in the theater of operation, one or more theater-peers or regional rogues might choose to bring the war home to the United States by exploiting cyberspace.

More conjectural, but not necessarily more controversial, is the prospect of MTWs becoming simply major wars in which targets in the United States could be attacked from cyberspace. The QDR calls for exploitation of the Revolution in Business Affairs (RBA), and of the concept of *focused logistics*, according to which all four services will move toward a "just-in-time" logistics system. From the perspective of the U.S. military's history, a shift away from the current logistics concept of "just in case" would be revolutionary. As posited by the QDR, the shift to a "just-in-time" logistics system could lead to major peacetime savings by reducing inventory requirements and increasing the efficiency of the process of repairing equipment. The strategic and operational benefits of moving to a *focused logistics* radically lower the logistics footprint of the U.S. expeditionary forces during an MTW; and a smaller footprint will reduce timelines for deployments of combat forces while also reducing the vulnerability of the in-theater logistics system to air and missile attacks. No longer

would there be a need for the massive dumping of supplies as in Operation *Desert Shield*, the Persian Gulf War buildup.

These powerful advantages could be offset if an opponent attacks the U.S. high-performance logistics system with cyberweapons and through cyberspace. War conducted from cyberspace means a conflict in an environment where the geolocation of attacker and target is nearly independent.

Aside from attacks through cyberspace designed to disrupt the rapid deployment phase of a U.S. expeditionary force, cyberattacks could be directed at the national strategic infrastructure (NSI) of the United States and key allies. Targets include the major elements of the national economy: the public telecommunications network, the financial and banking system, the electric power grid, the oil and gas networks, and the national transportation system--specifically, the air transportation system. All elements of the NSI are undergoing rapid, revolutionary changes under the pressures of privatization, globalization, and exploitation of IT.

Enormous economic benefits appear to be accruing to the U.S. economy, and the IT revolution may itself provide a partial explanation for the current steady economic growth accompanied by low unemployment and low inflation. These economic efficiencies may provide the United States with increasing commercial and economic superiority, but with that comes the risk of new strategic vulnerabilities. For private industry and commerce, public security and safety become cost centers to be avoided. Unfortunately, some of the NSIs that will evolve rapidly during the next decade may prove vulnerable to a variety of attacks from cyberweapons. One possible response by a regional opponent of the United States to the possible deployment of a U.S. expeditionary force is to cause a new strategic "fog of war." Without adequate back-track techniques, a strategic opponent of the United States might be able to conduct a disguised structured campaign that would cause mass disruption to civil society. This opponent may have nongovernmental allies located inside and outside the United States which, with or without the opponent's direct assistance, might conduct a cyberwar campaign that could distract and slow the decisionmaking process of the U.S. National Command Authority.

Finally, a future enemy could conduct a slow-motion strategic economic warfare campaign against private economic interests in the United States. A future high-performance criminal organization might be employed to conduct a campaign of strategic crime against the United States and its major allies. New opportunities for high-performance crime could use rapid deployment of a wide range of cyberpayments or electronic currency systems that facilitate the global transition to electronic commerce.

Biological Agents

| Disease | Incubation time (days) | Fatalities (percent) |
|---|------------------------|----------------------|
| Anthrax | 1 to 5 | 80 |
| Plague | 1 to 5 | 90 |
| Tularemia | 10 to 14 | 5 to 20 |
| Cholera | 2 to 5 | 25 to 50 |
| Venezuelan equine encephalitis | 2 to 5 | <1 |
| Q fever | 12 to 21 | <1 |
| Botulism | 3 | 30 |
| Staphylococcal enterotoxemia (food poisoning) | 1 to 5 | <1 |
| Multiple organ toxicity | Dose dependent | |

Source: Department of Defense

Conflict in the form of cyberwarfare that would blur conventional boundaries between crime and war might prove attractive to an opponent that sees no strategic benefit in a direct confrontation of the military of the United States in a regional war.

An important implicit assumption of the QDR is the absence of a military threat by a global peer before 2010. Several credible theater-peer competitors may challenge U.S. interests as early as 2008. A theater peer, by definition, will have a transoceanic nuclear delivery capability. It will have a substantial technological and military industrial base to develop, exploit, and deploy selected elements of an RMA-class military systems. It will have a large regional military capacity. And it will have a substantial space program and access to much of the global aerospace industry through commercial sources.

From the perspective of U.S. military planners, the arrival of future theater peers may be ambiguous. As transition states, they will probably both cooperate and compete with the United States on a wide range of strategic and geoeconomic issues. Such mixed relations will make any long-term U.S. strategy to use international monitoring or sanctions to restrict in a substantial way the diffusion of advanced dual-use or military technology ineffective. At present, the most plausible theater peers by 2008 are three large transition states: China, Russia, and India.

Bombs Designed for Underground Targets

Old: B-63 Large size means it can be dropped only by a B-52 bomber; explodes in midair with wide surface damage.

New: Modified B-61 Roughly equivalent in power to B-63, but smaller size means it could be carried by stealth aircraft; burrows into ground before exploding.

Source: Sandia National Laboratory

These three major powers may not pose a direct military threat to U.S. interests, with the possible exception of a future major military crisis between China and the United States over the disposition of Taiwan. More plausible is that the long-term strategic calculus of these powers may undermine central strategic assumptions of the QDR. First, Russia and China will probably give considerable emphasis to the role of nuclear weapons in deterrence and possibly warfighting, if only to counter U.S. preponderance in high-technology nonnuclear warfighting capabilities. India and Pakistan may follow the same rationale. If these major powers follow this nuclear emphasis strategy, it could prove to have an even more corrosive effect on the viability and stability of the NPT regime. Second, Russia and China have developed relations with several states--Iran, Iraq, Syria, and Libya--that the United States has defined as rogues, and they have become major exporters of military hardware and technology to these states. At the least, their relationships with Iran and Iraq will undermine the U.S. dual-containment strategy, by which it seeks to impose both international pressure and isolation on both regimes reminiscent of the Cold War. Most worrisome would be successful reestablishment of an alliance between either Russia or China and one or more of these rogue powers.

Patriot missile battery

China, Russia, and India may invest in leap-ahead technologies, include major investments toward directed energy, EMP, HPM, and cyberweapons systems designed specifically to undermine the U.S. concept of dominant battlefield knowledge warfare.

The biggest worry for the United States, as suggested above, may be the indirect strategic effect of a theater peer's behavior in a Eurasian region where the United States has vital interests.

Rogues

Current regional opponents (rogues) of the United States, specifically Iran and Iraq, may make major efforts to develop a geostrategic and geoeconomic alliance with either Russia and China or with both. Unlike the Persian Gulf War, where Iraq was geostrategically isolated, a future crisis involving Russia and China would be far more stressful for the U.S. military. The specter of limited wars in Korea and Vietnam looms large in the minds of U.S. military planners, and Washington might even rule out some high-performance reconnaissance strike options out of fear of escalation in a regional conflict.

With or without an alliance relationship, most potential rogue states will attempt to acquire the capability of a theater peer by 2008. Iran today continues to acquire a substantial WMD and long-range missile capability, and Iraq may soon follow, once UN economic sanctions are removed; the scientific and engineering cadre lies in wait. As already noted, the attractiveness of acquiring a regional WMD delivery capability is very powerful as a counter to U.S. power-projection capabilities. In parallel, rogue regimes will try to acquire a variety of niche capabilities to threaten or actually to raise the entry price of any major U.S. military intervention. Much of what the potential regional predator will do in the coming decade will probably be focused on undermining a U.S.-led political-military coalition, both in the region and at the United Nations.

SOURCE: Department of Defense

Failed States

In Somalia and Chechnya, local insurgents led by charismatic leaders frustrated military operations by the United States and Russia, respectively. With the global increase in urban sprawl, future conflicts are liable to occur in cities rather than in the countryside. Urban terrorism has a long history of use as the strategy of the weaker military party. Hiding within a civilian population, many of whom are sympathetic to the policies, if not the immediate aims, of the terrorists, is a consistent strategy of opponents of a U.S. or multilateral military intervention viewed as hostile to that organization's strategic interests.

Insurgents have already acquired advanced infantry weapons, including man-portable anti-aircraft and antiarmor guided weapons, which

are spreading rapidly worldwide, reflective of the broader cascade of older weapons out of both NATO and the former Warsaw Pact nations. Insurgents in the near future will be able to exploit the three space-based assets--navigation, surveillance, and telecommunications--to support their own operations. Mobile telephones equipped with encryption technology will be very useful to insurgent leadership. Insurgents may behave like niche regional military powers that have acquired RMA-types of weapons and support systems. The basic strategy of the insurgent or local tough ordinarily is, as stated before, to raise the entry price for any U.S. or other intervention force and drive it from the local field of battle.

Transnational Criminals

Even gray zones of classic insurgent warfare may be blurred by the introduction as a major player in future conflicts of the transnational criminal organization (TCO).

The U.S. military has already faced the frustrating task of taking part in the protracted drug war against various TCOs operating out of Latin America, Asia, and the greater Middle East. The current focus of U.S. Armed Forces is to provide wide-area surveillance south of the U.S. border in support of U.S. law enforcement efforts to interdict the flow of illegal drugs. Especially in Colombia and Mexico, U.S. law enforcement has been thwarted by the ability of the various drug cartels to mutate rapidly and suborn local governments. Several nations may become dominated politically and financially by powerful criminal enterprises. Certainly, a number of Latin American countries have had to struggle against this challenge.

The phenomenon is global, and a potential worry is that some states may chose to use indigenous TCOs in a symbiotic way. Like the use in Elizabethan England of letters of marque during state-sponsored terrorism against Spain's seaborne gold traffic, TCOs may be used creatively by future opponents of the United States to prey on the economies of the industrial democracies without prompting any effective reaction. Cyberspace may prove a very attractive arena for conducting strategic crime campaigns that may unfold over several years.

The QDR Response

The drafters and designers of the QDR strategy were not unmindful of the possibility of asymmetric threats. In a number of areas, new initiatives have been taken to make U.S. forces more resilient to asymmetric responses, and in others the response can be best described as "work in progress."

Countering WMD

Major initiatives can be identified that provide a response to a probable and very worrisome asymmetric threat--the delivery of WMD weapons by long-range ballistic or cruise missiles, or both. Some of these initiatives are listed below.

Enhanced Counterforce:

- Improved Theater-wide Intelligence Surveillance and Reconnaissance (ISR). Major new programs include the deployment of the E-8, joint surveillance and target attack radar system (JSTARS), and Global Hawk/Dark Star long-range, unmanned aerial vehicle (UAVs). Improved hyperspectral, electro-optical, and synthetic aperture radar (SAR) sensors deployed on a wide range of air- and spacecraft.
- Deep Strike (1,000+ kilometer range) Systems. New programs include deployment of 21 B-2 Spirit low-observable (LO) bombers, new variants of the Tomahawk cruise missile, development of the supersonic Fast Hawk cruise missile, and upgrade of tactical aviation with a wide range of advanced conventional munitions (ACMs).
- Enhanced Special Operations Capabilities. The U.S. Special Operations Command has taken on the counter-WMD mission as a high priority. Newly trained teams and technical assets are being developed and deployed to provide for on-site seizure or destruction of WMD materials, infrastructure, and delivery vehicles. One of the important roles of SOF units in future counter-WMD operations will be to provide bomb damage assessment for a U.S. counterforce campaign.

Advanced Theater Missile Defenses:

- Terminal Missile Defenses. These include Patriot advance capability (PAC-3), the Standard Missile II Block 4A, and medium-extended air defense system (MEADs).
- Wide-Area Missile Defenses. The principal programs are the Navy theaterwide and the Army theater high altitude area defense

(THAAD) systems. Both are expected to reach initial operational capability (IOC) before 2005, but the development of a reliable exoatmospheric kinetic energy kill capability has proved challenging. Further out is the Air Force Airborne Laser (ABL) program. If successfully developed by 2005, it may startle the skeptics and usher in a new era of air-combat operations.

- Joint Cooperative Engagement Concepts. An important program will be to provide a joint aerospace defense theater-wide command-and-control system for the array of active defense systems to be deployed by 2005. Failure to develop such a program would radically degrade the effectiveness of any theater missile defense modernization program.
- Joint Theater Missile-Defense Operations:
- *Roving Sands*. An innovative effort led by the Army is to practice joint counterforce and active-defense operations against the threat of mobile tactical and cruise missiles. Operation *Roving Sands* may be the precursor to a permanent National Training Center (NTC) type of operation where all the services can practice the "SCUD hunt."

Hezbollah guerrilla

Joint Passive Defense Measures:

- BW or CW passive defense. Many programs are underway to enhance the passive protection of U.S. field forces against the threat of BW and CW weapons, including development of enhanced local- and wide-area warning and attack characterization sensors.
- Enhanced Combat Engineering. Although no dramatic new initiatives are planned, substantial Army and Marine combat engineering capability will be maintained. These units will be a critical part of any early deployment force and will provide field-expedient shelters and fighting positions against the threat of long-range missile fire. Field-expedient shelters radically reduce the lethal radius of nuclear weapons, especially the lower yield variety, which are likely to be in the early inventory of a state which is a successful proliferator.
- Lowering the In-Theater Footprint:
- Focused Logistics. There are compelling peacetime reasons to exploit the revolution in business affairs (RBA). Various "total asset visibility" programs will allow future U.S. expeditionary forces to reduce their vulnerability to attack by long-range missiles by relying more on various "just-in-time" logistics concepts. The prospect of a major innovation in logistics is enhanced by QDR plans for robust strategic and intratheater air- and sealift programs. Noteworthy are the C-17 wide-body airlifter, C-130J, and V-22 programs. By the turn of the century, U.S. sealift and maritime pre-positioning programs will have undergone major modernization. Finally, the Army continues to upgrade its helicopter and truck fleets.
- Fighting with Dispersed Units and Indirect Fires. The QDR emphasizes deployment of a variety of long-range fire systems, including Army and Navy tactical missile systems (TACMS) equipped with brilliant munitions, tactical aircraft equipped with ACMs, helicopter gunships, and a new generation of tube and rocket artillery equipped with enhanced munitions. Especially in the early phase of MTW, when the menace of long-range missiles armed with WMD warheads is most severe, Army and Marine ground combat units will be able to fight in a more dispersed and agile fashion while relying heavily on long-range indirect fires and a focused logistics system.

All these initiatives suggest that embedded in the QDR is a very robust response to the WMD threat. A key to the success of these programs, aside from steady funding, is whether they will be effectively orchestrated by an overarching counter-WMD campaign. Such a campaign would require all the services to make major commitments to the development of new operational concepts and to a vigorous training program. Like the antisubmarine warfare (ASW) challenge, counter-mobile missiles armed with WMD warheads would be very difficult to produce.

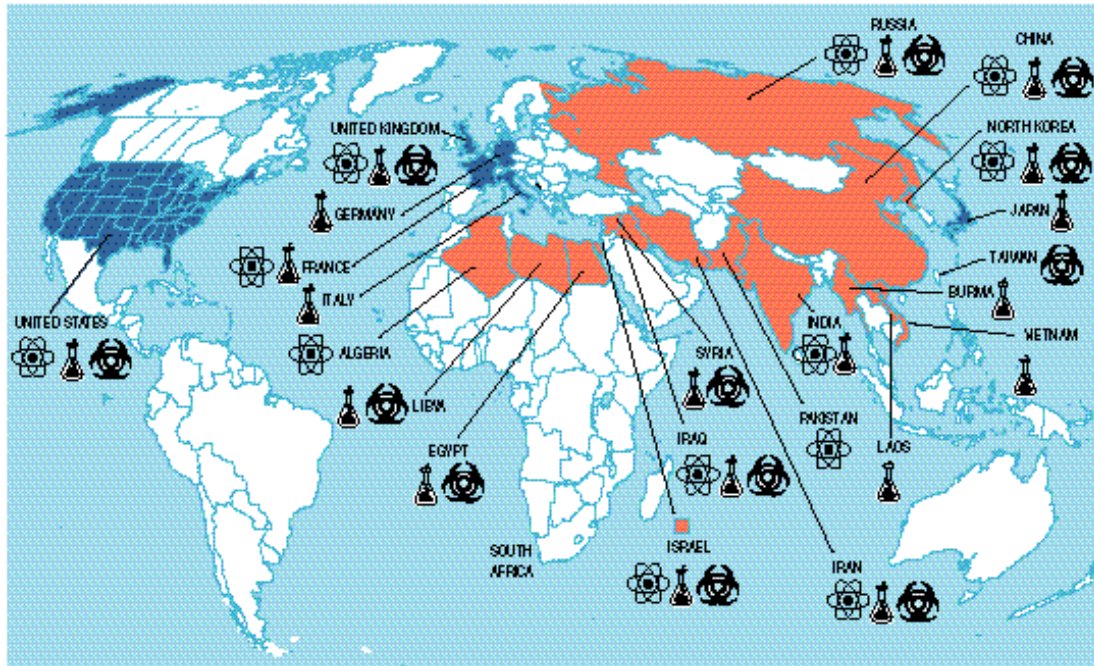

Reconnaissance, Surveillance, and Information Warfare

Finally, the issues of electro-magnetic pulse (EMP) and high-powered microwave (HPM) weapons are troubling. The limited use of nuclear weapons above the atmosphere can generate wide-area electromagnetic effects. The United States and other countries with advanced technologies have vigorous programs to develop nonnuclear-driven EMP and HPM weapons. A major policy issue apparently not fully resolved by the QDR is whether the next generation of key weapons systems and their associated C⁴ISR should be made resilient to this class of weapons effects. Electromagnetic hardening imposes a tax that many program managers would prefer not to pay. Without a coherent program, the risk remains that by 2008 many of the advanced weapons deployed with U.S. expeditionary forces will have a glass jaw.

This problem will not go away, even were U.S. planners convinced that the threat of nuclear retaliation would deter the next first use of a nuclear weapon. WMD weapons may be deployed in a way that causes major material damage and disruption without also incurring mass military and civilian casualties.

The Spread of Weapons of Mass Destruction

| Weapon | Governing Treaty | Original Possessor States at Treaty Signing | Problem States |
|--|-------------------------------------|--|--|
|  Nuclear | Nonproliferation Treaty, 1970 | United States, United Kingdom, France, China, and Soviet Union | Israel, India, and Pakistan. Active proliferators include Iran, Iraq, Algeria, and North Korea |
|  Chemical | Geneva Protocol, 1925 | United States, United Kingdom, France, Soviet Union, Germany, Japan, and Italy | Egypt, Iran, Iraq, Israel, Libya, Syria, North Korea, Burma, Vietnam, China, and Russia |
|  Biological | Biological Weapons Convention, 1975 | United States, United Kingdom, Soviet Union, and China | Iran, Iraq, Libya, Syria, Israel, Egypt, Taiwan, Vietnam, North Korea, and Laos |

B-2 dropping B61-11 bomb

Countering High-Tech

One powerful argument for investment in a robust counter-WMD and countermissile capability is that it provides for enhanced warfighting abilities across the spectrum of conflict. Forces that can conduct a countertheater missile campaign in a WMD-shadowed environment will be very well equipped to destroy classical military threats. Put another way, if you can conduct an effective SCUD hunt, you can smash tank armies.

Although there was an interservice quarrel over which array of weapons systems could best defeat a classical mechanized invading army, the QDR chose instead to invest in a variety of "tank killing" systems. Many of these are mentioned above, in the discussion of counter-WMD and countermissile operations.

The United States is developing a range of capabilities designed to counter asymmetric high-tech weapons. These efforts include:

- **Gaining Dominant Battlefield Knowledge.** An array of airborne and spaceborne sensors will be deployed in the next decade. Simultaneously, selected services will take the lead in deploying robust offensive EW capabilities, including the Navy's commitment to the joint Air Force/Navy EA-6B program. Although expensive, a large fleet of intelligence-collection aircraft includes the Air Force Rivet Joint and the Navy EP-3.
- **Robust Suppression of Enemy Air Defense.** An array of countermeasures has been developed to defeat the evolving threat of surface-to-air missiles. Most worrisome is the global diffusion of advanced electro-optically guided man-portable surface-to-air missiles. Airborne countermeasures will be developed and deployed during this decade to reduce this threat radically.

Low-Observable Combat Vehicles and Stand-Off Capabilities:

- **Continued Investment in low observable (LO) Vehicles.** The QDR program calls for investment in several very expensive LO programs. Although production of the B-2 will probably be capped at 21 aircraft, two major tactical fighter programs, the F-22 and JSF, emphasize LO features, which significantly increase the ability of both combat aircraft to operate in hostile airspace.
- **Diverse ACM Program.** The overall effectiveness of U.S. combat aviation, both long-range bombers and fighter bombers, will be radically enhanced by mass deployment of the next generation of guided munitions such as joint stand-off weapon (JSOW), joint direct attack munitions (JDAMs), and the wind-corrected tactical munitions dispenser. Further, the Air Force and Navy are deploying a variety of stand-off weapons, including the tri-service attack missile, extended range (TSAM-ER) and the joint service stand-off attack missile (JSSAM). All these munitions will dramatically increase the productivity of each sortie against fixed and mobile targets. Enhanced productivity will allow air campaigns to be conducted with great effect and dramatically reduce sortie rates.

Fighting for the Littoral:

- **Enhanced shallow antisubmarine warfare (ASW) and countermine programs.** After several brutal wake-up calls, the Navy appears heavily committed to development of enhanced countermine capabilities. Without a major upgrade in sea-mine countermeasures, various littoral states will be able radically to restrict the use of their neighboring water by the Navy. The arrival of the air-independent propulsion (AIP) non-nuclear-powered submarine offers a new undersea menace. Although the Navy may not be seriously challenged in open ocean, littoral ASW remains a major challenge.
- **Defeating the Antiship Missile.** An enhanced SCUD hunt capability will provide additional benefits. For the Navy, a major challenge is that a niche opponent will effectively close a littoral region to naval surface forces by deployment of ground- and air-launched antiship missiles. Already Iran is moving down this track. Another major challenge for the Navy will be to develop a neutralization campaign that will neutralize mobile missile launchers. Further major upgrades to shipborne active defense are under way, including continuing modernization of both terminal and wide-area active defenses. An unmet need is the deployment of a long-endurance airborne sensor designed to detect sea-skimming LO antiship missiles that may approach their target at supersonic speed.
- **Enhanced Amphibious and Logistics over the Shore (LOTS) Systems.** Major ports may be vulnerable to missile, air, and special operations attacks, especially in the early phases of an MTW. The QDR calls for continued investment in a robust over-the-horizon amphibious capability, especially with deployment of the V-22 on new-generation large-deck amphibious ships. Further, the Army and Navy continue to invest in the LOTS program that provides for over-the-beach logistics operations. Both programs will allow U.S. forces to bypass ports damaged or blocked by mines.

Night Fighting Superiority:

- **Enhanced Night Operations.** The QDR program supports a vigorous effort by all services to take advantage of the revolution in electro-optical technology to provide a 24-hour-a-day combat capability. U.S. superiority in night fighting was revealed during the 100-hour ground operation of the Persian Gulf War. Further advanced systems are in development, which should sustain U.S. tactical superiority for another decade. Beyond 2008, the situation will become problematic, because night-vision systems have become a major feature of the global arms market. One area in which the United States may remain ahead is electro-optical countermeasures.

Soldiers in CBW gear

Countering IW

The United States has also taken steps to counter cyber weapons, including:

- Organizing for Cyberwar. All four services have information operations (IO) or information warfare (IW) centers. At present, the Air Force appears the most energetic in developing offensive and defense IO techniques and doctrine. One major challenge for the services will be to develop effective institutional programs that can conduct risk-assessment programs. There is a real need for a systematic understanding of tradeoffs between the benefits of acquiring major C⁴ systems from COTS sources and the risks from their vulnerability to attacks by cyberweapons, ranging from computer viruses to electromagnetic weapons. Another unresolved issue is how DoD and the larger Federal Government should organize a credible tactical warning and attack assessment system to alert the NCA to major threats to "cyberpeace."
- A Minimum Essential Information Infrastructure (MEII). An important but unresolved issue is whether the U.S. military should develop the capacity to seize control of a portion of the national if not global information infrastructure, to insure continuity of military operations during an MTW in which an opponent conducts a strategic information-warfare campaign. Other options include the more indirect approach of the Federal Government to provide tax and other incentives to owners and operators of the National Strategic Infrastructure to build robust systems capable of defeating the effect of cyberweapons by direct defenses or rapid reconstitution measures, or both.

Implicit in the QDR strategic planning is the assumption that the United States will remain at the leading edge of military and dual-use technologies. Overall, this is indeed likely for the next 10 years. But deployment of advanced silicon-based weapons systems coupled with focused logistics produces emerging vulnerabilities. Some programs will be needed to nurture effective long-term responses.

Further Work

Even against the niche player that acquires RMA-type weapons, QDR-designed forces should have a robust capability to prevail in major combat operations. What remains uncertain is whether U.S. combat casualties will rise substantially during future SSCs or MTWs. Even with enhanced capabilities, U.S. commanders may not escape the reality that their combat units may suffer sharp but limited casualties during the high-intensity phase of any military operation. Obviously, the central political-strategic question for the NCA is whether the prospect of such casualties is worth the cost. Clearly, a regional player or local tough will try to prompt the answer "no." This chapter does not try to establish whether military leaders should either attempt to warn its political masters of this possibility, or continue to support the fiction, based on the unique experience of the Persian Gulf War, that war is a blood-free sport.

Aside from the threat of niche players and local toughs acquiring RMA-type technologies, several major powers, including potential theater peers, are likely to invest in the next generation of leap-ahead technologies.

Strategic Assessment

Engaging Power for Peace

CHAPTER TWELVE

Nuclear Weapons

Since the dawn of the nuclear age, the United States has been engaged in an ongoing debate--internally, with its allies, and with the international community--about its nuclear strategy. This has included vigorous discussion and analysis of the types of weapons that should be built and deployed, the characteristics of delivery vehicles for them, the targets to which these weapons should be assigned, the alert status of forces, and the relationship between how the weapons might be used (employment policy) and what senior government officials should say about their use (declaratory policy). The debate has addressed the requirements for deterrence of adversaries and reassurance of allies and examined the relationship of the U.S. nuclear force posture to the U.S. nonproliferation goals. In recent times, it has focused in detail on how far and how fast nuclear force reductions should proceed. This chapter deals with the nuclear issues that bear on U.S. security in the immediate future, that is, in the next two decades. The discussions of political issues that could shape the nuclear policy are offered in the specific chapters on regional security.

Response Capabilities

For five decades the United States has maintained a large, sophisticated nuclear force, which, until the end of the Cold War, was to do the following:

- Deter a nuclear attack on the continental United States by the Soviet Union
- Deter a nuclear or conventional attack by Warsaw Pact forces on U.S. allies in Europe
- Deter an attack on Japan or South Korea by the Soviet Union, China, or North Korea
- Reassure U.S. allies that U.S. commitments to their security were sufficiently credible for them to maintain high confidence in U.S. security guarantees and therefore not to entertain seriously the acquisition of their own nuclear forces.

To achieve these missions, the United States deployed a mix of strategic nuclear forces based on a triad of delivery vehicles: intercontinental ballistic missiles (ICBMs), submarine-launched ballistic missiles (SLBMs), and heavy bombers. At the height of the Cold War, roughly 12,000 nuclear warheads were deployed on about 2,000 delivery vehicles, all in a high-alert status to preclude the Soviet Union from executing a disarming first strike on U.S. nuclear forces. In addition to these strategic forces, the United States deployed nuclear weapons on the ground, on dual-capable aircraft in Germany and other NATO member states, and on carrier-based aircraft. More than 7,000 nuclear weapons were at one time deployed in Europe. Security guarantees were codified through the declaratory policy of extended deterrence. The United States led NATO's adoption of a flexible response policy, indicating a willingness to use whatever level of force was required to defeat the aggressor. To shore up these guarantees the United States refused to pledge no first use (NFU) of nuclear weapons, implicitly reserving the right to initiate nuclear weapon use should circumstances warrant it.

Minuteman

U.S. nuclear strategy in Europe evolved as relations between the United States and the Soviet Union improved after Mikhail Gorbachev took power in Moscow in 1985. In 1987, the two superpowers completed the Intermediate Nuclear Forces in Europe (INF) Treaty, which eliminated deployment in Europe by both sides of all nuclear weapons capable of delivery in the 500- to 5,500-kilometer range. For the West, this was significant, because it eliminated the Soviet SS-20 intermediate range ballistic missile (IRBM) force, which would have been a potent Soviet asset for political coercion or in the event of war in Europe.

Since the end of the Cold War and the collapse of the Soviet Union in 1991, the United States has undergone considerable rethinking about the roles and missions of nuclear forces. Such rethinking is likely to continue in the next two decades, as the United States adjusts its force posture to emerging international realities.

Overall, the quantitative deployment levels of U.S. and Russian strategic forces are limited by the Strategic Arms Reduction Treaty (START) I of July 1991, signed by Presidents Bush and Gorbachev. The treaty entered into force in December 1994 and is scheduled to be fully implemented by the end of 2001. Although it calls for numerical parity of forces, this may be misleading. Some students of nuclear forces and policy, noting severe budgetary constraints, decline in equipment reliability, and deterioration of morale that have plagued Russia since at least 1992, believe that the United States enjoys a superiority in operational effectiveness of the forces. If true, that may be a military distinction without a difference, given Russia could still deliver enormous destruction against the continental United States if its leaders chose to do so. Moreover, the humiliating Russian defeat in Chechnya suggests that for some time Russia will derive its "great power" status primarily from its nuclear arsenal and will therefore probably do what it can to maintain a modernized force that could remain impressive to Western analysts. According to Andrei Kokoshin, former Russian Deputy Minister of Defense and, who at this writing is the national security adviser to President Yeltsin, "Nuclear weapons, especially strategic nuclear forces, also play no small role in defining the status of our state, and by that parameter, Russia remains a superpower."

The 1994 Nuclear Posture Review

The NPR completed and extended President Bush's initiatives in several important aspects:

- It created no new mission or scenario for nuclear-weapon use and articulated the premise that nuclear weapons play a smaller role in U. S. security today than at any other time in the nuclear age.
- It codified that the United States no longer targets any country with strategic nuclear forces on a day-to-day basis.
- It specified that U.S. strategic bombers were taken off alert. Further, more ballistic missile submarines now patrol on "modified alert" out of the range of their targets than on an "alert" status. The U.S. airborne command and control posts now operate at a reduced tempo.
- It called for continued reduction of defense expenditures for strategic nuclear forces and in the number of associated personnel. The

levels for FY 97 were roughly one-third those of FY 88.

- It terminated U.S. ground-force nuclear capability and training for nuclear missions. By FY 97, the number of U.S. nuclear weapons deployed in Europe was down from a peak of 7,000 to "hundreds."
- It mandated that all nonstrategic nuclear weapons, including nuclear cruise missiles, depth charges, and torpedoes, be removed from surface ships, multipurpose submarines, and land-based naval aircraft bases. The capability to deploy such weapons on U.S. surface ships has now been eliminated.
- It continued the reduction of the overall U.S. nuclear stockpile--a 59 percent reduction from FY 88 to FY 97. Ninety percent of the nonstrategic nuclear stockpile and 47 percent of the strategic nuclear stockpile have been eliminated.
- It called for the continued elimination of nuclear warheads. By mid-1997, nearly 10,000 strategic and nonstrategic nuclear warheads had been eliminated. Since September 1993, the United States has unilaterally removed more than 225 metric tons of fissile material from its nuclear stockpile and offered to place it under the safeguards system of the International Atomic Energy Agency.

United States

For the United States, the main policy lesson has been the political value of sustaining a nuclear arsenal second to none--numerical parity coupled, if possible, with operational superiority--to complement superiority in conventional forces and in the unparalleled strength of its economic, technological, and industrial base. Some doubt that the United States needs to maintain nuclear forces greater than or equal to Russian capabilities, on the grounds that Russia is no longer a world power and unlikely to become one again for decades. But this reasoning is shortsighted. A vibrant nuclear force posture is the only politically feasible stance that would pass muster before intensive congressional scrutiny and reinforces the overall image of the United States as the only surviving superpower in the post-Cold War world, an image and a reality that serve U.S. strategic interests.

These favorable conditions have, however, permitted the United States to take significant unilateral steps to streamline its forces. In 1991-92, President Bush endorsed a set of nuclear initiatives, which, along with President Clinton's 1994 Nuclear Posture Review, have led to substantial reductions in the scope and character of the U.S. nuclear posture. President Bush cancelled the Peacekeeper rail mobile ICBM, a new small ICBM, and a new short-range attack missile (SRAM II); curtailed production of new warheads for sea-based missiles; ended production of B-2 bombers and the advanced cruise missile; and approved worldwide withdrawal of nuclear artillery shells, Lance missile warheads, and naval nuclear depth bombs.

In November 1997 President Clinton approved a Presidential Decision Directive (PDD) that reaffirmed a force posture based on a triad of strategic forces but required that a nuclear weapon be detonated on U.S. soil before nuclear retaliation would be authorized. The PDD reconfirms that the United States would not use nuclear weapons first in a conflict unless the state that attacked the United States, its allies, or military forces is nuclear capable or is in alliance with a nuclear power or is not in good standing in the nuclear nonproliferation treaty. The PDD leaves open U.S. nuclear weapon use in response to a biological or chemical weapons attack, but it reaffirms that nuclear weapons are for deterrence and not to be used to prevail in a nuclear war.

U.S.-Soviet/Russian Nuclear Stockpile (1945-96)

Source: Nuclear Weapons Database, January 1997

Beyond these unilateral initiatives, the disposition of strategic forces has been governed through much of the 1990s by the START I agreements and, potentially, by the START II Treaty signed by Presidents Bush and Yeltsin in January 1993. START I called for the reduction of the total number of deployed strategic warheads to 6,000, roughly half the peak Cold War level. Implementation of the treaty is running ahead of schedule. START II was ratified by the United States in January 1996 but has yet to be ratified by Russia. Until this treaty enters into force, U.S. strategic nuclear forces will include the following:

- 500 Minuteman III and 50 Peacekeeper ICBMs armed with multiple independently targetable reentry vehicles (MIRVs)
- 18 Ohio-class ballistic missile submarines, each carrying 24 SLBMs with MIRVed warheads
- 71 B-52 bombers, each equipped to carry 20 air-launched cruise missiles (ALCMs)
- 21 B-2 bombers, carrying up to 16 gravity bombs each.

The START II Treaty, if implemented, would reduce the number of deployed strategic warheads to 3,000-3,500, roughly half the START I levels. It also calls for elimination of all MIRVed ICBMs, an important contribution to strategic stability, because this would eliminate the most potent and potentially vulnerable systems of each side's nuclear arsenal. If implemented, U.S. nuclear forces would contain:

- 500 Minuteman III ICBMs, each deployed with a single warhead
- 336 Trident II SLBMs, each deployed with five warheads
- B2-A and B-52H strategic bombers deployed with a mix of nuclear-armed cruise missiles and gravity bombs. The United States would also retain 350 nuclear-armed sea-launched cruise missiles and several hundred Air Force tactical bombs.

According to the joint statement on future reductions in nuclear forces issued by Presidents Clinton and Yeltsin at Helsinki in March 1997, once START II enters into force, a START III negotiation would commence, to establish a limit of 2,000 to 2,500 deployed warheads for each side by the end of 2007. The START II deadline would then be extended from 2003 to the START III deadline of 2007.

The effect of implementing these arms control agreements would be a dramatic reduction in the U.S. strategic nuclear arsenal in 17 years, from 1990 through 2007.

Russia

Russia has experienced a similar decline in its strategic forces. Over the next 10 years the United States intends to maintain survivable nuclear forces that are sufficient to retain superiority in the eyes of potentially hostile foreign powers. This is a "hedge" strategy against the accession to power of hostile elements in Russia or the development of a hostile China. The strategy requires forces that provide an effective deterrent within arms-control treaty limitations, plus maintenance of a capability to reconstitute additional forces if needed. It constitutes the near-term concern now driving the immediate requirements of the U.S. nuclear force posture.

What are the implications of this strategy for the forces? For most or all of the next decade the United States will need to maintain a triad of ICBMs, SLBMs, and heavy bombers to ensure a diversity of delivery vehicles and to continue to deny any potential adversary the ability to launch a disarming first strike. So long as U.S.-Russia political relations remain largely cooperative, these forces need not be on high alert and could be reduced significantly in number and type through both arms control negotiations and unilateral measures. Their modernization rate can be meaningfully slowed, but modernization should not be terminated to hedge against technological surprise by Russia, China, or other powers.

Tammuz-2 reactor at Tuwaitha, Iraq

During the next decade, two concerns for U.S. nuclear strategists will be the status of the command and control of Russian nuclear forces and a possible surge in capability of Chinese nuclear forces. Some students of Russian nuclear weapons policy believe that control of these weapons has seriously deteriorated, that budgetary constraints have led to a decline in the reliability of equipment and systems, and that the probability of accidental or unauthorized launch has increased dramatically since the end of the Cold War. The detargeting agreement reached by Presidents Clinton and Yeltsin provides some insurance against an accidental launch. Yet some believe a substantial risk of "erroneous use" of nuclear weapons remains, such as conscious decisions by military or political leaders to use such weapons based on incomplete or inaccurate information, faulty reasoning, misinterpretation of intentions by other countries, or hasty decisionmaking. Reports of a deterioration in Russia's missile-attack warning system lend credibility to

these concerns. Therefore, measures to enhance the safety of the forces through "de-alerting" ICBMs and heavy bombers will need to be considered. De-alerting SLBMs is exceedingly difficult unless the ballistic missile submarines were put to sea without their guidance sets, a step that political circumstances do not yet warrant.

As U.S. and Russian nuclear forces are reduced, issues of seemingly less importance rise in value: the role of nondeployed weapons; strategic reserves; and questions of what targets should or should no longer be held at risk.

CSS-2 missile

China

A surge in Chinese nuclear forces in the years ahead, though by no means a certainty, is plausible. As of 1997, China possessed a modest capability of 17 ICBMs: 7 CSS-4 intercontinental range missiles that have been tested with MIRVs, and 10 older CSS-3 single-warhead ICBMs. China also has one ballistic missile submarine with 12 long-range CSS-N-3 missiles and perhaps 70 intermediate-range ballistic missiles. It has no intercontinental-range heavy bombers. The pattern of Chinese missile development appears cautious, reflecting budgetary or technological constraints or limited political will to invest heavily in such forces. Recent accounts of China acquiring advanced (SS-18, SS-19) missile technology from Russia and the continued growth of the Chinese economy and defense budget suggest that new Chinese nuclear forces will probably be concentrated in more advanced ICBMs, because they are the most reliable, most cost effective, most easily controlled, and most potent.

China seems less likely to invest defense resources in an expensive fleet of ballistic missile submarines, which are a cornerstone of U.S. strategic strength. Even were China to overcome the considerable technological obstacles to field such a force, it would face a considerable U.S. antisubmarine warfare capability that would make its own effectiveness highly uncertain. Relying on more advanced ICBMs gives the Chinese an opportunity to move slowly beyond China's minimum deterrent posture; to derive the political benefits of being a growing nuclear power; to threaten the U.S. homeland in a credible fashion; and possibly to use these forces to deter U.S. retaliation if China were to use conventional forces against Taiwan or in other contested areas in East or Southeast Asia. Because the United States does not now plan to reduce its nuclear arsenal below 2,000 deployed warheads for at least a decade, China has a very long way to go before even a dedicated surge capability would pose a serious threat to the U.S. strategic nuclear force posture.

Shaping the Strategic Environment

The strategic characteristics of the present world are sufficiently amorphous and uncertain that it is often now referred to as "the post-Cold War world." How long will it last? What will replace it and how will it be known? Answers are not yet in view, but the years immediately following the collapse of the Soviet Union revealed several important features. The United States is now the unchallenged military leader and predominant economic power, facing no primary threats to its existence for the first time since prior to World War II. Such U.S. primacy and the absence of threat are interrelated. Unless and until Russia and China make a clear-cut transition to political democracies and it becomes self-evident that no other state poses a serious threat to vital U.S. interests--and it may be many years before these conditions are met--the United States is best advised to maintain a nuclear force with a capability and flexibility second to none.

Averting Conflict

As the United States seeks to avert conflicts in the next decade, it will be faced by two primary challenges. The first will be to provide a blend of incentives and disincentives to promote the transition of Russia and China into political democracies and market economies. The reasoning behind this priority is that as Russia and China begin to look more like the Western nations, they will have more at stake in the existing international order and decreasing incentives to pose a threat to the system. Under these conditions of unambiguously reduced threat, the United States can take bolder steps in reducing its nuclear arsenal. Second, in the next decade the United States will most probably be faced by several smaller hostile states armed with WMD. To deal with this threat, the United States must establish credible and effective counterproliferation measures involving passive and active defenses, deterrent measures, and counterforce systems.

Russia

Soviet/Russian Nuclear Stockpile (1949-96)

SOURCE: Nuclear Weapons Database, January 1997

Russia, a shell of the former Soviet Union, is undergoing profound political and economic change. By 2008, it will have experienced another decade of decline, reform, and, perhaps, renewal, in a delicate process necessarily to be managed carefully by its leaders and nurtured so far as possible by both Washington and the international community. Nuclear forces will remain important to Moscow, primarily as a domestic and international political symbol of its former superpower status, but in the next 10 years Russia is unlikely to brandish such weapons, much less use them, in a conflict. Although Russian strategic rocket forces retain a practical capability to strike massively at the U.S. homeland, what would be gained? Such action would achieve no sensible Russian strategic objective and would certainly lead to the destruction of the Russian state. To the contrary, the Russian people have already twice democratically elected a leadership committed to joining, rather than destroying, the international community of market economies. Continuation of this pattern is the best insurance policy that Russia's nuclear forces will not pose a serious threat to the West.

Maintaining U.S. and Russian strategic nuclear forces will guarantee a degree of mutual deterrence, no matter what analysts may term the relationship. This might even be augmented with what some analysts call "mutual reassurance," that is, actions aimed at improving the understanding of each side's nuclear force posture. These actions could include the following: more complete exchanges of information; reciprocal stationing of military personnel at strategic command centers; and a broad-based effort to understand each other's budgets, war planning, operational procedures, and longer term force planning. Continued bolstering of the U.S.-Russian political relationship could make these aspirations, currently somewhat beyond reach, eminently feasible in the next 10 years. Accomplishing this task would in turn bolster Russia's political ties to the international community and help facilitate the closest integration of Russia with the West since the Duchy of Muscovy was founded 1,000 years ago.

Russian conventional forces are in the weakest shape since prior to World War II; their performance in Chechnya demonstrated serious deficiencies in morale, training, and readiness. A massive infusion of funds for many years would be needed to turn this situation around, and Russia will not have the resources to carry out this effort for at least a decade. With an enlarged NATO about to include Poland, Hungary, and the Czech Republic, Russia, even in 2008, will not be likely to pose a serious conventional military threat to its European neighbors. A U.S. nuclear force posture predicated on the maintenance of a reduced but highly survivable and effective force, coupled with greater interaction in U.S.-Russian planning, would be the best way to ensure that conflict with Russia can be averted in the next 10 years.

China

China remains more problematic than Russia but for the next decade can be expected to focus on its primary goal of economic development. By 2008, it could move closer toward becoming a world-class economic and perhaps even military power. But these goals can be achieved only in a peaceful international climate. With the exception of Taiwan, there is no rational reason for the Beijing leadership to take on the United States in a military conflict, even in 2008. Taiwan is the exception because its political status strikes at the core of the legitimacy of the Beijing regime. With the reversion of Hong Kong to Chinese rule in 1997, under the "one country, two systems" formulation, Taiwan remains the last piece to be put into its political place to complete the 1949 revolution. A move by Taipei toward political independence would be opposed by the leadership in Beijing, or they themselves would almost certainly fall. There is no evidence that the United States would endorse such a provocative act openly or even privately. Although China has significant disputes with many states in East and South Asia, and an abiding distrust of and hatred for the Japanese, it will surely move cautiously in order not to stimulate a U.S. military intervention. This prognosis assumes, of course, that the United States retains a robust nuclear force as well as

a forward presence of naval and air forces in the Pacific.

Within the next decade, the United States may expect to see an increase in the number of long-range Chinese delivery systems that could strike at U.S. forces in Japan and perhaps directly at the U.S. homeland. There will be no single answer to this threat. By maintaining the deployment of diversified, high-accuracy delivery systems with nuclear and conventional forces that could strike at highly valued Chinese military and command-and-control targets, the United States has the best chance of deterring Chinese use of their forces and successfully managing any Sino-U.S. crisis that might arise. Ironically, the prospect of deployment of a sophisticated network of theater missile defense (TMD) systems in East Asia or of a credible national missile defense (NMD) system for the continental United States would be used by senior PLA officers to justify operational emplacement of the longer range systems these defenses are intended to negate.

China has already made it clear to the United States that deployment of advanced TMD systems in Taiwan would be considered a provocation. It asserts that such systems deployed in Japan would reinforce the Chinese view that the U.S.-Japan security treaty had shifted from an anti-North Korean and anti-Soviet alliance to an anti-Chinese one. And Chinese officials argue that a network of land- and sea-based TMD systems deployed in East Asia coupled with an NMD system would pose a serious threat to the retaliatory capability of the Chinese nuclear deterrent.

This may be a strategic train wreck in the making. In the next decade the United States will almost certainly deploy TMD systems in East Asia to protect U.S. forces and its allies from missile attack (potentially from North Korea or China) as well as to project U.S. power in the region. The United States needs to join these deployments to confidence-building measures and transparency with some prospect of diminishing Chinese concern. Such measures could include prior announcement of deployments and, perhaps, arms control negotiations, to help communicate U.S. intentions and shape the Chinese force structure. Early efforts of this type, it should be noted, have not fared well, because China has insisted that the United States adopt a doctrine of "no first use" of nuclear weapons before it engages in more detailed nuclear arms control discussions.

North Korea

North Korea Nuclear Facilities

Source: Federation of American Scientists

The threat posed by North Korea to South Korea and Japan remains real. Leaders in Washington will be challenged to sustain a delicate mix of a tough military posture toward the North while seeking slowly to introduce Pyongyang into the family of nations. It will be a demanding task unless and until North Korea collapses and a peaceful transition to Korean unification can occur. Although many in the West believe North Korea will no longer exist by 2008, this is not a certainty, given the continued isolation of the society from most of the world and the sustained level of militancy the regime has instilled in the populace. Deterring North Korean aggression could still be a

serious problem for Washington well into the next century. Few know what deters the North Korean leadership, however. A credible conventional military posture in the South, a politically strong bond between Washington and Seoul, plus continued inferences in declaratory policy that Washington might seriously entertain the use of nuclear weapons if the North attacked the South are the best that can be done to avert conflict on the Korean peninsula.

Rogues

The post-Cold War world is made up of states that fit into four categories:

- "Core states," the increasingly large group of political democracies and market economies, almost all allies or friends of the United States, with a stake in maintaining the current international system
- "Transition states," which are attempting to shift into the first category (this includes Russia, other states of the former Soviet Union, China, and the Eastern European states) and which Washington encourages to become members of the core
- "Rogue" states, opposed to the core's values (North Korea, Iran, Iraq, Libya, Syria)
- "Failed states," which cannot carry out the basic functions of a sovereign nation (e.g., Haiti, Rwanda, Bosnia).

Trident II (SLBM) missile

The particular problem with North Korea is an example of a more general problem: the proliferation of WMD--nuclear, chemical, and biological weapons; ballistic missiles; and potentially cruise missiles--by rogue states.

North Korea has an active nuclear weapons program, which was ostensibly frozen by the October 1994 U.S.-North Korean nuclear agreement. It has a stockpile of chemical and biological weapons, has deployed the 1,000-kilometer *NoDong* missile, and is developing the much longer range *TaepoDong* ICBM. Iran clearly has a dedicated nuclear weapons program for which it is seeking Russian, Chinese, European, and expatriate assistance. It has deployed chemical and biological weapons and obtained the 150-kilometer CSS-8 missile from China. Iraq appears still to be conducting nuclear weapons research and has covert chemical and biological weapons stockpiles. Syria has no known nuclear program but has deployed substantial numbers of chemical weapons, is developing a biological weapons capability, and has obtained the 120-km SS-21 missile from the former Soviet Union. Libya has conducted some research on nuclear weapons and has sought to buy them from China, has deployed chemical weapons, and is conducting biological weapons research. North Korea, Iran, Iraq,

Syria, and Libya all possess adequate delivery systems (SCUD-B short-range missiles), obtained from the Soviet Union.

Almost certainly WMD proliferation by rogue states will be a dominant threat to U.S. interests in the next decade. The U.S. response is multifaceted:

- Arms control regimes to reduce the international legitimacy of possessing such weapons (e.g., the Nuclear Nonproliferation Treaty, now permanently extended); the Chemical Weapons Convention; the Biological Weapons Convention
- Intrusive on-site inspection measures built into these arm control regimes
- Export control regimes to inhibit the supply of WMD to rogue states (e.g., the Missile Technology Control Regime, the London Suppliers Group)
- Passive (e.g., masks) and active (missiles) defenses to protect U.S. forward-deployed forces and allies from use of WMD by rogue states
- Enhancement of high-accuracy conventional weapons as counterforce measures to destroy WMD systems preemptively or in retaliation. This capability is a useful deterrent only if it can destroy targets highly valued by rogue states. For example, the United States may need to target the sources of Iranian oil revenues or the Iranian Revolutionary Guard Corps to pose a threat meaningful to the leaders in Tehran
- Ambiguous declaratory policies about U.S. use of nuclear weapons in response to WMD attacks. The United States unambiguously reserves the right to use nuclear weapons of its own if an adversary attacks with nuclear weapons. But would it use such weapons first, after an attack with CW or BW? Indeed, this doubt may have deterred Iraq from using CW in the Gulf War.

Nuclear warhead

One possible step that the United States could consider would be to promote a "no first use of WMD" regime. Although it could not provide airtight guarantees, it might reduce the likelihood that WMD would be used in the first place.

Other conflict situations will surely materialize around the world by 2008; whether the U.S. nuclear force posture will influence their initiation or outcome is not clear. U.S. nuclear weapon power appears remote in the calculations of most Middle East and Persian Gulf leaders. Israel's nuclear weapons program is prompted by motives of national survival and unlikely to be affected unless the country's leaders were to become convinced that a general peace is at hand. No evidence suggests that the world will be any closer to this condition

in 2017 than it is today. The calculations of leaders in the various Arab capitals, in Tehran, and among the major non-state groups-- Hamas, Hezbollah, the Muslim Brotherhood--are rooted in some cases in matters of domestic prestige and in a desire to inflict punishment on their neighbors, to destroy Israel, and to remove the U.S. presence from the region. Perhaps some learned from the Gulf War that the best way to deter U.S. intervention is to acquire WMD, including nuclear weapons. Although specific changes in the U.S. nuclear force posture probably would not significantly influence these calculations, the types of measures cited above (increasingly known as the U.S. counterproliferation strategy) could have a meaningful effect on decisionmakers in rogue states.

Middle Eastern decisionmakers opposed to the United States are unlikely to launch attacks on U.S. targets in such a fashion that the source of attack could be easily determined. Their aim would be to cause enough damage to force a U.S. retreat--as did the truck bombing of the Marine barracks in Lebanon in 1983. This threat, which will only grow by 2008, may increase the desire of U.S. national leaders to maintain the tradition of not using nuclear weapons.

The South Asian subcontinent rivalry between India and Pakistan, almost certain to be going strong in 2008, will also be separated from U.S. nuclear forces and doctrine. Both countries have dedicated nuclear weapons programs to meet regional threats and satisfy domestic demand. Their arsenals are liable to grow substantially in the next two decades. Leaders in both capitals know that a conflict in South Asia does not engage core national interests of the United States. Several wars have already been fought between them since independence in the late 1940s, and more may occur. The United States may seek to engage in diplomatic conflict prevention, mediation, and conflict resolution. But the Indo-Pakistani rivalry, based on religious and geopolitical differences, will have to be worked out, irrespective of U.S. nuclear posture. One area of intersection, however, concerns the evolution of international diplomacy concerning the Comprehensive Test Ban Treaty. Although signed by the five declared nuclear powers and many other states, the treaty cannot enter into force unless India is a party to it, but India resists. Will India remain outside this symbolically important treaty while it seeks in many other respects to become a leading player in the international system? The answer will be known within the next few years and it in turn may influence India's nuclear program and even the prospect of conflict on the subcontinent.

Shaping the Threat

There are three overriding issues in the years ahead related to U.S. strategic calculations that could shape the threat posed by Russian and Chinese forces. The first concerns theater missile defense (TMD), the second concerns North Korea, and the third relates to the control of nuclear materials.

Theater Missile Defense

The United States today has under way a robust research, development, and testing program to deploy a mix of theater missile defenses in 2005-10. These programs garnered bipartisan support in Washington in the aftermath of the Gulf War and the demonstrated vulnerability of U.S. forces and allies to Iraqi Scud short-range ballistic missiles. A series of systems is expected to be deployed in Northeast Asia and elsewhere to provide a layered defense of forward-based U.S. forces and those of Japanese and Korean allies, including the following:

- Patriot Advance Capability (PAC-3)
- Navy Area Defense (Navy Lower Tier)

U.S. Nuclear Stockpile (1945-96)

Source: Nuclear Weapons Database, January 1997

Reductions in U.S. Strategic Nuclear Forces (FY90-FY07)

| | FY90 | FY01 | FY07 |
|---|-------|-------|---------------------|
| ICMIs | 1,800 | 500 | 000 |
| Declared Warheads on ICMIs | 2,400 | 2,000 | 2000 |
| SLMIs | 800 | 400 | 300 |
| Declared Warheads on SLMIs | 4,000 | 2,000 | Not to exceed 1,700 |
| Ballistic Missile Submarines | 31 | 10 | 14 |
| Declared Warheads on Ballistic Missiles | 7,214 | 4,100 | Not to exceed 2,200 |
| Heavy Bombers | 224 | 92 | 04 |

Source: U.S. Strategic Command

- Navy Theater Wide (Navy Upper Tier)
- Theater High-Altitude Area Defense (THAAD) system.

There are sound reasons for such deployments. Further, the United States is developing a national missile defense (NMD) capability that could be deployed also between about 2005-10 to protect the U.S. homeland against attacks by small numbers ("tens") of missiles from rogue (i.e., not Russia or China) states.

Consider the probable response of China and Russia to TMD deployments. The Chinese leadership has already expressed concerns. They claim that providing TMD systems to Taiwan would be a brazen act of interference by the United States in China's internal affairs and would push Taiwan further toward political independence. Provision of such systems to Japan would be seen as bolstering a U.S.-Japan anti-Chinese alliance. Deployment of sea-based TMD systems plus an NMD system would seriously degrade the retaliatory capability of the Chinese strategic force. Leaders in Beijing assert that these deployments would stimulate Chinese nuclear force modernization, leading to a proliferation of launchers and warheads, the MIRVing of Chinese systems, the acquisition of penetration aides, and other measures.

The Russian view is that deployment of layered TMD systems in Northeast Asia along with possible NMD deployment would seriously degrade the ability of their SLBMs based in the Sea of Okhotsk from reaching their targets. In response, Russian leaders speak of having to spend scarce resources to modernize offensive forces and of terminating the nuclear arms reduction process should such deployments proceed. Some Russians now argue that their country is a regional power competing with China, rather than a superpower competing with the United States. Even under such revised guidance, Russian defense planners would not sit idly by and witness a substantial modernization of the Chinese strategic nuclear force without responding in kind.

The emergence of these difficult tradeoffs suggests that the future of strategic arms control may require freedom to mix agreements involving both offensive and defensive forces. It is certainly in U.S. interests to deploy TMD systems to defend U.S. troops abroad and close allies from real ballistic missile threats. But it is not in U.S. interests to stimulate Chinese or Russian nuclear force planning. A mutually agreed- on U.S.-Russian formula of offensive and defensive forces, although difficult to develop, could eliminate, or at least forestall, this problem. Such a strategic bridge may well have to be crossed during the next decade if not by 2017.

Peacekeeper ICBM

North Korea

Should North Korea collapse in the next decade, as many believe will happen, new security concerns will emerge in Northeast Asia. A unified Korea with a nuclear weapons capability would pose a serious threat to Japan. China has already made great strides in improving economic relations with South Korea--for its own economic gain, to begin to drive a wedge between the United States and the South, and perhaps to lay groundwork for close Sino-Korean relations aimed against Japan after Korea is unified. It would be politically difficult for the United States to retain military forces in Japan if they were withdrawn from Korea. For the United States to maintain a stable balance

of power in Northeast Asia, it might be useful to consider an idea proposed by Japanese analysts: a nuclear-free zone in the region. This would preclude a unified Korea having nuclear weapons and a volatile Japanese response to such a development. The United States must think ahead as to how its nuclear weapons policy could instill stability into the region once Korea has become one nation.

Control of Nuclear Materials

Another issue concerns promoting the transparency of nuclear materials in the Russian federation. Once the Soviet Union had collapsed, the serious problem in Russia of control of fissile material became clear. A combination of lax security measures; poorly paid military, law enforcement, and technical personnel; inadequate equipment; and the creative inroads of organized criminal elements and other buyers from the Middle East and Persian Gulf taken together constitutes a serious "loose nuke" problem in Russia. This problem has led to several initiatives, including the cooperative threat reduction (CTR) program (the Nunn-Lugar and now Nunn-Lugar-Dominici Program), which has been funded for five years at \$300-\$400 million per year to assist in the denuclearization of Ukraine, Kazakhstan, and Belarus and in the control of nuclear materials in Russia. A key element of an effort by the Clinton administration that has not been successful was a diplomatic initiative to reach a bilateral U.S.-Russia agreement on exchange of classified information that would lead to a "chain of custody" formulation in which both sides would know the whereabouts of the fissile material of the other. Owing to resistance from leaders of the Russian atomic energy community to opening up their vast network of facilities to external observers ensured very limited progress.

Chernobyl

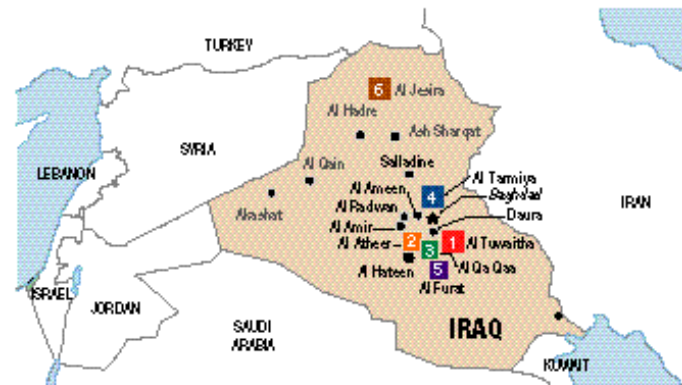

According to the 1997 Clinton-Yeltsin agreement in Helsinki on future reductions of nuclear forces, once START II was ratified a START III agreement would include measures relating to the transparency of strategic nuclear warhead inventories and the destruction of strategic nuclear warheads to promote the irreversibility of deep reductions. This would be the first time that a U.S.-Russian nuclear arms control agreement would constrain *warheads*, not merely the means for their delivery. After hard bargaining, Russia agreed to an element that calls for both sides to consider issues related to transparency of nuclear materials.

That nuclear warheads would be eliminated in subsequent arms control agreements is a potentially very important step. But such elimination would lead to the proliferation of more nuclear materials outside the hands of the strategic rocket forces, thereby exacerbating the "loose nukes" problem. The Helsinki agreement calls for these matters all to be worked out and completed by 2007, but allowing for diplomatic slippage--a safe bet--these issues may still be on the negotiating table in 2017. The establishment of a sound basis to account for Russian nuclear materials will minimize the probability that such lethal material will fall into the hands of adversaries of the United States.

Core Nations

Iraq's Nuclear Facilities (1995)

1 Al Tuwaitah Nuclear Research Center

- Tammuz I (Osirak), Tammuz II (SIS), and IRT-5000 research reactors (the first destroyed by Israel in 1981)
- Site of research and development (R&D) programs in uranium enrichment**
- Location of "hot cells" used for separation of grams of plutonium**
- Weapons-related R&D activities in nuclear physics, uranium metallurgy and triggering system capacitors***

2 Al Atheer

- Prime development and testing site for nuclear weaponization program including facilities and equipment for large-scale uranium metallurgy and production of weapons components
- Computer simulations of nuclear weapon detonations
- Experiments for the development of an implosion-type explosive structure***

3 Al Qu Qaa High Explosives and Propellant Facility

- Military and nuclear weapons R&D facility
- Development of exploding bridge wire detonators (EBW) used in the firing system of nuclear weapons
- Storage of large quantities of military high explosive used in nuclear weapons

4 Al Tarmiya

- Industrial-scale complex for Electromagnetic Isotope Separation (EMIS) designed for the installation of 70 1,200-millimeter separators plus 20 600-millimeter separators (eight units were operational prior to Desert Storm bombings)
- If all separators had been installed, the plant could have yielded 15kg of highly enriched uranium (HEU) annually, possibly enough for one nuclear weapon

5 Al Furat Project

- Large-scale manufacturing and testing facility
- Designed for the production of up to 2,000 managing steel centrifuges for uranium enrichment

6 Al Jesira

- Large-scale facility for the production of uranium dioxide (UO_2) and uranium tetrachloride (UCl_4), feed materials for EMIS

Names on map represent nuclear-related sites either declared by Iraq or discovered by IAEA inspectors during implementation of Security Council Resolution 687 adopted at the end of the 1991 Gulf War. The facilities and equipment at these sites that escaped damage during the war were subsequently dismantled or destroyed by the IAEA or came under the IAEA monitoring; sensitive nuclear materials have been removed.

* Activities found by the International Atomic Energy Agency (IAEA) to be in violation of Iraq's safeguards agreement with the IAEA.

** Activities found by the United States to be in violation of Iraq's obligations under Article II of the Non-Proliferation Treaty (NPT) prohibiting the "manufacture" of nuclear weapons.

Source: International Atomic Energy Agency and United Nations

A not very subtle objective of U.S. national security policy throughout the Cold War was to enmesh both Germany and Japan in a web of international security and economic relationships to ensure both were dependent for national security on the United States while, at the same time, allowing them every opportunity to prosper economically. This strategy worked beyond anyone's wildest imagination, and Germany and Japan, both now robust democracies, have been conflict free for half a century while their citizens enjoyed unparalleled achievements in quality of life. A key element of the security part of this equation has been the nuclear guarantees offered to both countries by the United States. These guarantees were formulated as part of a nonproliferation strategy seeking to convince leaders in both countries of the credibility of U.S. assurances and dissuading them from following extreme nationalist sentiments favoring independent nuclear forces.

In the next 10 years the United States will face the task of sustaining this policy, which has implications not only for alliance cohesion but also for relations with China and Russia. Virtually nothing else would stimulate Chinese defense expenditures more vigorously than an independent Japanese military force armed with nuclear weapons. The unilateral strengthening of Chinese military power will further strain the United States to demonstrate to Japan that it is still a credible guarantor of Japan's security. A somewhat similar interconnectedness affects Europe. Nothing would exacerbate Russian fears more than a newly mobilized, independent-minded, nuclear-armed Germany. But a Russia that begins to recover from its post-Cold War doldrums and reassert itself would stimulate renewed demands from Germany that the United States shore up its security commitments. For the next decade, the United States would be prudent

to maintain in Europe a residual nuclear arsenal of a few hundred weapons, to reinforce alliance cohesion, mute independent German defense aspirations, and demonstrate to Russia a continued U.S. commitment to European defense.

In sum, by 2008 the United States will be in the daunting position of playing the crucial role to keep in balance both the Sino-Japanese and Russo-German relationships. Economic prosperity and thriving democracies in all four countries would make the task far easier, but at present that is not the case nor may it be 20 years hence. Promoting nuclear transparency and coordination with both Russia and China may well prove a necessary, but not sufficient, condition to maintain these critical regional balances.

The Gulf War, although it may prove to have been a unique event, demonstrated the enormous power of a U.S.-led international coalition. By 2008, future adversaries may well be armed with weapons of mass destruction (WMD), which will greatly increase the difficulty of forming and sustaining such coalitions. The United States requires at its disposal a wide range of highly sophisticated nuclear and conventional arms to demonstrate *a priori* that it can lead the way in such dangerous situations. Planning for this eventuality would point the way for the United States to maintain a decisive edge in military power against any plausible regional adversary.

The Future

One obvious manifestation of the post-Cold War world has been the proliferation of WMD--nuclear, chemical, and biological weapons; ballistic missiles; and, soon, cruise missiles. Their use by rogue states and non-state groups will pose a first-order challenge to the United States two decades from now. The Defense Counterproliferation Initiative was established in 1993 to develop a coherent approach to the problem. Diagnosis of the issue led to two basic conclusions. First, the problem is clustered in four geographical regions: Northeast Asia, especially North Korea as a developer and China as a proliferator of these weapons; the Middle East and North Africa, focusing on Iran, Iraq, and Libya; the former Soviet Union; and South Asia, notably the Indo-Pakistani rivalry. The regional perspective is complicated by cross-regional links such as the sale of relevant systems and technologies by China to Pakistan and Iran, by North Korea and Russia to Iran, by Russia to China, and by Pakistan to Libya.

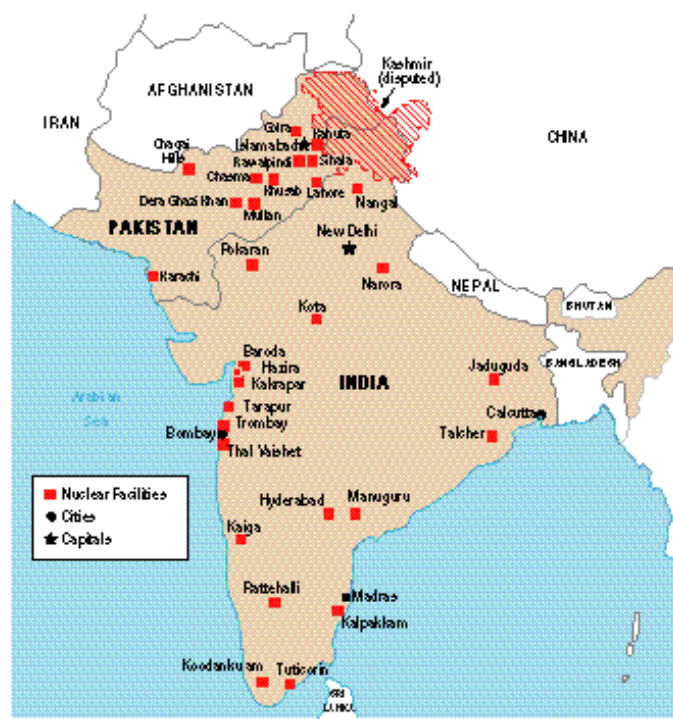

Second, the problem is not limited to nation states in these regions but now has a pronounced transnational character involving terrorist groups, insurgents, civil war factions (e.g., Chechens versus Russians), and organized criminal elements. Analysts have noted that the number of actors has expanded, as have the types of materials involved, their means of delivery, and the ease with which the technical know-how, materials, and equipment can be acquired.

The United States has sought to manage the growing threat, as noted above, through arms reduction agreements, the CTR program, and the establishment of international norms. It also seeks to deter the threat by maintaining robust conventional and nuclear forces. And it seeks to defend against the threat. The Defense Counterproliferation Initiative is designed to meet this last objective through measures for prevention and protection.

The proliferation of WMD by rogue states and terrorist groups and the emergence of China as a power with global reach will be the two dominant challenges facing the United States by 2018.

Larger Adversaries

Nuclear Facilities on the Subcontinent

One prospect for the world of 2018 is of the United States facing a substantial military adversary. Two old adversaries could become new ones, though the probability of that is not high. Germany would have to take off on a totally different political and economic course from the one it has followed for 50 years, and that is a very low-probability, high-consequence event. Germany today remains enmeshed in international security and economic relationships and has faced up to its behavior during World War II. The threat from the East has markedly declined, and several generations have been brought up on democratic political values and a market economic system that has made Germany one of the strongest and most free countries in the world.

In Japan the story is a little less certain. Japan has moved very slowly to confront its horrific behavior in the 1930s and 1940s and remains widely distrusted throughout East Asia. Even assuming the threat from North Korea disappears by 2018, as seems probable, a unified Korea may seem even more problematic from Tokyo's perspective. China, far stronger in 20 years than today, will surely be seen as the dominant national security issue for Japanese policymakers. And new generations of younger Japanese may feel much less inhibited about exercising Japanese military power than has been the case for five decades. The responsibility will fall on the United States to manage these complex interrelationships so that Japan feels secure and not in need of reestablishing itself with power projection forces. It is imperative that U.S. nuclear policy be sufficiently nimble and credible to dissuade Japanese decisionmakers fully of the need for acquisition of nuclear weapons. Overall, both Germany and Japan have so much to lose by embarking on independent nuclear weapons paths that the probability that either will choose this option, even in 20 years, is remote.

Without Germany or Japan, the only candidates in the "larger" category are China (having converted its growing economic prosperity into military might) and Russia (once recovered from its post-Cold War economic collapse). In this evolving situation the United States will be faced with tough choices in continuing nuclear reductions and altered declaratory policies.

Already today many notable voices are calling for major changes in U.S. nuclear policy. Suggestions include the following:

- Abandoning nuclear deterrence policy and sizing U.S. forces on the basis of criteria other than the ability to inflict enormous damage against an adversary in a retaliatory attack, such as mutual assured safety
- Abandoning launch-under-attack options and pushing for a global zero alert
- Officially embracing a declaratory policy of no first use of nuclear weapons or at least nuclear weapons as weapons of last resort
- Moving much further and faster than is outlined in the Helsinki agreements toward a very small number of deployed strategic nuclear weapons (i.e., a few hundred) or to zero nuclear weapons
- Establishing a policy of strategic escrow, in which the United States has only a few hundred weapons not deployed
- Redefining zero nuclear weapons as a few hundred not deployed.

Prominent retired military officers of the United States and other countries, distinguished scientific panels, and some prominent defense analysts have endorsed one or more of these measures. Some argue that the best way to avoid a nuclear showdown with a future Russia or China is to implement these measures now, when the United States enjoys enormous conventional force superiority, as demonstrated in the Gulf War. They also argue that these steps are needed to gain control over a dangerous situation in Russia where military leaders have neither command nor control of their nuclear forces.

Political realities, however, dictate just the opposite approach. A world in which Russia, China, and India are not a threat to the United States would make it easier to sell some of these measures to the domestic political elites who debate them. A world in which a potentially hostile Russia or China looms over the horizon, which some would argue will be the world for the next two decades, would be a far less hospitable climate in which to garner support for such initiatives. More than a decade must pass without a larger threat before a number of these measures could be given serious consideration.

To deal with a substantial Chinese nuclear force, Washington will have to become as focussed and as knowledgeable about Chinese weapons, doctrine, organizational structure, decisionmaking processes, and technological base tomorrow as it is about these aspects of Russia today. Today, the top leaders in the Department of State all are specialists on Russia. The United States discusses nuclear weapons issues with Russia in many forums:

- Presidential summits
- The Gore-Chernomyrdin Commission
- Frequent meetings between defense ministers
- Frequent meetings between foreign ministers
- High-level political contacts at the Under Secretary of State level
- Meetings between the Deputy Secretary of State and top Russian leaders
- The Joint Compliance and Inspection Commission established to implement START I
- The Standing Consultative Commission established to address problems in the ABM Treaty
- Frequent military-to-military contacts.

Through the end of 1997, Presidents Clinton and Yeltsin had met some 15 times and had held detailed discussions on nuclear issues at many of these meetings.

There is nothing like this in the dialogue with China. The United States meets sporadically with Chinese officials to complain about China's proliferation of WMD, ordinarily at the deputy assistant secretary of state level. Occasionally, meetings are repeated at the Under Secretary of State level. Other contacts at higher levels deal with broader security issues, are much less frequent, and far more formal. A few efforts have been made to initiate a dialogue on nuclear arms control, confidence-building measures, and transparency, but, as said above, China's insistence on a U.S. no-first-use pledge has blocked progress. In this regard it would be interesting to see Chinese reaction to a U.S. no first use of WMD.

The U.S. approach to an emerging powerful China, somewhat similar to the policy toward the Soviet Union, must be one of military strength, transparency, communication, and engagement at many levels. It is encouraging that China is now developing a serious arms control community in many institutions, including the following:

- The foreign ministry
- The People's Liberation Army
- The defense ministry
- The Committee on Science and Technology for National Security (COSTIND)
- The Center for Advanced Engineering Physics
- The Institute of Applied Physics and Combinatorial Mathematics.

Many Chinese have studied in the United States and are therefore familiar with the U.S. approaches to arms control. For the United States, with respect to China, *engagement is containment*. It is the only way to reduce tensions and minimize misunderstandings.

Peacekeeper ICBM

If the Chinese nuclear force grows from several hundred to more than 1,000 deployed weapons, the United States will find it difficult to continue to discuss arms reduction with Russia. There will be tremendous political pressure at home to maintain substantial numerical and operational superiority over Chinese forces, which would lead to more rapid modernization of nuclear forces and deployment of NMD systems. It seems implausible, though not impossible, that China's leaders would want to trigger such a response in the United States. Beijing, however, is more likely to continue deploying a small number of warheads while keeping a much larger stockpile in covert reserve status so that other nations would be highly uncertain of the size of its nuclear force. China surely does not wish to engage in a technological nuclear arms race with the United States, with everything to lose and virtually nothing to gain. But it may well continue to show independence from U.S. wishes by being a supplier to rogue states--partly for economic gain, partly to show great power reach around the world, and partly to defy U.S. preferences. The United States will continue to need to refine its counterproliferation policies but will be hard pressed to influence China's behavior.

A U.S.-China showdown over Taiwan could materialize by 2018, and it is imperative that the United States have the offensive and defensive forces that would actually be used in such a crisis. High-accuracy standoff precision conventional weapons that could destroy targets of vital interest to Chinese leaders are the most credible and potent weapons. Defenses to protect U.S. forces, Japanese allies, and selected military targets in the continental United States would also be highly valuable.

In sum, there will be no magic answer to coping with China as a great power. The Chinese believe in power and the balance of power. The United States must always retain a mix of nuclear forces and a doctrine for their use that the Chinese find credible under certain circumstances and that will constrain China from aggressive actions inimical to U.S. interests.

Nastier Adversaries

In a "nastier world" the proliferation of WMD systems by rogue states would be the foremost U.S. national security concern. As discussed above, such a world would put tremendous strain on U.S. decisionmakers not to break the tradition of nonuse of nuclear weapons. The use of CBW systems in anger against assets highly valued by the United States would involve the military immediately in efforts to punish the perpetrators. This would most probably require the engagement of sophisticated conventional weapons, ground forces, and special forces. U.S. decisionmakers, *de facto* if not *de jure*, would consider nuclear weapons as weapons of last resort, as they have for the past 50 years. In the past, U.S. presidents were confronted with several prospects of using nuclear weapons but always sought an alternative means of prevailing:

- Berlin in 1948
- Korea in 1951
- Vietnam in 1954 and 1967
- The Taiwan Strait in 1959
- Cuba in 1962.

It would probably take a direct attack using WMD on a major U.S. military force or population center for U.S. leaders to abandon this norm. This is not to suggest that they would not respond, and respond vigorously, but that nuclear weapons remain unique among the arsenal available to the president. An extraordinary provocation would be necessary before their use would be authorized.

One of the questions raised by the prospect of nasty rogue states armed with WMD is whether the United States should reconsider the deployment of intermediate-range or shorter range nuclear systems as a threat to such states. This approach does not appear very

promising. It would place highly vulnerable nuclear systems in volatile regions of the world where they could be attacked by unconventional means (such as truck bombs) with devastating results. To the contrary, the development of rogue states or terrorist groups armed with WMD would best be dealt with by precision-guided standoff conventional weapons that have a high credibility of being used and of acquiring their targets. By 2018 the United States will presumably have destroyed all its chemical and biological stocks; therefore the right mix would be a robust nuclear force useful for retaliatory purposes, plus precision-guided conventional weapons plus, perhaps, a doctrine of NFU of WMD that has political value.

Messier Adversaries

A "messier" world would be one dominated by failed states where internal strife would be the hallmark of contemporary security affairs. The most extreme case would be a civil war in Russia or China with nuclear weapons used in the strife. Such use would be seen on television around the world, and the horrors of nuclear war would be immediately visible to citizens everywhere. Rather than prompt U.S. military involvement, such a horrible eventuality would probably stimulate enormous U.S. diplomatic and political efforts to end the struggle. In these circumstances, the United States would need to ensure that its own assets, including nuclear forces, were adequately protected against desperate attempts by civil war antagonists to lash out at the United States, its forces, or its allies.

Perceptions matter. After the Vietnam conflict revealed a pronounced U.S. sensitivity to taking casualties, some believed the United States did not have the staying power to fight almost anywhere. Chinese analysts believed the United States would be defeated by Iraq in the Gulf War because of its inability to sustain casualties and maintain political will. The Gulf War proved, however, the enormous value of precision and standoff weapons, even if other lessons of the conflict remain highly debatable.

A messier world could indeed be dangerous. The proliferation of substantial amounts of nuclear, chemical, and biological materiel and missile technology in the hands of rogue states and nonstate actors accountable to no one is unsettling at best. Russia would be a major source of this materiel, and Russia or China, in political turmoil or civil war, could conceivably turn to WMD to resolve its conflict. In this messier world, WMD could be used on U.S. targets, mimicking the bombings in Oklahoma City and at the World Trade Center, with more devastating effect.

Such a world would be horrific. In it, the United States would need to maintain tight control over its nuclear forces, use satellite technologies and all available sensors to determine the identity of the perpetrators (a very demanding task), and deliver lethal force to destroy the users of WMD. Precision and control would remain the fundamental desirable attributes of U.S. nuclear and nonnuclear forces.

The irony of a messier and even a nastier world is readily apparent. The United States fought the Cold War for 50 years against a highly dangerous adversary that had the ability to annihilate it. It triumphed without a nuclear weapon being used in anger. Now, in the aftermath of this great victory, unexpected to most in its swiftness and decisiveness, the United States is on the verge of confronting a new series of threats. None of these is individually so daunting as the nuclear-armed Soviet Union at the peak of the Cold War, but collectively they could create an international environment so poisonous and challenging that the likelihood of nuclear weapons being used in the post-Cold War world could rise, alas, rather than fall.

No one can anticipate with confidence the global impact of the use of nuclear weapons in anger. Would it stimulate nuclear proliferation and make subsequent use even more probable? Would it generate global condemnation, followed by the most robust nuclear disarmament movements ever seen? It is in the U.S. national interest, and arguably in the interest of the entire international community, that no one have to answer these questions.

Strategic Assessment

Engaging Power for Peace

CHAPTER THIRTEEN

Nonstate Threats

In the core countries, and more and more over the globe, economies and infrastructure are increasingly integrated and people move more or less freely across borders. Mischief initiated in one place thus can now ripple across oceans and continents (e.g., an attack on information systems in the United States could be felt in Europe and Asia). This increased vulnerability magnifies the power of nonstate actors, making cooperation among the core countries against potential threats more desirable than ever.

International criminal activities, the focus of this chapter, include terrorism, which the United States has characterized as the use of illegal violence. Emphasizing its criminality has helped the United States strengthen the international consensus against terrorism, by underscoring the unacceptability of violence against innocent civilians, irrespective of the cause in whose name it is employed.

In addition to crimes motivated by causes, the other major international criminal activity is that motivated by profit. Criminal groups like the Russian *mafya* or the Italian *Cosa Nostra* are highly flexible, shifting the location and character of crimes whenever better opportunities for illegal gain present themselves. These groups rarely target governments directly, but their activities can undermine weak states. If the criminal groups decide to seek profits from smuggling weapons and military technology, particularly weapons of mass destruction (WMD), then their criminal activities can represent a serious challenge to international order.

U.S. Interests

The U.S. Government has an obvious interest in the physical protection of its citizens and their property. U.S. citizens appear to regard terrorist attacks as particularly disturbing crimes. Were the United States seen as not effective in protecting its people, especially its forces, that perception might create doubt about its ability to protect allies or punish enemies in far away regions.

Transition States

As part of its interest in promoting the successful transformation of transition states, the United States has an interest in seeing those states develop stable governments committed to the rule of law, at home and internationally. The United States has an interest also in helping transition states overcome what may be serious crime problems, owing to weakened governance, politicized criminal justice systems, and opportunities for easy money from breaking the rules during a time of rapid economic and institutional change. In some countries, such as Colombia, criminal activities finance guerrilla movements that threaten social stability, even if the prospects for those movements taking power are slim.

Mass Migration

Massive outpourings of peoples from their countries of origin increased in the 1990s. People who flee from conflict and cross international borders are generally recognized as refugees if they have a well-founded fear of persecution were they to return. In 1960, there were 1.4 million refugees; by 1980, the number was 8.2 million; and in 1997, there were about 15 million refugees. Refugee movements have increased not only in number but also in frequency and complexity. In civil conflicts, such as in Bosnia-Herzegovina and Rwanda, political leaders exploit ethnic, tribal, religious, and linguistic differences to incite neighbors to battle neighbors. The sweeping devastation forces overpowering numbers of refugees to seek safety at the same time, such as the Iraqi Kurds in 1991 and the 1 million Rwandans who poured into Zaire in a four-day period in July 1994.

Those who are displaced within their own country for the same reason that refugees flee across borders are called internally displaced persons. In

1997, they numbered approximately 30 million. Often, the internally displaced are trapped in the midst of armed conflict or in a country where governance has broken down, leaving no one with whom humanitarian organizations can negotiate access. In some cases, the government charged with protecting its citizens may refuse access to persons in territory held by rebel factions.

While refugees are those who flee involuntarily, migrants relocate voluntarily, usually out of the desire for a better life elsewhere or owing to deterioration in the living conditions in the home country. The illegal immigration of Caribbean people in the 1990s has been particularly troublesome; waves of migrants from Haiti and Cuba overwhelmed the response capacities of both the Coast Guard and civilian authorities, requiring intervention by the U.S. military, and the housing of migrants at the Guantanamo Bay naval base and in Panama.

Mass waves of refugees and migrants are a nonstate problem that will challenge the U.S. military in the future. When humanitarian organizations are overwhelmed by the scale of a disaster--including natural disasters--the military may be called on to assist in relief. It may also be called on to protect borders or to establish peace and carry out constabulary functions.

Deterring Terrorism

Terrorism can be a tempting tool for rogue states, particularly because they are not able to confront the United States more directly. Rogues can use anti-U.S. terrorism to intimidate U.S. allies into distancing themselves from the United States or denying access to facilities. Rogues need not be governments; they can be radical movements. Some such movements, lacking the political support to take power, find terrorism an attractive means with which to blackmail governments and gain publicity for their cause. In other cases, nonstate groups may be used to hide sponsorship of rogue states behind layers of cutouts through which money and technical support can be channeled.

Current Trends

Threats to U.S. Forces

On the whole, international terrorism--that is, terrorism involving citizens of several countries as victims, perpetrators, or sponsors--has been declining since the Cold War ended. Incidents of international terrorism fell to a 25-year low in 1996. In the 1990s, incidents have occurred most often in Europe, particularly as a result of the conflicts in Northern Ireland and the former Yugoslavia. Incidents have also been frequent in Latin America and the Middle East. Asia has had few of them, but these few included some particularly bloody attacks by Tamil ethnic movements in India and Sri Lanka. Indeed, the casualties from international terrorism issued overwhelmingly from a few spectacular incidents, like the Tamil attacks or the bombing of the World Trade Center in New York City, which was responsible for 1,006 of the 1,007 casualties from international terrorism in North America in 1991-97. Although the number of incidents is on the decline, casualties from them appear on the rise as terrorists use increasingly lethal explosives.

Organized Criminal Groups Within Russia

Recorded Russian Crimes

Source: Jane's Intelligence Review, *Intelligence: Organized Crime in Russia* (Special Report No. 10), June 1996

In the 1990s, most international terrorist incidents have targeted businesses rather than governments. For instance, in 1996, of the 296 incidents, 227 targeted business and 41 targeted governments, including 35 with civilian government targets and 6 with military targets. Anti-U.S. attacks are similarly usually against businesses: 50 attacks in 1996, compared with 6 against U.S. government targets, of which 4 were military.

Degree of Insurgent/Terrorist Risk Worldwide

Source: *Journal of Democracy and Terrorism: Being 1997*
 Note: The fact that Saudi Arabia in general has only low-risk risk of insurgency/terrorism does not mean there is no considerable danger to U.S. service personnel operating in the Kingdom. Also note that the map shows the risk of episodes in a country, not the risk of episodes perpetrated by nationals of that country.

The relatively few attacks on U.S. forces offer no reason for complacency, however. On the contrary, the small number of such attacks would seem to be a measure of U.S. success in force protection. After the June 1996 bombing of the Khobar Towers in Dhahran, Saudi Arabia, which killed 19 U.S. servicemen, force protection became a higher priority for the United States, particularly in the Middle East and Bosnia. The hope is that the protection has discouraged terrorists, but some may shift their targets from U.S. forces to U.S. businesses, which are already the more common terrorist target.

Pirate Attacks by Country

Source: International Maritime Bureau, 1997

Force protection has been accomplished by various means, but one of the most significant has been reducing unprotected physical proximity to locals, including limiting off-duty recreation and individual missions in the local community. For instance, in Saudi Arabia, most U.S. forces are isolated in the desert, with little opportunity to interact with the Saudi military, much less the Saudi civilian population. The challenge has been to achieve reduced contact without compromising other mission goals, such as training locals and maintaining U.S. force morale. The problems can be acute for a peacekeeping operation, as in Bosnia, in which the mission involves close interaction with locals. Where appropriate, another means to achieve force protection has been to mix so thoroughly with the local population that terrorists would have difficulty targeting the U.S. military. Techniques include wearing inconspicuous civilian clothing outside military installations and dispersing the housing for U.S. military among civilians in hotels and apartment buildings.

Piracy

At least 45 ship crew members were killed by pirate attacks in the first nine months of 1997, according to the International Maritime Bureau. The typical 1990s pirate attack is armed robbery of a ship and its crew on the high seas. The most common location is in Southeast Asia, near the Straits of Malacca and in the South China Sea. Persistent if unconfirmed reports suggest that some governments turn a blind eye to piracy and that some low-level military officials cooperate with the pirates for cash.

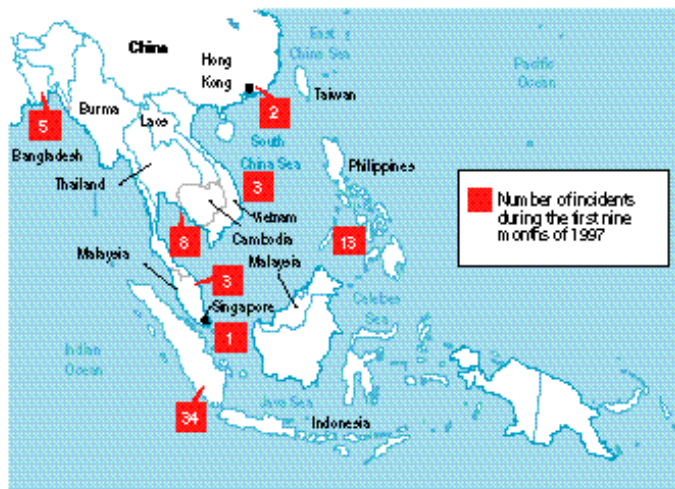

Criminal Destabilization

Great changes in the global economy--stemming from disintegration of hostile power blocs, technological advances in transportation and communications, and diminished government controls over the flow of goods, services, and money--have fundamentally changed the context in which organized crime operates. Increased legal commerce provides a handy cover and justification for the movement of illegal merchandise and cash proceeds. That less than 3 percent of the 9 million large shipping containers entering the United States annually is

checked by U.S. Customs only underscores the problem. The collapse of the Soviet empire and the reintroduction of capitalism in China have removed barriers not only to business but also to criminal activities. New opportunities have allowed criminal organizations to globalize their operations, move into new markets, and expand the range of illegal activities. Transnational criminal enterprises appear to share several key characteristics:

- Establishment of affiliates or cells abroad
- Corrupt relations with foreign leaders
- Transnational strategic alliances
- Legitimate investments in foreign countries.

Pirate Attacks in Southeast Asia

Within a country's borders, organized crime presents two broad types of threats to an existing political authority. One is that flagrant lawlessness and criminal threats to the legitimacy or integrity of governments will provoke the growth of extremist or authoritarian movements that promise to reestablish order and fairness. The other--almost a mirror image of the first--is that the activities of criminals will merge with and reinforce existing civil conflicts or separatist tendencies. These problems afflict many weak states, for instance, Albania and elsewhere in the Balkans, plus Nigeria and elsewhere in sub-Saharan Africa. For the United States, an important case of the first threat type is in Russia, and an equally important case of the second type is in Colombia.

The grave weakening of state power in the former Soviet Union weakened the law enforcement and criminal justice systems. Porous frontiers and newly convertible currencies have increased the attractiveness to criminals of local markets for drugs. In the former Soviet countries, as a result, organized crime flourishes in various guises--drug trafficking, counterfeiting, stolen cars and art objects, commerce in illegal aliens, and arms smuggling. Police forces tend to be underpaid, underfunded, ill equipped, and demoralized. This situation encourages both the offer and acceptance of bribes, as well as the use of violence by organized gangs against honest law enforcement officials. An atmosphere of inadequate rule of law has weakened support for democratization and free markets, discouraged Western investment, retarded economic growth, and made a return to authoritarianism and state control of the economy seem attractive to some. In Russia for instance, intensified criminal activities fanned the discontent that produced the success in the December 1993 parliamentary elections of the ultranationalist Vladimir Zhirinovskiy, when his Liberal Democratic party won 23 percent of the vote. Zhirinovskiy's platform included on-the-spot execution of criminal gang leaders and seizure of criminal assets to finance a reduction of government budget deficits.

In Colombia, the government's ability to control the country has been brought into doubt by the large armed forces of leaders of the drug trade. Paramilitary forces, often subsidized by drug traffickers, exercise more control over large areas than the government can. The most important of the approximately dozen such forces is that of Carlos Castaño, reported to have 2,000 men in uniform at a \$400 monthly salary. These forces engage in violent conflict with guerrilla groups, the largest of which is the 8,000-soldier Revolutionary Armed Forces of Colombia, which takes the lion's share of the \$700 million the guerrillas raise annually from the drug trade. This group spearheaded a boycott of the October 1997 local elections, using death threats to force 2,000 candidates to withdraw their names. Despite the intense terrorist threat and the government's poor control over large areas of the countryside, 45 percent of the eligible voters turned out, mainly because of the extensive role of the Colombian military: 84,000 soldiers joined 102,000 police officers to protect the voting.

The scale of violence by the drug traffickers is beyond police capabilities to control, necessitating a vigorous role for the Colombian military. The situation may worsen as cooperation between the Colombian and Russian organized criminals increases. Russian criminal groups were said in 1997 to have offered to sell Colombian drug traffickers a submarine, helicopters, and surface-to-surface missiles. The traffickers may have acquired at least two Russian combat helicopters.

Terrorism

International Terrorist Incidents (1977-96)

International Terrorist Incidents Over Time by Region (1991-96)

International Incidents Over Time by Type of Facility (1991-96)

Source: US State Department, *Patterns of Global Terrorism, 1997*

Compared with the radical leftist and nationalist anti-Western terrorism that dominated the 1970s and 1980s, terrorism in the 1990s has come from more diffuse sources. The distinction between international and domestic terrorism has eroded, as shown by the Aum Shinrikyo cult, which attacked Tokyo subways and had branches in several industrial countries, including the United States and Russia, from where it purchased and then imported into Japan an MI-17 helicopter. Much of the international terrorism of the 1990s has come from amorphous groups of individuals, not tightly knit organizations. In particular, radical Islamic fundamentalists were able to carry out several spectacular attacks, including the 1992 World Trade Center and the 1996 Khobar Towers bombings, without any evident central organization. These terrorists, whose claim to act on the basis of Islamic principles is rejected by the overwhelming majority of Muslims, drew in part on the experiences of the war against the Soviet occupation of Afghanistan. Financing for their activities comes from well-to-do individuals, such as the former Saudi citizen Osama Bin Laden, now resident in Afghanistan.

Of the seven governments on the U.S. terrorism list, there is little evidence that four of them--Cuba, North Korea, Syria, and Libya--are still sponsoring terrorism, though they continue to harbor terrorists and to maintain the infrastructure for terrorist training. Of the other three terrorist supporting states--Iran, Iraq, and Sudan--Iran is the main state sponsor of international terrorism. Some of Iran's recent activities include the following:

- In July 1997, the Palestinian Islamic Jihad, which Iran founded and controls, claimed responsibility for the Jerusalem market bomb that killed 15 shoppers, one of three bombings for which it took responsibility in 1995-97.
- In April 1997, a German court ruled that "Iran's political leadership made the decision" to kill four Iranian dissidents who had been gunned down in Berlin's Mykonos Restaurant in 1992--a ruling that led the European Union states to withdraw their ambassadors from Tehran until November 1997.
- In June 1996, the Bahrain government arrested a group trained in and financed by Iran that had tried with little success to foment unrest in Bahrain (the unrest that shook it in 1995-97 stemmed instead from domestic sources).
- In March 1996, Iranian agents smuggled a mortar in Antwerp probably to carry out terrorist attacks for which similar mortars were used against Iraq.
- In February-March 1996, Hamas, with which Iran works closely, carried out four suicide bombings in eight days, killing 59. These bombings shook Israel, creating a climate in which the more moderate Israeli Government narrowly lost the May elections to hardliners.
- In February 1996, NATO forces broke up a training camp in Bosnia where Iranian instructors appeared to have been preparing locals for terrorist attacks; explosives were found wired to children's toys.
- In 1996, Palestinian Authority Chairman Yasser Arafat claimed that Iran tried to have him assassinated.
- In June 1995, President Hosni Mubarak was nearly killed during a visit to Ethiopia; Egyptian journalists reported that the Egyptian Government saw Iran as involved in the attack.
- British national Salman Rushdie remains under a death decree from Iran's current spiritual ruler for his book, *Satanic Verses*.

Nuclear Smuggling

A compelling international security concern in the 1990s has been the illegal traffic in radioactive isotopes and other nuclear materials, which originates principally in the nuclear complexes of former Soviet states. Although illicit transactions in nuclear materials occurred in the 1960s, 1970s, and 1980s, most of the 450 reported attempts recorded by the Department of Energy prior to 1994 were scams involving bogus materials perpetuated by opportunists. The unprecedented leak of nuclear materials from the former Soviet Union in 1994 signaled a shift in significance of the problem of nuclear smuggling. The openness of former Soviet states to international travel and trade facilitates the creation of supply chains and mechanisms to transport such material. For instance, the trafficking chains that delivered 363 grams of plutonium-239 to Munich in August 1994 comprised three former employees of the Obninsk Institute of Physics and Power Engineering, a Moscow scientist, a Colombian medical doctor turned broker in military goods, and two Spanish construction businessmen. In all, there were in 1994 five weapons-usable samples (three plutonium-239 and two uranium-235) recovered in Europe (three in Germany and one each in Italy and the Czech Republic).

Since 1995, leaks from the former Soviet Union appear to have lessened. Through the end of 1997, not a single case of stolen nuclear materials actually reaching a bona fide customer had been documented. Most incidents have ended in arrests, the result of sting operations by law enforcement authorities and a lack of professionalism by part-time thieves. The role of Russian organized crime in nuclear smuggling is unclear. Some believe that it is only a matter of time before the Russian *mafya* begin to deal in weapons-usable materials, while others believe it has better opportunities in its current high-profit, low-risk crime than in nuclear smuggling, which would surely result in high-level domestic and international countermeasures.

A more troubling concern than this "supply-driven" smuggling, motivated by criminals out for profit, is "demand-driven" smuggling, representing a specific request from a would-be proliferant state or subnational group. Demand-driven nuclear smuggling would be characterized by an acquisition scheme involving a complex network of government and business front organizations, not unlike the network put together by Iraq in assembling its nuclear capabilities in the 1980s. Identification of such a network would be extremely difficult.

Another matter of concern is use of radiological material by a terrorist group. For instance, in November 1995, Chechen rebels placed cesium-135, a radiological material used for many industrial and medical purposes, in a heavily used Moscow port and then directed members of the Russian press to the site.

Smuggling of materials for chemical and biological weapons is easier to conceal than nuclear smuggling. Many materials of these kinds have legitimate civilian uses. For instance, some chemical weapons are similar to pesticides vital for agriculture, while the equipment needed to produce biological weapons has much in common with that needed to produce vaccines. Smuggling of chemical and biological weapons material is therefore primarily a matter of concealing the intent of what appears to be legitimate exports. It may be easier to arrange through front firms and state-owned companies than through transnational criminals.

Shaping the Strategic Environment

Maritime Terrorist Incidents (1986–96)

As of July 1, 1996

Source: International Maritime Bureau, *International Perspectives on Maritime Security* 1997

In most circumstances, the military will be only a supporting actor in the fight against terrorism and other forms of international organized crime. The principal responsibility for combating these threats rests with the criminal justice system--the police, the courts, the prisons--and those who write the laws. But the military will be used in counterterrorism, as in rescuing hostages in hostile territory and reprisals against terrorist-sponsoring states. And the military will be involved in constabulary operations, as a supplement to the police. Some circumstances in which the military's unique skills will be used are:

- Countering organized criminal gangs equipped with heavy armaments and advanced technologies (e.g., WMD)
- Operating in areas such as the high seas that are outside the control of any state
- Protecting borders
- Providing intelligence, logistical, and communications support
- Responding to a threat of such a size that the police are overwhelmed.

With other core country militaries, the United States aims to build on multilateral cooperation initiatives for both counterterrorism and counternarcotics. As these phenomena threaten all who share the values and interests of the core countries, this aim offers the basis for developing common strategies and sharing the responsibility for implementing them.

With transition country militaries, the U.S. focus is on reinforcing the capabilities to assist the criminal justice system in countering terrorism and organized crime, while drawing the transition states' military forces into multilateral cooperation mechanisms like those with core countries.

In the face of rogues, the principal security aim of countercrime policy is to deter these states from sponsoring terrorism, including hidden support.

Hezbollah guerrillas

Avert Conflict

U.S. counterterrorism forces are part of the larger special operations forces, which have approximately 29,000 active-duty personnel and an annual budget of \$3 billion. The portion of these forces and budget devoted to counterterrorism is classified information, but counterterrorism units train for a wide range of activities, including intelligence gathering, rescue operations, and combat missions. DoD policy prohibits divulging details about these forces or their use. The DoD willingly allows other entities to take credit for successful efforts for which its own counterterrorism forces have been responsible, both abroad and at home. Any advantages that might accrue from publicizing successful exploits are more than outweighed by the benefits of denying U.S. enemies information about how counterterrorism forces operate.

Military responses to terrorism are not limited to the use of special forces. One noteworthy example of a different response was the April 1986 air strike against Libya, a reaction largely to the bombing of a discotheque in Berlin popular with U.S. service personnel. The effectiveness of this reprisal remains unclear. To be sure, in the late 1980s Libya sharply scaled back its support for terrorism, but the change may have been due to a changed international environment (dramatically lower oil revenues, less support from the USSR). Further, Libya organized a particularly deadly attack after the 1986 strike, the December 1988 bombing of Pan Am flight 103 over Lockerbie, Scotland.

The U.S. Military on the Border

In 1989, the U.S. military began to operate a series of listening posts in unpopulated areas along the U.S.-Mexican border; currently there are about 200 posts. Since 1990, a Joint Task Force based in El Paso, Texas has carried out more than 3,000 operations in support of the Border Patrol.

Controversy erupted about the role of the U.S. military in assisting with control of the border in May 1997, when Marines on patrol shot and killed Ezequiel Hernandez, a south Texas youth, when they thought he was firing at them; others claim he was practicing shooting while watching the family sheep and may not have seen the camouflaged Marines. Concern about the death led Defense Secretary Cohen to suspend all ground-monitoring and observation activities in September 1997.

In theory, U.S. Armed Forces could be used to carry out combat missions against members of organized crime and their assets, but such actions would risk arousing nationalist sentiment in favor of the criminals, undermining anticrime goals, and possibly putting at risk the already weakened governance in a transition state. In many cases, a government under siege by organized crime may be unwilling to give approval for U.S. military operations directed against criminals. Were the United States to carry out strikes on the territory or in the airspace of foreign countries without their approval, these would almost certainly be seen as attacks on state sovereignty.

Even well-established criminal groups, like terrorist organizations, ordinarily do not possess permanent, irreplaceable infrastructure that provides targets for conventional military operations. For instance, a raid on terrorist camps may destroy only buildings and kill low-level caretakers, with little effect on the terrorist group's ability to carry out attacks. For these reasons, the principal overt use of the Armed Forces to counter organized crime abroad will be assistance to local military and security services.

U.S. allies are not likely to doubt the seriousness with which the United States views the issues of terrorism and counternarcotics, so long as these continue to receive high-level attention, as they have in the mid-1990s.

Promote Defense Reform

A major problem limiting the use of military forces in constabulary operations has been mixed reputations for fairness and effectiveness. Concerns about the human rights record of the Colombian military delayed provision of materiel for counternarcotics operations to both the military and the police, although the latter's record has been less doubtful. In 1996 and 1997, President Clinton authorized provision of nonlethal equipment for the Colombian counternarcotics effort contingent on agreement by the army and police on observing human rights. The police quickly agreed and received \$100 million in equipment; the military agreed only in August 1997 and then was authorized to receive \$50 million in nonlethal equipment.

Corruption in the Mexican military, though less rampant than in the Mexican police, has limited its effectiveness in counterdrug operations. Efforts to establish more professional accountability in the military are an essential component of counternarcotics policy, given that the vast sums of money changing hands in the drug trade create an inherent risk of terrorism. In February 1997, General Jesús Gutiérrez Rebollo, the director of Mexico's top antidrug agency (the 2,500-man National Institute to Combat Drugs), was arrested on charges of corruption. In March 1997, General Alfredo Navarro Lara was arrested for offering a \$1 million-a-month bribe to the general heading antinarcotics efforts in Tijuana.

The United States also encourages fuller civilian control over the military in countries where order has been threatened by drugs and drug-financed guerrillas, as in Peru. (For more on these issues, see chapter Seven.)

Another potential role for the U.S. military is to reinforce the police, especially as part of U.S. intervention in small-scale contingencies (SSCs). (For a discussion of the role of the U.S. military in policing the new world disorder, see chapter 10.)

U.S. Military and Counterterrorism in the United States

The role of the military in counterterrorism and other domestic constabulary activities is likely to be a function of the magnitude of the threat--the size and frequency of episodes--and the degree to which terrorism is sponsored by hostile states. At present, the Federal Bureau of Investigation (FBI) has principal Federal responsibility for responding to domestic terrorist incidents and the Federal Emergency Management Agency (FEMA) for the Federal response plan for the consequences of terrorism.

As a general principle, the 1878 Posse Comitatus Act (18 U.S.C. Sec. 831, 1385) prohibits use of "any part of the Army...to execute the laws," a provision extended to the sea services by regulation. However, a series of statutory exceptions enacted since 1981 permit use of the Armed Forces in specific situations, including counternarcotics operations and in dealing with terrorist threats that are exceptionally grave or beyond FBI capabilities to resolve. In practice, for a terrorist incident, written authority from the President is required and has never been sought. That said, the Armed Forces became involved in the 1993 episodes involving antigovernment activists at Ruby Ridge, Idaho (with reconnaissance flights), and Waco, Texas (e.g., with armored vehicles lent to the FBI), on the basis of alleged narcotics activities. The Posse Comitatus restrictions have strong support from civil libertarians, those who want to limit the powers of the Federal Government, and those who want the military to concentrate on traditional war-fighting. But the trend has been toward relaxing restrictions in cases of strong perceived threat, especially regarding guarding the borders (e.g., from narcotics smugglers and illegal aliens). In its December 1997 report, the National Defense Panel argued that domestic security will be one of three national security imperatives in 2020 (along with national survival and global economic and political stability). The panel argued, "Beyond its responsibility to secure our borders against attack, the Department of Defense must be able to assist civil authorities against a variety of threats to lives and property in the United States, regardless of their source." To this end, it recommended: "Use Department of Defense assets to advise and assist law enforcement in combating terrorist activities" and "Incorporate all levels of government into managing the consequences of a WMD-type attack."

In 1996-97, the military acquired an accelerated role in Federal preparations for possible WMD terrorism. As provided for in the 1996 Defense Against Weapons of Mass Destruction Act sponsored by Senators Nunn, Lugar, and Dominici, DoD began in April 1997 to train first responders in the nation's 120 largest cities, with 27 cities covered in FY 1997. A variety of WMD terrorism exercises were held (e.g., in Washington, D.C., prior to the January 1997 inaugural, and in Denver prior to the June 1997 G-8 summit). The U.S. Army Chemical and Biological Defense Command (CBDCOM) maintains a rapidly deployable monitoring and assessment system, and its Technical Escort Units can perform render-safe procedures on munitions as well as decontaminate equipment and personnel. The Marine Corps' Chemical Biological Incident Response Force is rapidly deployable to decontaminate victims, stabilize patients, and treat chemical and biological casualties.

U. S. Coast Guard searching for illegal drugs

Complement Friends

Multinational initiatives can be vital for combating transnational threats. For instance, consider the successes in the mid-1990s at interdicting drug smuggling. Since 1995, the United States, Colombia, and Peru have sustained a complex, closely coordinated attack against the drug-laden aircraft traversing the so-called air bridge from the coca-growing regions of Peru to the processing laboratories in Colombia. This included efforts to share detection, monitoring, and other information to identify and track these planes, so that Colombia and Peru can force--and, if necessary, shoot--them down. The program's success has been one of the reasons for the post-1994 collapse of the coca price in Peru and a dramatic reduction in cultivation there.

In the Caribbean, DoD has sponsored a joint interagency task force (JIATF), JIATF/East, which includes liaison officers from the United Kingdom and the Netherlands, whose forces are responsible for their territories in the region. The liaison officers assist in passing information between the United States and their countries, and they help in acquiring clearances concerning drug-enforcement flights that cross their borders. Since 1992, as the trafficking threat in the region shifted from air to seaborne smuggling, the United States has negotiated Maritime Counternarcotics Agreements with 11 nations bordering the Caribbean and is negotiating similar agreements with the United Kingdom, Netherlands, and France for their territories in the region.

In 1997, the United States and Panama reached agreement in principle on the formation of a multinational counternarcotics center, to be located in Panama. (For a discussion of this matter, see chapter Seven.)

Potentially Hostile States

In spite of the tragedy of the Khobar Towers bombing, the U.S. military's force protection policy has generally been successful; for instance, no casualties have been inflicted by terrorists in Bosnia, despite the high-threat environment. The paradox of successful protection measures is that they may encourage terrorists to consider larger or unconventional attacks that then inflict more casualties. Indeed, one of the reasons that the Khobar Towers bombing was so deadly was that the bomb was much larger than was believed within the capabilities of local terrorists. This problem, a kind of asymmetric attack issue, will be difficult to avoid. One response is to encourage imaginative thinking about the kinds of attacks terrorists could mount.

Conclusion

Casualties of International Terrorist Incidents (1991–96)

Source: Department of State, *Patterns of Global Terrorism* 1997

Few U.S. military units are organized or trained for law enforcement, which is the main instrument used against terrorists, drug traffickers, and other international criminals. Although the U.S. military will generally play only an auxiliary role in responding to nonstate threats, it alone can provide capabilities such as reprisal against terrorist-sponsoring states. The military will also assist in areas such as responding to the use of heavy arms and WMD and providing intelligence, logistics, and communications assets.

If the scale of the nonstate threat grows, especially if local police are being overwhelmed, the U.S. military will become more active. That is most likely in conjunction with U.S. military operations, e.g., protecting U.S. forces deployed overseas and in conjunction with SSCs. However, the U.S. military could also become involved in transition states or even inside the United States.

To a large extent, the training, doctrine, and equipment for accomplishing its periodic law-enforcement tasks will be an outgrowth of what the U.S. military prepares for SSCs. If escalating problems necessitate a larger military role in domestic defense in support of U.S. civilian authorities, careful attention to new training, doctrine, and equipment such as nonlethal weaponry will be needed. The U.S. military would have to balance military necessity and due vigilance for the lives of U.S. citizens who, when encountered in the field, must be presumed innocent.

Strategic Assessment

Engaging Power for Peace

CHAPTER FOURTEEN

Alternative Futures

Today's states are largely at peace with one another and likely to remain so through 2018. Nevertheless, militaries are designed for the exceptional, not the ordinary. The same rule holds for the future. The path forward may look benign, but the U.S. military must continually prepare for a world in which conditions have turned sour. The U.S. public will forgive its military if the world turns out to be sunnier than military planners had forecast, but it will be far more critical if its forces are unprepared for the worst.

In a sense, the U.S. military must simultaneously learn from and forget its last war, particularly since it was such a great victory. In retrospect, Iraq was not large, technologically adept, or operationally clever; the Gulf War was clean cut. But hubris lurks in positing Iraq (or a comparable midsize, midtech rogue) as the foe against which DoD (or most of DoD) should be structured. True, states larger than Iraq are now among or on good terms with core states; they alone have mastered the weapons of mass destruction (WMD) or interdiction which would imperil U.S. operations overseas. Global chaos appears to have increased or at least become more noticeable since the Cold War ended, small-scale contingencies (SSCs) continue, and U.S. participation in their resolution remains discretionary. With luck, the situation may hold through 2018, but not necessarily.

To survey the requirements for adapting in the present to an uncertain and possibly gloomier long-term future between 2008 and 2018, this section sketches a three-dimensional space. One vector features larger foes; a second, foes who have mastered nasty technologies; a third, a profusion of messy situations. Larger, nastier, and messier are understood here in relation to today's threat environment; even were the next 20 years free of unpleasant surprises, the environment in 2018 will be different from today's, a difference which must be reflected in defense planning.

In a sense, each dimension corresponds to some dysfunction within the world's state structure. A large transition state, for example, that failed to develop democratic institutions may emerge as a powerful foe. A rogue state may learn enough about the nasty technologies of warfighting to pose a serious challenge. The ranks of today's failed states may grow so large that a large share of the U.S. military (and those of its allies) would have to be devoted to coping with the resulting mess.

Any one future (or foe) may combine two or all three dimensions. A hostile Russia, for instance, would be bigger and enjoy better technology than Iraq did. Sea lines of communication (SLOC) can be contested by both a major power or clever rogue. Achieving the ends of conventional aggression by unconventional means (e.g., disguising military articles in the commerce of urban life) would prove that an enemy had mastered some nasty techniques and could cause a large mess (indeed, nastier becomes messier). The ambiguity that defines messiness can exacerbate military challenges because they generate operational constraints.

Each dimension, rather than being of intrinsic interest, is illustrated because it carries requirements for restructuring the armed forces in various ways. One can imagine interesting futures (e.g., a powerful neutral Brazil with a big, busy navy) that call for, at best, only modest changes in U.S. force structures. Finally, variant domestic futures (e.g., a \$100 billion DoD budget or an unexpected willingness to take casualties), despite their potential impact on U.S. forces, were specifically excluded from consideration.

Comparing a Surprise-Free 2018 to 1998

The world of 2018 will be identical to that of 1998 only if today's trends come to a dead halt. That being improbable, the differences 20 years may make are worth sketching.

**Demographics.* As recently as 1978, four times more people lived in greater Europe (i.e., between the Atlantic and the Urals) than in the Middle East (i.e., Iran plus Arab nations). By 1996, the toddler population in the two regions was equal. By 2018, nearly all those toddlers will be 25 (well over 95 percent of them having survived and stayed in their native region).

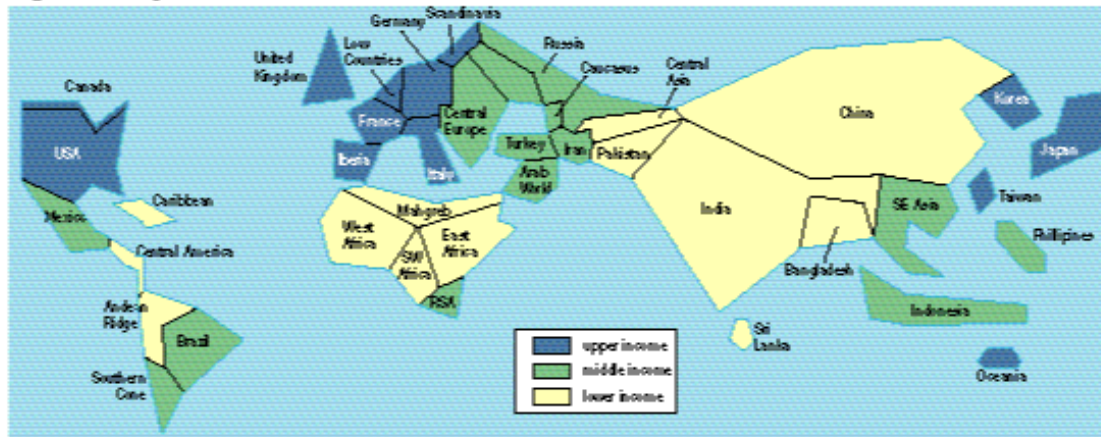

**Military Technology.* Even if the leading edge of military technology does not advance, simply replacing legacy equipment with modern equipment will increase the *average* level of military technology. A few more states will have WMD and ballistic missile capability.

**International Relations.* Some countries in Eastern Europe, Latin America, and Asia will probably become core states. Given another 20 years of experience, today's norms of international conduct, having been around that much longer, may be more accepted among core states and those aspiring to join them. Most of Asia will be richer than today despite recent economic troubles, but the larger countries (e.g., Indonesia, China) will still be less affluent than Europe is today.

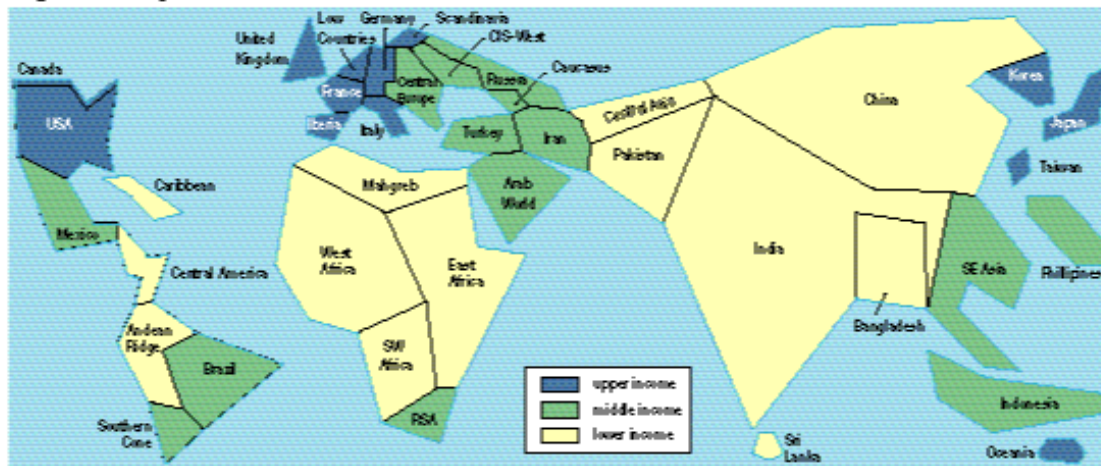

**Globalization.* The world's economy will doubtless grow more interconnected. Trade will account for a growing share of world GNP, more capital will be invested overseas, and multinationals of all sizes will do more business outside their home region. Unless energy prices rise spectacularly, the world's transportation network will grow denser—seaport, airport, and road capacity in Asia and Latin America in particular. Fiber-optic lines will connect nearly all cities of more than 100,000 inhabitants. Global satellite systems will serve affluent customers in both cities and hinterlands. Televisions will be as ubiquitous as radios today. Cellular telephones and the Internet will be almost as pervasive.

Larger

Regions Sized by Number of 25-Year Olds in 1978

Regions Sized by Number of 25-Year Olds in 2018

Regions are defined by nations, except as otherwise indicated.

- The United States includes Puerto Rico.
- The Caribbean includes all other island nations and territories.
- Central America encompasses Guatemala, Belize, Honduras, Nicaragua, El Salvador, Costa Rica, and Panama.
- Andean Ridge encompasses Surinam, Guyana, French Guiana, Venezuela, Colombia, Ecuador, Peru, Bolivia, and Paraguay.
- The South American Cone encompasses Chile, Argentina, and Uruguay.
- The United Kingdom includes Ireland.
- Central Europe encompasses Switzerland, Austria, Poland, the Czech Republic, Slovakia, Hungary, Romania, Bulgaria, Greece, Cyprus, Albania, and the republics of former Yugoslavia.
- Western OS Nations encompass the Baltic states, Belarus, Ukraine, and Moldova.
- The Caucasus encompass Armenia, Azerbaijan, and Georgia.
- The Arab States are bounded by Turkey, Iran, the Indian Ocean, Red Sea, and the Mediterranean.
- India includes Nepal and Bhutan.
- Central Asia encompasses Kazakhstan, Kyrgyzstan, Turkmenistan, Tajikistan, Uzbekistan, and Afghanistan.
- Southeast Asia encompasses Myanmar, Thailand, Malaysia, Brunei, Laos, Cambodia, and Vietnam.
- China includes Mongolia and Macao.
- Korea encompasses both North and South Korea.
- Oceania includes Australia, New Zealand, Papua New Guinea, and Pacific island nations and territories.
- The Malgreb countries are the five African countries with a Mediterranean coastline.
- The Republic of South Africa (RSA) includes Swaziland and Lesotho.
- East Africa encompasses Sudan, Eritrea, Djibouti, Somalia, Ethiopia, Uganda, Kenya, Rwanda, Burundi, Tanzania, Mozambique, and Indian Ocean islands.
- Southwest Africa encompasses Gabon, both Congo, Angola, Namibia, Zambia, Zimbabwe, and Malawi.
- West Africa encompasses all other African nations.

In 2018, the United States may face a much larger adversary than any current rogue state. A large transition state could turn away from the core, become hostile, and build military forces. A large coalition could be constructed by the convergence of several hostile states, no one of which has that much mass.

A larger foe would challenge U.S. force planning in several ways. It might simply fight better, thanks to greater robustness, more striking power, or deeper C⁴ISR. One that could project power around its periphery may be able to challenge U.S. interests in many places simultaneously; in so doing, it would enjoy the advantages of operating from interior lines. A major power with robust nuclear capability and space assets could jeopardize the U.S. sanctuary and threaten its strategic assets. If nothing else, its vote in the Security Council could stymie U.S. use of the United Nations for international security.

A critical factor in tomorrow's correlation of forces would be how U.S. friends react. In the Cold War, the United States and its allies faced the Soviet Union as a team, something that surely affected the Soviet calculations. Will a future foe induce the same reaction? Not automatically. As earlier chapters explain, most core states take a softer line toward Iran (not to mention Cuba) than the United States. A threat to some core states may not be seen as such by others; a foe may use a strategy of divide and conquer. Allies may very well shrink from a cohesive partnership with the United States just as U.S. policy would have them take more responsibility for global security.

A major power may participate in international trade and institutions, looking relatively benign to some, yet still help those whose behavior is hostile. China's trade with Middle Eastern rogues, for instance, has often been seen as a response to U.S. military sales to Taiwan. Under different circumstances, Russia could have helped Serbia, while the United States provided aid to Croatia and Bosnia.

China, Russia, and India as Potential Regional Peers

Three transition states, China, Russia, and India, possess the theoretical resources and sufficient independence of interest to become larger adversaries of the core states. Such an evolution is neither inevitable nor unlikely. Indeed, the three are counted among the transition states precisely because they are now integrating themselves into the world economy, embracing market forces, and leaning toward greater democracy. U.S. policy will certainly influence the path to power of these nations over the next two decades. Yet worse surprises have happened.

**China* is the most likely major power foe of the three, for several reasons: a growing GNP to finance a big military, an authoritarian government undergirded by a large army, a robust nationalism, and a history that leaves the state less than sympathetic to the interests of core states. But would China be willing and able to amass sufficient military power by 2018? Maybe not. First, because China is becoming rich as a trading state (rather than through the kind of forced draft industrialization that the Soviet Union underwent), its economic health requires global trade and hence an absence of major conflict. China's coastal provinces are growing richer and could serve as a potential counterweight to the center: even were China to bridge coast-inland schisms, the government's ability to mobilize resources for central ends might be limited. Second, a competent military takes years of investment; projecting power takes painstaking attention to the details of doctrine, logistics, and C⁴ISR. China has a long way to go: its rocket forces have mixed performance records, its air force and navy are unimpressive, and no army can get half its budget from running businesses without putting its warrior orientation in question. How soon China might challenge the United States as a near equal will be determined by its economic growth rates, its willingness to subjugate economic to state interests, and a demonstrated competence in military operations, especially those requiring power projection.

**Russia* couples great strengths and grave weaknesses. Among its strengths are vast resources, a large nuclear arsenal, and a reservoir of technology. But much of Russia's industry is shuttered. Its military sits at the edge of crisis. Birthrates have fallen below death rates. Technology-savvy people are emigrating. The central government has problems with organized crime and fissiparous tendencies in the perimeter (e.g., Siberia, the Caucasus). Russians still aspire toward great power status, but in a bleak economy individuals are consumed by survival. To reemerge as a power by 2018 Russia would need to pull out from its depression before its technological strengths dissipate, reassert central authority (either crushing or coming to terms with its Mafiya), and undertake serious military reform. Russia is unlikely to be a foe if it lacks security issues that define its own interests in clear and meaningful opposition to those of core states. Another indicator (if not necessarily cause) of strength would be a strong power position in former near abroad states (e.g., Ukraine, Kazakhstan).

**India* has a growing economy (roughly 6 percent a year), a large technically trained population, the world's largest population of preschool children (i.e., adults in 2018), a functioning space program, nuclear weapons, and a military of proven competence--as well as vast poverty and backwardness, a politically and culturally divided population, and a relatively weak central government. India has established a hegemonic position in South Asia and sits near two shipping chokepoints (the straits of Hormuz and Malacca). Yet, India is a democratic state with no serious quarrels with core states. To emerge as a major power by 2018, India would need faster economic growth (e.g., 10 percent a year), a unified will to power, and a greatly accelerated space and nuclear program. Even then India is likely to be on good terms with the core.

Implications

Scale is the essence of this threat, even though the larger foes are likely to have mastered the nasty technologies.

The character of an operational challenge from a major power depends, of course, on who the major power is. Were China and India hostile, the United States might seek broad naval and amphibious capabilities (including riverine operations) and the ability to operate in jungles and cities, possibly against very large armies. Were Russia to turn itself around, return to great power status, but pick fights with the core, the United States may have to return ground and air force units to Europe and buy additional nuclear submarines and related assets for SLOC protection.

A major power that was covertly or at least ambiguously hostile could prove a tricky challenge. As a player in the international system, it would have the same access to all infrastructure and technology as any other nation enjoyed. Such a power might be able to avoid the wrath of U.S. allies, especially in a proxy conflict in which it and the United States backed opposite sides. As a result, U.S. forces might face a nation with unexpectedly good capabilities such as the ability to borrow or reconstitute command and control infrastructure, access to navigation information, imagery from space, unmanned aerial vehicles (UAVs) *et al.*, and links to third-state markets. The United States would face a choice between ignoring the help provided or widening a conflict.

Ignoring the help would vitiate current planning assumptions of both information and logistics superiority. But striking back may be hard to justify to world publics, especially if assistance from the large power comes in as encrypted intelligence rather than boatloads of weaponry.

A major constraint on fighting a larger foe directly is how to manage conflict to avoid escalation into nuclear war. Unlimited aims may lead adversaries to desperate measures. Thus, U.S. aims may have to be limited, and strategic objectives may have to be defined in terms of settlement rather than surrender. Some or all of the major power's territory might need to be considered off-limits to U.S. operations.

Prospects

The plausibility of a larger foe varies with *who* that might be and *how* core states might respond to its emergence. Although both Japan and Europe have the resources to be major powers, each has firmly decided to work with the United States to pursue common security. Both have, on many occasions, lobbied the United States to exercise more, rather than less, global leadership.

China has demonstrated national security objectives at odds with U.S. interests (e.g., over Taiwan or islands in the South China Sea) and it abuts nations at or near core status (e.g., South Korea, Japan, ASEAN states). Russia, at this point, is primarily interested in its near-abroad. India has defined few interests outside its immediate subcontinent. A *global* challenge to the United States is much less likely; that would take decades of military investment, practice in power projection, and a belief system that results in global interests--all of which no large transition state possesses.

One contradiction inherent in the challenge of a potentially larger foe is that requisite economic and technological growth requires a nation to be open to interaction with the core. Yet the government of an open society may have more difficulty mobilizing resources against core states. A coherently hostile national will may be hard to induce if many internal forces identify their own well-being with the survival and prosperity of the core. The sooner a challenger arises, the more it will evoke memories of (and possibly responses to) the old Soviet Union. Yet, these contradictions do not apply to the rise of a major power that simultaneously works with the core on one level but

Disappearing Forests—Factors in Messier Global Scenarios

takes military issue with it elsewhere.

Technology Races and Globalization

When the worlds of defense and commerce were separate, technological competition between the United States and its adversaries could be abstracted as a two-handed match. The leader developed and deployed new technologies at the bleeding edge; the follower stole or copied (at the cost of being a few years behind), adapted it to national exigencies, and concentrated research on a few specialties (thus posing a niche challenge).

Dual-use technology offers the prospect of buying what one cannot steal, but until roughly the mid-1970s, commercial technology lagged military technology. The United States maintained its technological lead by declassifying technologies slowly and restricting the sale of advanced dual-use technologies to hostile states. Even if the system leaked, it helped contribute to the Communist bloc's relative backwardness.

Today some military equipment may be far superior to anything available commercially, but many defense systems lag commercial systems (because of delays associated with defense acquisition practices and the need to adapt products to military specifications). The sophistication and hardness of other military equipment are often purchased at a premium. Globalization means technologies are introduced everywhere at the same time (even if nations differ in their absorption rates). The end of the Cold War removed the constraint on selling dual-use equipment to almost anyone. These factors combined have led, in many areas, to where a dollar in the hands of adversaries can buy as much or more capability than the same dollar in the hands of DoD.

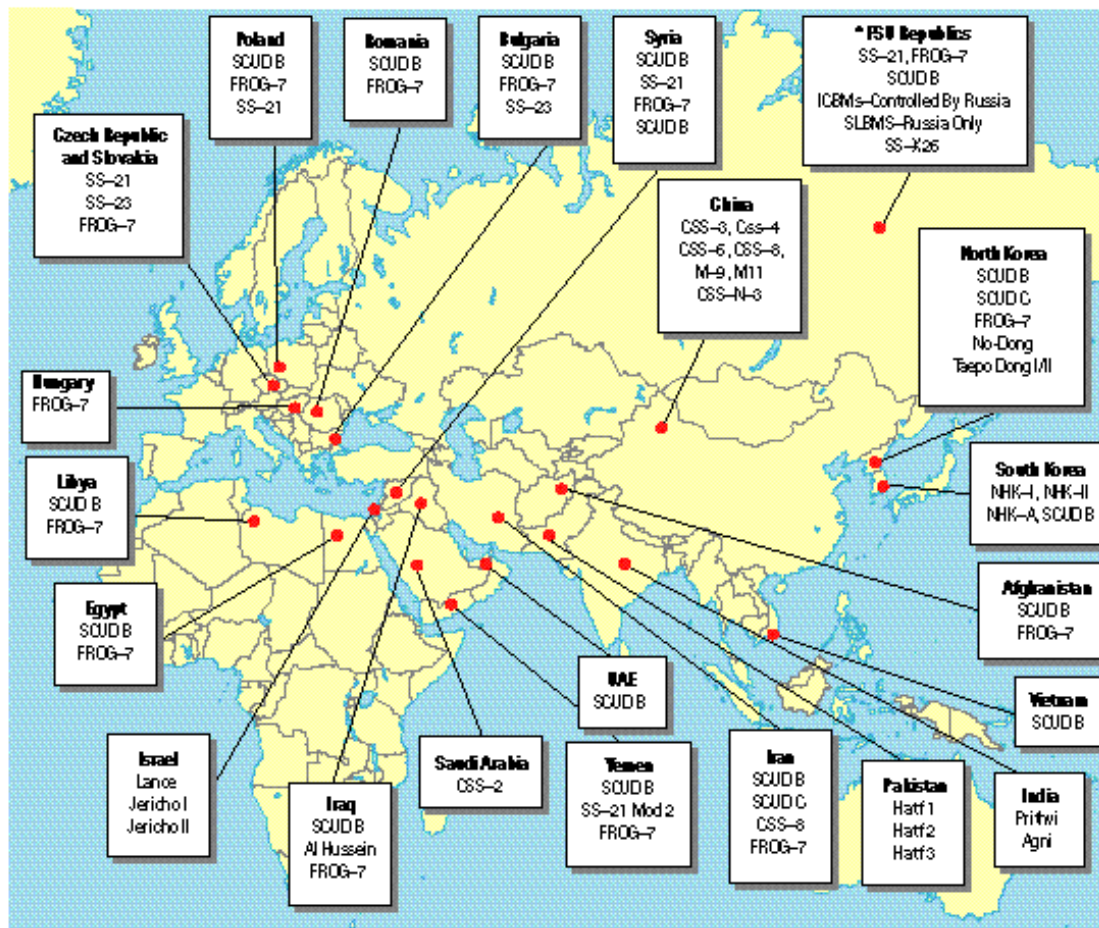

Where is the long-term U.S. technology advantage? First, the United States is richer; second, its military technologies give it unique capabilities; and third, the United States possesses systems integration skills that permit it to make more of a whole from its parts than others do. But do they suffice? China may have a larger GNP by 2018. Unique military technologies are becoming a thinner edge. The contribution of systems integration per se is hard to prove or even quantify.

Nastier

Estimates of future conflict often assume that it would involve only conventional weapons, that lines of communications to the front (or elsewhere) would be unimpeded, and that the United States would hold supreme technological advantages. All three assumptions are more likely than not. But a foe might plausibly have the will, wherewithal, and wit to figure out how to violate each of them. Chapter 11 outlines some paths a nation can take to confound the United States, particularly its ability to project forces overseas. To do so by 2008 would require good luck on the part of today's rogue states. But with globalization, technology is likely to spread faster. The 20 years between today and 2018 offer potential foes time to master the nasty technologies of warfare.

Weapons of mass destruction are a looming threat. The United States, for instance, has already fought an adversary, Iraq, which possessed medium-range missiles and chemical warheads that might have been mated and fired, even though they were not. Tomorrow's adversary may be less reluctant; its missiles might have longer ranges (possibly intercontinental), greater accuracy, and nuclear warheads.

Missile Arsenals of the World

Source: International Institute for Strategic Studies, *World Military Balance 1997-98*
 * Former Soviet Union

A denial strategy can operate in many ways. No nation is likely to dominate any warfighting medium in competition with the United States. Yet mines, missiles, surface raiders, and long-range guns can increase the hazards of sea transit, thereby throttling commerce. Foes can attack runways, air-traffic control sites, support services, and even aircraft. Information warfare against military information systems is inevitable, but the closed nature of most military systems may favor defenders. By contrast, most parts of the global information infrastructure are open and likely to be more vulnerable. They could be held for ransom, or attacked so that the citizenry thinks twice before supporting intervention into the attacker's neighborhoods.

Trade (Exports Plus Imports) as Percentage of GNP

Although exploitation of the information revolution for defense has gone furthest in the United States, even partial exploitation elsewhere could have a disproportionate effect on the capabilities of an adversary. Three pillars of tomorrow's military--precision-guided munitions (PGM), unmanned aerial vehicles (UAVs), and access to space--could be acquired from many countries. Commercial technologies with military potential--computers (e.g., portables, which can store detailed maps on CD-ROMs), cellular telephones, networks, digital signal processors, and software (e.g., for simulation, manipulating databases, and encryption)--are even easier to acquire. Future foes may not have the reach or legs of U.S. forces, but they do not need them to put up a stiff fight in their own neighborhoods.

Implications

A foe's mastery of nasty military technologies--WMD, attacks on lines of communication, or a cheap revolution in military affairs (RMA)--could extract unacceptable casualties from military forces operating overseas. A foe's technological competence

could strike hardest against power projection, which is both a U.S. core competence and the most vulnerable aspect of U.S. global military capabilities. In the hands of state or nonstate actors, WMD may be used against homeland populations.

The impact of WMD depends on how they are wielded. A threat against a lukewarm ally of the United States could persuade it to leave a U.S.-led coalition (thereby reducing the coalition's combat power) or deny the ally's facilities to U.S. forces (complicating logistics). The specter of WMD use would hang heaviest on force concentrations and close-in warfighting methods where soldiers must be massed if their effects are to be focused. The existence of countermeasures against chemical and biological warfare (e.g., aerosol detectors) by no means eliminates the problem. Chemical-weapons suits are hard to fight in. Defenses against WMD delivery systems such as ballistic or cruise missiles are advancing, but today's best systems leak, and progress belies optimistic expectations of their performance. Even reliable missile defenses would afford little protection against terrorist WMD or weapons delivered by artillery (e.g., North Korea's overlooking Seoul). Any deterrence provided by retaliation-in-kind (e.g., hitting back with nuclear weapons) is problematic because it would legitimize a class of weapons otherwise receding from the inventories of today's powers.

Somali "technicals"

Potential threats against cities of core states, especially in North America, have to be taken seriously. If the technologies of hitting an ICBM in flight continue to be refined into something reliable, a shield against a sparse attack might be upgraded to cover successively denser ones. True, sensors proliferated in space could increase detection and localization of missiles, but stealth and decoy techniques can hide true missile tracks. Beyond some point, the calculus of antimissile defense runs into the same technical problems (e.g., the mathematics of leak-proof defense or cheap countermeasures) that convinced the United States and the Soviet Union in 1972 to conclude the Anti-Ballistic Missile (ABM) Treaty.

The use of mines, shore-based bombardment, submarines, or surface raiders to threaten straits (e.g., Gibraltar, Bosphorus, Hormuz, Malacca, and Tsushima), canals (e.g., Suez, Panama), and littorals could frustrate global commerce, blackmail nations or corporations, and generally complicate deployment. Air threats pose similar challenges, and many are directed against lives rather than against commerce.

Cyber warfare, as noted in chapter eleven, could destroy (although more likely corrupt) information required for high-technology operations, curtail access to information systems and services when most needed, and either compromise the security of war plans and technologies or reveal locations of friendly forces. Threats against lines of communication could complicate the use of split basing and reach-back (i.e., supporting forces abroad with information systems in the United States) or force the addition of further layers of protection for the existing infrastructure. A thin but redundant support architecture might survive information warfare better than a thick but expensive one, prone to single-point failure because no one can afford to make it redundant.

By learning to apply information technology to conventional warfare, a nasty foe could easily undo the three pillars of the coalition victory in the Gulf: superior logistics, command-and-control warfare, and dominant maneuver. An adroit combination of cruise missiles and laser-equipped UAVs could pose substantial risks to the high concentrations of value that define U.S. platforms, notably ships, but also logistics transfer and storage points. An adversary's ability to disperse its own C⁴ISR systems would complicate U.S. efforts at command-and-control warfare. If a trackable signature constitutes a target for precision guided missiles, then maneuvering (thus, disturbing the environment) can, by enhancing signature, introduce new vulnerabilities. Today's operational philosophy counts on the United States' sensor superiority through such platforms as Aegis ships, or aircraft hosting AWACS, JSTARS, Cobra Ball, and Rivet Joint suites, none of them particularly stealthy and all operating within 100 to 200 kilometers of battle. Against a foe so equipped, the United States would need to rethink the optimistic pictures of *Joint Vision 2010*. By contrast, networks of sensors, processors, and weapons can be arrayed to take hits and still recompose themselves in near real time to support operations.

Prospects

A nasty threat arises only if the requisite technologies are mastered by those willing to take the risk of using them.

Many rogue states have WMD warheads and theater missiles. Few missiles exceed 1,000 kilometers in range, but North Korea, if it survives long enough, may have weaponry that does. Yet, developing WMD or strategic delivery systems is fraught with risks. The very activity gets one noticed and may lead to countermeasures by the United States and others before efforts have been completed. Those who would employ biological and chemical WMD must also calculate that while the odds of success may vary, even a serious attempt that fails to generate all the desired effects may result in retaliation, and nuclear means cannot be ruled out.

Because the means to challenge sea and air lines of communications are within reach of many, terrorism against either has to be considered a real threat (even if blue-water operational capability remains expensive and rare). Information warfare is cheap and many systems are vulnerable, but whether even a coordinated attack against prepared defenses can surpass the level of annoyance is not clear.

Finally, the innovative exploitation of commercial information technology is quite likely. Electronics is a commodity and is thus globally available. Although the United States prides itself on its superior skills in systems integration (a lead it should enjoy through at least 2018), the technological sophistication of the Third World is not to be underestimated. Given the Internet, the number of students studying engineering in the core states, the level of foreign direct investment, and the reverse engineering of complex systems, a potential exists to learn adequate systems integration skills.

Indications and Warnings of a Revolution in Military Affairs by Other States

Military intelligence tends to assess the progress of other countries toward an RMA by examining their doctrine plus current and in-the-pipeline equipment, most of it acquired and developed along established military lines. Were such assessments reliable, other countries' RMAs could be seen coming years away, and the U.S. lead could be managed by a vigorous response where most threatened.

The civilian nature of most RMA technologies suggests that an RMA itself may arise from civilian ranks. Third World strategists may be able to figure out how to build an effective military by rummaging through the global Radio Shack. They might not even have to be *defense* strategists. Much of the RMA entails how to know about and control land and immediate airspace. Domination of battlespace has similarities to other tasks of national space management, such as environmental control, transportation management, urban and regional planning, law enforcement, and even public health. RMA concepts may also arise among defense firms in core states eager for overseas customers. Rogue states are unlikely to be favored customers, but today's approved customer can become tomorrow's enemy (e.g., Iran in the late 1970s).

If new concepts for C⁴ISR and related aspects of warfighting do not show up in normal defense acquisition channels, they may be missed. Watching Beijing is not enough if the RMA comes out of Shenzhen.

Messier

When waging war, the United States prefers going in hard, knowing whom to fight, winning decisively, getting an enemy to admit defeat, and leaving a state to its (ultimately) grateful populace. Reality is rarely that clean. Wars, such as the one fought in Vietnam, may lack obvious starting points, clear lines between enemy and noncombatant, obvious ending points, and enemies that quit when beaten. Transitions between a large-scale peace operation, scattered resistance to peacemakers, dissolution into chaos, and the onset of outright war may not be possible to determine (even after the fact).

As the Gulf War has shown, the United States is hard to beat in open terrain. Dense terrain gives some protection, but the ability to intermingle one's warriors amongst the background population can generate especial advantages. Making military weapons (e.g., a pickup truck with a Bushmaster-class machine gun in back) look commercial (e.g., a pickup truck) is a tempting option for a foe preferring to abjure uniforms and shield itself behind the local population (whether as supporters or hostages may be irrelevant). As events in Mogadishu or Grozny proved, even poor people can generate challenging counters to technologically sophisticated weapons confined in urban areas. The cheaper electronics gets (and anything that can be pressed into a chip will eventually be tantamount to free), the faster it is likely to spread within the Third World. By 2018, many cities may be densely wired into virtual grids permitting the detection of and mobilization against even fast-moving military units.

The U.S. military can also be stressed if loaded with enough responsibilities for military operations other than war: peace operations occasioned by failing states, natural disaster relief, or large-scale noncombatant evacuation operations (NEOs). Rapid urbanization coupled with a decline of integrating belief systems may yield an ungovernable world where criminal organizations or gangs control neighborhoods and hold commerce for ransom. Failed states already pull in core forces in intermittent, frustrating attempts to relieve potential tragedy, restore order, or protect the interests of core states.

The occupation of even a defeated nation can pose problems if its population is:

- Ideologically or religiously at odds with the United States
- Hiding those who should be brought to justice
- So torn by factions (or permeated by former internal security forces) that it cannot rule itself.

Israel, for example, beat Syrian forces in Lebanon in 1982 and has suffered 16 years of constant casualties since, while occupying a security zone south of the Litani River.

Implications

Messy situations are manpower intensive. If they go wrong, the institutional cohesion of the military may be put at risk.

Patrol, whether for peace operations, or the occupation of a hostile land, could absorb tens or hundreds of thousands of foot soldiers. Forces may have to find a mix between visible presence and the rapid, stealthy insertion and recovery of forces to conduct strikes on opposing leaders and concentrations--with international media looking on. Although technology (e.g., unmanned hovering lookouts, sniper-round detectors, microwave and infrared (IR) see-through devices) can help find *things*, true information dominance requires an understanding of an area in its full human dimension. This is never easy, especially in the face of a suspicious or hostile population.

Evacuation and disaster operations require working with nongovernmental organizations (NGOs) and private voluntary organizations (PVOs), contracting for and delivering commercial services, and exercising power to acquire enough food, medicine, and transport vehicles. Eventually militaries will come to play a skeletal organizing role, and private support services will provide the bulk of the effort (except, perhaps, quarantine enforcement).

Prospects

The extent to which the U.S. military is preoccupied with a messy world depends on whether the world becomes more of a mess, and whether it does so in ways that compel U.S. interest.

The persistence of messiness is guaranteed. Dirty wars will not go away. State failure in Africa continues. Populations in many parts of the world are pressing against food supplies. Global warming, overpopulation, deforestation, and the potential rise of antibiotic-resistant infectious agents raise the likelihood of certain natural disasters. Youth unemployment in tomorrow's growing megacities is extremely high even as such conurbations become more vital to the world economy; irruptions against them may well call for evacuating their populations.

The United States will not send forces forward into every crisis or disaster. The more distant the trouble, the greater the temptation to do nothing. Yet, continued difficulties with drugs, organized crime, and unchecked immigration coupled with failing or corrupt state authority to the south may force the U.S. military to preoccupy itself with problems in its own backyard. A good deal depends on other nations' expectations of the world's unipolar power, U.S. public opinion, and the interdependence and growth of the global infrastructure. In an age of air transport, the outbreak of a highly contagious disease could force core states into action, which, in some circumstances, could involve military forces (e.g., to protect health workers in failed states). Given a globalized economy, the security of any one Third World city tied into core states affects the terms on which others live.

Responding to Worsening News

The United States could respond to a worsening world in two ways. As the next chapter details, the plausibility of larger foes, nastier technologies, or messy situations reinforces the need for defense institutions and systems to be broadly adaptive. But DoD must also monitor the world's threat environment and respond if it worsens.

Satellite communications

Responding to the problem of a larger foe is largely one of coping with unexpected but nevertheless historically familiar size. Today's forces need not be raised to meet a larger foe that, itself, must take comparable time to build forces. Yet some elements of defense, like advanced technology, take longer to complete than others. Some tasks that once consumed the assets of the Nation's R&D establishment--strategic warning, intercontinental strike, national missile defense, space control and denial, high-energy systems, and electronic warfare--may need to be intensified when a large adversary is on the ascent rather than when it has already arrived. Investments in lift would similarly be required to face a foe capable of challenging the United States in many places.

Pacing the force to follow a rogue's progress at mastering nasty technology is difficult. Few obvious indicators foretell a foe's ability to interdict lines of communication or field a cheap RMA. Harder still is correctly forecasting a *will* to be nastier. For this reason, many of the coping strategies must be in place or en route to begin with.

Many methods of coping with the possession of WMD are getting attention: warning systems, counterproliferation, and deterrence strategies. Operating with widely dispersed or over-the-horizon forces, although a more radical response that challenges command-and-control doctrine and inter-service roles, may need to be pressed.

Sea lines of communication can be pro-ected by using airborne surveillance and other C⁴ISR assets against shore attack or raiders. Mine-clearing and submarine-detection remain complex problems. Protecting the open ocean may require monitoring global ship movements continually, for example, by using air- or spaceborne synthetic aperture radar (SAR) to pick out wakes.

Conventional threats to airways can be managed by general air superiority, runway protection (e.g., rapid repair kits and revetments), and redundancy in radar and navigation systems. Coping with the proliferation of portable heat-seeking missiles (with vertical ranges up to 3 kilometers) into terrorist hands is difficult. Exclusion zones around some military airports may be workable, but many civilian airports cannot be protected this way. Hardening civilian aircraft would be hideously expensive, but infrared countermeasures may be affordable for aircraft with certain missions (e.g., the Civil Reserve Air Fleet).

DoD already protects its information systems and by contractual methods could induce similar protection for its suppliers' systems. To help bolster civilian but still critical infrastructures, DoD could fund help centers, computer-hacker trackers, security technology and related tests, standards, metrics, and verification suites; DoD experts could directly assist systems administrators. Yet DoD cannot protect private systems.

The United States could respond to an adversary's cheap RMA by accelerating its own, notably its ability to conduct stand-off warfare. The growing vulnerability of platforms will inevitably force consideration of dispersing data collection, information processing, manning, and weaponry into networks that can be assembled quickly, withstand attack, and degrade gracefully under its effects.

Escalation is another method of dealing with the threats of WMD and attacks on LOCs. In effect, the United States could declare a differentiation between the operational (conventional weapons used on the battlefield overseas) and the strategic (WMD and threats to the United States or its friends). Strategic threats warrant a strategic response. Declaring a firebreak, however, does not guarantee its acceptance; even allies might not countenance a U.S. strategic response unless there were many casualties at home.

Some trends toward a messier world can be monitored, but without sorting out its own values a nation will not know when and where it may intervene. Messy situations can be managed by using forces with sufficient mass to quell them. In other cases, control may be impossible and successful intervention a matter of influence: stand-off weapons for isolated, obvious targets; rapid-strike operations for targets of opportunity; and copious information support to local forces to help them handle problems. The challenges involved are to:

- Draw the required information from the environment
- Feed it to local friends in the best ways to support whatever doctrine local forces find appropriate to the level, scale, and character of the conflict
- Reconcile what friends do with U.S. values.

Large-scale NEOs require development of a doctrine of *cordón sanitaire*, a firebreak between the irruption and evacuees. The latter may include antimissile and anti-aircraft assets and counterfire operations.

Conclusion

Although today's world is benign and likely to stay so, the U.S. military must be prepared for less inviting futures. Compared to the canonical major theater war (MTW) foe, tomorrow may see larger foes, those who have mastered nastier technologies, or situations far messier than theater conflict.

The most difficult of plausible bleak futures may not be those that are obvious and ugly but those whose character is ambiguous. Ugliness derives from tradeoffs that even rogues may be unwilling to make. Taking on core states may impede the access to trade and technology necessary to financing and building a modern military. Brandishing WMD or threatening LOCs may risk devastating escalation by the United States. The messiest situations may not affect U.S. interests.

The futures to watch would skirt these tradeoffs. One might be a major power with a smiling face and steel-pointed boots kicking furiously under the table as domestic debate ensues over its *true* character. Another might be a midsize state that had mastered the jujitsu of commercial information technology and learned to build low-cost, high-tech defenses against U.S. intervention. A third might be a messy situation that strikes at the interests of core states: disasters that threaten to spread quickly along a swift infrastructure, or irruptions best dealt with by evacuation, rather than full-scale conventional combat operations.

Strategic Assessment

Engaging Power for Peace

CHAPTER FIFTEEN

Adapting Forces

The strength of the U.S. military rests on power projection, C⁴ISR, jointness, lethality, and robustness. If the world stays benign, these features will remain its long suit; if not, these features could be called into question.

- Weapons of mass destruction (WMD) and long-range strike capabilities possessed by large or nasty foes could confound power projection by crippling over-the-shore operations and lines of communication.
- Information warfare (from large foes or masters of nasty technologies) could put C⁴ISR at risk; the ambiguity of messy situations could prevail, making it unclear who is friend and who is foe.
- Joint warfare alone could be inadequate if combined warfare is required for coalitions among core partners (e.g., to face large foes) or for reaching to local power centers (e.g., in messier situations).
- Lethality, the *sine qua non* of warfare, may backfire in messy situations where nonlethality is more appropriate.
- Robustness, a feature of organizations, would have to be a feature of systems to defend them against nastier foes or support warfighters in messier situations.

Adaptiveness helps bridge the gap between the expected and the actual future. Chapter fourteen suggested why a gap may arise at the macro level. But microfactors also call for adaptiveness. A known adversary could have unexpected strategies. If its equipment is unfamiliar, identification based on recognizing a profile or electronic signature could be misleading. If its doctrine is unanticipated, new operational countermeasures will be needed. At the same time, unexpected opportunities (e.g., new technologies) can arise that an adaptive military will want to incorporate rapidly.

An adaptive military must have agile warfighters, trained in the known but capable of dealing with the unknown, aware that it will not have all the answers but capable of learning what is needed for victory. Yet, institutions matter because they form the context into which agile warfighters are recruited (thus they are mutually reinforcing), and they can enhance or impede the ability of warfighters to adjust to change. Systems can help or hinder warfighters, especially in extending their battlespace awareness. Systems and institutions both will need to adapt to the ongoing revolution in information technology--not just to the opportunities it presents but also to any challenges realized by adversaries.

Institutions

Troop levels, mobilization, doctrine, and alliance structures are all issues for the United States in adapting to a less friendly world of larger and nastier foes and messier situations.

Larger

With the end of the Cold War, the DoD lost its large foe and, understandably, reduced its manpower and material. A new major power (and, to some extent, a messier world) could reverse that. How can the DoD best face the challenges of a reconstitution?

Massed forces

If size were a matter of scale-up, one approach would be to maintain an officer corps and training base to facilitate expanding from today's specialized high-technology military to one in which large cohorts of rapidly trained fighters man the front lines. This approach, however, has several problems. First, the day of the mass military here may have passed as early as 1970. Compared with their fathers, today's entrants have greater access to information, broader familiarity with networked rather than hierarchical organizations, and hence greater resistance to rote discipline. Second, the skill levels of even front-line infantry today need to be much higher than popularly perceived. Not only is the gear more sophisticated, but in today's global fishbowl every mistake is likely to be widely broadcast. Third, without some reincarnation of the Cold War, the requirement for large armies is incompatible with a low public tolerance for casualties.

Reserves may be a repository of institutional adaptiveness. The Gulf War reinforced the notion that, in regard to major theater wars (MTWs), combat forces should be active and the reserves ought to specialize in support functions. Perhaps some of the reserve forces could be a repository for combat skills (e.g., riverine operations) that appear outmoded but may find unexpected use. Individual reservists could be rotated into combat units to return such skills to the active force. Conversely, nothing justifies retaining a skill to operate obsolete equipment.

Force XI: Wired soldiers

Industrial as well as manpower mobilization has been a traditional response to the possibility of a large and active foe. As inventories decline, bases are consolidated, the role of contractors grows, the defense sector closes underused facilities, and the challenge of mobilization increases. Consolidation of the defense industry into three large firms (Lockheed Martin, Boeing, and Raytheon) has narrowed the industrial base. An unexpected buildup could force the United States to look beyond traditional suppliers. Their learning curve might be uncomfortably long, but they would have sunk less intellectual capital in existing weapons, capital that could have gone to an RMA.

To face larger foes, the United States would have to have friends (a messier world also calls for partners, but political cover for unpopular operations is often the driving factor). The issue of how to structure coalitions becomes important. In the Cold War, allies manning the Central Front each had their zone to cover. By 1996, European allies had recognized U.S. preeminence in C⁴ISR and strategic lift, and NATO worked out arrangements by which U.S. intelligence, long-range lift, and strike capabilities would permit other countries to conduct out-of-area operations. Other combinations also might work, but they take up-front planning, mutual exercise, the careful integration of doctrine and expectations, and the mutual recognition that their consideration does not presage U.S. policy shifts (e.g., to allay fears that the United States expects NATO partners to take all the casualties).

Two Experiments with Universal Networking

Two broad experiments--the Army's Force XXI (TF XXI), and the Navy's Cooperative Engagement Capability (CEC)--testify to both the U.S. military's eagerness to adapt and the conceptual models within which adaptiveness is pursued.

The purpose of Force XXI is to put tactical information into the hands of the soldier by automating the generation and distribution of battlefield information, orders, and related message traffic. The heart of Force XXI is called the Appliqué: a computer terminal for every vehicle (dismounted versions are being explored), which offers soldiers a constantly populated map of the battlefield and allows them to receive status reports on mission assignments, logistics, and ambient factors (e.g., weather). The Appliqué and its servers are linked by a tactical internet covering 1,000-plus users per brigade over constantly shifting network topologies. In March 1997, the Army Experimental Force (EXFOR: the 1st Brigade of the 4th Infantry Division) went to the National Training Center to see what difference its new configuration would make. It lost, as does every unit that trains there, but its performance demonstrated (1) that internetworking can halve the time required to plan and conduct

operations and (2) that a lot of sensors are needed to stay current with enemy dispositions, but (3) that forcing others to gaze skyward for UAVs quickly tires them. Overall, the Army has concluded that, by providing a situational capability never before demonstrated, TF XXI was a successful proof of concept of the value and combat potential of digitization down to the platform level. The first digitized division is slated for the year 2000; the first such corps, for 2004.

Navy CEC was designed against the air threat (e.g., from cruise missiles), especially in littoral waters. Until now, each ship's radar would build incoming missile tracks by itself, on the basis of what it saw. CEC allows each radar to provide semiprocessed data to all other ships, supports a common data-fusion algorithm, and creates a consolidated track. Data exchange reduces dimensional inaccuracies; permits more frequent data acquisition; allows sharper beam focussing; provides earlier alerting; and supports common IFF determinations. Passing tracks to other ships permits one ship to engage a target on the basis of what other ships see. Undergirding CEC is a robust communications system with several orders of magnitude in improvement to bandwidth and electronic countermeasures.

Similarities between CEC and TF XXI are telling. Both programs were accelerated after impressive demonstrations. Both seek operational improvement through improved command and control. Both exist, in part, to systematize advantages offered by the global positioning system (GPS). Both programs cost in the low billions. Most of that money went to improve communications systems according to each service's structural paradigm, with the Army widening and the Navy deepening their respective nets. Both reinforce each service's reigning paradigm--the Army, by giving soldiers what they supposedly need to know; and the Navy, by reinforcing the position of the capital ship.

Both programs will probably expand their coverage. TF XXI is capable of extending tactical internetworking to the Marines, allies, close air-support units, and missile defense. CEC may be adapted to underwater and power-projection operations. Meanwhile, the Ballistic Missile Defense Office has its prototype of the System of Systems. The Air Force is initiating programs to fuse information gathered by its four tactical intelligence aircraft--AWACS, JSTARS (designed to communicate only to special trailers), Cobra Ball, and Rivet Joint--into rapidly deployable squadrons for real-time data fusion. Eventually these programs are bound to grow into one another. Foresight today may determine whether the result is a smooth meshing of gears or the noisy fight over sectors, budgets, protocols, and standards.

Nastier

Unexpected nasty foes (and other potential large enemies with similar capabilities) may cause the failure of key warfighting assumptions and create the need for new doctrine. Constant experiments, battle laboratories, and what-if exercises ought to be the rule in the military, even at the expense of high readiness ratings.

Although tomorrow's world is ineluctably joint, innovation may be enhanced when services compete for similar missions. Thus it may be healthy that the Army and the Marine Corps are exploring different and even antithetical concepts of how to use information on a dynamic battlefield, or that the Army, Navy, and Air Force each view the SCUD problem in various ways. As long as each service prefers to differentiate itself from others, each will probably develop a unique approach to problems. The more solutions there are, the greater the likelihood that one will fit the unexpected contingency (if losing approaches can be shed when proven less fit).

System of Systems: Linear versus Adaptive

| | Linear | Adaptive |
|--------------------|---|---|
| Input | Complex sensors. Data from air and space sensors are fused into a common picture. | Plus a profusion of simple air and ground sensors also fused into the common picture. |
| Throughput | Voice-grade field connectivity (3600 bits per second). | Wide-area conference-grade connectivity (128,000 bits per second). |
| Processing | Fixed routing from sensors readings to data bases. | Content and context-sensitive routing to narrative-oriented knowledge bases. |
| Anchor Desk | Preprogrammed consoles (e.g., for help on logistics questions). | On-call expertise supported by pop-up newfeeds. |
| Mapping | One- to five-meter resolution. | Real-time image overlays. |
| Output | Data reports supported by Web-based searches. | User-created displays, software agents, and natural-language inquiries. |

Because many of the nasty technologies work against power projection, the need for new doctrine in this area is critical. The United States would need ways to project force without necessarily projecting forces. Long-range, stand-off strike cannot be used for all aspects of warfighting, but it can destroy enemy platforms at a distance and thereby weaken foes in confrontations with the lighter forces that local allies would field. Small, lethal, highly mobile units on the battlefield (as advocated by the Defense Science Board summer 1996 study of *Tactics and Techniques for 21st Century Warfare*, and tested in the Marine Corps *Hunter-Warrior* exercise of 1996) can supplement or enhance stand-off strike. Such units would carry a two-week supply and most of their firepower would come from offshore units. Marines would "infest" enemy territory (rather than storm ashore), assess contested terrain, discern targets, and call for fire from over the horizon. Army officers now talk of "massing fires rather than forces" on tomorrow's nonlinear battlefield. Before the Gulf War, few airmen would have accepted, much less applauded, replacing manned aircraft with unmanned aerial vehicles (UAVs), but the Air Combat Command has since formed its first UAV squadron and sought and won tactical control of all UAVs in theater. UAVs were used more aggressively in Bosnia (despite worse weather than in the Gulf), and their numbers and roles will only increase.

JSTARS (top) and AWACS (below) aircraft detect ground and air targets, respectively

The ability to field new equipment rapidly in response to contingencies is another attribute of adaptiveness. Both the 1982 shoot-out in the Bekaa Valley (where Israeli jets shot down over 80 Syrian jets without loss) and the Gulf War suggested a growing gap separates what works well and what does not. In a crisis, one may need only the few really good items increased (and sharply). Yet picking winners prior to combat is hard; were it otherwise, production of the losers would have ended far earlier. The need for selective mobilization favors modularity in systems design (so components of losing weapons can be diverted to production lines for winning ones), commercial components (to extend the potential mobilization base), and software that can be rewritten in the heat of combat (as Patriot missile software was, to work against the SCUD--although a shortfall in performance suggests improvement is needed).

To meet contingencies, systems may have to be fielded well before their initial operational capability (IOC) has been certified. In a typical program, performance issues are worked on first, and the ability to test, maintain, and upgrade a product comes later. But the latter are what makes weapons fit for war. Otherwise they are fragile and vulnerable. Up-front attention to such factors, as well as interoperability and security, ease the task of fielding systems when needed, rather than when scheduled.

Messier

Coping with the stresses of a messier world may force the United States to cooperate with a wider variety of partners than it is accustomed to: not only coalition partners but NGOs, PVOs, local power centers, and commercial enterprises. U.S. military operations in politically unsettled regions mean working with local powers that may not meet U.S. standards in all respects. Adapting to such a future requires familiarity with the nuances and power relationships of other cultures. It means that, in a broad sense, the United States needs to be able to connect to and disconnect from them quickly.

Combined operations, like joint ones, are often a matter of developing standard doctrinal interfaces and a common set of concepts. Both permit innovation by all parties with less concern that evolutions by one may constrain the actions of another. Good interfaces allow the formation of task forces from elements trained and supplied by individual services, other countries, and nonmilitary institutions.

Messy situations also may call for the U.S. military to interoperate more closely with contractors. Their role has grown from near zero in the Korean War, to modest but vital in the Vietnam conflict, to critical in the Gulf War (JSTARS required Grumman employees on board), and to essential in the Haiti operation. Their use may very well have turned the Balkan war around for Croatia in 1995. When information accounts for 10 percent of operational effectiveness, it is the tail; when it is 90 percent, it is the dog. And information can be privatized in ways that the application of force cannot. The free market is a powerful adaptation mechanism, but one to be used with care.

A Revolution in Military Affairs

A current revolution in military affairs (RMA) can be traced back to the late 1970s with the development of precision munitions and off-board sensors. Barring global conflict, it is likely to play out well past 2018. Such an RMA rests on two tenets: the ability to put ordnance precisely on target from stand-off distances and the ability to conduct military operations more quickly (and, thus, to operate inside an enemy's decision loop).

*Precision. Precision weaponry (PGMs such as tactical missiles, torpedoes, and laser-guided bombs and rounds, plus armor within 3,000 meters) can kill targets whose location is known in real space or by general position plus by traceable signature. Precision offers first-strike kills (by the second shot an enemy may have run for cover), less collateral damage, and a smaller logistics burden and thus faster responsiveness. Precision is not guaranteed: jamming, spoofing, and other tricks can break a target lock; targets can be out of range, or can outrun (rarely) or outmaneuver (more commonly) the PGM. Targets can be armored, bunkered, or buried or can shoot back (e.g., as the U.S. Navy's Phalanx gun shoots back against cruise missiles). Yet, over time, smart money must be on precision weapons as they get faster, more maneuverable, stealthier, and more discriminating.

The trend in precision weapons is toward information-based control. Shorter range PGMs (e.g., TOW antitank missiles, or laser-guided bombs) require the targeter to be within sight of the target, thus at risk. These are being supplanted by PGMs that can acquire a target based on their own internal intelligence, and those that can go to a specific point (e.g., cruise missiles or JDAM bomb kits)--and, ultimately, to a track provided externally. Stand-off operations make shooters more difficult to spot and reach and give them time to hide or get back to shelter after they shoot.

All this shifts the basic wellspring of military efficacy from firepower to information. If seeing a target is tantamount to killing it, then seeing others and staying hidden become the two reigning requirements of combat. The U.S. military has, by far, the world's best eyes: from space-based sensors to aircraft such as AWACS, JSTARS, Cobra Ball (infrared), and Rivet Joint (signals intelligence), UAVs (for video and synthetic aperture radar [SAR] imagery), sea-based and counter-battery radar, and a host of unmanned ground sensors. By 2018, the U.S. military will be fusing the various bitstreams produced by such sensors into a unified picture of the battlefield that can be sliced and diced to the needs of any warrior. As for hiding, some U.S. forces can use stealth; electronic warfare and operating out of range are other protective measures.

The United States will probably maintain its long lead over rivals in illuminating the battlefield to its own advantage, but the underlying technology is already available to all. UAVs and medium-range cruise missiles are international commodities. Commercial space-based assets can take communications up and return one-meter imagery down. Everyday electronic equipment may have great military applicability (a 17-gigabyte digital video disk could hold the entire United States imaged to five-meter accuracy). Thousands of Third World engineers trained in core states can integrate pieceparts into systems. What results may not meet U.S. standards, yet the additional capability others get by buying off the shelf may exceed what extra benefit the U.S. military gets by pushing the envelope. Information technology enables a revolution in U.S. forces; a like empowerment in Third World militaries may compel U.S. forces to move forward.

*Reducing Cycle Time. Information technology helps to reduce the time required to conduct operations, a critical factor when two cycles compete for primacy: taking advantage of suddenly vacant terrain; spotting and killing a SCUD launcher inside the time it takes to set up, fire, and take it down; and distinguishing between an innocent fishing boat and a hostile missile-launcher in a crowded port before the launcher fires.

Indicators of reduced cycle time are ubiquitous. It is becoming increasingly possible to rewrite Air Tasking Orders (a three-day re-planning process in the Gulf War) between launch and engagement. Tactical internets let armies disseminate orders more quickly, permitting faster responses to evanescent opportunities. A deft combination of networks and electronic tags permits lean logistics; depletions at the front are immediately reflected in production starts in CONUS, so the pipeline is always full--but with little waste.

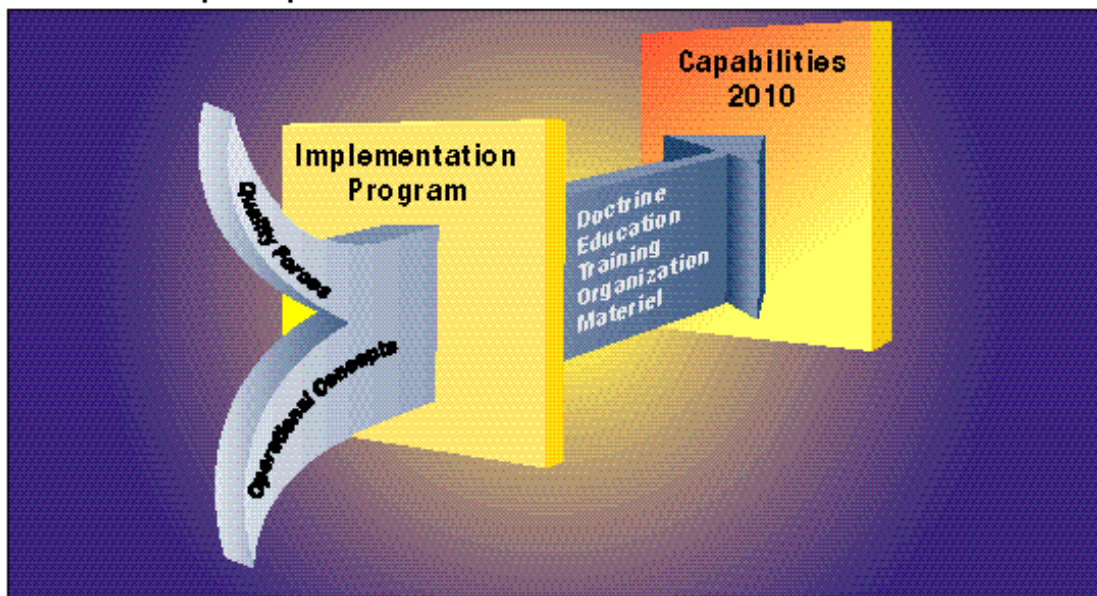

engagements to come up with new ways to do business. Were doctrine hardwired into the System of Systems, the normal difficulties of changing complex software (e.g., the year 2000 problem) would aggravate and delay change and confound adaptiveness.

JV2010: From Concepts to Capabilities

Larger

The need for adaptiveness calls into question the current preference for the complex, costly, hardened, and specialized systems that dominate defense acquisition. The assumption that foes can target neither sensors nor communications relays if they operate beyond 200 kilometers (e.g., JSTARS, Aegis, low-earth orbit [LEO] satellites) may not withstand serious challenge by a large foe. Less expensive commercial-grade items--especially sensors and offboard weapons--may be individually less survivable, but when networked may be collectively more robust.

Communications will permit warriors to operate farther apart, but techniques to disperse ground command centers (with their copious electronic emanations) will have to follow if these centers are to survive.

Nastier

If the United States hones its ability to project force rather than forces, the role of information will change. Traditionally, intelligence prepared the battlefield by locating enemy concentrations and vectoring forces to encounter them. Technology is giving modern forces greater confidence in the ability to locate individual equipment for precision strike. Exploiting such technology will require explicit attention to the requirements of battlefield illumination, not only in open but difficult terrain. Continuous, rather than intermittent, battlefield coverage will be needed to win contests between the U.S. cycle time (to spot, identify, and classify a target, assign it to a platform, engage the weapon, and hit the target) and the foe's (to emerge from cover, fire and move, and return to cover or bunker). Using such intelligence may require weapons that can be directed to a moving spot on the map (advances may be needed in geolocating image-identified targets). The combination of stand-off target acquisition and stand-off target prosecution drastically thins the need for forward projection.

Adaptiveness cautions against placing too great a reliance on looking for the expected. One common method of identifying adversaries is to generate a template of their assets and habits and then match sightings to them; this helps in interpreting electronic intelligence and defeating cover, concealment, and deception. Granted most rogue states use equipment of Russian design or manufacture (and in accordance with Soviet doctrine), but what if a nasty foe were to adopt a cheap RMA by outfitting itself with commercial goods (or close derivatives) and use them according to commercial, rather than military, logic? Templates and doctrines hard-wired into intelligence and engagement systems might fail to recognize ground truth on the battlefield.

Against a nasty foe that would attack U.S. ability to project power, the United States would need to counter strategies to disconnect components of the System of Systems. Threats include the physical destruction of nodes and links, electrical shock (e.g., EMP), jamming, and computer hacker attack. Hiding and hardening techniques can mitigate the risk of physical destruction and electric shock. Jamming can be countered by many techniques, including beam focussing, steerable antennae, spread spectrum, and redundant encoding. Hackers can be stymied by cryptographic methods, semantic- and protocol-level firewalls, anomaly-monitoring software, and the use of read-only media. Redundancy, in number and niche (e.g., different systems would operate at different frequencies or use different protocols) is another approach, one that, incidentally, favors an agile, distributed network over a few complex platforms.

Adaptiveness often means making do with less connectivity. Warfighters can be trained to function under both copious and austere information conditions (as the Marine Corps is doing). Substituting mission-type orders for a commander's fingertip control has many advantages (even when links are secure). Filtering out low-priority messages and repeating critical ones help cope with constrained links. Images can be compressed or replaced by symbols and drawings. Bulk data can be deployed forward (e.g., digital video disk, CD-ROMs). Precise mapping, pseudolites, and inertial measurement systems can mitigate the loss of GPS.

Making Systems More Adaptive

Some ways to make systems more adaptive are traditional and well understood:

- **Multifunctionality.** The Navy's Phoenix missile, the Air Force's B-1B bomber, and the Army all-source analysis system (ASAS) all were built to defeat dominant threats (Soviet naval aviation, air-defense systems, and tank operations, respectively). So highly tuned were they to the Soviet threat that, with its collapse, they proved less useful. Tomorrow's weapons systems need more generic capabilities.
- **Robustness.** A system needs to be able to degrade gracefully--that is, it must remain useful even after several features have been compromised by unexpected counters (e.g., information warfare).
- **Logistics.** The more easily a system can be transported, operated, and kept in repair under austere conditions or away from maintenance facilities, the more situations it is useful for. Systems that only specialists can work lose value if specialists are unavailable.

Other ways to enhance adaptiveness are newer:

- **Nonlethality.** The growing frequency of operations other than war (coupled with the ubiquitous presence of the media) has made a virtue of being able to control people without harming them. Nonlethal systems could have antipersonnel features (which incapacitate people or, at least, persuade them to leave), antimaterial features (which can dissolve rubbers and plastics, convert gasoline to gel, slick roads into impassability), and antielectronics features (e.g., high-powered microwaves, electrical shorts).
- **Interoperability and composability.** Jointness, networking, and the potential of data fusion all put a premium on designing systems that can be used with one another. Today's systems, by contrast, often wrap sensor, processor, communications channel, database, and workstation into one hardwired complex. Information would be more easily shared if a system's functionalities (e.g., sensor, processor, and display) were designed as standard modules. Interoperable systems facilitate the assembly of joint and combined task forces.

Messier

Satellite Vulnerability

Adaptiveness can also be fostered by pushing information down into the ranks so that operations can be devised and carried out within smaller units.

Meeting the canonical invasion (e.g., 15,000 pieces of equipment rolling over relatively easy terrain) by maneuver in corps is the basis for the organization of ground forces. The digitized Army empowers battalion-level headquarters with powerful tools--such as the maneuver control system (MCS), the all-source analysis system (ASAS)--and ties lower echelons into these tools by feeding soldiers maps and command-menus from higher level systems.

Yet much of this equipment remains too expensive, heavy, or just too rare for mobile field use. In Bosnia, although headquarters were richly supplied with data, information available to ground units below the division level was not appreciably greater than it was 20 years ago. Messy situations, by nature disorganized, often call for a capacity for context-related situational awareness and operational planning at the company level (roughly 200 persons) or lower. Without greater participation in the digital infrastructure, warriors will of necessity revert to stubby pencil work, guesswork, and learned doctrine.

To influence the evolution of messy but hazardous situations, U.S. forces may need to leverage their information superiority through local forces. Sharing intelligence with allies and coalition partners (e.g., in peace operations) remains an ad hoc art, and even though no technology prevents sharing battlefield illumination at the rate of a billion bits per second, planning for plugging foreign forces into U.S. information flows is still embryonic. If nothing else, such adaptation must reflect the fact that local allies, especially in underdeveloped nations, start with different equipment, their own doctrine and rules of engagement, a reduced capability for either stand-off or precision warfare, and less advanced logistics systems.

A System of Systems

Those possessing only hammers tend to see the world as nails. A system optimized to confront armored invasions may see them in any environment, even one with other driving factors. At best, the system will be useless and the U.S. advantage in dominant battlespace knowledge vitiated. At worst, conclusions drawn from the automated processing of bad data can drive out intuition from close experience.

Militaries composed of agile warriors can confront the unexpected and learn to use their tools as appropriate (e.g., when helicopters assume roles assigned to tanks). But as more responsibility is placed on information systems, those systems will need to be more agile. Building flexibility into a software-dominated system is complex, and its ramifications can only be discovered by experience. An adaptive system of systems would look to knowledge-processing, open construction, natural-language capabilities, and bottom-up systems integration for robustness and would require more from users consistent with giving them greater freedom. Such a system may be harder to build and control (although perhaps easier to manage). It may not be more powerful--indeed, it would probably be less efficient at any one task because it must accommodate more heterogeneous input--but it would span a wider range of operational contingencies and should cope with heavy information warfare: physical, electronic, and rogue code attack. Such a system would be an expression of the point in scientific history when lessons from biology begin to cross paths with those from physics.

Conclusion

Adaptive institutions are characterized by broad rather than focussed capabilities, competing points of view, flexible rather than fixed doctrine, and the potential to grow by mobilization and linking with partners. Adaptive systems are open to new capabilities, robust under expected stress, highly reconfigurable, relatively unstructured, and interoperable to facilitate mix-and-match recombination.

Adaptiveness is not free, and preparations made to adapt in one direction may not necessarily favor others. As it is, foes do not grow large overnight, and, if they do, the problem of scaling up existing assets and institutions is relatively straightforward. Messy situations, when they cannot be avoided, can be countered by an incremental shift in emphasis from conventional forces to those even now dealing with small-scale contingencies. But a truly nasty foe will require a response that stresses the adaptiveness of U.S. institutions and systems, which will involve long-run processes.

Space and Adaptiveness

The use of space was once limited to a few advanced nations, but now even developing nations use it as a medium for global information collection and exchange. The United States is especially dependent upon space capabilities today for military uses, but also for economic, diplomatic, political, and social uses. Its global economy, international transfer of funds, telemedicine, telecommunications, conversations between world leaders, diplomats, scientists, and educators are dependent on operational space capabilities. Decisions about the environment such as knowing where to plant crops or where to replant the Amazon River Valley are enhanced by use of space capabilities. This carries implications for U.S. national interests as well as national security interests. As more militarily useful space capabilities are developed, the United States becomes increasingly dependent on them, which, in turn, translates into a recognizable vulnerability to potential adversaries.

Because satellites are more vulnerable to antisatellite weapons the lower they fly, they face a tiered vulnerability. Low-earth orbits support today's surveillance and tomorrow's communications (e.g., Iridium, Teledesic). Medium-earth orbits support today's navigation and tomorrow's communications (e.g., Inmarsat's ICO) and could also be used for continuous surveillance (four Hubble-class telescopes in a medium-earth orbit could depict most of the globe at two-meter resolution). Geosynchronous orbits support early warning, meteorology, and communications. Detailed ISR and low-power communications are most vulnerable; navigation and continuous ISR the next most; and high-power communications, early warning, and weather the most survivable. Other threats to the effective use of U.S. space assets include disruption (e.g., through jamming) as well as attacks on ground stations and other uplink and downlink components. Practically speaking, without access to space systems, U.S. forces would be lost, blind, and out of touch, and the economic and social fabric of the nation would be frayed.

Attacking U.S. space assets is not easy. Direct antisatellite operations require spacelift capability, which few outside the nuclear league possess. It takes a decade or more of concentrated work to build it from scratch. Even among spacefaring nations, antisatellite operations have yet to be perfected. However, exotic space weapons (e.g., directed energy weapons such as lasers, radio frequency, or high-power microwave systems; direct ascent or co-orbital kinetic energy weapons) are not needed to degrade space products and services. An adversary need only put debris in orbit in such a way that intersects other satellite orbits to have an effective, albeit nondiscriminating, antisatellite system. Information warfare techniques, such as logic bombs and Trojan horses or electronic warfare that severs links to space systems, can also be just as effective as high-technology space weapons. Whatever the method, the attack is likely to precipitate a U.S. counterattack, so a foe's first strike, given the consequences of failure, must be decisive.

Four responses are possible. First, the United States could launch satellites that are stealthier. Nevertheless some satellites must radiate power to earth and so will be hard to hide. Satellites could also be hardened, or configured to shoot back. Second, the United States could field enough satellites with overlapping coverage so as to withstand the loss of a few satellites (or keep enough spares on-orbit and move them into place as needed). Third, the United States could develop a rapid reconstitution capability. Very small satellites, capable of reaching orbit using rockets mounted beneath the wings of large aircraft, could support communications and surveillance. The potential vulnerability of launch sites to terrorist attack suggests that alternative launch mechanisms may be an attractive option for their own sake. Fourth, substitutes could be found for satellites: pseudolites placed in precise locations can substitute for GPS signals (and by 2018, much of the world will be mapped to one- to five-meter resolution); UAVs can provide surveillance and reconnaissance; fiberoptic lines (which might be streamed to the front) can provide long-haul communications. But these are highly imperfect substitutes (e.g., their use would require considerable software to be rewritten). There is really no good alternative to a vigorous presence in space.

U.S. military planners may also have to adapt to the strong possibility that adversary access to space may make forces visible and thus vulnerable in new ways. Commercial imagery with 1-meter resolution will be available commercially within a few years; 3- to 5-meter resolution is already on the market. Commercial-grade GPS services are open to everyone. Adversary access to communications constellations may complicate U.S. efforts to impede adversary command and control. As space capabilities become more sophisticated and accessible, they can be exploited by potential adversaries with minimal investment: networks, software, and computers. Arrangements in advance with allies and other spacefaring nations to deny rogue states the use of space may protect U.S. forces. Yet, with 500 satellites already in orbit, and an estimated 1,200 to 1500 possible over the next 10 years, adversary access to space will become easier and denying it will become harder.

Ought the United States to pursue space denial capabilities? Jamming and attacks on ground receivers are clearly legitimate, and information operations may be a routine feature of future warfare. The United States is developing some antisatellite capabilities. Yet, any decision to use such a capability must be carefully weighed. The United States could target adversary space assets, but many foes will rely on third-party assets, and it may be hard to know which assets are being used by whom and for what purpose. Even friendly countries may not want to let the United States know of its commercial arrangements with "customers." Absent such information, it is difficult to develop a space denial strategy.

Although space is not a region in the sense that, say, Europe is, it is a region of national strategic interest with unique characteristics. U.S.

policy can seek to shape how the region of space is used and protected. International engagement on space policies and issues between the United States and other spacefaring nations via the United Nations, through country-to-country contact, or via dialogue with space consortia (e.g., the European Space Agency, the International Telecommunications Union, Intelsat, Inmarsat), will help shape and influence the international space environment. As outlined in the National Military Strategy, the United States can promote trust and confidence by encouraging measures that increase national security and that of allies, partners, and friends through our military contacts, international military education and training, and the sharing of information from space capabilities. In addition, cooperation among the U. S. Government, allied nations, and commercial players can inhibit the ability of rogue actors to enjoy unfettered access to space. Conversely, deterrence can be used to dissuade others from attacking U.S., allied, and commercial space assets.

Strategic Assessment

Engaging Power for Peace

CHAPTER SIXTEEN

Future Posture

Decisions about where U.S. forces are placed in peacetime reflect many factors. U.S. forces shape environments, as observed in chapter two. The fact or the promise of their presence in a region can dissuade local bullies from aggression and reassure friends of their own security and of the U.S. contribution to it. Confident friends are likely to create military capabilities complementary to, as opposed to competitive with, those of the United States. A benign successful core suffused with U.S. presence can promote defense reform and, thus, a peaceful global polity.

Yet, the specifics of posture--who, where, when--must also reflect operational considerations: how to concentrate more power faster where needed than potential foes can. To have the wrong people in the wrong place at the wrong time means that operations take longer and cost more in terms of lives and resources. Poor posture may thereby affect the course and even the outcome of conflict.

As the United States shifts its posture over the next 20 years it must respond to the changing nature of the threat. But posture also has aspects that necessarily respond to operational factors. One is the proper mix of in-country, off-shore, and virtual (i.e., based in the continental United States) presence. Another is the tradeoff between concentrating capability in a few places and distributing it widely but less thickly. These two are the subject of this chapter as viewed through the lens of the necessary (e.g., larger, nastier, messier challenges), and the lens of the possible as influenced by, among other factors, information technologies.

The Logic of Posture

In business, operations are located in a site that minimizes costs for a particular level of throughput. To some extent, decisions about military posture can be made on a similar rationale. Yet, militaries are ultimately judged not by efficiency but efficacy, whether they can protect the nation and its interests. A peacetime military ordinarily postures itself for wartime contingencies. Given enough time, the United States can put enough manpower and materiel anywhere, but early operations are particularly influential because they can:

- Frustrate an aggressor's snatch-and-settle gambit
- Limit damage to an ally or the forcible conversion of its resources into opposing strength
- Strike while an enemy is moving (thus easier to see)
- Strike an enemy's homeland from closer points
- Provide intelligence that might later be unavailable
- Help U.S. forces build a springboard for counteroperations (e.g., the Pusan perimeter).

And the promise of effective early operations can deter aggression more than might the prospect of eventual defeat (in time the United States might tire), and thus persuade allies to become cooperative, reliable partners. As such, posture decisions for the United States must logically respond to deployment requirements.

How much time the United States will have to move forces into combat will depend on the warning time available. Sometimes forces can be put on alert or sent forward on warning (e.g., what might have been a Soviet move to the inter-German border). But the warning must warn; preparations for invasion often look like raids (e.g., North Korea before the 1950 invasion), feints (e.g., Egypt prior to crossing the Suez in 1973), or exercises (e.g., Iraqi "maneuvers" prior to the invasion of Kuwait in 1990). When the ambiguity of possible precursors is added to the cost of rushing to the ramparts, leaders prefer direct evidence--especially if overt response to ambiguous information might provoke a conflict that might otherwise be avoided. Waiting leaves less time to react. Where terrain is open, important objectives lie near

the border, or and where local defenses are weak, the United States must respond more quickly in order to influence the outcome. Transparency is a way to buy time, thus becoming a substitute for being close. If the United States can see a potential aggressor more clearly, it can more easily identify indications and warnings--positively (to move earlier) or negatively (to avoid moving at all). Deploying sensors rather than moving forces in response to a crisis tends to be less provocative.

The Cost of Forward Deployment

Usually, the cost of stationing a soldier overseas rather than at home is higher, because of support requirements (social and physical infrastructure that must be replicated overseas), the expenses of moving and transportation, and the psychological burden of imposed separations and disrupted family life. Some nations have charged the United States rent, explicitly or implicitly (e.g., though foreign military assistance). Some overseas postings, however, are considered an inducement to military service, and some nations (notably Japan and Kuwait) defray the costs of U.S. overseas postings.

On the other side of the ledger, a military on constant or recurrent deployment can realize savings from operating forward. The expense of supporting no-fly zones in Bosnia and northern Iraq was eased by having bases in Aviano, Italy, and Incirlik, Turkey. Not having bases in the Persian Gulf added \$20 million a month to the cost of Operation *Earnest Will* (the Kuwaiti oil-tanker reflagging operation). Another consideration is that bringing together U.S. and allied forces for joint training is cheaper and easier if U.S. forces are already there (although allies could come to North America, as the Germans now do).

What would be most cost effective if rapid deployment were not an issue? Although some countries are generous hosts, with basing costs running to several billion dollars a year, the economics tend to favor keeping forces at home and transporting them as needed.

A posture decision involves not only where, but what: operational units, logistics, or C⁴ISR elements. Should the United States own the facility outright (and, if so, under what restrictions) or as part of an alliance (e.g., NATO), lease it (again, under what restrictions), or only gain rights to it? What role should private contractors and their facilities play? Should units be assigned there permanently or rotate? What kind of transit rights should the United States seek? What kind of radio frequencies can it use in the neighborhood? Logistics, too, are part of U.S. force posture. The Berlin airlift of 1948 resolved a crisis without war. Intermediate U.S. basing (e.g., in the Azores) permitted rapid resupply of Israeli forces in 1973. On-site and off-shore capabilities help in the transfer of materiel to friends who may neither need nor particularly want to see U.S. forces (e.g., Israel during the Gulf War).

Finally, the overall posture of the United States has to be considered part of an integrated *system* that cannot be easily analyzed as individual parts (even if Atlantic and Pacific facilities can be considered separately). Forward presence in one zone may require support facilities stretching back to CONUS. An air base here may obviate the need for a similar facility there.

Lessons from World War II and Cold War Basing

Before 1939, the United States had a thin basing structure with one string extending to the Canal Zone and another past Honolulu to the Philippines and Shanghai. World War II led to the largest basing expansion in the history of the world, first to support Allied shipping to Britain, North Africa, Australia, and the China-Burma-India theaters, then to support operations in the Mediterranean, France, and the Pacific Islands. By 1945, 3,000 new bases had been built.

This U.S. basing structure proved dynamic and sensitive to changes in conditions and technology. As the threat to shipping receded, for instance, intermediate bases in, say, South America and Africa were judged redundant. Aircraft operational ranges determined the best distribution of bases, even though aircraft accounted for only 1 percent of goods and 3 percent of human transport. But planners could not bring themselves to rely on projected, rather than actual, operational parameters. Iwo Jima, assaulted mainly to secure basing for the shorter range B-25s, might have been avoided had planners bet (correctly) that the longer range B-29 would be available by July 1945.

Half the World War II bases were closed by 1948 as some friendly countries sought to reassert national control over their lands. Others were closed later as some countries (e.g., China after 1949, Libya after 1970) turned hostile. The base structure of the Cold War reflected the containment policy against the Soviet Union (and sometimes China) and the continually longer legs of U.S. aircraft. The key bases were all far forward, rather than strung from the United States

outward. Events such as the Korean War and France's withdrawal from NATO had important secondary effects. By 1988, half the overseas bases used by U.S. forces were less than 40 years old.

The Necessary

There are still places in the world--the Persian Gulf and South Korea--where an invasion without warning may be undertaken to attain important military objectives, but such threats are less urgent than 10 years ago. North Korea is weak and may not last until 2018. Russia is two-and-a-half countries farther from the Rhine than in 1988. China, a potential major threat, does not share many easily crossed borders with nations the United States might defend. With the end of the Cold War, fewer wars can be reasonably described as proxies for a larger struggle (much as the Korean War was seen as a harbinger for a possible Soviet thrust into Europe).

Many invasions do not mandate a direct U.S. military response: border disputes not affecting U.S. interests (e.g., Libya versus Chad); places with little strategic value; and circumstances either too difficult to handle directly (e.g., Afghanistan) or where victims are at odds with the United States (e.g., Vietnam's invasion of Kampuchea in 1978) or might welcome liberation (e.g., India's move into East Pakistan in 1974). In the expected world of 2018, a few forces in or near the Gulf, and, for the moment, in Korea, might suffice.

But what if the international security environment deteriorates?

Larger

If the United States were to find itself oriented against a theater peer, it would want forces arrayed accordingly. To create a new military base may be viewed as provocative and potentially dangerous if the theater peer is strong enough to do something about it (e.g., threaten the host country before U.S. power can arrive to stiffen resistance). Expanding or upgrading key facilities incrementally as a threat grows or becomes increasingly evident may raise fewer hackles (particularly if no threshold exists where crossing one could create a fuss).

The rise of a theater peer raises the importance of having friends and the ability to work with them. Today's force posture should reflect the need to support:

- Joint exercises, to encourage mutual familiarity and to test the compatibility of operating practices and rules of engagement
- Adaptation of U.S. equipment to the host nation's infrastructure, including, at times, leaving equipment behind to facilitate a rapid reintroduction of force
- Melding the "system of systems" with compatible equipment in other nations.

THAAD launch

Nastier

A smarter foe that could impede lines of communication and hold bases and debarkation points at risk with weapons of mass destruction (WMD) or smart weapons could cause the United States particular difficulties with power projection. Redundancy in communications and operational areas, however, offers flexibility against this contingency, as would preparations for operating by standing farther back.

WMD may pose a special problem. Against nuclear weapons, no base is likely to survive (without a leakproof theater missile defense), but equipment may survive most biological and chemical weapons. A lightly manned but otherwise well-provisioned facility (a pre-positioned capability, as it were) that can be reentered rapidly might be more robust than a heavily manned base from which forces operate.

Messier

A series of messy situations in unpredictable places requires the ability to move light forces and associated logistics with C⁴ISR support into and out of area quickly. Chances are that if the world should become sufficiently messy it would be because of broad forces (e.g., the rise of a messianic ideology, environmental catastrophe, global trade war) that affect many places at once; chaos will be widespread. Concentrating capabilities in any one location may be less useful than dispersion, deployable capabilities, and lift. Should a large-scale noncombatant evacuation (NEO) or the restoration of national services come to matter, the need for rapid redeployment of essential infrastructures will call for facilities that can be taken down, transported, and turned on quickly.

The core could respond to a messy situation by identifying what it values most and protecting it (as opposed, for instance, to an evacuation or broader remediation strategy). If so, force and facility protection issues will arise. Otherwise, it must deal with the fact that while infrastructure is burgeoning elsewhere in the world, it may actually be deteriorating where most needed militarily (e.g., in former Zaire). A protection strategy must necessarily be a broad rather than focussed program that provides security, hardening, and connectivity.

Theater Missile Defense as a Posture Decision

Seemingly modest differences in performance capabilities among competing systems may have wide ramifications for posture. Consider theater missile defense. The current four-layer architecture envisions strikes against missile sites, airborne

lasers to kill missiles in boost phase (a program still in the early stages), upper tier missiles for the trajectory phase (a program being tested), and terminal missiles for the descent phase (an ongoing program of upgrades).

Two programs compete for the upper tier--the Navy area-wide standard missile and the Army theater high altitude area defense (THAAD) system. It is unclear whether both programs will go ahead.

Assume, now, that a continental power threatens an island friend of the United States. War has not broken out, so U.S. forces cannot hunt for launchers in country or deploy airborne lasers inland (and thus can do little against missiles launched from deep within national territory). If the United States were to support its island friend, it would have to rely on upper and lower tier missiles--preferably upper tier if the incoming warhead carries poisons. But which one? If THAAD alone were to survive, the United States could offer to base THAAD on the threatened island. This would put the island's government on the spot. It may see deployment as provocative--a prelude to war and public reconfirmation of its defense link to the United States, the continental power's special foe. Thus the island's government might reject THAAD deployment, leaving itself vulnerable and more easily swayed. Were the Navy area-wide Standard missile to survive, the United States could deploy missile-carrying ships into international waters without anyone's say-so (just as it moved two aircraft carriers into the Taiwan Strait in March 1996). The island's government, under U.S. protection, could take time to sort out its position. Unless the United States wants to force the island's government to declare itself, ship-based missile defenses have important advantages.

Upper tier is only one component of the four-layer defense, and engagement systems are but one part of a complex antimissile architecture that includes early-warning sensors, peripheral sensors, threat processors, civil defense (including NBC detectors) and complex command-and-control arrangements, many of which extend into the host country. A first response to a threat may be not moving hardware but seeing to technical and operational interoperability of equipment and hierarchies.

DMZ Korea

New Concepts for Off-Shore Presence

The collapse of the Soviet Empire eliminated the blue-water challenge to the U.S. Navy, which therefore turned its attention to power projection on shore and the supporting technologies. Two emerging concepts are mobile off-shore bases (MOBs) and arsenal ships.

A MOB is like a small floating island, with a 1,600-meter runway (for C-17s and other cargo aircraft) alongside port facilities, C⁴ISR assets (e.g., UAVs), logistics transfer equipment, weapons bunkering, and related inventory. With room for 10,000 troops, a MOB can provide staging facilities. By operating for years in a given region (e.g., outside the Strait of Hormuz), it could magnify the staying power of the fleet without requiring local access rights.

An arsenal ship with Sea Tactical Missile Systems (TACMS) (200-km range) and cruise missiles (2,500-km range) could provide firepower from far away, much as the battleship traditionally did from within 40 kilometers. Stand-off range makes ships harder to hit even if found, while features that reduce the ships profile and other facets of its signature (e.g., coatings, geometries) frustrate finding it. Extensive automation can reduce manning levels to 50, in contrast to the typical complement of a battleship of over 1,200. The chief alternative to the arsenal ship is the submarine with its proven design and stealthiness. But at a billion dollars apiece, submarines cost twice as much as arsenal ships are expected to, their load-out is smaller, and they cannot host tactical rockets.

MOBs and arsenal ships remain concepts, with neither fully supported by funding streams. They make sense as long as the threat to ships comes from mines or volleys of short-range land-based cruise missiles. Yet as (not if) cruise missiles and diesel submarines proliferate and gain range, more of the cost of a MOB will go to self-defense. Arsenal ships are harder to find (yet a swarm of UAVs equipped with synthetic aperture radar could search the ocean and look for an absence of expected waves) but easier to damage. In the long run, neither MOBs nor arsenal ships are foolproof for off-shore presence--but the long run could be 20 years away.

Presence and Nuclear Weapons

Physical presence is often assumed necessary for military power to be credible. Nuclear weapons, however, are a clear exception and this exception may speak to tomorrow's conventional warfare.

By 1960, intercontinental ballistic missiles (ICBMs), nuclear ballistic missile submarines, and the refinement of air-to-air refueling allowed the United States to maintain nuclear forces without any overseas bases. Yet it *did* maintain a forward nuclear presence: on surface ships, in air bases, and with Army units in Europe and Korea. Although these weapons added fractionally to the country's total nuclear punch, deployment was designed to weave a seamless fabric of deterrence that stretched from conventional forces through tactical nuclear capability to strategic systems. Extended deterrence reassured allies and complicated Soviet military planning. Unfortunately, it also complicated U.S. military planning, and many analysts raised concerns about command and control over such weapons should war erupt.

Since the mid-1980s, attributes of strategic systems have crept into conventional systems. Some strategic systems, such as long-range bombers, space surveillance, or high-altitude reconnaissance, have been adapted for conventional roles. Cruise missiles can also carry conventional warheads. The ultimate expression of this capability could be an infrastructure of ICBMs, each filled with hundreds of antiarmor projectiles, standing alert against a canonical invasion (pending ways to distinguish such a launch from a nuclear strike). At the \$20 it now costs to loft a gram into low-earth orbit, such a system may be too expensive for tactical missions. But billions are being invested to drive the \$20 per gram down to \$5 to \$2, where such a scheme may become cost effective (as long as their use does not look to others like a nuclear attack).

Even if such a scheme proved worthwhile, long-range strike, nuclear or conventional, remains an instrument of dissuasion, rather than control. The nuclear analogy does, however, suggest precedents for the psychology of virtual presence. Consider Bosnia: during the 1995 Dayton talks, U.S. negotiators used software to overlay source-based terrain and imagery data to make a technical point (the width of the corridor connecting Sarajevo and Gorazde, which had been behind Serbian lines). The same information served to convince the Serbs that where they lived was nakedly visible to NATO. This visibility was reinforced repeatedly during IFOR operations, as suspected weapons dumps were photographed by Apache gunsight cameras with cross-hairs plain in the pictures handed over to their owners. The psychological effects of having to fight exposed may well have convinced the Serbs to leave the IFOR/SFOR peacekeepers alone.

The Possible

Power projection is rapidly evolving. The model of inserting ground forces has already been amended to include air power and will soon include information power. Because the United States cannot be everywhere with everything, it must mix and match forces to offer the most presence for the least cost. Take the broad issue of on-site, off-shore, and CONUS-based presence.

On-site presence is responsive but expensive, both in dollars and lost flexibility. Being on site permits contact with enemy forces in minutes or hours. A local missile defense can engage an opening salvo of ballistic missiles. Even if war starts elsewhere, forward-deployed forces (e.g., in Europe) often are closer to the ultimate objective (e.g., the Persian Gulf) than if they were in CONUS. But being *here* makes it harder to be *there*. If storm clouds rise, the United States may want to redeploy forces--but if the world is generally inching toward crisis and everything is clouding over, host-nation objections may frustrate moving forces away to where they may be more

needed.

Off-shore presence--a combination of naval assets and air assets projected from nearby bases--offers greater flexibility. Because new technologies make it possible to measure the effective radius of off-shore presence in thousands of kilometers, broad regions can be covered with fewer assets tied to any one spot. Off-shore presence is also a more flexible instrument of U.S. power because it is less likely to be constrained by host nations. But apart from long-range strikes (e.g., by cruise missiles), reaction times are measured in days, not hours or minutes, whether by an Aegis ship providing radar coverage for missile defense, a carrier with attack aircraft, or a Marine detachment coming in over the shore on V-22s. Continuous naval presence requires an initial investment of about \$50 billion (for the three carrier battle groups required to keep one carrier continuously on-station) and an ongoing operational budget of \$5 to \$10 billion a year--and the seas do not reach everywhere.

CONUS-based or virtual presence is the most flexible of the three in that it presupposes the least about where trouble may break out. Long-range bombers can respond within a day, although their capability is limited. If in-theater C⁴ISR is thin, the only targets that can be effectively targeted will be fixed facilities, dense troop concentrations, or very obvious, slow moving platforms. Close air support or close-in combat forces would be out of the question.

Operations and basing are closely linked in that the shorter the range at which one would fight, the more important it is to be near where the next front line might be. Conversely, if one would operate from around the world, there is no need to take the risks of placing vulnerable facilities far forward. A combination of distributed basing and medium-range (e.g., 200 kilometers) engagement distances can cover a large swath of the world to a roughly equal degree without having to take the effort and, worse, time to move forces.

Four parameters influence the optimal mix among these three models of power projection: deterrence, logistics, long-range strike, and C⁴ISR. Deterrence and logistics affect the ability to project *forces* forward, whereas strike and C⁴ISR speak to projecting *force*.

Information Technology and Logistics

Information technology can make logistics leaner. Global networking, software to support logistics anchor-desks, the Total Asset Visibility program, radio-tagging of repairable items, and containerized cargoes all make goods in transit easier to trace. This reduces re-supply time (up to 60 percent in test cases in Bosnia) and the amount of logistics that must be kept forward in potentially vulnerable locations. Although a perfectly taut pipeline conflicts with the real-world need to buffer against the frictions of war, modeling and simulation should tell logisticians how to cover contingencies with the least overhang.

Information technology can help disperse logistics by making a network of smaller supply centers work almost as well as one big one. A related challenge is integrating U.S. logistics systems (and those of coalition partners) with facilities of a host nation. Standardization helps (e.g., for networking, electronic commerce, database manipulation, measurement, and product description).

Deterrence

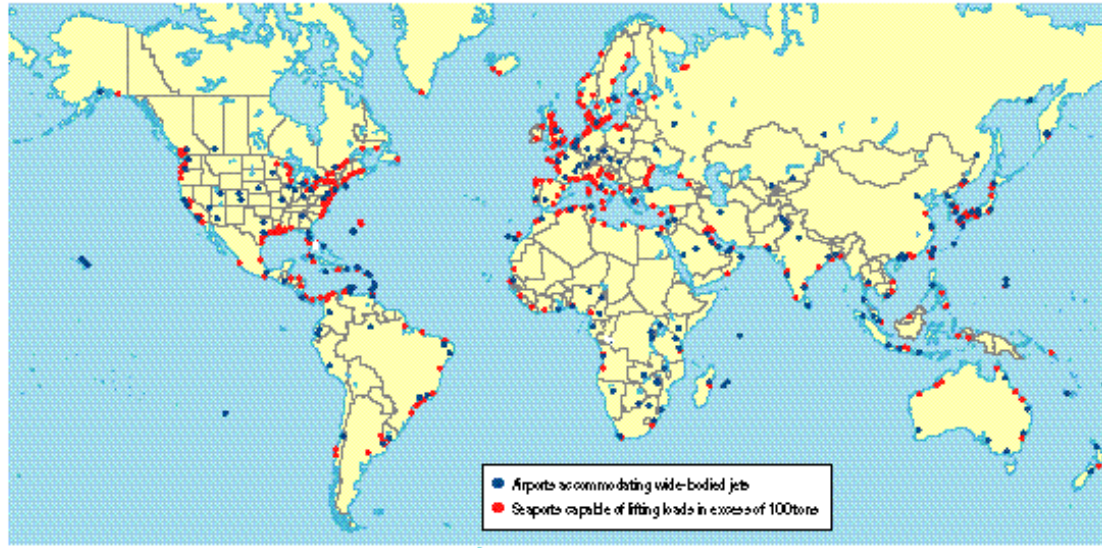

Because others perceive that killing American soldiers would bring the full military power of the United States into combat, being on

scene is often held to have deterrent value. But what, in fact, actually deters? Unfortunately, only the failure to deter can be known for sure. Measuring what any increment of forces adds to deterrence is almost impossible, even if its value did not vary with each instrument, opponent, location, and circumstance, as it does.

An enemy that knows that gaining military objectives must bring it into contact with U.S. forces must calculate where the tripwire lies. A few dead Americans have sometimes been enough to bring on a war (e.g., the Mexican War) or considerable punishment (e.g., the 1986 raid on Libya). Yet casualties taken when interests are unclear may not lead to further intervention. The bombing of the Marine barracks in Beirut in 1983 or the killing of 18 Rangers in Somalia in 1993 appeared to have had the opposite effect. Several hundred U.S. soldiers in Macedonia may pose a tripwire to deter a Serbian incursion, but only if political backing for engagement exists. Conversely, few doubt that the United States would honor its Article V obligations if a NATO country were violated, even if no U.S. servicemen were hurt in the invasion.

As the Khobar Towers incident (1996) suggested, the U.S. military cannot provide presence without addressing issues of force protection. More broadly, concentrations of U.S. forces hold American policy hostage both to foe and friend. U.S. attitudes toward North Korea are affected by having 37,000 troops within range of WMD (but millions of South Koreans also live within artillery range of the border).

Selected Airports and Seaports

Source: Defense Mapping Agency, *OFFICIAL AIRWAY GUIDE*

Note: Wide-bodied jets include Boeing 747 and 777, McDonnell-Douglas DC-10 and MD-11, Lockheed L-1011, Airbus 340, and Ilushin IL-86.

If war erupts, is having ground and air forces up front necessarily the best way to meet military objectives? No U.S. forces deployed forward today carry enough firepower to win on their own (although they may affect the outcome of an otherwise close contest). Their role would be to hold off invading forces long enough to permit reinforcements to land as far forward as possible. The vulnerability of visibility heightens the advantages of trading space for time. Armies moving forward often must mass or otherwise reveal themselves in the process of overwhelming resistance; they are even easier to detect if they advance into terrain that is wired with a dense sensor grid. Armies moving backward encounter less resistance and thus can move more stealthily. Attackers may therefore incur heavier casualties than defenders. As attackers are thinned out, they are likely to overextend themselves. But basing ties U.S. military behavior to the natural desire of host countries to concentrate power for goal-line stands (a historical problem for NATO). It also concentrates forces and tempts aggressors to use weapons of mass destruction.

A Burgeoning Global Infrastructure

A growing consideration in optimizing tomorrow's force posture is the world's expanding infrastructure: airports, seaports, roads, and communications. Because less of the world needs to be viewed as austere in terms of logistics support, more may be available to U.S. forces and less must be supplied from its own supply bases.

Major airports can support wide-bodied aircraft; they feature long runways, adequate traffic control, and generous loading and unloading facilities.

The burgeoning communications infrastructure is evident in the spread of cellular telephony (particularly in areas with weak wireline systems), the proliferation of satellites and very small aperture terminals (VSATs), and the pace at which new fiber-optic lines are being laid across ocean floors. One proposed line from New Jersey to the Mediterranean can carry 10 billion

bits per second (bps) and will later support 40 billion bps--enough for 600,000 simultaneous phone calls. By 2018, the world will be able to use serial space-based phone systems (e.g., Iridium, Globalstar, or ICO) and at least one high-bandwidth Internet-based system (e.g., Teledesic or Hughes Aircraft's Spaceway).

Military access to airports and other commercial infrastructures may not be automatic. The terms under which impressive facilities in, say, Arabia or Brazil could be used are neither clear nor explicit. Access may be blocked politically; for instance, military communications are explicitly forbidden on the Inmarsat satellite system--although this rule may have been skirted in past years. Capacity may be committed to nonmilitary users. Military bases have equipment and supplies (e.g., repair parts for weapons systems) that must be hauled to commercial sites--assuming that they are compatible with such equipment. Commercial facilities are poorly hardened against physical attack (e.g., most commercial airports lack revetments) and information attack (e.g., switches, concentrators, or other nodes are unguarded, radio communications are subject to jamming and other interference, and systems software is penetrable). In many cases, the command-and-control software that runs commercial infrastructures both differs from and is incompatible with comparable military systems.

Increasingly, the fastest and cheapest way to take advantage of commercial infrastructure is by subsidizing upgrades in advance of war (e.g., the Civil Reserve Air Fleet program) or prepackaging upgrade kits to support quick deployment. Software patches offer the advantage of leaving a smaller footprint than corresponding hardware upgrades.

Logistics

The faster U.S. forces can get to the theater, the farther away they can be stationed and still show up on time. Rates of surge into theater can be determined by dividing deployable assets by throughput, which equals lift capacity divided by turnaround time. Between now and 2018, C-17s will replace retired airlift aircraft, but the result will be little gain in airlift capacity. Although global inventories of wide-bodied cargo jets will grow over 20 years, unless the Civil Reserve Air Fleet (CRAF) keeps pace, they will be inadequate to meet the requirements for military airlift. Personnel movement presents little challenge: any major metropolitan airport (measured by air traffic control and runways) can land 5,000 people per hour; many can land 10,000.

In rough numbers, if half the expected U.S. heavy air transport fleet of 2018, that is, 60 C-5s and 60 C-17s, were available to run a 42-hour turnaround cycle, it could lift roughly 150,000 metric tons in three weeks--enough for a heavy division or two light ones. After that, a surged rate of lift could move one division a week (although shipping space would also need to be allocated for air squadrons, allies, and naval facilities ashore). The shorter the distance, the greater the lift capacity, but only slightly: every 1,000 kilometers closer adds only 5 percent to throughput rates. Sealift is cheap but slow, and capacity is unlikely to undergo dramatic change over the next 20 years.

Maintaining a tight cycle puts a premium on minimizing port congestion at both ends, fast loading and unloading, and fast or reduced maintenance. Pre-positioned supplies help, but only if the war's location is known correctly in advance. Advances in information technology can modestly reduce logistics requirements.

Growth in International and Commercial Capabilities

Air power can be moved more quickly, but unless strike assets are there when fighting starts, it takes roughly a week before they can arrive in meaningful numbers. As one response to Iraq's "exercise" in October 1994, the Air Force started working on its Air Expeditionary Force concept, in which combat power equivalent to half a squadron can be brought into an improved base with prepositioned equipment within 48 hours; five sites are planned for the Persian Gulf area.

Strike

Shooting from close up is cheaper and faster, but shooting from stand-off distances is less risky and more flexible (more shooters can reach any one target). Knowing how well U.S. forces can shoot from far away influences where to put them.

Accuracy--the first consideration--is no longer the best reason for shooting from up close. Direct fire is accurate against moving targets within 3 kilometers (or fixed targets within 5 to 10 kilometers). Beyond that, precision-guided munitions (PGM) must steer themselves to the target, and the global positioning system (GPS) makes accuracy distance-independent. Without GPS, a PGM needs inertial guidance; if fiber-optic gyroscopes work, their .01 degree/hour drift rate should put any PGM within sufficient homing range even if launched from several hundred kilometers away.

Cost is a second consideration. Hypothetical conventional intercontinental systems aside, cruise missiles have the longest range, more than 2,500 kilometers, but at \$500,000 apiece, they are costly. A canonical 15,000 aimpoint invasion requires an inventory of 24,000 cruise missiles (some miss) or roughly \$12 billion worth (perhaps less: unit costs fall as production rates rise). Within 200 to 300 kilometers, the land-launched Army tactical missile system (ATACMS) or sea-TACMs can do the same job more cheaply (each ATACM costs more but contains multiple bomblets).

Sender UAV

Missiles launched from manned aircraft have a maximum range of 20 to 80 kilometers depending on type. Most aircraft, in turn, have a flying radius of several hundred kilometers, and air superiority aircraft can go a few thousand kilometers. Very-long-range missions require either air-to-air refueling or trade fuel for ordnance loadout. Manned aircraft (with precision weapons) begin to become more cost effective than stand-off precision munitions only if full-scale operations continue for more than a month. To amortize just the purchase cost of an F-117 over the cost of a 30-day war (roughly 100 bombs), the cost per bomb is \$500,000--before maintenance is factored in. In the long run, dumb munitions are the cheapest weapon against diffuse targets, but they are also the heaviest to haul and the most expensive to man, and their delivery systems are the most difficult to protect.

Dark Star UAV

Meanwhile, the United States is steadily reducing its air-breathing intercontinental punch. By early in the 21st century, the United States will have no more than 22 B-2s, 70 B-52s, and 95 B-1s, and no warm production lines for more. As many or half of these aircraft will be devoted to strategic nuclear missions.

Flight time is a third consideration. The two hours a cruise missile takes to go 2,500 kilometers limit its value against moving targets. Loitering cruise missiles may be available by 2018 (the Tacit Rainbow antiradiation missile program failed, but the low-cost autonomous attack system, LOCAAS, is still going). The ATACMS can reach any target within four minutes, and short-range, air-to-ground munitions take roughly 30 seconds to reach target.

Enemy aircraft cannot now be killed from distances farther than 20 to 100 kilometers, whether from land or air attack. By 2018, the United States may have stealthy (and relatively small) unmanned aerial vehicles with the sole mission of dispatching air-to-air missiles when cued. Untested directed-energy weapons may permit air-to-air engagements from as far away as 500 kilometers.

C⁴ISR

The ability to watch the world in general and a battlespace in particular may be expensive to set up but, once established, may be relatively cheap to use or extend. Most costs of technology (e.g., software development, systems architecture, testing, training, and user adaptation) are paid for regardless of who is being watched or where. Orbiting surveillance assets do not need to be augmented to add new targets (even if today's constellation must evolve to support more continuous coverage, links to the field, data compression, and automatic scene preprocessing). Once global communications are in place, thickening them to meet the needs of a particular theater is secondary (ground terminals constitute much of the extra cost).

747-400 cargo plane

Detailed battlespace intelligence, surveillance, and reconnaissance (ISR) require local sensors. Some feature great mobility and long sensing range (e.g., joint surveillance target attack radar system [JSTARS], airborne warning and control system, [AWACS], comparable UAVs, Aegis ships); others must be scattered densely and repeatedly. The cost of achieving adequate coverage with unmanned long-range sensors, for instance, depends on terrain, weather, and use. Flying at 20 kilometers, one UAV can cover a territory as large as Kuwait with a vertical viewing angle within 45 degrees. To cover a notional 200 by 200 nautical mile battlefield would require 100 to 150 UAVs on station; using the most expensive UAV for that mission would require \$2 to \$3 billion in investment (depending on availability on-scene). Some UAVs are cheaper: tactical UAVs run several hundred thousand dollars each, and DoD labs have flown smaller UAVs that, at \$5,000 each, are almost disposable. With computer-mounted video cameras at \$9 apiece and microphones at three for a dollar, it would take quite a few disposable sensors to drain the Treasury. Coordination software is expensive to write, but once written can be used repeatedly.

C-17 Globemaster II

Basing geography does dictate some C⁴ISR costs. Central Asia, for instance, would cost more to monitor than Korea. UAVs capable of making round-trip flights of several thousand miles cost more than those that need go only a few hundred miles. Beyond a few hundred kilometers, aerostats are too far away; airborne sensor delivery is more problematic; and longer transit times raise the odds of accident or interception. Radio networks are hard to maintain over long distances.

Fundamental Parameters

Force posture therefore must be viewed in terms of a number of fundamental parameters:

- The world's commercial logistics and communications infrastructure is burgeoning, but all facilities are vulnerable to precision strike.
- In 2018, deployment times will probably be similar to today's (barring unexpected purchases, lift assets, or pre-positioning).
- The tradeoff between moving forces and moving force constantly shifts toward the latter. After all, manpower is expensive and casualties are prohibitive, but things (e.g., PGMs) are cheap.
- Weapons accuracy, communications bandwidth, and the ability to take a snapshot of the battlespace do not vary much by distance. The ability to keep a battlespace under constant watch, however, requires assets within airborne-relay distance.
- Range affects the cost of weapons laydown and their usefulness against fleeting targets. Breakpoints are roughly 20 kilometers for artillery and laser-guided weapons; 300 kilometers for helicopters, short-legged aircraft, and rockets; and 2,000 kilometers for cruise missiles and long-legged strike aircraft.
- Interoperability, doctrinal and technical, with foreign forces and infrastructure is emerging as the key prerequisite for the projection of U.S. power.

Conclusion

What should the U.S. posture be in 2018, particularly for futures that may feature larger or smarter foes and messier operations? From an operational viewpoint, trends both positive (what U.S. forces can do) and negative (the risks of similar technology in adversary hands) favor standing increasingly farther back from the battlefield. Other trends both positive (e.g., the greater ease of networking and transportation) and negative (e.g., the shadow of weapons of mass destruction) favor dispersion over concentration. The increasing emphasis on day-to-day engagement with allies and coalition partners argues for a posture that makes it easier for U.S. forces to go to others rather than have allies come to us.

*International Telecommunications Satellite Organization

As a practical matter, it helps to start within a few hundred kilometers of the action so as to operate with cheap UAVs, air-dropped sensors, upper atmosphere communications relays, over-the-horizon radar, precision rockets (e.g., ATACMS, upper-tier theater missile defenses), and rapid insertion forces (e.g., helicopters, V-22s). The ideal coverage is a network of thinly manned listening posts and potential stock points, all integrated into commercial infrastructures for transportation and communications. Such off-shore presence would be provided by land if possible and by sea if necessary. Strike could be provided from stand-off distances. This structure points to an inevitable evolution away from today's strategy, left over from the Cold War, of concentrating forces forward.

Strategic Assessment

Engaging Power for Peace

CHAPTER

SEVENTEEN

Conclusion

The traditional way of judging the need for U.S. forces was to determine what it would take to prevail in a specific contingency--such as a NATO-Soviet global war--until about 1990, and since then in a conflict resembling the Gulf War. But the world is now too fluid, change too rapid, and the future too hazy for such a narrow method. The United States has already experienced, in a few short years, a wide variety of contingencies, violent and not, in which the U.S. military was used. Threats are constantly rising, ebbing, and shifting. In a world of flux, U.S. forces can help shape desirable change but might instead have to respond to undesirable change. For these reasons, this volume, like the report of the Quadrennial Defense Review, breaks from the old way.

But how, in a disorderly world, can the United States take a more comprehensive view of the need for its forces without importing that disorder into the setting of U.S. defense priorities and programs? To help solve this problem without ignoring change and uncertainty, this volume suggests a way of thinking about the post-bipolar world:

- At the center is a *core* of democratic, free-market, peaceful and responsible states that encompasses North America, Western Europe, and Northeast Asia and is spreading eastward and southward. The core is increasingly integrated economically, has common interests, and stands for a set of norms.
- Outside this core but on a path of reform and integration are large *transition* states--China most importantly, but also India, Russia, and others. Their uncertain fate is a defining question, since their successful transition would vastly increase the core, extend its norms, and lessen the dangers beyond it, whereas failed transition would pose greater security problems than the United States has faced since the demise of the Soviet Union.
- Currently, a handful of relatively weak *rogue* states are openly hostile to the core's interests and norms, though their destructive potential could grow as technology spreads and if any large transition states turned hostile. In addition, a host of elusive nonstate rogues poses such transnational threats as drug trafficking, terrorism, and WMD smuggling.
- Finally, despite the impressive gains in global economics, politics, and security in the past decade or so, a number of states have not participated and are *failing*, confronting the core with major humanitarian and transnational challenges. Rogues that fail (as North Korea might) can pose severe hazards. If the transition states abandon reform and integration, they might not become powerful rogues but instead immense and dangerous failing states.

This way of "classifying" world politics and security lends itself to contemplating both futures. The overarching international goal of the United States is to extend the core and strengthen its norms, looking toward a *commonwealth of freedom and security encompassing most of the planet and all the leading powers*. To make progress toward this future, the United States must: (1) induce its *core* partners to take on more responsibility; (2) encourage those in *transition* to stick with reforms and integration; (3) weaken and, when threatened, defeat *rogues* (state and nonstate); and, (4) ease the humanitarian and transnational effects and causes of state *failure*. While U.S. military forces alone cannot produce such an international environment, they can play a key role as part of a wider U.S. political, economic, and security strategy.

But those forces must also be prepared for a deterioration in the world security environment, in which the vision of a commonwealth of freedom and security is eclipsed by a world of more dangerous rogues, large transition states turned hostile or chaotic, more frequent and messy state failures, proliferating transnational threats, and friends who flee from responsibilities.

This complex of requirements, imposed by the world as it is and as it could be (for better or for worse), constitutes a tall order, not only for U.S. forces but for those who plan, manage, and lead those forces. With this as the challenge, this volume has analyzed U.S. forces from three perspectives:

- Their peacetime role in affecting the strategic environment to advance U.S. interests and bolster peace (chapters two through eight)
- Their ability to prevail in military contingencies (chapters nine through thirteen)
- Adaptations that would be needed if strategic conditions take a turn for the worse (chapters fourteen through sixteen).

These perspectives correspond to the three elements of the QDR: *shape, respond, prepare*.

Structuring the Problem

| | Examples | Morale | Capabilities | U.S. Interests |
|--------------------------|--|--------------------|-----------------------------|---|
| Core Partners | NATO
Japan | Core | Underutilized | Avoid divergence
Revisit partnerships
More contribution |
| Transition States | China
Russia
Southeast Asia
South America | Undecided | Helpful
or harmful | Complete transition
Be prepared for rogue
or failing states |
| Rogues | Iran
Iraq
Cuba
North Korea | Opposed
to core | Increasingly
destructive | Restraint
Push toward transition |
| Failing States | Central Africa
Southern Balkans
Middle East | None | Drain | Multilateral capacity |

Broadly stated, *Strategic Assessment 1998* concludes, first, that how U.S. forces engage internationally--not just how many are kept where--is key to shaping a world in flux. Second, if, despite its shaping strategy, the United States must use force, its current military capabilities are particularly well suited to defeat familiar enemies in a familiar way. This should come as no surprise, since the forces have specifically been designed to meet the threats we know. At the same time, they are adequate but less well suited for conducting peace operations and other small-scale contingencies (SSCs) and for overcoming the asymmetric strategies of outgunned adversaries. Third, preparations for the future should be motivated principally by the need for the United States to project military power globally despite the growing dangers to its forces from the spread of dangerous technologies, especially WMD. Finally, the United States needs to renovate its coalitions with core partners, lest it find itself with increasingly unilateral strategies, capabilities, responsibilities, and burdens.

The QDR has offered a framework for assessing U.S. force needs in this fluid world. Likewise, the recent versions of the "National Security Strategy" and the "National Military Strategy" take this broader, dynamic view, as does the report of the National Defense Panel. This is a fertile and formative moment in U.S. defense strategy. The challenges of the new era are being framed--challenges that *Strategic Assessment 1998* seeks to sharpen and address.

Carrier battle group

Presence Plus

Using Power Judiciously

Compared to the Cold War, the peacetime role of U.S. forces in the new era is as important but quite different. Instead of confronting, containing, and deterring a global power along a fixed line, U.S. forces must deter a changing assortment of threats in a changing variety of places, relying less on stationary presence at every possible conflict site and more on a credible ability to project dominant power wherever U.S. interests might face danger. At present, the United States has both the need and the potential, unless its will is doubted, to deter aggression without basing forces in the direct path of every possible aggressor. As chapter two explains, the United States must tailor its peacetime deployments both to support and to draw upon its global power projection strategy.

The concentration of U.S. forces in Western Europe and Japan can no longer be justified by some fear that these partners might otherwise be invaded. Rather, they are now critical locations, within the core, from which U.S. power can be projected. There is thus a need for change in the way the United States relates to these other core powers. They are now successful, wealthy, and secure partners who ought to share responsibility with the United States for the health, safety, enlargement, and norms of the core. This will require a shift in the military strategies and capabilities of these allies, stressing the protection of distant interests more and the defense of their (unthreatened) home borders less. The continued stationing of U.S. forces in Japan and Western Europe will make it more likely that when those forces are deployed to nearby or distant contingencies, U.S. partners will provide at least more support and perhaps forces of their own. This will be difficult to achieve in the case of Japan and Germany, but if the old protector-protectee security relationships are not transformed into more balanced partnerships--in deed, not just in name--they could soon outlive their usefulness. Recent steps in NATO and the Japanese-American security agreement point the way, but the transformation has only begun.

To that end, the United States, acting in part through the forces it operates abroad, must draw these partners into its peacetime preparations, plans, and contingency responses. To accomplish this, it must retain its partners' confidence, lest they go off on their own; yet, it should also keep asking them to shoulder more of the burden of global security. The United States must impress its partners with its military capabilities and resolve, which they obviously find reassuring, but it must do so in a way that does not make them feel either that the United States has hegemonic motives or that it will meet every challenge whether they help or not. If its closest friends conclude that the United States wants vassals, not partners, they might embark on divergent strategies or, alternatively, become content to be free-riders. If the U.S. body politic perceives allies evading responsibilities, burdens, and risks, it will favor unilateralist if not isolationist U.S. policies.

For the large transition states, especially China and Russia, the United States must leave no doubt of its *ability* to maintain stronger military forces and to prevail if they turn hostile and aggressive. But it is equally important to communicate that the United States has no *intention*, and no cause, to use its power against them unless they threaten its interests or peace. How U.S. power is demonstrated to these transition states, especially near their territory, is a crucial and touchy matter. The United States has told Russia, in effect, that it has no plans permanently to station combat forces on the soil of NATO's new members (as long as they are unthreatened, of course). In China's case, the United States has said that the purpose of U.S. forces in East Asia is not to "contain" China but to preserve regional stability. In both cases, the course chosen by a transition state should determine how U.S. forces engage. Accordingly, when Beijing attempted to intimidate Taiwan in 1996, U.S. power--in the form of two aircraft carriers--was interposed. But as China shows that it does not intend to pursue its regional goals by force or coercion, U.S. forces should increasingly cooperate with their Chinese counterparts, as they would with any core partner-to-be. Thus, whichever broad path China takes, robust U.S. forces need to be engaged in East Asia.

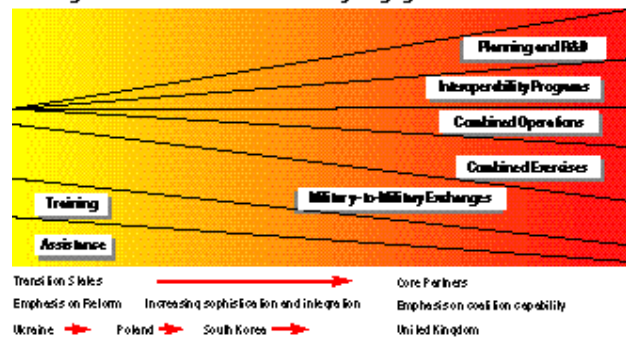

These cases illustrate how the United States must exercise its military superiority in a measured, sensitive way toward core partners and large transition states alike. Indeed, the same should be said for U.S. relations with *all* states, except for the rogues, who, by their own admission, would unhesitatingly threaten U.S. interests, values, and friends, were it not for U.S. power.

How can the United States use its power to shape the international environment in its favor without appearing hegemonic? How can the United States reassure its partners of its military prowess, will, leadership, and steadfastness, while also inducing them to take greater responsibility? How can the United States convince other powers, from its allies to China, that it does not regard their advancement as a challenge to itself?

From Presence to Active Engagement

These questions can be answered, in part, by *how* U.S. forces operate internationally during peacetime. The static concept of forward presence, Cold War-style, is inadequate for the challenge of shaping a dynamic world. The key is *engagement*: actively seeking to make contact, train, exercise, and operate with the forces of current and prospective (i.e., transition) core states. In time, the intensity and extent of such engagement should surpass stationary presence--and static measures of that presence--as the truest expression of U.S. involvement and as the most fruitful way to shape the international security environment.

Shifting Content of Peacetime Military Engagement

Active peacetime engagement is hardly new. It aptly describes many aspects of U.S. overseas deployments during the Cold War, especially in NATO. It was later given strong impetus in the effort to encourage reform in the new democracies when Soviet communism collapsed. And it has been an increasingly important motive and mode of U.S. defense activities in the past few years. New or not, it is worth specifying why active engagement is the preferred shaping concept for the current era:

Active engagement is crucial to promoting defense reform and civilian control, which are in turn crucial to democratization among transition states from Eastern Europe to Russia to Latin America to Asia--half the world.

- It is ideal for displaying U.S. military strengths to the large transition states without painting them as the target.
- There is no better way to reassure core partners of U.S. abilities and steadfastness while also inducing them to accept more responsibility and to adapt their forces for coalition operations with U.S. forces.
- It is the most effective way to prepare for multilateral operations, be they major wars or small-scale contingencies.
- Cooperation in defeating transnational threats (e.g., terrorism and drug trafficking) requires intensive interaction with partners and transition states.
- In this era of uncertainty and flux, engagement is an important way to gain and maintain a "feel" for international change, including in the capabilities and intentions of others.
- It is more flexible, giving the United States needed freedom to move forces in response to crises and changes in strategic conditions.

In concept, engagement means "to entangle, to attract and hold, to interlock, to mesh, to bind, to induce [another] to participate." In practice, it means a spectrum of activities in which U.S. forces and other defense organs cooperate with their counterparts. Different methods of peacetime military engagement should be emphasized across the spectrum of transition states and core partners. In all cases, the United States wants others to understand the qualities of its Armed Forces without flaunting their superiority. In addition, it wants to aid reform and build trust among transition states and to foster complementarity and greater burden-sharing among core partners. As transition states develop into core partners, for example, the way Poland, Hungary, and the Czech Republic are now, the content of engagement with them shifts to more organic and more sensitive cooperation.

Engagement relies more on what U.S. forces *do* than on their exact size. A squadron of naval combatants homeported abroad might once have been so important as a symbol of the U.S. defense commitment that its operations were of secondary significance. Now, however, if that same squadron is to produce the desired effects on the international security environment, what it *does* is critically important. Put differently, a platoon that continually works with a partner's forces may be worth a company that does not.

This is not to say that it matters little what forces, with what capabilities, are deployed where. Engagement is impossible without substantial U.S. deployments overseas, especially in East Asia and Europe, where the dual challenges of enhancing core partnerships and encouraging transition are greatest. In tailoring that presence, though, more attention should be given--and is already being given--to the uses of U.S. forces. U.S. interests argue for more combined exercises, involving not only allies but also transition states. Such exercises should bear on shared concerns: deterring rogues, defusing crises, conducting peace operations, delivering humanitarian relief in failing states, and combatting nonstate threats.

An increasing emphasis on active engagement also fits with plans to *prepare* for the longer term future. Chapter fifteen points out that as U.S. military doctrine, organization, and capabilities adapt in the information age, like so many other institutions, they should be more networked than they are now. Moreover, uncertainty about the location of future threats argues for a more dispersed approach, connected by information technology, and then concentrated when necessary in crises.

The globalization of trade, investment, and technology is producing a more robust, more integrated infrastructure, from air- and seaports to utilities, communications, transportation, and computing. So the distribution of U.S. military power in the world not only will be important but could be easier to support.

This vision, based on military necessity and technological possibility, dovetails with the concept of active engagement to shape the security environment. It suggests that the international deployment of forces will be a key feature of the U.S. posture of the next century, albeit with new purposes and patterns, and with rigidity replaced by interactivity. Engagement underscores the crucial role of core partners and transition states--not simply threats--in U.S. strategies to shape international conditions with its military capabilities.

Strategies

Chapter two offers a view of basic U.S. security goals in each region. With the benefit of the analysis of those regions in chapters three to eight, it is possible to summarize how U.S. forces and related programs could help achieve those goals.

U.S. Regional Goals and Strategies

| Region | Goals | Strategy |
|------------------------|---|---|
| Europe | Draw old and new allies into a new partnership to consolidate security in Europe and respond to threats elsewhere. | Engage full spectrum of U.S. capabilities. Integrate with core partners (NATO allies) to project power in or beyond Europe. Emphasize programs and forces that support defense reform and encourage transition states. |
| Greater Middle East | Deter rogues that use asymmetric strategies to threaten world oil supplies. Reinforce peace process. | Deploy ability to project robust and lethal power into the region. In light of regional sensitivities, limit permanent deployments to quick-response forces and pre-position materiel to deter rogues. |
| East Asia | Encourage peaceful unification of Korea. Build new partnership with Japan. Encourage transition of a powerful China. | Engage full spectrum of U.S. capabilities. Remain deployed "forward" in Korea. Increase combined operations with Japan and other partners. Expand interaction with China. Demonstrate military power to China when Chinese behavior warrants. |
| New Independent States | Facilitate democratic transition while protecting against the consequences of failure in Russia and the rest of the CIS. | Intensify programs that foster reform. Expand Russian military contacts with U.S. strengths without posing threat. |
| Latin America | Further the process of reform and democratization. Develop partnership based on shared interests and responsibilities within and beyond the hemisphere. | Expand contacts that share U.S. defense management methodology combined with civilian control. Emphasize exercises that bolster capacity for multilateral operations, e.g., Latin American participation in SSCs. |
| Africa | Work with core partners and Africans to avert state failure, promote reform, and improve humanitarian operations. | Improve NATO capacity to act in African crises. Expand contacts aimed at creating African competence in crisis management. |

From a global vantage point, these strategies suggest an increase in the intensity and extent of interaction of U.S. forces with those of the core and transition states. U.S. forces should, over the long term, remain concentrated in Europe and East Asia, where the most important core and transition states are. Those forces should engage frequently in combined and integrated exercises, with particular emphasis on power projection, C⁴ISR, and joint doctrine. This, in turn, will remind rogues, from North Korea to Iraq to Iran, that the United States has able partners prepared to help defeat them if need be. When such rogues can threaten vital U.S. interests, as Iran and Iraq have the potential to do, the demonstrable ability of the United States to surge overwhelming power must be augmented by quick-response deterrent forces in the region. Finally, with transition states accounting for more than half of the world's population, U.S. forces and other defense programs and contacts should be energetically used in *every* region to encourage reform.

In sum, the forces that the United States deploys abroad should become more interactive, operate with greater flexibility, and emphasize key U.S. strengths. As they do, U.S. military and environment shaping strategies will be brought into harmony, the United States will be well-prepared for this era of uncertainty and change, and the American people will understand and support the rationale for U.S. deployment abroad.

A Moving Target

Winning Wars

The United States can be confident of its ability to defeat any rogue state that threatens U.S. and core interests with traditional military power--in fact, any two rogues nearly at once. The ideal scenario is brief and to the point: U.S. forces nearby establish at once that the aggressor is at war with the United States. A robust joint force is dispatched to the theater. With its predominance in speed, information, and lethality, the force maneuvers freely, destroys enemy forces and infrastructure, and renders the rogue defenseless. The more rational the enemy leadership, the quicker the surrender.

The ideal scenario is one-sided in capabilities, execution, losses, and outcome. American defense planning and management pay off in the smooth way key U.S. advantages--power projection, C⁴ISR, joint doctrine, lethality, and robustness--are integrated. To be sure, risks exist that not all will go as well as planned--logistics being one potential weak link in the chain. Moreover, a clever adversary exploiting a difficult (e.g., urban, wooded, or mountainous) battlefield could increase the uncertainty and losses facing the United States in a major theater war (MTW)--ample reason not to grow too attached to any specific planning scenario. But the chance that the United States would ultimately fail in such a conflict, unless of course its will fails, is extremely low.

M-1A1 tanks during Desert Storm

Since "fighting and winning the Nation's wars," in the words of former Joint Chiefs Chairman, General John Shalikashvili, is the benchmark of U.S. military effectiveness, today's situation is cause for some satisfaction. In a nutshell, the main interests of the United States are secure because none of its few outright enemies would likely dare such certain and complete defeat, and U.S. losses would be tolerable--if any casualty can be deemed "tolerable"--in the event that one did.

Of course, "snapshot" security is not good enough for the United States in the unsettled world described in this volume--a world of deepening U.S. dependence on a spreading world economy, of wily and fanatical rogues that will not readily abandon their causes, of giant transition states that could fail or become rogue-like if their reforms are abandoned, of failing countries whose human agonies cannot be ignored, and of amorphous nonstate groups with the means and motivation to threaten U.S. security. The years since the Gulf War show that crises smaller and thornier than the last major theater war (MTW) are the norm. And the determination with which rogue states are acquiring the means to make and deliver weapons of mass destruction confirms that they will not stand pat in the face of U.S. power but instead seek a way to deter the United States despite its advantages. A broad and flexible view of missions and threats is therefore imperative. And thanks to the high confidence the United States has today in its ability to prevail in a war against today's rogues, it can afford to prepare for other missions, other threats, and other futures.

Landing craft air cushion (LCAC)

By stating that U.S. forces must be able to respond to small-scale contingencies (SSCs) and to asymmetric threats, the QDR has recognized that winning MTWs under current conditions is but one test of the sufficiency of U.S. capabilities. The QDR "raises the bar" by requiring that U.S. forces be able to respond to the multiple demands of the world as it is, instead of a simpler world. Having done so, confidence of success drops off, as expected, when plans depart from the principal mission and type of threat U.S. forces have been optimized to confront. This is evident in the contrast between the general bullishness of chapter nine and the concerns expressed in chapters ten and eleven. It also is the basis for the QDR's conclusion, reinforced by the National Defense Panel, that U.S. forces should be prepared for contingencies and adversaries other than wars with the rogues of today.

The "Small Scale" Challenge

At least three lessons have been learned from Somalia, Haiti, Bosnia, and other such experiences over the past five years. First, the conditions that cause states to fail--tribal, ethnic, and religious violence, government malfeasance, and economic desperation--are not disappearing and could spread. Second, despite congressional misgivings, American presidents of both major parties have taken the view--and in the end have prevailed--that the United States often cannot remain aloof from most large humanitarian crises. Although military forces are not the most suitable instrument for some aspects of the response to such crises, the danger or reality of armed conflict often makes a military component indispensable. Third, all the capabilities needed to respond effectively to multiple SSCs (e.g., peace operations, humanitarian relief, and large evacuations) are not inherent in a force designated to win major theater wars. If SSCs were merely small versions of big theater wars, there would be no need to stipulate that they be considered a different requirement.

The failing state phenomenon will not vanish, despite the impressive recent progress of the "global" economy. States with no ability to attract foreign investment, to add value, and to export to global markets can fall prey to rapacious corruption, crumbling infrastructure, tribal violence, and disintegration. Despite some recent promising signs in Africa, the pattern seen in Somalia, Liberia, Rwanda, Zaire, and Sierra Leone may not have peaked. Nor is this phenomenon confined to Africa, as Cambodia, Afghanistan, Haiti, Bosnia, and Albania indicate.

Additionally, rogues can end in collapse, as both North Korea and Cuba may. Even larger states in transition that fail to stay the course can see their progress turn to turmoil and fragmentation--Russia being of greatest concern because of its nuclear weapons.

Easing human suffering from state failure is not the only purpose to which U.S. forces could be put other than waging a major war. Other sorts of ethnic conflicts, territorial disputes, violent breaches of international law, insurgencies, and natural disasters could give rise to needs for peacekeeping, relief deliveries, sanctions enforcement, and even forcible intervention that the United States will opt to meet. Experience suggests that more than one such operation could be in train at any time. Non-state rogues and transnational threats (often due to failing states) cannot be countered by traditional combat operations. Moreover, the absence of both "life-threatening" adversary and clear delineation of vital interests that marked the Cold War has left the United States with a need for options short of the all-out destruction of enemy forces and infrastructure. Dangers to less-than-vital economic or security interests, or perhaps to core norms, could justify some involvement of U.S. forces to prevent or contain a crisis, especially if it could harm the long-term U.S. purpose in the world suggested above. This has been the case in Bosnia and Haiti (both of which of course could also be viewed as failing states).

Thus, the bright prospects for the core and most transition states do not readily translate into an end to calamities and crises short of war outside the core, in which the United States will opt to intervene, out of some mix of interest, responsibility, and moral impulse. Whenever the United States must decide whether or not to commit forces in such circumstances, the argument is made by domestic skeptics that U.S. lives and treasure should be sacrificed only to defend "vital" interests. But the decision reflected in the QDR is clear: the United States should have an *ability* to perform these missions. It may or may not get involved in specific crises, but it needs the option.

This will be a formidable challenge. The demands such operations place on U.S. forces differ markedly from those needed to defeat a rogue, as the contrast between the requirements set forth in chapters nine and ten--or between the Gulf War and the Bosnian operation--shows. At a basic level, of course, the ground, air and sea forces needed for large theater wars provide ample "raw materials" for these other needs. Moreover, C⁴ISR, joint doctrine, and sound defense management are crucial in both cases. But SSCs do not call for the projection of massive strike power to destroy enemy forces, infrastructure, and resolve. Generally, they entail small units, repetitive patrols, face-to-face contact, humanitarian deliveries, even-handedness, restrained rules of engagement, and performance of certain civil functions. (If Clausewitz considered war an extension of politics, he might have viewed SSCs as a reverse extension of war into politics.) Moreover, such operations are much smaller--as the name suggests--but more frequent than the huge but rare wars that U.S. forces have been designed to fight.

Broadly speaking, this is a fundamentally different class of military operation than major theater warfare. When a corporation finds itself in two different businesses, it is not necessary to spin one off, but it is crucial to manage the firm's operations and assets in light of this duality. So it is that the Department of Defense must manage forces in light of how different, operationally, the "typical SSC" is from the "typical MTW."

Small-scale operations are also more likely than large-scale combat to entail integrated *multinational* operations. Major wars tend to be fought when U.S. vital interests are directly threatened. Consequently, while it would prefer to be supported by a coalition, the United States must have the capability to wage such wars whether or not its partners join it. Small-scale operations, in contrast, tend to concern lesser stakes or less direct threats--in general, they are more discretionary than major wars. Those of the last five years, for example, have not involved the essential vitality or security of the United States, but rather disputes or human suffering beyond the core (though of some importance to the core). Because the argument for committing U.S. forces in such cases is often predicated on a sense of international responsibility, it is hard (though not impossible) to justify independent U.S. action. After all, others, starting with wealthy core partners, also have responsibilities--or should. Thus, while U.S. forces must be able to conduct major wars independently, they must be geared to carry out smaller operations multilaterally, while of course keeping open options to conduct the former multilaterally and the latter independently.

M-113 ambulance, Bosnia

Because of their purpose and character, small-scale operations often involve U.S. and international civil organizations. This has been the case in Somalia, Bosnia, and Haiti. At a minimum, this poses jurisdictional and coordination problems. At worst, it can lead to cross-purposes (e.g., between the use of U.S. air power and allied ground forces in Bosnia, before the Dayton Accords) or U.S. forces being called on to perform tasks best done by others.

Of all the challenges detailed in chapter ten, the most important and difficult are tailoring U.S. forces to succeed in frequent, even multiple SSCs without detracting from their ability to prevail in major wars; and preparing for multinational and civil-military operations, i.e., situations in which U.S. forces are not functioning alone and independently.

The first challenge originates from a paradox and points to a dilemma. U.S. military power is more likely to prevent large security problems than small ones. Outright aggression against vital national interests can normally be deterred by U.S. forces, but other international crises can occur regardless of those capabilities. So it can be assumed that SSCs will continue to be relatively frequent, irrespective of U.S. military strength. Major wars will be rare, thanks to U.S. military strength. If certain U.S. forces are earmarked and honed for the demands of SSCs, they will be used in live operations far more than those maintained only for major wars. This has been the case in recent years, less from design than necessity. The units of that overworked fraction will be under much greater stress while also, potentially, seeing their ability to fight major wars eroded, for example, because of gaps in combat training, equipment fatigue, and excessive demands on personnel.

Alternatively, all U.S. forces could be kept "multimission capable," in which case readiness for major wars would have to be maintained by forces engaged in SSCs. This way, the burden of responding to SSCs could be spread out across the entire force, and all units would have to be prepared for the different and frequent demands of such contingencies. The strain on particular forces could be eased, but U.S. forces as a whole would not be optimized either to fight wars *or* to conduct small-scale operations.

Whatever approach is taken, for budgetary reasons the United States will not elect to maintain a larger force structure than that needed to win two nearly simultaneous major wars. Consequently, it might have to face the additional problem of having to back out of a large peacekeeping commitment if a war looked imminent somewhere else. Would U.S. forces have left Bosnia if Saddam Hussein threatened Kuwait in 1997 (as he did in 1990 and 1994)? If so, what would have become of the NATO coalition, and thus the fragile peace, in Bosnia? If not, would the United States have had enough of the right forces in reserve to deter a *second* major war, lest North Korea, for example, have perceived an opportunity to attack the South? This illustration underscores the need to have forces of core partners available for both large wars and smaller contingencies.

Indeed, the second big challenge posed by SSCs is to be prepared for combined, or integrated, multilateral operations. This is a politically vexing problem. The United States has an interest in improving the capacity of the United Nations and other international institutions to perform peacekeeping, humanitarian relief, and the like; otherwise, it will be under intense pressure to take on the task itself whenever a large-scale human disaster occurs. Precisely because of the competence of U.S. forces, the worse the crisis, the greater the pressure for the United States to accept the bulk of the responsibility, overall command, and possible pressure to escalate if the crisis is not contained. Yet important voices in the United States doubt that the United Nations has, or should have, the practical or constitutional ability to handle such responsibilities.

Relatedly, Americans are not keen to see their troops operate under foreign commanders. But since the United States cannot insist on being in command if it does not provide a large contingent of forces, this stance means it must have the leading role or no role at all—not a good choice to have to make. It is easier to solve this foreign-command conundrum in Europe than elsewhere, because NATO is a capable multilateral military coalition that has the confidence of the United States; it has proven its competence in peacekeeping under trying conditions in Bosnia. Yet future needs in Europe appear to be limited to the Balkans, which, while serious, are unlikely to grow or spread. Meanwhile, the security challenge outside Europe is

greater and growing. Therefore, the use of NATO forces beyond Europe will be one of the most important questions in national security policy in the years to come.

Chapter ten offers several ideas for improving operations that combine U.S. forces with civil entities. The answer is not to avoid such circumstances; most of the future's messy situations, especially those caused by state failure, will demand both civil and military responses. But an essential principle should be that U.S. forces not be thrown into every predicament merely because they are capable and civilian agencies are lacking. This is no way to use U.S. forces and no way to avoid the actions and costs needed to improve civil capabilities. Congress, DoD, and various civilian agencies--perhaps nongovernmental entities, as well--need to fashion a rational division of labor and management systems.

Because they involve peculiar operational demands, multinational and civil-military action, and often less-than-vital U.S. interests, SSCs (despite the innocuous term for them) present a substantial challenge for U.S. forces that are designed mainly to win big wars. The QDR identifies the issues that will need to be settled, e.g., withdrawing from SSCs in an MTW appears likely, but makes no claim to settle them. Unless the Bosnias and Haitis of the world are behind us, which seems unlikely, these issues will occupy U.S. defense leaders, resources, forces, and debates for years to come.

The Asymmetric Challenge

Just as the QDR recognizes that "winning the nation's wars" does not encompass all that U.S. forces must be prepared to do, it acknowledges that winning future wars could prove much tougher than defeating today's rogues.

It is important to remember several things about rogues: First, as a rule, they are not mere opportunists, ready to drop their reckless ambitions or destructive causes simply because they are frustrated by *current* U.S. project-and-strike capabilities. Second, it is virtually impossible to block altogether their access to the technologies--dangerous and otherwise--that are spreading across the world, partly through illicit trade but to a large degree *via* the integration of the global economy. Third, even though prospects are not bright for several of today's broken-down rogues--North Korea, Serbia, and Cuba--this class of actor does not face early extinction. Their future ranks might include new and larger ones, even one or more current transition states. They might include sinister and sophisticated nonstate actors, or networks, such as a South American cocaine syndicate, a Russian Mafia dealing in nuclear material, and Middle East terrorists dealing in truck bombs or deadly toxins. We should assume that rogues will have every incentive and considerable means to outflank, undermine, defy, disrupt, and even defeat available U.S. forces, potentially leaving the United States with military capabilities that are nominally superior but not fully able to defend U.S. interests and preserve international security.

Indeed, every key U.S. military advantage discussed in chapter nine could be weakened or neutralized, to a troubling degree, by any or all of the three salient asymmetric threats analyzed in chapter eleven--weapons of mass destruction (WMD), selective use of new military technologies ("cheap high-technology"), and information warfare (IW). Although the focus here is on the *capabilities* of possible asymmetric response, it is also important to plan for more threatening *tactics*, such as concealment, short-warning offensive, attacks on sea lanes, and coordinated attacks on U.S. interests outside the conflict theater. Indeed, it is the combination of more dangerous means and doctrines that makes planning for asymmetric threats imperative.

The striking message here is that *the ability, and therefore perhaps also the will, of the United States to project power and destroy rogue targets without suffering unacceptable casualties could be undermined by a combination of asymmetric threats*. So the consequences of not planning forces to counter these threats could be grave, especially because not planning for them will make them all the more likely to happen.

To illustrate, imagine that the United States, along with its partners in the core and in the region, is again confronted with aggression in the Persian Gulf. This time, the enemy uses information warfare to destabilize the Gulf monarchies, disrupt U.S. military communications as it attempts to send forces, and interfere with computer and telephone systems in Europe and the United States. U.S. carrier battle groups find that thousands of cheap but effective mines have been placed in the Strait of Hormuz. And the adversary warns that its several hundred recently acquired, accurate (enough) missiles are armed with chemical warfare agents and can hit U.S. forces as well as allied bases and population centers in the region. In these circumstances, U.S. skill, muscle, and will *could* still yield eventual victory, but at considerable cost and perhaps without the political and material support of an international coalition. Unless it prepares to counter these threats, the United States might face and pay a severe price--in lives lost or interests damaged--if and when they arise.

Because a rogue might be acting out of fanaticism, irrationality (perhaps due to sketchy or skewed intelligence), or desperation, it could prove hard to deter from executing such threats. Moreover, since rogue regimes care little for their own citizens or even their soldiers (as Saddam Hussein showed), U.S. retaliatory threats might not work. In contrast, unless the stakes for the United States are so compellingly vital as to leave no choice, it could be deterred by the prospect of high casualties and uncertain success, despite its overall military muscularity. Strategically, then, the danger is that asymmetric responses, unless preempted or countered, could reduce the ability and resolve of the United States to project power to protect its own and core interests around the world. In essence, U.S. forces might not be able to fulfill their central purpose.

Impact of Asymmetric Threats

| | Power Projection | C/SI&I and Jointness | Strike |
|-----------------------------|------------------|----------------------|--------|
| Weapons of Mass Destruction | ↓ | | ↓ |
| Nucle High-Tech | ↓ | | ↓ |
| Information Warfare | ↓ | ↓ | ↓ |

The QDR states that the United States should anticipate such asymmetric threats, rather than await them. It prescribes intensified efforts to counter nuclear, chemical, and biological weapons, to combat terrorism against U.S. forces, and to frustrate hostile information operations. The United States has thus signaled to rogues that it is already anticipating their *next* moves. If this signal dissuades them, so much the better. But because cannot be counted on, the full investment must be made.

Such initiatives should be viewed as part of a wider strategy to counter asymmetric threats having these elements:

*Focus. In judging the adequacy of current and planned U.S. forces to *respond* in major contingencies, it should be assumed that whatever asymmetric threats are within the means of adversaries *will* be encountered. While taking into account both the intentions and capabilities of transition states, the United States should assume rogues have hostile intentions and base its defenses on their capabilities. Thus, if North Korea can use nuclear, biological, and chemical weapons, the United States should anticipate that it will and evaluate U.S. forces and plans accordingly. In planning jargon, plausible asymmetric threats that could upset U.S. strategy and confidence should not be "excursions" but "best case." The entire military establishment, not just those charged with special responsibilities, needs to come to grips with WMD and other asymmetric threats.

F-4 dropping GBU-15 unpowered glide weapon

*Deny. U.S. efforts to *shape* the international security environment (of the sort discussed in chapters two through eight) should be targeted especially at the trends and actors that breed asymmetric threats. New strategies are needed to deny or at least retard the acquisition of those dangerous technologies whose spread can be regulated. Information technologies are of course hard to control, especially in an integrating global economy. The key is to make this a concern and responsibility for U.S. core partners no less than for the United States. For example, the United States does not want its partners to trade with Iran or other rogues in technologies that could be used against U.S. forces. Therefore, Washington might consider insisting that those same partners accept a greater role in the defense of shared interests (e.g., oil supplies) if threatened by those rogues using those technologies. This could help produce a more united front, both in restricting the technologies and in deterring the threat.

*Deter. It is critical that rogues that have and might consider using chemical and biological weapons are aware that the United States does not preclude using nuclear weapons in response to such attacks on U.S. interests. Otherwise, while such states might appreciate the risks of using or even obtaining nuclear weapons, they will be drawn toward chemical and biological weapons, which the United States has forsworn through international treaties. While such a retaliatory threat might be credible only vis-a-vis large-scale chemical and biological attacks resulting in U.S. casualties, this could augment defenses against more limited attacks.

*Defeat. Plans and initiatives to *prepare* for the more distant future (2018) should include concepts to trump asymmetric threats. Ballistic missile defense and defensive information warfare are thus high priorities. Instead of counting on *deus ex machina* solutions the answers might be found in the ingenuity of U.S. soldiers and strategists. Not only the weapons and platforms of U.S. forces but their doctrines, tactics, and organization should be critically evaluated in light of asymmetric threats. In particular, as the United States finds ways, using communications and sensor technology, to give small and dispersed units access to more and better stand-off precision

strike power, it can sustain its ability to project power in the face of such threats--delivering force but not large forces--since deployment would be easier and fewer troops need be risked on battlefields made more deadly by weapons of mass destruction and other rogue capabilities.

*Adapt. The way U.S. forces are planned, like the forces themselves, needs to become more *adaptive*--operationally and strategically. Rigidity could be as great a threat as the nastiest rogue--indeed, its unwitting ally. Fixation on one or two exquisitely specified operational scenarios could endanger U.S. interests and lives if the scenarios prove even partly wrong, perhaps because enemies have consciously worked around them. *Desert Storm* was unusual. The odds that war will be conducted, by both sides, as scripted by U.S. planners are about as good as a baseball game being played exactly as intended by the manager of the better team. Strategically, the basic suitability of today's forces, doctrines, programs, and plans should be tested against asymmetric strategies devised to neutralize them. Today's computing power provides the means to analyze a virtual universe of possible operational and strategic circumstances, to see where investment is needed to neutralize or hedge against the ever-changing capabilities and tactics of adversaries, current and future.

In sum, in a world of uncertainty and change, it is possible to bracket without affixing what it is that U.S. forces might be called upon to do. Versatility must not be sacrificed at the altar of total confidence in the ability to defeat the threat du jour. The U.S. defense establishment planned on responding to a defined threat throughout the Cold War, and then extended that habit for some years afterwards, with its attention exclusively on the Iraq and North Korea scenarios. The QDR signals an important departure, calling for the ability to respond to a full spectrum of crises. That call raises a number of tough but crucial questions, which this volume has tried to frame.

Globalization of Interests versus Technology

| | Weapons of Mass Destruction | Nucle High-Tech | Information Warfare | Terrorism |
|-----------------------------------|---|---|---|---|
| Project and Strike (capabilities) |  |  |  | |
| U.S. Sanctuary (will) |  | |  |  |

The Unpredictable

Understanding the Unknowable

Predicting the world beyond 2008 today is probably no harder than predicting today's world was in 1988--in both cases, it is exceedingly hard. Policymakers may be just humbler now, and maybe a bit wiser, than before the changes of the last 10 years ambushed their confidence in precise prognostications. Perhaps, with a little hindsight, an understanding of how current conditions *might* affect the future is more possible now. After all, some trends detectable in 1988 could have helped explain broadly what ensued: Soviet communism was moribund; East Europeans were restless; the Persian Gulf was volatile; the Chinese economic system was being transformed; and East Asia had become a magnet for investment and technology. But because specific intervening events were unpredictable, and even surprising, so was today's world. Fortunately, those events were favorable to the United States, and its economy, technology, military capabilities, alliances, and political system proved robust and flexible.

Because predicting a "point" future in a fluid world is, well, pointless, preparing U.S. forces for the long-term future should not be based on such a prediction. Rather, the question is how those forces might need to be altered in view of all plausible future worlds. The method employed in this volume for tackling this question is to identify the principal axes along which international change--especially adverse change--would require a significant adaptation of U.S. forces. Thus, instead of specifying alternative futures, whether one or many, this study seeks to understand possible future challenges.

The Gulf War was fought against a relatively small foe (albeit with sizable forces on paper), one not especially shrewd in deploying its forces or exploiting U.S. vulnerabilities on an accessible battlefield. U.S. forces today are ideal for such a war. They would see and destroy most enemy forces, eliminate the danger to U.S. personnel and operations, demolish the enemy's infrastructure, and force a surrender. To prepare for the future, the Pentagon should examine how those same U.S. forces might fare and how they would need to be retailored if the United States had to face a *larger* or *nastier* enemy, possibly in *messier* conditions--tough terrain, crowded cities, or dense jungle, with unclear limits, lines of battle, and distinctions between combatants and civilians. When the United States faced some of these conditions in Indochina, it did not succeed. North Vietnam was a wily adversary, with substantial and well-dispersed forces that exploited unfavorable geography and other U.S. vulnerabilities, including America's flagging will.

Change along one, two, or all three of these axes is plausible. Numerous *transition* states are quite large--from China and India to Russia, Indonesia, and Brazil. While it is unlikely that any one of them would turn against the United States and the core, neither is it implausible that at least one would do so. Then, too, one or more current or future *rogues* could acquire and brandish a much nastier arsenal than today's Iraq or North Korea: an arsenal of nuclear, biological, and chemical weapons and delivery systems; cheap but "smart" weapons; of offensive information warfare capabilities. The *failing state* phenomenon, which can produce especially messy circumstances, could sweep across sub-Saharan Africa and afflict other regions such as South and Central Asia, North Africa, the Balkans, and even the Caribbean. Finally, dangerous nonstate rogues and other sub- and transnational threats could aggravate the security conditions in virtually any plausible future, because these dangers could be connected to the large transition states turned hostile, nastier rogues, or state failures.

A combination of larger foes, nastier foes (state or nonstate), and messier battlefields would pose especially severe and complex challenges for U.S. forces. In the worst case--unlikely but usefully provocative--the United States and its (possibly shaky) core partners might be confronted with a budding alliance of a powerful, hostile China, an aggressive, nuclear-armed Iran, and a desperate, nuclear-exporting Russia, or a global network of vicious terrorists and criminals. Such a combination would possess nearly every type of weapon fielded by the United States and would be poised to control most world oil and gas supplies of Southwest and Central Asia. U.S. territory would be no sanctuary, and the ability and will of the United States to project power successfully would be in doubt. Simultaneously--and not unrelated--Africa could become a cauldron of famine, refugees, and genocide. This case illustrates that it would not take a single "peer challenger" to confront the United States with a worldwide set of threats.

Chapter fifteen details the sorts of adaptations U.S. forces might need to undergo if change occurs on any of these three axes, but also adaptations that ought to be undertaken in any case, because they would help the United States in virtually any plausible future. One conclusion drawn from that analysis is that the United States needs agile warriors, versatile forces, flexible systems, and adaptive institutions. While this is certainly so, the search for hints about how the United States could be better prepared for the future need not stop there.

WMD environment

Every step taken by the U.S. defense establishment--new weapons systems, tactics, R&D--into the space of plausible futures will inevitably imply a sense of direction and a view of which of these three axes is of greatest concern. Because the problems that could crop up along these axes are different and require different responses, the United States needs to invest wisely. With a defense budget of approximately \$250 billion, it cannot prepare for the worst case on every axis. Making a beeline toward a single-point future is not wise, so Washington should watch for signposts to help adapt its plans and forces. What *can* be decided when the direction and signposts suggest that plans are on the right bearing *should* be decided--but planners should defer when not confident of the need or effect. This is the essence of adaptive planning.

Verities, Clues, and Signposts

Today's conditions contain a lode of information about plausible futures that can help in gaining a sense of direction. Some are obvious but nevertheless enduring and strategically significant facts: the United States is separated by vast oceans from its leading economic partners; population growth is greatest outside the core; the world's primary source of energy is fossil fuel; many of the world's political borders do not conform to ethnic distinctions; illegitimate governments will, over time, become unstable. Information technology reduces the importance of distance in industry, politics, and warfare. But the particular characteristic of world affairs that will most define the future security environment is *globalization*. It is to the new era what bipolar confrontation was to the old.

The integration of the global economy is manifested in the growth of trade, the quest of investment capital for competent low-cost labor, the diffusion of technology and knowledge, and the enhancement of the systems and networks that process and move information. These are not easily reversible processes, especially because they bring rewards--greater economic efficiency, prosperity, and freedom--that condition human behavior. In the information age, disintegration of the world economy borders on the implausible, not only because it would be cataclysmic but also, to some extent, impractical. Even if nation-states reverted to mercantilism, multinational enterprises utilizing information networks will not be brought back into national confines.

Prepare for "Space of Future Worlds"

As it proceeds, globalization will affect U.S. security in four basic ways:

**The United States will have increased global economic interests.* As a consequence of its integration in the world economy, which will include in time at least a portion of the states currently in transition, the United States will be concerned with crucial markets, product sources, energy sources, infrastructures, and flows that make the global economy function. These interests will take traditional geographic forms (e.g., key countries, oilfields, and borders), as well as new functional forms (e.g., financial and transport systems). On the assumption that there will still be rogue states and failing states--not all current transition states will succeed--threats to those interests will persist. The United States will therefore continue to depend vitally on its ability to project power to defend them.

**The spread of technology will be hard to control.* For the most part, this is desirable, as it strengthens and extends the global economy upon which the United States thrives. But it cannot be confined to the core. "Controlling information technology" is an oxymoron, because it is so pervasive in civil economies, so crucial to the globalization of multinational enterprises, and so fungible. Rogues and nonstates will have an ever-growing access to technologies that are or could be dangerous. While they will be hard-pressed to create or master these technologies and will remain generally backward compared to the countries in the core, they can use them asymmetrically to damage international security and U.S. interests.

**The transition states will probably gravitate toward the core.* Transition states--even the largest of them--will find it difficult to develop and sustain "world class" economic, technological, and military capabilities if they abort their reforms and fail to integrate into the world economy. Integration does not guarantee that such states--most importantly, China--will embrace the values and adopt the international norms of the current core democracies. But it does suggest that they will increasingly identify with the overarching U.S. interest in the vitality and security of the world's economic core. If they reject that basic interest, they could create severe security problems, becoming, in effect, large rogues, able to use technology destructively even if they cannot master it economically. But they would have difficulty becoming peer competitors and mounting a broad strategic challenge to the United States and to the interests and norms of the core.

**Uneven and incomplete globalization will exclude states and regions.* Globalization is, in large part, driven by combining information technology, high-potential labor, capital, and the demands of world markets. There are signs that this phenomenon is not spreading uniformly and will not soon occur throughout the entire world. Where it does not, economic exclusion and decline can result. This is, of course, the danger in parts of Africa, where it has already contributed to state failure and where demographic and food-production trends are unfavorable. Even in states that reform and integrate, large sectors and strata can be left out--and thus left to deteriorate or turn against the successful, posing increased transnational threats. As globalization progresses, this undertow will create "messy" situations that the United States and its core partners will find hard to ignore.

A Sense of Direction

The first three "clues" about the future, taken together, suggest that the most salient defense challenge to be faced by the United States over the next 20 years will be *to project power globally to defend core interests threatened by adversaries with increasingly destructive means at their disposal.* The destructive means of greatest concern are WMD. Today's breed of rogue state, having acquired technologies to pose asymmetric threats, or less likely, today's large transition states turned hostile, could have both the incentive and improved ability to hold the United States at bay. Such adversaries could disrupt or deter U.S. power projection both by posing greater dangers to U.S. forces in the theater and by threatening to attack the United States itself, which has been a sanctuary since the end of the Cold War. Thus, the United States will find it both more important and more hazardous to defend its global interests, even in the absence of a new global challenger.

F/A-18C Hornet

This *power-projection challenge* should energize plans and preparations for the future, unless and until conditions point in a different general direction. This does not mean that future adversaries will be no larger than, say, Iraq or North Korea. But more important than sheer size is how shrewdly rogues turn available technology, *especially WMD*, against U.S. vulnerabilities and its public's strong aversion to casualties. The best illustration of this is the case of China, with its ability to turn aggressive in Asia while preventing a successful U.S. intervention. If so disposed, China might seek the means to destroy U.S. forces projected near China and threaten the U.S. homeland if China proper is threatened, thus affecting both the ability and will of the United States to use its power in the region. This example is in essence a "high end" variant of the power-projection challenge.

The challenge, whether from China or sundry smaller rogues, follows the logic of the more immediate asymmetric threats identified in the QDR and analyzed in this volume, especially the WMD threat. Therefore, by anticipating the near-term need to *respond* to asymmetric threats in designing its forces (chapter eleven), the United States can get a head start in *preparing* for the more distant future (chapter fourteen). Moreover, because it takes time to reap results from R&D and other investments needed to be able to project power against nastier adversaries, such a focus ought to be a high priority now.

But what if the *size* of an adversary *were* to become the dominant problem for the United States (e.g., a hostile China that not only can frustrate U.S. power projection in its vicinity but can threaten core interests on a wide front). One reason this might be considered improbable is that for China to have that sort of power it would probably be so integrated into the core that it would not be inclined to threaten the core. Even in such a case, the United States could "scale up" its forces, increasing end-strength, force structure, and weapons and platform production. This would be an enormous undertaking, to be sure, but it would not require as much time as does creating the means--new technologies, institutions, doctrines, and structures--to counter the nastier adversary.

Moreover, because the probability of a global challenger is low and the costs of "scaling up" high, investments to prepare for it should not be undertaken unless and until there are warnings that one is emerging. In the meantime, measures to address the power projection challenge will *also* have value if the adversary turns out to be large (e.g., the WMD threat to U.S. forces and territory). This suggests that the military problems posed by size alone should not drive U.S. preparations for the future, though the United States must be adaptive enough to change course if the world develops in a way considered unlikely here. In short, Washington should *watch for* but not substantially *prepare for* a significantly larger foe.

The "principles for force 2018," which carry forward ideas in *Joint Vision 2010*, are in line with this logic. They call for an emphasis on the ability to "project force, not just forces," based on a system of systems that would give the United States advantages in illuminating the world, staying out of sight, and relying on "plugged in" coalition partners. Simply put, the United States can extend its ability to project power to defend its global interests in the face of nastier, better armed (including WMD) adversaries by giving small, networked, and rapidly deployable forces all the remote firepower they need to destroy larger enemy forces. It might also have to rely on nuclear deterrence against not only nuclear but also biological and chemical threats.

B-2 bomber

Of course, it is quite plausible that the challenge of the nastier (possibly larger) rogue will be aggravated by having to fight it on a more ambiguous, less visible ("messier") battlefield, where the problem is not as simple as destroying armor and facilities in the open. Such a battlefield might not be within easy range of littoral strike forces or standoff platforms; it might hamper joint operations; and it might not lend itself to "high-tech" C⁴ISR and weapons. The terrain and accessibility of future battlefields are as diverse as the range of possible future enemies. U.S. forces must be able to deploy and destroy enemy forces in unfavorable surroundings, not just ideal ones. While this will tax U.S. "information dominance," the answer is not to abandon that as a goal but to invest in achieving it even when conditions are poor.

The fourth "clue" presented above suggests that power projection against more dangerous enemies is not the only concern about the future that should inform current U.S. preparations. Because of uneven globalization, economic exclusion, and political instability, SSCs will continue to crop up, and they could be both larger and messier than those of recent years, particularly if state failures become more catastrophic. "Crash landings" by North Korea and Cuba, for example, could be extremely dangerous. Subnational and transnational rogues will pose unconventional threats. At least some U.S. forces (e.g., special operations, security services, light and agile mechanized units) might have to be tailored for these threats and contingencies rather than for major wars.

Thus, without embracing one specific view of the future, it is possible to identify--and important to prepare for--two broad classes of problems in the "future space" that require long-lead preparations: projecting power against WMD-armed adversaries, and conducting a wide range of operations (MTWs and SSCs) on messy battlefields and/or against transnational threats. These two concerns could tend to pull U.S. forces in two quite different directions, thus requiring that the dilemma described earlier--to specialize and devote a part of the force for small-scale operations, or not--be resolved.

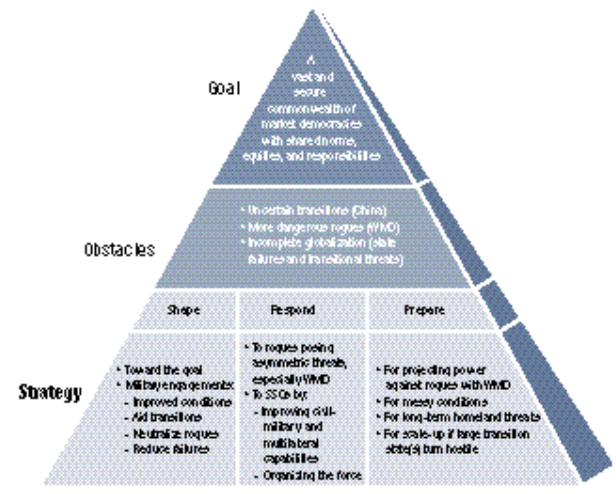

U.S. Military Superiority

During the Cold War, the yardstick for judging the adequacy of U.S. forces was rough across-the-board "equivalence" with Soviet forces. (The United States led in some categories such as naval forces and the Soviet Union in others such as tank armies.) While arbitrary from a purely operational military standpoint, this standard was widely accepted and indeed deemed crucial by the United States both for its peacetime global competition with the Soviet Union and for acting with confidence in crises.

With the end of the Cold War, U.S. military superiority has become a fact of life, accepted at home and abroad. Indeed, the resiliency of public support for a quarter-trillion-dollar annual defense budget can be explained not by the intricacies of MTWs, SSCs, and environment shaping, but by broad sympathy with the idea that maintaining unmatched military capabilities is worth the cost. To some, this is a prerequisite of U.S. international political leadership. To others, what matters most is that U.S. forces never enter a war they cannot win, with the lowest possible casualties. Still others believe that it is important strategically for the United States to preserve the so-called "unipolar moment." In any case, having backed into military superiority, thanks to the collapse of the other superpower, the United States now must learn to use it wisely.

The national preference for unmatched military capability gives the U.S. Department of Defense the fiscal resources needed to meet its more specific operational requirements. A fortunate alignment thus exists between the political consensus favoring military strength and the sufficiency of U.S. forces relative to various threats, none of which begins to compare to U.S. capabilities. There has been no need to define "superiority" or its purposes. Yet the more the QDR's two important additional considerations bearing on the adequacy of U.S. forces are considered--*environment shaping* and *preparing for the future*--the harder it is not to ponder military superiority: What is it? What good is it? How much of it is enough? How does Washington want others to regard it? How should it be used?

Sketching a Strategy

In approaching these questions, it is helpful to recall the U.S. "equity" in the world introduced in chapter one: the health, expansion, and security of the democratic, free-market core and its norms of responsible state behavior toward other states and their own citizens.

These interests and norms are linked: the stronger the core, the more its norms are likely to be respected; the firmer the norms, the better the outlook for the core's health and security. As the core grows, deviations from its norms become more isolated and, because of gathering strength, more easily defeated and punished.

Consider a future in which China, Russia, and all other major transition states come to identify with the key interests and norms this volume has stressed--unlikely and certainly beyond the means of the United States to bring about, but not implausible by 2018, and certainly worth striving toward. The few remaining rogue states would have nowhere to turn and much to lose when violating the norms and threatening the interests of what by then would be a nearly global core. Such an "outcome" for the period considered in this volume would obviously be of enormous benefit to the United States, which is at the heart of the core and second to none in its commitment to the norms. Simply stated, a larger core with widely respected norms is a favorable world for the way of life, quality of life, and global interests of U.S. citizens. Therefore, the goal of an inclusive *commonwealth* of freedom and security, based on norms, could animate U.S. strategy in the new century, as suggested by the 1997 National Security Strategy.

Make WMD Acquisition and Use Seem Futile and Risky

- Use nuclear deterrence for nuclear and high-end biological and chemical threats. More explicit declaratory policy is required.
- Employ theater missile defenses (TMD), equipment, and counterforce to defend battlefields and signal preemptive options.
- Pursue ideas to project force with smaller and dispersed units.
- Reduce dependence on vulnerable routes and bases.

Such a vision of a desirable future underscores the special importance of the current core partners and transition states in American strategy. The cohesion and increased international responsibility of the former and the reform and integration of the latter are the paramount objectives of the United States. And of course, U.S. success in aligning its closest and most capable friends, the EU and Japan, with its global strategy is indispensable for the goal of encouraging large transition states, especially China and Russia, to stay on a course of reform and moderation.

Principles of Force 2018

To decide now what would be the best U.S. force for the year 2018 would be both premature and unnecessary. The need may change as signposts become more readable. But it is not too soon to consider the general directions in which the DoD needs to move (and is already, to some extent, moving) to ensure the effectiveness of U.S. forces 20 years from now. The following principles are offered in this spirit:

- *Project Force, Not Just Forces.* U.S. forces will soon be able to destroy a large share of an adversary's invasion force by standoff strikes and the rapid insertion and retraction of ground units. Because similar capabilities are proliferating globally, it is important to change according to a schedule the U.S. chooses rather than one others choose.
- *Drive Cycle Time Down.* The greater the speed with which the United States can project force decisively, the greater the deterrence. At the operational level, a goal for 2018 is for the United States to be able to project force in all contingencies within a single day anywhere in the world. At the tactical level, a goal of U.S. forces is a cycle of operations--showing up, completing a

mission, and dispersing--that can be measured in minutes.

- *Illuminate the World.* To support force projection and reduced cycle times, the United States needs a system to illuminate most of the world all the time. This system requires establishing, maintaining, and exploiting a network of strategic and operational sensors.
- *Keep the Magazines Full.* Precision weaponry is getting cheaper as the cost of electronic components falls, even as the cost of operating platforms grows. The United States must be prepared to use very large numbers of precision weapons in a slugfest with a capable opponent.
- *Use What's There.* The more the United States can empower local allies, the less work it will have to do itself, and the smaller the risks of exposure. The same is true for using facilities: at the same time that militaries everywhere are shrinking, the world's commercial infrastructure for moving materiel and information is growing. Using this infrastructure will allow U.S. forces to do more and do it more quickly.
- *Defend What is Depended On.* Most commercial infrastructure is not well protected against physical or information attack. While this problem is mitigated by the sheer profusion of infrastructure, some critical nodes may have to be secured.
- *Connect With Friends.* The System of Systems--the emerging U.S. federation of sensors, switches, and processors--is becoming a core competence of its military. Careful attention needs to be given to enhance adaptiveness and create links to core partners, civilian agencies, and even transition states.
- *Never Stop Learning.* The DoD needs to evolve concepts and tactics more quickly than any adversary can evolve countermeasures. Every core competence should be continuously and critically examined. To deal with an uncertain world, doctrine must always be challenged for relevance.

This line of reasoning has two important implications for planning U.S. forces and their role in the world. First, although those forces are designed for *operational* contingencies mainly involving rogue states (in the case of MTWs) and failed states (SSCs), their role vis-a-vis the main U.S. core partners and transition states has profound *strategic* importance. Second, and related, how U.S. military superiority is presented to both partners and transition states is a crucial and delicate matter. In neither case is it helpful to suggest that the goal of the United States is to maintain primacy relative to them.

What, then, is a sound rationale for maintaining superior U.S. military capabilities? Promoting and protecting the norms and interests of the core present a major challenge for the United States as it approaches the new century, arguably as great as the challenge it faced in 1945. Superior military capabilities are a necessary, though not a sufficient, condition for the United States to fulfill this purpose. By the same logic, maintaining the capacity to promote and protect this equity against plausible threats--such as, projecting power when and where needed, even against WMD-armed rogues--is a reasonable standard for U.S. military sufficiency.

It is a standard that does not necessarily require treating the growth in the power of others as a challenge--only if their actions threaten the U.S. stake (its interests and norms). This is both the most principled and most practical way of dealing with the rise of China. It does not mean that the United States is determined to frustrate China's goal of becoming more powerful, but it does mean that the United States will maintain an ability and, if need be, will act to protect its own stake in the world. Moreover, because U.S. partners share the interests and norms that comprise that stake, making it theirs, too, the United States should regard the growth of their power, and of course their responsibilities, as desirable, not somehow threatening to its standing. In this sense, superior U.S. military capabilities are not intended to preserve a pecking order but to advance increasingly shared purposes. The U.S. motivation is thus quite the opposite of hegemonic.

In practice, as this volume has emphasized, U.S. military power is all the more likely to be accepted and thus useful in promoting U.S. interests and norms if the United States actively *engages* that power cooperatively, e.g., to promote coalitions in the core, to help transition states reform, and to encourage an understanding that U.S. power is threatening only to those that threaten the U.S. stake. Such a concept for overseas deployments, and for environment shaping in general, dovetails with American purposes and with the world of fluid challenges and opportunities.

The U.S. Stake in the World

| Interests | Norms |
|---|---|
| Cohesion and improved burden-sharing among partners | Nonaggression, peaceful conflict resolution |
| Completed reform and integration of states in transition | The rule of law in the functioning of the world economy and other transnational endeavors |
| Weakening and peaceful disappearance of rogues (state and non-state) | Respect for the rights, equality and freedoms of all human beings' endeavors |
| Broad international responsibility to relieve the human suffering and transnational threats from failing states | Collective responsibility for international security |

In closing, the QDR is a significant and timely departure from a way of thinking about the need for U.S. military capabilities that has served well in the past but is no longer right--namely, reliance on a known enemy (or two) to motivate both plans and public support for U.S. forces. This is a hard habit to break. But with the possibility of North Korea disappearing as a threat if not as a state, the habit is best broken now. The United States does not require an enemy to justify maintaining and improving its military capabilities. Those who believe that it does would either slash U.S. defense spending or find a new enemy, neither one being the right course for national security. Rather, the United States needs forces, with the qualities discussed in this volume, mainly because *globalization* increases the U.S. stake in the world while also placing more destructive means within reach of any number of states and other actors that could threaten that stake. The United States needs forces able to respond to the current security environment, to prepare for a

less secure world, and to help shape a commonwealth of security and freedom.

Global Engagement of U.S. Forces: A New and Enduring Rationale

The United States has a fundamental stake in the vitality, security, and expansion of the world's democratic, free-market core. To protect its stake, and as the leading partner of this core, the United States must engage its forces internationally in peacetime, even as they are kept ready for war.

By engaging abroad, U.S. forces can improve the compatibility of allied forces, thus building stronger partnerships, better burden sharing, and political cohesion within the core. They can also encourage reform and cooperation among states in transition--partners-to-be--including China and Russia. They can deploy rapidly to deter attacks by rogue states, improve multilateral responses to genocide and other humanitarian disasters in failing states, and develop cooperative solutions to transitional threats.

In light of these purposes, and the fact that U.S. forces cannot be kept everywhere they might someday be needed, most of those stationed abroad should be in Europe and East Asia (where most are anyway, as a legacy of the Cold War). There they can readily engage core partners (NATO allies, Japan, and Korea) as well as key transition states (Russia and China). Thus, in Europe and East Asia, U.S. forces can both strengthen and extend the core.

From bases in these regions, U.S. forces can be projected into areas where dangers to the core from rogue states and failed states are greatest, especially in the Middle East and Africa. And by virtue of their engagement in Europe and East Asia, they can be supported and joined by the forces of core partners, thereby sharing the burden and risk now faced by the United States.

Because the world has become so fluid, it is now essential for U.S. forces to interact regularly and intensively with those of core partners and increasingly with those of transition states. In light of this, and the fact that the United States can move its forces with great speed, the static presence and precise size of U.S. forces overseas are becoming less important than how actively they engage and what they do.

Part 1 Terrorism Defined

The DOD definition of terrorism is "the calculated use of violence or the threat of violence to inculcate fear; intended to coerce or to intimidate governments or societies in the pursuit of goals that are generally political, religious, or ideological."

This definition was carefully crafted to distinguish between terrorism and other kinds of violence. The act of terrorism is defined independent of the cause that motivates it. People employ terrorist violence in the name of many causes. The tendency to label as terrorism any violent act of which we do not approve is erroneous. Terrorism is a specific kind of violence.

The official definition says that terrorism is calculated. Terrorists generally know what they are doing. Their selection of a target is planned and rational. They know the effect they seek. Terrorist violence is neither spontaneous nor random. Terrorism is intended to produce fear; by implication, that fear is engendered in someone other than the victim. In other words, terrorism is a psychological act conducted for its impact on an audience.

Finally, the definition addresses goals. Terrorism may be motivated by political, religious, or ideological objectives. In a sense, terrorist goals are always political, as extremists driven by religious or ideological beliefs usually seek political power to compel society to conform to their views. The objectives of terrorism distinguish it from other violent acts aimed at personal gain, such as criminal violence. However, the definition permits including violence by organized crime when it seeks to influence government policy. Some drug cartels and other international criminal organizations engage in political action when their activities influence governmental functioning. The essence of terrorism is the intent to induce fear in someone other than its victims to make a government or other audience change its political behavior.

Terrorism is common practice in insurgencies, but insurgents are not necessarily terrorists if they comply with the rules of war and do not engage in those forms of violence identified as terrorist acts. While the legal distinction is clear, it rarely inhibits terrorists who convince themselves that their actions are justified by a higher law. Their single-minded dedication to a goal, however poorly it may be articulated, renders legal sanctions relatively ineffective. In contrast, war is subject to rules of international law. Terrorists recognize no rules. No person, place, or object of value is immune from terrorist attack. There are no innocents.

This situation did not always prevail. Throughout history, extremists have practiced terrorism to generate fear and compel a change in behavior. Frequently, terrorism was incidental to other forms of violence, such as war or insurgency. Before the nineteenth century, terrorists usually granted certain categories of people immunity from attack. Like other warriors, terrorists recognized innocents-- people not involved in conflict. Terrorists usually excluded women, children, and the elderly from target lists. For example, in late nineteenth-century Russia, radicals planning the assassination of Tsar Alexander II aborted several planned attacks because they risked harming innocent people. Old-school terrorism was direct; it intended to produce a political effect through the injury or death of the victim.

The development of bureaucratic states led to a profound change in terrorism. Modern governments have a continuity that older, personalistic governments did not. Terrorists found that the death of a single individual, even a monarch, did not necessarily produce the policy changes they sought. Terrorists reacted by turning to an indirect method of attack. By the early twentieth century, terrorists began to attack people previously considered innocents to generate political pressure. These indirect attacks create a public atmosphere of anxiety and undermine confidence in government. Their unpredictability and apparent randomness make it virtually impossible for governments to protect all potential victims. The public demands protection that the state cannot give. Frustrated and fearful, the people then demand that the government make concessions to stop the attacks.

Modern terrorism offers its practitioners many advantages. First, by not recognizing innocents, terrorists have an infinite number of targets. They select their target and determine when, where, and how to attack. The range of choices gives terrorists a high probability of success with minimum risk. If the attack goes wrong or fails to produce the intended results, the terrorists can deny responsibility.

Ironically, as democratic governments become more common it may be easier for terrorists to operate. The terrorist bombings of the New York City World Trade Center and the Oklahoma City Federal Building prove how easy it is for terrorists to operate in a free and democratic society. Authoritarian governments whose populace may have a better reason to revolt may also be less constrained by requirements for due process and impartial justice when combatting terrorists.

As commanders and staffs address terrorism, they must consider several relevant characteristics. First is that anyone can be a victim. (Some terrorists may still operate under cultural restraints, such as a desire to avoid harming women, but the planner cannot count on that. Essentially, there are no innocents.) Second, attacks that may appear to be senseless and random are not. To the perpetrators, their attacks

make perfect sense. Acts such as bombing public places of assembly and shooting into crowded restaurants heighten public anxiety. This is the terrorists' immediate objective. Third, the terrorist needs to publicize his attack. If no one knows about it, it will not produce fear. The need for publicity often drives target selection; the greater the symbolic value of the target, the more publicity the attack brings to the terrorists and the more fear it generates. Finally, a leader planning for combatting terrorism must understand that he cannot protect every possible target all the time. He must also understand that terrorists will likely shift from more protected targets to less protected ones. This is the key to defensive measures.

[Top](#)

Part 2

The Terrorists

Terrorists are inspired by many different motives. Students of terrorism classify them into three categories: rational, psychological, and cultural. terrorist may be shaped by combinations of these.

Rational Motivation

The rational terrorist thinks through his goals and options, making a cost-benefit analysis. He seeks to determine whether there are less costly and more effective ways to achieve his objective than terrorism. To assess the risk, he weighs the target's defensive capabilities against his own capabilities to attack. He measures his group's capabilities to sustain the effort. The essential question is whether terrorism will work for the desired purpose, given societal conditions at the time. The terrorist's rational analysis is similar to that of a military commander or a business entrepreneur considering available courses of action.

Groups considering terrorism as an option ask a crucial question: Can terrorism induce enough anxiety to attain its goals without causing a backlash that will destroy the cause and perhaps the terrorists themselves? To misjudge the answer is to risk disaster. Recent history offers examples of several groups that had apparently good prospects for success which paid the price of misjudging reaction to terrorism. In the early 1970s, the Tupamaros in Uruguay and the ERP (People's Revolutionary Army) and Montoneros in Argentina misjudged a hostile popular reaction to terrorism. They pushed the societies beyond their threshold of tolerance and were destroyed as a result. The same is true of several groups operating in Turkey in the late 1970s and, possibly, several Mafiosi families in Italy in the 1990s.

Psychological Motivation

Psychological motivation for terrorism derives from the terrorist's personal dissatisfaction with his life and accomplishments. He finds his *raison d'être* in dedicated terrorist action. Although no clear psychopathy is found among terrorists, there is a nearly universal element in them that can be described

as the "true believer."² Terrorists do not even consider that they may be wrong and that others' views may have some merit. Terrorists tend to project their own antisocial motivations onto others, creating a polarized "we versus they" outlook. They attribute only evil motives to anyone outside their own group. This enables the terrorists to dehumanize their victims and removes any sense of ambiguity from their minds. The resulting clarity of purpose appeals to those who crave violence to relieve their constant anger. The other common characteristic of the psychologically motivated terrorist is the pronounced need to belong to a group. With some terrorists, group acceptance is a stronger motivator than the stated political objectives of the organization. Such individuals define their social status by group acceptance.

Terrorist groups with strong internal motivations find it necessary to justify the group's existence continuously. A terrorist group must terrorize. As a minimum, it must commit violent acts to maintain group self-esteem and legitimacy. Thus, terrorists sometimes carry out attacks that are objectively nonproductive or even counterproductive to their announced goal.

Another result of psychological motivation is the intensity of group dynamics among terrorists. They tend to demand unanimity and be intolerant of dissent. With the enemy clearly identified and unequivocally evil, pressure to escalate the frequency and intensity of operations is ever present. The need to belong to the group discourages resignations, and the fear of compromise disallows their acceptance. Compromise is rejected, and terrorist groups lean toward maximalist positions. Having placed themselves beyond the pale, forever unacceptable to ordinary society, they cannot accept compromise. They consider negotiation dishonorable, if not treasonous. This may explain why terrorist groups are prone to fracturing and why the splinters are frequently more violent than their parent group.

The Jewish experience in Palestine is a classic example of splintering. In 1931, Haganah B broke from Haganah; in 1936, Irgun Svai Leumi split from Haganah B; and in 1940, Lochangei Herut Israel, or the Stern Gang, broke from Irgun. Each successive group was more rigid and violence-prone than its parent.

The psychodynamics also make the announced group goal nearly impossible to achieve. A group that achieves its stated purpose is no longer needed; thus, success threatens the psychological well-being of its members. When a terrorist group approaches its stated goal, it is inclined to redefine it. The group may reject the achievement as false or inadequate or the result of the duplicity of "them." Nicaragua's Recontras, The Basque ETA (Euskadi Ta Askatasuna, "Basque Fatherland and Liberty"), and many Palestinian radical groups apparently suffer from fear of success. One effective psychological defense against success is to define goals so broadly that they are impossible to achieve. Even if the world proclaims the success of a political movement, the terrorists can deny it and fight on.

Cultural Motivation

Cultures shape values and motivate people to actions that seem unreasonable to foreign observers. Americans are reluctant to appreciate the intense effect of culture on behavior. We accept the myth that rational behavior guides all human actions. Even though irrational behavior occurs in our own tradition, we seek to explain it by other means. We reject as unbelievable such things as vendettas, martyrdom,

and self-destructive group behavior when we observe them in others. We view with disbelief such things as the dissolution of a viable state for the sake of ethnic purity when the resulting ministates are economically anemic.

The treatment of life in general and individual life in particular is a cultural characteristic that has a tremendous impact on terrorism. In societies in which people identify themselves in terms of group membership (family, clan, tribe), there may be a willingness to self-sacrifice seldom seen elsewhere. (Note, however, that American soldiers are less surprised at heroic sacrifice for one's military unit; the difference among cultures is in the group with which one identifies.) At times, terrorists seem to be eager to give their lives for their organization and cause. The lives of "others," being wholly evil in the terrorists' value system, can be destroyed with little or no remorse.

Other factors include the manner in which aggression is channeled and the concepts of social organization. For example, the ambient level of violence is shaped by the political structure and its provisions for power transfer. Some political systems have no effective nonviolent means for the succession to power. A culture may have a high tolerance for nonpolitical violence, such as banditry or ethnic "turf" battles, and remain relatively free of political violence. The United States, for example, is one of the most violent societies in the world. Yet, political violence remains an aberration. By contrast, France and Germany, with low tolerance for violent crime, have a history of political violence.

A major cultural determinate of terrorism is the perception of "outsiders" and anticipation of a threat to ethnic group survival. Fear of cultural extermination leads to violence which, to someone who does not experience it, seems irrational. All human beings are sensitive to threats to the values by which they identify themselves. These include language, religion, group membership, and homeland or native territory. The possibility of losing any of these can trigger defensive, even xenophobic, reactions.

Religion may be the most volatile of cultural identifiers because it encompasses values deeply held. A threat to one's religion puts not only the present at risk but also one's cultural past and the future. Many religions, including Christianity and Islam, are so confident they are right that they have used force to obtain converts. Terrorism in the name of religion can be especially violent. Like all terrorists, those who are religiously motivated view their acts with moral certainty and even divine sanctions. What would otherwise be extraordinary acts of desperation become a religious duty in the mind of the religiously motivated terrorist. This helps explain the high level of commitment and willingness to risk death among religious extremist groups.

[Top](#)

Part 3 Organization

Terrorists organize to function in the environments where they carry out their acts. Organizational

details are situation-specific. There are, however, a few general organizational principles. Because terrorists must operate in a hostile environment, security is their primary concern. Security is best served by a cellular structure in which members do not know and cannot identify more than a few of their colleagues in the event of capture or defection. Defection is rare in most groups; defectors or even dissenters are frequently killed or maimed. Yet, terrorists are not immune to human weaknesses. Unless they are united by a charismatic leader, terrorists are affected by group dynamics that produce both problems and opportunities for security forces. Opportunities arise because internal dissension causes security leaks; problems arise because operational patterns may change as different factions prevail.

Terrorist groups that are not supported by a government usually create a support structure of sympathizers and people who have been coerced into helping them. The support structure may comprise active and passive members. It furnishes the active terrorists with logistic support, intelligence, dissemination of propaganda, recruiting, and money.

Terrorist recruitment and training are, predictably, security-sensitive. Among groups that are not ethnic-based, the usual sources of recruits are high school and college students who show commitment to the cause. Ethnically based terrorist groups recruit new members personally known to them, people whose backgrounds are known and who often have family ties to the organization. Intelligence penetration of organizations recruited in this way is extremely difficult.

Terrorist training varies considerably. Those with military experience or who have received prolonged training at sophisticated facilities are the equals of most state security forces. At the other end of the spectrum are "throw away" operatives who get little more than inspirational talks before being activated. Typical training includes instruction in the use of small arms and explosives along with intelligence collection and indoctrination in the group's cause.

Contemporary terrorist actions include the traditional assassinations, bombings, arson, hostage-taking, hijacking, kidnapping, seizure and occupation of a building, attacks on a facility, sabotage, and perpetration of hoaxes. Newer categories of operations include ecological terrorism and the still largely potential "high-tech" terrorism using nuclear, biological, and chemical (NBC) weapons and materials. Target selection considerations are equally diverse but include the target's value in terms of its contribution to group goals, its accessibility given group capabilities, and the purpose of the attack, such as to gain attention, collect resources, eliminate a threat, or demonstrate a capability. All these factors are reflected in the group's organization and training.

Part 4

Combatting Terrorism

Terrorism involves two sets of actions to oppose terrorism: antiterrorism (defensive measures) and

counterterrorism (offensive measures). Antiterrorism is defined as "defensive measures used to reduce the vulnerability of individuals and property to terrorist acts, to include limited response and containment by local military forces." Counterterrorism involves those offensive measures taken to prevent, deter, and respond to terrorism. Counterterrorism programs, which will not be addressed here, are classified and addressed in various national security decision directives, national security directives, and contingency plans. This publication addresses only antiterrorism.

Combatting Terrorism and the Principles of Stability and Support Operations

The principles of stability and support operations offer guidance about the range of combat and noncombat operations in peace and conflict. In the following paragraphs, these requirements for success are applied to various aspects of combatting terrorism.

Objective

The general objective of combatting terrorism programs is neutralizing terrorist groups. As in most stability and support operations, neutralization in this context means rendering the source of threat benign, not necessarily killing the terrorists. In antiterrorism, the objective can be further refined as preventing attacks and minimizing the effects if one should occur. It includes any action to weaken the terrorist organization and its political power and to make potential targets more difficult to attack. Counterterrorism includes spoiling action, deterrence, and response.

Unity of Effort

As in all stability and support operations, interagency action is required to combat terrorism. Unity of effort requires ways to integrate the actions of various responsible agencies of the US and foreign governments. Intelligence is particularly important and sensitive. International cooperation in combatting terrorism has advanced to the point at which it is not unusual for a deployed US Army unit to interact with several US government intelligence agencies which, in turn, are interacting with multiple international systems. An Army unit is also likely to have close intelligence relations with host country military and civilian agencies.

Unfortunately, it is easier to prescribe unity of effort than to achieve it. In circumstances where multiple police and intelligence agencies have vague and overlapping charters and jurisdictions, friction is bound to occur. As in other aspects of stability and support operations, the solution lies in negotiation and consensus-building. Fortunately, experience has proved that cooperation at the local unit or installation level is relatively easy to obtain.

Legitimacy

Legitimacy is not usually a problem in combatting terrorism since the right of self-defense is universally

recognized and, as indicated above, terrorist acts are crimes in peace, conflict, or war. Security forces might bring their legitimacy into question by failing to distinguish between those perpetrating, aiding, or abetting terrorism and others who might sympathize with their cause but do not engage in violent acts. Failure to consider proportionality can also tarnish the American image of legitimacy. An overreaction that results in the avoidable deaths of hostages while security forces are attempting to neutralize terrorists, for example, raises questions of judgment as well as the legitimacy of the undertaking.

Patience and Perseverance

Patience and perseverance are the hallmarks of successful programs to combat terrorism. In any country or region, there are few terrorists relative to the population. Identifying and capturing them is difficult and entails tedious police and intelligence work. It is filled with frustration. Antiterrorism efforts are also low-key and inglorious, requiring patience and running contrary to American culture. Perhaps the most irritating aspect of defense against terrorism is that success is hard to identify. For example, if there is no incident, it may be because the defensive measures are effective. On the other hand, it is equally likely that the terrorists never intended to attack in the first place. Rarely will success be measurable, but defensive efforts must continue.

Restraint

Restraint is necessary to both objective and legitimacy in the context of combatting terrorism. Premature action against individuals, for example, can be counterproductive if it interferes with developing intelligence in depth that might neutralize an entire terrorist group. Similarly, overreaction, such as imposing severe populace and resource control measures, can undermine legitimacy and unnecessarily irritate the civilian populace.

Security

Security is the most obvious requirement in combatting terrorism. Terrorists rely on surprise and the victim's confusion at the time of an incident. Antiterrorism involves physical security, operational security (OPSEC), and the practice of personal protective measures by all personnel. Commanders and staffs must plan their response to terrorist threats and incidents. Combatting terrorism is an aspect of force protection and is the responsibility of commanders at all echelons at all times. Properly planned and executed, the Army antiterrorism program will reduce the probability of surprise while discouraging attack by raising the risk to the attackers.

In combatting terrorism, intelligence is extraordinarily important. The essential elements of information (EEI) differ somewhat from those normally found in traditional combat situations. In addition to the terrorists' strength, skills, equipment, logistic capabilities, leader profiles, source of supply, and tactics, more specific information is needed. This includes the groups' goals, affiliations, indication of their willingness to kill or die for their cause, and significant events in their history, such as the death of

martyrs or some symbolic event. The specific EEI are particularly important because most terrorist groups are interested in symbolically significant targets rather than in targets that would be operationally more damaging to US forces. For example, a communications center is operationally significant, but a terrorist interested in publicity to influence US policy might find a few off-duty personnel or a motor pool more appealing and probably less protected. Unless terrorists' specific interests are known, predicting the likely target is pure chance.

[Top](#)

Part 5 US Policy

Until the 1980s, the US government, like most other Western governments, considered terrorism to be primarily a police matter. The seizure of the US embassy in Teheran and subsequent car and truck bomb attacks on our facilities in Lebanon forced us to reevaluate that position. Current US policy regarding terrorism encompasses acts against Americans at home and abroad.

The United States considers all terrorist acts criminal and intolerable and condemns them without regard for their motivation. The United States will support all lawful measures to prevent terrorism and bring perpetrators to justice. We will not make any concessions to terrorist blackmail because to do so will merely invite more terrorist actions. (No concessions does not mean no negotiations.)

DOD has identified five threat levels to standardize reporting. They are based on terrorists' existence, capability, intentions, history, targeting, and the security environment. The five levels are described below:

- * Critical, which means that a terrorist group has entered the country or is able to do so. It has the capability to attack and is engaged in target selection. Its history and intentions may or may not be known.
- * High indicates that a terrorist group exists which has the capability, history, and intention to attack.
- * Medium describes the same conditions as high except that intentions are unknown.
- * Low is a situation in which terrorist groups exist and have a capability to attack. Their history may or may not be known.
- * Negligible describes a situation in which the existence or capability of terrorist groups may or may not be present.

Threat levels are not the same as threat conditions (THREATCON); the latter are a matter of command decision that implements countermeasures. THREATCONs and actions to implement them are described in AR 525-13 (1992), Joint Pub 3-07.2 (1993), and DOD Directive 2000.12 (1990).

[Top](#)

Part 6

Future of Terrorism

Political violence will characterize the last years of this century and the early decades of the twenty-first century. One prominent form will be the practice of terrorism. The universal availability of weapons, explosives, and technologically sophisticated timing and triggering devices, along with the global communication revolution, adds to the terrorists' capabilities. Increased capabilities include coordinated, nearly simultaneous attacks in several countries, fax death threats, and comparison of target lists by computer. Concurrently, intrastate conflicts, political uncertainty, and growth of ethnic challenges to the administrative state are weakening the states' security capabilities. Coupled with the increasing porosity of state borders, these trends are making it easier for the terrorist and his supporters to move anywhere in the world with little chance of being apprehended or even identified.

Future terrorism is likely to include higher than ever levels of violence. Hijackings, kidnappings, and drive-by shootings will continue, but their shock effect has decreased with familiarity. Since terrorists need publicity to inspire fear, familiarity causes them to seek more unusual events that capture and hold public attention.

The March 1993 bombing of the World Trade Center in New York City may be typical of future terrorist attacks. If the bombing had gone as planned by the perpetrators, there might have been thousands of deaths. There was also a conspiracy to attack symbolic landmarks, including the Holland Tunnel and the United Nations headquarters, in and around New York that would have affected thousands of people and caused millions in property damage. It is not difficult to imagine the psychological effect of these types of attacks on the U.S. public.

Although technology aids in the defense against terrorism, it also provides terrorists with increased opportunities. Terrorists can operate in cyber space to destroy or manipulate information for their own purposes. Skilled "hackers" with terrorist intent can access all but the most secure data banks, stealing or changing information, or destroying it. This gives them the potential, for example, of manipulating the stock market for their own profit or to precipitate inflation or depression. There is evidence of large-scale counterfeiting of American currency to purchase weapons. This could cause serious economic disruption. Access to police and other security files can keep terrorists one step ahead of their government opponents.

Terrorists can follow the example of Iraq's Saddam Hussein and create ecological disasters by starting fires and causing chemical spills. For example, the forests of the American Northwest are vulnerable to arson. Seeking more spectacular attacks, terrorists may poison water supplies or blow up dams and levees. Chemical weapons have become increasingly powerful and easy to produce. Triggering devices have become more sophisticated. The potential for using weapons of mass destruction, including biological and nuclear material, exists.

Parallel to these ominous developments favoring the terrorist is a disturbing trend to resort to violence for an ever-widening range of causes. Terrorism is practiced on a global scale in support of criminal business initiatives, various social issues (for example, environmental and antiabortion extremists), ethnic conflicts (ranging from US street gangs to conflicts in Central Africa and South Asia), religious interpretation, traditional political power struggles, and insurgencies. Combined, these factors bode ill for the future and demand the attention of military commanders.

US military personnel will continue to be targets for terrorists for the same reason they have in the past. Collectively and individually, they symbolize US power. While no one will challenge the United States on the conventional battlefield in the foreseeable future, terrorist acts are likely to be the preferred form for expressing hostility toward the remaining superpower. Relative to the other forms of political violence, terrorism remains cheap and successful regarding limited objectives and carries low risk to the perpetrator. The activities that are likely to engage US military personnel in the near future occur in situations favorable to terrorism. These include peace operations; humanitarian assistance; and foreign internal defense where governments have failed, ethnic conflict prevails, widespread banditry exists, and weapons are readily available.

Terrorism constitutes a threat in all stability and support operations. The deployed forces' good intentions will not preclude terrorist actions to thwart US national objectives. An effective antiterrorism program will reduce the likelihood of successful terrorist attacks but only if it is so deeply instilled that it is habitual.

[Top](#)

Part 7

Trends in Terrorism

Politically motivated violence continues to find practitioners in established terrorist organizations, as well as in new and evolving groups. Old and undiminished enmities remain, like those in the Middle East, Turkey and the Punjab, as do associated terrorist groups, sponsors and international links. The growth of Islamic extremism, hostilities in the Balkans, conflict in a number of former Soviet republics, and turmoil in other areas represent some of the factors spawning new terrorist threats.

The terrorism of today is complex, with diminishing emphasis on formalized group structure. This is particularly true in the case of the less clearly defined threat rooted in extremist Islamic fundamentalism, identified in the World Trade Centre bombing and related events in the Philippines. The ad hoc, individualistic nature of those who form the amorphous membership is in direct contrast to more established terrorist groups.

The terrorists of today are often more sophisticated than their predecessors. Globally mobile and knowledgeable about communications, explosives technology and computers, they have contacts around the world. Their activities and targets are difficult to predict. The use of technology, always part of the

terrorist arsenal, now has been augmented by encryption and the Internet to facilitate communication and to reach a wider audience.

The technology of terrorism is becoming more accessible, but the gun and the bomb retain their favoured status in terrorist attacks. An emerging concern, however, is the possibility of weapons of mass destruction being obtained or constructed by terrorist groups, including chemical and biological agents or nuclear weaponry.

Recent terrorist incidents, like the Oklahoma City bombing and the Tokyo subway nerve agent attack, indicate a disturbing trend toward less discriminate attacks and higher casualty rates. As the millennium approaches, more groups with an apocalyptic view of the world may emerge-adding yet another disconcerting element to an already uncertain and volatile environment.

The following trends suggest the threat of terrorism has not abated.

- Nationalism and ethnic unrest remain primary motivators for terrorist activity. Terrorism associated with the Middle East Peace Process and with efforts to resolve the situation in Northern Ireland are two key examples.
- Religious extremism continues to be a primary and growing source of terrorism. The experience of the World Trade Centre and related events signal new dangers in a less defined terrorist threat with roots in extremist Islamic fundamentalism. Evidence points to extremists who are bound together by hatred of things Western, especially American, and the existence of Israel. Many are Mujahedin-hardened veterans of the Afghan and Bosnian conflicts.
- The Aum Shinrikyo attack in Tokyo is seen as the crossing of a threshold, opening the possibility that other terrorist groups may resort to attacks using weapons of mass destruction or may plan attacks to inflict maximum casualties.
- Although ideologically-driven terrorism has subsided, it is not a thing of the past; left-wing groups with a history of terrorism remain active in some countries. Particularly worrisome is the growth of right-wing extremism, which feeds on economic dislocation and reaction to patterns of migration.
- State-sponsorship of terrorism persists, providing much-needed logistical support for terrorist groups. Terrorist training centres continue to exist in the Middle East and North Africa.
- Terrorist methods continue to become more sophisticated, both in terms of technology and the exploitation of public opinion and media channels.

[Top](#)

Part 8

The Canadian Picture

Terrorism is not a phenomenon unique to the modern era. Viewed from an historical perspective, examples of terrorist behaviour are abundant. The Jewish Zealots

conducted a campaign of terror against the Romans in the first century AD; a Shi'ia Muslim sect known as the *Hashshashin*, which gave literal meaning to the word assassin in English, systematically murdered those in positions of leadership and influence in the eleventh century. The advent of modern terrorism as we know it appeared in the early 1960s, with 1968 marking the beginning of international terrorist incidents.

With the explosion of extremist groups and incidents in the 1970s, terrorism ceased to be an abstract force sowing its horror only in faraway lands. Canada and Canadians were no longer observers.

- An Armenian terrorist group claimed responsibility for the attempted assassination of the Turkish Commercial Counsellor, Hani Gungor, in Ottawa on April 8, 1982. Four months later, a second group claimed success when the Turkish Military Attaché, Colonel Altikat, was assassinated on August 27, 1982.
- Members of *Direct Action* bombed a Litton Industries plant in Toronto on October 14, 1982. The explosion injured ten persons, three of them seriously, and caused damage estimated at \$3.87 million.
- Three members of the Armenian Revolutionary Army killed a private security guard and occupied the Turkish Embassy in Ottawa on March 12, 1985.
- Sikh terrorists allegedly planted bombs on airliners within Canadian borders in 1985. These actions led to a combined total of 331 deaths in the downing of an Air India flight off the coast of Ireland and an explosion in the baggage handling area of Japan's Narita Airport.
- On May 25, 1986, a visiting Punjab cabinet minister was the target of an assassination attempt when his car was forced to stop by four men in Gold River, BC. Wounded by bullets in the chest and arm, he feigned death and his attackers fled.
- Members of the *Jamaat ul Fuqra* were arrested on October 3, 1991, in connection with a plot to bomb a Hindu temple, a movie theatre, and an East Indian restaurant in Toronto.
- The Iranian Embassy in Ottawa was stormed and briefly occupied by members of the anti-regime organization *Mujahedin-e-Khalq* (MEK) on April 5, 1992. The Iranian Ambassador was slightly injured in a struggle with one of the assailants during the attempted take-over.
- Letter bombs were sent to a scientist at the Alberta Genetics laboratory on July 11, 1995, and to the Mackenzie Institute in Toronto on July 13, 1995.

The threat to Canadians and Canadian interests abroad from international terrorism continues to be largely a matter of being "in the wrong place at the wrong time." In terms of Canada, the threat is principally associated with homeland issues. Persons residing in Canada with links to international or former homeland domestic groups engage in a wide range of support activities, including providing safe haven, logistical support for operations, fund raising, and the procurement of weapons and materiel.

A number of the world's better-known terrorist groups have a presence in Canada, where they engage in a variety of ongoing activities in support of terrorism, including:

- procuring and supplying logistical support for terrorist operations outside of Canada;
- developing and maintaining logistical support necessary to commit a terrorist act in Canada;
- fund raising;
- propagandizing and disseminating disinformation in support of their causes;
- coercing and manipulating immigrant communities;
- providing safe havens for terrorists;
- facilitating transit to and from the United States and other countries;
- and smuggling immigrants, and other illegal activities.

The foregoing are some of the immediate and future threats which face the democratic community despite progress in combatting terrorism. Well-established democracies such as Canada have inner strengths, but must be cognizant of terrorism's attempt to prompt a draconian response and to undermine the rule of law. Western democracies must remain vigilant and cooperative in their efforts to combat the insidious inroads of terrorism.

Part 9

International Measures

(from Canada's point of view)

Canada is an active participant in international fora established to fight terrorism.

In August 1995, Canada participated in a conference on terrorism in Buenos Aires together with the United States, Argentina, Paraguay, Uruguay, Brazil and Chile.

In December 1995, ministers from the G-7 countries and Russia (P-8) attended a conference in Ottawa to discuss ways of combatting terrorism. The conference culminated in the Ottawa Declaration, a series of measures to increase international collaboration in combatting terrorism. The Ottawa Declaration urges all states:

- to refuse substantive concessions to hostage takers, to ensure those responsible are brought to justice, and to join existing international treaties on terrorism by the year 2000;
- to promote enhanced mutual legal assistance, extradition and intelligence-sharing on terrorism;
- to pursue measures to prevent terrorist use of nuclear, chemical and biological materials;
- to inhibit the movement of terrorists and falsification of documents;
- to strengthen counter-terrorism cooperation in maritime, air and other transportation sectors;
- to counter terrorist attacks against public facilities and infrastructure;
- to deprive terrorists of funds; and
- to increase counter-terrorism training.

In 1996, Canada reaffirmed its commitment toward greater cooperation between states in the fight against terrorism and participated in conferences on

counter-terrorism in the Philippines in February, the Summit of the Peacemakers in Sharm El Sheik, Egypt in March and another G-7 and Russia (P-8) conference in Paris in July.

TO PUT IT BLUNTLY

by

Pierre Rinfret

TRUTH & POLITICS: AN OXYMORON*!

oxymoron (ok'se-môr'on', -mor'-) noun

plural **oxymora** (-môr'?, -mor'?) or **oxymorons**

A rhetorical figure in which incongruous or contradictory terms are combined, as in a deafening silence and a mournful optimist. [Greek oxumoron from neuter of oxumoros, pointedly foolish : oxus, sharp. See oxygen + moros, foolish, dull.]

Excerpted from The American Heritage Dictionary of the English Language, Third Edition Copyright © 1992 by Houghton Mifflin Company. All rights reserved.

"If American politics does not look to you like a joke, a tragic dance; if you have enough blindness left in you, on any plea, on any excuse, to vote for the Democratic Party or the Republican Party (for at present machine and party are one), or for any candidate who does not stand for a new era,-then you yourself pass into the slide of the magic-lantern; you are an exhibit, a quaint product, a curiosity of the American soil. You are part of the problem." John Jay Chapman (1862-1933), U.S. author. *Practical Agitation*, ch. 7 (1898). The Columbia Dictionary of Quotations is licensed from Columbia University Press. Copyright © 1993, 1995, 1997, 1998 by Columbia University Press. All rights reserved.

There are 10 very good reasons why it is absolutely and completely impossible to EVER get political truth!

1. Complexity.

2. Versions.

3. Secrecy.

4. Executive agreements.

5. Disinformation.

6. The Media.

7. Public Relations.

8. Intentional lying by the political parties.

9. Stupidity and ignorance.

10. The people

1. Complexity.

This is the most complex society known to man. When the Congress passes a major bill such as the last tax increase in the Clinton administration you can be sure that not one single Senator or representative ever but ever read the entire bill.

That is right! Not one single Senator or Representative ever read the entire bill. The members of the House had only fragmentary knowledge of what the bill contained!

It consisted of over 1200 pages and it is all annotated so that it is **impossible to "read the tax bill".**

What was done was to pass changes in the previous bill, which passed changes in the previous bill, which passed changes in the previous bill, which passed changes in the previous bill

.....ad infinitum!

The bill would have read something like this:

"Article 35, section 10020, paragraph 513A, is amended so as to strike the words 'tax relief shall be granted.....' and will substitute in its place 'according to statute 34566 tax relief is granted to (article 456789) subparagraph 145.32.4, annotated in article 456, subparagraph 678, section 20001 [amended before the 78th Congress so as to read ' in accord with subsequent amendments'], the phrase 'oil losses', which phrase is defined by article 345 in section 453 of article 980 in accord with HR 1999."

Believe it or not that is how the laws read!

It is that way with most laws and most rulings at the Federal level, the state level, the county level and the Presidential office.

If you didn't know what the bill before the current one contained how can you know what this one contains?

[RETURN TO 10 REASONS](#)

2. Versions.

I used to go to Board of Directors meetings all the time. Minutes of the previous meeting were circulated for discussion. I never, in 30 years of being on about 15 Industrial Boards, ever once recognized the minutes of the meeting I attended!

I used to visit the President (of the United States) and it was the same story. Each and every member at that meeting had a different version of what went on at the meeting, who said what and what was the decision.

When you read the column of Bill Safire (if you must) remember he always has his own version which will be different from that of others.

My rule for versions is that "Recollections=members attended X 2 +1.

That translates into that "recollections equal 2 versions per member of the meeting plus one additional version".

The truth is in the eye and the convenience of the beholder!

[RETURN TO 10 REASONS](#)

3. Secrecy.

If you ever read a book about some one who has been in high level politics I am sure that you might have thought you were MOSTLY getting the facts, the truth.

What you are getting is the white washed version of the truth as told by some one who has a vested interest in the reception of the book and an even greater vested interest in the way history will treat him.

I knew George Shultz (former Secretary of State) in the Nixon years rather well. I knew Al Haig rather well.

I read both their biographies and did not recognize the person about whom the book was written!

Neither book (nor many others such as those of Bill Safire who is one BIG smart ass) recounted events I knew in detail in any way except to pile credit on the author. I now refuse to read any biography and put the old ones in the FICTION section of my library.

All biographies belong in the fiction files.

BUT THAT IS THE LEAST OF IT!

What no one ever ever talks about is that all these high level cabinet members could not tell the truth for the

very simple reason that they have sworn an oath of secrecy.

If they tell anything, anything at all, about important government matters they have committed treason and the penalty for treason is death!

The technique is simple:all important matters that might embarrass the United States are declared top secret and therefore no one but no one including all the Presidents can talk or reveal what they know. Did Jack Kennedy agree that the CIA should assassinate Fidel Castro the day after his trip to Dallas. Who knows? It is top secret!

When Harry Truman was President he designated a key word to initiate the founding of the CIA. To this day that key word is classified as **TOP SECRET!**

YOU GET TO KNOW WHAT THE AMERICAN GOVERNMENT WANTS YOU TO KNOW AND NO MORE.

THE PRESIDENT HAS A SECRET BUDGET REPORTED OR IMAGINED TO BE IN THE \$BILLIONS.

DOES ANYBODY KNOW THE AMOUNT?NO, NOT EVEN CONGRESS!

DOES ANYBODY KNOW WHAT HE DOES WITH THE MONEY? NO, NOT EVEN CONGRESS!

WHO KNOWS BUT THE PRESIDENT AND HE IS SWORN TO SECRECY!

"The advance planning and sense stimuli employed to capture a \$10 million cigarette or soap market are nothing compared to the brainwashing and propaganda blitzes used to ensure control of the largest cash market in the world: the Executive Branch of the United States Government."

Phyllis Schlafly (b. 1924), U.S. author, political activist. A Choice Not an Echo, ch. 1 (1964).The Columbia Dictionary of Quotations is licensed from Columbia University Press. Copyright © 1993, 1995, 1997, 1998

by Columbia University Press. All rights reserved.

[RETURN TO 10 REASONS](#)

4. Executive agreements

Have you ever even heard of the phrase?

Executive agreements are those agreements entered into with foreign nations which agreements are made exclusively by the President without the advice and consent of the Congress!

No one but no one has a known list of such agreements, what they entail, the commitments made for the United States, the money involved, the promises or the obligations! These are secret agreements made by Presidents committing the United States and no one but no one except the Executive Office knows what they entail!

I repeat: "No one but no one has a known list of such agreements, what they entail, the commitments made for the United States, the money involved, the promises or the obligations! These are secret agreements made by Presidents committing the United States and no one but no one except the Executive Office knows what they entail!"

"Case Act on Executive Agreements (1972)

Prior to 1972, the president could make international accords by executive agreement and, since only formal treaties constitutionally required the "advice and consent" of the Senate, the president did not even have to make Congress aware of such agreements. In a 1942 case (U.S. v. Pink), the Supreme Court had held that international executive agreements, while having the same legal status as treaties, did not require Senate approval. During the 1950s and 1960s, administrations from Eisenhower through Johnson, for example, made a series of executive agreements with the South Vietnamese government, yet Congress did not learn of their existence until 1969.

Passed by a Democratic Congress during the Nixon administration, the Case Act required the president, acting through the office of the Secretary of State, to inform the Senate within 60 days of any executive agreement. No restriction was placed on presidential powers to make such agreements. However, the notification requirement put Congress in a position to be able to vote to cancel executive agreements, or to refuse to fund their implementation. As an example, in 1973 President Nixon signed an executive agreement with South Vietnam promising that the United States would "respond with full force" to North Vietnamese violations of the Paris Peace Accord, which had ended American military involvement in the Vietnamese War. (Enlargement of type mine)"

Source: <http://hcl.chass.ncsu.edu/garson/dye/docs/caseact.htm>

If you think you or any congressman knows our foreign commitments then think again and again and again and again!

No one but no one knows to what we are committed!

[RETURN TO 10 REASONS](#)

5. Disinformation.

Everybody but everybody uses the technique of disinformation.

"disinformation (dais-in'f?r-m?sh?n) noun

1. Deliberately misleading information announced publicly or leaked by a government or especially by an intelligence agency in order to influence public opinion or the government in another nation:" Excerpted from The American Heritage Dictionary of the English Language, Third Edition Copyright © 1992 by Houghton Mifflin Company. Electronic version licensed from Lernout & Hauspie Speech Products N.V., further reproduction and distribution restricted in accordance with the Copyright Law of the United States. All rights reserved.

The advocates of a particular law or objection to a particular law are masters at disinformation. The technique of disinformation is to feed the public partial and highly biased and prejudiced information without it being apparent to the reader.

Disinformation must always have the ring of truth to it so that the listener believes what he is lead to believe. The problem of sorting out disinformation is that there is always a ring of truth.

The media are absolute masters at disinformation. The New York Times probably grinds out more disinformation than any newspaper in the United states but, its wholly owned company the BOSTON GLOBE, is becoming a master at it as well!

But the ultimate is the United States government and the politicians. They are the Lord of the "Universe of Disinformation"! They feed out partial truths which are accepted as absolute truths and that leads people away from further inquiry into the real truth.

Without getting into it the ultimate disinformation game in town right now is the Social Security hysteria with almost everybody engaged in one disinformation game or another. The people are being most subtly lied to and by both parties!

What does disinformation do? It leads you away from the awful truth! And you never but never know it!

"Disinformation is a word that came into use during the 1970s. It means a deliberate attempt by government to deceive by spreading mixtures of truth and lies. The word was coined in the Soviet Union about 1959, when a department was founded to spread false information in other nations. The tactics of disinformation are numerous. It can be as simple as getting a false news story printed in newspapers or spreading rumors by word of mouth. It may mean publishing misleading scientific and technical articles in official journals. Specialists in disinformation have used letters and other communications on official stationery with forged signatures. These are allowed to fall into the hands of government officials in one country to persuade them that another government is plotting against it. Sometimes disinformation is spread by organizations that are really fronts for political parties, special-interest groups, or for intelligence agencies." From Compton's Interactive Encyclopedia © 1998 The Learning Company, Inc."

I know about disinformation.

I did it for Kennedy, Johnson and Nixon. Some day I will write about how we took

the UK to the cleaners on a planted false story but what might interest you is here:
[JBC](#)

[RETURN TO 10 REASONS](#)

6. The Media.

The media is the worst. It is the ultimate low life and if you think you ever get the truth from the media then you believe in the tooth fairy.

They censor the news to fit into their political predilections. Never but never forget that!

They bend the news, warp the news, censor the news, lie about the news, create news, mislead about the news and fake the news.

The media are basically liars about anything and everything that does not suit their political inclinations; right or left, it is the same.

[RETURN TO 10 REASONS](#)

7. Public Relations.

Everybody, or so it seems that is in the public eye employs public relations firms. Johnson did, Kennedy did, Eisenhower did, Nixon did, Carter did, Reagan did. They all did and do!

"Public relations is a means of getting attention and shaping public opinion. It achieves its goals through publicity, advertising, the use of press agents, public affairs forums, lobbying public officials, and every other means that gets a message before the public. ... most PR is directed outward at the general public or special segments of it.... " From Compton's Interactive Encyclopedia © 1998 The Learning Company, Inc.

When you read those wonderful articles about a Senator, a Congressman, the Speaker of the House, the Minority leader in the house, in the Senate, the Majority leader in the Senate, the Majority leader in the House, the Governor of the State etc. etc. rest assured that the odds are that the article was both written and planted by a PR firm of major repute!

The PR firm is, of course, employed by the party on whom all the adulation falls. The Kennedy's always employed PR and never but never have stopped to this day. As did Ronald Reagan and Richard Nixon (although even PR could not overcome the shortcomings and paranoia of Richard Nixon).

When you read those wonderful articles about some politician what you are reading is what they have written about themselves!

Think about it:**does a fish monger ever sell bad fish on a Friday?**

[RETURN TO 10 REASONS](#)

8.Intentional lying by the political parties.

Entire political parties lieand frequently lie through their teeth. Both parties are currently lying about Social Security and about Medicare.

No member of Congress**DARES**to depart from the party line. If they do then (1) they are ostracized, (2) they will never get preferential congressional appointments, (3)they get short shrift from the part leaders in the Congress, (4) they lose the support of the National Party Committee and (5) they have dug their own grave.

The more ethical members of the two parties will not misinform the public about the lies**but neither will they correct the lies. They keep their mouths shut!**

The parties take a national position that suits their interests and lie about it as needed. When Dukakis ran against Ronald Reagan he was portrayed by the Republican party as easy on criminals and a case was cited about a parolee who went out to rape, again.

Dukakis (stupidly and foolishly) never denied it BUT THE WHOLE STORY WAS A LIE CONCOCTED BY THE REPUBLICAN PARTY. It destroyed Dukakis and he lost the election against George Bush.

Nixon accused Helen Gehagan Davis of being a member of the Communist part back in 1948. The Democrats tore him to pieces for the next 45 + years about a "false" accusation. When she died recently her estate admitted she had been a member of the Communist party!

Lies are a common technique of both the Republican and Democratic parties!

What astounds most people is that they find it hard to believe that an entire political party would lie.

But they do, and frequently, as necessary for their frequently phoney issues!

[RETURN TO 10 REASONS](#)

9. Stupidity and ignorance.

The sad fact of the matter is that more than a few politicians are just plain dumb!

They don't understand issues, they don't inform themselves very much, they don't read memoranda, they cannot carry on an enlightened discussion and they may have very little (if any) sense of history.

Most of the congress were trained as lawyers (memory says that about 75 percent of all Congressmen were lawyers) and so economics, finance and history are outside (far outside) their domain.

When it comes to economics, budgets, appropriations, forecasts etc. most of them are operating in the dark, the absolute dark.

They vote, not according to the information, but according to the party line. The Party more often than not does both their thinking and their analyses for them.

A good friend of mine whom I admire and respect is a most high level member of Congress. He once told me that he never read all the contents of any important bill before the Congress because "I have neither the time nor the comprehension necessary".

[RETURN TO 10 REASONS](#)

10. The people.

One of the key reasons that politicians do not tell the truth is that frequently (read that as 'most of the time') the truth is unbearable in matters of critical importance!

Silly?

What would have happened to the world if Franklin Delano Roosevelt said to the American people after the bombing of Pearl Harbor that " I ask for a declaration of war against Japan even though it will cost us 1 million killed American soldiers"

or if Ronald Reagan had said that "I have a way to destroy the Soviet Union. We will outspend them and it will mean we will have a deficit of about \$3 trillion to do it".

The blunt truth is unpalatable to most Americans.

They want the easy outs, no sacrifices, all peaches and cream costing nothing, nothing at all.

Life is a party, isn't it?

I know. I told the truth in the gubernatorial campaign of 1990 in New York and I got bombed for it. **No on but no one wanted to hear it!**

Politicians lie because the people tend to prefer it that way!

[RETURN TO 10 REASONS](#)

***This article is the result of an email I received which asked telling questions about truth in politics.**

Foreign Affairs July/August 1999 Issue

GIVE WAR A CHANCE

By Edward N. Luttwak

PREMATURE PEACEMAKING

An unpleasant truth often overlooked is that although war is a great evil, it does have a great virtue: it can resolve political conflicts and lead to peace. This can happen when all belligerents become exhausted or when one wins decisively. Either way the key is that the fighting must continue until a resolution is reached. War brings peace only after passing a culminating phase of violence. Hopes of military success must fade for accommodation to become more attractive than further combat.

Since the establishment of the United Nations and the enshrinement of great-power politics in its Security Council, however, wars among lesser powers have rarely been allowed to run their natural course. Instead, they have typically been interrupted early on, before they could burn themselves out and establish the preconditions for a lasting settlement. Cease-fires and armistices have frequently been imposed under the aegis of the Security Council in order to halt fighting. NATO's intervention in the Kosovo crisis follows this pattern.

But a cease-fire tends to arrest war-induced exhaustion and lets belligerents reconstitute and rearm their forces. It intensifies and prolongs the struggle once the cease-fire ends -- and it does usually end. This was true of the Arab-Israeli war of 1948-49, which might have come to closure in a matter of weeks if two cease-fires ordained by the Security Council had not let the combatants recuperate. It has recently been true in the Balkans. Imposed cease-fires frequently interrupted the fighting between Serbs and Croats in Krajina, between the forces of the rump Yugoslav federation and the Croat army, and between the Serbs, Croats, and Muslims in Bosnia. Each time, the opponents used the pause to recruit, train, and equip additional forces for further combat, prolonging the war and widening the scope of its killing and destruction. Imposed armistices, meanwhile -- again, unless followed by negotiated peace accords -- artificially freeze conflict and perpetuate a state of war indefinitely by shielding the weaker side from the consequences of refusing to make concessions for peace.

The Cold War provided compelling justification for such behavior by the two superpowers, which sometimes collaborated in coercing less-powerful belligerents to avoid being drawn into their conflicts and clashing directly. Although imposed cease-fires ultimately did increase the total quantity of warfare among the lesser powers, and armistices did perpetuate states of war, both outcomes were clearly lesser evils (from a global point of view) than the possibility of nuclear war. But today, neither Americans nor Russians are inclined to intervene competitively in the wars of lesser powers, so the unfortunate consequences of interrupting war persist while no greater danger is averted. It might be best for all

parties to let minor wars burn themselves out.

THE PROBLEMS OF PEACEKEEPERS

Today cease-fires and armistices are imposed on lesser powers by multilateral agreement -- not to avoid great-power competition but for essentially disinterested and indeed frivolous motives, such as television audiences' revulsion at harrowing scenes of war. But this, perversely, can systematically prevent the transformation of war into peace. The Dayton accords are typical of the genre: they have condemned Bosnia to remain divided into three rival armed camps, with combat suspended momentarily but a state of hostility prolonged indefinitely. Since no side is threatened by defeat and loss, none has a sufficient incentive to negotiate a lasting settlement; because no path to peace is even visible, the dominant priority is to prepare for future war rather than to reconstruct devastated economies and ravaged societies. Uninterrupted war would certainly have caused further suffering and led to an unjust outcome from one perspective or another, but it would also have led to a more stable situation that would have let the postwar era truly begin. Peace takes hold only when war is truly over.

A variety of multilateral organizations now make it their business to intervene in other peoples' wars. The defining characteristic of these entities is that they insert themselves in war situations while refusing to engage in combat. In the long run this only adds to the damage. If the United Nations helped the strong defeat the weak faster and more decisively, it would actually enhance the peacemaking potential of war. But the first priority of U.N. peacekeeping contingents is to avoid casualties among their own personnel. Unit commanders therefore habitually appease the locally stronger force, accepting its dictates and tolerating its abuses. This appeasement is not strategically purposeful, as siding with the stronger power overall would be; rather, it merely reflects the determination of each U.N. unit to avoid confrontation. The final result is to prevent the emergence of a coherent outcome, which requires an imbalance of strength sufficient to end the fighting.

Peacekeepers chary of violence are also unable to effectively protect civilians who are caught up in the fighting or deliberately attacked. At best, U.N. peacekeeping forces have been passive spectators to outrages and massacres, as in Bosnia and Rwanda; at worst, they collaborate with it, as Dutch U.N. troops did in the fall of Srebrenica by helping the Bosnian Serbs separate the men of military age from the rest of the population.

The very presence of U.N. forces, meanwhile, inhibits the normal remedy of endangered civilians, which is to escape from the combat zone. Deluded into thinking that they will be protected, civilians in danger remain in place until it is too late to flee. During the 1992-94 siege of Sarajevo, appeasement interacted with the pretense of protection in an especially perverse manner: U.N. personnel inspected outgoing flights to prevent the escape of Sarajevo civilians in obedience to a cease-fire agreement negotiated with the locally dominant Bosnian Serbs -- who habitually violated that deal. The more sensible, realistic response to a raging war would have been for the Muslims to either flee the city or drive the Serbs out.

Institutions such as the European Union, the Western European Union, and the Organization for Security

and Cooperation in Europe lack even the U.N.'s rudimentary command structure and personnel, yet they too now seek to intervene in warlike situations, with predictable consequences. Bereft of forces even theoretically capable of combat, they satisfy the interventionist urges of member states (or their own institutional ambitions) by sending unarmed or lightly armed "observer" missions, which have the same problems as U.N. peacekeeping missions, only more so.

Military organizations such as NATO or the West African Peacekeeping Force (ECOMOG, recently at work in Sierra Leone) are capable of stopping warfare. Their interventions still have the destructive consequence of prolonging the state of war, but they can at least protect civilians from its consequences. Even that often fails to happen, however, because multinational military commands engaged in disinterested interventions tend to avoid any risk of combat, thereby limiting their effectiveness. U.S. troops in Bosnia, for example, repeatedly failed to arrest known war criminals passing through their checkpoints lest this provoke confrontation.

Multinational commands, moreover, find it difficult to control the quality and conduct of member states' troops, which can reduce the performance of all forces involved to the lowest common denominator. This was true of otherwise fine British troops in Bosnia and of the Nigerian marines in Sierra Leone. The phenomenon of troop degradation can rarely be detected by external observers, although its consequences are abundantly visible in the litter of dead, mutilated, raped, and tortured victims that attends such interventions. The true state of affairs is illuminated by the rare exception, such as the vigorous Danish tank battalion in Bosnia that replied to any attack on it by firing back in full force, quickly stopping the fighting.

THE FIRST "POST-HEROIC" WAR

All prior examples of disinterested warfare and its crippling limitations, however, have been cast into shadow by NATO's current intervention against Serbia for the sake of Kosovo. The alliance has relied on airpower alone to minimize the risk of NATO casualties, bombing targets in Serbia, Montenegro, and Kosovo for weeks without losing a single pilot. This seemingly miraculous immunity from Yugoslav anti-aircraft guns and missiles was achieved by multiple layers of precautions. First, for all the noise and imagery suggestive of a massive operation, very few strike sorties were actually flown during the first few weeks. That reduced the risks to pilots and aircraft but of course also limited the scope of the bombing to a mere fraction of NATO's potential. Second, the air campaign targeted air-defense systems first and foremost, minimizing present and future allied casualties, though at the price of very limited destruction and the loss of any shock effect. Third, NATO avoided most anti-aircraft weapons by releasing munitions not from optimal altitudes but from an ultra-safe 15,000 feet or more. Fourth, the alliance greatly restricted its operations in less-than-perfect weather conditions. NATO officials complained that dense clouds were impeding the bombing campaign, often limiting nightly operations to a few cruise-missile strikes against fixed targets of known location. In truth, what the cloud ceiling prohibited was not all bombing -- low-altitude attacks could easily have taken place -- but rather perfectly safe bombing.

On the ground far beneath the high-flying planes, small groups of Serb soldiers and police in armored vehicles were terrorizing hundreds of thousands of Albanian Kosovars. NATO has a panoply of aircraft designed for finding and destroying such vehicles. All its major powers have anti-tank helicopters, some equipped to operate without base support. But no country offered to send them into Kosovo when the ethnic cleansing began -- after all, they might have been shot down. When U.S. Apache helicopters based in Germany were finally ordered to Albania, in spite of the vast expenditure devoted to their instantaneous "readiness" over the years, they required more than three weeks of "predeployment preparations" to make the journey. Six weeks into the war, the Apaches had yet to fly their first mission, although two had already crashed during training. More than mere bureaucratic foot-dragging was responsible for this inordinate delay: the U.S. Army insisted that the Apaches could not operate on their own, but would need the support of heavy rocket barrages to suppress Serb anti-aircraft weapons. This created a much larger logistical load than the Apaches alone, and an additional, evidently welcome delay.

Even before the Apache saga began, NATO already had aircraft deployed on Italian bases that could have done the job just as well: U.S. a-10 "Warthogs" built around their powerful 30 mm antitank guns and British Royal Air Force Harriers ideal for low-altitude bombing at close range. Neither was employed, again because it could not be done in perfect safety. In the calculus of the NATO democracies, the immediate possibility of saving thousands of Albanians from massacre and hundreds of thousands from deportation was obviously not worth the lives of a few pilots. That may reflect unavoidable political reality, but it demonstrates how even a large-scale disinterested intervention can fail to achieve its ostensibly humanitarian aim. It is worth wondering whether the Kosovars would have been better off had NATO simply done nothing.

REFUGEE NATIONS

The most disinterested of all interventions in war -- and the most destructive -- are humanitarian relief activities. The largest and most protracted is the United Nations Relief and Works Agency (UNRWA). It was built on the model of its predecessor, the United Nations Relief and Rehabilitation Agency (UNRRA), which operated displaced-persons' camps in Europe immediately after World War II. The UNRWA was established immediately after the 1948-49 Arab-Israeli war to feed, shelter, educate, and provide health services for Arab refugees who had fled Israeli zones in the former territory of Palestine.

By keeping refugees alive in spartan conditions that encouraged their rapid emigration or local resettlement, the UNRRA's camps in Europe had assuaged postwar resentments and helped disperse revanchist concentrations of national groups. But UNRWA camps in Lebanon, Syria, Jordan, the West Bank, and the Gaza Strip provided on the whole a higher standard of living than most Arab villagers had previously enjoyed, with a more varied diet, organized schooling, superior medical care, and no backbreaking labor in stony fields. They had, therefore, the opposite effect, becoming desirable homes rather than eagerly abandoned transit camps. With the encouragement of several Arab countries, the UNRWA turned escaping civilians into lifelong refugees who gave birth to refugee children, who have in turn had refugee children of their own.

During its half-century of operation, the UNRWA has thus perpetuated a Palestinian refugee nation, preserving its resentments in as fresh a condition as they were in 1948 and keeping the first bloom of revanchist emotion intact. By its very existence, the UNRWA dissuades integration into local society and inhibits emigration. The concentration of Palestinians in the camps, moreover, has facilitated the voluntary or forced enlistment of refugee youths by armed organizations that fight both Israel and each other. The UNRWA has contributed to a half-century of Arab-Israeli violence and still retards the advent of peace.

If each European war had been attended by its own postwar unRwa, today's Europe would be filled with giant camps for millions of descendants of uprooted Gallo-Romans, abandoned Vandals, defeated Burgundians, and misplaced Visigoths -- not to speak of more recent refugee nations such as post-1945 Sudeten Germans (three million of whom were expelled from Czechoslovakia in 1945). Such a Europe would have remained a mosaic of warring tribes, undigested and unreconciled in their separate feeding camps. It might have assuaged consciences to help each one at each remove, but it would have led to permanent instability and violence.

The UNRWA has counterparts elsewhere, such as the Cambodian camps along the Thai border, which incidentally provided safe havens for the mass-murdering Khmer Rouge. But because the United Nations is limited by stingy national contributions, these camps' sabotage of peace is at least localized.

That is not true of the proliferating, feverishly competitive nongovernmental organizations (NGOs) that now aid war refugees. Like any other institution, these NGOs are interested in perpetuating themselves, which means that their first priority is to attract charitable contributions by being seen to be active in high-visibility situations. Only the most dramatic natural disasters attract any significant mass-media attention, and then only briefly; soon after an earthquake or flood, the cameras depart. War refugees, by contrast, can win sustained press coverage if kept concentrated in reasonably accessible camps. Regular warfare among well-developed countries is rare and offers few opportunities for such NGOs, so they focus their efforts on aiding refugees in the poorest parts of the world. This ensures that the food, shelter, and health care offered -- although abysmal by Western standards -- exceeds what is locally available to non-refugees. The consequences are entirely predictable. Among many examples, the huge refugee camps along the Democratic Republic of Congo's border with Rwanda stand out. They sustain a Hutu nation that would otherwise have been dispersed, making the consolidation of Rwanda impossible and providing a base for radicals to launch more Tutsi-killing raids across the border. Humanitarian intervention has worsened the chances of a stable, long-term resolution of the tensions in Rwanda.

To keep refugee nations intact and preserve their resentments forever is bad enough, but inserting material aid into ongoing conflicts is even worse. Many NGOs that operate in an odor of sanctity routinely supply active combatants. Defenseless, they cannot exclude armed warriors from their feeding stations, clinics, and shelters. Since refugees are presumptively on the losing side, the warriors among them are usually in retreat. By intervening to help, NGOs systematically impede the progress of their enemies toward a decisive victory that could end the war. Sometimes NGOs, impartial to a fault, even help both sides, thus preventing mutual exhaustion and a resulting settlement. And in some extreme

cases, such as Somalia, NGOs even pay protection money to local war bands, which use those funds to buy arms. Those NGOs are therefore helping prolong the warfare whose consequences they ostensibly seek to mitigate.

MAKE WAR TO MAKE PEACE

Too many wars nowadays become endemic conflicts that never end because the transformative effects of both decisive victory and exhaustion are blocked by outside intervention. Unlike the ancient problem of war, however, the compounding of its evils by disinterested interventions is a new malpractice that could be curtailed. Policy elites should actively resist the emotional impulse to intervene in other peoples' wars -- not because they are indifferent to human suffering but precisely because they care about it and want to facilitate the advent of peace. The United States should dissuade multilateral interventions instead of leading them. New rules should be established for U.N. refugee relief activities to ensure that immediate succor is swiftly followed by repatriation, local absorption, or emigration, ruling out the establishment of permanent refugee camps. And although it may not be possible to constrain interventionist NGOs, they should at least be neither officially encouraged nor funded. Underlying these seemingly perverse measures would be a true appreciation of war's paradoxical logic and a commitment to let it serve its sole useful function: to bring peace.

IS MAN AND MANKIND MAD, CRAZY, INSANE, DEMENTED?

I THINK SO.

Paul A. H. H.

Arthur Koestler, author of "Darkness At Noon" wrote a book entitled "Janus".

"Janus, in Roman mythology, god of doors, gateways, and of beginnings, which the Romans

believed ensured good endings. His principal temple in the Forum had doors facing east and west for the beginning and ending of the day. Romans sought his help in domestic undertakings and at the beginning of wars. Janus was publicly invoked on the first day of January, the month named for him."The Encarta® 99 Desk Encyclopedia Copyright © & ? 1998 Microsoft Corporation. All rights reserved.

Arthur Koestler was a trained psychologist and he used that knowledge in all of his writings. That, among other things, made all of his books (fiction and fact) fascinating to me.

"JANUS" was a book on the thinking and musing of Koestler about mankind over his life time. He was in his late 60's when he wrote the book.

The thesis of the book was this: as mankind evolved over the millions of years there were two routes for evolution to take; one route was what I call 'quietude', the other route was war. Mankind took the wrong path and evolved down the route of war.

Mankind therefore, took the wrong path and that explains what a disaster the evolution of man has been. Mankind took the route of aggression, conquest, battles, murder, killing and genocide.

We, therefore, live in an insane world.

What's my point? There are many days when I shake my head in disbelief, become despondent, discouraged and disgusted at the goings on in the world and in my own country.

I more than not ask myself a rhetorical question: how can people behave like that?

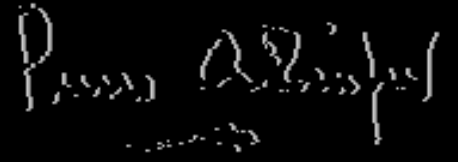

I watch in living color the killings in the middle east, in Africa, in the Balkans, the starving and helpless dying by the thousands in Africa as one war lord after another unleashes death, the insanity of a lying President and a vicious congress of zero morality, the lying and vicious media, the fools who have forgotten there is such a thing as a private life (the mother and father of Monica Lewinsky) and the local shenanigans of this tiny island. I shake my head in disbelief and then I ask myself "Whatever happened to us?".

And then I remember what Arthur Koestler said "mankind is mad".

It doesn't relieve the pain but it does make living easier. At least I understand what the world is all about! I find it easier to cope with life if I understand the rules and the tilt of the playing field!

With that simple phrase everything comes into focus.

I send you my best wishes and best regards,

Paul Auster

4. Einführung in den komparativen Block

Nach den theoretischen Ausführungen werde ich mich detailliert mit den in dieser Arbeit relevanten Organisationen auseinandersetzen. Dabei bediene ich mich des eingangs beschriebenen direkten und unmittelbaren Vergleichs, mit der die Besonderheiten und Entwicklungen der Parteien sowie die Bedingungen ihres Erfolgs analysiert werden. Besonders wichtig ist dabei eine Untersuchung der drei Parteiensysteme sowie eine Analyse sozio-ökonomischer Entwicklungsprozesse und gesellschaftlicher Krisenerscheinungen.

Diesem umfangreichen Komplex gehen zunächst zwei Kapitel über rechte Stammkulturen und Faschismus sowie die Entwicklung des Rechtsextremismus nach dem Zweiten Weltkrieg voraus. Obgleich diese Kapitel für meine unmittelbaren Fragestellungen wenig bedeutsam sind, halte ich das Nachzeichnen rechter Kontinuitäten in Österreich, Frankreich und Italien für wichtig. Denn deren Kenntnis schafft die Voraussetzung, die im Zentrum dieser Arbeit stehenden Parteien entsprechend zuzuordnen.

Es wird sich noch zeigen, daß die ideologische Einordnung der Lega Nord schwierig ist. Sie war sicher nie rechtsextrem und "doch auf ihre Weise von Anfang an extremistischer als die rechten Parteien Europas. Denn während diese Parteien ihren Nektar aus bestimmten Politikfeldern saugen, startete die Lega einen Generalangriff auf den italienischen Staat". Obwohl sich die Lega in dieser Hinsicht also von den anderen Parteien unterscheidet, werde ich Italien in den beiden folgenden Kapiteln unter den gleichen Fragestellungen untersuchen wie Frankreich und Österreich. Dies ist aus Gründen der Vollständigkeit des Ländervergleichs geboten.

4.1. Rechtes politisches Denken in Frankreich, Italien und Österreich - Stammkultur und Faschismus

Im Zentrum des folgenden Kapitels stehen jene rechte Strömungen, die in Frankreich, Italien und Österreich eine lange Tradition haben oder von besonderer Bedeutung sind. Ihre völlig trennscharfe Systematisierung ist allerdings nicht möglich, was "Koalitionsbildungen" miteinander konkurrierender Strömungen ebenso verdeutlichen wie die Entwicklung der Rechtsextremismen nach dem Zweiten

Weltkrieg, die im anschließenden fünften Kapitel untersucht werden.

4.1.1. Frankreich

Gemeinhin und zurecht werden die Wurzeln rechten politischen Denkens auf die gegenrevolutionären Bewegungen des 18. und 19. Jahrhunderts zurückgeführt. Aber auch die Revolution selbst schuf mit dem Nationalstaat die Bedingung für rechtes und insbesondere für nationalistisches Denken: "Die dominierende Bourgeoisie und die bürgerlichen Gesellschaftsformationen haben sich wechselseitig durch einen 'Prozeß ohne Subjekt' konstituiert, indem sie den Staat in der nationalen Form umstrukturierten und den Status sämtlicher Klassen veränderten, was die gleichzeitige Genese von Nationalismus und Kosmopolitismus verständlich macht". Zugleich wurde mit der Emanzipation des aufstrebenden Bürgertums die Entwicklung des Besitzstandskonservatismus eingeleitet.

Während hier eher von abstrakten Entwicklungsprozessen die Rede ist, wende ich mich nun den explizit gegenrevolutionären Strömungen zu. Dazu zählen royalistisch-klerikale Kräfte, das organisierte gegenrevolutionäre Bürgertum sowie der Bonapartismus als Negation von Ancien régime und bürgerlichem Parlamentarismus. Der bislang umfassendste Systematisierungsversuch geht auf René Rémond zurück:

1. Als entschiedenste gegenrevolutionäre Strömung bezeichnet er die vor allem in der Restaurationszeit einflußreichen Royalisten, deren Weltanschauung sich über die Action française bis zum heutigen katholischen Integritismus sowie zur neurechten Denkschule Groupement de Recherche et d'Études pour la Civilisation Européenne (GRECE) weiterverfolgen läßt. Allerdings ist mit Marieluise Christadler darauf hinzuweisen, daß GRECE aufgrund seiner antichristlichen Ideologie nicht der Kernfamilie der Legitimisten zuzuordnen ist.
2. Die liberal-konservativen Orléanisten, während der Juli-Revolution entstanden, vertraten die Interessen des aufstrebenden Bürgertums, das zwar vom Kapitalismus profitierte, seiner Geburtshelferin Revolution aber skeptisch gegenüberstand. Als vorläufig letzte Strömung dieser Gruppe nennt Rémond den Giscardismus.
3. Die 1848 gegründete und aus Anhängern des 1851 durch Staatsstreich an die Macht gelangten Louis Bonaparte bestehende bonapartistische Bewegung vereinigte unterschiedliche autoritäre und nationalistische Strömungen. Im Boulangismus und anderen nationalistischen sowie antisemitischen Organisationen, in verschiedenen Zwischenkriegsligen, schließlich im Gaullismus und Poujadismus sieht Rémond die Tradition des Bonapartismus weiterleben bzw. neu aufgelebt.

In den 80er Jahren des 19. Jahrhunderts wurde Frankreich nach einer kurzen Phase sozialer und bildungspolitischer Reformen von der großen Depression erfaßt. Diese Krise nutzte den Monarchisten und Bonapartisten, die bei den Wahlen von 1885 nur knapp die absolute Mehrheit verfehlten. Ihr gewachsenes Selbstbewußtsein und ihre gesellschaftliche Akzeptanz zeigten sich wenig später im Zusammenhang mit der Boulanger-Krise 1887/88 und der Dreyfus-Affaire Ende des 19. Jahrhunderts.

Antisemitismus, Antikapitalismus und Antiparlamentarismus sowie das Leitbild einer auf nationaler Gemeinschaft basierenden Gesellschaft bildeten dabei die auf große Zustimmung stoßende Gegenideologie zum liberal-republikanischen Denken. Im Verlauf der Dreyfus-Affaire wurden zahlreiche rechte (vielfach von linken Themen und Personen inspirierte) Diskussionszirkel und Clubs gegründet, von denen sich die Ligue d'Action française (AF) um Charles Maurras und ihr studentisches Tochterunternehmen zur wichtigsten intellektuellen Strömung mit bis zu 60 000 Mitglieder entwickelt hat. Mit ihrer an Traditionalismus, Nationalismus (integraler Nationalismus) und Positivismus orientierten Ideologie und ihrem taktischen Brückenschlag zwischen populärem Radikalismus der Nationalisten und elitärem Monarchismus hat sie die Grundlage für eine Massenbewegung geschaffen.

Besondere Bedeutung hatte dabei die von der Action française 1908 gegründete Tageszeitung, die unübersehbaren Einfluß auf das gesellschaftliche Klima nahm und zu seiner Radikalisierung beitrug. Bis zum Beginn des Ersten Weltkriegs war das Thema Dreyfus und seine Rehabilitierung immer wieder Gegenstand wüster Agitation. Während des Ersten Weltkriegs wurde es still um die AF, aber in den 30er Jahren haben sich weitere, stark von ihr beeinflusste Gruppierungen, Ligen und Clubs formiert, die von der in Frankreich verspätet auftretenden Weltwirtschaftskrise profitieren konnten. Zur stärksten Kraft avancierte der Parti Populaire Français mit zeitweilig 250.000 Mitgliedern. "Kennzeichen dieser Zwischenkriegsrechten - deren Machtübernahme nur durch das Volksfrontbündnis aus Sozialisten, Kommunisten und Liberalen (Radicaux) verhindert wird - bleibt die organisatorische wie ideologische Heterogenität. Konservative, monarchistisch-klerikale Elemente bestehen neben nationalistischen und antisemitischen, bis hin zum offenen Faschismus." 1940 schließlich ist es der extremen Rechten gelungen, erstmals die alleinige Macht zu erzielen. Damit ging die Niederlage liberal-republikanischer Politik einher, an deren Stelle von Marschall Pétain der autoritär-korporatistische Staat gesetzt wurde.

Über das Vorhandensein und die Bedeutung eines eigenen französischen Faschismus wird in Frankreich gestritten. Die extremsten Antworten auf die Frage nach Präsenz, Relevanz und Originalität geben René Rémond und Bernard-Henri Lévi sowie der israelische Historiker Zeev Sternhell. Mit Verweis auf die politische Hegemonie der "klassischen" Rechten verneint Rémond ausdrücklich die Entstehungschancen eines französischen Faschismus und spricht "lediglich von Adaptionen außerfranzösischer Vorbilder". In eine ähnliche Richtung zielt Pierre Milza, für den Vichy in erster Linie ein durch von außen kommendes und durch die militärische Niederlage Frankreichs ermöglichtes Regime war. Dagegen hält Lévy den Faschismus für eine "genuin französische" und vor dem Ersten Weltkrieg entwickelte Ideologie, die zur faschistischen Revolution des Pétain-Regimes geführt habe. Mit seiner "These attackiert Lévy nicht nur den 'Geschichtsbuch-Mythos vom gewaltsam importierten Faschismus', er deckt gleichzeitig den Anteil der Linken an der 'französischen Ideologie' auf".

In eine ähnliche Richtung zielt die Argumentation von Zeev Sternhell. Er unterscheidet mit der liberal-konservativen und der revolutionären Rechten nur zwei rechte Grundströmungen, wobei er letztere für den Faschismus als Synthese aus Nationalismus und Sozialismus verantwortlich macht. Auch Michel Winock bringt Vichy mit zwei rechten Strömungen in Verbindung: 1. Mit dem National-Populismus, der zum Teil im Vichy-Regime wieder auftaucht und 2. die gegenrevolutionäre, katholisch-royalistische Linie, die von 1789 bis zur Action Française führt.

Zwischen diesen Extremen finden sich unterschiedliche Einschätzungen: Henry Rousso bezeichnet Vichy als ein "Bürgerkriegsphänomen", Jean-Pierre Azéma als "autoritär, aber nicht faschistisch", Thammer/Wippermann sprechen von einem Regime, das rechte Kontinuitäten "in Themen und Personen" aufwies.

Damit stellt sich die Frage nach den Wurzeln faschistischen Denkens und seinem Wirken im real existierenden *État français*. Wird Faschismus mit Mussolini gleichgesetzt, dann hätte Frankreich in der Tat wenig damit zu tun. Zwar sind auf organisatorischer Ebene einige Gruppierungen zu nennen, deren politische Inhalte und ideologischen Anleihen als faschistisch bezeichnet werden können, doch lassen sie sich nicht mit Weltanschauung und Strategie "Mussolinis unter einen Hut bringen". Begreift man Faschismus hingegen als Antithese revolutionärer Ideale, muß in seine Analyse vor allem der Action-française-Gründer Charles Maurras einbezogen werden, der, so Ernst Nolte, "den ganzen Strom des gegenrevolutionären Denkens seit 1789 in sich aufgenommen, verwandelt und für seine Zeit und seine politische Partei neugeformt hat".

4.1.2. Italien

Ein gegenrevolutionäres Äquivalent gibt es in Italien nicht, da Adel und Bürgertum einen risorgimentalen Kompromiß geschlossen haben. Diese auch den Widerstand der europäischen Großmächte neutralisierende Übereinkunft wurde möglich, nachdem sich das gemäßigte Bürgertum (*moderati*) gegen den revolutionären Flügel der Risorgimento-Bewegung (*democratici*) durchgesetzt hatte. Mit der sozialistischen und der christlichen Arbeiterbewegung sowie dem Klerus hatte der unitarisch-liberale Staat potente Widersacher. Das ebenfalls christliche und föderalistische Neo-Guelfentum dagegen war ein bedeutender Motor der italienischen Einigungsbewegung gewesen.

Mit der Annexion des Kirchenstaates 1870 entwickelte sich der Klerus zur zeitweilig wichtigsten oppositionellen Kraft, wobei der Vatikan nicht zur aktiven Opposition oder zum Kampf gegen den laizistischen Staat, sondern zur Nicht-Teilnahme am politischen Leben aufgerufen hat. Spürbare Annäherung zwischen Staat und Klerus vollzog sich erst um die Jahrhundertwende; bemerkenswerterweise zu einem Zeitpunkt also, als die politische Rechte erstarkt war.

Der Parlamentarismus der ersten Jahre war von zahlreichen Arrangements der in den Kammern vertretenen Kräfte, von Pragmatismus, Realismus und schrittweisen Reformen gekennzeichnet; und von transformistischer Politik, die vom zwischen 1876-1887 regierenden linksliberalen Agostino Depretis zur vollen Entfaltung gebracht wurde. Grundsätzlich ist gegen diese Taktik in dosierter Verwendung nichts einzuwenden. Im Italien des letzten Jahrhunderts wurde sie jedoch politischer Alltag, was wegen der damit einhergehenden Konfliktunterdrückung eine Radikalisierung der jeweiligen Randflügel zur Folge hatte. Von diesem Klima wiederum konnte die nationalistische Rechte profitieren, deren Repräsentanten mehr als einmal direkt von der äußeren Linken herübergewandert sind. Mehrere Strömungen, die als Wegbereiter des Faschismus betrachtet werden dürfen, lassen sich unterscheiden:

1. Der Kreis um Francesco Crispi, der für den Übergang vom emanzipatorischen Risorgimento zum

aggressiven Nationalismus steht. Der zunächst zur extremen Linken zählende Crispi war seit 1861 als Abgeordneter und zwischen 1887-1891 und 1893-1896 als Superminister mit der Doppelverantwortung für das Innen- und das Außenressort tätig. Seine rigide Innenpolitik zielte gegen die immer stärker werdende Arbeiterbewegung und seine aggressive Außenpolitik gegen Afrika. Crispi wurde vom ähnlich denkenden Pelloux abgelöst, der aber wegen des wachsenden Widerstandes der sozialistischen und katholischen Arbeiterbewegung gegen ihre Unterdrückung vom Parlament gestürzt wurde. Damit wurde der Weg für den liberalen Reformen Giovanni Giolitti frei.

2. Darüber hinaus existierte seit der Jahrhundertwende eine von Frankreich inspirierte neoromantische Strömung, deren Hauptvertreter der Literat, spätere Fiume-Besetzer und Mussolini-Verehrer Gabriele D'Annunzio war. Zahlreiche von ihm beeinflusste Diskussionszirkel und Zeitschriften feierten die Wiedergeburt des Spirituellen, Okkulten und Irrationalen und forderten Überwindung des Positivismus, Wiedererweckung des Glaubens und der Mystik. Publikationen etwa wie der 1903 von Giuseppe Prezzolini und Giovanni Papini gegründete *Leonardo*, Giuseppe A. Borgeses *Hermes* oder der von Enrico Corradini herausgegebene *Regno* (in dem auch zahlreiche Pareto-Beiträge veröffentlicht wurden) formulierten bereits hier das außenpolitische Programm des faschistischen Italien. An der Schwelle zum Ersten Weltkrieg stimmte auch die Zeitschrift *La Voce* in den Kriegsgesang ein. Sie war vom Verlegerpaar Prezzolini/Papini 1908 als Organ des "gereiften Nationalismus" (Nolte) gegründet worden und unterschied sich in Wort und Ton vom Nationalismus Corradinis. Aber schließlich wurde auch sie aggressiver, womit einmal mehr die Problematik eines sogenannt gemäßigten Nationalismus unterstrichen wird.

3. Großen Einfluß auf die Entwicklung des Faschismus hat der 1908 von Filippo Tommaso Marinetti als neue Kunstrichtung ins Leben gerufene Futurismus gehabt. Die von Marinetti, Settimelli und Carli gegründete Zeitschrift *Roma futurista* und die futuristischen *fasci* hatten sich als antiphilosophische, anti-kulturelle Bewegung mit dem Ziel einer Erneuerung Italiens verstanden. Die Tatsache, daß die futuristische Ideologie später stark von Sorel und Bergson beeinflusst wurde und mit mystischer Unterlegung den Krieg verherrlichte, verdeutlicht zumindest in der Frage der Ästhetisierung von Gewalt die Gemeinsamkeit von Futuristen und Neoromantikern.

Anders als in Frankreich streitet man in Italien kaum über Ursprung und Herkunft des Faschismus, was nicht zuletzt daran liegt, daß es hier keine staatliche Judenverfolgung gab. Die 1919 von Mussolini gegründeten *fasci di combattimento* waren ebenso widersprüchlich und uneinheitlich wie das verwirrte politische Klima, in dem sie entstanden sind: Unter den ersten *fasci*, die der linken Idee gegenüber durchaus aufgeschlossen, aber gegen die russische Revolution eingestellt waren, befanden sich Anarcho-Syndikalisten, Arditisten, Futuristen und Ultrakonservative. Gerade Linke und Syndikalisten hatten dem Faschismus noch über einen längeren Zeitraum ein fortschrittliches Image verschafft, das er aber spätestens seit der Zerschlagung der proletarischen Massenorganisationen einbüßte. Anfang der 20er Jahre hatte der Faschismus seine ideologische Orientierung an "Gruppierungen wie Futurismus, Arditismus, D'Annunzianismus und linksinterventionistischen Kreisen" eingebüßt. Die faschistische Bewegung war seit 1920 in einen militant außerparlamentarischen und den parlamentarischen Flügel um

Mussolini gespalten, der sich mit seinem Normalisierungs- bzw. Parlamentarisierungskurs Hoffnung machte, das breite Bürgertum an sich binden zu können.

Karin Priester unterstreicht, daß das gängige Begriffspaar Mussolini/Faschismus insofern irreführend ist, als die nationalistische Ideologie, "die ab 1923 das politische und ideologische Bild des Faschismus bestimmen wird, (...) ohne und gegen Mussolini entstanden ist". Erst nach der Zerschlagung linker Organisationen setzte die Industrie auf ihn und seinen 1921 gegründeten Partito nazionale fascista, von dem sie sich eine grundlegende Erneuerung des in der Krise steckenden Staates erhoffte. Carlo Tullio Altan betont dabei die Bedeutung einer dichten Gruppe von nationalistisch gesinnten Intellektuellen verschiedenster Provenienz, die durch ihre "Mitarbeit und bemerkenswerte Sensibilität für die Probleme des Staates" zu seiner Neugestaltung nach faschistischem Muster beigetragen und dem faschistischen Regime zu Popularität verholfen haben.

Seine gesellschaftliche Anbindung begann der italienische Faschismus in dem Moment zu verlieren, "in dem er sich dem deutschen Nationalsozialismus unterordnete". Spötter stellen vielleicht nicht einmal ganz zu unrecht fest, daß Italien zwischen den 20er und 40er Jahren 80 Millionen Einwohner gehabt habe: 40 Millionen Faschisten und ebensoviele Antifaschisten.

4.1.3. Österreich

Nach der in Österreich sattem bekannten Drei-Lager-Theorie von Adam Wandruszka existieren mit dem sozialistischen (1.), dem christlich-konservativen (2.) und dem deutschnationalen Lager (3.) drei voneinander unterscheidbare sozio-kulturelle und sozio-politische Milieus. Zwei dieser auch die Parteien umfassenden Lager gehören ideologisch zur politischen Rechten.

Das Deutschnationale Lager

Während Rainer Münz im deutschnationalen Lager auch den Liberalismus verortet, wird von Anton Pelinka explizit das Vorhandensein einer wichtigen liberalen Strömung bestritten. Zwar hatten seiner Meinung nach an der Wiege des dritten Lagers verschiedene Gruppen gestanden, "die das 'Völkische' mit dem 'Liberalen' zu verbinden versuchten"; zwar hat auch das 1882 formulierte Linzer Programm (das nicht zur Gründung einer Partei führte) noch verschiedene freiheitliche Vorstellungen formuliert; jedoch herrschte innerhalb dieser Strömung von Beginn an das Streben nach deutscher Hegemonie in allen gesellschaftlichen Bereichen vor. "Hier ist sie schon, die Position, die etwa die Kärntner Parteien gegen die slowenische Volksgruppe mehr als ein Jahrhundert danach ins Treffen führen: Andere Sprachen als die deutsche werden nicht geduldet."

Georg Ritter von Schönerer war verantwortlich für die antisemitische Ausrichtung des Linzer Programms. Sowohl die 1920 gegründete Großdeutsche Volkspartei als auch der Landbund, den später die ÖVP beerben konnte, haben Schönerers Positionen übernommen und wesentliche Teil von Hitlers "Mein Kampf" vorweggenommen.

Das inhomogene und in fast allen sozialen Milieus beheimatete deutschnationale Lager des 19. Jahrhunderts hatte sich in erster Linie durch Opposition gegenüber der Habsburgmonarchie, Anti-Katholizismus bzw. Antiklerikalismus, später durch prononcierten Antisemitismus sowie überwiegend "im Volk" präsenten Antikapitalismus ausgezeichnet. Dieses zunächst verstreute und sich zur "deutschen Volks- und Kulturgemeinschaft" zählende Lager konnte infolge seiner ideologischen Radikalisierung um die Jahrhundertwende von der österreichischen NSDAP insgesamt an sich gebunden werden. Hitler kann dabei als Produkt und zugleich als Motor eines Deutschnationalismus bezeichnet werden, der um die Jahrhundertwende seine volle Blüte entfaltet hat.

Das parteipolitisch organisierte dritte Lager zeichnet sich Kurt Richard Luther zufolge durch folgende, bis in die 80er Jahre des 20. Jahrhunderts geltende Merkmale aus:

1. Dezentral organisierte Honoratioren, deren regionale Hochburgen über Jahrzehnte hinweg mit vor allem Kärnten, Oberösterreich und Salzburg nahezu identisch geblieben sind.
2. Geringe Organisationsdichte trotz zahlreicher Vorfeldorganisationen.
3. Überrepräsentanz einer männlichen, akademischen, protestantischen bzw. laizistischen Wählerschaft aus dem Kleinbürger- bzw. Kleinstadtmilieu, zu denen ein Kreis eher inhomogener Protestwähler tritt. Gemeinsames Merkmal ist "eine gewisse Anfälligkeit für autoritäres Denken".
4. Hohe Konfliktbereitschaft wegen der ideologischen Ambivalenz von liberalen und (deutsch-)nationalen Kräften bei ansonsten anti-sozialistischem und anti-klerikalem Grundkonsens.

Das Christlich-Konservative Lager

Rechtes Denken findet sich darüber hinaus im christlich-konservativen Lager mit der Christlichsozialen Partei (CP) als erstes bedeutendes organisatorisches Zentrum. Sie war ein Zusammenschluß von Christlich Sozialem Verein und konservativem Liechtensteinclub mit kleinbürgerlichen Gruppen um Karl Lueger (dem Gründer der CP) und die erste große antisemitische Partei Europas. Obwohl sie nach ihrer Gründung 1891 gegen Adel und hohen Klerus eingestellt war, suchte sie nach dem Zusammenbruch der feudalen Strukturen ein enges Verhältnis zum organisierten Katholizismus, der aufgrund dieser Entwicklung seinerseits "seinen verlängerten Arm" verloren hatte.

Das christlich-konservative Lager bestand vornehmlich aus Bauern und katholischem Kleinbürgertum und war Karl Lueger und seiner christlichen Soziallehre sowie seinem prononcierten Antisozialismus und Antisemitismus gegenüber sehr aufgeschlossen. Signifikant ist der Meinungs- und Wertewandel der Partei, die erst antiklerikal und dann kirchenfreundlich, erst für und später gegen die Republik eingestellt war und schließlich im Verbund mit den Heimwehren den autoritären Ständestaat und den Austrofaschismus aus der Taufe gehoben hat.

Pelinka bezeichnet den Austrofaschismus als konstitutive Wurzel einer Großpartei, nämlich der ÖVP.

Damit will er nicht ständischen Autoritarismus und demokratisch gesinnte Volkspartei in einen Topf werfen, sondern auf institutionelle und personelle Verflechtungen sowie darauf verweisen, daß die ÖVP bis heute für die Politik Schuschniggs und Dollfuß' Verständnis aufbringe: "Für die ÖVP ist die Diktatur des Austrofaschismus keineswegs eine von vornherein vollständig abzulehnende Geschichtsepoche."

4.1.4. Diskussion

Die maßgeblichen gegenrevolutionären Strömungen in Frankreich gehören anders als die anti-risorgimentalen Bewegungen Italiens zur politischen Rechten. Aber das Risorgimento ist kein mit der französischen Revolution vergleichbares Ereignis, auch wenn es im Vorfeld der italienischen Staatsgründung zahlreiche "revolutionäre Vorkommnisse" gab. Günther Heydemann weist darauf hin, daß diese Vorkommnisse überwiegend in den jeweiligen lokalen Zusammenhängen interpretiert werden müssen und nicht pauschal als risorgimental zu bezeichnen sind. Darüber hinaus ist die Staatsgründung gleichsam ein Produkt des Kompromisses zwischen Adel und moderatem Bürgertum, das sich gegen die revolutionären bzw. linken Strömungen der risorgimentalen Bewegung durchgesetzt hatte. Ein Vergleichsfall Österreich fehlt in diesem Zusammenhang.

In allen drei Staaten wurden Ende des letzten Jahrhunderts weit rechts stehende Organisationen spürbar stärker. Obgleich sie sich in ihrem Denken, ihren primären Zielen und ihren Strategien auch innerhalb eines jeden Staates voneinander unterschieden haben, waren sie sich politisch nahe genug, um später gemeinsam agieren zu können oder den Boden für eine rechte Konkurrenzströmung zu bereiten. Rechtes als rückwärtsgewandtes und in diesem Sinne reaktionäres Denken orientiert sich an alten Werten, Machtstrukturen und Ideologien, auch wenn dieses Denken unter dem Stichwort "revolutionär" firmiert. Unter diesem Blickwinkel haben rechte Strömungen trotz unterschiedlicher Merkmale stets gemeinsame Wurzeln; unterschiedliche oder widerstreitende Strömungen sind deshalb prinzipiell kompatibel.

In Italien und Frankreich haben sich um die Jahrhundertwende auch elitäre bzw. revolutionäre Zirkel mit betont intellektuellem Habitus herausgebildet, wobei ihre Protagonisten nicht selten von der äußersten Linken stammten. Warum in Österreich derartige Strömungen fehlen (bis heute hat die Alpenrepublik auch keine "Neue Rechte" französischen Typs aufzuweisen), ist schwer zu beantworten. Ein entscheidender Grund dafür ist aber zweifellos die politische Bedeutung des ursprünglich lagerübergreifenden und später vom dritten Lager repräsentierten Deutschnationalismus.

Für alle Staaten gleichermaßen schwierig ist der Umgang mit der faschistisch/nationalsozialistischen Vergangenheit. Erst 1995 hat der französische Staatspräsident Chirac die Mitschuld Frankreichs an der Deportation der Juden eingestanden; beinahe zeitgleich wurde vom österreichischen Kanzler Vranitzky der Mythos, wonach Österreich erstes territoriales Opfer nationalsozialistischer Gewaltherrschaft gewesen sei, relativiert. Der Umgang mit der Geschichte durch staatliche Repräsentanten ist eine, die wissenschaftliche Auseinandersetzung damit eine andere Sache.

Rolf Uessler hat am Beispiel Italien zwei Forschungsphasen identifiziert. Er unterscheidet dabei den bis etwa Mitte der 60er Jahre dauernden Zeitraum, der wesentlich von der Resistenza und von

Untersuchungen geprägt war, die emigrierte Forscher während der Zeit des Faschismus verfaßt haben. Ihre Beiträge und das gesellschaftliche Klima waren in hohem Maß von der Annahme geprägt, daß die Überwindung des Faschismus eine italienische Eigenleistung, eine Leistung der Resistenza gewesen sei (dies gilt ebenso für Frankreich). Einigkeit bestand vor allem darin, daß der Faschismus sowie die Zeiträume vor seiner Entfaltung und nach seiner Überwindung von "Kontinuität und Bruch" gekennzeichnet sind. In der zweiten Phase wurden Uessler zufolge diese "Kontinuitäten und Diskontinuitäten in den einzelnen Bereichen" herausdestilliert und "die antifaschistische Grund- und Ausgangslage" durchlöchert und aufgebrochen. Hier setzte die personalistische, auf Mussolini konzentrierte Faschismusforschung ein, die wesentlich von Renzo de Felice geprägt wurde.

Der Umgang mit Vichy in Frankreich wurde in diesem Kapitel bereits andiskutiert; bislang unerwähnt blieb jedoch, daß auch in Frankreich der Mythos von der Selbstbefreiung über lange Jahre vorherrschte. Henry Rousso führte dazu aus, daß der von Marc Ophuls gedrehte und von der 1968er Bewegung inspirierte Film "Le chagrin et la pitié" (1971) eine neue Phase einleitete, mit der dieser Mythos überwunden wurde. "Politisch gesehen war das auch das Ende der Ära, in der Gaullisten und Kommunisten das Erbe der Résistance unter sich aufgeteilt hatten."

Ein österreichisches Äquivalent dazu ist der Opfer-Mythos, der lange Zeit nicht in Frage gestellt wurde. Die Mitschuld und die Aufarbeitung der Vergangenheit wurde erst seit Mitte/Ende der 80er Jahre in Wissenschaft und Publizistik bedeutsam. Dabei hat "das 'Bedenkjahr' 1988 (..) der historischen Forschung einen deutlichen Impuls gegeben".

6.Front National, Lega Nord und FPÖ im Vergleich

Durch das heute allgegenwärtige Fernsehen und seine Tendenz, zu verkürzen und Worte oft nur noch als akustisches Geleit bildhafter Darstellungen einzusetzen, erscheinen Politik und Politiker synonym. Politische Prozesse, Interaktion und Kommunikation zwischen Bürgerschaft und Repräsentanz oder die Bedeutung des Politischen im scheinbar unpolitischen Alltagshandeln sind für das Fernsehen kaum ein Thema. Politik ist Parteipolitik. Mehr noch: Politik ist die Politik von parteipolitischen Führungsfiguren. Ich will an dieser Stelle nicht entscheiden, wem die Hauptverantwortung für diesen Reduktionismus zu geben ist, sondern lediglich feststellen, daß Medien und Politiker aufeinander eingespielt und voneinander abhängig sind. Es verwundert daher kaum, daß Umberto Bossi, Jörg Haider und Jean-Marie Le Pen weitaus bekannter sind, als Parteifreunde, divergierende Parteiflügel oder politische Programme. Die Politik von Front National, Lega Nord und der Freiheitlichen Partei Österreichs wird in erster Linie über ihre Führungsfiguren wahrgenommen und mit ihnen gleichgesetzt. Sie sind - nicht nur deshalb - wichtige und zentrale Personen, denen in meiner Arbeit zwar nicht das Hauptaugenmerk gilt, die ich jedoch im folgenden mit drei kurzen Portraits vorstellen möchte. Diesen persönlich-politischen Profilen folgt eine Auswertung sozial- und geschichtswissenschaftlicher Literatur über die drei Personen, ihre Parteien und deren ideologischen Klassifizierungen.

6.1.Front National

Kaum jemand, der bei Front National nicht sofort an seine Führungsfigur Jean-Marie Le Pen dächte. Der gebürtige Bretoner und spätere Sorbonne-Student hatte schon frühzeitig begonnen, sich politisch zu engagieren. Er war Mitglied verschiedener akademischer Zirkel mit konservativ-nationalistischer Ausrichtung, meldete sich 1953 als Freiwilliger zum Indochinakrieg, kam aber nicht mehr zum Einsatz, da bei seiner Ankunft der Krieg bereits beendet war. 1956 wurde er Abgeordneter der Poujadisten, beteiligte sich am Algerienkrieg sowie - um den Preis seines Mandats - an der terroristischen OAS. In den Folgejahren kümmerte er sich hauptsächlich um den Vertrieb verbotenen Nazimaterials und mischte in verschiedenen rechtsextremen Organisationen mit, die allesamt bedeutungslos blieben. Nach mehreren Jahren politischer Abstinenz erschien er im Zusammenhang mit dem Front National erneut auf der politischen Bühne, meldete im 1972 gegründeten FN seinen Führungsanspruch an und setzte sich nach anfänglichen Flügelkämpfen und Streitereien als Parteichef durch. Machtwillen, Flexibilität und Eloquenz zeichnen den 67jährigen Le Pen aus, der besonders vor grossem Publikum durch

Sprachbravour glänzt. Daß der Erfolg des Front National auch seinem Anführer gutgeschrieben wird, kann daher kaum verwundern und kommt in dem häufig verwandten Diktum "L'effet Le Pen" (der Le-Pen-Effekt) zum Ausdruck. Wo aber muß der Front National ideologisch verortet werden und was sind die Ursachen seines Erfolgs? Ob der Front National rechtsextrem ist, wird in Frankreich nicht zuletzt wegen des denotatorischen Disputs unterschiedlich beantwortet. Marieluise Christadler verweist dabei auf Pierre-André Taguieff, der den Begriff rechtsextrem als polemisch und wissenschaftlich unbrauchbar verwirft. Andere bemühen sich um eine Differenzierung dieses Begriffs. Dabei komme in den von rechtsextrem über ultrarechts bis rechtsradikal reichenden Abstufungen die Komplexität gegenrevolutionären Denkens und zudem das Bedürfnis nach einer Trennung des Rechtsextremismus vom Faschismus zum Ausdruck. In Bezug auf den Front National betont Michel Winock "das Wiederaufleben einer alten nationalpopulistischen Tradition", in der Elemente wie Dekadenzvorwürfe, der Antagonismus gegen die offizielle Politik, die Betonung des Plebiszitären und eine starke Integrations- bzw. Führungsfigur zusammentreffen. Paul Buzzi weist darüber hinaus auf die im Front National vertretene Strömung des katholischen Integrismus hin. "Diese zweite Linie beginnt mit der gegenrevolutionären, katholisch-royalistischen Rechten von 1789 und führt zu Beginn des 20. Jahrhunderts zur Action Française (...)". Stärker an den Bedingungen seines Erfolgs orientiert betonen etwa Nonna Mayer oder Pascal Perrineau den Charakter des FN als Protestpartei, die von der zunehmenden Desintegration der traditionellen Parteien profitiert. Immigration und Unsicherheitsgefühle sind weitere Stichwörter zur Erklärung des lepenistischen Erfolgs und zugleich wichtige Themen der Partei. Gleichwohl befinden sich ihre Hochburgen nicht innerhalb der problematischen Siedlungen, sondern eher an deren Rändern. Dies läßt Wahlmotive vermuten, die sich nicht direkt aus dem Zusammenleben verschiedener Kulturen, sondern aus der koexistenziellen Qualität und deren Außenwahrnehmung speisen. Zudem weisen Daniel Cohn-Bendit und Thomas Schmid in ihrem Buch *Heimat Babylon* darauf hin, daß Xenophobie alle Gesellschaften begleitet, "die von Modernisierungsprozessen erfaßt werden und in denen immer wieder der fremde Bote für die Botschaft genommen und zur Rechenschaft gezogen wird." Pascal Perrineau, Jean Viard, Hans-Gerd Jaschke nennen als wichtige Erfolgsursache des FN den Wandel der traditionellen kulturellen und sozialen Subsysteme, die im Verlauf der gesellschaftlichen Modernisierung ihre Integrationsfähigkeit eingebüßt haben. Dabei ist es dem FN in verschiedenen Kommunen sogar gelungen, die entstandene Lücke mit eigenen sozio-kulturellen Netzen zu füllen. Aus ökonomischer Perspektive schließlich wird die Anfang der 80er Jahre einsetzende Wirtschaftskrise hervorgehoben. Wo die Gründe für den Erfolg des FN zu suchen sind, wird noch zu klären sein. Daß sie aber nicht monokausal hergeleitet werden können, ergibt sich schon daraus, daß jeder politische Akteur in einem weitverzweigten sozialen, politischen und kulturellen Netz agiert.

6.2.Lega Nord

Hunde, die bellen, beißen nicht, behauptet der Volksmund. Auch der italienische. Und in der Tat läßt sich über die Bißfähigkeit Bossis trefflich streiten, seit er zwischen separatistischen Maximalismen und realpolitischen Kompromissen schwankt. Kein Zweifel indes besteht über die Härte des Tons und dessen provokative, oft vulgäre Färbung als Markenzeichen des enfant terrible der italienischen Politik. Bossis Biographie ist voll von Brüchen, oder besser Abbrüchen, denn sein Karrierewunsch als Musiker blieb ihm ebenso versagt wie ein Universitätsabschluß als Mediziner oder ein Traumjob als Elektrotechniker.

Lediglich in seiner politischen Arbeit ist er (bislang) einigermaßen beständig, wenn auch nicht berechenbar. Überraschen mag die Tatsache, daß Bossi lange Zeit für Politik nichts übrig hatte. Dies änderte sich mit nachhaltigen Folgen für die italienische Innenpolitik erst durch seine Freundschaft mit dem ehemaligen Vorsitzenden der autonomistischen Union Valdotaïne Bruno Salvadori: Umberto Bossi wollte Berufsbefreier werden. Versuchsweise übte er sich als Retter der beiden Städte Como und Varese, die er mit seiner 1979 gegründeten *Unione nord-occidentale laghi per l'autonomia* aus den Fängen der *Lombardei* befreien und ihnen zu hoheitlichen Rechten verhelfen wollte. Nachdem dieser Versuch ins Leere gelaufen war, verlangte er die Selbstbestimmung der gesamten *Lombardei* und gründete 1982 die *Lega Autonomista Lombarda*, die 1984 in der *Lega Lombarda* aufging. Lange Zeit hatte sich niemand so recht für Bossi interessiert. Nachdem ihn aber seine langsam größer werdende Anhängerschaft 1987 zum Senator wählte, wurde er "dank seiner frechen Klappe, seiner volkstümlich-ordinären Ausdrucksweise und seiner schrillen Schlipse schnell als Senatür in ganz Italien berühmt". Über die Bedeutung Bossis als politische Führungskraft und Identifikationsfigur existieren verschiedene Ansichten. Fritz Plasser und Peter A. Ulram bestreiten indirekt Bossis Relevanz, wenn sie als zentralen Unterschied zwischen *Lega* und *FPÖ* hervorheben, daß die österreichische Partei in besonderem Maß von ihrer Führungsfigur geprägt sei. Zu einem anderen Schluß kommt Marc Gilbert, der den Erfolg der *Lega* auf Bossis Einfluß und seine Selbstdarstellungskompetenz zurückführt. Die Tatsache, daß er bei den Deputiertenkammerwahlen 1992 rund 250.000 Vorzugsstimmen abschöpfen konnte und damit meist gewählter Parlamentarier (Senator) wurde, gibt Gilbert recht. Anders als Haider, dem nach seiner Wahl zum Parteichef schon deshalb viel Aufmerksamkeit zuteil wurde, weil er einer im System verankerten Partei vorsteht, war Bossi über lange Zeit ein outsider. Die nationalen Medien haben sich mit wenigen Ausnahmen ebensowenig für ihn und seinen folkloristischen Verein interessiert wie die italienischen Parteien. Er hatte sich auf der *piazza* einen Namen gemacht, und sein Bekanntheitsgrad wuchs erst nach seiner Wahl zum Senator. Jedoch können weder Bekannt- noch Beliebtheit die zunächst schleichende und seit 1989 rapide Abkehr der Wähler von den traditionellen Parteien erklären. Innerhalb der Sozialwissenschaften existieren zahlreiche Untersuchungen, die nach den Gründen für den Erfolg der *Lega* suchen. Die Parteien- und Wahlforschung hebt den bereits seit Mitte der 70er Jahre zu konstatierenden Vertrauensschwund in etablierte Parteien hervor, bleibt aber in der Regel die Antwort schuldig, warum ausgerechnet eine Partei wie die *Lega* davon profitieren konnte. Roberto Biorcio betont in diesem Zusammenhang ihre Bedeutung als neuartige Partei, die ihre Akzeptanz vor allem aus ihrer Präsentation bezieht. Er definiert sie als politischen Akteur, der als Dienstleistungsbetrieb seine Angebote an den Nachfragen der Bevölkerung orientiert und mit ihr in ein scheinbar direktes Interaktionsverhältnis tritt. Dagegen verweisen andere nicht primär auf den Wandel des Parteiensystems, sondern auf seine durch Korruption verursachte Krise. Die auf den ersten Blick naheliegende und von der ausländischen Presse favorisierte Erklärung verliert jedoch bei genauer Betrachtung an Wert: Denn erstens herrschte in der italienischen Bevölkerung schon seit langem die Meinung vor, Politik und Parteien seien "schmutzig", und zweites waren die *Ligen* und die *Lega* bereits vor den Enthüllungen der gegen Korruption ermittelnden Richterschaft erfolgreich. Valeska von Roques und Jens Petersen betonen gleichermaßen den Nord-Süd-Gegensatz als wichtigen Grund für die Geburt und den Erfolg der norditalienischen *Ligen* bzw. der *Lega Nord* hervor. Dagegen betont die modernisierungstheoretische Perspektive den Wandel der Arbeits- bzw. Industriegesellschaft und die damit entstandenen neuen Bedürfnisse und Konflikte. Aufschlußreich sind die mehrdimensionalen Erklärungen Michael Brauns. Er nennt als wichtigste Gründe den durch Korruption bedingten Verschleiß des alten Systems und die

von ihm hinterlassene Fiskalkrise, die von den antimeridionalen Ligen benutzt wurde, um eine Spaltung des Staates zu fordern. Diese Spaltung zielte vor allem darauf, den subventionsabhängigen Süden vom steuerpotenten Norden abzukoppeln. Die ideologischen Klassifikationen sind vielschichtig, wobei die Abstufungen - sezessionistisch, autonomistisch, regionalistisch bzw. neoregionalistisch und föderalistisch - aus der Entwicklung des Leghismo resultieren. Ob und inwieweit die Lega als rassistische Partei bezeichnet werden kann, ist eine umstrittene Frage. Sie wird überwiegend verneint, wenn unter Rassismus eine kulturell-ethnisch hergeleitete "Höher- bzw. Minderwertigkeit" verstanden wird. Definiert man jedoch Wohlstandschauvinismus als eine moderne Variante rassistischen Denkens, dann wird sie wie von Jens Petersen, Sibylle Stegmüller und Vittorio Moiola dementsprechend klassifiziert. Moiola bezeichnet den Rassismus der Lega als differenzialistisch: Indem sie vorhandene Ressentiments aufgreift und sie provokativ zuspitzt, sichert sie sich die Zustimmung der Bevölkerung und öffentliches Interesse. Damit wird zugleich Identität gestiftet, die sich aus der Abgrenzung nährt. Rolf Uessler nennt dies "negative Identifikation". Obgleich die Lega vorhandene Ressentiments für propagandistische Zwecke instrumentalisiert, unterscheidet sie sich in dieser Hinsicht nicht von den übrigen italienischen Parteien. Auch in diesem Punkt muß die Entwicklung der Lega berücksichtigt werden. Noch bis Anfang der 90er Jahre wurden Vorurteile gegen Immigranten und Südtaliener noch scharf formuliert. Parallel zur nationalen Etablierung der Partei und ihrem Willen, innerhalb des Systems zu gestalten, wurden sie jedoch vergleichsweise milde vorgetragen. Weitgehende Einigkeit besteht darüber, daß die Lega keine Partei der extremen Rechten ist und unter dem Blickwinkel ihrer politischen Ziele - sie tritt für eine Tout-court-Privatisierung ein - als neoliberal bezeichnet werden kann. So unterschiedlich die Ergebnisse auch sind; ein Faktum wird von allen Sozialwissenschaftlern, Journalisten und von der Lega selbst hervorgehoben: Das Jahr 1989, der Fall der Mauer als definitives Ende des Kalten Krieges, war eine wichtige Voraussetzung für die Beschleunigung längst augenfälliger Erosionserscheinungen des alten Parteiensystems und Chance für politische Newcomer.

6.3.Freiheitliche Partei Österreichs

Haider. Ganz Österreich scheint fasziniert von diesem Mann. Kaum ein anderer Politiker, der so viel Staub aufwirbelt und damit Journalisten Topmeldungen beschert. Plumpe Geschmacksverletzungen, Tabubrüche, historische Wahrheitsverschiebungen oder provokativ-intelligente Zuspitzungen, mit denen er nicht selten ins Schwarze und damit den Nerv von Politikern trifft, sichern der wohl umstrittensten öffentlichen Figur Österreichs permanente Medienpräsenz. Entdeckt wurde das Rhetorik-Talent beim Jahrestreffen des Österreichischen Turnerbundes. Dieser ebenso politische wie sportliche Verein hatte 1966 Jörg Haiders Gedanken über die Bedeutung österreichischen Deutschtums mit dem Rednerpreis des Jahres prämiert. Damit weckte der Jugendliche das Interesse der Deutschen National Zeitung, die den Text nachdruckte, und des damaligen FPÖ-Vorsitzenden Friedrich Peter, der Haider in die Partei lockte. Neben seiner Parteiarbeit engagierte sich Haider zumeist an exponenter Stelle in zahlreichen rechtsextremen Organisationen. Darunter die Freiheitliche Jugend Oberösterreich und der Ring Freiheitlicher Jugend Österreichs. 1976 zog er nach Kärnten und übernahm in dem wichtigsten deutschnationalen Landesverband zahlreiche parteiinterne und parlamentarische Ämter; 1989 schließlich avancierte er dort zum Landeshauptmann (ein dem bundesdeutschen Ministerpräsidenten entsprechendes Amt). Nach nur zwei Jahren Amtsinhaberschaft wurde allerdings sein Rücktritt unumgänglich, nachdem er in einer hitzigen Haushaltsdebatte die Arbeitsmarktpolitik der Nationalsozialisten als "ordentlich"

gelobt hatte. Seiner Karriere tat diese Provokation keinen Abbruch, denn zielstrebig wechselte er ein weiteres Mal seinen politischen Standort, zog nach Wien und wurde im Nationalrat Fraktionsvorsitzender seiner Partei. Seit 1986 hatte er bereits das Amt des Parteiobmanns inne. Der Rhetoriker Haider zieht nicht nur Anhänger, sondern auch seine politischen Gegner in Bann. So hatte sich eine Gruppe Klagenfurter Psychologen fakultätsintern "über das Stück Faszination und Aufregung, das wir beim Haider-Thema auch in uns selbst immer wieder spürten", geärgert und sich als Konsequenz dieses Unbehagens mit "Haiders Inszenierungserfolgen und Erfolgsinszenierungen" intensiver auseinandergesetzt. Die 1992 vorgelegte Studie richtet sich aufgrund ihrer Methoden in erster Linie an Sozialpsychologen und ist eine unter zahlreichen Untersuchungen, die sich mit Jörg Haider auseinandersetzen. Zunächst erstaunt über die Fülle von Publikationen zum Thema FPÖ und Haider, fiel mir bei genauerer Durchsicht die Dominanz des sprachanalytischen Diskurses auf. Er zielt hauptsächlich darauf, Jörg Haiders Affinität zum Nationalsozialismus herauszuarbeiten und zu beweisen, daß seine NS-Anspielungen überwiegend weltanschaulicher und nicht taktischer Natur sind. Die Anwendungshäufigkeit dieser Methode legt den Schluß nahe, daß der überwiegende Teil österreichischer Gesellschaftswissenschaftler den Erfolg der FPÖ nach 1986 in erster Linie auf die Person Haiders und auf eine Wählerschaft zurückführt, die sich mit seinen Äußerungen identifiziert. Eine Analyse von politischen oder sozio-ökonomischen Erfolgsbedingungen der Partei gerät so ins Hintertreffen. Den diesbezüglichen Forschungsstand würde ich bei aller Vorsicht als rudimentär bezeichnen. Darüber hinaus halte ich es für sekundär, ob die inkriminierten Äußerungen auf einem geschlossenen rechtsextremen Weltbild basieren oder stärker taktisch motiviert sind. Alleine die Tatsache, daß Haider seine Verlautbarungen häufig an den NS-Sprachgebrauch anlehnt und damit absichtsvoll an latent oder manifest vorhandene Affekte appelliert, ist Grund genug, an seiner demokratischen Integrität zu zweifeln. Aber auch jenen, die diese Forschungsmethode bzw. ihre Dominanz wie ich für problematisch halten, fällt es augenscheinlich schwer, andere Instrumente anzuwenden. So bemängelt Andreas Schedler die einseitige akademische Konzentration auf Haiders "Affinitäten und Ambivalenzen gegenüber (...) nationalsozialistischen Positionen (..)". Seine Kritik zielt jedoch lediglich gegen das Thema und nicht gegen die Methode, der er sich in seiner Arbeit über die "antipolitischen Stereotypen" Haiders ebenfalls bedient. So interessant und legitim die Beschäftigung mit dem FPÖ-Obmann auch sein mag: Allein seine Rhetorik und seine NS-Anspielungen, Sprachwitz oder Provokationen können den Erfolg der FPÖ nicht erklären. Insofern liegt es nahe, sich mit den Befindlichkeiten der übrigen Parteien und den Beziehungen zwischen ihnen und (Wahl-)Bürgerschaft auseinanderzusetzen, wofür eine zweite Forschungsrichtung namentlich steht. Sie weist nach, daß der Erfolg der FPÖ auf die schwindende Integrationskompetenz der beiden großen Parteien zurückzuführen ist. Dies wird auf der Basis umfangreichen Datenmaterials zumeist lediglich konstatiert und die Gründe dafür mit nur wenigen Stichwörtern (gesellschaftliche Modernisierung, Arbeitslosigkeit) umrissen. Aufschlußreicher dagegen ist die 1994er Studie aus dem Hause Plasser/Ullrich, in denen die Politologen detailliert die sozio-ökonomischen Hintergründe des FPÖ-Erfolgs beleuchten. Nicht zuletzt wird der Erfolg nach 1986 auf die Haider unterstützende Boulevard-Presse zurückgeführt. Eine besondere Rolle spielt dabei die Kronenzeitung, deren Aufmacher sich häufig mit den jüngsten, zu Parolen verdichteten Botschaften Haiders decken. Die FPÖ wird mit unterschiedlichen Adjektiven belegt, und in vielen Untersuchungen wird die Frage, ob und inwieweit sie rechtsextrem ist, diskutiert. Aufgrund der Unterwerfungs- und Zermürbungstaktiken Haiders unterscheidet Hans-Henning Scharsach zwischen dem Parteiobmann, den er als rechtsextrem bezeichnet, und der weitgehend einflußlosen

Mitgliedschaft, die er nicht pauschal der extremen Rechten zuschlagen mag. Er definiert die Partei deshalb als Führerpartei. Da aber auch bei der FPÖ Mitgliedschaft freiwillig und niemand am Austritt zu hindern oder zum Eintritt gezwungen ist, halte ich diese Differenzierung für fragwürdig. Dagegen bewerten Brigitte Bailer und Wolfgang Neugebauer die FPÖ als tendenziell rechtsextrem, weil sich nach 1986 ein "entscheidendes Anwachsen der traditionellen deutschnational-rechten bis rechtsextremen Kräfte" vollzogen hat. Die sich stärker mit den politischen Taktiken Haider und der FPÖ auseinandersetzenden Beobachter bezeichnen die FPÖ dagegen als populistische, rechtspopulistische oder schlicht als Protestpartei. Fritz Plasser und Peter A. Ulram fusionieren verschiedene Begriffe zu einem umfassenden Ausdruck und definieren die FPÖ als radikale rechtspopulistische Partei. In Anlehnung an Hans-Georg Betz differenzieren sie zwischen dem radikalen, dem rechten und dem populistischen Merkmal. Radikal sind Parteien dieses Typs in ihrer Ablehnung sozio-kultureller und sozio-politischer Systeme und in der Befürwortung des Leistungsprinzips und des liberalen Marktes, "ohne jedoch die Legitimität der Demokratie offen in Frage zu stellen". Rechts sind sie aufgrund ihrer Ablehnung individueller und sozialer Gleichheit und wegen ihrer Ablehnung der sozialen Integration von Minderheiten. Sie sind populistisch, weil sie Angst und Unsicherheit für ihre Zwecke instrumentalisieren und an den "gesunden Menschenverstand" und den sogenannten "kleinen Mann" appellieren. Auch Franz Janushek bezeichnet die FPÖ als eine rechtspopulistische Partei, definiert den Begriff jedoch anders als Plasser/Ulram: Die Partei Haider ist rechtspopulistisch "und zwar nicht nur der Geschichte der Partei wegen, sondern auch wegen der Inszenierung ihrer gegenwärtigen Politik. Dies gilt zum einen für den traditionellen Topos der rechtsextremen Politik, die Reinhaltung der Rasse, Nation oder auch nur 'Kultur' - ein Topos, der von der FPÖ durchaus bedient wird -, zum anderen aber auch für Anspielungen auf die nationalsozialistische Vergangenheit". Das Populistische selbst äußere sich in dem Willen der FPÖ, die Macht zu übernehmen und sich nicht lediglich an einer Koalitionsregierung zu beteiligen, womit sie letztlich auf die Durchsetzung ihrer Ziele verzichten und Glaubwürdigkeit verlieren würde. Bei der ideologischen Klassifizierung läßt sich eine gewisse Vorsicht konstatieren, die meines Erachtens auf die Entwicklung der Partei und die bis heute nicht eindeutig erkennbare Richtung zurückzuführen ist. Wie viele andere hatte Hans-Henning Scharsach nach 1986 eine Re-Radikalisierung bzw. eine Renaissance des aggressiven Deutschnationalismus festgestellt. Aber "geblendet und irritiert durch diesen vermeintlichen 'Rückfall' übersehen politische Öffentlichkeit, Gegner und wahrscheinlich auch große Teile in der eigenen Partei, daß Haider's Politik eine völlig neue Dimension enthält, die weit über die Reproduktion gestriger Ideen hinausreicht." Unklar bleibt bei Scharsach aber die Qualität des Darüberhinausreichens. Zwar wurde Haider mit Hilfe der Deutschnationalen zum Parteichef gewählt, und er stammt selbst aus diesem politischen Zusammenhang. Aber er will keine Reaktivierung der alten FPÖ, die auch in ihren guten Zeiten keine ernstzunehmende Konkurrenz für die anderen Parteien darstellte. Er will Anführer einer großen Partei oder Bewegung mit dem Ziel sein, in der nationalen Politik eine wichtige Rolle zu spielen. Unter machtpolitischem Aspekt befindet sich die FPÖ derzeit in ihrer wohl wichtigsten (Entwicklungs-)Phase, was gleichzeitig dazu führt, daß man sie ideologisch schwer einschätzen kann.

6.4.Zusammenfassung

Claus Leggewie konstatiert (wie zuvor schon Durkheim) völlig zu Recht, daß sich Soziales nur aus Sozialem und Politisches nur aus Politischem erklären lasse. Ich will damit nicht behaupten, daß Haider,

Le Pen und Bossi unwichtig sind oder daß ihre Parteien auch dann erfolgreich gewesen wären, wenn ihnen unauffällige Personen vorgestanden hätten. Zweifellos haben sie mit machiavellistischem Antrieb, politischem und sozialem Instinkt und einer gehörigen Portion Selbstbewußtsein die gesellschaftliche Stimmung und damit zusammenhängende Probleme erkannt, aufgegriffen und für sich instrumentalisiert. Sie sind aber keinesfalls Verursacher der für sie günstigen Bedingungen. Aus diesem Grund will ich die personalen Besonderheiten und Ähnlichkeiten der drei Parteichefs nicht lange diskutieren und nur auf einen wichtigen biographischen Unterschied verweisen: Anders als Jörg Haider und Jean-Marie Le Pen hat Umberto Bossi keine Berührungspunkte mit der extremen Rechten. Distanz oder Nähe zur extremen Rechten sagt nicht nur etwas über die Personen, sondern zugleich etwas über die Parteien aus, die in den folgenden Kapiteln im Mittelpunkt stehen. Die bereits hier deutlich gewordenen ideologischen Unterschiede sind noch weiter herauszuarbeiten. Unabhängig davon tauchen in den zitierten Untersuchungen aber auch Begriffe auf, die trotz parteipolitischer Differenzen äquivalente Erfolgsbedingungen der Parteien vermuten lassen: Modernisierung, Unsicherheit, Wandel der Industriegesellschaft und des Parteiensystems. Dies und die Überprüfung meiner Thesen steht im Zentrum von Kapitel 9. Im folgenden Teil werden die Parteien in ihrer Gründungs- und Konsolidierungsphase vorgestellt. Im Fall FPÖ bedeutet dies eine Analyse des Nach-1986er-Zeitraums, d.h. nach Haiders Antritt als Parteiobmann.

7.Gründungs- und Konsolidierungsphasen

Zehn Jahre mußte der Front National auf seine ersten Erfolge warten. Damit haben die Partei und ihr Chef den anderen etwas voraus: Geduld, Durchhaltevermögen, Zweckoptimismus. Zwar zeichnet sich auch Haider durch taktisches Abwarten und die Fähigkeit aus, Niederlagen einstecken zu können. Aber eine zehnjährige Durststrecke hat er nicht hinter sich bringen müssen. Und beide wiederum unterscheiden sich von Umberto Bossi, der auf Niederlagen sprachlich schrill und mit überstürzt wirkenden Attacken reagiert. So zum Beispiel im Sommer 1995, als er verfassungswidrig ein norditalienisches Parlament in Mantova "konstituierte" und die Stadt selbst zum Regierungssitz erklärte. Dies war bei aller Taktik ein Verzweiflungsakt des nach politischem Terrain und originären Themen suchenden Parteivorsitzenden.

Im Zentrum des folgenden Kapitels stehen die Gründungsbedingungen (Sonderfall FPÖ) der Parteien und ihre ideologischen Orientierungen. Dieser Abschnitt endet vor ihrem elektoralen Durchbruchs, der im anschließenden Kapitel untersucht wird. Der FPÖ-Teil endet vor dem Durchbruch der Partei in der Arbeiterschaft.

7.1.Front National

Der Front National wurde 1972 auf Initiative des nationalistischen Ordre Nouveau (ON) gegründet, der sein aktivistisches Image korrigieren und zudem weite Teile der extremen Rechte zusammenschließen und sie dadurch stärken wollte. Allerdings mußte die Partei etwa 10 Jahre auf ihren elektoralen Durchbruch warten. Trotz wirtschaftlicher Krisenerscheinungen waren die "jeweiligen Oppositions- und Semioppositionsparteien (in der Lage), potentielle Protestwähler" an sich zu binden. Diese Integrationsfähigkeit blieb bis Anfang der 80er Jahre bestehen.

Der "frühe" FN unter weitgehender Federführung ehemaliger ON-Eliten integrierte unterschiedliche ideologische Strömungen, die sich im ersten Parteiprogramm "Défendre les Français" niederschlugen. Paul Buzzi unterscheidet dabei zwei ideologische Grundrichtungen: 1. die europäisch-nationalistische Strömung; 2. die ein breites Spektrum (Neo-Vichysmus, Neo-Faschismus, Poujadismus und Algerie Française) repräsentierende anti-gaullistische und legalistische Rechte um Jean-Marie Le Pen. Weder

die revolutionäre neue noch die konterrevolutionäre Rechte schlossen sich - mit einigen monarchistischen Ausnahmen - der von Le Pen geführten Partei an. Aufgrund der heterogenen Struktur ist es kaum überraschend, daß der FN Veränderungen durchgemacht hat und Konflikten ausgesetzt war. Interne Streitigkeiten und Krisen hatten zumeist der Dominanz Le Pens gegolten, der zeitweilig sogar seinen Einfluß verlor und sich juristisch mit einer Abspaltung, die sich ebenfalls Front National nennen wollte, auseinandersetzen mußte. Die innerparteiliche Spannung wurde 1974 durch eine vom ON-Kreis vorgelegte und die Präsidentschaftskandidatur Giscard unterstüzende Wahlplattform verschärft, die Position Le Pens aber durch die Aufnahme von zwei radikalen Organisationen gefestigt:

1. die von François Duprat geführten Groupes nationalistes-revolutionnaires (GNR).
2. Fédération d'action nationale et européenne (FANE); eine aktionistische neofaschistische, von Marc Frederiksen dirigierte Organisation.

Diese beiden Gruppierungen setzten Alain Renault als Generalsekretär der Partei durch. Er gilt als Vertreter der harten neofaschistischen Linie und war zusammen mit Duprat Herausgeber der Cahiers européens. Duprat hatte die Koordination der Präsidentschaftskandidatur Le Pens übernommen, die aber lediglich 200.000 Stimmen (1,3%) einbrachte. Nach diesem schlechten Ergebnis spaltete sich der zur Zusammenarbeit mit der traditionellen Rechten neigende ON ab und gründete mit dem bis 1981 überlebenden Parti des Forces Nouvelles (PFN) das wichtigste FN-Konkurrenzunternehmen.

Ein wichtiger Wendepunkt in der Geschichte des Front National vollzog sich Ende der 70er Jahre. Zeichen dieses Wandels ist zum einen das Ende nationalrevolutionärer Präsenz innerhalb der Partei. Nach dem Tod Duprats 1978 hatte der GNR-Kreis den FN verlassen und mit den ebenfalls dissidierenden Neofaschisten von FANE fusioniert. Demgegenüber gewann die von Jean Pierre Stirbois angeführte Gruppe der Solidaristen an Gewicht. Sie war 1977 dem FN beigetreten, wenig später stießen katholische Integristen um Roman Marie sowie einige "Überläufer" der Neuen Rechten dazu. Parallel dazu wurden die Inhalte verändert, die sich stärker am Poujadismus orientierten und auf den konservativen Mittelstand zielten. Beklagt wurden zuviel Staat, zu hohe Steuern, zu große gewerkschaftliche Kompetenzen und mangelnde Förderung unternehmerischer Eigeninitiative. Zugleich wollte der FN sein radikales neofaschistisches Image korrigieren. Der dominante Antisemitismus à la Duprat wurde durch die Kritik an außereuropäischer Einwanderung nicht gerade ersetzt, aber weitgehend überlagert.

Mitunter wird dieser Wandel auf den Tod Duprats und das Ausscheiden von GNR und FANE zurückgeführt. Meines Erachtens müssen aber zwei weitere Faktoren berücksichtigt werden: Trotz aller Bemühungen war der Front National bislang bei keiner Wahl erfolgreich und daher gezwungen, Themen und Strategie kritisch zu reflektieren. Darüber hinaus war seit Ende der 70er Jahre Bewegung in das bis dahin starre Parteiensystem gekommen. Das politische Klima hatte sich nach links verschoben, und gleichzeitig befand sich die gaullistische Partei in einer tiefen Krise. Mit dieser Entwicklung wuchs der Kreis unzufriedener Rechtswähler beider bürgerlichen Kräfte und des traditionellen Mittelstandes, der seine originären Interessen immer weniger vertreten sah. Was wäre eine Partei ohne arithmetisch-

taktisches Bewußtsein? Wenn sich der Trend verstärken, die eigene Klientel ausbauen und sich die anderen Rechtskräfte schwächen ließen - so der unterstellte Gedankengang -, könnte die traditionelle Rechte langfristig Gefallen an einer Bündniserweiterung finden. Und die Intensität des Gefallenfindens hängt nicht unwesentlich von der Präsentation ab.

Bevor die Partei Le Pens aber zu ihren ersten Einzelerfolgen kam, gelang 1981 dem Linksbündnis aus Sozialisten und Kommunisten ein erdrutschartiger Wahlsieg, mit einer für den PS enormen Steigerung von 22,6% auf 37,5%; der PCF dagegen hatte rund 4% verloren und kam nur noch auf 16,2% der Stimmen. Zuvor hatte sich François Mitterrand gegen Giscard als Staatspräsident durchsetzen können. Die sich angedeutete politische Trendwende wurde damit bestätigt.

7.2.Lega Nord

Was sind die Ligen eigentlich, über die in den letzten Jahren auch hierzulande viel geschrieben worden ist? Wer sind ihre auf der piazza Dialekt parlierenden Anführer, die mit Alberto da Giussano einen lombardischen Befreier zum Symbol erheben, der vermutlich eine Erfindung - aber immerhin eine gute Erfindung! (la Repubblica) - aus dem letzten Jahrhundert ist? Was macht den Reiz Umberto Bossis aus, der mit Wortgewalt und Sprachakrobatik und einer Mischung aus sex and crime, aus Potenzgebaren und Gewaltandrohung gegen das Establishment zu Felde zieht? Warum liefen dieser "letzten leninistischen Partei Europas", in der angehende Mandatäre noch bis vor kurzem gleich ein Blanko-Rücktrittsschreiben zu unterzeichnen und ansonsten wenig mitzureden hatten, zahlreiche Mitglieder und Wähler zu? Es sei bereits hier vorweggenommen, daß der Durchbruch der Ligen wenig mit der Bedeutung regionaler Historie oder lokaler Sprachoriginalität zu tun hat. Die Ursachen des Erfolgs von Bossi und seiner Partei sind anderswo zu suchen.

Mit dem Begriff Leghismo bezeichnen italienische Sozialwissenschaftler und die Lega selbst den Kontext autonomistischer/föderalistischer Organisationen Norditaliens, von denen die Liga Veneta die älteste ist. Sie wurde bereits 1979/80 mit Unterstützung der venezianischen Società Filologia und der Union Valdotaïne gegründet. Im Veneto existieren zahlreiche kulturelle Organisationen, die sich überwiegend mit Sprachpflege und Literatur beschäftigen. Ihre Auffassung von Region als Nation und Territorium als Quelle historisch-kultureller Identität prägte auch die Liga Veneta, die sich 1980 erstmals um Mandate bemüht hatte. Oder korrekter formuliert: Mit denen die Società Filologia via Liga Veneta Eingang in die parlamentarische Politik suchte. Mit nur etwa 14.000 Stimmen erzielte die junge Organisation unter Franco Rocchetta ein schlechtes Ergebnis. Sie kam aber bei den nationalen Wahlen 1983 als mittlerweile eigenständig operierende Kraft auf regional gerechnete vier Prozent, die sie ebenfalls bei den europäischen Abstimmungen 1984 erzielte.

Die Wähler der Liga Veneta stammten überwiegend aus ländlichen Räumen, waren konservativ und christdemokratisch sozialisiert, gehörten zum Mittelstand oder zur schlecht ausgebildeten Arbeiterschaft mittelständischer Betriebe. In beiden Gruppen waren männliche Wähler überrepräsentiert. Ilvo Diamanti hat ihre Wahlmotive untersucht: Krise der christlich-demokratischen Partei, lokalistische Tradition, Angst vor der sozio-ökonomischen Entwicklung und schwindende Skepsis gegenüber laizistischen

Parteien.

Anfang/Mitte der 80er Jahre wurden die übrigen Ligen gegründet, die der Liga Veneta ideologisch und wahlsoziologisch entsprachen. Eine wichtige Veränderung ging von der Lega Lombarda aus: Sie rückte bis etwa 1987 vom ethnoregionalistischen Kulturverständnis ab und definierte die Lombardei und später den gesamten Norden als Konfiguration mit gleichen sozio-ökonomischen Interessen. Die so begründete und vergleichsweise säkulare Forderung nach Autonomie mit ihrem Kernziel "Los vom Süden" entspringt Bossis Einsicht, wonach eine moderne Protestpartei nicht von den Stimmen des konservativen Mittelstandes leben kann. Flankiert wurde diese Wende zum Neoregionalismus (Ilvo Diamanti) mit Steuerboykottaufrufen und schärferer Kritik an den bürokratischen und politischen Eliten in Rom, die nach Auffassung der Ligen unbeweglich, korrupt und vor allem meridionalisiert sind. Dem thematischen Wandel folgte die Veränderung der Wählerschaft mit einem nun höheren Anteil von Frauen und urbanen Mittelschichtlern. Nunmehr verloren auch der PSI und andere Linksparteien einen viele Wähler an die Lega.

Was sind die Ursachen für diesen Wandel? Im Unterschied zum Veneto ist die Lombardei eine industrialisierte und tertiärisierte Region mit entsprechender Bevölkerung. Zudem stammt Bossi bei aller Freundschaft zu Salvadori nicht aus ethnoregionalistischen Zusammenhängen, deren Forderungen ihm im Grunde fremd geblieben sind. Sein zweifellos origineller Vorschlag, aus den zahlreichen norditalienischen Dialekten eine gemeinsame Sprache zu kreieren, unterstreicht seine Distanz und seinen instrumentellen Umgang mit Traditionen. Und nicht zuletzt wollte Bossi Karriere machen. Die diesem Karrierewunsch zugrundeliegende Modernisierung der Partei machte Bossi zu einer erfolgreichen politischen Figur. Damit unterscheidet er sich vom traditionalistischen Chef der Liga Veneta, Franco Rocchetta, der bis zu seinem Parteiaustritt im Herbst 1994 Bossis schärfster Gegner war.

Bis 1989 war die Lega Lombarda die einzige Liga mit einer kontinuierlich nach oben weisenden Erfolgskurve, wodurch Bossi seine Position in der eigenen Sektion stärken und den Zusammenschluß aller Ligen zur Lega Nord (1991) forcieren konnte.

7.3.Freiheitliche Partei Österreichs

Seit Haiders Amtsantritt als Obmann wird die Partei in Wissenschaft und Publizistik aufgrund seines Führungstils und seiner Personalpolitik häufig als Haider-FPÖ bezeichnet. Es wäre sicher übertrieben, von der FPÖ als einem völlig neuen Produkt zu reden. Allerdings läßt sich ebensowenig behaupten, daß sie einen kontinuierlichen Wandlungsprozeß durchgemacht hat, in dem sich die Konturen der heutigen FPÖ bereits frühzeitig abgezeichnet haben. 1986 war ein Bruch. Und dieser Bruch war einschneidender als der Übergang von der rechtsextremen zur sogenannten liberalen bzw. moderaten Phase der Partei. Denn zu dieser Zeit hatten sich die soziologischen Profile der Wähler- und Mitgliederschaft kaum verändert.

Stegers Sturz und Haiders Amtsübernahme wurden von langer Hand und speziell von zwei Gruppierungen vorbereitet: Dem Lorenzer Kreis und dem Landesverband Kärnten.

Der Lorenzer-Kreis

Die in diesem informellen Kreis versammelten rechtsextremen FPÖ-Exponenten rühmen sich selbst ihrer Urheberschaft des "putschartigen" Wechsels. Dies mag vielleicht etwas selbstgefällig sein; aber immerhin wurde ihr Engagement von Haider auf dem Sonderparteitag in Innsbruck gelobt. Der Lorenzer Kreis fungiert als Kadergruppe der harten deutschnationalen Strömung und kümmert sich hauptsächlich um personelle Koordination und politische Strategie. Deshalb existieren auch keine schriftlichen und öffentlichen Stellungnahmen, Anträge oder Publikationen. Mit allerdings einer Ausnahme: 1989 wurde in der AULA ein "Lorenzer Erklärung" genanntes Positionspapier mit reaktionärem, rassistischem, faschistischem und nationalrevolutionärem Inhalt veröffentlicht. Die unterschiedlichen ideologischen Ansätze spiegeln die personelle Zusammensetzung des Lorenzer Kreises wider, und die Vielzahl der im Papier diskutierten Themen sind Ausdruck der Ereignisse Ende der 80er Jahre: Fall der Mauer, Ende des Ost-West-Konflikts, Ideologienkrise, Ostöffnung.

Der Kärntner Landesverband

Ein großer Teil der Angehörigen des Lorenzer Kreises stammt aus dem Kärntner Landesverband, der ebenfalls eine wichtige Rolle bei Stegers Sturz und Haiders Inthronisation gespielt hat. Nicht zuletzt war es der Wahl-Kärntner Haider selbst, der entschlossen an seiner Karriere gearbeitet hat. Dabei ging es nicht nur um Meinungsführerschaft in der Partei, Promotion von Inhalten und Formulieren politischer Ziele. Haider ist seinem Wunsch, Parteiobmann zu werden, auch mit höchst praktischen Maßnahmen nähergekommen: gegenseitige Karriereversicherungen zwischen dem designierten Vorsitzenden und seinen wichtigsten Förderern, penetrante Beeinflussung kommunaler Untergliederungen zum Zweck der richtigen Delegiertenauswahl und Instrumentalisierung führender Mitglieder, die mit der Politik Stegers unzufrieden waren, aber nicht zur deutschnationalen Strömung zählten.

Seit 1985 hatte Haider seinen Anti-Steger-Kurs erheblich verschärft und ein Parteiausschlußverfahren sowie die Spaltung der FPÖ riskiert. Dazu kam es jedoch nicht, wodurch die Stärke der deutschnationalen Fraktion bzw. die Schwäche ihres politischen Gegners unterstrichen wird. Zudem waren die Kärntner aufgrund ihrer elektoralen Stärke in der bequemen Lage, Druck auf die Partei auszuüben.

Unmittelbar nach Haiders Wahl zum Bundesparteiohmann fanden in Österreich Nationalratswahlen statt, bei denen die Wende der Partei mit 9,7% der Stimmen honoriert wurde. Dem Freudenfest folgte jedoch bald das Katerfrühstück, denn Haiders Förderer mußten feststellen, daß ihrem neuen Chef nicht nach Dank, sondern nach Abdank zumute war. Und zwar nach ihrem. Nach seinen ersten Wahlerfolgen fühlte sich Haider stark genug, auf ehemalige politische Freunde zu verzichten und die Außen- und Innenrepräsentanz nach seinem Gusto zu gestalten. Ehemalige Weggefährten wurden von ihm weggelobt oder mit zermürenden Taktiken aus der Partei getrieben. Statt dessen scharte er eine Gruppe junger und dynamischer Haiderianer um sich, die ihren Vorgängern und dem neuen Vorsitzenden schon allein deshalb unterlegen sind, weil ihnen als Quereinsteigern die harte Schule von Strategie, Taktik und Rhetorik fehlt.

Anders verhält es sich bei dem aus Kärnten stammenden Andreas Mölzer, der von Haider 1991 zum Grundsatzreferenten gemacht wurde. Neben dieser Tätigkeit wurde er mit der Aufgabe betraut, die historisch-ideologischen FPÖ-Schriften zu verwalten. Seine Bestellung für diese wichtigen Ämter erfüllte eine Doppelfunktion: 1. Wegen des Angestelltenverhältnisses stand Mölzer unter der Kontrolle Haiders. Zwar gilt er als treu ergebener Haider-Anhänger. Nicht selten jedoch hat Treue einen nur instrumentellen Charakter. 2. Mit der Anstellung Mölzers ließ sich zugleich die durch Haiders Personalpolitik frustrierten Deutschnationalen befrieden. Der 1952 geborene Historiker und Landeskundler war unter anderem führend an der AULA beteiligt, von 1985 bis 1990 Chefredakteur der Kärntner-Nachrichten und Mitglied des Autorenkollektivs der Deutschen Monatshefte. 1987 wurde er wegen nationalsozialistischer Wiederbetätigung zu einer geringen Geldstrafe verurteilt und zwei Jahre später auf der Landtagswahlliste der FPÖ placiert.

Mölzer bietet alles, was die Herzen der österreichischen Rechtsextremen höher schlagen läßt. Allerdings ist er Taktiker genug, um zu wissen, daß mit einer deutschnationalen Renaissance keine Wähler zu gewinnen sind. Deshalb favorisierte er wie Haider eine von ihm so bezeichnete plebiszitäre Emanzipationsbewegung, die sich ohne Ideologismen präsentiert.

Hatte Haider schon zu Beginn seiner Obmann-Karriere die Transformation seiner Partei und die Bildung einer Bewegung im Auge? Vermutlich nicht, denn bei allem Karrierestreben konnte er den fulminanten Aufstieg der FPÖ innerhalb kurzer Zeit kaum vorhersehen. Mittlerweile verzichtet die Partei darauf, Partei zu heißen und kommt als selbsternannte Bewegung daher. Mölzer? Der ist nicht mehr dabei. Er wurde von Haider entlassen.

7.4.Diskussion

Bossi, Le Pen und Haider haben sich als Führungskräfte durchsetzen bzw. stabilisieren können. Wer jedoch langfristig an führender Stelle stehen will, braucht Erfolgserlebnisse. Dies müssen nicht zwingend elektorale Effekte sein, wie das Beispiel des in dieser Hinsicht lange glücklosen Front National zeigt. Allein das Überleben einer Partei "gegen" eine ähnliche Konkurrenz kann schon ein Erfolg sein. Wenn jedoch eine Partei nach einem Achtungserfolg wieder in der Versenkung verschwindet oder dauerhaft Stimmeinbußen hinnehmen muß, wird dies nicht ohne Auswirkungen auf die Führung bleiben; eine Logik von Erfolg und Wiederholungszwang, der alle Parteien ausgesetzt sind.

Das Zusammentreffen von führungspolitischer Stabilisierung und elektoralen Erfolgen ist in Österreich und Italien signifikant. Ansonsten durch Flügel- und Machtkämpfe oder Aufbauphasen absorbierte Kräfte werden frei und können auf Wahlen konzentriert werden. Der Erfolgsfall wiederum zieht eine Stabilisierung des Führungspersonals nach sich. Damit werden zugleich die Bedürfnisse der Wähler nach einer Identifikationsfigur befriedigt. Einige Daten sprechen für das Vorhandensein einer derartigen Korrelation: Schlagartig nach dem Sturz des blassen und umstrittenen Steger und seiner Substituierung durch den jungen und "feschen" Haider avancierte die FPÖ zu einer Zehn-Prozent-Partei mit steigender Erfolgskurve. Im Zeitraum zwischen den letzten Umfragen für FPÖ unter Steger (um die 2%) und den

für die Haider-FPÖ erfolgreichen Wahlen hat sich nichts ereignet, womit diese Trendwende erklärt werden könnte. Mit einer Ausnahme allerdings: Die im Zusammenhang mit der Wahl Waldheims zum Bundespräsidenten aufgewühlten Emotionen. Will man aber nicht Haider selbst als kausale Ursache seines Erfolgs bezeichnen, dann muß es bereits zuvor ein latentes, aber unsichtbares oder durch andere Faktoren überlagertes Protestpotential gegeben haben.

Während es in Österreich einen Führungswechsel innerhalb der Partei gab, fand in Italien ein Parteienwechsel durch eine Führungsfigur statt (Gründung der Lega Nord). Damit konnte der bereits mit seiner Lega Lombarda erfolgreiche Bossi sich zum Spitzenmann einer norditalienischen Partei aufschwingen (siehe das folgende Kapitel) und für eine einheitliche Präsentation und für elektorale Akzeptanz sorgen. Anders sieht es in Frankreich aus. Denn obgleich Le Pen bereits lange vor dem Durchbruch des FN dessen unumstrittene Führungsfigur war, blieb er ohne elektoralen Erfolg. In diesem Zusammenhang müssen jedoch die oben untersuchten Zeiträume berücksichtigt werden: Während das Mißtrauen der italienischen und österreichischen Wähler in die traditionellen Parteien schon spürbar gewachsen war, endet die untersuchte Phase Frankreichs mit einem Sieg für die Linke zu Beginn der 80er Jahre, die die Rechtskoalition mit einem hervorragenden Ergebnis abgelöst hat. Diese Linke wurde nicht mangels Alternative oder zähneknirschend, sondern in der begründeten Hoffnung auf große soziale, politische und ökonomische Veränderungen gewählt.

Zur ideologischen Ausrichtung der drei Parteien: Für die frühen Ligen, den Front National und die FPÖ ist Nation in erster Linie durch Kultur und ethnische Zugehörigkeit bestimmt. Dieser Nationenbegriff blieb bei den Ligen allerdings auf die Region bezogen. Aber auch die Nationalismen der FPÖ und des FN sind unterschiedlich: Der österreichische Deutschnationalismus postuliert eine über die eigenen Staatsgrenzen hinausreichende Grundgesamtheit eines Volkes. Auch die kurzzeitig im FN präsente nationalrevolutionäre Strömung denkt über Frankreichs Grenzen hinaus und hat dabei ein europäisches Reich im Blick. Ohne dem folgenden Kapitel vorgreifen zu wollen, sei bereits hier angemerkt, daß Haider sich unterdessen vom deutschnationalen Bekenntnis distanziert und die Notwendigkeit eines inländischen Ansprechpartners erkannt hat. In diesem Sinn adressiert er seine Appelle an die Gemeinschaft der Österreicher, die seiner Meinung zufolge durch innere und äußere Feinde bedroht wird. Bei allen drei Parteien fehlen bislang mit wenigen Ausnahmen die Vertreter der Neuen Rechten. Zweifellos hat in der FPÖ Modernisierungsbedarf bestanden, auch wenn durch den Obmann Friedrich Peter eine Öffnung der Partei eingeleitet wurde. Allerdings konnte sich die liberale Strömung um Norbert Steger das Modernisierungsdefizit zunutze machen, das die nationale Fraktion durch ihr Festhalten an alten Positionen geschaffen hat. Erst durch das schlechte Abschneiden der Liberalen bei Wahlen und Wahlumfragen wurde der Weg für den in vielerlei Hinsicht modernen Jörg Haider frei, auch wenn man ihn ideologisch betrachtet sicher nicht als einen Vertreter der Neuen Rechten bezeichnen kann. Dagegen ist das Fehlen einer Neuen Rechten innerhalb der Ligen schon deshalb nicht überraschend, weil auch die Köpfe der "alten" Rechten für den Leghismo keine Bedeutung haben. Für Frankreich ergibt sich ein ganz anderer Zusammenhang. Denn Alain de Benoist und seine Nouvelle Droite verzichteten ganz bewußt auf parteipolitische Aktivitäten, um sich dem kulturellen Paradigmenwechsel in den französischen Köpfen zu widmen. Daß der spätere Erfolg des Front National auch auf die Arbeit dieses "Ideenlabors" zurückzuführen ist, wird von Wolfgang Kowalsky ebenso vertreten wie von Dietmar Loch, der zwischen der Neuen Rechten und dem FN "eine

uneingestandene Arbeitsteilung" vermutet.

Ideologische Wandlungsprozesse sind bei der Lega und bei FPÖ am deutlichsten zu beobachten. Der fundamentalistische Ethnoregionalismus der ersten Ligen wurde schnell vom Neoregionalismus der aufstrebenden Lega Lombarda neutralisiert bzw. überlagert. Allerdings sind ideologische Abschleifungen oder Veränderungen weniger überraschend, wenn sich dies innerhalb einer jungen Partei vollzieht. Aus diesem Grund halte ich den Wandel der FPÖ und ihre Entideologisierungerscheinungen für bedeutsamer als den Wandel der Lega, in der sich traditionalistische und ideologisch gefestigte Strömungen noch gar nicht haben entwickeln können.

Welche Schlüsse sind aus diesen Entwicklungen zu ziehen? Zunächst einmal stoßen maximalistische Forderungen bei der Bevölkerung dann auf Ablehnung, wenn zwischen den Forderungen und den gesellschaftlichen Problemen keine Berührungs- oder Anknüpfungspunkte bestehen. Der Deutschnationalismus ist in der österreichischen Bevölkerung mittlerweile ein Randphänomen. Dagegen unterstreichen sozialwissenschaftliche Erhebungen ein stark ausgeprägtes Österreich-Bewußtsein. Wenn die FPÖ eine Konsenspartei werden will, muß sie, zumindest nach außen, auf Deutschtümeleien verzichten. In Italien hingegen existieren mit dem Nord-Süd-Gegensatz und den Forderungen der Lega deutliche Berührungspunkte. Im öffentlichen Bewußtsein wird dieser Gegensatz primär als ökonomisches Problem begriffen. Daher war der Wandel des Leghismo vom Ethno- zum Neoregionalismus konsequent.

Das folgende Kapitel wird zeigen müssen, inwieweit die hier erst tendenziell wahrnehmbaren Veränderungen Fortsetzung finden. Meiner These zufolge ist nicht nur mit einer Fortsetzung dieser Entwicklung zu rechnen. Sie wird auch dazu führen, daß die Profile dieser ideologisch differenten Parteien ähnlicher werden. Zudem vermute ich einen Zusammenhang zwischen den Orten ihres Durchbruchs und ihrem weiteren Wandel. Und es muß sich zeigen, ob und in welchem Umfang auch der FN einen derartigen Prozeß durchmacht.

8. Durchbruch der Parteien

Ziel dieses Kapitels ist die Analyse des Durchbruchs der drei Parteien, was zunächst eine Diskussion des Begriffs erfordert. Eine Partei kann sich beispielsweise ohne gravierende Abweichung des Wahlergebnisses in einer zuvor nicht erreichten Wählerschaft etablieren und dafür eine gleichstarke Klientel verlieren. Wer nur auf das Resultat blickt, bemerkt diese möglicherweise bedeutende Veränderung nicht. Theoretisch denkbar ist auch, daß sich die Wahlergebnisse einer Partei nur deshalb verbessern, weil auch die von ihr umworbene sozialen Gruppen größer werden. Dieses Ereignis wäre im Unterschied zum ersten weniger interessant. Ebenfalls denkbar wäre der Niedergang einer Partei infolge einer Atomisierung ihrer Stammklientele (wobei dies konzidertermaßen kein Durch-, sondern ein Einbruch wäre). Außer Frage dürfte deshalb stehen, daß der elektorale crash, die Steigerung von 0,x auf mehrere Prozent oder die Vervielfachung traditioneller Ergebnisse dann als Durchbruch zu bezeichnen ist, wenn vergleichbare Resultate wiederholt erzielt werden oder wenn die dauerhafte Anbindung innerhalb einer neuen Wählergruppe gelingt.

Der Zeitpunkt des FN-Durchbruchs ist leicht zu terminieren. Gleiches gilt für den italienischen Leghismo, auch wenn zuvor schon einige Einzelerfolge erzielt worden sind. Hier wie dort wurde zunehmend eine zuvor nicht umworbene bzw. nicht erreichte Wählerschaft gewonnen. Nach 1986 hat sich auch der FPÖ-Stimmenanteil sprunghaft gesteigert. Bemerkenswerter als dies ist die Tatsache, daß sich die Partei in der Arbeiterschaft etablieren konnte, was einem gravierenden Wandel ihres Wählerprofils entspricht.

8.1. Front National

Erste urbane Erfolge

Zwar hatte der Front National bei den Kommunalwahlen 1983 insgesamt betrachtet noch miserabel abgeschnitten, erste kommunale Einzelerfolge deuteten jedoch eine Trendwende an. So erzielte die Partei in Paris und Aulnay sous Bois Ergebnisse um die 10% und in der nahe bei Paris gelegenen Stadt Dreux sogar 16,7% der Stimmen. Industriestädte wie Dreux sind mit unterschiedlichen Problemen konfrontiert: Mit der industriellen Modernisierung ging die Anwerbung ausländischer und billiger

Arbeitskräfte einher, die in den hochgezogenen und wenig sympathischen Wohnsiedlungen in der Peripherie untergebracht wurden. Die Wirtschaftskrise seit Mitte der 70er Jahre und der dadurch bedingte Anstieg der Arbeitslosigkeit provozierte in den industriellen Zentren ein Klima von Angst und Unsicherheit, das sich der Front National zunutze machen konnte. Sein Wahlkampf speziell in Dreux verfolgte eine Doppelstrategie. Zum einen zielte er gegen den PCF, dem man die Arbeiter mit dem Vorwurf abspenstig machen wollte, daß die Kommunisten zu immigrantenfreundlich seien. Während sich Pierre Stirbois auf dieser Schiene bewegte, kümmerte sich seine Frau "um Geschäftsleute und Freiberufler", die sie "mit Attacken gegen zu hohe Steuern und die 'Marxisierung des Unterrichts'" erfolgreich umwarb.

Dreux blieb entgegen anderslautenden Vorhersagen kein Einzelfall. Weder prozentual, noch wahlsoziologisch, noch axial: In Dreux hatten sich bei den Nachwahlen die alliierten Rechtsparteien mit 55,5% der Stimmen gegen die Linke durchgesetzt, und Pierre Stirbois wurde stellvertretender Bürgermeister. Trotz der Abgrenzungsbestrebungen von hohen UDF- und RPR-Repräsentanten wurden unterhalb der nationalen Ebene immer wieder Bündnisse mit dem FN geschlossen.

Zum Zeitpunkt seines ersten Erfolgs war der Front National eine schlecht organisierte Partei. Es fehlten Strukturen, Strategien und Mitglieder, um elektorale Besitzstände zu halten und auszubauen. Zudem fällt die Inkompatibilität von mittelstandsorientiertem Wahlprogramm und urbaner Wählerschaft ins Auge. Die Korrektur dieses Mißverhältnisses leitete die nächste Phase ein.

Parteipolitische Erneuerung

Die Entwicklung des Front National zu einer populären und auf breite Schichten zugeschnittenen Partei ist auf dem Hintergrund der geschilderten Initiation keineswegs zufällig. Wachsendes Interesse an der Partei und deren Chef durch die Medien infolge dieser Effekte und der elektorale Durchbruch mit 11,2% bei den Europawahlen 1984 (infolge dieser Aufmerksamkeit?) machten aus der politischen Sekte eine Mitgliederpartei. Dies erforderte den Aufbau von Kommunikations- und Entscheidungsstrukturen, die jedoch so konzipiert sind, daß die Macht der Führungsgremien nicht tangiert werden kann. Stirbois hatte bereits in Dreux einen gut organisierten Parteiapparat aufgebaut, und er brachte seine Erfahrungen nun auch national ein. Auch die wenig später zum FN gestoßenen Mitglieder des neurechten Club de l'Horloge widmeten sich der organisatorischen und politischen Modernisierung, wodurch Honoratioren aus Wissenschaft und Bürokratie am Front National zunehmend Gefallen fanden. Die (auch) an persönlichen Karrieren interessierten Intellektuellen haben wesentlich zur Modernisierung und zum Imagegewinn der Partei beigetragen.

Die Modernisierung der Partei läßt sich auch auf programmatischer Ebene nachvollziehen: Das ultra-liberale und antifiskalische Wirtschaftsprogramm wurde mit einem "populär-kapitalistischen" Anstrich (propriété=responsabilité=enracinement) versehen.⁷ Bemerkenswerterweise geht die Modernisierung des Front National, also seine urbane Massensorientierung, in erster Linie auf den Einfluß jener Kräfte zurück, die mit den nun umworbenen Schichten soziologisch betrachtet wenig zu tun haben. Dies gilt für die Vertreter des Clubs de l'Horloge ebenso wie für die Eliten aus Wissenschaft und Bürokratie, die sich

seit 1986 verstärkt die Ehre der Parteimitgliedschaft geben. Was auf den ersten Blick wie ein Widerspruch wirkt, ist in Wirklichkeit keiner. Zumindest nicht in Frankreich, meint Marieluise Christadler. Sie erläutert, daß die Praxis, Eliten für Ämter und Mandate anzuwerben, einem "sozialen Aufstiegs- und Notabilitätsmuster der französischen Gesellschaft" folgt, von denen alle Parteien "imprägniert" sind. Zumindest in dieser Hinsicht ist der Front National eine ganz normale Partei geworden.

Nationaler Durchbruch und Etablierung der Partei

Parteipolitische Modernisierung und elektoraler Erfolg haben sich wechselseitig verstärkt. Den 11,2% bei den Wahlen zum Europäischen Parlament folgten 1986 auf regionaler Ebene 9,56% der Stimmen. Im gleichen Jahr gelang dem Front National auch auf nationaler Ebene der Durchbruch. Wenngleich das hohe Ergebnis auch auf das von den Sozialisten beschlossene Verhältniswahlrecht zurückzuführen ist, war spätestens hier klar, daß die ersten elektoralen Effekte des FN keine Einzel- oder Zufälle waren. 9,7% der Stimmen und 35 Abgeordnete konnte der Front National erzielen. Er wurde in hohem Maß von Arbeitern und kleinen Angestellten aus den Ballungszentren des Südens, Nordens und des Pariser Großraums und proportional stärker noch von Bauern, Handwerkern und Händlern gewählt. Dabei läßt sich ein Überhang ehemaliger UDF- und RPR-Präferenten feststellen. Als Wahlmotive werden weniger Sympathie für Le Pen oder die Partei, sondern für ihre Themen genannt, wobei sich ihre "eigenen Werte und die gesellschaftspolitischen Vorstellungen mit Themen der linken Parteien (z.B. Staatsinterventionismus, Sicherung der sozialen Errungenschaften) als auch mit Themen der rechten Parteien (z.B. Nationalstolz, soziale Hierarchie)" überschneiden haben.

Zwischen 1984 und 1986 hatte sich der FN als verhältnismäßig moderate Partei präsentiert und seine Themen auf Einwanderung, Kriminalität, Korruption und Mißwirtschaft konzentriert. Moderat darf dabei keinesfalls mit gesinnungsdemokratisch übersetzt werden, denn durch alle Äußerungen des FN zieht sich seine xenophobische und antiliberale Grundeinstellung. Eindeutig rechtsextreme Verlautbarungen indes, die den gerade erstarkenden Front National dauerhaft von der exekutiven Ebene ausschließen könnten, wurden nur sehr vorsichtig formuliert. Diese Taktik machte vor allem wegen des eingeführten Verhältniswahlrechts Sinn, durch das der Einzug des FN ermöglicht wurde und eine Zusammenarbeit aller rechten Kräfte immerhin nicht ausgeschlossen war. Ihm blieb jedoch die Oppositionsrolle vorbehalten, denn UDF und RPR konnten allein eine Regierung bilden, die zur Zusammenarbeit mit dem sozialistischen Staatschef gezwungen war.

Radikalisierung

Die Tatsache, daß sich die drei wichtigsten politischen Strömungen in der cohabitation arrangieren mußten, provozierte die erneute Radikalisierung des Front National, der sich vehement vom sogenannten Establishment abgrenzte und gleichzeitig kräftig mit ihm kungelte. Seine Angriffe gegen die als "Viererbande" diffamierten Parteien (PS, RPR, UDF, PCF) und ein straff geführter Wahlkampf bescherten Le Pen bei den Präsidentschaftswahlen 1988 14,4% der Stimmen. Dabei haben ihm seine aufsehenerregenden Bemerkungen über den Holocaust, den er als ein Detail der Geschichte abgetan

hatte, offensichtlich nicht geschadet. Die Stimmen für den Bretonen stammten bei Überrepräsentanz des Mittelstandes aus allen sozialen Milieus, und auch die geographischen Grenzen sind durchlässiger geworden.

Die Höhe dieses Ergebnisses weckte die Hoffnungen der Partei auf ähnliche Resultate bei den im gleichen Jahr stattfindenden Legislativwahlen. Zwar schnitt sie dabei mit 9,7% (ein Direktmandat) nach wie vor beachtlich, aufgrund der hochgesteckten Erwartungen nach Le Pens persönlichem Erfolg zugleich enttäuschend ab. Freuen durften sich hingegen die Sozialisten, die mit 37% der Stimmen an ihren Erfolg von 1981 anknüpfen und die bürgerliche Rechte erneut von der Regierung ablösen konnten. Nach seiner wahlsoziologischen Analyse zieht Claus Leggewie den Schluß, daß das rechte Wählerspektrum in drei Elektorate zerfallen sei. Die Wähler dieses Spektrums verteilen sich auf:

- Neogaullisten, denen es nicht gelungen ist, den rechten Rand des Spektrums zu integrieren und die "populäre Basis" zu halten. Damit sei Chiracs Partei wieder eine klassische konservative Rechtspartei geworden;
- die UDF und Giscard, dessen, auch vom parteilosen Raymond Barres vertretene, zentristische Politik tendenziell für eine "sozialliberale Koalition der linken Mitte" stünde;
- den Front National, der trotz regionaler und soziostruktureller Schwerpunkte über alle Klassen und Regionen hinweg verankert sei und dabei "die paradoxe Figur eines 'Extremismus der Mitte', d.h. einer radikalen Protestpopulation zwischen links und rechts" verkörpere.

Die Europawahlen von 1989 hatten dem Front National ebenfalls enttäuschende 11,7% beschert, auf die Le Pen mit einem "Rückfall in uralte Komplottvisionen à la Maurras" reagierte, der "offenbar der Identitätsversicherung und inneren Festigung der Partei" diene. Diese Trendwende kostete den FN Image und Mitglieder und provozierte zugleich den Unmut der davon wenig begeisterten Modernisten. Sie nutzten die angeschlagene Stimmung und den Tod Stirbois und verpaßten der Partei einige organisatorische Umstrukturierungen und sich selbst als Repräsentanten der neu geschaffenen Ämter Generaldelegation (Bruno Mégret) und Generalsekretariat (Carl Lang). Aber der erneute Auftrieb des Front National hatte wenig mit intellektuellen Planspielen, sondern mit zwei politischen Ereignissen zu tun: Mit der sogenannten Kopftuch-Affaire und die dadurch losgetretene "Grundsatzdebatte über die Integration muslimischer Staatsbürger- und bürgerinnen sowie über das Prinzip der republikanischen Laizität" und mit den nationalen Befreiungsbewegungen in Osteuropa, die den Nationalismus auch in Frankreich zum Thema machten. Die hohen Ergebnisse des Front National bei den Nachwahlen in Dreux (42%) und Marseille (33%) und das bei der Entscheidungsabstimmung erzielte Direktmandat in Marseille stärkten schließlich das Selbstbewußtsein des FN und Le Pens, der auf dem Parteitag in Nizza 1990 vom nationalen Führungsanspruch träumte.

Wende moderat rückwärts

Auf diesem 8. Parteikongreß im März/April 1990 zeichnete sich erneut eine Imagewende ab, die Buzzi

als tendenziell moderat beschreibt. Die Gründe für diesen Wandel lassen sich außenpolitisch mit dem Ende des Ost-West-Gegensatzes und der Abschleifung des antikommunistischen Arguments und innenpolitisch mit dem neuerlichen Sieg der Sozialisten erklären: Weil der neuen Regierung eine etwa gleichstarke Opposition gegenüberstand, wurden auch koalitionäre Rechenspiele wieder interessant. Auch wenn RPR und UDF derartige Ansinnen weit von sich weisen und der FN in Nizza ebenfalls unterstrichen hat, durch Druck von außen auf die Regierung Einfluß nehmen zu wollen, mag der naheliegende Gedanke hier wie dort gekommen sein.

Die Realität indes sieht anders aus, denn mit den Legislativwahlen von 1993 erzielte die Traditionsrechte aus UDF und RPR mit fast vier Fünfteln aller Mandate eine erdrückende Mehrheit in der Nationalversammlung. Ihren Sieg verdankt sie allerdings weniger ihrer eigenen Kraft (rund 8% Zuwachs), als der desaströsen Niederlage der Sozialisten, mit der das Ende des Mitterrandismus eingeleitet und die Krise der parteipolitischen Linken offengelegt wurde. Der Front National blieb mit 12,8% der Stimmen hinter seinen eigenen Erwartungen und dem Ergebnis der Regionalwahlen 1992 (13,9%) zurück. Allerdings konnte er im Vergleich zu den letzten Legislativwahlen zulegen, hat aber nirgendwo ein Direktmandat erzielt.

Mehrere interessante Entwicklungen enthält das lepenistische Elektorat:

1988 (legislativ) lag der FN in 32 Departements zum Teil weit über seinem Gesamtergebnis von 9,7%. In diesen Bezirken legte er 1993 höchstens im Rahmen seines Gesamtzuwachses von ca. 30% zu. Ausnahmen dieser "stagnativen Steigerung" bilden die Departements Seine-et-Marne, Eure-et-Loire, Yonne, Marne und Loire mit einem höheren Anstieg von mindestens 40%. Einen überdurchschnittlichen Stimmenzuwachs erzielte der Front National aber fast ausschließlich in Departements mit stark unterrepräsentierter FN-Wählerschaft. Daraus kann der Schluß gezogen werden, daß die Partei ihre Wähler in ihren Hochburgen im Süden, Nordosten und im Großraum Paris zunehmend langsamer erreicht. Dagegen scheint sie sich neue, überwiegend ländliche Gebiete zu erschließen. Sie müssen neben ihren spezifischen Problemen Einbußen im Tourismus hinnehmen und verlieren ihren Stellenwert als attraktive Standorte für Zweitwohnungen.

Darüber hinaus dürften die in den Städten kumulierenden Probleme auch auf dem Land ihre Wirkung hinterlassen. Dem Front National gelingt mittlerweile auch die Anbindung ansonsten eher skeptischer Wählergruppen wie Frauen und engagierte Katholiken, und es hat sich "neben einer fluktuierende(n) Zahl von Gelegenheitswählern" (Christadler) eine zuvor nicht identifizierbare Stammklientel herauskristallisiert. Seine Wähler stammen aber nach wie vor aus allen sozialen Schichten, und auch die "geographische Herkunft hat sich nicht entscheidend geändert: FN Bastionen koinzidieren mit städtischen Problemen".

Umfragen unterstreichen, daß der Front National seinen Erfolg hauptsächlich den Themen Immigration, innere Sicherheit und Arbeitslosigkeit verdankt. Daß Frankreich mit gravierenden Problemen konfrontiert ist, zeigen die Kommunalwahlen von 1995. Die schlechte Stimmung und die sich durch alle Wahlaussagen des FN ziehende Botschaft, nach der Franzosen positiv und Ausländer negativ

diskriminiert werden sollen, brachte der Partei drei Bürgermeistersessel ein: in Toulon und in den südfranzösischen Kleinstädten Orange und Marignane. Im ebenso von Korruption wie gehobener Flanierkultur geprägten Nizza konnte ein FN-Dissident das Rennen für sich entscheiden, wohingegen Absprachen zwischen der traditionellen Rechten und Linken ("Republikanische Front") den Sieg von FN-Kandidaten in Dreux, Mülhausen und Noyon verhindern konnte. Auch wenn viele südfranzösische Städte von Korruption, Mafia-Verstrickung, Immobilien-Spekulation und Geldwäsche gekennzeichnet sind, kann der Erfolg des FN nicht nur darauf zurückgeführt werden. Denn auch in zahlreichen anderen Kommunen hat er beachtliche Ergebnisse erzielt, die mitunter nur knapp hinter den Resultaten der Sieger liegen. Öffentlichkeit und politische Eliten reagierten überrascht und bestürzt auf die Ergebnisse.

Noch ein Jahr vor diesen Abstimmungen hatte sich der Front National ernsthaft Sorgen machen müssen, nachdem er bei den Europawahlen von der Liste des nationalkonservativen de Villiers überflügelt worden war. Beide Organisationen haben einen Anti-Maastricht-Wahlkampf betrieben, wobei de Villiers Bewegung Mouvement pour la France weitaus stärker von der antieuropäischen Stimmung in Frankreich profitieren konnte als der Front National mit lediglich 10,5% der Stimmen. Darüber hinaus droht von neogaullistischer Seite Konkurrenz, seit der Präsidentschaftsanwärter Chirac die Themen Armut und Ausgrenzung zum Schwerpunkt erhoben hatte. Angesichts der sozio-ökonomischen Schieflage war dies eine naheliegende Taktik; "so zu tun, als gäbe es keinen Bruch", wäre "wahlkämpferischer Selbstmord gewesen". Doch bei den kurz nach der Präsidentschaftswahl durchgeführten Kommunalwahlen wurde einmal mehr die Mobilisierungsfähigkeit des Front National und zugleich ein latentes Mißtrauen der Wähler in die traditionelle Rechte offengelegt. Le Monde spricht von einer deutlichen Warnung der Wähler an die Regierung. Die zukünftige Stärke des Front National wird nicht unwesentlich von der Politik des neuen Staatspräsidenten und von der Mobilisierungsfähigkeit der Linken abhängen, die sich allem Anschein nach zurückgemeldet hat. Ob sich daraus aber eine "nouvelle gauche" (Levi) mit Meinungsführerschaft in den Problemfeldern Arbeit und Soziales entwickelt, wird sich noch zeigen müssen.

Die Stimmung der Franzosen jedenfalls ist alles andere als euphorisch. 64% fürchten sich vor Arbeitslosigkeit, 51% glauben, ihren Wohlstand nicht halten zu können, 38% haben Zukunftsangst. Von der Stimmung der Ausgeschlossenen einmal ganz zu schweigen. Die Erstrundenergebnisse der Präsidentschaftswahlen und die kommunalen Abstimmungen legen eine Vertrauenskrise offen, die die traditionellen Parteien zur Kenntnis nehmen müssen. Sie können darauf politisch reagieren, indem sie sich der Probleme annehmen, zu ihrer Überwindung oder Minimierung beitragen und somit vertrauensstiftend wirken. Natürlich können sie auch den vordergründig bequemeren Weg wählen und den FN in seiner Rhetorik nachahmen in der Hoffnung, ihm die Wähler abspenstig zu machen.

Nicht zuletzt besteht die Möglichkeit einer juristischen Reaktion, d.h. eine Wahlrechtsänderung, mit der es den stärker werdenden außerparlamentarischen Parteien gelingt, in die Nationalversammlung einzuziehen. Auch wenn die Parlamentsparteien daran kein unmittelbares Interesse haben und auch nicht ernsthaft über eine derartige Änderung nachdenken, halte ich es zumindest für nicht ausgeschlossen, daß einige politische Vordenker sich die entsprechenden Gedanken oder auch Vorschläge machen. Denn wenn sich das Parteiensystem dauerhaft erweitern sollte, aber nur die großen politischen Akteure im Parlament vertreten sind, so kommt dies einem geringer werdenden Repräsentationsradius in eben

diesem Parlament gleich. Es verliert damit Legitimation und kann leicht zur Zielscheibe derjenigen werden, die ohndies nicht zu den dicksten Freunden der liberalen Demokratie zählen. "Wo immer ein Politiker die Legitimität eines Parlaments in Zweifel zieht, riecht es nach Urfaschismus", dramatisiert ein wenig Umberto Eco. Im Kern aber und auf dem Hintergrund historischer Erfahrungen ist ihm Recht zu geben.

Schließlich bleibt die Möglichkeit taktischen Reagierens wie die bei den Kommunalwahlen erprobte Allianz der traditionellen Kräfte zur Verhinderung lepenistischer Bürgermeister. Dies kann aber nicht dauerhaft praktiziert werden und von Erfolg gekrönt sein, denn Entpolitisierung und Entpolarisierung wären vorgezeichnet. Parteipolitische Unterschiede müssen wahrnehmbar bleiben und damit wählbar sein. Dennoch können republikanische Gemeinsamkeiten unterstrichen werden: Sie bestehen Claude Julien zufolge darin, für nationale und internationale Gleichheit zu kämpfen. Dies "bildet den Kern des 'republikanischen Pakts'".

8.2. Lega Nord

Das Jahr 1989

1989 war das wichtigste Jahr für alle italienischen Ligen, die mit Ausnahme der Lega Lombarda nahe in den Bereich der Bedeutungslosigkeit gerückt waren. Bei den Wahlen zum Europäischen Parlament konnten sie aber erstmals wieder zulegen: Ergebnisse von etwa 2% in der Emilia und der Toskana, um 5% in Ligurien und im Piemont, knapp 10% im Veneto und schließlich die weit weniger überraschenden 15% in der Lombardei.

Industrialisierte und bevölkerungsreiche Städte wie Varese, Brescia, Bergamo, Monza, Cremona (weit weniger Mailand), aber auch Kommunen wie Pavia und Como entwickelten sich zu Hochburgen der Partei und die Bewohner dieser Gemeinden zu Anhängern der neoregionalistischen Teilungsforderung. Zwischen 1987 und 1990 konnte die Lega ihre Ergebnisse hier etwa verdreifachen, und 1990/91 wurde sie in Brescia, Varese und Monza sogar erste politische Kraft. Von der nun noch stärker aus den Zentren stammenden und gut gebildeten Wählerschaft wurden als wichtigste Wahlmotive das Nord-Süd-Problem, bürokratische Ineffizienz und außereuropäische Einwanderung genannt.

Ecco: La Lega Nord

Die Erfolge der Ligen nach 1989 hatten mehrere Konsequenzen: 1. Aus Gründen taktischer und politischer Effizienz wurden sie auf Bossis Druck im Februar 1991 zur Lega Nord zusammengeschlossen, wodurch die Macht des Lombarden noch größer wurde. Zwar existieren die Regionalparteien auch weiterhin. Mit der Gründung der Lega Nord wurde ihr Handlungs- und Präsentationsspielraum jedoch erheblich eingeschränkt. 2. Parallel zur Fusionierung mußte ein einheitlicher Apparat aufgebaut werden, der sich neben organisatorischen Angelegenheiten um die Anwerbung von Kandidaten, ihre rhetorisch-taktische und politische Schulung sowie postelektorale Anbindung zu kümmern hat. Dieser Apparat war in den ersten Jahren streng hierarchisch gegliedert,

wurde aber immer stärker demokratisiert. Rolf Uessler bezeichnet die Lega Nord unter diesem Aspekt heute als eine "nahezu ganz normale Massenpartei", während andere den im Wort "nahezu" artikulierten Entwicklungsoptimismus nicht teilen und die Lega eher skeptischer betrachten. 3. Neben zentralen Strukturen war eine Vereinheitlichung der Sprache nötig, die zunächst schärfer wurde und gemäß Bossis Ankündigungen auf der konstituierenden Sitzung in Mailand hauptsächlich gegen die partitocrazia und den unitarischen Staat zielte.

Der 1989 zur Lega Lombarda gestossene und schnell zum engsten Berater Bossis avancierte Gianfranco Miglio leistete einen wichtigen sprachvereinheitlichenden Beitrag: Er begründete die Teilungsforderung mit dem Vorhandensein von drei unterschiedlichen ökonomischen Makrostrukturen (Nord, Zentrum, Süd) und klagte eine dementsprechenden Zergliederung Italiens ein. Er würde aber nicht Chefideologe genannt, hätten sich seine Vorstellungen nur darauf beschränkt. Seine wichtigste Idee ist die Schaffung einer Föderation mit souveränen Einzelstaaten unter der Ägide eines plebiszitär gewählten Präsidenten, dessen potentiellen Kompetenzen bei Miglio aber ebenso nebulös bleiben, wie seine Vorstellung von der Verfaßtheit der Einzelstaaten. Die Tatsache, daß er sowohl für kleine Einzelstaaten als auch für ein supranationales Präsidentenamt eintritt, legt den Schluß nahe, daß ihm die alte Reichsidee auch als (europäisches) Zukunftsmodell vorschwebt.

Jedenfalls hat er sich die erstarkende Lega nicht zufällig als Instrument zur Förderung seiner Ziele ausgesucht, denen er bei den regionalen Wahlen 1990 durch die Vormachtstellung der Lega in einigen lombardischen Kommunen und ihr insgesamt hervorragendes Ergebnis von 18,9% näher zu kommen schien. Dieser breiten Legitimation folgte die Entscheidung, offensiv auf der nationalen Bühne mitzuwirken, um von Rom aus Druck auf die Politik ausüben zu können.

Die neu geschaffene Lega Nord konnte bei den Deputier-tenkammerwahlen 1992 vor allem in jenen Gebieten zulegen, in denen sie zuvor nur mäßig abgeschnitten hatte: Im Trentino, im Veneto, in der Emilia Romagna, in Ligurien, im Piemont und in der Toskana. In der Lombardei hingegen verbesserte sie sich nur noch leicht, war aber hier nach wie vor am stärksten verankert. Ihre aus dem Norden und aus der Toskana stammenden Stimmen ergaben national gerechnet 8,7% und machten sie hinter der Democrazia cristiana, dem Partito socialista und den im PDS vereinten Ex-Kommunisten zur vierten Kraft. Vor allem in den Hochburgen wiesen Bevölkerung und Wählerschaft ein fast identisches soziologisches Profil auf. Bis etwa 1992 konnte ein Überhang männlicher Wähler und peripherer Provinzen festgestellt werden, der allerdings immer geringer geworden ist.

Eppure si muove - der rapide Wandel der Republik

Bereits vor den Deputiertenkammerwahlen von 1992 war neben der ökonomischen die politisch-institutionelle Krise Italiens offensichtlich geworden: Der Aufwind der Ligen und der parallele Einbruch der alten Parteien bescherte den Ermittlungsrichtern genügend Selbstbewußtsein, ohne Furcht vor Repressionen gegen Korruption vorzugehen. Versetzung mißliebiger Richter sowie Hinhalte- und Verschleppungstaktiken bei begründeten Verdachtsmomenten waren Alltagserfahrungen italienischer Juristen, die ihre Ämter vielfach selbst durch Begünstigung erhalten haben. Wegen der veränderten

politischen Kräfteverhältnisse hatten sie nun die Möglichkeit, konsequent gegen Partei- und Staatseliten zu ermitteln. Sie brachten damit eine Lawine ins Rollen, die zum Zusammenbruch des alten Parteiensystems führte.

Das Jahr 1992 war für Italien ein tragisches Jahr mit zahlreichen Verhaftungen prominenter Personen aus Politik, Wirtschaft und Bürokratie, die nicht alle in der Lage waren, sich ihrer Verantwortung zu stellen: Einige sind wie Craxi ins Ausland geflohen, andere haben sich das Leben genommen, und wieder andere wurden von der Mafia ermordet, um bedrohliche Zeugenaussagen oder Ermittlungen zu verhindern. Beeindruckend waren die Ereignisse rund um die Beisetzungsfestlichkeiten für die beiden Anti-Mafia-Richter Falcone und Borsellino, deren Ermordung nicht nur ein Aufbegehren der (jungen) Südtaliener gegen die Mafia, sondern zugleich gegen Politiker auslöste, die im Bewußtsein der Bevölkerung verantwortlich für den Fortbestand des organisierten Verbrechens waren. Daß dies nicht lediglich Vermutungen waren, beweisen die vermehrten Mordanschläge der Mafia seit Anfang der 90er Jahre gegen potentielle Verhaftungskandidaten aus der Parteipolitik, um deren Zeugenaussagen zuvorzukommen.

Die alten Parteien waren schnell auf dem Tiefpunkt ihres Ansehens angelangt. Ihren Zusammenbruch besiegelte schließlich das per Referendum eingeführte Mehrheitswahlrecht, dessen Initiatoren den Exitus des angeschlagenen Parteiensystems beschleunigen und die Voraussetzung für eine Links-rechts-Polarität schaffen wollten. Dieses 1993 eingeführte Wahlrecht war für die weitere Entwicklung der Lega von entscheidender Bedeutung. Bei den (Teil-)Kommunalwahlen Mitte 1993 erzielte sie die Mandatsmehrheit in zahlreichen norditalienischen Städten und viele Bürgermeistersessel (darunter Mailand) noch aus eigener Kraft. Im Winter 1993 jedoch scheiterten ihre Bürgermeisterkandidaten etwa in Venedig, Genua und Triest am unterdessen gebildeten progressiven Bündnis rund um den PDS.

Das für die Lega wichtigste Ereignis fand jedoch in Rom statt, wo sich in der Stichwahl um das Bürgermeisteramt Francesco Rutelli (grüner Kandidat des Mitte-links-Bündnisses progressisti) und der MSI-Chef Gianfranco Fini gegenüberstanden, dessen Erstrundenergebnis von 35,8% auf die Schwäche des damals noch rekonvaleszierenden Zentrums zurückzuführen ist. Diese Abstimmung war erklärtermaßen eine Testwahl für Silvio Berlusconi, der im Interesse seines hochverschuldeten Imperiums einen Sieg der kartellfeindlichen Linken verhindern mußte. Seine für die Öffentlichkeit überraschende und skandalisierende Kampagne zugunsten Finis ("Wenn ich Römer wäre, würde ich für Fini stimmen") verfehlte jedoch knapp ihr Ziel, wodurch ein linker Sieg auch bei den Deputiertenkammerwahlen 1994 als sicher galt. Infolge dieser Einschätzung hoben Berlusconi und sein Fininvest-Stab den Wahl- und Jubelverein Forza Italia aus der Taufe, und sie konnten die föderalistische Lega ebenso in das Bündnis einbinden wie den etatistischen MSI, der es aus kosmetischen Gründen vorzog, sich als Alleanza nazionale zu präsentieren. Thematische Übereinstimmungen zwischen Fini, Bossi und Berlusconi beschränkten sich auf Randbereiche. Aber sie einte der Wille zur Macht und der Gedanke an eine italienische Präsidentialrepublik. Dieses ungleiche Bündnis zog bei den Wahlen an der geschockten Linken vorbei und bildete mit anderen rechten Kleinablegern die Berlusconi-Regierung.

Glücklich war Bossi damit nicht, denn trotz des Sieges hatte die Partei in mehrfacher Hinsicht verloren: die bequemen Oppositionseffekte und ehemaligen Hauptgegner DC und PSI, von deren

Nachkommenschaft pikanterweise Teile in der Regierung vertreten waren. Auch thematisch wurde es eng, nachdem die Mehrheit der norditalienischen Bevölkerung lediglich für einen "federalismo light", also für mehr Dezentralisierung optiert hatte. Dadurch verlor die Partei nicht nur argumentatives Terrain, sondern auch Gianfranco Miglio, der sich öffentlich darüber ärgerte, daß sich Bossi von maximalistischen Forderungen distanziert und dagegen auf andere Themen konzentriert hatte. Zudem war sein Stolz verletzt, weil er beim Ministerroulette leer ausgegangen und das von ihm anvisierte Ministeramt für staatliche Neugestaltung auf Bossis Betreiben an jemand anderen vergeben worden war. Am größten waren die Sorgen der Lega um ihre erst frisch erworbene Wählerschaft aus dem urbanen Arbeiter- und Angestelltenmilieu, die in weiten Teilen für Berlusconi gestimmt hatte.

All dies nahm Bossi Ende 1994 zum Anlaß, mit der Linken und dem DC-Nachfolger Partito popolare italiano (PPI) den Sturz der bis dahin stark imagegeschädigten Regierung auszuhandeln. Er wollte so seinen wichtigsten Konkurrenten neutralisieren und ein Bündnis mit der linken Mitte eingehen, in dem sich die Lega als neoliberale Kraft bestens hätte profilieren können. Die Rechnung ging jedoch nicht auf, denn Teile der Mitglieder wollten die Fortsetzung des rechten Pakts, zumindest aber keinen mit der Linken. Zugleich kam ihm der PPI-Chef Rocco Buttiglione in die Quere: Seine Partei hatte zwar gerade zum Sturz der Regierung beigetragen. Aber Buttiglione hatte es sich anders überlegt und wollte entgegen den Parteitagsbeschlüssen eine Koalition mit den gerade erst gestürzten Rechtsparteien (minus Lega) eingehen. Damit wurde die Führungskrise des PPI offengelegt, und Bossi war zum Abwarten gezwungen. Gegen den erbitterten Kampf Berlusconis ("sofort Neuwahlen") beauftragte Staatschef Scalfaro den bisherigen Finanzminister Lamberto Dini mit der Bildung einer Übergangsregierung. Sie wurde von der ehemaligen Mitte-links-Opposition und der Lega und in Einzelfragen auch von der Rifondazione comunista gestützt und beschränkte sich hauptsächlich auf finanzielle Sanierungsmaßnahmen.

Zahlreiche, auch prominente Austritte, erste (aber unterdessen gescheiterte) Gehversuche einer Art Gegenlega und die Drohung Bossis, fortan wieder gegen alle Parteien zu kämpfen, verdeutlichen die Fragilität einer Partei, die bei den Regionalwahlen im Frühjahr 1995 im Norden noch gut 6% der Stimmen geholt hatte. Ihre weitere Entwicklung wird in hohem Maße von elektoralen Erfolgen und der Integrationsfähigkeit Bossis abhängen. Und von ihren Themenangeboten. Endgültig verabschiedet hat sie sich nämlich nicht von ihren alten Ideen, wie der Parteitag vom Mai 1995 zeigte. Die dort von Bossi erhobene Drohung, entgegen der Verfassung eine norditalienische Kammer in Mantova zu etablieren, läßt Giorgio Bocca zufolge zwei Interpretationen zu: Sie ist entweder torschlußpanischer Profilierungsversuch oder ein bewußt eingesetztes Druckmittel in Richtung der Mitte-links-Parteien.

Die Lega steht mit ihnen in lockerem Kontakt und könnte nach den 1996er Wahlen mehrheitsstiftend wirken. Und die linke Mitte wiederum ist allein nicht mehrheitsfähig und deshalb äußerst druckempfindlich. Erstmals jedenfalls seit Ende des Krieges wird nach den vorgezogenen Wahlen von 1996 ein Mitte-links-Bündnis die Regierung bilden. Während den alliierten Parteien (PDS, PPI, Verdi, Rinnovamento italiano von Dini) im Senat nur eine Stimme zur absoluten Mehrheit fehlt, sind sie in der Deputiertenkammer weit stärker auf die Kooperation entweder der Rifondazione comunista oder der Lega angewiesen. Im Gegenzug hat der Premier Romano Prodi nach den Wahlen eine Föderalisierung des Landes in Aussicht gestellt. Die Lega Nord hat mit ihren landesweit gerechneten 10% ein

überraschend hohes Ergebnis erzielt, wobei sie insbesondere in der Lombardei und im Veneto erfolgreich war. Der von vielen erwartete Abwärtstrend ist damit erst einmal gestoppt.

Erst die weitere Stabilisierung des derzeit scheinbar endgültig neu formierten Parteiensystems wird zeigen, ob und wo es einen Platz für den shooting-star der Ersten Republik gibt. Eine Renaissance als Spaltpilz ist ebenso möglich wie die Profilierung als neoliberale Kraft mit föderalem Zungenschlag oder als thematisch sprunghafte Mehrheitsbeschafferin mit vermutlich begrenzter Haltbarkeit. Innerhalb einer Diskussionsveranstaltung an der Universität Duisburg hat Michael Braun hervorgehoben, daß der Tanz zwischen den beiden Blöcken die einzige Überlebenschance der Lega ist. Bossis viel beklagte Sprunghaftigkeit sei kein "Charakterzug", sondern eine bewußt eingesetzte Taktik, die sich gegen jede politische Einvernahme wehrt und von der Provokation der Gegner wie der Freunde lebt. Ob eine so handelnde Partei jedoch überlebensfähig ist, hängt nicht zuletzt von den Konzepten der übrigen Parteien und ihrer Polarisierungskompetenz ab.

8.3. Freiheitliche Partei Österreichs

Die Entwicklung der Haider-FPÖ zu einer urbanen, im Arbeitermilieu verankerten Partei vollzog sich wie in Italien und Frankreich schrittweise.

Erfolgsrausch nach 1986

Durch die Präsidentschaftskandidatur des bei den Wahlen später obsiegenden Kurt Waldheim herrschte 1986 ein innenpolitisch emotionalisiertes Klima. Diese aufgeheizte Stimmung hatte auch der deutschnationalen Fraktion innerhalb der FPÖ Auftrieb gegeben. Parallel dazu wurde von Vranitzky die kleine Koalition infolge des Stegersturzes aufgekündigt und die ursprünglich für 1987 terminierten Nationalratswahlen einige Monate vorgezogen. Die noch andauernden Auseinandersetzungen um die Vergangenheit Waldheims und die bis in sozialdemokratische Kreise hineinreichende Empörung über seine Suspendierung von der internationalen Bühne kam dabei auch jener Partei zugute, deren in jeder Hinsicht jüngster Obmann gerade "unter einem an faschistische Kundgebungen erinnernden Gejohle" gewählt worden war, während der "unterlegene Repräsentant des Liberalismus mit Erschießen und Vergasen bedroht wurde". Der Aufstieg der Haider-FPÖ wurde nicht zuletzt durch die Boulevard-Presse begünstigt, die nach dem Innsbrucker Parteitag eine Pro-Haider-Kampagne gestartet hat, die bis heute andauert. Die genannten Faktoren und das Vorhandensein eines beachtlichen Budgets, mit dem sich ein teurer Wahlkampf finanzieren ließ, waren wichtige Fundamente für den Erfolg der FPÖ.

Bereits vor den Nationalratswahlen hatte kein Zweifel darüber bestanden, daß eine große Koalition unmittelbar ins Haus steht. Ebenso unmittelbar haben Haider und seine Mannschaft das alte Image der FPÖ als Partei gegen "Proporz-, Parteibuch und Freundlerlwirtschaft" aufpoliert und gegen die sogenannten "Altparteien" agitiert und damit 9,7% der Stimmen erzielt. Das war fast eine Verdoppelung des Ergebnisses von 1983 (5%) und eine Vervielfachung dessen, was die FPÖ unter Stegers Anführung zu erwarten hatte, nämlich etwa zwei Prozent.

Für diesen Aufstieg ist eine Klientel verantwortlich, die sich von der FPÖ-Stammwählerschaft deutlich unterscheidet: Noch 1983 wies sie den relativ größten Mittelschicht-Sockel aller Parlamentsparteien auf, konnte stärker als andere Kräfte Männer an sich binden und war bei Wählern mit Pflichtschulabschluß unterrepräsentiert. Lediglich bei der altersmäßigen Verteilung existierten im Vergleich zu den übrigen Parteien keine Unterschiede. Zwar hatte die Mittelschicht auch 1986 in hohem Maß für die FPÖ gestimmt. Ihre Zusammensetzung änderte sich jedoch leicht in Richtung des jungen, sportlichen und karrierewilligen Yuppie, der sich vor allem durch Haiders jugendlich-dynamische und unkonventionelle Präsentation angesprochen fühlte. Aber auch bei den schlechter Ausgebildeten fand und findet Haider wachsenden Zuspruch. Interessanterweise stößt hier wie dort seine Kampfansage gegen Establishment, Sozialpartnerschaft und große Koalition auf großen Zuspruch. Seine NS-Anspielungen und die recht eigenwillige Interpretation historischer Ereignisse korrelierten hingegen kaum mit den weltanschaulichen Präferenzen des urbanen Aufsteigers oder Arbeiters. Lediglich der gezielte Tabubruch, die Tatsache, daß "sich der Haider was traut", kam bei diesen beiden Gruppen an.

Haider's deutschnationaler Diskurs ist daher immer auch instrumenteller Natur. Dies gilt sowohl für die Außen- als auch für die Innenrepräsentation, wo eine gut organisierte deutschnationale Strömung auf ein entsprechendes Auftreten ihres Zöglings wartete. Gleichwohl formuliert Armin Pfahl-Traughber zu Recht, "daß die These, es habe sich mit dem Führungswechsel eine Abkehr vom Liberalismus und eine Stärkung des nationalen Elementes vollzogen", relativiert werden muß. Denn erstens war die FPÖ zu keinem Zeitpunkt eine liberale Partei, und zweitens hat der harte deutschnationale Flügel nur scheinbar den Innsbrucker Richtungsstreit gewonnen. Haider's fortschreitende Distanzierung vom Landesverband Kärnten und seine Bemühungen, die FPÖ als Bewegung zu präsentieren, unterstreichen dies.

Der Durchbruch in Wien

Bei den Nationalratswahlen von 1990 hatte sich die FPÖ um weitere sechs Prozent verbessert (16,6%), und auch ihre Landtagswahlergebnisse stiegen proportional an. Parallel dazu änderte sich die Zusammensetzung ihrer Wählerschaft, die nicht mehr überwiegend von der ÖVP, sondern aus sozialdemokratischen Kernwählerschichten stammt. Der FPÖ-Kenner Fritz Plasser weiß, daß sich Haider nicht mit der Rolle des "populistischen Staubsaugers der Opposition" begnügen will, sondern selbst an die Macht strebt. Um dieses Ziel zu erreichen, mußte er sich um den Ausbau seiner Wählerschaft und gleichzeitig um die Schwächung des ideologischen Hauptgegners SPÖ kümmern. Seine "Strategie des Angriffs und der Attacke auf die SPÖ" scheint aufzugehen, denn bei den Wiener Gemeinderatswahlen 1991 kam die FPÖ schon auf 22,5% (1987: 9,7%) der Stimmen. Die immerwährende zweite ÖVP mußte sich dagegen mit 18,1% bescheiden, und erstmals seit 1949 fiel die SPÖ unter 50%. Sie sieht sich im "Roten Rathaus", wo auch die Grünen eingezogen sind, drei Oppositionsparteien gegenüber.

Wo liegen nun die Gründe für diesen signifikanten Wandel? Ende der 80er-, Anfang der 90er Jahre sind mehrere Faktoren zusammengetroffen, die Verunsicherung in der Gesellschaft auslösten: 1. Ein ausgesprochen wirtschaftsorientierter Kurs der Vranitzky-Regierung, mit dem das definitive Ende des Kreisky-Sozialismus besiegelt wurde. 2. Die Arbeitslosigkeit ist seit Anfang der 90er Jahre zwar nur leicht angestiegen; die Zahl der Langzeitarbeitslosen aber hat sich ebenso deutlich vermehrt wie die

Anzahl gefährdeter oder zeitlich begrenzter Stellen. 3. Mit dem Wandel in Osteuropa wurden die Ostgrenzen mit weitreichenden Folgen für den heimischen Arbeitsmarkt und Handel geöffnet. 4. Schließlich war die Sozialpartnerschaft infolge wachsender wirtschaftlicher Probleme und zunehmender Kompromißunlust der Unternehmer brüchig geworden. Vor allem bei verunsicherten Arbeitern war Haider mit seiner argumentativen Taktik erfolgreich, die Krise der Sozialpartnerschaft auf ihr Vorhandensein zurückzuführen. Seine verschwörungstheoretische Polemik zielte zugleich gegen Parteien, Regierung und die große Koalition, deren Politik nur die eigenen und nicht die Interessen des "kleinen Mannes" im Auge habe. Darüber hinaus stritt er gegen die seit der Ostöffnung steigende Arbeitsimmigration und gegen den EU-Beitritt, für den sich die beiden großen Parteien stark gemacht hatten. Zwar ist die FPÖ mit ihrem Volksbegehren gegen Einwanderung 1993 gescheitert; zwar hat sie mit dem Kreis um Heide Schmitt unmittelbar im Anschluß an dieses Volksbegehren ein wichtiges Repräsentationsstandbein verloren; zwar haben die österreichischen Bürger mehrheitlich für einen Beitritt des Landes zur Europäischen Union votiert und Haider eine deutliche Abfuhr erteilt. Meinungsforscher und Journalisten haben nach diesen Mißerfolgen stets das Ende des FPÖ-Aufwärtstrends diagnostiziert, dabei aber möglicherweise übersehen, daß die Mehrheit der Wähler in der Lage ist, zwischen einer turnusmäßigen Wahl und einem entscheidenden Referendum zu unterscheiden.

Das Ende einer Partei?

Wie falsch diese Niedergangsprognosen waren, zeigte sich bei den Nationalratswahlen von 1994, die unmittelbar im Anschluß an das EU-Beitrittsreferendum durchgeführt wurden: Die FPÖ konnte um weitere 6% zulegen und kam auf 22,6% der Stimmen. Diese Steigerung, die rund zweiprozentige Verbesserung der Grünen (7%) und der Einzug des Liberalen Forums (5,74%) um Heide Schmitt bedeuteten das Ende der großkoalitionären Zwei-Drittel-Mehrheit. Auch die Logik der Großen Koalition war dahin, denn die Oppositionsparteien kamen auf etwa 35% der Stimmen, wohingegen ÖVP und stärker noch die SPÖ beträchtliche Stimmeeinbußen haben hinnehmen müssen. Kaum verwunderlich, daß allenthalben der Taschenrechner gezückt wurde. Auf der Linken, zu der neben SPÖ und Grünen streng genommen auch das Liberale Forum gerechnet werden kann, reichten die Stimmen für eine kleine Koalition freilich nicht. Auf der Rechten hingegen sah die Sache anders aus. Der neue ÖVP-Chef Wolfgang Schüssel galt eigentlich als ein Gegner gesamtretcher Experimente. Aber immerhin hatte er den Bruch der großen Koalition im Herbst 1995 betrieben und damit Neuwahlen provoziert, die am 17. Dezember stattfanden.

Sein selbstgestecktes Ziel, Kanzler innerhalb einer neuen und von der ÖVP angeführten Regierung zu werden, hatte zu allerlei Spekulationen über ein schwarz-blaues Bündnis geführt. Zwar wollte vor den Wahlen niemand so recht daran glauben, daß sich die ÖVP mit Haider's Partei liieren würde. Vielmehr galt als sicher, daß er die Fortsetzung der großen Koalition unter anderer Kanzlerschaft im Blick hatte. Schüssel mußte Fragen nach möglichen koalitionären Modellen aber schon allein deshalb unbeantwortet lassen, weil er das SPÖ/ÖVP-Bündnis provokativ gekündigt hatte. Dadurch waren Spekulationen Tür und Tor geöffnet, in deren Folge dann aber die SPÖ zulegen konnte. Sie hatte einen dezidierten Anti-Haider-Wahlkampf geführt und gegen den von der ÖVP geforderten Abbau des Sozialstaates gestritten. Die Angst der Wähler vor koalitionären wie sozialen Experimenten und das aus Frankreich nach innen wirkende Klima rund um die großen Streiks haben den Abwärtstrend der SPÖ (vorerst) gestoppt. Ein

Großteil ihres Zuwachses ging zu Lasten der arg gebeutelten Grünen, wohingegen die FPÖ- und ÖVP-Ergebnisse in etwa gleich geblieben sind. Unter dem Strich hat sich bis auf die wiedergewonnene 2/3-Mehrheit der SPÖ/ ÖVP-Mandate wenig geändert: Die große Koalition wurde neu aufgelegt, und sie wird wieder von Vranitzky geführt. Haider ist es nicht gelungen, das FPÖ-Ergebnis erneut zu verbessern. Zudem ist er in Schwierigkeiten, seit sein Auftritt und seine Rede vor ehemaligen Waffen-SSlern in Kärnten publik wurde.

Aber alle Experten glauben, daß Haider's Siegerimage zwar "eine Delle" hat, daß seine Siegesserie aber nicht beendet ist. Der FPÖ-Chef wartet weiter ab und hat nach den Wahlen verkündet, einer Koalition mit der ÖVP nicht zur Verfügung zu stehen und dagegen offensive Oppositionspolitik zu betreiben.

Wahlsoziologisch interessanter als diese waren die 1994er Nationalratswahlen, bei denen es der FPÖ gelungen ist, in die sozialdemokratische Kernwählerschicht einzudringen und beträchtliche Teile der Arbeiterschaft zu sich herüberzuziehen. Im nationalen Durchschnitt liegt die FPÖ hier bereits bei 29% (SPÖ 47%). Damit hat sich die FPÖ-Anhängerschaft bei den Arbeitern seit 1986 verdreifacht. Haider's Absicht, aus der FPÖ eine lose Sammlungsbewegung zu machen, steht in unmittelbarem Zusammenhang mit ihrem neuen Profil als populäre und urbane Kraft. Ein erster Schritt in diese Richtung ist bereits gemacht: Die Abkürzung FPÖ gefällt den Parteistrategen nicht mehr, und sie haben sie durch ein schlankes, chic gestyltes F für Freiheitliche (Bewegung) ersetzt.

Ob die Partei mittelfristig tatsächlich zugunsten einer losen Bewegung aufgelöst wird, oder ob Haider die im Parteiengesetz vorgesehenen Vorteile für seinen Apparat nutzen, die Strukturen aber gleichzeitig einfrieren will, muß derzeit noch abgewartet werden. Brigitte Bailer spricht in diesem Zusammenhang von einer Doppelstrategie Haider's. Ein ähnlich doppeltes Spiel vermutet sie bei der erkennbaren ideologischen Ent-Radikalisierung der FPÖ. Wie immer sich Haider auch entscheiden mag: Innerparteilichen Widerstand dürfte er momentan kaum zu erwarten haben, selbst wenn er sich entschlösse, die Partei mit Hilfe einer Parteitagsmehrheit aufzulösen und in einen anderen Zusammenhang zu transformieren. Die dahinter stehenden Motive sind leicht zu identifizieren. Apparate, Strukturen, Mehrheitsfindungen und Beschlüsse sind aufwendige und aus der Sicht Haider's überflüssige Angelegenheiten. Bereits nach seiner Amtsübernahme hatte er mit einer schleichenden Demontierung demokratischer Strukturen begonnen; freilich keine kalte Demontage. Seine Personalpolitik und die Unzulänglichkeit der FPÖ-Statuten haben jedoch zu einer Machtkonzentration geführt, die Haider zementieren will, um seine Substituierung auszuschließen.

In seiner Wiener Erklärung von 1992 hat er gegen "pubertären Dogmatismus" und "ideologischen Fundamentalismus in unseren eigenen Reihen" Stellung bezogen und erklärt, die FPÖ sei "weder ein nationaler Geschichtsverein noch eine liberale Sekte pseudointellektueller Standpunktlosigkeit". Die einen haben die FPÖ mehr oder minder aus eigenem Antrieb verlassen und das Liberale Forum gegründet. Die anderen werden marginalisiert: Die Entlassung des Grundsatzreferenten Mölzer, der die Öffentlichkeit noch bis 1993 mit "Umvolkungs"szenarien erschrecken durfte, ist ein wichtiges Indiz für Haider's taktischen Wandel. Er will regierungstauglich werden, und daß ein äußerst rechtslastiges Image dabei hinderlich ist, dürfte außer Frage stehen. Unterdessen hat sich Haider sogar dazu durchgerungen, von Österreich als dauerhaft eigenständigen Staat zu reden und ihn nicht mehr als potentielle

Vereinigungsmasse zu betrachten. Damit hat er erhebliche Irritation innerhalb des rechtsextremen Lagers provoziert.

Die Präsentation der Partei als (freiheitliche) Bewegung dient mehreren Zielen:

1. Innerparteiliche Opposition wird durch den schwindenden Einfluß des Apparates weniger bedeutsam.
2. Wenn sich eine Partei als lose Sammlungsbewegung präsentiert, relativiert sich auch die Bedeutung innerparteilicher Strömungen, für deren Politik und Stärke Haider als Obmann die Letztverantwortung trägt.
3. Haiders Akzeptanz in der antifaschistisch sozialisierten Arbeiterschaft kann durch den Bedeutungsverlust der mit dem Stallgeruch des Rechtsextremismus behafteten Partei nur steigen.
4. Ein weiterer Vorteil dieser Taktik liegt darin, daß sich Haider als Anti-Parteien-Mann präsentieren kann, ohne diskret auf die vorhandene Kontradiktion, selbst Vorsitzender einer Partei zu sein, aufmerksam gemacht zu werden.
5. Haider ist wie viele seiner ideologischen Gefährten Anhänger plebiszitärer Entscheidungen. Als Anführer einer völlig auf ihn zugeschnittenen und gegen die traditionellen Parteien zielenden Wahlbewegung kann er sich bei gutem Ergebnis stärker als andere Spitzenkandidaten als plebiszitär legitimiert und als politischer Erneuerer betrachten. Es steht zu erwarten, daß er seinen Diskurs über die Direktwahl des Kanzlers oder die Stärkung des Präsidenten intensivieren wird (Stichwort: Dritte Republik).
6. Schließlich dient seine ganze Taktik dem Ziel, selbst ins Machtzentrum vorzustoßen.

8.4. Kurzprofile der Wählerschaft

Front National

Das nach wie vor größte Gefälle innerhalb der FN-Wählerschaft besteht zwischen Stadt und Land. Wähler der Le-Pen-Partei stammen überwiegend aus großen Städten und aus industrialisierten Ballungszentren: dem Elsaß, dem Großraum Paris, von der Cote d'Azur und dem Rhône-Gebiet. Noch bis Anfang der 90er Jahre waren männliche Wähler deutlich überrepräsentiert; seither ist die geschlechtermäßige Verteilung nahezu ausgeglichen. Ebenso hat der Anteil praktizierender Katholiken innerhalb der FN-Wählerschaft zugenommen. Zwischen 1986 und 1988 haben regelmäßig und nicht regelmäßig praktizierende Katholiken den FN signifikant seltener gewählt als Angehörige anderer Religionen bzw. Wähler ohne religiös motiviertes Engagement. Altersmäßige Unterschiede zu den Elektoraten der übrigen Parteien bestehen nicht. Mittelständler, einfache Arbeiter und Angestellte sind wesentlich häufiger vertreten als andere Berufsgruppen.

Bernd Mosebach hat nach einer Untersuchung des FN-Wahlkörpers konstatiert, daß sich die politische Herkunft der FN-Stimmen schwer ausmachen lasse. Allerdings ist seinen Analysen zu entnehmen, daß "sie sowohl von der Linken - und dabei besonders häufig von den Kommunisten - als auch von der traditionellen Rechten kommen. Dazu kommen natürlich die Stimmen aus dem rechtsextremen Lager, darunter Katholiken traditionalistischer Tendenz, Vichy-Anhänger und Nationalisten". Etwa 10% der FN-Wähler bezeichnen sich als weit rechts stehend, 20% als eher rechts und rund 30% als weder rechts noch links. Wähler des Front National sind überwiegend unzufrieden. Sie wenden sich gegen Gewerkschaften (75%), kritisieren die Justiz (62%) und die Verwaltung (56%) und schimpfen gleichermaßen auf Medien und Politik (je 54%). Ihre wichtigsten Themen sind Immigration und Sicherheit. Beispielsweise wollen 69% der FN-Wähler die Todesstrafe als strafrechtliches Instrument wieder einführen; immerhin noch gut 29% der übrigen Wähler sind der gleichen Auffassung. Die eigene und die Zukunft des Staates wird von den Anhängern des Front National äußerst skeptisch bewertet (43% bzw. 62%).

Lega Nord

Sowohl die Lega Nord als auch ihre Wählerschaft sind auf dem Links-rechts-Kontinuum schwer zu positionieren. Im Europäischen Parlament etwa arbeitet die norditalienische Partei in der Regenbogenfraktion mit, die aufgrund ihrer ideologischen Bandbreite selbst schwer zu klassifizieren ist. Auf der Basis etlicher Analysen kommt Rolf Uesseler zu dem Schluß, daß es sich - "inzwischen auch weitgehend wissenschaftlich nachgewiesen" - bei der Lega "um eine nahezu ganz normale Massenpartei mit Schwerpunkt im Zentrum des parteipolitischen Spektrums" handelt. Bevor sie dies wurde, kamen ihre Stimmen vor allem von der Democrazia cristiana. Aber parallel zur ideologischen Erneuerung konnte die Lega ihre Stimmen aus allen politischen Milieus holen. Ihre Wähler positionieren sich überwiegend in der Mitte; dezidiert links wie rechts eingestellte Wähler finden sich hingegen kaum. Die wichtigsten Themen der zunächst vor allem aus dem Mittelstand, später auch aus der Arbeiterschaft stammenden Wähler waren staatliche bzw. bürokratische Ineffizienz, Protest gegen die römische Zentralregierung, Protest gegen die finanzielle Ungleichbehandlung des Nordens und Südens und Parteienherrschaft. Anti-Einwanderungsmotive waren nur kurzzeitig bedeutsam.

Wie erwähnt war die Wählerschaft auf dem Höhepunkt des Lega-Erfolgs mit der soziologischen Zusammensetzung der Bevölkerung nahezu deckungsgleich. Dies gilt vor allem für die eigenen Hochburgen der Partei, die während dieser Zeit ähnlich wie in Frankreich in den großen Städten und nahe der industrialisierten Zentren lagen. Nach dem Erfolg Berlusconis, der Bossi einen großen Teil der Ende der 80er, Anfang der 90er Jahre gewonnenen Arbeiter abgeworben hat, ist ihre größte Wählergruppe wieder im traditionellen (und nach wie vor verbreiteten) Mittelstand beheimatet. Konfrontationen zwischen einer eher konservativ eingestellten Wählerschaft und eine auf die Integration in das Mitte-links-Spektrum zielende Taktik Bossis sind daher nicht ausgeschlossen, bislang aber auch noch nicht belegt.

Freiheitliche Partei Österreichs

Nach 1986 ist die FPÖ sowohl in der Außen- als auch in der Innenwahrnehmung deutlich nach rechts gerückt. Und weil sich die gesamte Wählerschaft stärker als zuvor in der Mitte positioniert, fällt der konstatierte Rechtsruck der FPÖ noch deutlicher aus. Dieser Veränderung entspricht ein Wandel ihrer Wählerschaft, wobei deutliche Zuwächse vor allem in der Gruppe der Arbeiter, der Arbeitslosen und der Pensionäre zu verzeichnen sind. Mehr Stimmen erzielt die Haider-Partei zudem bei jungen Wählern, unqualifizierten Arbeitern und Pensionärinnen. Bis 1990 konnte die FPÖ ihre Stimmen vor allem von der ÖVP gewinnen; danach ist der Stimmenanteil ehemaliger SPÖ-Wähler in großem Umfang angestiegen. Darüber hinaus rekrutierte die Partei 1990 und 1994 erneut traditionelle FPÖ-Wähler, die während der Steger-Epoche anderweitig votiert haben. Den stärksten Zulauf hatte die FPÖ in Wien, wenngleich sie nach wie vor in Kärnten am besten verankert ist. Die Zuwachsraten in dieser deutschnationalen Hochburg fallen aber weit geringer aus als in der Hauptstadt, in der ein großer Teil österreichischer Arbeiter lebt. Kärnten weist derzeit die schwächste Steigerungsrate auf. Die FPÖ konnte vor allem in den Wahlbezirken überproportional zulegen, in denen große Industriezweige angesiedelt sind oder die in der Nähe der ehemaligen Warschauer-Vertrags-Länder und Ex-Jugoslawiens liegen. Als Wahlmotive werden Mißtrauen in Regierung und Verbände und seit Anfang der 90er Jahre auch das "Ausländerthema" genannt. Unzufriedenheit und Mißtrauen von FPÖ-Wählern ist signifikant stärker ausgeprägt als bei anderen Klientelen.

Ich halte es für wahrscheinlich, daß sich die Selbsteinschätzung der Partei, die ihrer Wähler und möglicherweise auch die Außenwahrnehmung mittelfristig in Richtung "politische Mitte" verschieben wird. Anzeichen dafür ist die Korrektur des vormals konstitutiven Deutschnationalismus und das damit verbundene verstärkte Eindringen der Partei in die SPÖ-Wählerschaft. Dadurch dürfte die FPÖ einen Teil ihrer explizit deutschnationalen Klientel sowie weitere dezidierte Rechtswähler verlieren.

8.5. Diskussion

Mehrere Sachverhalte lassen sich am Ende dieses Kapitels konstatieren:

1. Die drei Parteien verdanken ihre Erfolge einer von ihnen zuvor nicht erreichten Wählerschaft.
2. Organisatorische Modernisierung und elektoraler Durchbruch verlaufen parallel.
3. Desgleichen fallen Erfolg und ideologisch-thematischer Wandel zusammen. Dies gilt vor allem für die FPÖ und die Lega Nord.
4. Infolge dieses Wandels wurden die Profile der Parteien ähnlicher. Dazu gehören die erkennbaren Deideologisierungstendenzen und eine zunehmende Kongruenz auf thematischer Ebene: verstärkte Kampfansagen an das sogenannte Establishment, aber auch eine Konzentration auf Themen wie Armut bzw. Wohlstandssicherung.

Wien, Dreux, Marseille, Brescia oder Varese - diese und andere Hochburgen der drei Parteien sind ebenso bevölkerungsreich wie industrialisiert und weisen damit eine

Sozial- und Problemstruktur auf, die sich von den traditonellen Schwerpunkten der drei Parteien unterscheidet.

Ursprünglich haben sich der Front National, die Lega und die FPÖ mit unterschiedlichen Ergebnissen an eine konservative und traditionalistische und im Fall FN und FPÖ auch an eine Wählerschaft mit einer extremrechten Weltanschauung gewandt. Im Verlauf der 80er Jahre jedoch haben die Parteien begonnen, sich verstärkt auf eine urbane, aus dem Arbeiter- und Angestelltenmilieu stammende Wählerschaft zu konzentrieren. Während die Lega gezielt in den großen Städten geworben und Haider bewußt an die sozialdemokratische Wählerschaft appelliert hat, wurde der Front National erst durch die Taktik und den Erfolg Stirbois auf ein von ihm zuvor vernachlässigtes Potential gestoßen. Die programmatische und rhetorische Gesamtpräsentation des Front National wurde sozusagen im Nachhinein auf jene Wählerschaft zugeschnitten, die sich bei den Kommunalwahlen in Dreux und nach weiteren Effekten in den demographischen und industrialisierten Agglomerationen für die Partei ausgesprochen hatte. Die Veränderung der Wählerschaft geht mit der urbanen Etablierung einher, und die Wähler stammten immer stärker auch von den linken Parteien.

Parallel zu den Erfolgen vollzog sich ein innerparteilicher Wandel. Zur Lega und zum Front National stießen aufgrund dieses Erfolgs und des ihnen so zuteil gewordenen öffentlichen Interesses zahlreiche Mitglieder. Auch solche mit instrumentellen Motiven oder Karriere Wünschen. Aufgrund dieser Entwicklung waren die beiden Parteien zum Ausbau ihrer Strukturen gezwungen, ohne jedoch die Macht des Führungsapparates beschneiden zu wollen. Die FPÖ hingegen ist eine durchstrukturierte Partei, und sie ist derzeit sogar bemüht, ihr organisatorisches Gerüst zu beschneiden. Zumindest werden in diese Richtung gehende Überlegungen angestellt. Diese auf den ersten Blick gegenteilig aussehende Entwicklung ist aber keine. Denn auch hier geht es um die Zementierung von Machtpositionen. Immerhin ist die FPÖ eine demokratisch legitimierte Partei, in der Repräsentanten abgewählt werden können. Es widerspricht jedoch dem Haiderschen Selbstverständnis und Selbstbewußtsein, eine Führungsperson auf Abruf zu sein.

Zunächst hatte es den Anschein, als würden die Lega und die FPÖ ideologisch gefestigter bzw. stringenter. Haider als wichtige Symbolfigur der deutschnationalen Strömung wurde zum Obmann seiner Partei gewählt, und er hatte mit Andreas Mölzer einen weiteren Vertreter dieses Flügels zum Chefdenker gemacht. Der italienische Mölzer heißt Gianfranco Miglio, der sich bald nach seinem Eintritt eng an der Seite des ideologisch eher inkongruenten Bossi bewegte und damit großen Einfluß auf Sprache und inhaltliche Präsentation nehmen konnte. Schließlich hat auch der neurechte Club de l'Horloge entscheidenden Anteil an der Modernisierung des Front National gehabt. Damit haben sich deutliche Berührungspunkte zwischen den Parteien und Personen bzw. Strömungen der Neuen Rechten ergeben. Gleichwohl ist der Begriff Neue Rechte nicht eindeutig zu definieren.

Wolfgang Kowalsky macht auf die doppelte Bedeutung dieses Begriffs aufmerksam und unterscheidet zwischen einem modernisierten, sich vom historischen Faschismus abkoppelnden Rechtsextremismus einerseits und rechtsintellektuellen Denkzirkeln andererseits. Beide Definitionen lassen sich zweifellos auf den Uhrenclub anwenden. Auf dem Hintergrund seiner verfassungspolitischen Arbeit in dem rechtskonservativen Gruppo di Milano kann man sicher auch Miglio als einen Vertreter der Neuen Rechten bezeichnen. Schwieriger verhält es sich im Fall Mölzer. Allein die Tatsache, daß er von Haider zum Vordenker bestellt wurde, macht aus ihm noch keinen Vertreter der Neuen Rechten. Von ihm sind zahlreiche nationalsozialistisch gefärbte Beiträge sowie seine engen Kontakte mit der militanten rechten

Szene bekannt. Lediglich unter dem Aspekt einer überwiegend taktisch motivierten Modernisierung der FPÖ, an der ihm in seiner Eigenschaft als Grundsatzreferent gelegen war, kann man ihn der Neuen Rechten zuschlagen.

Jedoch wurden mit anhaltendem Erfolg und dem dadurch gewachsenen Machtanspruch die vormals wichtigen Unterstützer oder Förderer überflüssig: Andreas Mölzer ist nunmehr ehemaliger Grundsatzreferent der FPÖ, und der Einfluß der deutschnationalen Fraktion wurde von Haider zurückgedrängt. Gianfranco Miglio hat die Lega frustriert verlassen. Aber auch ohne freiwilliges Ausscheiden war die Beschränkung seines Einflusses vorgezeichnet (Vorenthaltung eines Ministeramtes). Der Uhrenclub allerdings konnte sich im Front National etablieren. Allerdings darf dabei nicht außer acht gelassen werden, daß Miglio und Mölzer in ihren Parteien stärker zu einer ideologischen Radikalisierung und die Vertreter des Uhrenclubs dagegen eher zu einer tendenziellen Moderation beigetragen haben.

Elektoraler Erfolg und innerparteilicher Wandel verlaufen synchron. Signifikant ist der Zusammenhang zwischen ideologischer Öffnung und wachsendem Erfolg in Italien, wohingegen sich das österreichische Beispiel etwas mühsamer liest: Der 1986 gewählte Jörg Haider war in erster Linie ein von der deutschnationalen Strömung promovierter Obmann und wurde von der Öffentlichkeit entsprechend wahrgenommen und einsortiert. Die auch von Haider studierten Wahlanalysen führen seinen Erfolg jedoch nicht auf seinen germanisierenden, sondern primär auf seinen Anti-Parteien- und Anti-Sozialpartnerschaftsdiskurs zurück. Der Wandel der FPÖ wurde dementsprechend eingeleitet.

Warum verhält es sich in Frankreich anders, wo der Front National erheblich zwischen radikaler und moderater Präsentation schwankt? Um diese Frage zu beantworten, will ich den Blick erneut auf die Lega richten. Obgleich sie bereits in einer Regierung vertreten war und sich von ihren fundamentalistischen Forderungen verabschiedet hatte, versucht auch sie sich wieder als separatistischer Sprengkörper zu profilieren. Dieser, im übrigen auch Miglio wieder geneigt machende Rückfall korreliert auffallend mit ihrer Standortsuche im Parteiensystem und der Gefahr, in der Deputiertenkammer eine Nebenrolle zu spielen. Der Front National hat aber parlamentspolitisch gesehen nicht einmal die Chance, mittelfristig jene von der Lega gefürchtete Nebenrolle zu besetzen. Daraus kann der Schluß gezogen werden, daß sich Protestparteien dann moderater präsentieren und einen Normalisierungsprozeß durchlaufen, wenn reale Chancen einer nationalen Etablierung bestehen. En passant sei darauf hingewiesen, daß die Lega parallel zu diesem Prozeß auch ihren Parteiapparat demokratisiert hat. Durch ihren Erfolg hat sie zudem den anderen Parteien ihre Themen aufzwingen können (was auch für Frankreich und Österreich gilt). Das Ministerium für staatliche Neugestaltung wurde geschaffen; PDS, PPI und andere diskutieren ernsthaft über praktikable Möglichkeiten einer Raumordnungsreform. Aber schließlich war es die Lega, die seit ihrer legislativen und exekutiven Partizipation von maximalistischen Forderungen abrückte.

Dieser Feststellung soll keinesfalls der Ratschlag folgen, Protestparteien aus Domestizierungsgründen den Weg in die Regierungsverantwortung zu ebnen. Hier soll nur ein Prozeß nachgezeichnet werden, der sich vermutlich auch in Österreich vollziehen wird. Erst einmal versucht sich die FPÖ "nur" von ihrem rechtsextremen Image zu lösen. Um aber an die Regierungsmacht zu gelangen, wird auch sie moderater,

kompromißbereiter und flexibler werden müssen. Aufschlußreich in diesem Zusammenhang ist die Tatsache, daß Jörg Haider im Herbst 1995 schließlich medienwirksam auf das deutschnationale Bekenntnis verzichtet hat; mehr noch: Er bezeichnet nunmehr den österreichischen Staat als dauerhaft eigenständig und nicht mehr wie noch vor Jahren als eine "ideologische Mißgeburt". Dies ist nichts anderes als ein, wenngleich zunächst taktisch motivierter, Kompromiß mit der umworbenen österreichischen Wahlbevölkerung, die von Haider nun als Gemeinschaft der Österreicher angesprochen wird.

Wenn Claus Leggewie den lepenistischen Wahlkörper als radikale Protestpopulation zwischen links und rechts bezeichnet und in diesem Sinne von einem Extremismus der Mitte spricht, so darf nicht außer acht gelassen werden, daß sich der FN (etwas) und in weitaus stärkerem Umfang die anderen Parteien sukzessive vom radikalen Rand entfernt haben und damit selbst ein Stück (!) in die politische Mitte gerückt sind. Insofern koinzidieren zwei soziale Phänomene: Bislang gemäßigte Wähler werden radikaler bzw. rücken stärker nach rechts, und bislang extreme Parteien verlassen ihre exponierte Randposition. Oder präziser formuliert: Bislang gemäßigte Wähler neigen unter bestimmten Bedingungen verstärkt zu einer isolierten Weltanschauung, und Parteien mit bislang geschlossenem Weltbild öffnen sich tendenziell. Damit meine ich keinesfalls, daß sie handzahn werden. Öffnen heißt in diesem Fall das Abrücken von ursprünglich konstituierenden bzw. sinnstiftenden politischen Inhalten wie etwa Deutschnationalismus, Ethnoregionalismus, Antisemitismus. Dies könnte gleichbedeutend sein mit einer schrittweisen Anerkennung demokratisch-parlamentarischer Regeln, die sich zunächst in Abwehr artikuliert, aber letztlich auf Teilnahme zielt.

Der Systemantagonismus (Einheitsstaatlichkeit, Österreich-Nation, parlamentarische Demokratie) scheint durch einen Parteienantagonismus substituiert zu werden. Da aber die moderne bürgerliche Gesellschaft Westeuropas durch das Vorhandensein von Parteien gekennzeichnet ist, und diese Parteien Trägerinnen des Systems sind oder seine Konstrukteurinnen waren, stellt sich die Frage nach der Bedeutung dieser Oppositionismen. Es stellt sich mit anderen Worten die Frage, ob die hier im Zentrum stehenden Organisationen stärker republikanische Antiparteien oder antirepublikanische Parteien sind. Darauf eine Antwort zu geben, ist nicht ganz einfach, da die Präsentation und die Radikalität drei Parteien stark von ihren jeweiligen Erfolgen bzw. Mißerfolgen abhängt. Wenn unter antirepublikanisch weniger eine Haltung oder Ideologie, sondern die Ablehnung eines konkreten Staatsgefüges verstanden wird, dann fällt die Antwort in Bezug auf die Lega Nord jedoch eindeutig aus: Denn unabhängig von präsentationsbezogenen Schwankungen gilt ihre Aversion in erster Linie dem italienischen Staat in seiner Gesamtheit.

Abschließend noch einige Bemerkungen zur inhaltlichen Präsentation: Parteienantagonismus und Xenophobie bzw. kulturelle Ressentiments waren die beiden wichtigsten Standbeine der drei Parteien vor und zwischen den Wahlkämpfen. Die leghistische Rhetorik zielt hauptsächlich gegen Süditaliener. Ressentiments treten dabei nicht isoliert, sondern kontextuell auf: Kammern, Parteien und Institutionen sind meridionalisiert und der Süden von der Mafia durchsetzt. Folglich stehen Parteien und Mafia in einem engen Verhältnis, und die im Norden erbrachten Steuergelder werden in dunkle Kanäle gelenkt. Ebenso verhält es sich in Österreich und Frankreich, wo sich das xenophobische Ressentiment auch unter anderen Stichwörtern - etwa wachsende Kriminalität, Arbeitslosigkeit - aufspüren läßt. Bei allen

drei Parteien finden sich neben den Ressentiments gegen Paßausländer auch jene gegen Paßinländer.

Kaum zu unterscheiden ist der Anti-Establishment-Diskurs. Le Pen polemisiert gegen die Viererbande, Haider redet verächtlich von Altparteien und Bossi von der partitocrazia. Dieser Protest entwickelte sich vor allem in den Parteienstaaten Italien und Österreich als mobilisierend.

Summary

This paper discusses a few of the questions that the use of computer-based tools in administrative practice poses to politics and to legal theory. Two of these tools will be presented as case studies. Hard political and legal-theoretical questions may need reconsideration since some of the delicate balances, vital to the constitutional state are being challenged by information-technological developments. Our analysis focuses on the identification of those topoi where leverage is already felt or where it is to be expected in the near future. The potential of information-technological tools is immense but are we ready to face the consequences?

1. Introduction

The last decennia have shown the applicability of computer-based tools to be virtually without any limit. Some applications within the legal practice have proven possible. We describe two examples of such applications. One system (JES) is already in use, the other (CIS) has by now been on the planning board for four months. Status, background, chosen solutions and foreseeable pitfalls of these systems will be discussed in Sections 2 and 3. Further analysis of the case studies reveals that the growth of knowledge will provide a serious cause for political debate and for revisiting some well-known legal-theoretical issues: the relations between what is known to be possible and what ought to be done about it. In Section 4 we discuss these relations and conclude that the role played by information technology requests serious democratic attention and debate. In Section 5 we take part in the debate, anchoring our argumentation at the foremost equilibria that have proven to be useful for (democratic) political and legal-theoretical stability. We mention (a) egalitarianism vs. individualism, (b) checks & balances and (c) perfectionism vs. liberalism. In Section 6 we present our conclusions.

2. JES

As a first case study we examine an expert system supporting the process of providing licences for the discharge of effluent on the Dutch surface waters. The expert system is called JES, standing for "Juridisch Expert Systeem". It has been developed by Rijkswaterstaat (Ministry of Transport and Public Works) and Icim (Informatics Centre for Infrastructure and Environment). By now JES is a system in full operation.

2.1. Background

One of the assignments of Rijkswaterstaat is the granting of licences prescribed in the Water Pollution Act (Wet verontreiniging oppervlaktewateren, WVO). The object of the Act is to oppose and prevent the pollution of water. To achieve this the discharge of effluent is regulated by licences. Discharging into open water without a licence is forbidden, for domestic as well as commercial waste water. Indirect discharge via sewers

is also regulated by way of licences. The drafting of a specific licence depends on a combination of disciplines. On the one hand juridical expertise is needed to ensure that the licence is juridically correct. On the other hand technical knowledge, i.e., knowledge of the substances and techniques used in households and in industrial processes, is necessary to be able to assess the pollution and countermeasures to be taken.

The authorities aim at adapting the services to the needs of the citizens and at rendering high quality services. For the granting of licences this means procedural correctness and insight into the enforcement of the procedures, correct licences and rapid processing of the requests. The current licence-granting practice does not fulfill these goals due to two problems: (1) legal verification and (2) regionally diverging licence-granting policies.

1. The greater part of the licences is granted by technical experts exclusively. It is mainly based on precedents (notably on similarities in processes and substances used). In some cases the outcome is legally incorrect because technical experts do not always possess the required juridical expertise. Verification by professional jurists is therefore necessary, but not comprehensively performed due to governmental expenditure restrictions.
2. Rijkswaterstaat is divided into regions. Discrepancies between regional licence-granting policies have emerged. Uniformity in licensing policy between the regions is a goal set by the competent administration (Rijkswaterstaat itself). This goal has proven hard to be achieved by conventional means.

2.2. The solution

2.2.1. Legal verification

One of the main problems that leads to the lack of verification is the workload of the jurists. Their capacity does not allow the verification of all licences. Taking on extra jurists is not possible because of the restrictions in governmental expenditure. The solution chosen provides for standardization of relatively simple licences in such a way that only the complex licences remain to be verified by jurists. (The distinction between standard cases and hard case is non-standard, consequently the preliminary categorization is performed by the jurists).

Standardization of relatively simple licences is achieved by JES [Van Adrichem, 1992]. JES consists of two distinguishable parts, a reasoning part and a presentation part. The reasoning part is an expert system in which rules lead to conclusions. All kinds of procedural and technical aspects are considered. Per request a communication session is necessary in which all relevant data of the request are being asked. The questions are the same as those on the application form. The data are used to derive conclusions, of which the most important one is whether or not a licence can be granted. The expertise realized in JES, both juridical and technical, is elicited from the experts of Rijkswaterstaat. The presentation part is a separate program which communicates with the knowledge base. The program decides, depending on data retrieved from the knowledge base, which texts are to be used. JES produces text models of licences for standard cases in word-processing format; they only need to be printed and signed. However, the word-processing format allows the users to append and edit the text, using a standard wordprocessor. This feature may in the future prove useful to prepare the standard parts of complex licences, and to append the more complex articles.

2.2.2. Discrepancies in policies

Standardization makes it possible to speed up the correct processing of the simple licences, thereby creating capacity for the processing and the legal verification of complex

licences. As an added bonus, it concurrently solves, for standardized cases, the problem of discrepancies in licence-granting policies between the different regions. We do not see a problem regarding diverging policies in hard, complex or non-standard cases. For these cases there is, *qualitate qua*, no policy available at all (cf. for the elaboration of an analogous problem Section 3.1).

2.3. The pitfalls

2.3.1. User friendliness

The WVO is a fairly broad law. To represent the complete law at once is impossible. The first selection of subdomains has been made in mutual agreement between Rijkswaterstaat and Icim. The restriction to a subdomain made it possible to show results in an early stage of the project, enhancing the acceptance by users. In a later stage other, more complex, parts were added to the knowledge base. The choice for a user friendly system (combining Nexpert Object and WordPerfect under MS Windows) further helped to facilitate the acceptance by potential users. The complexity of the system does not show, and does not make the system's behaviour incomprehensible.

2.3.2. Knowledge elicitation

The knowledge of the experts is not easy to obtain. Most of the technical knowledge is implicit. The explanation of technical features to non-technicians is very difficult. The explanation of implicit technical knowledge, derived from experience, to non-technicians is an even harder problem. The same goes for explaining juridical knowledge to software engineers. These processes bear in themselves the risk of building an invalid expert system. The communication between the experts and the developers is therefore the most important factor in a successful realization of such a project. Moreover, in creating the knowledge base we found that reflections that should play a part in the granting process are often left out, because of miscommunication between experts. Relevant rules known to experts of one of the disciplines proved to be totally unknown to the other.

The juridical correctness of the system depends on the information the jurists provide during knowledge acquisition. They are responsible for interpreting the law and incorporating jurisprudence. This also holds for the technical correctness, it depends on the skills of the technicians. Consequently, the responsibility for assessing the correctness of the granted licences remains with Rijkswaterstaat because it is the competent governmental body, as well as the provider of the expertise.

2.3.3. High-quality aims and perfection

The interpretation of the law by machine needs to be pragmatic. The law is designed to be suitable to all conceivable circumstances. We find the law to describe exceptions on normal ruling, and possibly exceptions on the exceptions, etcetera. Although this allows us to use a well-known and straightforward representation formalism (production rules), exceptions on exceptions can make a system unworkable while it takes a large amount of effort to incorporate all these exceptions (Oskamp, 1990). The solution we chose is to find a compromise between the high quality aimed at and the available law-modelling capacity by not incorporating exceptions that hardly ever occur (according to our experts). High quality does not equal perfection. Consequently, we may rely on JES to handle correctly simple cases that occur frequently. All other cases are considered to be non-standard and should be recognized as such during the preliminary categorization mentioned earlier.

2.3.4. The pitfalls of the tool being used

The actual use of the system may lead to pitfalls of a different kind which will be discussed more generally in later sections. Here we provide a few JES-related examples. The WVO requires that the quality of the water is considered in the process of granting the licence. The discharge should consequently be balanced against the quality of the receiving water. This could mean that the first ten companies that request a licence receive one because the water-pollution level is still acceptable, and the eleventh company is denied a licence. The competition issues arising between applicants is something that should be considered.

Another complicating factor is "sustainable development", a concept adopted by the policy makers. The leading thought being that environmental factors can be expressed in economic terms, thus providing the means for hopeful discussions on simultaneous economical growth and environmental preservation. The latter aims at sustaining future society on an acceptable level. The concepts involved should be considered in an expert system such as JES. But since guidelines and practical applications of those guidelines are not yet available and since such an approach would need more data on waterways and interregional effects, political instructions cannot be incorporated in JES at the moment.

3. CIS

The second case study looks into the supply of information and the information interrelationships within the judiciary, in particular with respect to the sentencing of courts in criminal cases. A research project on this subject is defined by an ad hoc project team in which judges, scientists and software engineers participate. Preliminary analyses have revealed the development of a Communication Infrastructure for the registration, provision and development of common Sentencing knowledge as main objective. Hence we refer to the project as CIS.

3.1. Background

Empiricists frequently observe the occurrence of differences between Dutch courts in sentences adjudicated in comparable criminal cases [e.g., Berghuis, 1992]. These differences are unwanted and can contribute to a growing distrust in the legal system by the general public. Although Dutch judges are independent and have considerable freedom in choosing type and weight of punishment, they have to take into account the seriousness of the criminal act and the circumstances of the accused - not their personal taste in these matters.

The differences in sentencing can be explained by looking at the knowledge that is available to judges for sentencing. We distinguish three categories:

- a. *Individual expertise.* This is sentencing knowledge derived from personal experience by a professional judge. With regard to the identification and assessment of personal circumstances of the accused and to the veracity of his motives and intentions this type of knowledge is indispensable. For the greater part this knowledge is intuitive. The personal conviction of the judge plays a decisive role. The same goes for the interpretation of statements of experts and social workers. Ambiguous interpretations are sometimes unavoidable.
- b. *Professional knowledge.* This is knowledge that is generally acknowledged by the professional group of judges as common knowledge. As any professional common legal knowledge, it should be accessible in handbooks, jurisprudence and precedent. Professional knowledge on sentencing is not available in any of these media.

- c. *Knowledge about legal principles.* Knowledge about legal principles is widely published in the traditional media. Judges often have to decide hard cases [Dworkin, 1978] where neither professional knowledge nor individual expertise is available. These decisions are to be taken and with responsibility. The most important criterium for these decisions is normative and involves taking into account the well-known principles regarding the role of judges within the constitutional state, and the social and legal structures which form it. Responsible judgments in hard cases are acknowledged to be based on legal principles of a very general nature which hardly allow straightforward answers.

Individual expertise and knowledge about principles are available in the present day sentencing practice. Professional sentencing knowledge is not. Prerequisite for the possible development of acknowledged professional sentencing knowledge is the case-law publication of relevant circumstances, applied sentences and explicit reasons. However, in published cases, argumentation of sentences is generic and extensionally void: "(...) is in accordance with the gravity of the criminal act and with the circumstances of the accused (...)" has become the cliché argument which is generally approved of by the Dutch High Court. The actual discussion of assessments in sentencing is in Dutch legal practice restricted to the council meeting of the judges, that judge a particular case. The proceedings of these meetings are secret. Accordingly, the exchange of assessments between courts, the debating of cases amongst professional judges is severely limited. This prevents autopoiesis [Witteveen, 1992] of appropriate professional knowledge. Thus, the first and foremost conditions for the development of professional sentencing knowledge are currently not met in Dutch legal tradition.

Consequently, each individual sentencing decision constitutes a hard case and is based on (a) individual expertise regarding assessment of the circumstances of the case and on (b) vague normative principles regarding the adjudication of punishment to assessed circumstances.

3.2. A possible solution

It is expected that the availability of professional knowledge will enhance the rationality of sentencing. The professional knowledge that has to be made available to the judges are records of previous sentences and the assessments and argumentations which motivate the specific sentence. These records can be used by the judges as a tool to study viable assessments and common sentences in later cases.

The first step towards a solution is a database with restricted access in which the sentencing information as revealed in secret council meetings about cases will be stored in text format. This database should be accessible to all (secret) council meetings, thus providing an infrastructure for communication between courts and a medium for the professional debating of sentencing knowledge. It is to be noted that information technology has only very recently come up with tools to realize such an infrastructure.

Since there is no professional sentencing knowledge available as yet, the database will initially lack structure. Therefore, the second step is to gain professional sentencing knowledge from the database. The goal of the research program is to analyze the sentencing information and to find (or create) commonly acknowledged sentencing knowledge in the debate between courts and judges. The outcome of this study can be used for initial modelling and formalization in a knowledge base that can access the database. The resulting system will be used for enhanced study programs and further discussion on the theory and application of the sentencing knowledge.

With changing insights into the professional knowledge the database and the knowledge base have to be adaptable and extendable. Knowledge-representation formalisms will have to be appropriate in this respect. Based on our experience with JES we assume that

the target knowledge will conceptually be structured in the rule-exception format which may be represented in production rules. Knowledge-maintenance tasks will concentrate on handling refinement of exceptions and conflict resolution between them.

3.3. The foreseeable pitfalls

3.3.1. Knowledge elicitation

The most alluring pitfall of the CIS project for knowledge engineers is to assume that professional sentencing knowledge actually exists and to venture it into a model. This attitude is prone to the modelling of an individual judge's expertise that will prove not to be generally acceptable. It has been adopted in an earlier project [Vollbeh, 1991].

Many other pitfalls are for a large part similar to those faced in the JES project. The broadness of the sentencing cases requires that a selection is made narrowing the domains. The communication between the jurists and the developers will, especially at the start, cause misunderstanding and stress. The different teams will have to do their utmost to remain on 'speaking terms'.

The problem of exceptions plays a different role than it did in JES. Here, the exceptions in assessments are essential to the system - nevertheless, how do we notice the exceptions, and to which rules are they exceptions? Another way of looking at this pitfall is that shared professional knowledge may not actually emerge when using and developing the system.

3.3.2. The pitfalls of the tool being used

Assuming the system to be successful, we can foresee its use to lead to pitfalls of a different kind. We mention a few.

By making more data available to judges a situation is created that, whilst they can take notice of professional sentencing knowledge, judges have the responsibility to do so. In other words: a system as proposed could make their task more complex. Therefore, much consideration has to be given to the search mechanisms and to a conceptually transparent knowledge representation.

The basis of sentencing is the notion that there is a choice in every case that can do justice to the personal circumstances and still lead to equality in the sentencing. Of course, the choices are supposed to be made by capable judges. If all assessments can be monitored, judgements can become questionable. This questioning can undermine the credibility of judgements and judges. As a result they may undermine the base of our sentencing. Systems such as CIS may thus save us from the frying pan into the fire. After all, the urge behind the project is the current undermining of our trust in the legal system due to differences in sentencing.

4. Is and ought revisited

Further analysis of the case studies reveals the growth of knowledge to provide a serious cause for a political debate and for the revisiting of age-old legal-theoretical and practical issues: the relations between what is and what ought to be.

Knowledge about what is and about what ought to be is closely interrelated. This interrelationship is bidirectional (a) from what is known towards what ought to be and (b) from what ought to be towards what is known.

4.1. From what is known to be to what ought to be

Legal and political theory agree that no logical relationship can be established between what ought to be and what is known to be. Nevertheless, we seem to generate strong feelings on what we should (not) do, as soon as we find ourselves able to accomplish something due to newly acquired empirical knowledge. Consequently, other, more practical methods for generating normative knowledge have been created, notably democratic procedures. If we know how to destroy the ozone layer we may thus (democratically) answer the question whether we ought to do so. As long as we do not know the ozone layer to be impaired, normative questions regarding the ozone layer are nonexistent. As a matter of consequence, we suggest that the more we know empirically, the more normative questions we have to answer.

4.2. From what ought to be to what is known to be

Legal and political theory also agree that there are limits to the norm-issued constructability of reality by administration. If we have collectively decided that we ought not destroy it, there seem to remain a few problems to be solved in order to reach a state in which the empirical world shows an unimpaired ozone layer. For an effective administration we should, for instance, monitor the production (and use) of all matter that may contribute to changes in the ozone layer. As a matter of consequence we suggest that the more we know about what ought to be, the more empirical knowledge has to be made available in order to procure an appropriate state of affairs.

The relationships between empirical and normative knowledge may provide a vicious circle, where additional empirical knowledge creates a need for additional norms and where additional norms create a need for additional empirical knowledge. An equilibrium in this process will be reached, according to the law of diminishing returns; an equilibrium will be upset if the marginal needs are increasing. Our impression is that especially the communication and registration potential of information technology upsets the existing equilibria because they drastically increase the possible growth of empirical knowledge.

To illustrate our point we present two scenarios, which can easily reduce our promising case studies into nightmares:

JES The development of JES was inspired partly by efficiency needs (which have been met and which we leave outside the discussion) and partly by the normative need to coordinate policies between granting bodies. Consequently, empirical knowledge about the amounts of allowed pollutants has become available. This, in its turn, may pose the question of how much pollutants will be allowed in the environment. After any answer, additional normative knowledge has to be generated with respect to the actions to be taken when the limit has been reached (or has been overshoot). The administration will need additional empirical knowledge to decide on the resulting questions regarding, for instance, commercial competition. Eventually an equilibrium (for instance, around the concept of sustainable development) may be reached. Somewhere during this process, however, it will become clear that the empirical information available can be used for several different purposes, say, by the Revenue Administration. This circumstance may induce the upset of another equilibrium, etcetera. We are confronted with a domino effect.

CIS The development of CIS was inspired by a normative need: the decrease of differences in sentencing in comparable cases. The research for empirical knowledge regarding sentencing policy is induced, which may lead to the increase of normative knowledge regarding sentencing. Here, an equilibrium may be reached. However, the additional empirical knowledge may lead to additional normative questions which could be answered, using the continued

CIS empirical data. It might even be used to judge judges, and accordingly to destroy a particularly delicate balance in a democratic society.

We have directed our scenarios towards the envisionment of serious damage to society caused by vicious norm-knowledge circles. However, we feel that the scenarios mentioned might as easily have been egged on towards utopian results. We have shown that serious practical questions are being posed to democratic societies by the potential of information-technological tools. These problems need democratic attention and solutions, which are traditionally being reached in debate.

5. Equilibria

We briefly review the foremost equilibria that have proven to be useful in a (democratic) political and legal-theoretical debate and suggest the possible upsets issued by information-technological tools. We mention (a) egalitarianism vs. individualism, (b) checks & balances and (c) perfectionism vs. liberalism.

5.1. Egalitarianism vs. individualisation

Equality and individualism are fundamental legal issues. They are institutionalized in the (independent) legislative and judicatural powers, respectively. One of the foundations for these distinct powers is to be found in the amount of practical knowledge available. Legislative generality is based on an assumption of equality that does not actually exist. Appropriate individualization is performed by the judicature, instantiating individual cases to general rules. They are supposed to know the individual circumstances that the legislator cannot possibly take into account.

The emergence of information-technological tools makes the development of common individualization knowledge possible (cf. the CIS project). This type of knowledge may be used by the legislator, again suggesting a shift from judicatural to legislative power. However, the legislator will never be able to predict developments in society and will consequently seldom be tempted to be overspecific in his legislation. We do not see serious dangers needing discussion in this area, provided that the administration and the legislator refrain from using information-technological tools to control the judicature.

5.2. Checks & balances

In the Netherlands, the discussions about the impacts of information-technological tools have for a considerable time been focused on questions relating to registration and privacy. We consider the privacy-registration discussion to be a symptom of marginal trust of the public in administration and vice versa. As such, the discussion has read mistrust in the public's opposition to registration as well as in the administrations picking at the public's privacy. This type of (regularly justified) mutual mistrust has made the democratic society dependent on an elaborate system of checks and balances, most notably explicitated in the traditional distinction of the powers of state (legislator, judicature and administration) and in the positions of the Public Prosecutor and the accused.

Van Gunsteren [1972] has argued severe limits to exist for the effective pursuit of administrative goals. These limits seem, however, to have been stretched by information-technological tools. Extensive registration in itself is considered to be politically neutral. It will facilitate effective administration as readily as administrative abuse of power. Nonetheless, extensive registration suggests a big, simultaneous power shift towards administration as soon as information-technology driven, knowledge-based effectuation is realized. We suggest that these shifts are most likely to be brought about by short-term,

ad hoc problems in society (cf. the current debate on the integration of tax administrations and social welfare administrations in the Netherlands in relation to controlling welfare abuse and illegitimate immigration).

We also suggest that the simultaneous power shifts should neither be discussed ad hoc nor be forgotten in the heat of the moment. It is not immediately clear, however, in what way the administrative power could be checked. Perhaps it can be done by redirecting the emerging registration potential towards the administration itself. Again, a vicious circle seems to emerge. Where and how this will reach (or should be brought to) a stable equilibrium is an existential challenge to today's political and legal theory (and practice).

5.3. Perfectionism vs. liberalism

A perfectionist ethical theory claims universal morality, its scope reaching into the most private of individual actions. Perfectionist ethical theory knows any of our actions to be good or bad, anywhere and all the time. A famous and extremely influential example is provided by Aristotle. Opposed to perfectionist ethical theories are those, that only claim validity for actions that may affect the freedom of others. Perfectionist and liberal ethical theories have bred perfectionist and liberal political parties, who, in their turn, have provided societies with hybrid perfectionist-liberal legal systems.

Prima facie it seems more natural for perfectionist-oriented legal systems to strive for comprehensive registration than for more liberal-oriented systems. History bears out this intuition if we classify the communist systems amongst the perfectionist-oriented and notice their inherent huge administrative overhead. We allow the comprehensive registration in these systems to have brought about an anti-democratic upset compared with our traditional equilibria of power, thus yielding possibilities for abuse that have not been checked by knowledge-based, public discussions of the behaviour of administration itself. We think this bears out our observations in the last subsection. We maintain, however, that extensive registration is in itself politically neutral. It may be effectively used in the pursuit of liberal as well as in the pursuit of perfectionist goals.

6. Conclusions

The growth of empirical knowledge issues the demand of additional normative knowledge and the growth of normative knowledge issues the demand for empirical knowledge. An equilibrium between empirical and normative knowledge demands may be reached. However, recent information technological developments have disturbed the existing equilibrium or will soon do so. As a consequence, power shifts in the *trias politica*, organic to the constitutional state, will occur. These shifts need serious democratic attention.

Daniela Raschhofer EU-Spitzenkandidatin der FPÖ

Das richtige Gespür für die Entwicklungen in der EU

Daniela Raschhofer hat bereits in ihrer bisherigen Tätigkeit als freiheitliche Europaabgeordnete das richtige Gespür für Entwicklungen in der EU gezeigt.

Nur zwei Beispiele

- Im Zuge des BSE-Skandals hat Daniela Raschhofer als eine der Ersten im EU-Parlament die Initiative ergriffen.
- Als Umfang der Mißwirtschaft und Korruption der EU-Kommission festgestanden sind, hat Daniela Raschhofer bereits am 15. Jänner 1999 versucht, durch die Mitwirkung beim Mißtrauensantrag gegen die Kommission, ein eindeutiges Signal gegen Korruption, Vetternwirtschaft und Mißwirtschaft zu setzen. Als Delegationsleiterin der freiheitlichen EU-Parlamentarier wollte sie der Kommission bereits am 15. Jänner 1999 die rote Karte zeigen. Bekanntlich haben damals die Abgeordneten von SPÖ und ÖVP gegen den Mißtrauensantrag gestimmt.

Ihre Ziele:

- Kontrolle und in der Wahrung der österreichischen Interessen im Europäischen Parlament
Die lange Chronologie des Mißbrauchs und der Korruption in der EU beweisen, daß Österreich eine starke Kontrolle in Brüssel braucht.
- Aufbrechen des Systems der rot-schwarzen Päckerei auf Europäischer Ebene
Was für Österreich gilt, gilt noch viel mehr für Europa. Beim europäischen Postenschacher bleibt der Bürger endgültig auf der Strecke. Wie die Skandalchronik um den Rücktritt der EU-Kommission beweist, mauern und vertuschen die roten und schwarzen Fraktionen im Europaparlament und geben nur das zu, was wirklich nicht mehr zu verheimlichen ist.

Im Gegensatz dazu können sich die Österreicher auf die Freiheitlichen verlassen. Daniela Raschhofer nach ihrer Nominierung: **„Wir Freiheitlichen werden unser Gewissen nicht wie die anderen in der Abflughalle in Schwechat abgeben. Am 13. Juni muß gelten: Wahltag ist Zahltag, Zahltag für Korruption, Mißwirtschaft und Postenschacher - in Österreich und in der EU.“**

Kurz-Lebenslauf der freiheitlichen EU-Spitzenkandidatin Daniela Raschhofer

Geboren am 19. Juni 1960 in Braunau
Höhere Bundeslehranstalt für wirtschaftliche Frauenberufe (HBLA), Abschluß mit Matura
Einjähriger Auslandsaufenthalt in Paris
Absolvierung der Pädagogischen Akademie in Salzburg, Lehramtsprüfung für Volksschule
Absolvierung der Berufspädagogischen Akademie in Linz, Lehramtsprüfung für Berufsschulen
Oktober 1991 - November 1996: Abgeordnete zum Oberösterreichischen Landtag
11. November 1996: Abgeordnete zum Europäischen Parlament
ab Jänner 1998: Delegationsleiterin

Das Wahlergebnis vom 13. Oktober 1996

| Partei | Prozent | Mandate |
|--------|---------|---------|
| ÖVP | 29,7 | 7 |
| SPÖ | 29,2 | 6 |
| FPÖ | 27,5 | 6 |
| Grüne | 6,8 | 1 |
| LiF | 4,3 | 1 |

Am 13. 10. 1996 hat die FPÖ bundesweit das beste Ergebnis in ihrer Geschichte erreicht.

Unser Wahlziel für den 13. Juni: Wir wollen das historische Ergebnis von 1996 wieder erreichen und nach Möglichkeit überspringen.

Um das zu verhindern, werden uns SPÖVP mit allen Mittel bekämpfen.

SPÖVP werden behaupten:

Eine Stimme für die FPÖ ist eine verlorene Stimme, weil wir Freiheitlichen im Europaparlament in keiner Fraktion sind.

Wahr ist:

Die Freiheitlichen Abgeordneten im Europaparlament verfügen über die größtmögliche Unabhängigkeit und Eigenständigkeit. **Sie entscheiden immer im Interesse Österreichs.** Die anderen Parteien sind in festen Fraktionen und unterliegen einem europäischen Klubzwang.

Beispiel 1: Das Mißtrauensvotum gegen die EU-Kommission wegen erwiesener Korruption und Mißwirtschaft.

Die ÖVP stimmt dagegen, „weil der Antrag von radikalen Europegnern eingebracht wurde!“ (Ursula Stenzel am 15. Jänner 1999).

Das beweist: Die Interessen der europäischen Fraktion stehen über den Interessen der Österreicher.

Beispiel 2: Liberalisierung des Drogenkonsums

Am 14. 1. 1998 verlangt die SPE – die Fraktion der Sozialisten im EU-Parlament - mit andern linken Gruppierungen den Konsum illegaler Drogen international straffrei zu stellen, den Handel und die Herstellung weicher Drogen zu regulieren und die ärztliche Verschreibung von Heroin und Methadon zuzulassen.

Das beweist: Linke Drogenliberalisierung über die Brüsseler Hintertür. Die SPÖ-Delegation denkt nicht daran, dagegen aufzutreten.

Beispiel 3: Ampelkoalition bei Homosexuellengesetzgebung

Hannes Swoboda, Maria Berger (beide SPÖ), Friedhelm Frischenschlager (LiF) und Johannes Voggenhuber (Grüne) bringen am 17. September 1998 für ihre europäischen Fraktionen einen Antrag „zur Gleichberechtigung von Homosexuellen und Lesben“ im Europaparlament ein.

Das beweist: Die Ampel ist in Brüssel in der Gesellschaftspolitik Trittbrettfahrer gegen österreichische Interessen.

SPÖVP werden behaupten:

Nur in einer Fraktion können die Österreichischen Interessen vertreten werden. Außerhalb können nicht einmal Anträge gestellt werden.

Wahr ist:

Wir Freiheitlichen vertreten die Anliegen Österreichs in Europa. SPÖ, ÖVP, Grüne und Liberale exekutieren die Beschlüsse und die Interessen ihrer europäischen Fraktionen im Europaparlament. Ohne Rücksicht auf Österreich. **Jede Stimme für die FPÖ ist tatsächlich eine Stimme für Österreich.**

Beispiel 4: Anti-Atompolitik

Die FPÖ fordert im Februar 1997 alle österreichischen EU-Abgeordneten auf, im EP geschlossen gegen das Atomkraftwerk Temelin aufzutreten. Die ÖVP-Abgeordnete Fleming verweigert im Namen ihrer Kollegen die Unterstützung mit dem Hinweis, daß sie selbst einen diesbezüglichen Antrag einbringen wird. Nach Ablauf der Einbringungsfrist gibt es keinen Antrag.

Die Fraktion der europäischen Volkspartei hat der ÖVP die Unterstützung versagt.

SPÖPVP werden behaupten:

Nur durch die SPÖ und die ÖVP wurden Korruption und Mißwirtschaft in der EU aufgedeckt.

Wahr ist:

Wir Freiheitlichen haben am 15. 1. 1999 den Rücktritt der EU-Kommission wegen erwiesener Mißwirtschaft und Korruption verlangt. SPÖ und ÖVP haben im Europaparlament einer Kommission, die Monate später selbst geschlossen zurückgetreten ist, die Mauer gemacht und gegen den Rücktritt gestimmt.

Das beweist:

Die Regierungsparteien, allen voran Kanzler Klima und Vizekanzler Schüssel haben während des österreichischen EU-Vorsitzes nichts unternommen, obwohl alle Fakten seit Monaten auf dem Tisch gelegen sind.

Die SPÖ wird behaupten:

Die österreichische Neutralität ist das beste Sicherheitssystem, bis es ein eigenes europäisches Sicherheitssystem gibt.

Wahr ist:

Mit dem Beitritt zur Europäischen Union hat sich Österreich zur gemeinsamen europäischen Sicherheits- und Außenpolitik verpflichtet. Damit ist die Neutralität obsolet geworden. Um die Sicherheit der österreichischen Bevölkerung auch hinkünftig gewährleisten und finanzieren zu können, ist nach einer Volksabstimmung ein Beitritt Österreichs zur NATO notwendig.

Österreich kann sich durch einen Alleingang vor seiner internationalen Verantwortung nicht drücken. Außerdem ist ein Alleingang entweder sicherheitspolitisch unverantwortlich – Beweis: aktueller Zustand des Bundesheeres – oder nicht finanzierbar.

Die Lawinenkatastrophe von Galtür und die Probleme beim versuchten humanitären Einsatz im Kosovo/ in Albanien haben gezeigt, daß das österreichische Bundesheer so ausgehungert ist, daß es nicht einmal mehr zur Katastrophenhilfe mittlerer Größe in der Lage ist. Und die Entwicklung im Kosovo beweist neuerlich, daß die NATO das funktionierende europäische Sicherheitssystem ist.

Einwandkatalog 1 EU-Wahl 1999

Am 13. Oktober 1996 hat die FPÖ bundesweit das beste Ergebnis in ihrer Geschichte erreicht.

Unser Wahlziel für den 13. Juni 1999:

Wir wollen das historische Ergebnis von 1996 wieder erreichen und nach Möglichkeit überspringen.

SPÖVP werden behaupten:

Eine Stimme für die FPÖ ist eine verlorene Stimme, weil die Freiheitlichen im Europaparlament in keiner Fraktion sind.

Wahr ist:

Die Freiheitlichen Abgeordneten im Europaparlament verfügen über die größtmögliche Unabhängigkeit und Eigenständigkeit. Sie entscheiden immer im Interesse Österreichs. Die anderen Parteien sind in festen Fraktionen und unterliegen einem europäischen Klubzwang.

SPÖVP werden behaupten:

Nur in einer Fraktion können die österreichischen Interessen vertreten werden. Außerhalb können nicht einmal Anträge gestellt werden.

Wahr ist:

Wir Freiheitlichen vertreten die Anliegen Österreichs in Europa. SPÖ, ÖVP, Grüne und Liberale exekutieren die Beschlüsse und die Interessen ihrer europäischen Fraktionen im Europaparlament. Ohne Rücksicht auf Österreich. Jede Stimme für die FPÖ ist tatsächlich eine Stimme für Österreich.

SPÖVP werden behaupten:

Nur durch die SPÖ und die ÖVP wurden Korruption und Mißwirtschaft in der EU aufgedeckt.

Wahr ist:

Wir Freiheitlichen haben bereits am 15. Jänner 1999 den Rücktritt der EU-Kommission wegen erwiesener Mißwirtschaft und Korruption verlangt. SPÖ und ÖVP haben im Europaparlament gegen den Rücktritt gestimmt.

Die Regierungsparteien, allen voran Kanzler Klima und Vizekanzler Schüssel haben während des österreichischen EU-Vorsitzes nichts unternommen, obwohl alle Fakten seit Monaten auf dem Tisch liegen.

Die SPÖ wird behaupten:

Die österreichische Neutralität ist das beste Sicherheitssystem, bis es ein eigenes europäisches Sicherheitssystem gibt.

Wahr ist:

Mit dem Beitritt zur Europäischen Union hat sich Österreich zur gemeinsamen europäischen Sicherheits- und Außenpolitik verpflichtet. Damit ist die Neutralität obsolet geworden.

Um die Sicherheit der österreichischen Bevölkerung auch hinkünftig gewährleisten und finanzieren zu können, ist nach einer Volksabstimmung ein Beitritt Österreichs zur NATO notwendig.

Ursula Stenzel, ÖVP, zwei markante Aussagen:

15. Jänner 1999:

Stenzel mauert für eine korrupte EU-Kommission: „Die ÖVP lehnt das Mißtrauensvotum gegen die EU-Kommission ab, weil der Antrag von radikalen Europagegnern eingebracht wurde!“

17. März 1999:

Stenzel verliert drei Monate vor dem Wahltermin erstmals die Nerven: „Heftige Kritik übt Stenzel im KURIER-Gespräch an der FPÖ: „Haider wird eine Volksverblödungskampagne machen“, sagte sie wörtlich. Und: „Der einzige EU-Abgeordnete der FP, der Hirn hat, ist Professor Gerhard Hager.“

Hans Peter Martin, SPÖ: Als Spiegel-Redakteur Mitglied der Waldheim-Jagdgesellschaft. Höhepunkt seiner Anti-Österreich-Hetze im Zeitraffer:

29. Jänner 1988:

Das Nachrichtenmagazin **„Der Spiegel“** veröffentlicht ein Dokument, mit dem die Zeitschrift dem damaligen österreichischen Bundespräsidenten Kurt Waldheim die Mittäterschaft bei Kriegsverbrechen nachweisen will. Laut Spiegel soll Waldheim 1942 die Deportation von mehr als 4.000 Bewohnern der bosnischen Ortschaft Kozara befohlen haben.

30. Jänner 1988:

Der für die Veröffentlichung der Dokumente über Bundespräsident Waldheim verantwortliche „Spiegel“-Redakteur Hans-Peter Martin bestreitet, daß es sich dabei um eine Fälschung handelt. Das Dokument, dessen Original sich in Belgrad befinde, ist genau auf seine Echtheit geprüft worden, erklärte Martin gegenüber der Nachrichtenagentur AP. Dabei haben sich „überhaupt keine Zweifel ergeben.“ Martin: „Wir hätten das nicht gedruckt, wenn wir irgendeinen Anhaltspunkt für eine Fälschung gefunden hätten.“

Der **„Spiegel“** veröffentlicht außerdem ein Photo, das Waldheim zwischen dem Führer des faschistischen Ustascha-Staates Kroatien, Ante Pavelic, und dem deutschen Befehlshaber von Massakern im Kozara-Gebirge, Generalmajor Friedrich Stahl, zeigt.

3. Februar 1988

Die Dokumente stellen sich als Fälschung heraus. Und: Neben dem Hamburger **„Stern“** und der Zürcher **„Weltwoche“** hatte auch die Illustrierte **„Quick“** ein Angebot des jugoslawischen Journalisten Danko Vasovic ausgeschlagen, Dokumente über Waldheims Wehrmachtsvergangenheit zu kaufen. In einer Presseerklärung heißt es, **die im Spiegel veröffentlichten Dokumente seien für „mindestens 100.000 Mark“ (700.000 Schilling) angeboten worden.** Es handle sich unter anderem um Fotos, die Waldheim zusammen mit dem Ustascha-Führer Pavelic zeigen.

7. April 1999:

Die SPÖ belohnt Hans Peter Martin für seinen „Kampf an vorderster Front in der Waldheim-Jagdgesellschaft“ mit dem Spitzenplatz ihrer EU-Liste.

Ursula Stenzel, ÖVP, zwei markante Aussagen

15. Jänner 1999:

Stenzel mauert für eine korrupte EU-Kommission:

„Die ÖVP lehnt das Mißtrauensvotum gegen die EU-Kommission ab, weil der Antrag von radikalen Europagegnern eingebracht wurde!“

17. März 1999:

Stenzel im KURIER-Gespräch:

De Binnenlandse Veiligheidsdienst

vanaf 1 januari 1999

Ministerie van Binnenlandse Zaken en Koninkrijksrelaties
Binnenlandse Veiligheidsdienst
Dokter van der Stamstraat 1, Leidschendam
Postbus 20010, 2500 EA Den Haag
Telefoon (070) 3178610
Telefax (070) 3200733
Internet: <http://www.minbzk.nl/>

Vanaf 1 januari 1999 werkt de Binnenlandse Veiligheidsdienst volgens een aangepaste organisatiestructuur. Op die manier is de BVD beter in staat tot het vervullen van zijn taak: het leveren van informatie en advies met het oog op de nationale veiligheid. De verandering is ook noodzakelijk omdat de in februari 1997 ingevoerde Wet veiligheidsonderzoeken (WVO) en de voorbereidingen op de herziening van de Wet op de inlichtingen- en veiligheidsdiensten (WIV) gevolgen hebben voor de inrichting van het werkproces en de organisatie.

■ Een nieuwe organisatiestructuur

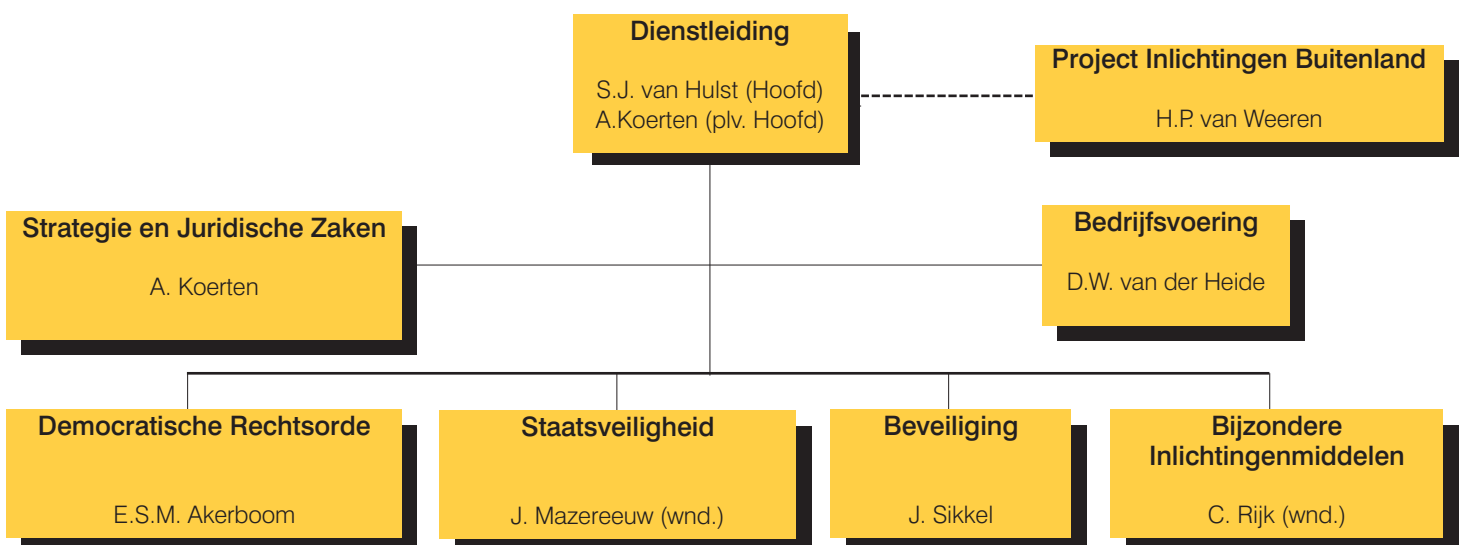

Een van de meest in het oog springende veranderingen is de directie Beveiliging. In deze directie zijn de beveiligingstaken gebundeld die eerst waren ondergebracht bij afzonderlijke directies.

De verandering van de organisatiestructuur brengt voorts met zich mee dat de drie oude directies Democratische Rechtsorde, Staatsveiligheid en Maatschappelijke en Economische Belangen worden opgeheven. De directies Democratische Rechtsorde en Staatsveiligheid komen in een andere vorm opnieuw in de nieuwe organisatie terug.

Ter voorbereiding op een nieuwe wettelijke taak is het project Inlichtingen Buitenland in het leven geroepen.

Tenslotte worden van drie directies de namen geactualiseerd. De directie Strategie en Planning wijzigt haar naam in directie Strategie en Juridische Zaken. De directie Operationele Informatievergaring wordt omgedoopt in de directie Bijzondere Inlichtingenmiddelen en de directie Management Advies en Centrale Faciliteiten krijgt de naam directie Bedrijfsvoering.

■ De nieuwe organisatie vanaf 1 januari 1999

■ Toelichting op de nieuwe organisatiestructuur

Dienstleiding

Het hoofd van de BVD, de heer S.J. van Hulst geeft leiding aan de BVD. Zijn plaatsvervanger is de heer A. Koerten (tevens directeur Strategie en Juridische Zaken). Samen vormen zij de dienstleiding.

Directie Strategie en Juridische Zaken (SJZ)

Directeur: A. Koerten

De directie Strategie en Juridische Zaken is verantwoordelijk voor de ondersteuning van de dienstleiding en het managementteam van de BVD, het ontwikkelen en bewaken van de strategische koers, juridische en parlementaire aangelegenheden en de interne en externe communicatie.

Directie Bedrijfsvoering (BV)

Directeur: mr. D.W. van der Heide

De directie Bedrijfsvoering geeft managementadvies en levert centrale faciliteiten op de terreinen personeel, automatisering en organisatie, financiën, veiligheid, kwaliteitsmanagement, registratie en archivering en facilitair bedrijf.

Directie Democratische Rechtsorde (DRO)

Directeur: drs. E.S.M. Akerboom

De directies Democratische Rechtsorde en Staatsveiligheid verrichten onderzoek naar personen en organisaties die een bedreiging kunnen vormen voor de democratische rechtsorde, de veiligheid van de staat of andere gewichtige belangen van de staat.

De directie richt zich op:

- schending van grondrechten;
- ontregeling politieke besluitvorming;
- terrorisme en ander politiek geweld.

De directie is opgebouwd uit teams die inhoudelijk worden ondersteund door een afdeling Beleid en Expertise.

Directie Staatsveiligheid (SV)

Directeur: J. Mazereeuw (wnd.)

De directies Democratische Rechtsorde en Staatsveiligheid verrichten onderzoek naar personen en organisaties die een bedreiging kunnen vormen voor de democratische rechtsorde, de veiligheid van de staat of andere gewichtige belangen van de staat.

De directie richt zich op:

- activiteiten van buitenlandse inlichtingendiensten;
- proliferatie van massavernietigingswapens;
- fenomenenonderzoek georganiseerde misdaad;
- ongewenste handel in conventionele wapens.

De directie is opgebouwd uit teams die inhoudelijk worden ondersteund door een afdeling Beleid en Expertise.

Directie Beveiliging (BC)

Directeur: drs. J. Sikkel

De directie Beveiliging heeft als taken:

- het bevorderen van de beveiliging van gegevens waarvan de geheimhouding door het belang van de staat wordt geboden;
- het bevorderen van de beveiliging van onderdelen van overheid en bedrijfsleven die van vitaal belang zijn voor de instandhouding van het maatschappelijk leven;
- het verrichten van veiligheidsonderzoeken naar personen die vertrouwensfuncties (gaan) vervullen bij overheid en bedrijfsleven.

Ook de werkzaamheden van de BVD met het oog op de beveiliging van NAVO-informatie worden binnen deze directie verricht. Verder is een meldpunt integriteitsaantastingen met betrekking tot de Nederlandse overheid bij de directie ondergebracht.

De directie kent een afdeling Beveiligingsbevordering, twee afdelingen voor het verrichten van veiligheidsonderzoeken en een afdeling Beleid en Expertise.

Directie Bijzondere Inlichtingenmiddelen (BI)

Directeur: C. Rijk (wnd.)

De directie Bijzondere Inlichtingenmiddelen levert bijzondere operationele informatie en diensten en verzorgt de relaties met buitenlandse zusterdiensten.

Project Inlichtingen Buitenland (IB)

Directeur: mr. drs. H.P. van Weeren

Het project Inlichtingen Buitenland heeft tot doel voorbereidingen te treffen voor de inlichtingentaak met betrekking tot het buitenland. Deze taak is voorzien in de thans bij de Staten-Generaal in behandeling zijnde nieuwe Wet op de inlichtingen- en veiligheidsdiensten.

LEITANTRAG des ao. Bundesparteitages
der Freiheitlichen Partei Österreichs
am 29. Oktober 1998 in Linz

Faire Steuern

Arbeit schaffen – Steuern senken

ALLGEMEINES

Die große Koalition hat Österreich in den letzten Jahren zu einem Hochsteuerland gemacht, und die Abgabenquote von 41,9 % im Jahr 1989 auf rund 45 % des Bruttoinlandsproduktes gesteigert. Das ist eine der höchsten effektiven Belastungen innerhalb der OECD. Die von der Bundesregierung angekündigten Steuerreformen stellen sich als Täuschungsmanöver heraus, da sie lediglich den Grenzsteuersatz abgesenkt, die tatsächliche steuerliche Belastung für den Steuerzahler aber gesteigert haben. So haben sich z.B. die steuerlichen Einnahmen Lohnsteuerpflichtiger von ÖS 88 Milliarden im Jahre 1989 auf voraussichtlich mehr als ÖS 190 Milliarden im Jahre 1998 mehr als verdoppelt. Die Leidtragenden dieser Entwicklung waren vor allem Familien sowie Bezieher niedriger bzw. mittlerer Einkommen.

Da SPÖ und ÖVP in den letzten Jahren die durch die überwuchernde Bürokratie verursachte Ausgabendynamik nicht einbremsen konnte, unternimmt die Koalition, trotz stetig steigender Einnahmen, ständig den Versuch, den braven Steuerzahler weiter zur Kasse zu bitten. Die in diesem Rahmen entwickelten Steuerreformpakete werden aber von den Steuerzahlern als ungerecht und unfair empfunden, weshalb sie legale bzw. illegale Steuervermeidungsstrategien entwickeln. Dadurch sind in den letzten zehn Jahren die Schattenwirtschaft um sagenhafte 230 % auf ca. ÖS 233 Milliarden und die Steuerrückstände von rund ÖS 36 Milliarden auf knapp ÖS 90 Milliarden Ende Oktober 1997 angestiegen.

Eine Folge dieser Entwicklung war, daß die Steuergesetze ständig novelliert, angepaßt und rückwirkend geändert wurden. Die Gesetze wurden daher immer komplizierter. Es müssen umfangreiche Verordnungen erlassen und diese wiederum mit noch umfangreicheren Erlässen kommentiert werden.

Die Gesetzestexte werden in vielen Fällen sowohl qualitativ als auch quantitativ durch Erlässe überlagert. Der Wortlaut des Gesetzes spielt oft in der Anwendung keine Rolle mehr, so daß es dem Steuerpflichtigen trotz zu Hilfenahme des Gesetzestextes nicht mehr möglich ist, zu erkennen, in welcher Höhe und in welcher Form sich ein Besteuerungstatbestand konkret sich für ihn auswirken wird. Am Beispiel des Arbeitszimmererlasses (Erlaß des BMF vom 28. Feber 1997) ist zu ersehen, daß für eine fünfzeilige gesetzliche Regelung ein Erlaß von 4 Seiten erforderlich ist, der außerdem äußerst umständlich, verwaltungsaufwendig und für den Steuerpflichtigen kaum leserlich verfaßt wurde.

Um der Blamage einer Aufhebung durch den Verfassungsgerichtshof wegen Verfassungswidrigkeit bzw. Gesetzswidrigkeit zu entgehen, wird in diesem und in zahlreichen anderen Erlässen ausdrücklich ausgeführt, daß „über die gesetzlichen Bestimmungen hinausgehende Rechte und Pflichten daraus nicht abgeleitet werden können“.

Im genannten Arbeitszimmererlaß wird den Finanzbeamten auch noch die delikate Aufgabe übertragen, zu überprüfen, ob die Tätigkeit des Steuerpflichtigen „notwendigerweise zeitmäßig zu mehr als 50 % im Arbeitszimmer ausgeübt wird“.

Dieser chaotische Zustand des österreichischen Steuerrechtes wurde von anerkannten Experten immer wieder kritisiert:

Die schlechte Qualität der Gesetze veranlaßte den Präsidenten des Verfassungsgerichtshofes Professor Adamovich jüngst zu deutlicher Kritik: „Die Probleme hätten sich durch die zunehmende Tendenz zu Sammelgesetzen mit Änderungen zu sehr verschiedenen Materien verstärkt. Die Frage sei, wo die Kompliziertheit notwendig und wo sie überflüssig sei. Daß Gesetze als Kompromiß bewußt mehrdeutig gestaltet würden, sei wohl eine Unterstellung. Es gebe im

Hintergrund aber tatsächlich divergierende Interessen, es gehe über das Unvermögen hinaus“. Prof. Adamovich kritisierte mehrfach auch die zunehmende Tendenz, die Bundesverfassung durch Verfassungsbestimmungen in den einfachen Gesetzen auszuhöhlen. Er sprach in diesem Zusammenhang sogar von einer schleichenden Gesamtänderung der Bundesverfassung.

Der Verfassungsrichter Professor Korinek erklärte dazu bei einer Tagung der Österreichischen Juristenkommission, das Problem der Unklarheit der Gesetze habe „eine Dimension erreicht, die man sich nicht mehr vorstellen könne. Die zum Teil aufgehobene Werkvertragsregelung sei dafür nur ein Beispiel von vielen.“

Der Verfassungsrichter Professor Ruppe betonte bei derselben Tagung, daß das Einkommensteuergesetz im Jahr 1996 gleich siebenmal geändert worden sei, Unsicherheit und Unverständlichkeit seien enorm. Vielfach seien die Gesetze nur noch mit Hilfe der mündlich tradierten Privatmeinung von Beamten anzuwenden.

Wie wenig die Steuergesetzgebung der Koalitionsparteien auf das Erfordernis der Rechtssicherheit und den Grundsatz von Treu und Glauben bedacht nimmt zeigt alleine die Entwicklung des Investitionsfreibetrages von 1992 bis 2000. Dabei ist besonders auf die jährlichen Änderungen der Höhe des Investitionsbeitrages und auf die verschiedenen Stichtage des Spatenstiches hinzuweisen.

Allein für die Vollziehung der im Strukturanpassungsgesetz 1995 (BGBl.Nr. 297/1995) im Bereich des Investitionsfreibetrages vorgesehenen Änderungen, nämlich die Absenkung des Investitionsfreibetrages auf 9 % bzw. 6 % und ein besonderes Vorauszahlungsmodell war wiederum ein Erlaß im Umfang von ca. 8 Seiten erforderlich, dessen Vollziehung für den Steuerpflichtigen aber auch für die Finanzverwaltung äußerst verwaltungsaufwendig ist.

Der Verfasser des Leitfadens des österreichischen Einkommensteuerrechtes, Fritz Korntner, führt zu den oben angeführten Änderungen des Investitionsfreibetrages kritisch an, daß der Investitionsfreibetrag lediglich in Kombination mit der Investitionsrücklage ein kompaktes und sinnvolles Investitionsinstrumentarium war. Durch die Abschaffung der Investitionsrücklage mittels Steuerreformgesetz 1993 sprechen manche Kritiker vor einer katastrophalen Entwicklung im Abgabenrecht.

Darüber hinaus merkt der Autor zu den befristeten Sonderregelungen für den Investitionsfreibetrag noch an, daß die von der Koalition gewählte Verfassungsbestimmung beim § 8 Abs. 2 (Rückwirkung ab der Veranlagung 1996) wie in den zahlreichen anderen Fällen juristisch kaum vertretbar sei.

Als weiteres Beispiel für den mangelnden Mut der Koalitionsparteien, klare, zielgerichtete und den Erfordernissen entsprechende Regelungen zu schaffen, sind die Änderungen im Zusammenhang mit der Geltendmachung von Sonderausgaben anzuführen. Die Änderungen im Bereich der Sonderausgaben zeigen insbesondere auch die Verlogenheit der Koalition im Zuge der Streichung von Begünstigungen auf, welche einen massiven Verwaltungsaufwand in Kauf nimmt, dem auf der anderen Seite eine kaum spürbare Begünstigung für Steuerpflichtige gegenübersteht.

Die Forderung, die Eigenkapitalbasis der Unternehmen zu stärken, wird auch vom Verfasser des Handbuches „Bemerkungen zur Entwicklung des Unternehmenssteuerrechtes, Franz Helbich“, erkannt und unterstützt. Indem dieser ausführt, daß eine elementare Erfahrung der letzten Jahrzehnte die Einsicht ist, wie sehr Unternehmen eines hohen Anteiles an Eigenkapital bedürfen. Helbich spricht auch davon, daß auf dem Gebiet der Unternehmensbesteuerung (Innenfinanzierung) eine weitere tendenzielle Absenkung der Spitzensteuersätze erforderlich ist. Jede kleinste Prozentsatzabsenkung unter 50 % bei der Einkommensteuer oder unter 34 % bei der Körperschaftssteuer bedeutet Zuwachs an Eigenmitteln, betriebswirtschaftlich einen Anreiz auf Verringerung der Ausgaben und Druck auf die Kosten. Stärkung der Eigenkapitalbasis verlangt aber auch auf dem Gebiet der Unternehmensbesteuerung einen besseren Verlustausgleich zu ermöglichen als bisher und auch die Einführung des Verlustrücktrages, wie in anderen westlichen Ländern.

Prof. Dkfm. Dr. Heidinger spricht auch von der enormen Bedeutung des Eigenkapitals als Risikopolster für Innovation und zum Abfangen vorübergehender Rezession. Auch für ihn ist die steuerliche Entlastung der Gewinne, insbesondere auch für die Erhaltung von Arbeitsplätzen im Inland, von größter Wichtigkeit.

Im folgenden eine kleine Auswahl weiterer kritischer Expertenmeinungen:

Die österreichische Einkommensteuer ist kompliziert, unverständlich, unfair und ineffizient – sie verletzt alle Grundsätze, auf denen ein vernünftiges Steuersystem basieren soll.

(Alvin Rabushka – US-Steuerexperte)

In Betrachtung der Steuerwirklichkeit spricht Prof. Tipke von Steuerwirrwarr, Steuerchaos und Steuergestrüpp.

(Prof. Tipke – Nestor der deutschsprachigen Steuerjuristen)

Lang spricht von einem Scherbenhaufen des komplizierten, undurchschaubaren Steuerrechts.

(Prof. Lang – Steuerexperte)

Fritz Kortner weist auf den mangelnden Mut des Gesetzgebers hin, klare steuerliche Regelungen zu schaffen was dazu führt, daß ein Verwaltungsaufwand in einem nicht bescheidenem Maße weiter hingenommen wird.

**(Fritz Kortner – Verfasser des Leitfadens
des Österreichischen Einkommensteuerrechts)**

Es ist dies die Tatsache, daß unser Steuersystem bis zur Unerträglichkeit unfair und ungerecht geworden ist. Man kasziert nur mehr einfach drauf los. Mutig wäre, Neues zu überlegen.

(Herbert Kohlmaier – ÖVP, ehem. Volksanwalt)

Normen im Steuerrecht sind so gestaltet, daß sie - im Steuerrecht kann ich zahllose Beispiele liefern – nur unter Zuhilfenahme der Privatmeinungen von Ministerialbeamten auslegbar sind.

**(Univ. Prof. DDr. Ruppe – Herausgeber des Grundrisses des
Österreichischen Steuerrechts)**

Univ. Prof. Dr. Kofler spricht im Zusammenhang mit dem Steuerrecht vom prinzipienlosen Recht, welches im Laufe der Zeit so kompliziert und unübersichtlich wird, daß es selbst von Fachleuchten nicht mehr beherrscht werden kann.

„Steuern nähren die Fiskalillusion, deren Abbau ist ein Gebot der Stunde.“

(Univ. Prof. Dr. Herbert Kofler – Universität Klagenfurt)

Die Steuern bezahlen die anderen mit weniger Vermögen und geringem Einkommen; sie sind dem Finanzminister eine Steuerbefreiung nicht wert.

Warum so kompliziert, wenn es auch einfach geht? Wir ersparen uns die Stiftungen und schreiben gleich in den § 3 EStG: Wer 20 Mio. Schilling oder mehr Vermögen hat, wird von der Einkommensteuer befreit. Das wäre wenigstens ein einfaches und zugleich ehrliches System. In diesem Sinne: Bleiben sie bitte bescheiden und verdienen sie nicht zuviel. Der Staat braucht sie als Steuerzahler.

(Univ. Prof. Dr. Doralt – in RDW 1998/8 b)

Das Existenzminimum des wirtschaftenden, arbeitenden Bürgers darf keinesfalls niedriger sein als dasjenige eines Bürgers, der Sozialhilfe empfängt. Insofern beinhaltet der aktuelle Steuertarif einschließlich der Transferzahlungen erhebliche Ungerechtigkeiten und Unabgestimmtheiten.

(Studie des Fachsenates SWK-Heft 19, 1. Juli 1998)

Es muß ein gemeinsames Ziel von Finanzverwaltung, Beratern und Steuerbürgern sein, die geradezu unüberschaubare Zahl von permanenten steuerlichen Änderungen (so wurde z.B. das EStG 1988 seit seiner Entstehung von 10 Jahren mehr als 40-mal – pro Jahr daher durchschnittlich 4-mal – geändert!) einzuschränken und die vor allem in den letzten Jahren überproportional angestiegene Kompliziertheit des Steuerrechts auf das unbedingt notwendige Ausmaß zurückzuführen.

(Memorandum der Wirtschaftstrehänder zur Steuerreform 2000)

Anstatt die Kritik der Experten zu beachten und daran zu arbeiten, die Steuergesetze zu vereinfachen und fairer zu gestalten sowie gleichzeitig die Effizienz der öffentlichen Verwaltung zu steigern, um die Ausgabendynamik einbremsen zu können, überlegen SPÖ und ÖVP lediglich, wie sie neue Einnahmenquellen erschließen können, wie z.B. die Anhebung der Einheitswerte auf die Verkehrswerte als Besteuerungsbasis oder die Anhebung der Mineralölsteuer für Diesel unter dem Deckmantel der Ökologisierung.

Die Koalitionsparteien haben es auch zugelassen, daß das österreichische Steuerrecht weiterhin Steuerschlupflöcher aufweist, die es insbesondere Beziehern großer Einkommen sowie großen Unternehmen erlaubt, ansehnliche Steuervorteile zu Lasten der übrigen Steuerzahler zu kassieren. So sind etwa nach den Strukturverbesserungsgesetz nach wie vor Gewinnverschiebungen möglich oder werden im Wege der Privatstiftungen hohe Einkommen faktisch steuerfrei gestellt und Abschreibungsgesellschaften mit Verlustzuweisungen in mehrfacher Höhe des eingesetzten Kapitals und sogenannte Hausherrenmodelle nach wie vor als besonders effiziente Möglichkeiten der Steuervermeidung angepriesen. So wird etwa von der CA-Gruppe zur Zeichnung einer atypischen stillen Beteiligung an der C.I.M. Unternehmensbeteiligungs- und Anlagenvermietungs GmbH mit einem Mindestzeichnungsbetrag von ÖS 600.000,- eingeladen, wobei eine Steuerrückerstattung aus Verlustzuweisung in Höhe des Kapitaleinsatzes versprochen wird.

Auch aus der bisherigen Debatte zur angekündigten Steuerreform ist zu ersehen, daß die Koalitionsparteien nicht wirklich bereit sind, neue Wege zu beschreiten. Anstatt einer echten Entlastung der Steuerzahler durch ein neues einfacheres Steuersystem sollen die Steuerlasten nur neu verteilt werden; anstatt die Unternehmen, die privaten Haushalte und die Verwaltung von bürokratischem Aufwand zu entlasten, werden laufend neue komplizierte Ausnahmeregelungen erfunden. Anstatt echter Sparsamkeit mit dem Geld des Steuerzahlers sind fortgesetzte Verschwendung und weitere Aufblähung der Bürokratie angesagt. Dem Gesetz des Steuerzyklus folgend werden die Bemessungsgrundlagen laufend verringert und die Steuersätze hochgehalten; es ist nicht verwunderlich, daß dies wiederum Steuerwiderstand zur Folge hat, was zu neuen Korrekturen führt.

Die derzeit bestehende außerordentlich hohe Steuerlast und die damit verbundene Bürokratie werden von den Österreicherinnen und Österreichern nicht länger akzeptiert. Es ist auch leicht einzusehen, daß der sorglose Umgang mit dem Geld des Steuerzahlers zu Recht den Steuerwiderstand verstärkt. Dieser Entwicklung hin zum Steuerstaat muß Einhalt geboten werden.

FAIRE STEUERN

Wir Freiheitlichen treten hingegen für ein Steuersystem ein, welches die Familien begünstigt, vor allem die Bezieher kleiner und mittlerer Einkommen entlastet und die klein- und mittelständischen Unternehmen fördert. Durch diese Steuerreform soll der Wirtschaftsstandort Österreichs gestärkt, die Kaufkraft der Österreicherinnen und Österreicher erhöht und durch eine vermehrte Inlandsnachfrage die Arbeitslosigkeit wirksam bekämpft werden. Um diese Zielsetzungen zu erreichen, haben wir in den letzten Monaten intensiv mit nationalen und internationalen Experten zusammengearbeitet und konnten ein neues zukunftsweisendes Modell „FAIRER STEUERN“ erarbeiten.

Dieses Modell „FAIRER STEUERN“ baut auf Einfachheit, Transparenz, Fairneß, Ehrlichkeit, Wirksamkeit, Unternehmertum, Wachstum und Bürokratieabbau auf, wobei folgende Grundsätze Anwendung finden:

1. alle Einkommen sollen nur einmal zur Besteuerung herangezogen werden,
2. alle Einkunftsarten sollen nach Abzug der jeweiligen Freibeträge mit demselben Steuersatz belastet werden,
3. einkommensschwache Familien sollen bis zu einem bestimmten Niveau von der Besteuerung gänzlich ausgenommen werden,
4. Steuererklärungen müssen einfach, transparent und leicht administrierbar sein und
5. die „FAIREN STEUERN“ ersetzen die bisherige Lohnsteuer, Einkommensteuer, Körperschaftsteuer und Kapitalertragssteuer.

Wir Freiheitlichen erachten dieses Modell als die Grundlage für ein faires Steuersystem, welches Arbeit schafft und Leistung belohnt, wobei der lineare Steuersatz und die Freibeträge für Erwachsene und Kinder so festzulegen sind, daß Familien, kleine bzw. mittlere Einkommensbezieher sowie klein- und mittelständische Unternehmungen gegenüber dem derzeitigen System begünstigt werden. Darüber hinaus werden Problemfälle, so wie im Modell selbst vorgesehen, durch Übergangsfristen weitestgehend gelöst.

Um Österreich wieder auf die Überholspur zu bringen, ist eine Steuerreform unabdingbar, welche den Wirtschaftsstandort Österreich stärkt, die Kaufkraft der Österreicherinnen und Österreicher erhöht und durch eine erhöhte Inlandsnachfrage die Arbeitslosigkeit bekämpft.

Die bisherige Lohnsteuer, Einkommensteuer, Körperschaftsteuer und Kapitalertragsteuer müssen daher ehestmöglich durch „FAIRE STEUERN“ abgelöst werden, die die genannten Grundsätze erfüllen.

Das Modell der „Fairen Steuern“ stellt sich wie folgt dar:

Alle Einkommen werden nach Abzug der jeweiligen Freibeträge mit einem einheitlichen Steuersatz von 23 % besteuert. Die „Fairen Steuern“ ersetzen die bisherige Einkommensteuer, Lohnsteuer, Körperschaftsteuer und Kapitalertragsteuer.

Alle Steuerpflichtigen erhalten einen jährlichen Freibetrag von ÖS 150.000 pro Erwachsenen und von ÖS 75.000 pro Kind. D.h., daß eine Familie mit zwei Kindern ein steuerfreies Einkommen in der Höhe von ÖS 450.000 beziehen kann. Ein von einem Ehepartner nicht konsumierter Freibetrag ist aliquot beim anderen Ehepartner anrechenbar.

Pro Familie steht ein maximaler Freibetrag von ÖS 450.000 zur Verfügung. Die Freibeträge werden zwischen ÖS 600.000,- und ÖS 900.000,- der laufenden Bezüge mit Ausnahme der Kinderfreibeträge auf Null eingeschliffen.

Das 13. und 14. Monatsgehalt bleiben unangetastet.

Sämtliche Investitionen können im ersten Jahr zu 100 % steuerlich geltend gemacht werden. Investierte nicht entnommene Gewinne sind daher steuerfrei.

Sämtliche Ausnahmebestimmungen, Absetzbeträge sowie sonstige Freibeträge (ausgenommen ÖS 8.500 bei den sonstigen Bezügen) und Steuer-schlupflöcher werden gestrichen.

Sozialversicherungsbeiträge können im Rahmen der Freibeträge steuermindernd geltend gemacht werden.

Die Höchstbeitragsgrundlagen in der Krankenversicherung werden auf-gehoben (Arbeitnehmer derzeit ÖS 42.000,-, Selbständige ÖS 49.000,-).

Kleinverdiener mit einem Einkommen bis zu ÖS 250.000,- erhalten jährlich einen einkommensabhängigen Zuschlag zur Familienbeihilfe in der Höhe von max. ÖS 9.600,- pro Kind.

Arbeitnehmer mit niedrigem Einkommen bis ÖS 200.000,- erhalten jährlich eine einkommensabhängige zusätzliche Beihilfe in Höhe von max. ÖS 2.000,-.

Die Steuererklärungen werden einfach und verständlich.

Durch unser Modell wird der österreichische Steuerzahler steuerlich in der Höhe von ca. 52 Mrd. Schilling entlastet. Dies deshalb, da die Steuerbelastung aus den in Punkt 1 angeführten Steuern von 11,6 % des BIP im Jahr 1998 auf 9,6 % des BIP des Jahres 1989 zurückgeführt wird.

BEDECKUNG

Die Einführung der „Fairen Steuern“ wird für die Steuerzahler im Endeffekt eine jährliche Entlastung in Höhe von ca. 52 Mrd. ÖS bringen. Diese Entlastung wird für die Lohnsteuerzahler sofort wirksam werden, während sie im Bereich der Einkommensteuer erst schrittweise erfolgen wird. Dies deshalb, weil das gegenwärtige Steuerrecht in Folge des Veranlagungszyklus noch einige Zeit wirksam sein wird.

Auch die positiven Auswirkungen der „Fairen Steuern“, nämlich die Stärkung des Wirtschaftsstandortes Österreich, die Stärkung der Kaufkraft sowie die vermehrte Inlandsnachfrage werden schrittweise innerhalb weniger Jahre voll wirksam werden.

Daraus folgt, daß auch der Steuerausfall für das Budget nicht sofort voll wirksam wird. In den ersten beiden Jahren ist daher mit einem Einnahmehausfall in Höhe von ca. 30 Mrd. ÖS zu rechnen. Dieser bzw. der volle Steuerausfall ist aber durch eine Reihe von u.a. nachstehenden kurz- bzw. mittelfristigen Maßnahmen leicht finanzierbar:

KURZFRISTIG WIRSAME MASSNAHMEN:

| | |
|---|------------|
| Auflösung freier OeNB-Rücklagen | |
| in den ersten zwei Jahren jeweils | 20 Mrd. ÖS |
| Raschere Einhebung von Steuerrückständen | |
| derzeit 90 Mrd. ÖS Rückstand | |
| in den ersten beiden Jahren jeweils | 10 Mrd. ÖS |
| Subventionskürzungen | |
| u.a. auch Parteienförderung, Presseförderung usw. | 20 Mrd. ÖS |

MITTELFRISTIG WIRKSAME MASSNAHMEN:

Zurückdrängung der Schattenwirtschaft, Eindämmung des Steuerbetruges

| | |
|---|------------|
| niedrige Steuersätze erhöhen den Anreiz zu legaler Beschäftigung | 10 Mrd. ÖS |
| Bürokratieabbau | |
| Entlastung der Verwaltung z.B. durch einfacheres Steuersystem, neues Gewerberecht, Zusammenlegung der Sozialversicherungsträger | 10 Mrd. ÖS |
| Mehreinnahmen durch höhere Beschäftigung | |
| laut BMAS kostete bereits 1993 jeder Arbeitslose jährlich mehr als 250.000,- ÖS | 15 Mrd. ÖS |
| Reduzierung der Wohnbauförderung | |
| Wohnbauförderung im Jahre 1997 ca. 25 Mrd. ÖS | 8 Mrd. ÖS |

Aufhebung der Höchstbeitragsgrundlage
in der Krankenversicherung

9 Mrd. ÖS

Die beispielshafte Aufzählung der kurz- und mittelfristigen Maßnahmen zeigt, daß die Einführung der „Fairen Steuern“ ohne zusätzliche Belastung für das Budget leicht finanzierbar ist. Dieses Ergebnis wird auch durch zahlreiche in- und ausländische Experten bestätigt.

ARGUMENTE

| UNSERE GEGNER SAGEN: | DIE WAHRHEIT IST: |
|---|---|
| ist unsozial | Die Fairen Steuern bewirken, daß alle Steuerpflichtigen in Zukunft weniger Steuern zahlen als bisher. Unser Modell sieht vor, daß darüber hinaus Kleinverdiener durch Freibeträge keine Steuern zahlen und Familien bis zu einem Einkommen von jährlich ÖS 250.000,- einen Zuschlag zur Familienbeihilfe erhalten. |
| belastet Einkommensschwache | Die Fairen Steuern sehen für Einkommensschwache nicht nur Freibeträge, sondern auch zusätzliche Zahlungen durch den Staat vor. |
| ist veraltet | Die „Flat Tax“ wurde bereits in manchen Ländern eingeführt. Derzeit wird die Einführung in einigen europäischen und mittelamerikanischen Ländern sowie in den USA ernsthaft erwogen. Das US-Wirtschaftswunder wurde erst durch die Diskussion über die „Flat Tax“ möglich, die zu einer massiven Absenkung der Steuersätze geführt hat. |
| Erhöht das Budgetdefizit | Die Fairen Steuern, das Wirtschaftswachstum und die Kaufkraft des Einzelnen schaffen zusätzliche Arbeitsplätze und fördern Betriebsansiedlungen. Darüber hinaus zwingen sie die Regierung zu mehr Sparsamkeit. |
| ist leistungsfeindlich | Die Fairen Steuern erhöhen das verfügbare Einkommen und steigern die Investitionsfreudigkeit und schaffen dadurch Arbeitsplätze. |
| Gefährdet den Wirtschaftsstandort | Fairen Steuern mit niedrigen Steuersätzen fördern unternehmerische Initiativen, ziehen ausländische Investoren an, wodurch ebenfalls neue Arbeitsplätze geschaffen werden. |
| Begünstigt die Reichen | Die Fairen Steuern beseitigen Steuergeschenke und Steuerbefreiungen. Derzeit brauchen Reiche durch die Nutzung legaler Steuerschlupflöcher (z.B. Privatstiftungen) nahezu keine Steuern zahlen. |
| Verhindert die Umverteilung | Die Fairen Steuern sehen hohe Freibeträge vor, die insbesondere für Einkommensschwache und Familien eine erhebliche Umverteilungswirkung erzielen. Diese ist wirksamer als bisher, da laut Umverteilungsbericht 1996 des WIFO die Umverteilungseffizienz der derzeitigen Abgaben als relativ gering erachtet wurden. |
| bestraft die Einkommensschwachen | Die Fairen Steuern begünstigen Einkommensschwache durch Freibeträge und zusätzliche Zahlungen. Das derzeitige Steuersystem ist zur Unerträglichkeit unfair und ungerecht geworden, in dem kleine Einkommen heute übermäßig belastet, und der Vorteil derer, die vermögend sind, wächst (Dr. Kohlmaier, ehemaliger Volksanwalt, ÖVP). |
| Beseitigt die Progression | Die Fairen Steuern erhöhen durch die vorgesehenen Freibeträge die Progression. So würde z.B. eine Familie mit zwei Kindern bei einem Einkommen von ÖS 300.000,- für die laufenden Bezüge 0 % und bei einem Einkommen von ÖS 700.000 für die laufenden Bezüge 23 % Steuern zahlen. |
| führt zu einem radikalen Abbau von Sozialleistungen | Die Fairen Steuern ersetzen lediglich die direkten Steuern (z.B. Einkommen-, Lohn- und Körperschaftsteuer) und lassen Sozialleistungen unberührt. Richtig ist aber, daß beabsichtigt ist, die Höchstbeitragsgrundlage von derzeit ÖS 42.000,- in der Krankenversicherung aufzuheben. |
| Zerstört Arbeitsplätze | Die „Fairen Steuern“ senken Verwaltungskosten, fördern Investitionen, erhöhen die Kaufkraft, forcieren Unternehmensgründungen (neues Unternehmertum) und schaffen dadurch Arbeitsplätze, durch die Möglichkeit, daß Investitionen bereits im ersten Jahr zu 100 % abgeschrieben werden können. Die Begünstigung von eigenkapitalbildenden Maßnahmen schafft laut Univ. Prof. Dr. Schneider in vier bis sechs Jahre 50.000 Arbeitsplätze (Gründerwelle). |

| | |
|---|--|
| verhindert wirtschaftsfördernde Maßnahmen | Die „Fairen Steuern“ geben die Möglichkeit, daß Investitionen im ersten Jahr zu 100 % abgeschrieben werden können, beseitigen die Scheingewinnbesteuerung und forciert dadurch die Eigenkapitalquote der Unternehmungen. |
| führt zu einer Umverteilung von unten nach oben | Die „Fairen Steuern“ verbessern die Situation der Einkommensschwachen und der Familien durch Freibeträge und zusätzliche Zahlungen. |
| führt zu keiner Vereinfachung | Die „Fairen Steuern“ kann man auf einem Formular in Postkartengröße berechnen. |

ANTRAG

Der Bundesparteitag hat am 29.10.1998 auf Antrag des Bundesparteivorstandes der Freiheitlichen Partei Österreichs folgenden

ANTRAG

beschlossen:

Die Funktionäre der Freiheitlichen Partei Österreichs werden ersucht, umgehend Schritte zur Einführung der „Fairen Steuern“ zu setzen, durch welche die österreichischen Steuerzahler massiv steuerlich entlastet werden. Die „Fairen Steuern“ orientieren sich nach folgenden Grundsätzen:

1. Alle Einkommen werden nach Abzug der jeweiligen Freibeträge mit einem einheitlichen Steuersatz von 23 % besteuert. Die „Fairen Steuern“ ersetzen die bisherige Einkommensteuer, Lohnsteuer, Körperschaftsteuer und Kapitalertragsteuer.
2. Alle Steuerpflichtigen erhalten einen jährlichen Freibetrag von ÖS 150.000 pro Erwachsenen und von ÖS 75.000 pro Kind. D.h., daß eine Familie mit zwei Kindern ein steuerfreies Einkommen in der Höhe von ÖS 450.000 beziehen kann. Ein von einem Ehepartner nicht konsumierter Freibetrag ist aliquot beim anderen Ehepartner anrechenbar.
3. Pro Familie steht ein maximaler Freibetrag von ÖS 450.000 zur Verfügung. Die Freibeträge werden zwischen ÖS 600.000,- und ÖS 900.000,- der laufenden Bezüge mit Ausnahme der Kinderfreibeträge auf Null eingeschliffen.
4. Das 13. und 14. Monatsgehalt bleiben unangetastet.
5. Sämtliche Investitionen können im ersten Jahr zu 100 % steuerlich geltend gemacht werden. Investierte nicht entnommene Gewinne sind daher steuerfrei.
6. Sämtliche Ausnahmebestimmungen, Absatzbeträge sowie sonstige Freibeträge (ausgenommen ÖS 8.500 bei den sonstigen Bezügen) und Steuer-schlupflöcher werden gestrichen.
7. Sozialversicherungsbeiträge können im Rahmen der Freibeträge steuermindernd geltend gemacht werden.
8. Die Höchstbeitragsgrundlagen in der Krankenversicherung werden aufgehoben (Arbeitnehmer derzeit ÖS 42.000,-, Selbständige ÖS 49.000,-).
9. Kleinverdiener mit einem Einkommen bis zu ÖS 250.000,- erhalten jährlich einen einkommensabhängigen Zuschlag zur Familienbeihilfe in der Höhe von max. ÖS 9.600,- pro Kind.
10. Arbeitnehmer mit niedrigem Einkommen bis ÖS 200.000,- erhalten jährlich eine einkommensabhängige zusätzliche Beihilfe in Höhe von max. ÖS 2.000,-.
11. Die Steuererklärungen werden einfach und verständlich.

SPECIAL REPORT

1200 17th Street NW, Suite 200 • Washington, DC 20036-3011 • VOX 202.457.1700 • FAX 202.429.6063

ABOUT THE REPORT

Political violence remains a serious threat to life in much of the world, and it can have a corrosive effect on the political processes that contribute to domestic and international peace. On

April 12, 1999, the United States Institute of Peace, together with the British-based Airey Neave Trust, convened a working group meeting on the subject "How Terrorism Ends." The workshop, which attracted the participation of academic experts, current and former government officials, and security consultants, was conducted as an activity of the International Research Group on Political Violence, which the Institute co-sponsors with the Airey Neave Trust and which is chaired by the Rt. Hon. Sir Adam Butler.

Panelists at the workshop included Professor Martha Crenshaw of Wesleyan University, Professor Paul Wilkinson of St. Andrews University, Jon B. Alterman of the Institute, and Ambassador Teresita Schaffer of the Center for Strategic and International Studies.

Institute President Richard H. Solomon moderated the meeting, which was attended by some forty authorities in the field of political violence. This report, written by Dr. Alterman with the help of former research assistant Sara Simon, summarizes the points made by the panelists.

The views expressed in this report do not necessarily reflect those of the United States Institute of Peace, which does not advocate specific policies.

How Terrorism Ends

Briefly...

- The nature of the grievance matters. Ethnically based terrorist campaigns can be harder to end decisively than politically based ones, because they often enjoy broader support among a population they seek to represent.
- Political violence by itself can rarely achieve its aims, but it can sometimes do so in conjunction with less violent political action.
- By the same token, deterring terrorism and prosecuting terrorists may be insufficient to end terrorism, especially when a large population supports the terrorists' cause. In such situations, negotiated settlements may provide the only solutions.
- In Sri Lanka, the government appears to have concluded from its victory over the Maoist JVP that law enforcement and compulsion can end a terror campaign. However, the LTTE has a much broader base of support than the JVP ever did, and the LTTE is unlikely to go away simply through government-applied force.
- One of the most effective strategies at governments' disposal may be to split off pragmatists from radical rejectionists. Such efforts can diminish public support for the terrorists and deny them a strong base from which to operate.
- In the cases of the IRA and the PLO, the initiation of political negotiations has not conclusively ended terrorism, but it has swung public support behind a peaceful solution and helped diminish popular support for the terrorists.
- Making concessions to causes espoused by terrorists can arouse hostility from those who believe that terrorism is "being rewarded." Weak governments find it difficult to make such concessions.
- Peace overtures must be well-timed. Ideally, they should come at a time when the government is strong and the terrorist organization is undergoing a period of introspection. Good intelligence can make a difference in these cases.

UNITED STATES INSTITUTE OF PEACE

The United States Institute of Peace is an independent, nonpartisan federal institution created by Congress to promote research, education, and training on the peaceful resolution of international conflicts. Established in 1984, the Institute meets its congressional mandate through an array of programs, including research grants, fellowships, professional training programs, conferences and workshops, library services, publications, and other educational activities. The Institute's Board of Directors is appointed by the President of the United States and confirmed by the Senate.

BOARD OF DIRECTORS

Chester A. Crocker (Chairman), Research Professor of Diplomacy, School of Foreign Service, Georgetown University • **Max M. Kampelman**, Esq. (Vice Chairman), Fried, Frank, Harris, Shriver and Jacobson, Washington, D.C. • **Dennis L. Bark**, Senior Fellow, Hoover Institution on War, Revolution and Peace, Stanford University • **Theodore M. Hesburgh**, President Emeritus, University of Notre Dame • **Seymour Martin Lipset**, Hazel Professor of Public Policy, George Mason University • **W. Scott Thompson**, Professor of International Politics, Fletcher School of Law and Diplomacy, Tufts University • **Allen Weinstein**, President, Center for Democracy, Washington, D.C. • **Harriet Zimmerman**, Vice President, American Israel Public Affairs Committee, Washington, D.C.

MEMBERS EX OFFICIO: **Ralph Earle II**, Deputy Director, U.S. Arms Control and Disarmament Agency • **Phyllis Oakley**, Assistant Secretary of State for Intelligence and Research • **Daniel H. Simpson**, Vice President, National Defense University • **Walter B. Slocombe**, Under Secretary of Defense for Policy • **Richard H. Solomon**, President, U.S. Institute of Peace (nonvoting)

In an attempt to better understand what governmental actions can hasten the end of political violence, the workshop began with an overview of the problem by Martha Crenshaw. Her presentation was followed by three case studies. In the first, Paul Wilkinson of St. Andrews University discussed the Irish Republican Army (IRA), and in the second, Jon B. Alterman of the United States Institute of Peace discussed the Palestine Liberation Organization (PLO). Both were considered “successful” case studies, because the organizations in question have embraced political dialogue instead of violence to pursue their aims. In the third case study, Teresita Schaffer of the Center for Strategic and International Studies discussed the Liberation Tigers of Tamil Eelam (LTTE), who have been fighting for autonomy for Tamil-populated areas in Sri Lanka for almost two decades. The LTTE was considered a “failed” case because government actions have been unable to end the violence.

Martha Crenshaw on How Terrorism Ends

As we try to create governmental policies aimed at ending terrorism, it is useful to enumerate some of the variables that distinguish different situations.

The first set of variables involves the terrorist groups themselves.

- **Internal factors.** How does the organization make decisions? How does the organization perceive its environment? What are the internal psychological dynamics? Is the organization divided internally? All of these things are important to know but often difficult to ascertain.
- **External factors.** How does the relative strength of the terrorist organization compare with that of the government it opposes? Are the terrorists ideologically or ethnically motivated? What kinds of ties do they have to outside groups who may support them? Is the conflict best characterized as a secessionist movement's civil war, or does the conflict involve a battle over civil society and representation?

The second set of variables involves the tools that a government uses to respond to terrorism. Many of these options can be pursued simultaneously.

- **Deterrence.** Governments can use their coercive capacity to make terrorism too costly for those who seek to use it. They can do this by military strikes against terrorist bases, assassinations of key leaders, collective punishment, or other methods. There are several drawbacks to this approach, however. On the one hand, it can lead to unacceptable human rights violations. In addition, groups may not come to government attention until movements are so well developed that efforts to contain them through deterrent methods are insufficient.
- **Criminal justice.** Governments can treat terrorism primarily as a crime and therefore pursue the extradition, prosecution, and incarceration of suspects. One drawback to this approach is that the prosecution of terrorists in a court of law can compromise government efforts to gather intelligence on terrorist organizations. In addition, criminal justice efforts (like deterrent efforts) are deployed mostly after terrorists have struck, meaning that significant damage and loss of life may have already occurred.
- **Enhanced defense.** Governments can make targets harder to attack, and they can use intelligence capabilities to gain advance knowledge of when attacks may take place. As targets are hardened, however, some terrorist groups may shift their sights to softer targets. An example is the targeting of U.S. embassies in Kenya and Tanzania in August 1998 by truck bombs. Although the attacks are strongly believed to have been coordinated by individuals with Middle Eastern ties, targets

in Africa were chosen because of their relatively lax security compared with targets in the Middle East.

- **Negotiations.** Governments can elect to enter into negotiations with terrorist groups and make concessions in exchange for the groups' renunciation of violence. While governments are often reluctant to do so at the beginning of terror campaigns, negotiations may be the only way to resolve some long-standing disputes.

Given the above sets of variables, the end of terrorism may result from one or more of the following situations:

- **Success.** The terrorists may have accomplished their objectives, such as the overthrow of a government or the end of an occupation. Terrorism per se cannot achieve long-term goals such as revolution or independence, but it can sometimes do so in conjunction with less violent political action.
- **Preliminary success.** A corollary to achieving objectives is having at least achieved public recognition for an organization and the cause it espouses. In this case, continued terrorist actions may alienate supporters, sponsors, or key third-country actors for whom continued violence is unacceptable.
- **Organizational breakdown.** Terrorist organizations, like any organizations, must constantly work to maintain themselves. If recruiting dries up, or if funding becomes unavailable, the organization may be unable to sustain itself. On the other hand, self-preservation may in fact force organizations to continue terrorist activities even if the leadership otherwise wishes to give them up. It may be that the only way for the organization to continue to attract new recruits and financial support is to continue to gain publicity for its terrorist actions.
- **Dwindling support.** Organizations may lose the support of their various constituencies—the populations they seek to represent or the governments or other organizations that support them. They can do so for reasons of ideological or strategic differences, personality clashes, or simple fatigue. Terrorist actions can also provoke moral outrage and undermine support.
- **New alternatives.** At times, other options for political change emerge. They can include more traditional forms of warfare or revolution, mass protests, or political negotiations.

As suggested above, many of the factors and consequences outlined above may occur simultaneously. Both governments and terrorist organizations can pursue many tracks at once, and organizations may confront a wide series of challenges simultaneously.

Governmental decisions about how to confront terrorism are made more difficult by the frequently high degree of uncertainty governments have about the nature of terrorist organizations, their motivations, and the effects of government actions on those organizations. The need for understanding terrorist organizations is highlighted by the fact that such groups' calculations are based on the groups' perceptions of costs and rewards, not those of the authorities confronting them or of objective observers.

So called "get-tough" measures against terrorist groups can have unintended consequences. Trying to "decapitate" a movement may radicalize the whole movement or some splinter faction. Assassinations and military force can provoke a desire for revenge, and raids and arrests can reinforce martial images, create mythologies of martyrdom, or feed paranoia and secretiveness (which makes the movements even harder to penetrate for reasons of either understanding motivations or foiling actions).

In the event that organizations are primarily motivated by a desire for recognition, how should policymakers respond? Should the government recognize the organizations and eliminate their motivation for terrorism? Since terrorist actions most often are con-

Both governments and terrorist organizations can pursue many tracks at once

Public opinion is important because it strongly affects the amount of financial and operational support the terrorists enjoy.

One effective tactic against many terrorist organizations may be to promote their disintegration from the inside.

considered newsworthy events by media organizations, it is beyond governments' control whether the actions garner attention or not. Governments can play an effective role, however, in influencing how terrorist events are portrayed to the public, and thus influence (but not control) how the public interprets those events.

Public opinion is important because it strongly affects the amount of financial and operational support the terrorists enjoy. In some cases, support comes from abroad and is difficult for governments to control. In other cases, however, governments have control over populations sympathetic to the terrorists. In this event, they must walk a difficult line. On the one hand, repressive measures can encourage antigovernment hostility and support for the terrorists. On the other, fear of punishment for the terrorists' excesses can undermine a population's willingness to support terrorist activities. In this balance, the terrorists have two weapons on their side. The first is their own ability to mete out punishment against those who do not support their actions, and the second is their ability to build on group solidarity to overcome reservations about their methods.

One effective tactic against many terrorist organizations may be to promote their disintegration from the inside. Governments can demonstrate to groups that their support among the populations those groups supposedly represent is waning. Even if such allegations are true, however, groups may be resolute in believing they enjoy support even after that support has dissipated. Governments can also split off members from a group, either by offering large rewards for information that undermines group solidarity or by making promises of leniency for imprisoned group members. Finally, governments can unilaterally enact reforms that reduce public support for the terrorists without rewarding the terrorists directly, or even negotiating with them.

Another tactic may be to put pressure on states sympathetic to a terrorist group's goals, even if the states are not outright sponsors of the group. Expulsion from a haven often causes financial pressures or logistical difficulties and can sometimes end a group's viability. In many cases, however, affected countries lack the necessary ties to effect such pressure, or laws governing free expression make it very difficult to crack down on an organization's activities.

If efforts to eliminate a terrorist group through compulsion fail, however, governments are left trying to reach a peaceful settlement with that group. In civil conflicts, such a settlement will entail negotiations for amnesty on both the individual and group levels.

Governments must confront opposition on two fronts: among rank-and-file members, who may be more disposed toward violence than the leadership, and among their own populations, who may oppose the government's sitting down with killers and "rewarding violence." Groups opposed to a peaceful reconciliation at that time will act to undermine the peace, often by undertaking terrorist actions of their own. In this event, governments that have only a precarious grip on power will find it difficult to move decisively toward peace.

In addition, governments must time their peace overtures carefully, first by making such gestures when their ability to reward good behavior and punish bad is strong, and second, by making them when the terrorist organization is going through some period of internal questioning. In such situations, effective intelligence can be crucial, since it can both identify auspicious times for a peaceful gesture and help inform the nature of that gesture.

Paul Wilkinson on the IRA

Of Martha Crenshaw's models presented above, we can discount three with regard to the IRA.

- We cannot let the terrorists win on their own terms. The prospect of conceding the future of Northern Ireland to those who have shown little regard for democratic processes is simply horrifying.
- We cannot wait for the terrorists to discount themselves. The idea of the IRA just "withering away" in the medium term or even the long term is highly unlikely because through a long process of socialization, predilections toward extreme violence are deeply embedded in some elements of society in Northern Ireland.
- State use of "draconian military force" is unacceptable because it suspends democratic rights and allows terrorist groups a victory at the expense of democratic institutions.

These options eliminated, three main areas for maneuver remain. The first is what might be called "politics, diplomacy, and prophylaxis." That is, to use democratic processes to address the underlying grievances of various groups in the region. Such a response is an important tool for any democratic government. In fact, a democratic government should be responding to the kinds of grievances that lead to violent conflict before that conflict turns violent at all. That being said, once violence has broken out, it is possible for a democratic system to address the causes of violence and reduce the violence that results from people's grievances.

Along these lines, the example of the Basque population in Spain is instructive. The new democratic government in Spain in the late 1970s made a bold and farsighted decision to grant autonomy to the Basque regions. Consequently, popular support for the Basque terror group ETA (Euskadi Ta Askatasuna, or Basque Fatherland and Liberty) has been reduced enormously. ETA has become so fragile in recent years that it has decided to investigate following the Northern Ireland example. The Spanish government is understandably cautious about negotiating, but negotiating may represent a way forward in that conflict.

It is important to remember, however, that political rapprochement cannot end violence entirely. It is unrealistic to expect that, after decades of violence, a single document can put an end to every violent act. A political agreement can, however, attract the support of a large segment of a population, and that support can be a very important component in ending a cycle of violence.

The second model to be considered involves criminal justice and law enforcement. The United States and other democratic countries reach for this model almost instinctively, and rightly so, for terrorist actions are crimes. The criminal justice system is an important weapon in both reducing and deterring violence, and it remains an important tool to combat terrorism in Northern Ireland.

As part of its execution, the criminal justice model may have to include military aid to the civilian power if the civilian police are unable to maintain order on their own. In such a case, it is important that the military assistance remain under the firm authority of the civilian police, because, if unchecked, the military power threatens to destroy democratic rights and processes.

The third model is enhanced international cooperation against terrorism. Even though many terrorist groups carry out their actions in a narrowly defined geographical area, groups waging violence have developed increasingly sophisticated international support structures. Such support may be in terms of political and diplomatic support abroad but could also include significant fund-raising and arms procurement activities.

A democratic government should be responding to the kinds of grievances that lead to violent conflict before that conflict turns violent at all.

AP Photo/Alastair Grant

John Dillon carries one of his son's coffins in Rasharkin Tuesday, July 14, 1998, as the three coffins of Richard, Mark, and Jason Quinn, are moved to the Catholic church at Rasharkin, Northern Ireland. The three brothers were killed in a sectarian arson attack on their home on July 12. Their deaths shocked the province and led to serious soul-searching about the future of Northern Ireland's shaky peace. Their funeral highlighted the emotional distress that more than 20 years of violence have wrought on individual families.

Even localized terrorism can have a crucial international element, and it takes international cooperation to diminish the terrorist threat.

In the case of Northern Ireland, all three of these models are being used. Since the Downing Street declaration and the start of the Northern Ireland peace process, there has been a very heavy stress on prophylaxis and politics. The Good Friday Agreement worked out by George Mitchell expresses well the fears of both sides in the Northern Ireland conflict, and it enjoys overwhelming support in the communities affected by it.

Nonetheless there remain threats to the Good Friday Agreement. The most important is neglect of the key relationship between peace and security. A broadly inclusive political settlement must include groups with a long and brutal terrorist past that lack a genuine commitment to democratic principles. In the case of the IRA, its political wing, Sinn Fein, is highly experienced and committed to making political progress. But its military wing, especially at the grass roots, is much more skeptical about progress through a political process and has wanted to keep its traditional weapon—force—ready and waiting if politics does not gain it the results it wants.

Consequently, there has been deadlock over the issue of decommissioning weapons. The IRA maintains a large stockpile of highly destructive weapons, including the explosive Semtex, mortars, and machine guns. While perhaps not numerically larger than the stockpiles of the Loyalists, the IRA stockpiles contain more destructive weapons. The Good Friday Agreement provides a two-year time frame for decommissioning forces, but more than one year into the agreement, not a single weapon has been handed in on either side. The IRA argues that giving up any weapon is an act of surrender. Still, decommissioning of weapons is the litmus test of the Agreement, not only for its practical effects but also for its psychological effects on the parties.

Given the present state of affairs, the respective governments may wish to link various events in the Northern Ireland peace process to increase the incentive for terrorists' cooperation. For example, the original agreement does not link the release of large numbers of prisoners to the decommissioning of weapons. This strategy may bear revisiting.

Another way out may be to try to split Sinn Fein off from the IRA. Sinn Fein may decide that progress at the political level is important enough that it will distance itself from the armed wing of the IRA and sever links with that wing if it refuses to cooperate with the political process. Such an outcome occurred with the Basques.

Whatever the IRA, Sinn Fein, or the Loyalist terrorists decide, democratic parties must continue the political process. The political framework must function even if some factions remain attached to terrorist groups. Along these lines, it is hard to imagine one terrorist group completely making the transition to a political party; perhaps a split is the best we can hope for.

Some groups are not on board in this peace process, so we have not eliminated the problem of terrorist groups. Therefore, our best option now may be to use public opinion to marginalize the terrorists while using the criminal justice system to punish those who continue to pursue terrorism.

Jon Alterman on the PLO

Although originally established in 1964 by the Arab League, the PLO absorbed a number of other movements in the aftermath of the 1967 war and has been an umbrella organization dominated by Fateh in general and Yasser Arafat in particular. Arafat's constant effort to build coalitions between Fateh and other organizations has made the PLO something of a less rational actor on the one hand, but more responsive to changes in Palestinian public opinion on the other hand.

A second characteristic of the PLO is that since an early period it has resembled a government, with a large resource base (perhaps exceeding \$1 billion per year in the late 1980s), its own bureaucracy and entitlement programs, and the recognition of at least some world governments.

A third characteristic is that it has been able to rely on sympathetic regional governments for logistical support. Moving from Jordan to Lebanon to Tunisia (and with fighters in an even wider array of countries), the PLO has been able to rebound from setbacks.

The decision to abandon armed struggle has not been unanimous, but the idea has garnered increasing support within the organization since it first surfaced in the early 1970s. Several developments accelerated that move:

- **Soviet policy.** The Soviet Union was a strong ally of the PLO for many years, but Mikhail Gorbachev made it clear to Arafat in the late 1980s that Soviet support for Palestinian armed struggle was diminishing (as indeed were the larger fortunes of the Soviet Union).
- **Intifada.** The Palestinian uprising against the Israeli occupation occurred without PLO coordination and forced the PLO leadership to move quickly to reassert their centrality to Palestinian life. In so doing, they were forced to choose between those favoring a violent solution to the Arab-Israeli conflict (many of whom were in exile) and those favoring a negotiated one. They chose the latter (in the process incorporating such local leadership as Hanan Ashrawi and Faisal Husseini) but have been careful not to crack down too hard on the former, especially Hamas.
- **Gulf war.** By all accounts, the PLO's embrace of Saddam Hussein following the latter's invasion of Kuwait was a horrible miscalculation that led to the expulsion of huge numbers of Palestinian workers from the wealthy Gulf monarchies and a dramatic cut in those countries' subsidies to the PLO.
- **Madrid.** In exchange for Arab support in Desert Storm, the Bush Administration orchestrated a conference in Madrid to find a permanent solution to the Arab-Israeli conflict. While the Madrid Conference itself did not produce progress, it created an environment in which the Oslo Accords could be struck.

While many of the factors in the PLO's turn to diplomacy are specific to that case, there appear to be several generalizable lessons.

- The PLO had an **unusually rich resource** base to draw on. It was not merely a terrorist organization but also a government in exile, a business conglomerate, and a source of significant patronage—it had durability.
- The PLO was a **responsive organization**. As a loose confederation of nationalist organizations, it often had to (and did) shift policy to reflect the opinions of its constituency or rebound from changes in the international environment.
- **U.S. diplomacy** played an important role. As early as the 1970s, PLO leaders began to understand that they could not achieve their goals without at least tacit

The decision to abandon armed struggle has not been unanimous, but the idea has garnered increasing support within [the PLO] since it first surfaced in the early 1970s.

support from the United States. American conditions for a dialogue shaped to some degree PLO behavior in the 1980s and even 1990s.

Israeli law enforcement measures appear to have played little role in the PLO's decision to turn toward a negotiated solution to the Arab-Israeli conflict. Broader strategies such as the village council plan of 1980-81 were ineffectual, and Israel's widely reported support for Hamas in its earliest phases appears to have backfired.

Two Israeli decisions have played a crucial role in the PLO's transformation, however. The first was the Israeli invasion of Lebanon, which at one stroke denied the PLO territoriality and removed it from Israel's borders. Although Lebanon has turned into a quagmire for Israel, it marked a decisive end to any PLO illusions about victory through force. Second, the government of Israel was willing to negotiate when the opportunity presented itself at Oslo. Despite having ignited a political backlash at home, it helped pave the way for an as yet to be achieved negotiated end to the Arab-Israeli conflict.

Teresita Schaffer on the LTTE

Sri Lanka has the distinction of having had two civil wars going on at the same time; and in a number of ways, Sri Lanka's two different experiences with terrorist organizations have complicated the task of dealing with its terrorist problems. One of Sri Lanka's terrorist experiences has happened two times. The government has twice put down a majority Sinhalese group called the JVP (Janatha Vimukthi Peramuna, or National Liberation Front) using police action verging on military force. The government has also battled for a decade and a half with the LTTE, although that effort has been markedly less successful.

Of the Sri Lankan population of 18 million, 75 percent are Sinhalese and 19 to 20 percent are Tamil. The two groups are ethnically and linguistically distinct, and Sinhalese are predominantly Buddhist while the Tamils are predominantly Hindu. More than half of the Tamils live in the North and East, with smaller concentrations in major cities such as Colombo. Other Tamils are plantation workers whose ancestors were brought over from India about 100 years ago by the British to work on the tea plantations; they are known as "Hill Tamils" or "Estate Tamils." The remainder of the population consists primarily of Tamil-speaking Muslims who tend to oppose the Tamil militants.

The experience of twice putting down a group with extreme political views has left an unfortunate legacy of allowing people in the Sri Lankan government to think that they know how to deal with terrorism. First founded in the 1960s, the Maoist JVP had ties to the Chinese Communist Party but was philosophically closer to Peru's "Shining Path." The organization was avowedly revolutionary, and its support in the early years came mainly from university students and frustrated high school graduates. In the late 1960s these youth mobilized politically and also armed themselves. In the 1970 Sri Lankan election, they threw their support to the Sri Lankan Freedom Party, which was victorious. By April 1971, however, they had grown disaffected with mainstream politicians, and one night they coordinated simultaneous attacks on five police stations, followed by a series of political killings. The JVP was put down by military action supported by India, Pakistan, China, and the United States. Members were either jailed or killed, and the group virtually ceased to exist.

In 1977, politicians seeking to show that the JVP could not survive in the political arena allowed the party to reestablish itself legally. The experiment appeared to work; in a 1981 election the group registered less than 5 percent of the vote nationally, and in its strongest district received just 13 percent of the vote. In university elections, however, the group enjoyed significant support.

Sri Lanka's two different experiences with terrorist organizations have complicated the task of dealing with its terrorist problems.

The experience of twice putting down a group with extreme political views has left an unfortunate legacy of allowing people in the Sri Lankan government to think that they know how to deal with terrorism.

In 1987 the Indian government sent 100,000 troops to Sri Lanka to enforce a peace agreement following four years of Sinhalese-Tamil armed strife. The presence of Indian troops on Sri Lankan soil agitated members of the ferociously nationalist JVP, and the organization's militant opposition to those troops helped it gain support among many Sri Lankan nationalists.

By the late 1980s, the JVP's membership was almost completely different than it had been twenty years before. Although Rohana Wijeweera still led the JVP, most of its old members had gone on to more mainstream political affiliations, and a new crop of young, unemployed graduates once again comprised the rank and file. The group's first actions were a series of general strikes, but in late 1988 the JVP began to target the families of police officers. In response, the government closed ranks behind the police and attacked the JVP mercilessly. At the height of the conflict, the weekly death toll topped 300 people. By early 1990, the entire JVP leadership had been killed and the organization was destroyed.

Almost a decade later, the legacy of the JVP remains. Many Sri Lankans lost friends or relatives in the violence, and memories of those days remain fresh in many people's minds. In addition, many Sri Lankans harbor resentment over what they perceived to be lectures by Western officials demanding that they respect human rights in their deadly battle against the JVP. Finally, many Sri Lankans have concluded that the government did what it had to do against the JVP and that they now understand how to counter terrorist campaigns.

In fact, the government's campaign against the JVP succeeded in part because the JVP lacked a broad constituency. Put quite simply, the JVP's grievances did not capture the imagination of any major concentrations of people. Even at the height of its popularity, there was no district in which the JVP would have won an election. As a consequence, the JVP's campaign of terror got it more attention and influence than it would have gotten through political means. At the same time, the JVP failed because there was never a huge reservoir of people who said, "We don't like their methods but at least they've gotten us on the map." It makes a difference how much resonance the underlying grievance has.

The LTTE has been a different phenomenon. Ethnic rivalry has a long history in Sri Lanka, but the roots of the present-day ethnic conflict lie in the period after its independence from Britain in 1948. For centuries, intercommunal ties between Tamils and Sinhalese have been close at the elite level, but Sri Lanka's first post-independence government made a catastrophic decision. In a blatant attempt to tighten the Sinhalese grip on power, the government wrote a nationality law that effectively disenfranchised the Hill Tamils, who constitute almost half of the Tamil population. The error was compounded in 1956 when a prime ministerial candidate, S.W.R.D. Bandaranaike, decided to campaign on a call for the primacy of Sinhalese language, culture, and religion in Sri Lanka. The two moves served to heighten intercommunal tension and led first to Tamil militancy and later to separatist sentiments.

The first Tamil militant groups were founded in the 1960s, and they took as their goal greater rights for the Tamil population. By 1976, the Tamil United Liberation Front (TULF) had emerged as the first political group calling for a separate Tamil state. In 1983, however, the Sri Lankan government adopted a constitutional amendment criminalizing advocacy of a separate state within Sri Lankan territory and requiring that all members of parliament swear an oath not to support separatism in any way. That decision forced the TULF out of the parliament and deepened the alienation between the Tamil population and the government. As a result, support for the LTTE increased.

The government's campaign against the JVP succeeded in part because the JVP lacked a broad constituency.

In the early years, much of the support for Tamil independence came from individuals in their thirties who were primarily motivated by the language issue.

In the 1990s, the [LTTE's] trend toward youth has accelerated... many of these younger members are fanatical.

In the early years, much of the support for Tamil independence came from individuals in their thirties who were primarily motivated by the language issue. Starting in the 1970s, the cause of Tamil independence began to attract a younger crowd, in part because of quotas on university admissions aimed at limiting the number of Tamils with access to higher education. In the 1990s, the trend toward youth has accelerated. Some members are as young as thirteen or fourteen years old. Many of these younger members are fanatical; they are issued a cyanide capsule on completion of their basic training with the LTTE, and they have been engaged in suicide bombing.

The LTTE's first acts of terrorism were directed against Tamils who opposed the LTTE's policies; LTTE leader Velupillai Prabhakaran got his start assassinating the mayor of the predominantly Tamil city of Jaffna in the mid-1970s. Since 1985, the four targets of frequent terrorism have been

- VIPs, such as Indian Prime Minister Rajiv Gandhi in 1991 and Sri Lankan President Ranasinghe Premadasa in 1993;
- Tamil rivals;
- isolated Sinhalese and Muslim populations on the borders of Tamil-majority areas;
- civilian population centers, such as mosques and the Temple of the Tooth Shrine.

In combating the LTTE, the Sri Lankan government has employed three strategies.

- **Law enforcement efforts** have placed constraints on the LTTE and have imprisoned a number of their followers and sympathizers, but at the same time have alienated many Tamils.
- **Military efforts** have been inconclusive, in part because the Sri Lankan military has not proven particularly competent, and in part because it does not appear to possess a clear strategy. The military has never been able to hold the main Tamil population centers in the North and East of the country simultaneously.
- **Efforts to negotiate a political settlement** have generally been cases of too little, too late. A 1995 peace proposal started out with great promise but is now moribund.

The Sri Lankan government has not tried three strategies that may hold out the promise of ending the long-running conflict.

- **Engage in public diplomacy.** The Sri Lankan government could launch a major "hearts and minds" campaign to win the support of large segments of the Tamil population away from LTTE sympathy. The present government mounted a limited effort along these lines in the so-called "White Lotus" campaign, but a major campaign has yet to be tried.
- **Demonstrate that autonomy can work.** The Sri Lankan government could mount a major effort to show that autonomy can work. Constitutional amendments introduced in 1987 provided for a degree of decentralization of power. This could have been an opportunity to show that the Sri Lankan government was capable of allowing local authorities, including Tamil-dominated ones, to run their own affairs effectively. The near-normalization of life in the East in 1994 and the government's taking control of Jaffna in 1995 could have led to similar "demonstration projects" in devolution. In each case, the opportunity slipped away, reinforcing the concerns of skeptics in the Tamil community about whether devolution could work.
- **Conclude a peace settlement.** The Sri Lankan government could reach a peace agreement with the LTTE. There have, of course, been a whole series of negotiating efforts, which thus far have come to naught.

The chief lesson to be learned here is that if we focus only on the criminal side of terrorism, then we will fail to solve even that side of terrorism. In the Sri Lankan case, resolving the terrorism arising out of the ethnic conflict will require at least two approaches: a political negotiation and an integrated military strategy. This government understood the importance of the political part of the package but was unable to deliver on it. It then turned to the military arm as a separate response but, despite its success in capturing the LTTE's stronghold in Jaffna, was not able to put the military and political parts of its strategy together. The LTTE, of course, had by then lost interest in the negotiation, leaving the conflict in a new and bloodier stalemate.

Success in the initial political negotiations might not have eliminated terrorism. When one is dealing with hard-bitten adversaries, some of whom see little personal advantage in a peaceful settlement, the risk is high that extremist elements will continue to use terrorism even if the mainstream has settled. However, under these circumstances, terrorism would be reduced to its criminal element. With the underlying grievances at least headed for resolution, the terrorism problem would assume manageable proportions.

Conclusions

One of the hardest problems facing government officials dealing with terrorism is deciding when to employ what strategy. Negotiations with those perpetrating violence are not the solution to every problem; by the same token, many terrorist campaigns cannot be stopped by law enforcement actions alone. Many participants suggested a decisive factor determining the sufficiency of law enforcement activities is the support that the terrorist groups have among the populations in which they are based. Narrowly based terrorist groups can be rooted out, but groups that rely on a broad base of support (some of which can come from beyond a nation's borders) have a durability that may defy such efforts. For that reason, ethnically based groups may be harder to eliminate through force than class-based groups, since ethnicity has proven a stronger tie than class in most cases.

If negotiations are pursued, two conditions should be present. The first is that the government should enjoy a strong popular mandate. Political opponents often portray negotiating with terrorists as "giving in to terrorism." Such an attack can topple weak governments or, short of that, stymie whatever agreement has been reached through negotiations.

The second condition is that the terrorist organization is going through a period of self-evaluation. In such circumstances, the government may be able to successfully split off pragmatists from hard-line terrorists, bring the population along with the pragmatists, and dry up popular support for those continuing to pursue violence.

Throughout, participants stressed the importance of intelligence. In confronting terrorism, the nature of the grievance does matter, and the nature of the organization putting forth the grievance matters as well. Intelligence is important not only to prevent terrorist attacks but also to understand how the organization works and how its decision making processes can be affected.

A consistent theme in all of the presentations was the extent to which terrorism is an international problem. Money and weapons flow across borders, and supporters of terrorism (if not the terrorists themselves) often have established bases in other countries. Increasingly, law enforcement efforts aimed at stemming terrorism have an international component, and such a strategy will require more international cooperation in the future.

About the Panelists

Jon B. Alterman is a program officer in the United States Institute of Peace's Research and Studies Program, where he covers the Middle East. His most recent book is *New Media, New Politics? From Satellite Television to the Internet in the Arab World*.

Martha Crenshaw is John E. Andrus Professor of Government at Wesleyan University in Middletown, CT. She is the author of a number of works on political violence and terrorism and was co-editor of *The Encyclopedia of World Terrorism*.

Teresita Schaffer is director of the South Asia Program at the Center for Strategic and International Studies. She is a thirty-year veteran of the Foreign Service and served as U.S. Ambassador to Sri Lanka from 1992 to 1995.

Paul Wilkinson is a professor of international relations and chairman of the Centre for the Study of Terrorism and Political Violence at the University of St. Andrews in Scotland. He is the author of several authoritative works on terrorism and political violence. His book most recent book, *Terrorism and Liberal Democracy*, will be published shortly.

If negotiations are pursued, two conditions should be present:

- the government should enjoy a strong popular mandate.***
- the terrorist organization [should be] going through a period of self-evaluation.***

Het jaarverslag 1997 van de Binnenlandse Veiligheidsdienst (BVD) geeft inzicht in de aandachtsgebieden waarop de BVD zich in het afgelopen jaar heeft gericht en zich in 1998 in ieder geval zal richten. Achterwege blijft de vermelding van gegevens waarvoor de geheimhoudingsverplichting van de BVD geldt. Daarbij gaat het om gegevens over de middelen die de BVD inzet, bronnen die door de BVD worden aangewend en het actuele kennisniveau van de dienst. Deze gegevens worden wel ter kennis gebracht van de commissie voor de Inlichtingen- en Veiligheidsdiensten van de Tweede Kamer.

Het afgelopen jaar is de voorbereiding afgerond van het voorstel voor een nieuwe Wet op de inlichtingen- en veiligheidsdiensten. Het wetsvoorstel, dat zowel betrekking heeft op de BVD als op de Militaire Inlichtingendienst (MID), is inmiddels aan de Tweede Kamer aangeboden. Het voorstel bevat een taakomschrijving en een regeling van de bevoegdheden van de twee diensten. Tevens wordt voorzien in een regeling voor de inzage van gegevens die bij de diensten berusten. Tenslotte wordt voorgesteld een onafhankelijke commissie in te stellen die toeziet op de taakuitvoering van de diensten, in aanvulling op de bestaande voorzieningen. De nieuwe wettelijke regeling moet de BVD in staat stellen zijn taken ook in de toekomst naar behoren te vervullen. Tegelijk is de nieuwe wetgeving er op gericht de rechtmatigheid van het werk van de BVD blijvend te waarborgen.

Dit jaarverslag maakt duidelijk dat radicale organisaties en stromingen, proliferatie van massavernietigingswapens en de kwetsbaarheid van organisaties voor aantasting van hun integriteit ook in 1997 de aandacht bleven vragen van de BVD. Mede dankzij de inspanningen van de dienst hield de Nederlandse overheid zicht op de ernst van deze verschijnselen en konden waar nodig maatregelen worden genomen.

Het hoofd van de BVD is sinds september 1997 de heer S.J. van Hulst.

*De minister van Binnenlandse Zaken,
H.F. Dijkstal*

HOOFDSTUK 1

In dit hoofdstuk wordt ingegaan op de taakuitvoering van de BVD in het afgelopen jaar en wordt een vooruitblik gegeven op 1998. Na het algemene gedeelte wordt de wet- en regelgeving die voor de BVD van belang is aan de orde gesteld. Vervolgens wordt ingegaan op de politieke en ambtelijke sturing en op de parlementaire controle. Het hoofdstuk eindigt met een passage over de inlichtingenmiddelen van de dienst.

1.1 Algemeen

In 1997 besteedde de BVD, evenals in voorgaande jaren, aandacht aan aantastingen van grondrechten, georganiseerde criminaliteit van nationale en internationale oorsprong, gewelddadige politieke groeperingen, proliferatie van massavernietigingswapens, handel in conventionele wapens, spionage en beveiligingsbevordering. Deze onderwerpen zullen ook in 1998 de agenda blijven bepalen.

Op het gebied van de aantasting van grondrechten werd onderzoek gedaan naar conflicten binnen en tussen groepen in de Nederlandse samenleving van politieke, etnische of religieuze aard. Ook kregen de bemoeienissen van vreemde mogendheden met in ons land aanwezige bevolkingsgroepen de aandacht. De BVD vergrootte zijn inzicht in de doelbewuste verstoring door misdaadorganisaties van vitale functies in de samenleving, zoals het functioneren van het openbaar bestuur en van het apparaat voor opsporing en vervolging. Aan de opkomst van de Russische georganiseerde criminaliteit werd gericht aandacht besteed. Over deze onderwerpen verstreekte de BVD informatie aan de verantwoordelijke instanties. In internationaal verband werd bijgedragen aan de bestrijding van terroristische groeperingen. De aandacht voor

andere gewelddadige politieke groeperingen kon beperkt blijven en spitste zich toe op radicale groeperingen van buitenlandse komaf. Aan de internationale samenwerking bij het tegengaan van proliferatie van massavernietigingswapens leverde de BVD regelmatig een bijdrage. De aandacht van de dienst spitste zich toe op de landen en de bedrijven die hun verwervingsactiviteiten in of via Nederland bedrijven. Het onderzoek naar de handel in conventionele wapens richtte zich vooral op het vergroten van het inzicht in transacties naar spanningsgebieden en regio's waar mensenrechten worden geschonden. Op beide terreinen van wapenhandel -conventionele en massavernietigingswapens- werd bijgedragen aan het internationale beleid van wapenbeheersing.

Op het terrein van de beveiligingsbevordering nam het preventieve optreden van de BVD toe. Naast het uitbrengen van beveiligingsadviezen aan instellingen en bedrijven, werden op verzoek bijdragen geleverd bij het opzetten van algemene integriteitsonderzoeken ter vaststelling van de kwetsbaarheid van overheidsorganisaties. Het uitvoeren van veiligheidsonderzoeken naar personen die een vertrouwensfunctie (gaan) bezetten, kreeg met de op 1 februari 1997 in werking getreden Wet veiligheidsonderzoeken een geactualiseerde en nader uitgewerkte wettelijke basis.

Het beveiligen van informatie en het waarborgen van de rechtmatige toegang tot gegevens vergde in toenemende mate aandacht in verband met de ontwikkelingen op het terrein van de informatie- en telecommunicatietechnologie.

Internationale samenwerking neemt in belang toe wegens het grensoverschrijdend karakter van de hedendaagse veiligheidsbedreigingen. Het Nederlandse voorzitterschap van de Europese Unie bood de BVD de mogelijkheid om bij te dragen aan het nader vorm geven van de internationale samenwerking op het terrein van de terrorismebestrijding. Voorts kwamen de onderwerpen racisme/xenofobie en cryptografie hoog op de internationale agenda. De beschikking van de BVD over vaste en reizende liaisons bewijst in toenemende mate zijn nut. De bilaterale contacten met de veiligheidsdiensten in Midden- en Oost-Europa werden voortgezet en waar nuttig uitgebreid. Met enkele veiligheidsdiensten van landen in het Midden-Oosten en Noord-Afrika had een oriënterend contact plaats. Met de veiligheidsdiensten van westerse landen werd collegiaal samengewerkt.

1.2 Wettelijk kader

Op 17 september 1997 bracht de Raad van State advies uit over het wetsvoorstel tot herziening van de Wet op de inlichtingen- en veiligheidsdiensten, dat in december 1996 om advies aan de Raad werd voorgelegd. Begin 1998 is het wetsvoorstel aan de Tweede Kamer aangeboden. De Wet veiligheidsonderzoeken (Stb. 1996, 525) is op 1 februari 1997 in werking getreden. Deze wet regelt het aanwijzen van vertrouwensfuncties en het uitvoeren van veiligheidsonderzoeken.

1.3 Sturing

1.3.1 *De minister van Binnenlandse Zaken*

De BVD is een onderdeel van het ministerie van Binnenlandse Zaken. De minister van Binnenlandse Zaken is derhalve politiek verantwoordelijk voor de Binnenlandse Veiligheidsdienst (BVD). De minister bespreekt periodiek de ontwikkelingen op de verschillende aandachtsgebieden van de BVD met het hoofd van de BVD. Onder verantwoordelijkheid van de minister is in de afgelopen kabinetsperiode een algehele herziening van het wettelijk kader van de BVD in gang gezet.

1.3.2 *Ministeriële Commissie voor de Inlichtingen- en Veiligheidsdiensten (MICIV)*

De MICIV vergadert onder voorzitterschap van de minister-president en bestaat verder uit de ministers van Binnenlandse Zaken, Buitenlandse Zaken, Defensie, Justitie, Economische Zaken en Financiën. De vaste ambtelijke deelnemers aan het overleg zijn de voorzitter en leden van het CVIN-plus (zie hieronder). De MICIV coördineert de politieke sturing aan de BVD en de MID en maakt afspraken over afstemming van werkzaamheden tussen BVD en MID.

In 1997 kwam de commissie éénmaal bijeen. De belangrijkste gespreksonderwerpen waren: bijzondere informatiebeveiliging, operationele cryptografie, het onderscheppen van telecommunicatie (interceptie) en het inlichtingenplan BVD voor 1997. Naast deze onderwerpen werd ook aandacht besteed aan ontwikkelingen in Turkije, aan Rusland en de overige landen van het GOS, in relatie tot mogelijke veiligheidsrisico's voor Nederland.

1.3.3 *Comité Verenigde Inlichtingendiensten Nederland (CVIN)*

Het CVIN is het ambtelijk voorportaal van de MICIV en coördineert de uitvoering van de taken van BVD en MID. Het comité bestaat uit de coördinator van de inlichtingen- en veiligheidsdiensten en diens adviseur, beiden werkzaam bij het ministerie van Algemene Zaken, de hoofden van de BVD en de MID, alsmede vertegenwoordigers van de ministeries van Buitenlandse Zaken en Justitie. Afhankelijk van het onderwerp zijn ook vertegenwoordigers van het ministerie van Economische Zaken en het ministerie van Verkeer en Waterstaat aanwezig.

Met uitzondering van de maand juli kwam het CVIN maandelijks bijeen. In 1997 stonden onder andere de onderwerpen operationele cryptografie, interceptie en bijzondere informatiebeveiliging op de agenda. Naast deze onderwerpen kregen de ontwikkelingen in Turkije en Rusland en de overige landen van het GOS, voor zover sprake is van een mogelijk veiligheidsrisico voor Nederland, de nodige aandacht. Ter voorbereiding op de MICIV-vergadering was er een CVIN-plus bijeenkomst. Hieraan wordt, naast de leden van de CVIN, deelgenomen door de secretarissen-generaal van de ministeries die in de MICIV participeren.

1.4 Parlementaire controle

De vaste commissie voor Binnenlandse Zaken besprak op 5 november 1997 tijdens een algemeen overleg het jaarverslag van de BVD over 1996 en het verslag van de commissie voor de Inlichtingen- en Veiligheidsdiensten van de Tweede Kamer over hetzelfde jaar. Bij dit overleg kwam ook het eindrapport van het project Hermandad aan de orde. Met dit project werd beoogd de samenwerking tussen de BVD, de politie, het Openbaar Ministerie, de Koninklijke marechaussee en enkele bijzondere opsporingsinstanties te verbeteren. Voorts heeft de Tweede Kamer bij verschillende gelegenheden gesproken over de BVD-invalshoek bij onderwerpen als de integriteit van de openbare sector, extreem rechts en de Grijsse Wolven. Bovendien werd over een groot aantal onderwerpen schriftelijke vragen gesteld. Zie voor een overzicht bijlage 1 van dit jaarverslag.

De staatssecretaris van Onderwijs, Cultuur en Wetenschappen heeft mede namens de minister van Binnenlandse Zaken op 5 december 1997

de Tweede Kamer schriftelijk informatie verstrekt over in het verleden uitgevoerde vernietigingen van BVD-dossiers. In deze brief werd de Kamer ook geïnformeerd over de stand van zaken betreffende de nog uit te voeren vernietigingen van BVD-dossiers. Overeenkomstig de afspraak met de Kamer werd in oktober 1997 een selectielijst voor de BVD vastgesteld. De Centrale Archief Selectiedienst heeft op basis van deze lijst een proefbewerking uitgevoerd. Over de resultaten van deze proef brengt de Raad voor Cultuur advies uit. Eerst nadat hierover overleg met de Kamer heeft plaatsgevonden wordt tot het daadwerkelijk vernietigen van BVD-dossiers overgegaan.

Volledigheidshalve wordt tenslotte vermeld dat op 17 december 1997 nog een algemeen overleg plaatsvond over de vernietiging van dossiers van inlichtingen- en veiligheidsdiensten met de vaste commissies voor Binnenlandse Zaken, Defensie en Onderwijs, Cultuur en Wetenschappen. De nadruk bij dit overleg lag op het vernietigen van Defensie-dossiers.

In het verlengde van het overleg besloten de vaste commissies tot het instellen van een werkgroep Archieven die tot taak kreeg onderzoek te doen naar het beleid en beheer met betrekking tot archieven van inlichtingen- en veiligheidsdiensten. Op 13 mei 1998 presenteerde de werkgroep haar onderzoeksrapport. Ten aanzien van de BVD concludeerde de werkgroep dat er, voorzover waarneembaar, gesproken kon worden van een professioneel archiefbeheer. Verder bevestigde de werkgroep de eerder door de Rijksarchiefdienst gemelde bevinding dat de BVD in het verleden vernietigingen heeft uitgevoerd terwijl er geen op de juiste wijze tot stand gekomen vernietigingslijst was. De werkgroep tekende daarbij aan dat het niet waarschijnlijk is dat de feitelijke vernietigingen veel anders zouden zijn geweest indien de lijst wel op wettelijk juiste wijze was vastgesteld.

1.4.1 Commissie voor de Inlichtingen- en Veiligheidsdiensten

Over BVD-aangelegenheden, die om redenen van staatsveiligheid niet openbaar gemaakt kunnen worden, werd met de commissie voor de Inlichtingen- en Veiligheidsdiensten van de Tweede Kamer twee keer vertrouwelijk overleg gevoerd. Ook is de commissie een aantal malen schriftelijk geïnformeerd.

Tijdens het overleg op 10 april 1997 kwamen de brandstichtingen tegen Turkse doelen en de gewelddadigheden tussen Turken en Koerden op Nederlands grondgebied uitgebreid aan de orde. Daarnaast werd

gesproken over veiligheidsrelevante ontwikkelingen op Aruba.

De commissie werd geïnformeerd over de procedure rond de opvolging van het hoofd van de BVD.

De Grijze Wolven vormde het belangrijkste gespreksonderwerp van het op 22 oktober 1997 gevoerde overleg. Op verzoek van de commissie zegde de minister toe, ook de Tweede Kamer als geheel schriftelijk te informeren over dit onderwerp. In november 1997 vond die informatieverstrekking plaats. Verder is tijdens dit overleg gesproken over de geheime versie van het BVD-jaarverslag 1996. Hierin zijn de operationele bijzonderheden opgenomen die omwille van de staatsveiligheid niet openbaar kunnen worden gemaakt. Tot slot is een uiteenzetting gegeven over een aantal actuele operationele aangelegenheden. De commissie brengt over haar werkzaamheden een afzonderlijk schriftelijk verslag uit aan de Tweede Kamer.

1.5 Inlichtingenmiddelen

De interceptie van telecommunicatie -in combinatie met andere bij de wet toegestane inlichtingenmiddelen- blijft een belangrijk inlichtingenmiddel. De BVD leverde een bijdrage aan de beleidsontwikkeling om het gebruik van dit middel ook in de toekomst mogelijk te blijven maken. De verdergaande liberalisering van de Europese markt en de snel veranderende technologie maken dat een achterstand dreigt te ontstaan bij het voorzien in de inlichtingenbehoefte van de betrokken overheidsdiensten. In het voorstel voor de nieuwe Telecommunicatiewet is voorzien dat nieuwe systemen en diensten structureel aftapbaar moeten worden gemaakt. Dit wetsvoorstel is in maart 1998 door de Tweede Kamer aanvaard.

Ter beveiliging van elektronisch berichtenverkeer wordt steeds meer gebruik gemaakt van cryptografie. In het voorstel voor een nieuwe Wet op de inlichtingen- en veiligheidsdiensten is de verplichting opgenomen om mee te werken aan het decrypteren, daar waar de nationale veiligheid in het geding is (zie ook paragraaf 2.7.1 Informatiebeveiliging).

De activiteiten gericht op de verbetering van de samenwerking op het terrein van de operationele crypto- en interceptie-problematiek worden voortgezet. Het ministerie van Justitie geeft leiding aan dit proces. Een van de prioriteiten is het realiseren van een efficiënt en effectief beheer

van informatiestromen tussen het toenemende aantal marktpartijen en de
behoeftestellende instanties.

In de tweede helft van 1997 was er een nieuwe marktontwikkeling,
namelijk de mobiele telefoon-kaart (pre paid card). Hiermee werd het
voor gebruikers mogelijk om volledig anoniem en niet traceerbaar te
communiceren. Overleg met de marktpartijen heeft ertoe geleid, dat een
oplossing is gevonden voor die bijzondere situaties dat communicatie
met een mobiele telefoon-kaart toch gecontroleerd moet worden.

HOOFDSTUK 2

Dit hoofdstuk geeft inzicht in de verschillende aandachtsgebieden van de BVD. Het eerste gebied is de aantasting van grondrechten. De verschillende organisaties die onderwerp van onderzoek zijn, passeren de revue. Daarnaast wordt in deze paragraaf ingegaan op de bemoeienis van vreemde mogendheden met bevolkingsgroepen in ons land.

Het tweede aandachtsgebied is (internationaal) georganiseerde criminaliteit. In de paragraaf over terrorisme en ander politiek geweld komen de verschillende gewelddadige politieke groeperingen aan bod die voor Nederland van belang zijn.

Vervolgens wordt ingegaan op de onderwerpen proliferatie van massavernietigingswapens en conventionele wapenhandel. Dat het verschijnsel spionage nog altijd actueel is, blijkt uit de daarop volgende passages. De integriteit van de openbare sector is eveneens een aandachtsgebied, evenals de beveiligingsbevordering die gestalte krijgt in beleidsontwikkeling, beveiligingsadvies en veiligheidsonderzoeken.

Tenslotte wordt ingegaan op enkele overige aandachtsgebieden.

2.1 Aantasting van grondrechten

In het kader van de bescherming van grondrechten besteedt de BVD aandacht aan extremistische politieke groeperingen. Daarnaast onderzoekt de BVD de bemoeienis van vreemde mogendheden. Islamitische organisaties krijgen de aandacht van de BVD voor zover sprake is van ontwikkelingen die zich niet verdragen met de beginselen van de Nederlandse rechtsstaat.

2.1.1 *Extreem rechts*

Extreem rechtse organisaties hebben in 1997 minder vaak -via demonstraties of anderszins- de openbaarheid gezocht dan in 1996. Ook in dat jaar was al sprake van een afname van het aantal publieke acties vergeleken met 1995.

De Centrum Partij '86 (CP'86), restant van de NVP/CP'86 die eind 1996 uiteen viel, is in 1997 onmiskenbaar in neo-nazistisch vaarwater geraakt. De belangrijkste bestuursleden van de partij namen enkele keren deel aan samenkomsten en demonstraties van neo-nazi's in België en Denemarken. Zij werken samen met geestverwanten van de FAP-arbeiderspartij, de Nederlandse Volksunie en het Aktiefront Nationale Socialisten en onderhouden regelmatig contact met gelijkgezinden in België en Duitsland. CP'86 is gebrekkig georganiseerd en telt niet meer dan enkele tientallen leden, die voornamelijk woonachtig zijn in het Rijnmondgebied. Het totaal aantal georganiseerde neo-nazi's in ons land in en buiten CP'86 wordt geschat op minder dan vijftig.

In het publieke debat over extreem rechts wordt de omvang van het verschijnsel wel eens overschat. De BVD gaf ook in 1997 voorlichting aan politici, bestuurders en andere betrokkenen om verkeerde beeldvorming tegen te gaan. Voorts werd meegewerkt aan de eerste uitgave van de Monitor Racisme en Extreem Rechts die in opdracht van het ministerie van Binnenlandse Zaken is samengesteld door het Leids Instituut voor Sociaal Wetenschappelijk Onderzoek (LISWO) en in het najaar verscheen. In deze publicatie wordt vermeld dat het aantal bij de BVD gemelde inter-etnische incidenten, in vergelijking met 1996, niet is toegenomen.

2.1.2 *Bemoeienis van vreemde mogendheden*

Activiteiten van Zuid-Slavische staten gericht op Nederland

De aanwezigheid van het Joegoslavië-tribunaal van de Verenigde Naties in Nederland is de belangrijkste aanleiding voor activiteiten van Zuid-Slavische inlichtingendiensten in ons land. Deze diensten probeerden de rechtsgang te beïnvloeden, bijvoorbeeld door in een vroeg stadium de identiteit van getuigen te achterhalen. De BVD heeft met name een toename geconstateerd van de activiteiten van Kroatische inlichtingendiensten.

Op de ambassade van Bosnië-Herzegovina is de meerderheid van de ambassadestaf het VN-tribunaal behulpzaam bij de opsporing en berechting van oorlogsmisdadigers. Daartoe werkt die ambassadestaf nauw samen met de Bosnische veiligheidsdienst AID.

De Bosnische ambassade heeft enige malen verzuimd zich te houden aan de regels die in het normale diplomatieke verkeer tussen bevriende landen gangbaar zijn. Het ministerie van Buitenlandse Zaken heeft in dit kader een aantal keren geweigerd visa te verstrekken aan beoogde tijdelijke medewerkers van deze ambassade.

In 1997 is contact gelegd met de Bosnische veiligheidsdienst AID. Dit is gebeurd vanuit de verwachting dat de AID hierdoor wordt aangezet zich te houden aan de gangbare regels. De AID dreigt echter uiteen te vallen in diverse facties die door het hoogste staatsgezag van Bosnië-Herzegovina niet meer kunnen worden gecontroleerd.

Vertegenwoordigers van de Federale Republiek Joegoslavië en van de Servische gemeenschap in Bosnië-Herzegovina probeerden -zoals in het verleden- met behulp van informatie en desinformatie de beeldvorming in de Nederlandse media over de Servische politiek te beïnvloeden.

Binnen de Zuid-Slavische gemeenschappen in Nederland deden zich weinig verontrustende ontwikkelingen van politieke aard voor. De diverse schietpartijen en liquidaties in deze kringen hadden namelijk geen politieke achtergronden. Te verwachten valt dat de groeiende onvrede in Kosovo zich in de nabije toekomst zal weerspiegelen in de Kosovaarse gemeenschap in Nederland.

Irak

De Iraakse gemeenschap in Nederland is de laatste jaren toegenomen tot ruim twintigduizend personen. Het betreft voornamelijk vluchtelingen en asielzoekers, deels van Koerdische afkomst. De Iraakse algemene inlichtingendienst (Jihaz al-Mukhabarat al-'Amma, kortweg Mukhabarat) verzamelt gegevens over deze gemeenschap, en vooral over mogelijke opposanten van het regime van Saddam Hussein.

In het najaar van 1997 is twijfel ontstaan over de herkomst en achtergronden van een aantal personen dat zich als Iraaks vluchteling meldde bij de asielzoekerscentra.

Iran

In de loop van het jaar werden de diplomatieke betrekkingen met Iran weer hersteld. Deze waren bekoeld als gevolg van het 'Mykonos-proces' in Duitsland waarbij de Iraanse overheid schuldig werd geacht aan een moordaanslag op vier Iraans-Koerdische leden van de oppositie.

De houding van de Iraanse autoriteiten ten aanzien van oppositie-groeperingen is niet wezenlijk veranderd ten opzichte van voorgaande jaren. De Iraanse inlichtingendienst is in Nederland dan ook nog onverminderd actief. Deze dienst richt zich op het lokaliseren en registreren van oppositieleiden in Nederland met de bedoeling deze oppositie te destabiliseren. De inlichtingendienst doet ook pogingen om leden van de Iraanse gemeenschap in ons land tot medewerking te dwingen door middel van intimidatie.

2.1.3 Islamitische organisaties

De ontwikkelingen in Turkije, waar de deelname van de orthodox-islamitische Refah-partij aan de regering met een 'stille coup' werd beëindigd, zijn niet zonder gevolgen gebleven voor de Turkse moslim-gemeenschap in Europa. Door het verbod van Refah in Turkije is de aan haar gelieerde Islamitische Gemeenschap Milli Görüş (IGMG), met het hoofdkwartier in Keulen, weer meer in de rol gedrukt van politiek-religieuze oppositie in ballingschap, net als in haar beginjaren na de staatsgreep van 1980. Niettemin kan gesteld worden dat in de West-Europese moskeeën beheerst gereageerd is op het ingrijpen van het Turkse leger en dat het nergens tot felle protesten of tegenacties is gekomen.

Ook in Europa heeft het zelfvertrouwen van de Refah-aanhanger een forse deuk opgelopen. De teleurstelling over de wijze waarop voorman en oud-premier Necmettin Erbakan moest buigen voor de militairen is groot. Bij sommigen heeft dit de overtuiging doen postvatten dat een islamitische staat nimmer langs democratische weg gerealiseerd kan worden en dat andere wegen bewandeld moeten worden. Bij anderen heeft de behandeling die de moslimbeweging ten deel is gevallen geleid tot berusting en lethargie.

Het gevolg is dat Milli Görüş als grootste van de niet aan de Turkse staat gebonden islamitische organisaties te kampen heeft met een teruglopend ledental en een afnemende motivatie bij de aanhang. Met name jongeren, die Milli Görüş in het verleden altijd in groten getale aan zich

wist te trekken, voelen zich steeds minder aangesproken door partij-retoriek. Hun organisaties hebben te maken met leegloop of leiden een kwijnend bestaan. De toeloop naar weekendkampen en eigen internaten stagneert. De organisatie blijkt voor veel jongeren niet het antwoord te bieden op vragen waarmee zij in de Nederlandse context worstelen. Een gedeelte belandt in a-religieuze jongerencircuits, waar zij soms een groter risico lopen met criminaliteit in aanraking te komen. Anderen blijken in toenemende mate ontvankelijk voor Turks-nationalistische sentimenten, die aan intensiteit hebben gewonnen als gevolg van de gebeurtenissen in Turkije en de afwerende houding van Europa. In de aloude worsteling tussen de islamitische en de Turkse identiteit, lijkt ook binnen de Turkse gemeenschap in Nederland het nationalisme weer eens aan de winnende hand.

De nauwe verwevenheid van staat en religie in Turkije zorgt er echter voor dat de slinger nimmer geheel naar één zijde doorslaat. Ook de huidige regering in Ankara blijft zich sterk maken voor een gematigde en gecontroleerde (staats)islam binnen de kaders van het wettelijk voorgeschreven laïcisme. Het wordt in dit licht noodzakelijk geacht om ook de islamitische organisatievorming onder Turken in het buitenland onder controle te houden, waarbij initiatieven die afbreuk (kunnen) doen aan dit streven te maken kunnen krijgen met tegenwerking.

Ook andere dan Turkse moslimorganisaties staan soms gereserveerd of zelfs afwijzend tegenover op integratie gerichte initiatieven. Vaak betreft het religieuze motieven, die tevens verband houden met de angst voor het verlies van eigen culturele identiteit en onafhankelijkheid. Deze angst wordt niet zelden gevoed door orthodox-islamitische landen en groeperingen, die organisatorisch en financieel een dam pogen op te werpen tegen wat gezien wordt als verwatering en teloorgang van de islamitische cultuur en religie.

Het vermoeden van het bestaan van relaties tussen criminele bendes en moskeebesturen heeft het afgelopen jaar in brede kring bezorgdheid gewekt, omdat dergelijke banden een zeer schadelijke uitwerking zouden kunnen hebben op het integratieproces van de moslims in de Nederlandse samenleving. De behoefte was dan ook groot om het waarheidsgehalte van dergelijke in de media geuite beschuldigingen te onderzoeken, temeer omdat steeds meer overheden en instanties juist in islamitische organisaties een bondgenoot hopen te vinden in het

uitdragen van normbesef en het terugdringen van criminaliteit onder allochtonen. Om die reden werd besloten om in het kader van het interdepartementale project Criem (Criminaliteit en integratie van etnische minderheden) onderzoek te doen naar de kwetsbaarheid van islamitische organisaties.

Vastgesteld moest worden dat de weerbaarheid van met name Marokkaanse moskee-organisaties tegen ongewenste inmenging op belangrijke punten tekort schiet. Zij kampen met onvoldoende financiën, gebrek aan bestuurskracht en administratieve onvolkomenheden als gevolg van een niet-professionele bedrijfsvoering. De meeste Turkse organisaties daarentegen worden gekenmerkt door een hoge organisatiegraad, de beschikbaarheid van gekwalificeerd kader, een over het algemeen gezonde financiële huishouding en een redelijke mate van toezicht hierop. Dit rechtvaardigt de conclusie dat ten aanzien van de Turks-islamitische organisaties sprake is van een geringe kwetsbaarheid voor criminele organisaties of buitenlandse mogelijkheden.

In het algemeen lijken de mogelijkheden en de bereidheid van islamitische organisaties om door de Nederlandse overheid betrokken te worden bij het terugdringen van en het weerbaar maken tegen criminaliteit beperkt. Bestuurders -hoofdzakelijk behorend tot de eerste generatie- en imams zijn nog onvoldoende toegerust om antwoorden aan te reiken op vragen over de ernstige sociaal-maatschappelijke problemen waarmee grote groepen geloofsgenoten worstelen.

De volop florerende neutraliseringstechnieken, in het bijzonder de neiging om de verantwoordelijkheid voor de problemen volledig neer te leggen bij de Nederlandse overheid of politiek-extremistische groeperingen vormen een belemmering voor samenwerking. Complicerende factor in het geheel vormt de invloed die vanuit de moederlanden (door overheid, politieke partijen, geestelijke leiders) wordt uitgeoefend op de organisaties in Nederland. De belangen van deze buitenlandse actoren in het binnenlandse krachtenveld sporen lang niet altijd met die van de Nederlandse samenleving in het algemeen of van de etnische minderheidsgroepen hier te lande in het bijzonder.

2.2 (Internationaal) georganiseerde criminaliteit

De BVD onderzoekt in hoeverre activiteiten van criminele organisaties afbreuk doen aan de integriteit van staat en samenleving. Daarbij gaat het niet alleen om een (mogelijke) verstrengeling van onderwereld en bovenwereld in Nederland. De grensoverschrijdende effecten van de georganiseerde criminaliteit nopen de BVD ook tot het bestuderen van ontwikkelingen rond criminele organisaties in het buitenland, die direct of indirect hun weerslag kunnen hebben op de Nederlandse situatie. Onverminderd wordt daarbij vastgehouden aan het uitgangspunt dat de opsporing en vervolging van criminelen de verantwoordelijkheid is van het Openbaar Ministerie, de politie en de bijzondere opsporingsdiensten.

2.2.1 Onderzoek naar vormen van criminaliteit

Unit Synthetische Drugs (USD)

In september 1996 kondigde de Nederlandse regering in de 'Voortgangsrapportage drugbeleid' de formatie aan van een aparte eenheid voor de landelijke coördinatie en de uitvoering van de opsporing inzake de productie van en handel in XTC en andere synthetische drugs. De eenheid Unit Synthetische Drugs (USD) werd samengesteld uit vertegenwoordigers van bijzondere opsporingsdiensten, zoals de Koninklijke marechaussee en politie. Omdat de BVD geen opsporingsdienst is, zal hij niet in de eenheid participeren, maar uitsluitend een bijdrage leveren aan de informatievoorziening.

De USD heeft de eerste helft van 1997 benut voor het verrichten van voorbereidende activiteiten. De BVD heeft in die periode verkennende gesprekken gevoerd met de USD om te komen tot een eerste afbakening van de rol die de BVD ten behoeve van de USD kan spelen. De BVD zal zich met name toeleggen op het verzamelen van informatie van buitenlandse zusterdiensten over gesignaleerde trends en ontwikkelingen en andere strategische informatie over de productie van synthetische drugs in het buitenland en de aanvoer van grondstoffen naar Nederland.

Contra-strategieën

Op basis van informatie van het Openbaar Ministerie en de politie is de BVD enkele zelfstandige onderzoeken gestart naar gevallen van (offensieve) contra-strategieën door criminele organisaties. In algemene zin worden

hieronder verstaan: pogingen van criminele organisaties om het proces van opsporing en vervolging te verstoren door middel van contra-observatie, corruptie, intimidatie en andere vormen van bedreiging van politie en justitie. In deze onderzoeken staat de vraag centraal of en op welke wijze de (mogelijk) betrokken criminelen bereid zijn door de toepassing van geweld de strafrechtelijke aanpak van criminele activiteiten te ondermijnen. Voorts moet het onderzoek het bevoegd gezag in staat stellen zonedig passende tegenmaatregelen te nemen.

Naast enkele concrete onderzoeken is de BVD tegen het einde van 1997 ook een algemene inventarisatie gestart van recente gevallen van contra-strategieën van criminele organisaties. De inventarisatie vindt plaats aan de hand van gesprekken met vertegenwoordigers van het Openbaar Ministerie, de politie, bijzondere opsporingsdiensten en andere materie-deskundigen, waar mogelijk aangevuld met dossieronderzoek. De uitkomsten van de inventarisatie dienen meer inzicht te verschaffen in contra-strategieën als fenomeen en de daarbij betrokken criminele organisaties. Daarnaast moet de inventarisatie licht werpen op de ernst en de omvang van de bedreiging van een ongestoord verloop van de normale rechtsgang.

Taskforce mensensmokkel

Op 24 oktober 1997 besloot het kabinet tot de oprichting van een taskforce voor het tegengaan van georganiseerde mensensmokkel onder leiding van het Openbaar Ministerie en de Immigratie- en Naturalisatiedienst. In het besluit worden bijdragen voorzien van het ministerie van Buitenlandse Zaken, het Korps Landelijke Politiediensten, de Koninklijke marechaussee, de politie en de BVD. Bij de formatie van de taskforce is nader bepaald dat de BVD met de andere participanten zitting zal nemen in het Afstemmingsoverleg Mensensmokkel (AOM), dat de uitwisseling en de uitwerking van informatie verzorgt.

De BVD zal zijn onderzoek naar georganiseerde vormen van mensensmokkel vooral concentreren op de activiteiten van de (internationale) georganiseerde criminaliteit, buitenlandse inlichtingendiensten en politiek of religieus extreme organisaties. Daarnaast zal de BVD zijn contacten intensiveren met buitenlandse zusterdiensten die ook actief zijn bij het tegengaan van mensensmokkel. Dit om informatie te verwerven die van belang kan zijn voor de taskforce als geheel of de daarin participerende organisaties.

Russische georganiseerde criminaliteit

Het uiteenvallen van de voormalige USSR en het verdwijnen van de daarmee verbonden gezagsstructuren is in Rusland (en in andere GOS-republieken) gepaard gegaan met een explosieve groei van de georganiseerde criminaliteit. Van de economische hervormingen, waarbij op grote schaal privatisering plaatsvond, blijken de oude communistische nomenklatura en de criminele organisaties te hebben geprofiteerd. Zij hebben hun posities geconsolideerd en waar mogelijk versterkt. Er is sprake van connecties tussen de politiek, het bedrijfsleven en de criminaliteit.

De economische problemen, die ook gepaard gaan met een toenemende destabilisering van de samenleving, bieden criminele organisaties een klimaat waarin zij hun activiteiten en invloed steeds verder kunnen uitbreiden. De (al tijdens het communistisch regime) bestaande cultuur van corruptie in de Russische samenleving en het tekort aan financiële middelen maken dat de organen die met misdaadbestrijding zijn belast grote problemen hebben om deze ontwikkeling het hoofd te bieden.

De expansie van de georganiseerde criminaliteit doet zich in toenemende mate ook in het buitenland gevoelen, omdat Russische criminele organisaties steeds vaker grensoverschrijdend opereren. Voor de BVD was dit in 1997 aanleiding een verkennend onderzoek te starten naar de Russische georganiseerde misdaad in Nederland. Dit onderzoek concentreert zich met name op de vermeende verwevenheid tussen de Russische overheid en de Russische georganiseerde misdaad, alsmede op mogelijke integriteitsaantasting van de Nederlandse samenleving.

Criminaliteit en etnische minderheden (Criem)

De participatie van de BVD in het project van de ministeries van Justitie en Binnenlandse Zaken, dat de relatie heeft onderzocht tussen criminaliteit en etnische minderheden, is in 1997 afgerond. In het kader van het project richtte de aandacht van de BVD zich vooral op de (mogelijke) kwetsbaarheid van (leden van) islamitische organisaties in Nederland voor internationale beïnvloeding en infiltraties door criminele organisaties en personen. De BVD heeft een bijdrage geleverd aan de eindrapportage van Criem, die inmiddels met de Tweede Kamer is besproken (zie ook paragraaf 2.1.3).

2.3 Terrorisme en ander politiek geweld

2.3.1 Radicale islamitische organisaties

Iran: Mujahedin-e Khalq

De Iraanse gewapende oppositiegroepering Mujahedin-e Khalq (MEK) is in oktober 1997 in de Verenigde Staten tot verboden organisatie verklaard wegens vermeende terroristische activiteiten. De MEK is daarop in de VS ondergronds gegaan. Als reactie op de gebeurtenissen in de VS, hebben ook in Nederland partijbijeenkomsten van de MEK plaatsgevonden.

Algerije: GIA en FIS

Mede verantwoordelijk voor de voortgaande terreur in Algerije is de extremistische Groupe Islamique Armé (GIA), die iedere vorm van dialoog met de Algerijnse machthebbers afwijst en zich niet gebonden acht aan het vredesinitiatief van het Front Islamique du Salut (FIS). Hoewel in Frankrijk en België menige GIA-cel werd ontmanteld, worden in Europa nog steeds actieve GIA-aanhangers -onder meer vanuit Londen- aangestuurd om hun bijdrage aan de strijd in Algerije te continueren. Ook in Nederland onderhouden Noord-Afrikaanse GIA-sympathisanten nauwe banden met geestverwanten in en buiten Nederland.

De staakt-het-vurenverklaring van het FIS heeft overigens tot onenigheid en afsplitsingen geleid binnen het FIS-leiderschap in Europa. De verklaarde tegenstanders koesteren sympathieën voor en onderhouden banden met de Algerijnse GIA.

Egypte: al-Jama'a al-Islamiyya

Ook in Egypte werd, in juli 1997, door zes in gevangenschap verkerende 'historische' leiders van de extremistische groepering al-Jama'a al-Islamiyya (AJAI) een staakt-het-vuren afgekondigd. Dit initiatief leidde tot afwijzende reacties van in het buitenland verblijvende leiders van de groepering, de zogenoemde Afghanistan-veteranen. Daarmee leken de eerste tekenen van een splitsing binnen de AJAI-gelederen zichtbaar te worden. De bloedige aanslag op (buitenlandse) toeristen in Luxor, in november 1997, werd desondanks in verklaringen van AJAI-leiders in Egypte en in het buitenland vrijwel unaniem veroordeeld.

Een in ons land verblijvende representant van AJAI verklaarde dat de aanslag een eigen initiatief was van de AJAI-broeders in Egypte en dat niemand van de leiders in het buitenland opdracht had gegeven tot de uitvoer ervan. De verklaring was mede bedoeld als reactie op de door de Egyptische president Mubarak geuite beschuldigingen aan het adres van landen als Groot-Brittannië, Afghanistan en ook Nederland, asiel en bewegingsvrijheid te bieden aan 'terroristen'.

2.3.2 *Revolutinaire Volksbevrijdingspartij-Front (DHKP-C, Devrimci Halk Kurtulus Partisi-Cephesi)*

Het afgelopen jaar is het relatief rustig geweest rondom de Turkse linkse groepering DHKP-C. De reeds enige jaren geconstateerde afname van politieke activiteiten zette zich verder door. Voornamelijk oorzaak daarvan is het uiteenvallen van de voormalige moederorganisatie Dev Sol in twee elkaar beconcurrerende vleugels waarvan in Nederland slechts één, de DHKP-C, vertegenwoordigd is. Er zijn aanwijzingen dat de DHKP-C in het kader van de fondsenwerving contacten onderhoudt in het Turkse criminele milieu.

Alhoewel de dreiging van geweldadige acties de afgelopen jaren sterk is afgenomen, blijft de BVD gelet op het onvoorspelbare karakter van de groepering alert op signalen die duiden op een wederopleving van deze organisatie.

2.3.3 *Koerdische Arbeiderspartij (PKK, Partiyê Karkerên Kurdistan)*

In het voorjaar van 1997 deden zich enkele incidenten voor die zorgden voor een snel oplopende spanning tussen de Turkse en Koerdische bevolkingsgroepen in ons land.

Voornaamste katalysator van deze spanningen vormde een drietal brandstichtingen in Den Haag in maart 1997. Twee brandaanslagen werden gepleegd door personen waarvan kon worden vastgesteld dat zij sympathiseerden met de PKK. De derde zaak, waarbij zes doden vielen, betrof een familievete. De aanslagen veroorzaakten in de weken erna veel onrust in de Turkse gemeenschap en slechts door ingrijpende bestuurlijke maatregelen kon worden voorkomen dat het tot een gewelddadig treffen kwam tussen Turken en Koerden.

De BVD heeft door het verstrekken van informatie een bijdrage kunnen leveren aan het beheersen van de tegenstellingen binnen de Turkse gemeenschap. Die informatie diende als ondersteuning, zowel bij de opheldering van de achtergronden rond de aanslagen, als bij het

preventief optreden van de bestuurlijke en justitiële autoriteiten in de periode daarna.

Evenals in 1996 heeft de PKK in West-Europa in 1997 veel aandacht gegeven aan diplomatieke en politieke activiteiten. Daarnaast waren er ook negatieve signalen betreffende het (dreigen met) gebruik van geweld jegens dissidenten en jegens onwillige contribuanten in de jaarlijkse financiële campagne. Ook dit jaar waren er onmiskenbare aanwijzingen dat de PKK profiteert van de opbrengst van handel in verdovende middelen. Tot dusverre ontbreken echter aanwijzingen dat de organisatie direct verantwoordelijk is voor handel en doorvoer van narcotica uit Turkije.

2.3.4 Turks extreem-nationalisme

De afgelopen jaren lieten zien dat de rechterzijde van het Turkse politieke spectrum, die extreem-nationalistisch van karakter is, zich hergroepeerde en meer naar buiten wenste te treden. De eerste indicaties daarvan waren de felle en massale reacties van nationalistisch ingestelde Turken ten tijde van de oprichting van het Koerdisch parlement in ballingschap in Den Haag (april 1995). Uit de gebeurtenissen die volgden op de brandaanslagen in Den Haag in maart 1997 bleek verder dat Turks extreem-nationalistische elementen op soms provocatieve wijze inspeelden op de onlustgevoelens binnen de Turkse gemeenschap. Daarmee dreigde de aanwezigheid van een extreem-nationalistische stroming binnen de Turkse gemeenschap uit te groeien tot een zelfstandige polariserende factor binnen deze gemeenschap. De, weliswaar niet openlijk beleden, doelstelling van onder andere de nationalistische Grijze Wolven staat haaks op het integratiebeleid van de Nederlandse overheid. Naar aanleiding van alle commotie rondom het verschijnen van het door twee journalisten geschreven boek 'Grijze Wolven. Een zoektocht naar Turks extreem rechts', heeft de minister van Binnenlandse Zaken benadrukt dat de BVD alert zal zijn op alle strevingen van politieke-extremistische aard die de rechtsorde en de cohesie van de samenleving kunnen bedreigen. Het is om bovenstaande redenen dat de BVD ook de komende jaren de ontwikkelingen binnen de Turkse extreem-nationalistische stroming nauwlettend blijft volgen.

2.3.5 Noord-Ierse terreurorganisaties

Na de hervatting van haar gewelddadige acties in 1996 legde de IRA in 1997 opnieuw de wapens neer. In september werd de IRA door Sinn

Fein vertegenwoordigd bij de onderhandelingen met de loyalistische tegenstanders over de toekomstige status van Noord-Ierland. Kleine splinterpartijen van zowel republikeinse als loyalistische origine trachtten eind 1997, begin 1998 door bloedige moordaanslagen de besprekingen te laten mislukken en zo een terugkeer van het geweld af te dwingen. Dat was aanleiding tot verscherpte beveiligingsmaatregelen. Ook in Nederland, dat in het verleden vaker heeft gediend als uitvalsbasis voor acties tegen Britse doelen in Duitsland, werden extra maatregelen getroffen.

2.3.6 Terrorismedreiging in de Europese Unie

Met betrekking tot de dreiging van terrorisme in de Europese Unie wordt kortheidshalve verwezen naar paragraaf 3.4.

2.3.7 Gewelddadig activisme

In het begin van 1997 kwam het tot een definitieve breuk binnen de gelederen van RaRa. Daardoor kwam het niet tot enige vorm van activiteit. Andere activisten maakten zich op om de Eurotop van 16 en 17 juni in Amsterdam te verstoren. De BVD heeft ruim van te voren een risico-analyse vervaardigd en doen uitgaan. Vervolgens is aan de lokale autoriteiten geadviseerd.

Acties van de kant van milieu-activisten waren in 1997 in hoofdzaak ludiek. Bij enkele gelegenheden werden vreedzame bezettings- en blokkade-acties uitgevoerd.

De eerder verwachte radicalisering binnen de milieubeweging heeft zich tot op heden niet doorgezet. De twee 'Earth Nights', de door het Earth Liberation Front (ELF) uitgeroepen actieweken, leverden enkele kleinschalige vernielingen op. Het ELF behoudt vanwege de politieke en ideologische onderbouwing van zijn acties de aandacht van de BVD.

2.4 Proliferatie van massavernietigingswapens en conventionele wapenhandel

De proliferatie van massavernietigingswapens en de illegale handel in conventionele wapens vormen een bedreiging van de internationale vrede en veiligheid en staan daarom hoog op de internationale politieke agenda. De BVD levert door onderzoek en informatieverstrekking een bijdrage aan wapenbeheersing. In dit kader wordt nauw samengewerkt met de MID.

2.4.1 Proliferatie van massavernietigingswapens

De BVD ondersteunt het Nederlands beleid gericht tegen de verdere verspreiding van massavernietigingswapens en hun overbrengingsmiddelen. De BVD-activiteiten omvatten het onderkennen van pogingen om in of via Nederland technologie, materiaal of kennis te bemachtigen ten behoeve van dergelijke wapenprogramma's. Daarnaast worden gegevens uitgewisseld met buitenlandse partners.

De BVD voorziet het ministerie van Buitenlandse Zaken van informatie over landen die streven naar het opbouwen van een nucleair, biologisch en/of chemisch wapenarsenaal met bijbehorende raketssystemen. Die kennis draagt mede bij tot de Nederlandse standpuntbepaling in internationaal overleg op het terrein van wapenbeheersing, of de opstelling van Nederland naar individuele landen. Aan het ministerie van Economische Zaken verstrekt de BVD niet alleen algemene, beleids-ondersteunende informatie, maar wordt ook advies uitgebracht met het oog op concrete besluitvorming over de afgifte van exportvergunningen. Daar waar de BVD stuit op vermoedelijke overtredingen van de exportwetgeving worden de justitiële instanties ingelicht. Ook worden daar waar nodig Nederlandse bedrijven en de wetenschappelijke wereld gealerteerd.

Het groeiende bewustzijn van de proliferatieproblematiek leidde tot verscherpte exportcontrole in de vorm van adequatere wetgeving, uitgebreidere lijsten van onder controle staande goederen en een versterking van het controle-apparaat. (Non-) proliferatie werd een van de voornaamste taakvelden voor veel inlichtingen- en veiligheidsdiensten.

Naar aanleiding van de Golfoorlog en hetgeen bekend werd over leveringen uit het Westen ten behoeve van de aanmaak van massavernietigingswapens in Irak, is de controle op de export van apparatuur en grondstoffen aanzienlijk aangescherpt. Tevens werd meer aandacht geschonken aan de overdracht van essentiële kennis voor de aanmaak van dergelijke wapens, de zogeheten immateriële technologie-overdracht.

De BVD richtte de aandacht in 1997 primair op de meest actieve landen die in Nederland goederen verwerven ten behoeve van programma's voor massavernietigingswapens, te weten Iran, Irak, Libië en Pakistan.

Daarbij verloor de BVD de in Nederland ontplooiden activiteiten van andere potentiële risicolanden in het Midden-Oosten, Noord-Afrika en Azië (waaronder India) overigens niet uit het oog.

Irak

Irak was dankzij de leveringen van apparatuur en grondstoffen uit de geïndustrialiseerde wereld in staat een omvangrijk productie-apparaat op te bouwen voor de aanmaak van onder meer chemische en biologische wapens.

De Iraakse massavernietigingswapens zijn voor het grootste deel vernietigd, dankzij het werk van UNSCOM, de speciale commissie van de VN die op de ontmanteling van de Iraakse programma voor massavernietigingswapens toeziet.

Helaas is UNSCOM door tegenwerking van Irak er tot dusver niet in geslaagd ook de laatste resten van dat programma op te ruimen. In de afgelopen twee jaar is daardoor de spanning tussen Irak en UNSCOM hoog opgelopen. Maar zelfs wanneer UNSCOM er in slaagt alle voorraden en productie-apparatuur op te sporen en te vernietigen, beschikt het Iraakse regime nog steeds over de kennis om opnieuw massavernietigingswapens te maken. De VN tracht dat te voorkomen door toezicht op relevante locaties in Irak en controle van de import in dat land. Beide zullen overigens ook na opheffing van de huidige sancties voortduren.

De ervaringen met betrekking tot Irak maken zichtbaar, dat de overdracht van kennis een bijzonder risico op proliferatierrein is. Veel van de kennis waarover Irak op het terrein van massavernietigingswapens beschikt, is afkomstig uit de geïndustrialiseerde wereld. In de jaren zeventig en tachtig studeerden veel Irakezen in met name Groot-Brittannië en de Verenigde Staten. Ook in de voormalige Sovjet-Unie werd veel kennis vergaard. Terwijl de levering van allerlei hardware aan banden is gelegd, zijn op het terrein van de immateriële technologie-overdracht ('intangible technology transfer') nog onvoldoende maatregelen getroffen. Het onderwerp is wel steeds vaker onderwerp van gesprek in allerlei internationale gremia, onder meer in EU-verband.

De BVD verricht nader onderzoek naar relevante kennisoverdracht vanuit Nederland naar de diverse risicolanden.

Iran

Iran gaat onverminderd verder met de op- en uitbouw van het potentieel van massavernietigingswapens. Daarnaast werkt Iran aan de ontwikkeling van ballistische raketten om deze wapens naar het doel te kunnen voeren. Ook in en via Nederland stelt Iran pogingen in het werk kennis en goederen voor deze wapenprogramma's te vergaren en naar verwachting zal Iran deze activiteiten voortzetten. De BVD zal daarom ook in 1998 zijn aandacht hierop gericht houden.

Libië

Alhoewel Libië internationaal wordt gerekend tot de meest actieve landen op proliferatierrein, lijken de activiteiten gericht op verkrijging van goederen in Nederland enigszins te zijn afgenomen. Desalniettemin blijft de BVD waakzaam voor een mogelijk hernieuwde intensivering van Libische verwervingsactiviteiten in Nederland.

Pakistan

Pakistan intensiveerde de ontwikkeling van ballistische raketsystemen, waarmee de bestaande nucleaire potentie extra kracht kan worden gegeven. Ook in Nederland probeerde Pakistan materiaal te bemachtigen voor het raketprogramma. Verwacht wordt dat Pakistan deze activiteiten zal continueren. De BVD blijft alert op Pakistaanse verwervingspogingen in Nederland.

Internationaal

Vanwege het internationale karakter van de proliferatieproblematiek zette de BVD zijn samenwerking met daarvoor in aanmerking komende zusterdiensten voort. Naast regulier contact met de traditionele samenwerkingspartners, had voor het eerst overleg over non-proliferatie plaats met specialisten van inlichtingen- en veiligheidsdiensten van Jordanië, Marokko, de Russische Federatie, Oekraïne en Turkije.

2.4.2 Ongewenste handel in conventionele wapens

De Nederlandse regering hanteert als uitgangspunt dat bij de uitvoer van conventionele wapens terughoudendheid moet worden betracht. Voorts wordt gestreefd naar grotere transparantie van internationale wapenstromen. Illegale wapenstromen, met name naar politiek ongewenste bestemmingen, krijgen eveneens de aandacht. De BVD ondersteunt de werkzaamheden van de verantwoordelijke ministeries van Economische Zaken en Buitenlandse Zaken door het verzamelen van

informatie over de betrokkenheid van Nederlandse handelaren en bedrijven bij ongewenste handel in conventionele wapens. Daarnaast onderzoekt de BVD de (mogelijke) Nederlandse betrokkenheid bij de wapenvoorziening aan politiek extremistische groeperingen.

Internationale samenwerking

Om de handel in conventionele wapens te beperken en transparant te maken, participeert Nederland in diverse internationale samenwerkingsverbanden. Een belangrijk forum is het 'Wassenaar Arrangement' (WA). Het WA kwam in december 1995 tot stand en vulde een leemte die was ontstaan door de opheffing in 1994 van internationale afspraken die nog uit de tijd van de Koude Oorlog stamden. Het WA heeft als doel destabiliserende accumulaties van conventionele wapens en dual use goederen te voorkomen en zo internationale veiligheid en stabiliteit te bevorderen. Het WA-overleg telt momenteel 33 deelnemende landen, waaronder de Verenigde Staten, de Russische Federatie, het Verenigd Koninkrijk en Frankrijk.

Waar mogelijk voorziet de BVD de ministeries van Economische Zaken en Buitenlandse Zaken van informatie die van belang kan zijn voor de Nederlandse standpuntbepaling in WA-verband en bij ander internationaal overleg op dit terrein.

2.5 Spionage

Verschillende buitenlandse inlichtingendiensten zijn in Nederland actief en hun handelen verdraagt zich niet met Nederlandse belangen. In paragraaf 2.1.2 is aandacht besteed aan de bemoeienis van buitenlandse inlichtingendiensten met in Nederland verblijvende bevolkingsgroepen van buitenlandse afkomst. In deze paragraaf wordt ingegaan op de 'klassieke' spionage van de Russische inlichtingendiensten en op het verschijnsel economische spionage dat wereldwijd opgeld doet.

2.5.1 Russische inlichtingendiensten

De BVD richt zich evenals de MID -en waar nodig gezamenlijk- op het tegengaan van activiteiten van Russische inlichtingen- en veiligheidsdiensten in ons land die een risico vormen voor Nederlandse en bondgenootschappelijke belangen. Naast conflicterende zijn er echter ook gemeenschappelijke belangen met de Russische diensten,

bijvoorbeeld als het gaat om het tegengaan van internationale wapenhandel en internationaal georganiseerde criminaliteit. Op een aantal terreinen is een basis gelegd voor samenwerking (zie ook paragraaf 3.3.2).

De Russische inlichtingen- en veiligheidsdiensten staan voor het grootste deel onder gezag en controle van de president en vervullen deels overlappende taken. Van de diensten die belast zijn met het bewaken van de binnenlandse veiligheid is de Federale Veiligheidsdienst FSB de grootste. Naast contraspionage wordt vooral aandacht besteed aan de bestrijding van de georganiseerde misdaad en terrorisme. De FSB beschikt over ruime executieve bevoegdheden. De dienst neemt een offensieve houding aan tegenover de vertegenwoordigingen van westerse inlichtingendiensten en westerse gouvernementele en niet-gouvernementele organisaties in Rusland. Deze worden regelmatig beschuldigd van aantasting van Ruslands nationale belangen. In dit kader deed de FSB een oproep in de Russische media aan Russische agenten van buitenlandse inlichtingendiensten om zich te melden bij de FSB als dubbel-agent. De betrokkenen zouden als beloning hun financiële vergoedingen van buitenlandse diensten mogen behouden en niet worden vervolgd of strafvermindering krijgen.

Van de diensten met een buitenlandse inlichtingentaak manifesteren zich in het buitenland met name de buitenlandse inlichtingendienst SVR en de militaire inlichtingendienst, het GRU. De SVR speelt een belangrijke rol bij de beleidsvorming op het gebied van de buitenlandse politiek. De dienst heeft tot taak inlichtingen in te winnen op politiek, economisch en technisch-wetenschappelijk gebied. Het GRU heeft als primaire taak informatievergaring op militair terrein. Daarnaast richt deze dienst zich eveneens op het vergaren van politieke, technisch-wetenschappelijke en economische informatie.

2.5.2 Economische spionage

In de loop van 1997 begonnen in de Verenigde Staten de eerste economische spionage-processen. De aangeklaagden worden ervan verdacht gespioneerd te hebben ten behoeve van Taiwan.

Deze procedures zijn mogelijk geworden door de goedkeuring door het Amerikaanse Congres van de Economic Espionage Act eind 1996. In navolging van landen als de Verenigde Staten zagen ook kleinere landen aanleiding over te gaan tot bijstelling van wetgeving, alsmede

van het takenpakket van hun veiligheidsdienst teneinde beter het hoofd te kunnen bieden aan economische spionage.

Tegelijk kregen inlichtingendiensten de taak om ook in offensieve zin informatie te verzamelen, met het oog op de economische positie van het eigen land. Ook hier volgen kleinere landen meer en meer het voorbeeld van de grote. Zo verwacht de BVD bijvoorbeeld dat de valuta- en beurscrises in Azië tijdens de tweede helft van 1997 voor menige inlichtingendienst uit die regio aanleiding zullen zijn tot verhoogde activiteit op economisch terrein.

In de loop van het jaar sprak de BVD met enkele Nederlandse bedrijven, die bij hun optreden in het buitenland herhaaldelijk geconfronteerd worden met diefstal van beschermde informatie.

Ook in 1997 werd met het ministerie van Economische Zaken overleg gepleegd over de aandacht die de BVD aan dit onderwerp dient te besteden. Het overleg zal in 1998 worden voortgezet.

2.6 Integriteit van de openbare sector

Bij het waarborgen van de integriteit van de openbare sector heeft de BVD vooral een preventieve taak. De dienst geeft advies en ondersteuning aan overheidsinstanties die hun weerbaarheid tegen fraude, corruptie en dergelijke willen vergroten. Daarnaast beschikt de BVD over een meldpunt voor aantastingen van de integriteit. Naar aanleiding van zo'n melding kan de BVD een onderzoek instellen.

2.6.1 Integriteitsonderzoek

In 1997 werden bij tal van overheidsorganisaties projecten opgezet, die ten doel hebben de integriteit van de organisatie te bevorderen. In een belangrijk aantal gevallen werd daarbij gebruik gemaakt van de handleiding 'Een beetje integer kan niet' die in 1996 door de BVD werd gepubliceerd. De grote belangstelling voor de handleiding heeft ertoe geleid dat in 1997 de tweede en derde druk zijn uitgebracht. Op verzoek kan de BVD in beginsel de opzet en eventueel de uitvoering van het project begeleiden.

In 1997 is de BVD op deze wijze bij de volgende overheidsinstanties betrokken (geweest) bij dergelijke integriteitsonderzoeken:

het ministerie van Buitenlandse Zaken, de provincies Overijssel, Limburg en Drenthe, de gemeenten Hellevoetsluis, Spijkenisse, Rotterdam (dienst Sociale Zaken en Werkgelegenheid) en Amsterdam.

Het integriteitproject 'Correct of corrupt?' van de gemeente Amsterdam omvat risico-inventarisaties bij alle stadsdelen en diensten. Het project, dat ruim vijftig organisatie-onderdelen van de gemeente Amsterdam omvat, is gestart op 1 november 1997 en duurt twee jaar. De gemeente Amsterdam heeft voor de duur van het project een pool van intern geworven adviseurs samengesteld. Deze adviseurs zijn in 1997 door de BVD opgeleid in het hanteren van de onderzoeksmethodiek en zij ontvangen gedurende het project ondersteuning van BVD-medewerkers. De begeleiding door de BVD vindt derhalve plaats door tussenkomst van de (interne) projectadviseurs.

In 1997 heeft de BVD lezingen verzorgd over aspecten van het onderwerp integriteit. Dit gebeurde tijdens het integriteitscongres van de VNG in Ede, het Congres 'Lokaal Bestuur versus criminele beïnvloeding' op de Erasmus Universiteit in Rotterdam en de startconferenties van de integriteitsprojecten van de gemeenten Amsterdam en Rotterdam, en het ministerie van Buitenlandse Zaken.

Daarnaast is met het oog op integriteitspreventie deelgenomen aan de departementale werkgroep Integriteit van het ministerie van Binnenlandse Zaken, de interdepartementale werkgroep Antecedentenonderzoek, het interdepartementaal overleg Contactpersonen Integriteit en de interdepartementale werkgroep Vertrouwensfuncties Politie.

In 1998 zal de BVD ook bij de gemeente Rotterdam assistentie en begeleiding verlenen bij een gemeentebrede risico-inventarisatie in het kader van het project 'Integer handelen'. Deze activiteit sluit aan bij het begeleidingstraject dat reeds in 1997 is gestart bij de dienst Sociale Zaken en Werkgelegenheid van de gemeente Rotterdam.

2.6.2 Meldpunt voor integriteitsaantastingen

Het meldpunt voor integriteitsaantastingen bij de BVD ontving vierentwintig meldingen. Hiervan waren aan het eind van 1997 negen meldingen nog in onderzoek. Net als het voorgaande jaar hadden de meldingen voornamelijk betrekking op (vermoedelijke) integriteitsaantastingen bij semi- en rijksoverheid. Hierbij ging het

Figuur 1 Herkomst meldingen integriteit

| Herkomst meldingen | 1996 | 1997 |
|--------------------|-----------|-----------|
| Overheid | 8 | 4 |
| Politie | 3 | 5 |
| Burgerij | 12 | 14 |
| Bedrijfsleven | - | - |
| Anoniem | 1 | 1 |
| Anders | 1 | - |
| | ----- | ----- |
| Totaal | 25 | 24 |

veelal om fraude, corruptie, andere strafbare gedragingen en onoorbaar gedrag. Naar tien meldingen werd door de BVD geen nader onderzoek verricht omdat zij reeds in behandeling waren (geweest) bij een justitiële opsporingsdienst, het niet de openbare sector betrof of omdat de afhandeling behoorde tot de competentie van de leiding van de betreffende instantie. De overige vijf meldingen gaven voldoende aanleiding voor het instellen van een feitenonderzoek.

Uit bovenstaande tabel blijkt dat het totaal aantal meldingen vrijwel hetzelfde is gebleven. Het aantal meldingen door burgers is enigszins toegenomen, terwijl het aantal vanuit de overheid is gehalveerd. Dit laatste lijkt een gevolg van het feit dat steeds meer overheidsinstanties overgaan tot het zelf benoemen van meldpunten en vertrouwenspersonen.

2.7 Beveiligingsbevordering

De BVD heeft tot taak de beveiliging te bevorderen. In deze paragraaf wordt ingegaan op de verschillende sectoren waarop deze taak zich richt en op de veiligheidsonderzoeken die de BVD in dit kader uitvoert.

2.7.1 Informatiebeveiliging

De BVD heeft zowel in nationaal als in internationaal verband veel energie gestoken in de ontwikkelingen rond 'Trusted Third Parties' (TTP's), betrouwbare organisaties die cryptografische beveiligings-

diensten aanbieden. Met de opkomst van 'electronic commerce' (het handeldrijven via Internet) ontstaat een groeiende behoefte aan veilig berichtenverkeer. Cryptografie speelt hierbij een belangrijke rol, zowel als het gaat om de bescherming van de integriteit en de authenticiteit als om de bescherming van de vertrouwelijkheid van de gegevens. Het gebruik van cryptografie ter bescherming van de vertrouwelijkheid kan de nationale veiligheid schaden, indien de inlichtingen- en veiligheidsdiensten bij de uitvoering van hun taak geen toegang zouden kunnen krijgen tot versleutelde gegevens.

De inspanningen van de BVD zijn gericht op het vinden van een balans tussen de belangen van privacybescherming en geheimhouding van kwetsbare gegevens enerzijds en die van rechtshandhaving en nationale veiligheid anderzijds. TTP's kunnen hierop een antwoord zijn als betrouwbare organisaties die gebruikers diverse cryptografische diensten aanbieden, maar zo nodig, en op basis van een wettelijke last, moeten meewerken bij het decrypteren (ontsleutelen) van berichtenverkeer. Gezien het internationale karakter van 'electronic commerce' is internationale samenwerking en afstemming over het te voeren beleid meer en meer noodzakelijk.

De BVD adviseert over het beleid voor de beveiliging van informatie in twee interdepartementale commissies: het Informatiebeveiligingsberaad en het Bijzonder Informatiebeveiligingsberaad (in oprichting). Het Informatiebeveiligingsberaad richt zich op de algemene informatiebeveiliging. Het Bijzonder Informatiebeveiligingsberaad richt zich op de beveiliging van die informatie die van belang is voor de democratische en justitiële rechtsorde, dan wel voor de veiligheid of voor andere gewichtige belangen van de staat.

In 1997 heeft het Bijzondere Informatiebeveiligingsberaad een daadwerkelijke aanvang gemaakt met een beleidsmatige aanpak van de bijzondere informatiebeveiliging. De BVD heeft daaraan een bijdrage geleverd. In het Informatiebeveiligingsberaad vervult de BVD een brugfunctie tussen de twee gebieden van de informatiebeveiliging. De ontwikkelingen op deze twee gebieden moeten elkaar immers waar mogelijk versterken.

Naast voornoemde activiteiten die voornamelijk beleidsmatig van karakter zijn, werden beveiligingsadviezen verstrekt aan organisaties die over staatsgeheimen of anderszins kwetsbare informatie beschikken.

Tevens werd gestart met het ontwikkelen van een methodiek waarmee de effectiviteit van beveiligingsmaatregelen van een organisatie in de praktijk kan worden getoetst.

2.7.2 Vitale sectoren

De BVD participeert in het interdepartementale proces, dat wordt geleid door het Nationaal Coördinatiecentrum bij het ministerie van Binnenlandse Zaken, om te komen tot actualisering van de lijst van vitale ondernemingen en instellingen. Een conceptlijst nadert zijn voltooiing. Vooruitlopend hierop beraadt de BVD zich over de invulling van zijn beveiligingsbevorderende taak bij de bedrijven en instanties op de nieuwe lijst.

Het vitale karakter van de burgerluchtvaart komt onder meer tot uitdrukking in een aanzienlijk aantal vertrouwensfuncties, met als gevolg dat in die sector ook een aanzienlijk aantal veiligheidsonderzoeken moet worden ingesteld. Voor de uitvoering hiervan zijn in de loop van 1997 met de Koninklijke marechaussee nadere procedure-afspraken gemaakt.

In het kader van het projectprogramma Crisisbeheer van het ministerie van Economische Zaken vindt overleg plaats over het vitale karakter van de energieproductie- en distributiebedrijven. Inmiddels is een concrete aanzet gegeven voor een herijking van de aanpak van beveiligingsbevordering binnen deze sector.

2.7.3 Overheidsinstanties en (defensie-order) industrie

De BVD treedt op als National Security Authority (NSA) voor de NAVO en WEU. In dit kader zijn in 1997 NAVO- en WEU-inspecties uitgevoerd bij het ministerie van Volkshuisvesting, Ruimtelijke Ordening en Milieubeheer en bij het ministerie van Buitenlandse Zaken (inclusief de Nederlandse diplomatieke vertegenwoordigingen in Washington, Parijs, Wenen en bij de NAVO).

Indien gerubriceerde informatie (staatsgeheimen of NAVO- en WEU-gerubriceerde informatie) buiten de overheid moet worden gebracht, bijvoorbeeld in het kader van een defensie-opdracht, dan dienen waarborgen aanwezig te zijn dat die informatie op de juiste wijze wordt behandeld. De BVD adviseert, in geval van een defensie-opdracht in nauwe samenwerking met het bureau Industrieveiligheid van de MID, de betreffende bedrijven en instellingen over het treffen van de vereiste

beveiligingsmaatregelen. Voorts stelt de BVD naar de betrokken medewerkers in die bedrijven en instellingen veiligheidsonderzoeken in (zie paragraaf 2.7.5). In 1997 zijn, gedeeltelijk in samenwerking met de MID, inspecties uitgevoerd bij HSA Hengelo, Koninklijke Schelde Maritiem BV, TNO Preventie en Gezondheid, TNO Fysisch Elektronisch Laboratorium, TNO Prins Maurits laboratorium, TNO Defensie Onderzoek, TNO Technische Menskunde en de Distributie Autoriteit TNO.

In 1997 heeft de BVD in samenwerking met de MID voor circa 115 defensie-orderbedrijven drie voorlichtings- en informatiedagen georganiseerd over actuele ontwikkelingen op het gebied van internationale veiligheid en beveiligingsaangelegenheden.

Met het oog op een goede coördinatie van en informatie-uitwisseling over beveiligingsaangelegenheden woont de BVD de vergaderingen bij van de Contactkring van Beveiligingsambtenaren. Als NSA neemt de BVD, in samenwerking met de MID, deel aan de vergaderingen van het WEU Security Committee, NATO Security Committee en de Multi-national Industrial Security Working Group. Voorts vond op bilateraal niveau overleg plaats met de NSA's van Duitsland, het Verenigd Koninkrijk en Italië.

2.7.4 Internationale instellingen

De BVD verstrekt beveiligingsadviezen aan in Nederland gevestigde internationale instellingen. In het afgelopen jaar werden adviezen verstrekt aan onder meer het Joegoslavië-tribunaal en aan de Organization for the Prohibition of Chemical Weapons (OPCW), beide gevestigd in Den Haag.

Bij het Joegoslavië-tribunaal waren de toegenomen risico's voor de veiligheid het gevolg van de komst naar Nederland van een groot aantal verdachten. Ook het gebruik van geweld bij sommige arrestaties verhoogde de risico's.

De risico's voor Nederland zijn niet alleen een gevolg van het feit dat Nederland gastheer is van het VN-tribunaal, maar ook van de aanwezigheid van Nederlandse militairen in Bosnië-Herzegovina. De beslissing van het Openbaar Ministerie om zelfstandig oorlogsmisdadigers uit voormalig Joegoslavië te vervolgen kan eveneens risicoverhogend werken. Deze opeenstapeling van factoren kan niet alleen gevolgen hebben voor de veiligheid van het VN-tribunaal,

maar mogelijk ook voor de veiligheid van Nederlandse vertegenwoordigers in binnen- en buitenland. In 1997 zijn diverse bedreigingen geuit tegen personen die direct of indirect bij het VN-tribunaal zijn betrokken. Daarbij is geen daadwerkelijk geweld gebruikt.

2.7.5 Overige beveiligingsaangelegenheden

Ten aanzien van Urenco Nederland BV vervullen zowel het ministerie van Economische Zaken (afdeling Economische Controledienst/ Nucleaire Beveiliging en Safeguards) als de BVD een beveiligingsbevorderende taak. Dit houdt verband met de aanwezigheid van staatsgeheimen bij dit bedrijf. In de loop van 1997 is overleg gestart teneinde te komen tot een betere afstemming van deze beveiligingszorg.

Voor de organisatorische en fysieke beveiliging van het innameproces van overtollige blanco paspoorten werden aanbevelingen gedaan aan het ministerie van Binnenlandse Zaken.

2.7.6 Veiligheidsonderzoeken

De BVD stelt veiligheidsonderzoeken in naar kandidaten voor vertrouwensfuncties bij de overheid en in het bedrijfsleven. Op 1 februari 1997 trad de Wet veiligheidsonderzoeken in werking. Een van de belangrijke wijzigingen als gevolg van de wet is de besluitvorming over het al dan niet aanstellen van een kandidaat-vertrouwensfunctionaris. De verantwoordelijkheid voor die besluitvorming ligt nu bij de minister van Binnenlandse Zaken, terwijl die voorheen bij de werkgever lag. Verder schrijft de nieuwe wet voor dat besluitvorming binnen acht weken na aanvraag van het onderzoek dient plaats te vinden.

Een overzicht van de aantallen vertrouwensfuncties en ingestelde veiligheidsonderzoeken in 1996 en 1997 is opgenomen in de tabel op de volgende pagina (figuur 2).

Op basis van de verrichte veiligheidsonderzoeken werd in de meeste gevallen een verklaring van geen bezwaar afgegeven. In 397 gevallen leidde de uitkomst van het veiligheidsonderzoek tot de beslissing een verklaring van geen bezwaar niet af te geven. De meeste weigeringen betroffen kandidaten voor een vertrouwensfunctie bij de Luchthaven Schiphol. Van de mogelijkheid, om hun persoonlijke visie te geven op een voornemen tot weigering van een verklaring van geen bezwaar, maakten 48 personen gebruik.

Figuur 2 Vertrouwensfuncties (v.f.) en veiligheidsonderzoeken (v.o.) in 1996 en 1997

| | 1996 | | 1997 | |
|--------------------------------|---------------|---------------|---------------|---------------|
| | v.f. | v.o. | v.f. | v.o. |
| Rijksoverheid ^{1]} | 4.032 | 852 | 4.672 | 899 |
| Defensie-orderbedrijven | 12.210 | 2.722 | 12.117 | 2.460 |
| Vitale bedrijven ^{2]} | 32.618 | 12.960 | 32.237 | 23.380 |
| Diversen ^{3]} | - | 975 | - | 945 |
| Totaal | 48.860 | 17.509 | 49.026 | 27.684 |

1] Exclusief het ministerie van Defensie en de krijgsmacht en de BVD.

2] Het aantal veiligheidsonderzoeken in 1997 is inclusief 22.515 veiligheidsonderzoeken ten behoeve van beveiligingsmaatregelen voor de burgerluchtvaart.

3] Internationale instellingen en zusterdiensten.

De stijging van het aantal vertrouwensfuncties met 640 bij de rijksoverheid wordt veroorzaakt door het aanwijzen van nieuwe vertrouwensfuncties bij de departementen en bij de Regionale Inlichtingendiensten, de Rijksrecherche, het Korps Landelijke Politiediensten, het Openbaar Ministerie en het Landelijk Recherche Team.

De stijging van het aantal ingestelde veiligheidsonderzoeken voor de burgerluchtvaart wordt verklaard door de noodzakelijke poolvorming ten behoeve van de tijdige beschikbaarheid van uitzendkrachten.

In zes gevallen is van de mogelijkheid gebruik gemaakt om ingevolge de Algemene wet bestuursrecht bezwaar te maken tegen de weigering om een verklaring van geen bezwaar af te geven. De minister van Binnenlandse Zaken verklaarde in overeenstemming met de minister van Justitie drie bezwaarschriften ongegrond. Twee bezwaarschriften werden niet-ontvankelijk verklaard. Deze besluiten waren conform het advies van de Hoorcommissie Veiligheidsonderzoeken. Eén in het verslagjaar ingediend bezwaarschrift is nog in behandeling.

Figuur 3 Resultaten veiligheidsonderzoeken 1997

| | Aantal veiligheidsonderzoeken | Verklaring van geen bezwaar | Negatieve uitkomst | Gebruik hoor en wederhoor door kandidaat ^{2]} | Aantal bezwaarschriften ^{3]} | Aantal niet-geplaatst |
|-------------------------|-------------------------------|-----------------------------|--------------------|--|---------------------------------------|-----------------------|
| A-functie ^{1]} | 797 | 796 | 1 | - | - | 1 |
| B-functie | 25.857 | 25.464 | 396 | 48 | 6 | 393 |
| C-functie | 1.030 | 1.030 | - | - | - | - |
| ----- | ----- | ----- | ----- | ----- | ----- | ----- |
| Totaal | 27.684 | 27.290 | 397 | 48 | 6 | 394 |

1] Er zijn drie categorieën vertrouwensfuncties: A, B en C. In deze vertrouwensfuncties kan de veiligheid van de staat zeer grote schade (A-functie), schade (B-functie) of nadeel (C-functie) berokkend worden. De diepgang van het veiligheidsonderzoek is gerelateerd aan de zwaarte van de vertrouwensfunctie.

2] Alvorens te besluiten tot het weigeren van een verklaring van geen bezwaar wordt een voorname tot weigering aan de kandidaat-vertrouwensfunctionaris voorgelegd. Vervolgens wordt een eventuele reactie meegewogen bij de definitieve besluitvorming.

3] De ingediende bezwaarschriften worden behandeld door de Hoorcommissie Veiligheidsonderzoeken.

Uitvoering nieuwe Wet veiligheidsonderzoeken

Voorafgaand aan de invoering van de Wet veiligheidsonderzoeken zijn maatregelen genomen om de uitvoering van de wet soepel te laten verlopen. Zo werd de personele bezetting door middel van interne re-allocatie uitgebreid en het werkproces aangepast. In de loop van 1997 bleken deze maatregelen niet voldoende voor een adequate aanpak. De onverwachte stijging van veiligheidsonderzoeken voor A-vertrouwensfunctionarissen, en het invoeren van de maximum-termijn van acht weken waarbinnen een besluit dient te worden genomen, leidden tot achterstand bij de afhandeling van de onderzoeks aanvragen.

Er is nog geen gebruik gemaakt van de in de Wet veiligheidsonderzoeken geboden mogelijkheid, om periodiek herhaalonderzoeken in te stellen naar zittende vertrouwensfunctionarissen. De hierboven geschetste problematiek ligt hieraan ten grondslag. Er is wel een aantal herhaalonderzoeken ingesteld op grond van gebleken relevante feiten en omstandigheden.

Uitbreiding van de personele capaciteit en verdergaande automatisering van het werkproces zullen gedurende het komende jaar voor de noodzakelijke verbetering moeten zorgen.

2.8 Overige aandachtsgebieden

2.8.1 Suriname

De vervolging van de in april 1997 tot Adviseur van Staat benoemde NDP-voorzitter Bouterse wegens 'betrokkenheid bij handel in drugs' en het daarmee samenhangende internationale verzoek tot aanhouding zorgden voor spanningen in de relatie tussen Suriname en Nederland.

De verhouding tussen Suriname en Nederland moet worden aangemerkt als een gewichtig politiek belang. De BVD besteedt aandacht aan de eventuele gevolgen die spanning in de relatie met zich mee zou kunnen brengen.

2.8.2 Molukkers

De vanaf 1995 gesignaleerde ontwikkeling, waarbij een gedeelte van de derde generatie Molukkers zich nadrukkelijker is gaan interesseren voor de wijze waarop het RMS-ideaal gerealiseerd zou moeten worden, heeft zich ook in het afgelopen jaar voortgezet. Vooral nog heeft dat echter niet of nauwelijks geleid tot ongeregelheden. De demonstraties van Molukkers tegen het Indonesische bewind kenden een rustig verloop. Ook op de voor aanhangers van een onafhankelijke republiek der Zuid-Molukken gedenkwaardige data bleef het in het afgelopen jaar over het algemeen rustig. Alleen op 25 april 1997, na afloop van de jaarlijkse manifestatie in de Haagse Houtrusthallen, richtten Molukse jongeren vernielingen aan in Scheveningen. Overigens blijkt dat de RMS-aanhangers onder de Molukkers in Nederland van mening zijn dat de strijd -in de breedste zin van het woord- voor de Molukse republiek op de Molukken zelf dient te worden gevoerd. De BVD blijft alert op ontwikkelingen die de Nederlandse veiligheidsbelangen zouden kunnen schaden.

De BVD werkt bij de uitvoering van zijn taak nauw samen met andere instanties die een rol spelen op het terrein van de nationale veiligheid, in Nederland zelf, in Koninkrijksverband en op het internationale vlak.

3.1 Samenwerking in Nederland

De samenwerkingsrelatie in Nederland betreft een aantal ministeries, met name die van Economische Zaken, Buitenlandse Zaken en Financiën. Daarnaast wordt nauw samengewerkt met de Militaire Inlichtingendienst (MID), de politie, het Openbaar Ministerie en bijzondere opsporingsinstanties.

3.1.1 *Ministerie van Economische Zaken*

Met de directie Handelspolitiek en Investeringsbeleid van het ministerie van Economische Zaken vindt overleg plaats over het tegengaan van de proliferatie van massavernietigingswapens. Op uitvoerend vlak vindt geregeld overleg plaats met de Economische Controledienst. Op strategisch niveau vindt overleg plaats over economische spionage (zie paragraaf 2.5.2).

3.1.2 *Ministerie van Buitenlandse Zaken*

De samenwerking met onderdelen van het ministerie van Buitenlandse Zaken is in 1997 onverminderd voortgezet. Evenals voorgaande jaren ging het daarbij om de veiligheidsaspecten van visumaangelegenheden en het toelatingsbeleid. Inzake het visumbeleid is gewerkt aan de vereenvoudiging van de procedure voor de beoordeling van aanvragen vanuit Rusland. Hierdoor kan de afgifte van visa door Nederland worden versneld. Ook aantasting van grondrechten, spionage, proliferatie en illegale wapenhandel hebben opnieuw de aandacht opgeëist.

Informatie afkomstig van Buitenlandse Zaken is in 1997 wederom een wezenlijk bestanddeel van analyses van de BVD geweest.

3.1.3 De Grote Evaluatiedriehoek en de Technische Evaluatie Commissie (TEC)

De BVD is vertegenwoordigd in de Grote Evaluatiedriehoek en de Technische Evaluatiecommissie, interdepartementale adviesorganen voor bewakings- en beveiligingsaangelegenheden. Naast de BVD zijn in deze organen de ministeries van Justitie, Binnenlandse Zaken en Defensie vertegenwoordigd. Het ministerie van Buitenlandse Zaken vervult een permanent adviseurschap in de Grote Evaluatiedriehoek. Ten behoeve van de Technische Evaluatie Commissie (TEC) maakt de BVD dreigingsanalyses. Gebaseerd op de bevindingen van de TEC stelt de Grote Evaluatiedriehoek bewakings- en beveiligingsadviezen op namens de ministers van Justitie en Binnenlandse Zaken. De adviezen hebben betrekking op de beveiliging en/of bewaking van personen, objecten en gebeurtenissen waarvoor de rijksoverheid een bijzondere verantwoording draagt, zoals grote manifestaties en demonstraties.

In het eerste half jaar van 1997 zijn vele analyses gemaakt in het kader van het Nederlandse voorzitterschap van de Europese Unie. Daarnaast werden frequent analyses gemaakt in verband met de komst van verdachten en getuigen naar het Joegoslavië-tribunaal dat in Den Haag is gevestigd. Ook hebben incidenten elders in de wereld niet zelden tot gevolg dat een analyse dient te worden gemaakt van mogelijke gevolgen voor in Nederland gevestigde vertegenwoordigingen van landen die bij incidenten zijn betrokken.

3.1.4 Militaire Inlichtingendienst

De Binnenlandse Veiligheidsdienst en de Militaire Inlichtingendienst werken op tal van terreinen nauw samen. Zo vindt regelmatig afstemmingsoverleg plaats waar het gaat om de taakuitvoering van de twee diensten in algemene zin. Ook is er nauw contact met het oog op de voorbereiding van de nieuwe Wet op de inlichtingen- en veiligheidsdiensten en de uitvoering van de Wet veiligheidsonderzoeken. De samenwerking op het gebied van de contraspionage, de proliferatie van massavernietigingswapens en de handel in conventionele wapens is verder geïntensiveerd. De Nederlandse militaire aanwezigheid in voormalig Joegoslavië en op de Nederlandse Antillen en Aruba noopt eveneens tot een goede informatie-uitwisseling.

In het kader van de samenwerking tussen de BVD en MID op het terrein van industrieveiligheid is de plaatsing van de contactfunctionaris bij het bureau Industrieveiligheid van de MID gecontinueerd. Ook de werkzaamheden met betrekking tot de zogenaamde bezoekaanvragen voor de Nederlandse industrie in het bij de BVD gesitueerde Netherlands Industrial Visit Control Office (NIVCO) is voortgezet. De samenwerking op dit terrein is in 1997 geïntensiveerd door het gezamenlijk plannen en uitvoeren van bezoeken aan defensie-orderbedrijven.

3.1.5 Politie

Het project Hermandad, dat ten doel had de relatie tussen BVD en politie te verbeteren, is in 1997 afgerond. In de afgelopen vijf jaar is dankzij intensieve samenwerking met de politie een goede werkverhouding gerealiseerd tussen de BVD en de Regionale Inlichtingendiensten (RID'en).

Ook op tactisch en strategisch niveau zijn de relaties met de politie verder aangehaald. Op tactisch niveau spreken leidinggevenden van politie en BVD met elkaar over raakvlakken en de daarbij gewenste samenwerking. Bovendien organiseert de BVD met regelmaat stage-activiteiten voor deze doelgroep. Op strategisch niveau vinden contacten plaats tussen de dienstleiding van de BVD en korpsleidingen. Daarnaast zijn met vrijwel alle regionale korpsen en het Korps Landelijke Politiediensten (KLPD) samenwerkingsprotocollen afgesloten.

In het afgelopen jaar is op specifieke terreinen nauw samengewerkt met de CRI, in het bijzonder met de Dienst Bijzondere Recherche Zaken. Regelmatig heeft afstemmingsoverleg plaatsgevonden op uitvoerend niveau, onder andere over het onderwerp terrorisme.

Verder is veel aandacht besteed aan informatie-uitwisseling tussen de politie en de BVD. Een werkgroep onder leiding van de Landelijk Officier van Justitie (LOvJ) voor de bestrijding van terroristische misdrijven, tevens landelijk coördinator voor het voorkomen en opsporen van andere misdrijven waarop de BVD in zijn taakuitvoering stuit, heeft aanbevelingen gedaan aan het hoofd van de BVD tot verdere verbetering in de informatie-uitwisseling. Dit betekent niet alleen waar nodig het bevorderen van informatie-uitwisseling, maar ook de zorg dat dit verantwoord gebeurt, met inachtneming van ieders verantwoordelijkheden en bevoegdheden. Onder het motto vasthouden wat goed is en uitbouwen wat beter kan, zal de BVD voortgaan op de ingeslagen weg.

3.1.6 Openbaar Ministerie

Wanneer daartoe aanleiding bestaat, overlegt het hoofd van de BVD met het College van Procureurs-Generaal. Overeengekomen is dat, in de uitvoering van het dagelijkse werk, BVD-leidinggevenden overleggen met de LOvJ. In de komende tijd verdient de relatie met het Openbaar Ministerie meer aandacht. In het kader van wederzijdse informatie-uitwisseling zal het OM nadrukkelijker een rol vervullen. Gezamenlijke initiatieven van BVD en OM dienen deze informatie-uitwisseling waar nodig verder te bevorderen.

3.1.7 Koninklijke marechaussee, Douane, FIOD en Rijksrecherche

Op tal van terreinen is ook in het afgelopen jaar samengewerkt met de Koninklijke marechaussee. Vier maal is een beleidsoverleg gehouden, waarin diverse samenwerkingsaangelegenheden aan de orde zijn geweest. In het komende jaar gaan BVD en Koninklijke marechaussee op de ingeslagen weg verder.

Met de Rijksrecherche zijn werkafspraken in voorbereiding die in 1998 van kracht zullen worden. De afspraken hebben betrekking op afstemming, consultatie en informatie-uitwisseling. Een toename van raakvlakken tussen BVD en Rijksrecherche maakt het vastleggen van dergelijke werkafspraken nodig.

Op basis van samenwerkingsprotocollen vindt met de FIOD en de Douane op ad hoc basis overleg plaats over onderwerpen die van gemeenschappelijk belang zijn. Het ligt in het voornemen de contacten verder te structureren en te verdiepen. Vanuit de betrokken organisaties worden hiertoe reeds initiatieven genomen.

3.2 Samenwerking binnen het Koninkrijk

In 1997 is de samenwerking tussen de BVD en de Veiligheidsdienst van de Nederlandse Antillen (VNA) en de Veiligheidsdienst van Aruba (VDA) voortgezet. Deze samenwerking kreeg vorm in de uitwisseling van informatie, het vervaardigen van een BVD-VNA-rapportage en het waar mogelijk wederzijds verlenen van bijstand. Voorts bood de BVD de mogelijkheid van stages en/of opleidingen voor personeel van VDA en VNA.

Eind 1997 heeft overleg plaatsgevonden tussen BVD, VNA en VDA, waarbij de mogelijkheden zijn besproken om de bestaande samen-

werking verder te intensiveren en te optimaliseren. Daarnaast is afgesproken voortaan ieder half jaar een tripartite overleg te houden.

3.3 Internationale samenwerking

Gezien het grensoverschrijdende karakter van veiligheidsproblemen op diverse terreinen, is een goede internationale samenwerking tussen inlichtingen- en veiligheidsdiensten van essentieel belang. De BVD hecht daarom grote waarde aan het ontwikkelen en onderhouden van relaties met zusterdiensten in het buitenland, zowel op bilateraal niveau als in grotere samenwerkingsverbanden. De BVD-liaisons in het buitenland hebben daarbij een belangrijke schakelfunctie.

Vanuit Washington wordt een uitgebreid relatienetwerk in Noord-Amerika onderhouden. Bij diverse bezoeken van BVD-delegaties aan de Verenigde Staten en Canada kon hiervan gebruik worden gemaakt.

De in Ankara geplaatste BVD-liaison kon in het afgelopen jaar het relatienetwerk van de BVD uitbreiden met de zusterdiensten in Oman en Bahrein. De samenwerking met de Jordaanse dienst GID werd geïntensiveerd.

Azië werd in 1997 getroffen door een ernstige economische crisis, hetgeen in verscheidene landen leidde tot politieke instabiliteit en sociale onrust. Alles wijst erop dat deze regionale crisis in 1998 zal voortduren. De BVD-liaison in Singapore kon in 1997 zijn relatienetwerk consolideren en verder uitbouwen, waarmee hij de BVD een goed zicht op de situatie in de regio kon verschaffen.

3.3.1 West-Europese inlichtingen- en veiligheidsdiensten

De BVD maakt deel uit van het samenwerkingsverband van hoofden van 17 West-Europese inlichtingen- en veiligheidsdiensten, de zogenaamde Club de Berne. Dit richtte zich in 1997 op onderwerpen van gemeenschappelijk belang, zoals activiteiten van buitenlandse inlichtingendiensten en radicaal islamitisch fundamentalisme.

3.3.2 Oost-Europese inlichtingen- en veiligheidsdiensten

De contacten van de BVD met de inlichtingen- en veiligheidsdiensten van Rusland werden in 1997 zowel formeel als inhoudelijk verder

uitgebouwd. De inlichtingendienst (SVR) plaatste een liaison in Nederland, terwijl een (reizende) BVD-liaison regelmatig bezoeken aan Moskou bracht. De relatie met de veiligheidsdienst (FSB) bevindt zich nog in een verkennende fase.

Een BVD-delegatie bezocht Moskou in januari, waarbij met zowel de inlichtingendienst als met de veiligheidsdienst werd gesproken. In november ontving de BVD een delegatie van SVR-specialisten op het gebied van georganiseerde misdaad en proliferatie van massavernietigingswapens. In 1998 zal een soortgelijke BVD-delegatie Moskou bezoeken. Het overleg op deze terreinen betekent een verdieping van de feitelijke samenwerking.

Ook de banden met de veiligheidsdienst van de Oekraïne SBU werden verstevigd. Tijdens bezoeken van het waarnemend hoofd van de BVD aan Kiev en van het hoofd van de SBU aan de BVD werden afspraken gemaakt voor delegatie-uitwisselingen. Het hoofd van de BVD heeft een uitnodiging aanvaard om in de loop van 1998 een bezoek aan de Oekraïne te brengen.

3.3.3 Midden-Europese inlichtingen- en veiligheidsdiensten

Tijdens de jaarlijkse bijeenkomst van de zogenaamde Midden-Europa Conferentie (MEC), een samenwerkingsverband van diensthoofden uit enkele Midden- en West-Europese landen, werd besloten tot het organiseren van enkele themabijeenkomsten voor ter zake deskundigen van de deelnemende diensten. In oktober vond een bespreking plaats over de problematiek van de interceptie van telecommunicatie. Een tweede bijeenkomst in november was gewijd aan de ontwikkelingen in het voormalig Joegoslavië en Albanië en de effecten daarvan op de veiligheidssituatie in Europa. Als internationaal forum, dat een waardevolle bijdrage kan leveren aan de veiligheid in Europa, neemt de MEC door deze bijeenkomsten aan belang toe.

In het afgelopen jaar werd voor het eerst contact gelegd met de inlichtingen- en veiligheidsdiensten in Roemenië. Dit contact heeft inmiddels geleid tot de stationering van een liaison van de Roemeense inlichtingendienst SIE in Den Haag.

In maart werd contact gelegd met de Estlandse zusterdiensten. Hiermee is de relatie met alle inlichtingen- en veiligheidsdiensten in het Balticum

een feit geworden en kan een aanvullend beeld worden verkregen over onder meer het fenomeen georganiseerde misdaad in de Baltische regio.

Ten behoeve van de beveiliging van het Joegoslavië-tribunaal zijn de eerste stappen gezet op weg naar een mogelijke samenwerking met de Bosnische veiligheidsdienst AID.

Met betrekking tot in de voorbereiding zijnde integratie in de NAVO en de EU is aan enkele MEC-partners bijzondere ondersteuning gegeven bij ontwikkelingen op het terrein van de democratische inbedding van inlichtingen- en veiligheidsdiensten en op het terrein van beveiliging van confidentiële gegevens.

3.3.4 Noord-Afrika/Midden-Oosten

Op uitnodiging van het hoofd van de Jordaanse inlichtingendienst GID bracht het plaatsvervangend hoofd van de BVD in maart een bezoek aan Jordanië. Gesproken werd onder andere over het vredesproces in het Midden-Oosten en de situatie in Syrië en Irak. Het hoofd van de Jordaanse dienst werd uitgenodigd voor een tegenbezoek aan de BVD en tevens werd afgesproken delegaties uit te wisselen. In oktober bezocht een eerste delegatie uit Jordanië de BVD. Bij die gelegenheid werd van gedachten gewisseld over terrorisme geïnspireerd vanuit het Midden-Oosten en in het bijzonder over de activiteiten van radicaal islamitisch fundamentalistische groeperingen. Het contact met de GID zal gecontinueerd worden.

3.3.5 NAVO en WEU

De voorziene uitbreiding van de NAVO met drie nieuwe leden heeft geleid tot een eerste overleg met de tot die landen behorende veiligheidsdiensten, teneinde de uiteindelijke toetreding tot reguliere bijeenkomsten van het NATO Special Committee voor te bereiden. Aandacht is ook besteed aan de invulling van de bijzondere relatie die de NAVO met Rusland is aangegaan. Ook met de andere landen van de Euro-Atlantic Partnership Council (EACP) zal overleg in meer gestructureerde vorm gaan plaatsvinden.

3.4 Europese Unie

De eerste helft van 1997 stond in het teken van het Nederlands voorzitterschap van de Europese Unie. Voor de BVD betekende dit een extra inspanning in de EU-werkgroepen Terrorisme. Naast terrorismebestrijding zelf waren de onderwerpen racisme/xenofobie en cryptografie van belang. In de tweede helft van 1997 werd ook nog enige extra inspanning geleverd in troika-verband ter ondersteuning van het Luxemburgs voorzitterschap.

Halfjaarlijks maakt de werkgroep Terrorisme, die onderdeel is van de samenwerking in Unie-verband op het terrein van Binnenlandse Zaken en Justitie (JBZ-pijler) een terrorisme-dreigingsdocument. De twee overzichten die vorig jaar zijn opgemaakt, geven aan dat van het separatisme in Europa nog steeds de grootste terroristische dreiging uitgaat. Groepen als de IRA, de ETA en het FNLC op Corsica namen de meeste terroristische aanslagen in Europa voor hun rekening. Van de groepen, die uit landen buiten de Europese Unie stammen, ging de meeste dreiging uit van de Turkse DHKP-C (voormalig Dev Sol), de Koerdische PKK en islamitisch fundamentalistische groepen als de Algerijnse GIA en de Egyptische al-Jama'a al-Islamiyyah.

Met betrekking tot de bestrijding van terroristische groepen werd onder meer aandacht besteed aan de manier waarop deze groepen zich financieren en aan de manier waarop zij gebruik maken van moderne informatietechnologie.

Tijdens het Nederlands voorzitterschap van de Europese Unie werd de samenwerking tussen de werkgroep Terrorisme in de JBZ-pijler en die in de pijler voor het gemeenschappelijk buitenlands- en veiligheidsbeleid (GBVB-pijler) aangehaald. Hierdoor konden vanuit twee invalshoeken maatregelen genomen worden tegen Iran naar aanleiding van de zogenaamde Mykonos-proces (betrokkenheid van de Iraanse overheid bij een moordaanslag op Koerden in Berlijn). Ook werden dialogen over terrorismebestrijding met andere landen als de Verenigde Staten en de met de EU geassocieerde landen door beide werkgroepen gezamenlijk gevoerd.

Voor de inmiddels afgeronde onderhandelingen over een nieuw VN-verdrag over terroristische bomaanslagen (UN-terrorist bombings convention) werd materiaal geleverd door beide werkgroepen.

HOOFDSTUK 4

In dit hoofdstuk wordt ingegaan op de informatieverschaffing door de BVD en op de behandeling van klachten.

4.1 Verzoeken in het kader van de Wet openbaarheid van bestuur

Jurisprudentie

Op 1 augustus 1997 gaf de hoogste Nederlandse bestuursrechter, de Afdeling bestuursrechtspraak van de Raad van State, een positief oordeel over het beleid bij het geven van inzage in BVD-dossiers, het zogenoemde contextenbeleid. Met alle onderdelen daarvan werd onverkort ingestemd. Dit beleid houdt in dat geen antwoord wordt gegeven op de algemene en ongeclausuleerde vraag of iemand een dossier bij de BVD heeft en of hij/zij dat mag inzien. Alleen als het verzoek om informatie betrekking heeft op gegevens die zijn vastgelegd in relatie tot een maatschappelijke context die met het oog op de taakuitvoering van de BVD niet langer actueel is, kunnen die gegevens mogelijk openbaar worden gemaakt. Daarom worden verzoekers in de gelegenheid gesteld aan te geven in welke context zij denken in de aandacht van de BVD te zijn gekomen, of hun verzoek tenminste te beperken tot niet-actuele informatie.

Verschuiving in aanpak werklast

De werklast die samenhangt met de te behandelen zaken in het kader van de Wet openbaarheid van bestuur (Wob) was opnieuw hoog. Naast een gemiddelde werkvoorraad van ruim zestig verzoeken om inzage moest een groot aantal bezwaarschriften in behandeling worden genomen. Alleen al van de Vereniging Voorkom Vernietiging (VVV) en de vereniging Steunpunt inzage PID Nijmegen (SIP) werden er zo'n tweehonderd ontvangen. Geconstateerd is dat tegen vrijwel alle

beschikkingen, die naar aanleiding van de verzoeken van de leden van de genoemde verenigingen zijn afgegeven, bezwaar wordt gemaakt en vervolgens beroep wordt ingesteld. Aan het einde van het verslagjaar waren ruim veertig beroepen ingediend bij de bestuurskamers van de diverse Arrondissementsrechtbanken. Daarnaast was er een viertal hoger beroepszaken aanhangig bij de Afdeling bestuursrechtspraak van de Raad van State. Verwacht mag worden dat dit aantal in 1998 zal toenemen. Het gebruiken van de bezwaar- en beroepsmogelijkheden legt een zware claim op de juridische capaciteit van de BVD.

Termijnoverschrijding

Een en andermaal is geconstateerd dat het niet mogelijk is verzoeken om inzage binnen de in de Wob gestelde termijn af te doen. Niet alleen het grote aantal verzoeken, bezwaren en beroepszaken is daar debet aan, ook de complexiteit van de behandeling speelt een belangrijke rol. De wijze van behandeling van inzageverzoeken en de moeite die wordt gedaan om toch zoveel als mogelijk is tegemoet te komen aan de wensen van de desbetreffende verzoekers, is meer specifiek beschreven in het BVD-jaarverslag 1996.

Ondanks het feit dat in de meeste gevallen niet aan termijnoverschrijding valt te ontkomen, wordt aan een vlotte afhandeling veel zorg en aandacht besteed. Een verdergaande inzet van mensen en middelen zou echter niet in verhouding staan tot de benodigde capaciteit ten behoeve van de taakuitvoering op basis van de Wet op de inlichtingen- en veiligheidsdiensten. Overigens mag in vrijwel alle gevallen op begrip van de zijde van verzoekers worden gerekend; verzoekers/bezwaarden worden tijdig geïnformeerd waardoor klachten kunnen worden voorkomen. In de nieuwe Wet op de inlichtingen- en veiligheidsdiensten is een beslistermijn opgenomen die meer is toegesneden op de complexiteit van de hier bedoelde verzoeken en de daarvoor benodigde behandelingsduur.

4.2 Klachten

De Nationale ombudsman bracht in 1997 vijf rapporten uit die betrekking hadden op klachten over de BVD. Drie van deze klachten waren in 1996 ingediend. De rapporten 97/081 en 97/499 hebben beide betrekking op klachten over vermeend onterecht ingestelde onderzoeken

door de BVD. In beide gevallen komt de Nationale ombudsman tot de conclusie dat de klachten ongegrond zijn. Dit is anders in rapport 97/89 waarin de Nationale ombudsman een klacht over het uitblijven van een antwoord op een verzoek om inzage van een dossier en een schriftelijk rappel gegrond verklaart. Ook in rapport 97/342 komt de ombudsman tot de conclusie dat een klacht over het uitblijven van een reactie op een brief gegrond is. Deze klacht heeft ook betrekking op het door de BVD aanleggen van een dossier over klager. Dit onderdeel van de klacht is volgens de ombudsman evenwel ongegrond. Rapport 97/155 betreft een klacht over de bejegening van klager door medewerkers van de BVD toen hij werd benaderd voor een gesprek. De Nationale ombudsman komt tot de conclusie dat de klacht ongegrond is, behoudens voor wat betreft het door de BVD'ers te laat verschijnen op een afspraak voor een gesprek met klager. Op dat punt is de klacht gegrond. Het onderzoek dat uitmondde in dit rapport heeft ook betrekking op een gedraging van de Immigratie- en Naturalisatiedienst van het ministerie van Justitie (IND). Klager had namelijk ook geklaagd over het door de IND aan de BVD verstrekken van gegevens over diens asiolverzoek, zonder daartoe eerst diens toestemming te vragen. De Nationale ombudsman oordeelt deze gedraging evenwel behoorlijk.

Naast de hiervoor genoemde klachten ontving de ombudsman in het verslagjaar nog een klacht. Het naar aanleiding daarvan ingestelde onderzoek werd door de ombudsman beëindigd, omdat de BVD naar het oordeel van de Nationale ombudsman terecht niet inhoudelijk had gereageerd op een brief die over hetzelfde onderwerp handelde waarover al eerder uitvoerig was gecorrespondeerd.

Bij het hoofd van de BVD en de minister van Binnenlandse Zaken werden in 1997 zeven klachten ingediend. Drie daarvan zijn nog in behandeling. De andere vier klachten bleken na onderzoek niet gegrond te zijn.

HOOFDSTUK 5

In dit hoofdstuk komen de onderwerpen personeel, organisatie-ontwikkeling, informatievoorziening en financieel kader aan de orde.

5.1 Personeel

Op 31 december 1997 waren 559 medewerkers in dienst, te weten 164 vrouwen en 395 mannen. De instroom in 1997 bedroeg 39 medewerkers. Daartegenover stond een uitstroom van 32 medewerkers.

Evenals voorgaande jaren is en blijft personeelsontwikkeling, met daarin een belangrijke plaats voor mobiliteit, een speerpunt van personeelsbeleid voor de BVD. Intern is mobiliteit een permanent aandachtspunt bij functioneringsgesprekken en bij het opmaken van loopbaanadviezen. Extern is verder gewerkt aan het opbouwen van een mobiliteitsnetwerk met organisaties die door de aard van hun werkzaamheden in redelijke mate aansluiten bij de kennis en ervaring van BVD-medewerkers. Dit heeft ertoe geleid dat een aantal medewerkers op basis van interim-functievervulling (IF) bij andere organisaties tewerk is gesteld. Aldaar kan ervaring worden opgedaan die de 'employability' van de medewerkers vergroot.

Het ARBO-beleid stond in het teken van de uitvoering van de in 1996 gehouden risico-inventarisatie en -evaluatie. Op het gebied van veiligheid, gezondheid en welzijn van medewerkers zijn verschillende activiteiten ondernomen. Deze bestonden uit aanpassingen van werkomgeving, voorlichtingen en instructies. Tevens is een ARBO-jaarverslag en een -jaarplan uitgebracht.

De evaluatie van de invoering van de 36-urige werkweek over het eerste halfjaar heeft niet geleid tot extra aandachtspunten of aanpassingen. Over het algemeen werd wel een stijging van de werkdruk ervaren en ook de individuele bereikbaarheid is, zoals ook elders binnen het departement, iets teruggelopen. Met een strakke planning van het bedrijfsproces en de bezettingsgraad zal dit naar verwachting geen verdere problemen opleveren.

In 1997 is, net als in 1996, onverminderd aandacht gegeven aan verzuimbegeleiding. Ondanks het feit dat het verzuimpercentage van de BVD erg laag blijft -in 1997 ruim een procentpunt lager dan in 1996- ten opzichte van het gemiddelde bij de rijksoverheid, is de preventieve en curatieve aandacht niet verslapt. Het periodieke overleg tussen het management, de bedrijfsarts en de afdeling personeelszaken (sociaal medisch team) blijkt in dit opzicht een goed en effectief instrument voor zowel organisatie als medewerkers.

Ter voorbereiding op de uitvoering van een aantal dienstbrede organisatieveranderingen en ontwikkelingen is bezien in hoeverre het instrument vorming en opleiding een nog effectievere bijdrage aan dit proces zou kunnen leveren.

Voorts zal er meer en gericht aandacht worden besteed aan de inwerkperiode van nieuwe medewerkers. Automatisering blijft een gebied waar nieuwe ontwikkelingen zich in een hoog tempo voltrekken en dus ook een relatief grote opleidingsinspanning vergen.

5.2 Organisatie-ontwikkeling

Het voornemen tot een reorganisatie van de BVD werd nader uitgewerkt. Besloten is tot een hergroepering van taken en een gewijzigde organisatiestructuur. De reorganisatie-inspanningen hebben voorts betrekking op het stroomlijnen van een aantal werkprocessen, het verbeteren van de geheugenfunctie, het invoeren van integraal management en de toekomstige inbedding van de inlichtingentaak. De nieuwe organisatie zal naar verwachting begin 1999 zijn beslag krijgen.

5.3 Informatievoorziening

In 1997 is goede voortgang gemaakt met de bouw en de invoering van het nieuwe documentair-informatiesysteem. Een groot aantal medewerkers kan inmiddels ter ondersteuning van hun dagelijkse werk gebruik maken van dit documentatiesysteem in combinatie met workflowmanagement. Het systeem is ook geschikt gemaakt voor het werkproces dat voortvloeit uit de Wet veiligheidsonderzoeken; begin januari 1998 is het in productie genomen.

Ook de BVD kent in de geautomatiseerde systemen een millennium-probleem. In 1997 zijn alle objecten geïnventariseerd en aan een risicoanalyse onderworpen. Testfaciliteiten zijn inmiddels geïnstalleerd. De BVD kiest ervoor om minimaal te investeren in het millenniumproof maken van bestaande applicaties; zoveel mogelijk zullen nieuwe versies of produkten worden aangeschaft. Daarmee wordt tegelijk een noodzakelijke vernieuwing van verouderde systemen gerealiseerd.

Op het gebied van de beveiligde communicatie is goede voortgang gemaakt met de uitbreiding van het zogenaamde Riddle-netwerk. Thans is met dertien Regionale Inlichtingendiensten veilige informatie-uitwisseling mogelijk. In de eerste helft van 1998 volgen de overige diensten.

Om beter en/of op moderne manier gebruik te kunnen gaan maken van de mogelijkheden die externe databanken en Internet bieden, is het open bronnen-netwerk geheel vernieuwd.

5.4 Financieel kader

De BVD heeft in 1997 extra middelen uitgetrokken voor informatie-technologie en in het bijzonder voor de verbetering en uitbreiding van het computernetwerk. Vanaf 1997 draagt de BVD zelf zorg voor de financiering van post-actieven.

THE NATO HANDBOOK CHRONOLOGY

**A Companion Volume to
the 50th Anniversary Edition
of the NATO Handbook**

1998

*Office of Information and Press
NATO - 1110 Brussels, Belgium*

ISBN 92 - 845 - 0109 - 1

CHRONOLOGY 1945-1998

This Chronology traces the principal developments in the evolution of NATO against the background of significant world events. It reflects the intensity of diplomatic contacts and exchanges in the early years following the end of the Cold War and the high level consultations which take place on a continuous basis in relation to key areas of Alliance policy. Numerous additional events which have taken place in the framework of Partnership for Peace and the Euro-Atlantic Partnership Council, including seminars and conferences, training courses, military and crisis management exercises, additional visits and exchanges and other activities are not recorded for reasons of space. Information about such events may be found in communiqués and press releases listed in NATO's Integrated Data Service on the Internet (<http://www.nato.int>).

Note : The NATO Handbook - Chronology is published as a companion volume to the 50th Anniversary Edition of the NATO Handbook. A further volume in the series, entitled The NATO Handbook - Documentation, is also in preparation.

Copies of each of these volumes can be obtained from the Distribution Unit, Office of Information and Press, NATO-1110 Brussels, Belgium. Each volume will also be published on NATO's web site (<http://www.nato.int>).

1945

- 26 June The United Nations Charter is signed at San Francisco.
6 August Explosion of Hiroshima atomic bomb.

1946

- 5 March Winston Churchill's 'Iron Curtain' speech at Fulton, Missouri.

1947

- 19 January The Soviet-sponsored Communist "Lublin-Committee" monopolises power in Poland.
12 March President Truman urges the United States "to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure" (Truman Doctrine).
5 June United States Secretary of State, George C. Marshall, announces plans for the economic rehabilitation of Europe (Marshall Plan).
22-27 Sept. Establishment of Cominform, the organisation for the ideological unity of the Soviet bloc, following rejection of Marshall Aid by the Soviet Union and its allies.

1948

- 22 January Ernest Bevin, United Kingdom Secretary of State for Foreign Affairs, speaking in the House of Commons, proposes a form of Western Union. The Western Union Defence Organisation is subsequently established by the Defence Ministers of the Brussels Treaty Powers on 27-28 September 1948.
22-25 February The Communist Party of Czechoslovakia gains control of the government in Prague through a coup d'Etat.
17 March Signature of the Brussels Treaty of Economic, Social and Cultural Collaboration and Collective Self-Defence by the Foreign Ministers of Belgium, France, Luxembourg, the Netherlands and the United Kingdom.
11 June The United States Senate adopts the "Vandenberg Resolution", establishing the basis for future US association with regional and other collective arrangements for security.

- 24 June Beginning of the Berlin blockade by the Soviet Union.
- 28 June Formal expulsion of Yugoslavia from Cominform.
- 6 July Talks on North Atlantic defence begin in Washington between the United States, Canada and the Brussels Treaty Powers.
- 25-26 October The Consultative Council of the Brussels Treaty Powers announces “complete agreement on the principle of a defensive pact for the North Atlantic”.
- 10 December Negotiations on the North Atlantic Treaty open in Washington between the representatives of the Brussels Treaty Powers, Canada and the United States.

1949

- 15 March The negotiating powers invite Denmark, Iceland, Italy, Norway and Portugal to adhere to the North Atlantic Treaty.
- 2 April The governments concerned repudiate Soviet assertions that the North Atlantic Treaty is contrary to the United Nations Charter.
- 4 April The North Atlantic Treaty is signed in Washington by Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States.
- 8 April The Brussels Treaty Powers, Denmark, Italy and Norway request United States military and financial assistance.
- 4 May The London Ten-Power Agreement sets up the Council of Europe. Inaugural meeting of the Council at Strasbourg takes place on 10 August.
- 9 May The Berlin blockade is lifted.
- 24 August The North Atlantic Treaty enters into force.
- 17 September First session of the North Atlantic Council in Washington.
- 6 October Mutual Defence Assistance Act of 1949 is signed by President Truman.

1950

- 27 January President Truman approves the plan for the integrated defence of the North Atlantic area, releasing US\$ 900,000,000 of military aid funds.

- 9 May The French Government proposes the creation of a single authority to control the production of steel and coal in France and Germany, open for membership to other countries (Schuman Plan).
- 25 June North Korean Forces attack the Republic of South Korea.
- 25 July First meeting of NATO Council Deputies in London. Ambassador Charles M. Spofford, United States Representative to the North Atlantic Council, is elected Permanent Chairman.
- 24 October French Prime Minister, Rene Pleven, outlines his plan for a European unified army, including German contingents, within the framework of NATO.
- 19 December The North Atlantic Council appoints General Dwight D. Eisenhower to be the first Supreme Allied Commander Europe (SACEUR).
- 20 December The Brussels Treaty Powers decide to merge the military organisation of the Western Union into the North Atlantic Treaty Organisation.

1951

- 15 February Conference convened by French Government on the setting up of a European Army opens in Paris.
- 2 April Allied Command Europe becomes operational with Supreme Headquarters Allied Powers Europe (SHAPE) located at Roquencourt, near Paris.
- 18 April Setting up of the European Coal and Steel Community by Belgium, France, Italy, Luxembourg, the Netherlands, and the Federal Republic of Germany.
- 3 May Incorporation of the Defence Committee and the Defence Financial and Economic Committee into the North Atlantic Council.
- 19 June The parties to the North Atlantic Treaty sign an agreement on the status of their forces.
- 20 September The member countries sign an agreement in Ottawa on the Status of NATO, National Representatives and International Staff (Civilian Status Agreement).
- 9-11 October First meeting of the Temporary Council Committee (TCC) in Paris, established by the North Atlantic Council to reconcile the requirements of collective security

with the political and economic capabilities of the member countries.

17-22 October Signature in London of the protocol to the North Atlantic Treaty on the accession of Greece and Turkey.

19 November Inauguration of the NATO Defense College, Paris (transferred to Rome on October 10, 1966).

1952

30 January Appointment of Vice-Admiral Lynde D. McCormick (United States) to be the first Supreme Allied Commander Atlantic (SACLANT).

18 February Greece and Turkey accede to the North Atlantic Treaty.

20-25 February The North Atlantic Council meeting in Lisbon reorganises the structure of the Alliance and NATO becomes a permanent organisation with its headquarters in Paris.

21 February The Council establishes a Channel Command, and appoints Admiral Sir Arthur John Power as the first Commander-in-Chief Channel (CINCHAN).

12 March Lord Ismay (United Kingdom) is appointed Vice-Chairman of the North Atlantic Council and Secretary General of the North Atlantic Treaty Organisation.

10 April Allied Command Atlantic (ACLANT) becomes operational, with headquarters at Norfolk, Virginia, USA.

16 April NATO opens its provisional headquarters at the Palais de Chaillot, Paris.

28 April First meeting of the North Atlantic Council in permanent session in Paris.

27 May Signature in Paris of the Treaty setting up the European Defence Community by Belgium, France, Italy, Luxembourg, the Netherlands and the Federal Republic of Germany. (Following the decision of the French National Assembly on 29 August 1954, the Treaty did not come into force).

28 August Signature in Paris by member nations of the Alliance of a Protocol on the Status of International Military Headquarters.

1953

5 March Death of Stalin.

- 23 July Korean Armistice signed at Panmunjon.
- 20 August USSR issues a communiqué of its possession of the hydrogen bomb.
- 4-8 December Conference in Bermuda of the Heads of Government of France, the United Kingdom and the United States, attended by Lord Ismay as observer for NATO.

1954

- 25 Jan./18 Feb. Abortive Four-Power Conference in Berlin on German reunification.
- 7 May The United Kingdom and the United States reject the USSR's bid to join the North Atlantic Treaty Organisation.
- 17-18 June Meeting at The Hague of the Constituent Conference of the Atlantic Treaty Association sponsored by the International Atlantic Committee.
- 29 August The French National Assembly decides against ratification of the Treaty setting up the European Defence Community (EDC).
- 6 September Opening of Manila Conference which culminates in the signing of the treaties setting up SEATO (South-East Asia Treaty Organisation)¹.
- 28 Sept.-3 Oct. Meeting in London of the Conference of Nine to seek an alternative to the EDC. (Participating countries: Belgium, Canada, France, Federal Republic of Germany, Italy, Luxembourg, the Netherlands, United Kingdom and the United States.)
- 23 October Signature of the Paris Agreements. The Federal Republic of Germany is invited to join NATO, and Italy and the Federal Republic of Germany accede to the Western European Union (WEU).

1955

- 6 May The Federal Republic of Germany becomes a member of NATO.
- 14 May The USSR concludes the Warsaw Treaty with Albania, Bulgaria, Czechoslovakia, East Germany, Hungary,

¹ Member countries: Australia, France, New Zealand, Pakistan, Philippines, Thailand, United Kingdom and United States.

- Poland and Romania.
- 18-23 July First Conference of NATO Parliamentarians (since November 1966, the North Atlantic Assembly) in Paris.
- 30 December The USSR signs a treaty with the régime in East Germany, granting it the prerogatives of a State.

1956

- 24 February At the 20th Congress of the Soviet Communist Party, Khrushchev denounces Stalin in a “secret” speech.
- 18 April Dissolution of Cominform.
- 28 June Anti-régime riots erupt at Poznan in Poland.
- 26 July Egypt nationalises the Suez Canal.
- 4 November Soviet suppression of Hungarian people’s rebellion.
- 13 December The North Atlantic Council approves the recommendations contained in the Report of the Committee of Three on Non-Military Cooperation in NATO.

1957

- 25 March Signature of the Rome Treaties setting up Euratom and the European Economic Community.
- 2-3 May Ministerial meeting of the North Atlantic Council in Bonn. The Council decides to intensify its efforts in favour of German reunification by means of free elections.
- 16 May Paul-Henri Spaak (Belgium) succeeds Lord Ismay as Secretary General of NATO.
- 29 July Signing in Berlin of a declaration by the governments of France, the Federal Republic of Germany, the United Kingdom and the United States, affirming the identity of their policies with regard to the reunification of Germany and to European security.
- 14 September The General Assembly of the United Nations condemns the Soviet intervention in Hungary.
- 4 October The first Soviet Sputnik is launched.
- 31 October Franco-British intervention in the Suez Canal area.
- 16-19 Dec. At a meeting of the North Atlantic Council in Paris, Heads of Government reaffirm the principles and purposes of the Atlantic Alliance.

1958

- 1 January Entry into force of the Treaty of Rome setting up the

- European Economic Community.
- 26-29 March First meeting of NATO Science Committee.
- 15-17 April Defence Ministers of the NATO countries meeting in Paris reaffirm the defensive character of the NATO strategy.
- 10 November Khrushchev announces that the USSR wishes to terminate the Four-Power Agreement on the status of Berlin. (The Plan was rejected by the Western Powers on December 31).
- 16-18 Nov. December Ministerial meeting of the North Atlantic Council. The Council associates itself with the views expressed by the governments of France, the United Kingdom and the United States on Berlin and on the right of the Western Powers to remain there.

1959

- 1 January Overthrow of the Batista regime in Cuba by Fidel Castro.
- 11 June Opening of Four-Power Meeting of Foreign Ministers in Geneva (France, the United Kingdom, the United States and the USSR) on the German question.
- 19 August The Baghdad Pact signed on 24 February 1955 becomes the Central Treaty Organisation (CENTO). Full members: Iran, Iraq, Pakistan, Turkey and the United Kingdom. Associate member: United States. Its headquarters is set up in Ankara. (Dissolved, 26 September 1979).
- 20 November Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom initial the Stockholm Convention establishing the European Free Trade Association (EFTA)².
- 15-22 Dec. Inauguration of the new NATO Headquarters at the Porte Dauphine in Paris.

1960

- 15 March Opening of the United Nations Ten-Power Disarmament Committee negotiations in Geneva. Communist states withdraw on 27 June.

² Finland became an associate member of EFTA in 1961. Iceland joined in 1970. Denmark and the United Kingdom withdrew from EFTA on joining the EEC on 1 January 1973. Portugal withdrew from EFTA on 1 January 1986.

- 1 May American U2 aircraft is shot down over Soviet territory.
- 19 May French, United Kingdom and United States Foreign Ministers report to the North Atlantic Council on the breakdown of the Paris Summit meeting with the participation of the USSR on 16 May.
- 27 May Military coup d'Etat in Turkey
- 23 September Khrushchev attends the General Assembly of the United Nations in New York.
- 10 November Summit meeting in Moscow of the Communist leaders of 81 countries. Approval of Khrushchev's concept of peaceful co-existence.
- 14 December Convention for the Establishment of the Organisation for Economic Cooperation and Development (OECD) in place of the OEEC signed by 18 European countries and the United States and Canada. Australia, New Zealand and Japan subsequently join the Organisation.

1961

- 12 April Soviet Major Yuri Gagarin becomes the first man orbited in space.
- 21 April Dirk U. Stikker (Netherlands) succeeds Paul-Henri Spaak as Secretary General of NATO.
- 13 August Erection of the Berlin Wall.
- 13-15 Dec. At a Ministerial meeting of the North Atlantic Council in Paris, the Alliance reaffirms its position on Berlin, strongly condemning the building of the Wall, and approves the renewal of diplomatic contacts with the Soviet Union to determine whether a basis for negotiation can be found. It also announces the establishment of a mobile task force.

1962

- 8-20 January The "Alliance Convention" of citizens of NATO countries meets and endorses the "Declaration of Paris" in favour of strengthening the Alliance and the Atlantic Community.
- 18 March The Evian agreements establish an independent Algeria.
- 29 March Establishment of the European Organisation for the Development and Construction of Space Vehicle Launchers (ELDO). Member countries: Australia, Belgium,

- Federal Republic of Germany, France, Italy, the Netherlands and the United Kingdom.
- 10 April Macmillan and Kennedy appeal to Khrushchev for agreement on a test ban treaty.
- 4-6 May Foreign Ministers and Defence Ministers of the North Atlantic Alliance review the circumstances in which the Alliance might be compelled to have recourse to nuclear weapons (Athens Guidelines).
- 14 June Establishment of the European Space Research Organisation (ESRO). Member countries: Belgium, Denmark, France, Federal Republic of Germany, Italy, the Netherlands, Spain, Sweden, Switzerland, and the United Kingdom. (ELDO and ESRO merged to become the European Space Agency (ESA) on 31 May 1975.)
- 22 Oct.-20 Nov. Partial blockade of Cuba by the US following revelation of Soviet construction of missile bases on the island; lifted following Soviet agreement to dismantle the bases.
- 18-20 Dec. President Kennedy and Prime Minister Macmillan confer at Nassau, Bahamas. They agree to contribute part of their strategic nuclear forces to NATO.

1963

- 16 January Following a statement by the French Representative, the Council notes that insofar as the former Algerian Departments of France are concerned, the relevant clauses of the North Atlantic Treaty became inapplicable as of 3 July 1962.
- 20 June Agreement on a 'hot line' between Washington and Moscow is signed in Geneva by the United States and the Soviet Union.
- 15-25 July The United States, the United Kingdom and the Soviet Union initial an agreement banning nuclear tests in the atmosphere, in outer space and underwater.
- 10 October The Moscow Treaty on a partial nuclear test ban, signed on 5 August, comes into force.
- 22-23 October In a military exercise (Operation "Big Lift"), 14,500 American soldiers are flown from the United States to Germany to demonstrate the ability of the United States to reinforce NATO forces in Europe rapidly in an emergency.

22 November President Kennedy is assassinated in Dallas, Texas.

1964

1 August Manlio Brosio (Italy) succeeds Dirk Stikker as Secretary General of NATO.

14 October Khrushchev is removed from office. He is replaced by Leonid Brezhnev as General Secretary of the CPSU and by Alexei Kosygin as Prime Minister.

16 October China explodes its first atomic bomb.

1965

6 April The world's first commercial satellite "Early Bird" is launched by the United States. Successfully tested as first global communications system for telephone, TV and telegraphic communications.

7 April Soviet and East German authorities block land access to Berlin at intervals for one week when the Parliament of the Federal Republic of Germany holds its plenary session in West Berlin's Congress Hall.

23 April Soviet Union launches its first communications satellite.

31 May-1 June Meeting of NATO Defence Ministers in Paris pays special attention to the defence problems of Greece and Turkey, and agrees to consider a proposal for improving consultation and extending participation in the planning of nuclear forces.

9 September At a press conference President de Gaulle announces that French military integration within NATO would end by 1969.

20 October The North Atlantic Council approves the revised missions of the Major NATO Commanders and the Canada-US Regional Planning Group.

14-16 Dec. The North Atlantic Council meeting in Ministerial session in Paris accepts new procedures designed to improve the annual process of reviewing the defence efforts of member countries and agreeing upon their force contributions.

1966

10 March President de Gaulle formally announces France's inten-

tion of withdrawing from the integrated military structure of the Alliance.

14 December The Defence Planning Committee establishes the Nuclear Defence Affairs Committee and the Nuclear Planning Group.

1967

18 January Inauguration of NATO Defense College in Rome.

31 March Official opening ceremony of SHAPE at Casteau, near Mons, Belgium.

6-7 April First meeting of the Nuclear Planning Group in Washington.

21 April Military régime takes over power in Greece.

14 June The North Atlantic Council meeting in Luxembourg reviews the Middle East situation following the Six-Day War between Israel and its Arab neighbours.

16 October Official opening of new NATO Headquarters in Brussels.

12 December The Nuclear Defence Affairs Committee holds a meeting in Brussels to examine the Report of the Nuclear Planning Group on strategic nuclear forces, antiballistic missiles, the tactical use of nuclear weapons, and national participation in nuclear planning.

13-14 Dec. The North Atlantic Council approves the Harmel Report on the Future Tasks of the Alliance. The Defence Planning Committee adopts NATO's new strategic concept of flexible response and approves the establishment of a Standing Naval Force Atlantic (STANAVFORLANT).

1968

19 January The United States and the Soviet Union table a draft nuclear non-proliferation treaty at the Geneva Disarmament Conference.

24-25 June The Ministerial meeting of the North Atlantic Council in Reykjavik, Iceland reviews current measures affecting access routes to Berlin and issues a Declaration on Mutual and Balanced Force Reductions.

20-21 August Soviet, Polish, East German, Bulgarian and Hungarian troops invade Czechoslovakia.

- 12 September Albania renounces its membership of the Warsaw Treaty Organisation.
- 13-14 Nov. Formation of the Eurogroup.
- 15-16 Nov. The North Atlantic Council denounces Soviet actions in Czechoslovakia as contrary to the basic principles of the United Nations Charter and issues a warning to the USSR.

1969

- 28 May Establishment of the naval on-call force in the Mediterranean (NAVOCFORMED).
- 8-10 December First meeting of the Committee on the Challenges of Modern Society (CCMS), established by the North Atlantic Council on 6 November, on the basis of a proposal by recently elected US President Nixon.

1970

- 5 March Nuclear Non-Proliferation Treaty signed on 1 July 1968 comes into force.
- 20 March First NATO communications satellite launched from Cape Kennedy.
- 16 April Opening in Vienna of US-USSR negotiations on strategic arms limitations (SALT).
- 11 June The Defence Planning Committee in Ministerial session discusses the continuing expansion of the Soviet presence in the Mediterranean and welcomes the activation of the naval on-call force for the Mediterranean.
- 2-4 December At Ministerial meetings of the Council and Defence Planning Committee (DPC) in Brussels the United States announces that it will not reduce US forces in Europe except in the context of reciprocal East-West action. The DPC adopts the study on "Alliance Defence in the '70s." Ten European countries adopt a special European Defence Improvement Programme.

1971

- 2 February Second NATO communications satellite launched from Cape Kennedy.
- 1 October Joseph Luns (Netherlands) succeeds Manlio Brosio as Secretary General of NATO.

5-6 October Former NATO Secretary General, Manlio Brosio is appointed to conduct exploratory talks on mutual and balanced force reductions with the Soviet and other interested governments.

1972

26 May Signature in Moscow of interim agreement on strategic arms limitations (SALT) and anti-ballistic missile systems (ABM).

30-31 May At its Ministerial meeting in Bonn, the North Atlantic Council agrees to start multinational preparatory talks for a Conference on Security and Cooperation in Europe (CSCE). Multilateral explorations on mutual and balanced force reductions (MBFR) are proposed by the countries participating in NATO's integrated military structure.

3 June Quadripartite Agreement on Berlin signed by Foreign Ministers of France, United Kingdom, United States and the USSR.

21 November Opening of SALT II negotiations in Geneva.

22 November Opening in Helsinki of multilateral preparatory talks on a CSCE.

21 December Signature in East Berlin of the "Basic Treaty" between the Federal Republic of Germany and the German Democratic Republic.

1973

1 January Denmark, Ireland and the United Kingdom join the European Economic Community (EEC).

31 Jan.-29 June Multilateral exploratory talks on MBFR in Vienna.

11 May Inauguration of Standing Naval Force Channel (STANAVFORCHAN).

3-7 July Opening of Conference on Security and Cooperation in Europe (CSCE) in Helsinki.

6-24 October Arab-Israeli Yom Kippur War.

30 October Negotiations on Mutual and Balanced Force Reductions (MBFR) open in Vienna.

1974

25 April Military coup d'Etat in Portugal.

- 26 June NATO Heads of Government meeting in Brussels sign a Declaration on Atlantic Relations approved and published by the North Atlantic Council in Ottawa on 19 June.
- 23 July Konstantinos Karamanlis becomes Prime Minister of Greece following the resignation of the military government.
- 14 August Withdrawal of Greek forces from integrated military structure of NATO.
- 23-24 Nov. President Ford and General Secretary Brezhnev, meeting in Vladivostok, agree on steps towards limitation of US-USSR strategic nuclear arms.

1975

- 31 May ELDO and ESRO merge to become the European Space Agency (ESA). Member countries: Belgium, Denmark, France, Federal Republic of Germany, Italy, Ireland, the Netherlands, Spain, Sweden, Switzerland and the United Kingdom.
- 31 July-1 Aug. The Heads of State and Government of the 35 participating states sign the CSCE Helsinki Final Act.

1976

- 21-22 January At the meeting of the Nuclear Planning Group (NPG) in Hamburg, NATO Defence Ministers discuss the continuing increase in Soviet strategic nuclear capabilities and review prospects for stabilisation through SALT.
- 2 February Establishment of the Independent European Programme Group with the participation of all European member countries of NATO to provide cooperation in the research, development and production of equipment.
- 20-21 May At the North Atlantic Council in Oslo, Foreign Ministers review East-West relations and progress towards implementation of Final Act of CSCE and discuss prospects for MBFR.
- 9-10 December The North Atlantic Council rejects proposals by Warsaw Treaty countries to renounce first use of nuclear weapons and to restrict Alliance membership and calls for all CSCE states to renounce the threat or use of force including all types of weapons in accordance with the UN Charter and Helsinki Final Act.

1977

- 10-11 May North Atlantic Council meeting in London with participation of newly elected US President Carter and other Heads of State and Government. Initiation of a long-term defence programme.
- 4 October CSCE Follow-up Meeting in Belgrade (4 October 1977-9 March 1978).
- 12 October Establishment of NPG High Level Group on theatre nuclear force modernisation.

1978

- 30-31 May Meeting of the North Atlantic Council with participation of Heads of State and Government in Washington.
- 31 Oct.-11 Dec. CSCE Experts' Meeting on the Peaceful Settlement of Disputes, Montreux.
- 18 November Third NATO communications satellite launched from Cape Canaveral, Florida.
- 5-6 December Approval of Airborne Early Warning and Control System (AWACS).

1979

- 13 Feb.-26 Mar. CSCE Experts' Meeting on Mediterranean Cooperation, Valleta.
- 11 April Establishment of Special Group to study arms control aspects of theatre nuclear systems. (The Special Group concluded its work on 11 December 1979).
- 18 June SALT II agreement signed in Vienna by President Carter and General Secretary Brezhnev. (The agreement was not ratified by the United States).
- 4 November Seizure of the United States Embassy in Teheran and 53 hostages by Islamic revolutionaries.
- 12 December Special Meeting of Foreign and Defence Ministers in Brussels. "Double-track" decision on theatre nuclear force modernisation including the deployment in Europe of US ground-launched Cruise and Pershing II systems and a parallel and complementary arms control effort to obviate the need for such deployments.
- 25-26 December Soviet invasion of Afghanistan.
- 29 December Special meeting of North Atlantic Council following Soviet invasion of Afghanistan on 25-26 December.

1980

- 24 January Members of the Alliance participating in the 12 December 1979 Special Meeting establish the Special Consultative Group on arms control involving theatre nuclear forces.
- 18 Feb.-3 Mar. CSCE Forum on Scientific Cooperation, Hamburg.
- 4 May Death of President Tito of Yugoslavia.
- 31 August Gdansk Agreements, leading to establishment and official recognition of independent Polish trade union "Solidarity".
- 12 September Turkish military leadership takes over the administration of the country.
- 22 September War breaks out between Iraq and Iran.
- 20 October Reintegration of Greek forces into the integrated military structure of the Alliance.
- 11 November Opening of CSCE Follow-up Meeting in Madrid.
- 9-12 December Ministerial meetings of the Council and Defence Planning Committee reflect concern over the situation with regard to Poland and the continuing Soviet occupation of Afghanistan.

1981

- 1 January Greece becomes the 10th member of the European Economic Community.
- 23 February Abortive attempt by rebel civil guards to overthrow Spanish caretaker government.
- 6 October Assassination of Egyptian President Sadat.
- 27 October Soviet submarine grounded in Swedish territorial waters.
- 18 November President Reagan announces new arms control initiatives including intermediate-range nuclear force (INF) negotiations and strategic arms reduction talks (START).
- 30 November The United States and the Soviet Union open Geneva negotiations on intermediate-range nuclear forces (INF).
- 10-11 Dec. Signature of the Protocol of Accession of Spain to the North Atlantic Treaty.
- 13 December Imposition of martial law in Poland.

1982

- 11 January Special Ministerial Session of the North Atlantic Coun-

cil issues a Declaration on Events in Poland.

- 2 April-14 June The Falklands Conflict.
- 30 May Spain becomes the 16th member of the North Atlantic Treaty Organisation.
- 10 June Summit Meeting of the North Atlantic Council in Bonn. Heads of State and Government issue the Bonn Declaration setting out the Alliance Programme for Peace in Freedom.
- 30 June Opening of Strategic Arms Reduction Talks (START) in Geneva.

1983

- 23 March President Reagan announces a comprehensive research programme aimed at eliminating the threat posed by strategic nuclear missiles (Strategic Defence Initiative).
- 22 July Ending of martial law in Poland. New laws reinforce government controls.
- 1 September A South Korean airliner with 269 people on board is shot down by Soviet air defence off the coast of Sakhalin.
- 9 September Conclusion of CSCE Follow-up Meeting in Madrid.
- 25 October Military intervention in Grenada by United States and East Caribbean forces.
- 25 Oct.-11 Nov. Preparatory meeting in Helsinki for Stockholm Conference on Security and Confidence Building Measures and Disarmament in Europe (CDE).
- 27 October The Montebello Decision. Defence Ministers meeting in the NATO Nuclear Planning Group in Montebello, Canada announce their decision to withdraw a further 1,400 warheads from Europe, bringing the total of such withdrawals since 1979 to 2,400.
- 23 November Deliveries of Ground-Launched Cruise Missile components to the United Kingdom mark the beginning of NATO's intermediate range nuclear force deployments (INF). Decision by the Soviet Union to discontinue the current round of negotiations in Geneva on intermediate-range nuclear forces (INF).
- 8 December Conclusion of the current round of US-Soviet Geneva negotiations on Strategic Arms Reductions (START) without a date being set by the Soviet side for their resumption.

- 8-9 December Foreign Ministers meeting in the Ministerial Session of the North Atlantic Council issue the Declaration of Brussels expressing their determination to seek a balanced and constructive relationship with the East and calling on the Soviet Union and other Warsaw Treaty countries to respond.
- 13 December Formation of a civilian government in Turkey following parliamentary elections under a new constitution.

1984

- 17 January Opening of the Stockholm Conference on Security and Confidence Building Measures and Disarmament in Europe (CDE).
- 21 Mar.-30Apr. CSCE Experts' Meeting on the Peaceful Settlement of Disputes, Athens.
- 31 May NATO Foreign Ministers issue the Washington Statement on East-West Relations.
- 7-9 June Summit meeting in London. Heads of State and Government of the seven major industrialised countries issue a declaration on East-West Relations and Arms Control.
- 12 June Foreign Ministers of the seven countries of the Western European Union meeting in Paris decide to reactivate the WEU.
- 25 June Lord Carrington (United Kingdom) succeeds Joseph Luns as Secretary General of NATO.
- 16-26 October CSCE Seminar on Economic, Scientific and Cultural Cooperation in the Mediterranean, Venice.
- 26-27 October Foreign and Defence Ministers of the member countries of the Western European Union publish the "Rome Declaration" announcing their decision to increase cooperation within the WEU.
- 7 December Presentation by the Secretary General of NATO of the first Atlantic Award to Per Markussen (Denmark), for his contribution over many years to the objectives of the Atlantic Alliance.

1985

- 11 March Mikhail Gorbachev becomes General Secretary of the Communist Party of the Soviet Union following the death

- of Konstantin Chernenko.
- 12 March The United States and the USSR begin new arms control negotiations in Geneva, encompassing defence and space systems, strategic nuclear forces and intermediate-range nuclear forces.
- 26 April The 1955 Treaty of Friendship, Cooperation and Mutual Assistance, establishing the Warsaw Treaty Organisation, is extended for 20 years by leaders of the seven member states.
- 7 May-17 June CSCE Experts' Meeting on Human Rights, Ottawa.
- 15 Oct.-25 Nov. CSCE Cultural Forum in Budapest.
- 12 November Professor van der Beugel (Netherlands) becomes the second recipient of NATO's Atlantic Award for outstanding services to the Atlantic Alliance.
- 19-21 Nov. At the Geneva Summit, United States President Ronald Reagan and Soviet leader Mikhail Gorbachev agree in principle on a reduction of strategic nuclear forces by 50 per cent and on an interim INF agreement.
- 21 November President Reagan reports on his Geneva talks with Soviet leader Mikhail Gorbachev at a special meeting of the North Atlantic Council with the participation of Heads of State and Government and Foreign Ministers.

1986

- 1 January Portugal and Spain become members of the European Economic Community (EEC).
- 12 March In a referendum organised by Prime Minister Felipe Gonzalez, Spanish voters support the continued membership of Spain in the Atlantic Alliance without participation in NATO's integrated military structure.
- 15 April In response to terrorist attacks attributed to Libya, United States forces attack targets in Tripoli and Benghazi.
- 15 Apr.-26 May CSCE Experts' Meeting on Human Contacts, Berne.
- 26 April Nuclear accident at the Chernobyl power station in the Soviet Union.
- 29-30 May Foreign Ministers issue a Statement on the Ministerial meeting of the North Atlantic Council in Halifax, Canada, calling on the Soviet Union to join them in taking "bold new steps" to promote peace, security and a productive

- East-West dialogue. Ministers establish a High-Level Task Force on Conventional Arms Control.
- 22 September End of Stockholm Conference on Confidence and Security Building Measures and Disarmament in Europe (CDE). Concluding document (dated 19 September) includes mandatory measures for notification, observation and on-site inspection of military manoeuvres of participating countries.
- 13 October At a special session of the North Atlantic Council attended by Foreign and Defence Ministers in Brussels, US Secretary of State Schultz briefs the Council on the negative outcome of the Reykjavik Summit 11-13 October.
- 21-22 October Ministerial meeting of NATO's Nuclear Planning Group in Gleneagles, Scotland. Defence Ministers express support for President Reagan's arms control programme.
- 4 November The third CSCE Follow-up Conference opens in Vienna.
- 24 November Prof. Karl Kaiser (Federal Republic of Germany) receives the third Atlantic Award for services to the Alliance.
- 11 December NATO Foreign Ministers issue the Brussels Declaration on Conventional Arms Control calling for negotiations on conventional stability, aimed at eliminating existing disparities from the Atlantic to the Urals and establishing conventional stability at lower levels; and on further confidence and security building measures.

1987

- 26 January Spain resumes negotiations with its NATO partners on the future role of Spanish forces with the Alliance.
- 17 February Talks open in Vienna between NATO and Warsaw Treaty countries on a mandate for negotiations on conventional forces in Europe from the Atlantic to the Urals.
- 27 March NATO Secretary General Lord Carrington, following an emergency meeting of the North Atlantic Council, offers to use his good offices to help to resolve the dispute in the Aegean between Greece and Turkey.
- 4 June The parliament of the Federal Republic of Germany formally endorses a proposal calling for the elimination of intermediate-range (INF) and shorter-range (SRINF) missiles in Europe.

- 5 June The Canadian Government announces its decision to redirect its commitment to the reinforcement of Europe from the Northern to the Central Region.
- 19 June Chancellor of the Federal Republic Helmut Kohl proposes the formation of a joint Franco-German brigade as the first step towards a joint European fighting force.
- 22 July Soviet leader Mikhail Gorbachev announces Soviet readiness to eliminate all intermediate-range nuclear weapons including those deployed in the 1987 Asian part of the Soviet Union in the context of a United States-Soviet INF treaty.
- 23 July Soviet negotiators present a proposal at the United States-Soviet Geneva arms control negotiations accepting the principle of a 'double-zero option' eliminating Soviet and US land-based intermediate range (LRINF and SRINF) missiles on a global basis.
- 20 August Western European Union experts meeting in The Hague consider joint action in the Gulf to ensure freedom of navigation in the oil shipping lanes of the region.
- 28-30 August United States inspectors attend military manoeuvres near Minsk, the first such inspection to take place under the provisions of the September 1986 Stockholm Document.
- 5-7 October Soviet inspectors attend NATO exercises in Turkey, the first such inspection to take place in an Alliance country under the provisions of the September 1986 Stockholm Document.
- 27 October Foreign and Defence Ministers of the seven member countries of the Western European Union adopt "The Hague Platform on European Security Interests".
- 25 November Presentation of NATO's annual Atlantic Award to Pierre Harmel (Belgium), author of the 1967 Harmel Report.
- 8 December US President Reagan and Soviet Leader Mikhail Gorbachev, meeting at the beginning of their three-day summit talks, sign the Washington Treaty on Intermediate Range Nuclear Forces (INF), eliminating on a global basis land-based intermediate-range nuclear missiles.
- 9 December The United States and the Soviet Union reach agreement on measures allowing the monitoring of nuclear explosions at each other's test sites.

- 10 December At the end of their 3-day summit meeting in Washington, US President Reagan and Soviet Leader Mikhail Gorbachev pledge deep cuts in strategic arms and instruct negotiators in Geneva to draft an agreement in line with the 1972 ABM Treaty.
- 11 December The North Atlantic Council marks the 20th anniversary of the Harmel report. The Secretary of State of the United States and the Foreign Ministers of Belgium, Federal Republic of Germany, Italy, the Netherlands and the United Kingdom sign bilateral agreements relating to the implementation of the INF Treaty and its on-site inspection and verification procedures.

1988

- 22 January Establishment of a Joint Security Council by the Governments of the Federal Republic of Germany and of France. The two Governments also sign an agreement relating to the formation of a joint Franco-German Army Brigade.
- 2-3 March Summit meeting of the North Atlantic Council in Brussels emphasises Allied unity and reasserts the common objectives and principles and the continuing validity of Alliance policies. A Statement on Conventional Arms Control is issued calling for significant steps to bring about progress in eliminating conventional force disparities through negotiations on conventional stability.
- 15 May Beginning of Soviet troop withdrawals from Afghanistan.
- 26-27 May NATO Defence Ministers commission the Executive Working Group to conduct a review of roles, risks and responsibilities shared by member nations in the context of their efforts to sustain the credibility and effectiveness of collective security and defence.
- 31 May During a five-day Summit meeting in Moscow, President Reagan and General Secretary Gorbachev exchange documents implementing the recently ratified December 1987 INF Treaty and sign bilateral agreements on nuclear testing and in other fields.
- 9-10 June At the first Ministerial meeting of the North Atlantic Council to be held in Madrid, Foreign Ministers review

- the positive progress in East-West relations registered at the Moscow Summit meeting, and welcome the evolution of the Spanish contribution to the common defence.
- 24 June Announcement of the formation of a NATO Composite Force to reinforce Northern Norway in periods of tension or hostility, to replace the Canadian CAST Brigade which will be reassigned to the Central Region in accordance with the plans of the Canadian Government.
- 28 June-1 July The 19th CPSU Conference in Moscow sets in train a programme of political, constitutional and legal reforms.
- 1 July Manfred Woerner, former Minister of Defence of the Federal Republic of Germany, succeeds Lord Carrington as Secretary General of NATO.
- 20 August Entry into force of a ceasefire in the Gulf War between Iran and Iraq, in the framework of UN Security Council Resolution 598.
- 14 November Portugal and Spain sign the Treaty of Accession to the Western European Union.
- 5 December Paul Nitze, Special Adviser on Arms Control to President Reagan, receives the 1988 Atlantic Award.
- 7 December President Gorbachev, in the course of a major address to the UN General Assembly, announces unilateral Soviet conventional force reductions. A major earthquake in Armenia devastates several cities and causes massive loss of life.
- 8 December Alliance Foreign Ministers welcome Soviet reductions in conventional forces and publish a statement outlining the Alliance's proposals for forthcoming negotiations on conventional stability and further confidence and security building measures.

1989

- 7-11 January 149 countries participate in an international Conference on Chemical Weapons in Paris.
- 18 January President Gorbachev provides further details of intended reductions in Soviet armed forces referred to in his address to the United Nations on 7 December 1988, announcing cuts of 14.2 per cent in Soviet defence expenditure and 19.5 per cent in the production of arms and military equipment.

- 19 January Conclusion of the Vienna CSCE Follow-up Meeting and adoption of a Concluding Document including mandates for new negotiations on Conventional Armed Forces in Europe (CFE) and new negotiations on Confidence and Security Building Measures (CSBMs).
- 23-27 January Future reductions in conventional forces and military budgets are announced by the German Democratic Republic, Poland, Hungary, Czechoslovakia, and Bulgaria. They are welcomed by Alliance countries as contributions to the reduction of conventional force imbalances in Europe.
- 2 February Final meeting of the Vienna negotiations on Mutual and Balanced Force Reductions.
- 11 February The Central Committee of the Hungarian Communist Party endorses “gradual and steady” transition to a multi-party political system.
- 15 February The Soviet Union completes the withdrawal of military forces from Afghanistan in accordance with the schedule announced by President Gorbachev.
- 6 March Foreign Ministers of CSCE states meet in Vienna to mark the opening of new negotiations on Conventional Armed Forces in Europe (CFE) among the 23 members of NATO and the Warsaw Treaty Organisation and on Confidence and Security Building Measures among all 35 CSCE participating States.
- 26 March The first multi-candidate elections to the new USSR Congress of People’s Deputies result in major set-backs for official Party candidates in many constituencies.
- 4 April The fortieth anniversary of the signing of the North Atlantic Treaty is marked by a special session of the North Atlantic Council and other ceremonies at NATO and in capitals.
- 5 April Agreements signed in Warsaw by Government and opposition negotiators on measures leading to political reforms in Poland including free elections and registration of the banned trade union movement Solidarity.
- 18 Apr.-23 May CSCE Information Forum, London.
- 12 May President Bush proposes “Open Skies” régime to increase confidence and transparency with respect to military activities. The proposal envisages reciprocal opening of

- airspace and acceptance of overflights of national territory by participating countries.
- 29-30 May Summit Meeting of the North Atlantic Council in Brussels attended by Heads of State and Government. Announcement by President Bush of major new initiatives for conventional force reductions in Europe. Adoption of the Alliance's Comprehensive Concept of Arms Control and Disarmament and publication of a Summit Declaration.
- 30 May-23 June First meeting of the CSCE Conference on the Human Dimension (CDH) in Paris.
- 31 May During a visit to the Federal Republic of Germany President Bush outlines proposals for promoting free elections and pluralism in Eastern Europe and dismantling the Berlin Wall.
- 3-4 June Chinese leaders use armed forces in Peking to suppress unarmed student-led popular demonstrations in favour of democracy, causing large-scale loss of life and leading to major unrest in other cities, purges and infringements of basic rights.
- 4 and 18 June Free elections for the Polish Senate and partial elections involving 35 per cent of seats in the Sejm result in major electoral success for Solidarity.
- 8-9 June Ministerial Meeting of the Defence Planning Committee. Defence Ministers consider implications for defence planning of Western proposals for reduction of conventional forces in Europe.
- 16 June Imre Nagy, leader of the 1956 Hungarian revolution who was hanged in 1958, is reburied with full honours in Budapest.
- 19 June Re-opening of Strategic Arms Reduction Talks (START) in Geneva.
- 2 July Death of veteran Soviet Foreign Minister and former President Andrei Gromyko.
- 9 August A statement is issued by NATO's Secretary General on behalf of the Allies concerning the situation of ethnic Turks in Bulgaria, calling upon the Bulgarian government to respond positively to appeals to meet its responsibilities in accordance with CSCE commitments.

- 24 August Tadeusz Mazowiecki becomes Prime Minister of the first non-communist led government in Poland in 40 years. The Polish United Workers' (Communist) Party retains four ministries.
- 10 September Hungary opens its Western border, enabling large numbers of East German refugees to leave the country for destinations in the West.
- 3 October Following the exodus of 6,390 East German citizens from Western embassies in Prague on 1 October under arrangements made by the East German Government, some 20,000 East German emigrants congregate in the Prague and Warsaw embassies of the Federal Republic of Germany.
- 6-7 October Mikhail Gorbachev, attending 40th Anniversary Parade in East Berlin, urges reforms in the GDR.
- 16 October CSCE Meeting on Environmental Protection in Sofia.
- 18 October Erich Honecker, General Secretary of the Socialist (Communist) Unity Party since 1971, is replaced by Egon Krenz as leader of the German Democratic Republic as East German citizens demonstrate for political reform and large numbers of refugees continue to leave the German Democratic Republic through Prague and Budapest.
- 23 October The new constitution adopted by the Hungarian Parliament on 18 October brings into being the Republic of Hungary as a "free, democratic, independent legal state" and opens the way for multiparty elections in 1990.
- 7 November Resignation of the East German Cabinet following rallies in many cities calling for free elections and the abolition of the Communist monopoly on power and calls from within the Party for major changes at the highest level. The move is followed the next day by the joint resignation of the ruling Politburo.
- 9-10 November Opening of the Berlin Wall. In an atmosphere of political uncertainty and a crisis of authority in East Berlin, East and West Berliners tear down the wall and celebrate the beginning of the process of unification. Following widespread demonstrations and demand for political reform, the government of the German Democratic Republic announces the lifting of travel restrictions to the West and sets up new crossing points.

- 10 November Removal of Todor Zhivkov, Bulgarian Communist Party leader since 1954, followed by further sweeping changes in the party leadership.
- 14 November East German Parliament elects Hans Modrow as Prime Minister.
Portugal and Spain sign the Treaty of Accession to the Western European Union.
- 17 November Violent dispersal of Prague student demonstrations triggers popular movement against the government. Emergence of Civic Forum, led by Vaclav Havel.
- 20 November Mass demonstrations in Leipzig voice popular call for German unification.
- 24 November Resignation of the Czechoslovak Party leadership. Karel Urbanek becomes General Secretary and invites dialogue with Civic Forum.
- 3 December Resignation of new East German Politburo and Central Committee amid revelations of Communist leadership's misrule and corruption.
- 4 December NATO Summit Meeting in Brussels. US President George Bush briefs NATO leaders on his talks with Soviet President Gorbachev at the US-Soviet Summit Meeting in Malta on 2-3 December. The Summit Meeting of leaders of the Warsaw Treaty Organisation in Moscow publishes a joint statement denouncing the 1968 invasion of Czechoslovakia by Warsaw Pact forces and repudiates the Brezhnev Doctrine of limited sovereignty.
- 7 December Resignation of President Gustav Husak and formation of coalition government in Czechoslovakia. NATO's Atlantic Award for 1989 is bestowed on Sir Michael Howard, President and co-founder of the International Institute for Strategic Studies (IISS).
- 11 December Popular demonstrations in Bulgaria lead to the promise of free elections and renunciation of the leading role of the Communist Party.
- 14-15 December Ministerial Meeting of the North Atlantic Council in Brussels. Foreign Ministers review accelerating political change in Central and Eastern Europe.
- 19 December Soviet Foreign Minister Eduard Shevardnadze visits NATO Headquarters for talks with NATO Secretary General Manfred Woerner and Permanent Representa-

- tives of NATO countries the first such visit by a Minister of a Central or Eastern European government.
- 20 December Troops and police open fire on thousands of anti-government protesters in the Romanian town of Timisoara.
- 22 December Fall of Ceausescu regime. Nicolai Ceausescu is arrested by the Romanian armed forces and executed on 25 December. The National Salvation Front headed by Ion Iliescu takes control and promises free elections.
- 29 December The Polish Parliament abolishes the leading role of the Communist Party and restores the country's name as the Republic of Poland. Vaclav Havel is elected President of Czechoslovakia.

1990

- 15 January Bulgarian government abolishes the Communist Party's 44-year monopoly on political power.
- 16 Jan.-5 Feb. 35-nation Seminar on Military Doctrines in Vienna in the framework of the CSCE.
- 6 February In an unprecedented speech to the Plenary Session of the Central Committee of the Communist Party of the Soviet Union, Mikhail Gorbachev addresses major aspects of his reform programme including the abandonment of the leading role of the Communist Party and the introduction of political pluralism.
- 12-14 February Foreign Ministers of NATO and Warsaw Treaty Organisation countries, with observers from other CSCE states, meet in Ottawa at the opening of the "Open Skies" Conference.
- 13 February On the margins of the "Open Skies" Conference in Ottawa, agreement is reached by the Foreign Ministers concerned to hold discussions on external aspects of the establishment of German unity in a "Two Plus Four" framework. NATO and Warsaw Treaty Organisation Foreign Ministers also agree on steps to enable a CFE agreement to be concluded in 1990.
- 3 March Czechoslovak Foreign Minister Jiri Dienstbier visits NATO Headquarters for discussions with NATO Secretary General Manfred Woerner.
- 8 March At a meeting attended by Chancellor Helmut Kohl,

- consultations take place in the North Atlantic Council on the position of the Government of the Federal Republic on developments in Germany and related security matters.
- 11 March The Lithuanian Parliament votes to break away from the Soviet Union and regain its independence.
- 17 March Warsaw Treaty Organisation Foreign Ministers meeting in Prague support the continuation of both NATO and the Warsaw Pact.
- 18 March In their first free elections in 40 years the citizens of the German Democratic Republic give an overwhelming majority to the conservative “Alliance for Germany”, marking a further key step in the process of the unification of Germany.
- 19 Mar.-11Apr. CSCE Conference on Economic Cooperation in Europe, Bonn.
- 21 March Krzysztof Skubiszewski, Foreign Minister of Poland, visits NATO Headquarters for discussions with Secretary General Manfred Woerner and Permanent Representatives of NATO countries.
- 26 March The Czechoslovak Government orders border installations along its frontiers with Austria and the Federal Republic of Germany to be dismantled.
- 27 March Formal entry of Portugal and Spain to the WEU on completion of the ratification process.
- 7 April Elections in Hungary result in a decisive victory for the Hungarian Democratic Forum (centre-right party).
- 12 April The coalition government of the German Democratic Republic pronounces itself in favour of unification with the Federal Republic of Germany on the basis of Article 23 of the Basic Law and the membership of the unified country in the North Atlantic Alliance.
- 3 May President Bush announces the cancellation of modernisation programmes for nuclear artillery shells deployed in Europe and for a “follow-on” to the LANCE short-range nuclear missile. He calls for negotiations on US and Soviet short-range nuclear missiles to begin shortly after a CFE treaty is signed.
- 4 May The Latvian Parliament declares the independence of the Baltic Republic.

- 8 May The Estonian Parliament modifies the Republic's name and constitution and restores its pre-war flag and national anthem.
- 9-10 May NATO Defence Ministers, meeting in the Nuclear Planning Group in Kananaskis, Canada, discuss the implications of political changes taking place in Europe for NATO's security policy.
- 20 May Following elections in Romania, former Communist Government member Ion Iliescu is elected President despite opposition accusations of electoral irregularities. The National Salvation Front obtains a majority in Parliament.
- 22-23 May NATO Defence Ministers, meeting in the Defence Planning Committee, assess the implications for NATO security policy of the changes taking place in Europe and initiate a review of NATO's military strategy. Hungary's new Premier, Josef Antall, announces his government's intention to withdraw from the Warsaw Treaty Organisation following negotiations.
- 30 May Boris Yeltsin is elected President of the Russian Republic in the third round of elections.
- 30 May-2 June US-Soviet Summit Meeting in Washington.
- 5 June Foreign Ministers of the 35 countries participating in the second CSCE Conference on the Human Dimension (CHD2) in Copenhagen agree to accord observer status to Albania.
- 7-8 June At the Ministerial Meeting of the North Atlantic Council at Turnberry in Scotland, Alliance Foreign Ministers publish a "Message from Turnberry" in which they express their determination to seize the opportunities resulting from the changes in Europe and extend to the Soviet Union and all other European countries the hand of friendship and cooperation.
- 8 June Parliamentary elections in Czechoslovakia. Civic Forum and allied parties win a majority in the Federal Assembly.
- 10 and 17 June Elections in Bulgaria result in a parliamentary majority for the Bulgarian Socialist Party.
- 18 June NATO announces the award of 70 research fellowships for 1990/91 including 55 fellowships for research on

- democratic institutions awarded for the first time to citizens of both NATO and Central and Eastern European countries.
- 28 June At the Copenhagen CSCE Conference on the Human Dimension, Eastern European countries (excluding Albania, which joined the CSCE process in June 1991) commit themselves to multiparty parliamentary democracy and to the rule of law.
- 29 June Geza Jeszensky, Foreign Minister of Hungary, is received at NATO Headquarters by Secretary General Manfred Woerner.
- 2 July Monetary union is established between the Federal Republic of Germany and the German Democratic Republic. Taro Nakayama, Foreign Minister of Japan, is received by Secretary General Manfred Woerner at NATO Headquarters.
- 6 July NATO Heads of State and Government meeting in London publish the "London Declaration" on a Transformed North Atlantic Alliance. The Declaration outlines proposals for developing cooperation with the countries of Central and Eastern Europe across a wide spectrum of political and military activity, including the establishment of regular diplomatic liaison between those countries and NATO.
- 10 July The Foreign Minister of the German Democratic Republic, Markus Meckel, visits NATO.
- 13-17 July NATO Secretary General Manfred Woerner visits Moscow at the invitation of Foreign Minister Shevardnadze for talks with the Soviet leadership following publication of the London Declaration.
- 16 July Chancellor Kohl and President Gorbachev agree on measures enabling Germany to regain full sovereignty and to exercise its right to remain a full member of the North Atlantic Alliance.
- 17 July Conclusion of the "Two Plus Four" Conference in Paris on the unification of Germany.
- 18 July Hungarian Prime Minister Josef Antall visits NATO Headquarters.
- 2 August Iraqi troops invade Kuwait following a dispute between the two countries on exploitation of oil rights in the Gulf.

- 6 August The UN Security Council agrees unanimously on wide-ranging sanctions against Iraq and demands Iraqi withdrawal from the occupied territory of Kuwait.
- 8 August The UN Security Council declares the Iraqi announcement of its de facto annexation of Kuwait null and void.
- 10 August Special Meeting of the North Atlantic Council at the level of Foreign Ministers for consultations and exchange of information on developments in the Gulf.
- 22 August The legislature of the German Democratic Republic votes in favour of the unification of the GDR with the Federal Republic of Germany on 3 October 1990 and agrees to hold elections in the unified country on 2 December 1990.
- 4 September The nine member countries of the Western European Union agree on guidelines for the coordination of their naval operations in the Gulf region in order to reinforce the international embargo against Iraq. A number of WEU and other countries send forces to the area.
- 5-8 September NATO Secretary General Manfred Woerner visits the Czech and Slovak Federal Republic for discussions with the President, Prime Minister and President of the Parliament.
- 7 September Consultations continue in the North Atlantic Council on political, military and economic developments in the Gulf in the framework of the harmonisation of allied policies and the commitment of the Allies to work for the application of United Nations resolutions in relation to the Gulf crisis.
- 10 September The United States Secretary of State James Baker briefs a special meeting of the North Atlantic Council in Ministerial session on the outcome of the US-Soviet summit meeting on the Gulf crisis.
- 12 September In a statement issued on the occasion of the signing of the "Two Plus Four" Treaty in Moscow, the Alliance welcomes this historic agreement which paves the way for the unification of Germany and its return to full sovereignty.
- 13-15 Sept. NATO Secretary General Manfred Woerner on his first visit to Poland addresses the Sejm on the historic opportunities for creating a durable order of peace and prosperity in Europe based on cooperation and friendship.

- 14 September Initiation of Allied consultations in NATO's Special Consultative Group on future negotiations on short-range nuclear forces as called for in the London Declaration. In a statement condemning the forced entry by Iraqi soldiers into the residences of NATO embassies in Kuwait, the Alliance calls upon Iraq to free those seized and to refrain from further aggressive acts.
- 24 Sept.-19 Oct. CSCE Meeting on the Mediterranean, Palma de Mallorca.
- 1-2 October CSCE Conference of Foreign Ministers in New York passes resolution condemning Iraqi aggression against Kuwait.
- 3 October On the day of German unification the North Atlantic Council marks the occasion by a special meeting and welcomes the united country as a full member of the Alliance.
- 15 October Mikhail Gorbachev is awarded the 1990 Nobel Peace Prize.
- 23 October Mr. Petre Roman, Prime Minister of Romania, is received at NATO Headquarters by Secretary General Manfred Woerner.
- 25-26 October Visit to NATO by First Deputy Minister of Defence and Chief of the Soviet General Staff, General M.A. Moiseyev.
- 26 October Dr. Lajos Fur, Defence Minister of the Republic of Hungary, visits NATO.
- 15 November Mr. Luben Gotsev, Foreign Minister of Bulgaria, is received at NATO Headquarters by Secretary General Manfred Woerner.
- 17 November CSCE negotiators adopt the "Vienna Document" on Confidence and Security Building Measures (CSBMs).
- 19 November In the framework of the CSCE Summit Meeting in Paris, the 22 member states of NATO and the Warsaw Treaty Organisation sign a major Treaty on Conventional Armed Forces in Europe and publish a Joint Declaration on non-aggression.
- 21 November CSCE Heads of State and Government publish the Charter of Paris for a New Europe and endorse the adoption of the Vienna Document on Confidence and Security Building Measures (CSBMs).
- 22-25 Nov. NATO Secretary General Manfred Woerner visits Hungary.

Bosnian Serbs reject the Vance-Owen Peace Plan.
- 22 May Joint Action Programme on Bosnia-Herzegovina announced by members of the UN Security Council (France, Russia, Spain, UK, US) to stop the fighting, including provisions for "safe areas".
- 24 May Eurogroup Defence Ministers transfer Eurogroup training and medical activities to NATO and Eurogroup publicity and communications activities and communications to the WEU.
- 25-26 May DPC/NPG Ministerial meeting at NATO Headquarters to discuss, inter alia, defence planning implications of support for UN and CSCE peacekeeping activities and defence aspects of the proliferation of weapons of mass destruction.
- 8 June At the joint session of the North Atlantic Council and the Council of the Western European Union at NATO Headquarters, the two organisations approve a single command and control arrangement for the combined NATO/WEU naval operations in the Adriatic for the enforcement of the UN embargoes against Serbia and Montenegro.

- 10 June At the Ministerial meeting of the North Atlantic Council in Athens, NATO Foreign Ministers offer to provide protective air power in case of attack against UNPROFOR in the performance of its overall mandate, if so requested by the UN.
- 11 June NACC Foreign Ministers, meeting in Athens, announce a programme of cooperation in preparation for joint peacekeeping activities in support of the UN and CSCE and publish a report by the NACC Ad Hoc Group on Cooperation in Peacekeeping.
- 18 June The UN Security Council approves deployment of 300 US troops to the former Yugoslav Republic of Macedonia to join the 700 UN troops already there as a preventive measure to keep the Bosnian conflict from spreading.
- 23 June Eduard Shevardnadze, the Chairman of Parliament and Head of State of Georgia pays an official visit to NATO Headquarters.
- 28-30 June The Chairman of the NATO Military Committee, Field Marshall Sir Richard Vincent, visits the Czech Republic.
- 30 June-2 July NACC High Level seminar on peacekeeping is held in Prague, to further the work of the NACC Ad Hoc Group on Cooperation in Peacekeeping.
- 30 June-2 July The 1993 Economics Colloquium is held at NATO Headquarters on the theme "Economic Developments in Cooperation Partner Countries from a Sectoral Perspective".
- 22 July Belarus formally accedes to the NPT as a non nuclear weapon state, in accordance with the 1992 Lisbon Protocol to START I.
- 2 August At a special meeting on the situation in Bosnia-Herzegovina the North Atlantic Council announces immediate preparations for undertaking stronger measures, including air strikes against those responsible, if the strangulation of Sarajevo and other areas continues, including wide-scale interference with humanitarian assistance.
- 9 August The North Atlantic Council approves the operational options for air strikes in Bosnia-Herzegovina, as called

- for by the Council on 2 August, to be implemented on the authorisation of the UN Secretary General.
- Albert II, King of the Belgians, accedes to the throne following the death of King Baudouin I on 31 July.
- 16-18 August The Chairman of the Military Committee, Field Marshall Sir Richard Vincent, pays an official visit to Romania and Moldova.
- 31 August Russia completes the withdrawal of its troops from Lithuania.
- 1 September NATO Secretary General Manfred Woerner meets with UN Secretary General Boutros Boutros-Ghali in Geneva to discuss prospects for a peaceful settlement in Bosnia-Herzegovina and NATO's role in support of the UN's peacekeeping mission in the former Yugoslavia, as well as the development of closer links between NATO and the UN.
- 18 September Ukrainian Foreign Minister Anotoly Zlenko visits NATO Headquarters.
- 20 September NACC representatives meeting at NATO Headquarters issue a statement calling for an end to fighting in Georgia and condemning the cease-fire violations of the Abkhazian forces.
- 21 September The Chief of Defence of the Czech Republic, Major General Jiri Nekvasil, visits NATO Headquarters. Russian President Boris Yeltsin suspends parliament and calls for fresh elections on 11-12 December. Vice-President Alexander Rutskoi and the Parliamentary Chairman Ruslan Khasbulatov urge the armed forces to resist the suspension. They and other hardliners occupy the Russian White House.
- 22 September Thorvald Stoltenberg and Lord Owen, Co-Chairmen of the International Conference on the Former Yugoslavia, visit NATO Headquarters to discuss the implementation of an eventual peace plan for Bosnia-Herzegovina with the Secretary General and the Chairman of the Military Committee.
- 29 September Official visit of the President of Turkmenistan, Saparmurad Niyazov, to NATO Headquarters.
- 4 October Troops loyal to Russian President Yeltsin pound the White House, headquarters of the Russian Parliament,

with tanks and machine gun fire, ending the occupation of the building by parliamentarian hardliners opposing President Yeltsin's reform programme. The Security Council extends the mandate of UN peacekeepers in Croatia and Bosnia for six months. It authorises the peacekeepers in Croatia "to take the necessary measures, including the use of force, to ensure its security and its freedom of movement".

- 6-7 October NATO Secretary General Manfred Woerner, on a visit to the US, meets with President Bill Clinton in Washington, and with UN Secretary General Boutros Boutros-Ghali in New York.
- 18 October The Prime Minister of the Republic of Estonia, Mr. Mart Laar, pays an official visit to NATO Headquarters.
- 20-21 October NATO Defence Ministers meet in Travemunde, Germany, to discuss informally a range of subjects including the Partnership for Peace proposal and the CJTF concept and proliferation of weapons of mass destruction.
- 2-3 November The Chairman of the NATO Military Committee, Field Marshal Sir Richard Vincent, pays an official visit to Bulgaria, meeting with President Zhelyu Zhelev.
- 4 November The President of the Slovak Republic, Michael Kovac, pays an official visit to NATO Headquarters.
- 15-17 November NATO's Verification and Coordinating Committee conducts a seminar at NATO Headquarters with NACC Partner Countries on cooperation in the verification and implementation of conventional arms control provisions, including the CFE Treaty.
- 30 November NATO Secretary General Manfred Woerner addresses the CSCE Council of Foreign Ministers meeting in Rome.
- 2 December At the Ministerial meeting of the North Atlantic Council, NATO Foreign Ministers discuss the concept of Partnership for Peace and related proposals, in preparation for the January 1994 Summit.
- 3 December At the NACC Ministerial, NATO and NACC Foreign Ministers approve a second report by the NACC Ad Hoc Group on Cooperation in Peacekeeping, as well as the NACC Work Plan for 1994.
- 7 December EUROGROUP Ministers announce that several sub-groups will either be incorporated into NATO or trans-

- ferred to the WEU, and that the EUROGROUP itself will cease to exist as of 1 January 1994.
- 8-9 December NATO Defence Ministers meeting in the DPC/NPG in Brussels discuss new defence tasks of the Alliance, including support for UN and CSCE peacekeeping, and the concept of Combined Joint Task Forces. Ministers express their strong support for the Partnership for Peace.
- 9 December NATO Secretary General Manfred Woerner meets with Russian President Boris Yeltsin in Brussels.
- 12 December First multiparty parliamentary elections in Russia since 1917. A new constitution giving increased power to the President is approved by 58.4 per cent of votes cast.
- 14 December Joint meeting of the North Atlantic Council and the Council of the WEU at ambassadorial level at WEU Headquarters in Brussels.

1994

- 10-11 January At the Brussels Summit, Alliance Heads of State and Government launch Partnership for Peace (PfP), issuing an invitation to all NACC partner countries and CSCE states able and willing to participate. The PfP Framework Document is published. The concept of Combined Joint Task Forces is endorsed, as well as other measures to support the development of a European Security and Defence Identity. NATO Heads of State and Government reaffirm NATO's readiness to carry out air strikes to prevent the strangulation of Sarajevo and other UN-declared safe areas in Bosnia-Herzegovina.
- 14 January The Presidents of US, Russia and Ukraine sign a trilateral agreement in Moscow detailing procedures for the transfer of Ukrainian nuclear warheads to Russia and associated compensation and security assurances. US President Clinton and Russian President Yeltsin sign an accord bringing to an end the targeting of long-range nuclear missiles at each other's countries with effect from 30 May 1994.
- 18 January Elections for the Russian State Duma (Parliament) result in large gains for opponents of President Yeltsin.
- 20 January The President of Bosnia-Herzegovina, Alija Izetbegovic, visits NATO Headquarters.

- 24-27 January Second NATO/CCMS International Conference on the Role of the Military in Protecting the Ozone Layer. Participants pledge to meet the deadlines set by the Montreal Protocol on Substances that Deplete the Ozone Layer.
- 26 January Romania's Foreign Minister, Teodor Melescanu, comes to NATO Headquarters to sign the Partnership for Peace Framework Document.
- 27 January The President of Lithuania, Algirdas Brazauskas, pays an official visit to NATO Headquarters to sign the PfP Framework Document.
A programme of military cooperation between Russia and NATO, signed in Moscow, provides for exchanges of visits by senior commanders and military experts and for joint exercises and training.
- 1 February Sergio Silvio Balanzino (Italy) succeeds Ambassador Amadeo de Franchis as Deputy Secretary General of NATO.
- 2 February Polish Prime Minister Waldemar Pawlak signs the PfP Framework Document at NATO Headquarters.
- 3 February Mr. Juri Luik, Estonian Minister of Foreign Affairs, signs the PfP Framework Document at NATO Headquarters. The Ukrainian Parliament rescinds the conditions attached to its earlier ratification of START I on 18 November 1993, authorising the government to exchange instruments of ratification.
- 6 February UN Secretary General Boutros Boutros-Ghali requests NATO to prepare for possible air strikes against artillery positions in and around Sarajevo, following a mortar attack on a crowded market place in the city with extensive loss of life.
- 8 February Hungary's Minister of Foreign Affairs, Geza Jeszenszky, visits NATO Headquarters to sign the PfP Framework Document.
Mr. Anatoly Zlenko, Foreign Minister of Ukraine, signs the PfP Framework Document at NATO Headquarters.
- 9 February The North Atlantic Council condemns the continuing siege of Sarajevo and announces that heavy weapons of any of the parties remaining in an area within 20 kilometres of the centre of the city after 20 February would be

- subject to NATO air strikes conducted in close coordination with the UN Secretary General, consistent with the NAC's decisions of 2 and 9 August 1993. The Prime Minister of Slovakia, Vladimir Meciar, signs the PfP Framework Document at NATO Headquarters.
- 14 February Mr. Zhelyu Zhelev, President of Bulgaria, visits NATO Headquarters where he signs the PfP Framework Document.
- Latvian Prime Minister Vladis Birkavs signs the PfP Framework Document at NATO Headquarters.
- Kazakhstan formally accedes to the Non-Proliferation Treaty (NPT) as a non-nuclear weapon state, in accordance with the 1992 Lisbon Protocol to START I.
- 14-15 February The Chairman of the NATO Military Committee, Field Marshall Sir Richard Vincent, pays an official visit to Poland, under the auspices of the NACC programme.
- 15 February The UK and Russia agree to reprogramme their nuclear missiles so that as of 30 May 1994, they are no longer targeted at one another.
- 21 February Following expiry of the deadline of 9 February to withdraw heavy weapons from the Sarajevo exclusion zone, NATO's Secretary General announces that, because the objectives were being met, UN and NATO officials had recommended not to use air power at this stage.
- 23 February The President of Albania, Sali Berisha, comes to NATO Headquarters to sign the PfP Framework Document.
- 28 February Four warplanes violating the UN-mandated no-fly zone over Bosnia-Herzegovina are shot down by Alliance jets.
- 4 March The first shipment of 60 nuclear warheads are transferred from the Ukraine to Russia, under the terms of the Tripartite Statement of 14 January 1993 between Ukraine, Russia and the US.
- 10 March Vaclav Klaus, the Prime Minister of the Czech Republic, signs the PfP Framework Document at NATO Headquarters.
- 14-17 March Field Marshall Sir Richard Vincent, Chairman of the Military Committee, pays an official visit to Estonia, Latvia and Lithuania to discuss NATO's Military Cooperation Programme and the security interests of each country.

- 16 March The President of Moldova, Mircea Snegur, visits NATO Headquarters to sign the PfP Framework Document.
- 23 March Alexander Chikvaдзе, Foreign Minister of Georgia, signs the PfP Framework Document at NATO Headquarters.
- 30 March The Prime Minister of Slovenia, Janez Drnovsek, comes to NATO Headquarters to sign the PfP Framework Document.
- 10 April Following a request from the UN Force Command, NATO aircraft provide close air support to UN personnel in Gorazde, a UN-designated safe area in Bosnia-Herzegovina, under the guidance of a UN forward air controller.
- 16 April A British Sea Harrier jet is shot down while on a NATO close air support mission to protect UNPROFOR troops in Bosnia-Herzegovina.
- 22 April In a response to a request of 18 April by the UN Secretary General, the North Atlantic Council takes further decisions regarding the use of air power to protect UN personnel throughout Bosnia-Herzegovina and UN-designated safe areas. The Council also authorises air strikes unless all Bosnian Serb heavy weapons are withdrawn by 27 April from an area within 20 kilometres of Gorazde. This deadline also applies to any of the other UN-designated safe areas if they are attacked by heavy weapons.
- 25 April Poland's Defence Minister, Piotr Kolodziejczyk, visits NATO Headquarters to submit his country's PfP Presentation Document.
- 27 April The NATO Council, reviewing the implementation of its decisions of 22 April concerning the situation in and around Gorazde and other safe areas in Bosnia-Herzegovina, determines that there is general compliance with the deadline. The NATO Military Committee meets in Cooperation Session at Chiefs of Defence/Chiefs of General Staff level at NATO Headquarters.
- 27-29 April NACC seminar on Planning and Management of National Defence Programmes is held in Budapest, Hungary.

- 28 April Opening ceremonies of the Partnership Coordination Cell, collocated with SHAPE at Mons, Belgium. Defence Minister Gheorghe Tinca submits Romania's PfP Presentation Document at NATO Headquarters.
- 4 May The President of Azerbaijan, Gaidar Aliyev, signs the PfP Framework Document at NATO Headquarters.
- 9 May The Foreign Minister of Sweden, Baroness Margaretha af Ugglas, and the Foreign Minister of Finland, Mr. Heikki Haavisto, visit NATO Headquarters to sign the PfP Framework Document.
Meeting of the WEU Council of Ministers in Kirchberg, Luxembourg, with Foreign and Defence Ministers of Bulgaria, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania and Slovakia. A new status is agreed whereby these countries become Associate Partners of the WEU.
- 10 May Finland and Sweden submit their PfP Presentation Documents to NATO.
Turkmenistan's Deputy Prime Minister, Boris Shikmuradov, signs the PfP Framework Document at NATO Headquarters.
- 11-14 May The Chairman of the NATO Military Committee, Field Marshall Sir Richard Vincent, visits Slovakia and Russia to meet with high ranking military and civilian government officials in both countries in the context of the NACC.
- 17 May The Czech Republic submits its PfP Presentation Document to NATO.
- 24 May At the DPC/NPG Ministerial meeting, NATO Defence Ministers review progress on the defence implications of PfP, the CJTF concept, counter-proliferation and peacekeeping efforts.
Russian Defence Minister Pavel Grachev comes to NATO Headquarters to brief NATO Defence Ministers on Russia's new defence doctrine.
- 25 May NATO Defence Ministers meet with Defence Ministers and Representatives of Cooperation Partner countries including, for the first time, those from Finland, Sweden and Slovenia, under the auspices of PfP, to discuss cooperation in defence-related matters, including peacekeep-

- ing.
Slovakia and Ukraine submit their PfP Presentation Documents to NATO.
- 26-27 May Inaugural Conference on a Pact on Stability in Europe, in Paris. European Foreign Ministers discuss a new initiative aimed at averting conflicts over borders and the rights of minorities, promoting good neighbourly relations in Central and Eastern Europe, and strengthening regional cooperation and democratic institutions.
- 27 May The Foreign Minister of the Republic of Kazakhstan, Kanet Saudabaev, visits NATO Headquarters to sign the PfP Framework Document.
- 1 June President Askar Akayev of Kyrgyzstan signs the PfP Framework Document at NATO Headquarters.
- 3 June Deputy Secretary General Sergio Balanzino formally opens the offices for Partners in the Manfred Woerner Wing at NATO Headquarters.
- 6 June Bulgaria and Hungary submit their PfP Presentation Documents to NATO.
- 9 June NATO Foreign Ministers meeting in Istanbul review progress on the implementation of the Brussels Summit decisions, noting that 20 countries had already joined PfP. Ministers adopt an overall policy framework on the Alliance's approach to the proliferation of weapons of mass destruction.
- 10 June Ministerial meeting of the NACC in Istanbul. Foreign Ministers issue a third Report on Peacekeeping by the Ad Hoc Group on Cooperation in Peacekeeping. Foreign Ministers from Finland, Sweden and Slovenia also attend.
Lithuania submits its PfP Presentation Document.
- 22 June Russian Foreign Minister Andrei Kozyrev visits NATO Headquarters to sign the PfP Framework Document and to hold discussions with the Council. A Summary of Conclusions of the discussions is issued.
- 26-28 June General George Joulwan (SACEUR) visits Moscow for discussions on Russia's participation in PfP as well as a specific cooperation programme with Russia.
- 29 June The Special Representative of the Secretary General of the UN, Yasushi Akashi, accompanied by Lt. Gen.

- Bertrand de Lapresle, Commander of the United Nations Protection Forces (UNPROFOR) in former Yugoslavia, and Lt. Gen. Sir Michael Rose, Commander of UNPROFOR in Bosnia-Herzegovina, visit NATO Headquarters to meet with the Deputy Secretary General, Sergio Balanzino.
- 29 June-1 July The annual NATO Economics Colloquium takes place, focusing on privatisation in the defence industry.
- 5 July Poland's PfP Individual Partnership Programme with NATO is formally accepted.
Russia submits its PfP Presentation Document.
- 8 July Estonia submits its PfP Presentation Document.
- 11 July The North Atlantic Council issues a statement reiterating the willingness of the Alliance to participate in the implementation of a peace agreement in Bosnia-Herzegovina; and agreeing that steps envisaged in the plan issued by Foreign Ministers in Geneva on 5 July could result in the assumption of new tasks by the Alliance in former Yugoslavia at the request of the UN.
- 12 July The German Federal Constitutional Court clarifies the constitutional basis for the deployment of German forces abroad, removing constitutional objections to German participation in UN, NATO or WEU peacekeeping missions.
- 13 July The Foreign Minister of Uzbekistan, Saidmukhtar Saidkasimov, and Defence Minister Rustam Ahmedov visit NATO Headquarters to sign the PfP Framework Document.
- 18 July Latvia submits its PfP Presentation Document.
- 20 July Slovenia submits its PfP Presentation Document.
- 5 August NATO aircraft attack a target within the Sarajevo Exclusion Zone at the request of UNPROFOR, after Bosnian Serbs seize weapons from a UN collection site near Sarajevo.
- 13 August Death of NATO Secretary General Manfred Woerner in Brussels. Deputy Secretary General Sergio Balanzino assumes duties as Acting Secretary General.
- 18 August Commemorative meeting of the NAC in honour of the late Secretary General Manfred Woerner.

- 22 August Sweden's PfP Individual Partnership Programme with NATO is formally accepted.
- 31 August The last Russian troops leave Estonia, completing their withdrawal from the three Baltic States.
- 1 September Russian troops leave Berlin, completing their withdrawal from German territory.
- 2-10 September The first joint US-Russian manoeuvres held on Russian territory focus on peacekeeping training exercises.
- 6 September Moldova submits its PfP Presentation Document to NATO.
- 8 September The US, UK and France withdraw remaining Allied troops from Berlin.
- 12-16 Sept. The first joint training exercise under PfP (Cooperative Bridge) is held near Poznan, Poland, with participation by soldiers from 13 NATO and Partner nations.
- 13 September Lt. Gen. John Sheehan is appointed Supreme Allied Commander Atlantic (SACLANT).
- 14 September Romania's PfP Individual Partnership Programme with NATO is formally accepted.
- 22 September Following an attack on an UNPROFOR vehicle near Sarajevo, NATO aircraft carry out an air strike against a Bosnian Serb tank, at the request of UNPROFOR.
Albania submits its PfP Presentation Document.
- 28 Sept.-7 Oct. Maritime PfP exercise Cooperative Venture takes place in the Skagerrak area of the North Sea, with NATO and Cooperation Partner maritime forces conducting peacekeeping, humanitarian and search and rescue operations.
- 29 September The North Atlantic Council, meeting at the level of Foreign Ministers in New York, invites Willy Claes, Belgian Minister of Foreign Affairs, to become Secretary General of NATO.

- 1 December Javier Solana Madariaga is appointed Secretary General of NATO.
- 5 December The NAC meets at ministerial level. Foreign and Defence Ministers of all 16 nations affirm their commitment to continue the Alliance's efforts to bring peace to Bosnia-Herzegovina.
 NATO formally endorses the deployment of 60,000 troops in Bosnia. The German Parliament votes to contribute 4,000 troops.
 In Paris, the Presidents of Bosnia-Herzegovina, Croatia and Serbia sign the General Framework Accord for peace in Bosnia-Herzegovina.
 US troops arrive in Tuzla and UN hands over commands of military operations in Bosnia to NATO.
 NATO Commander, Admiral Leighton Smith, turns down requests by the Bosnian Serb Assembly leader, Momcilo Krajisnik, for delay of at least nine months in transferring Bosnian Serb areas of Sarajevo to Muslim control. France announces that it will resume its seat in the NATO Military Committee. The French Minister of Defence will also regularly attend the Defence Planning Committee and other meetings.
- 7-8 December OSCE Ministerial Council in Budapest gives guidelines for Security Model and confirms its role in Bosnia-Herzegovina.

- 14 December President Slobodan Milosevic of Serbia, President Alya Izetbegovic of Bosnia-Herzegovina and President Franjo Tudjman of Croatia sign the Bosnian Peace Agreement in Paris.
- 15 December The UN Secretary Council adopts Resolution 1031 on the establishment of a Multinational Military Implementation Force.
- 16 December Beginning of the deployment of the NATO-led Implementation Force (IFOR) in Bosnia.
- 19 December 28 Countries sign the Wassenaar Arrangement on armament and technology export controls.
- 20 December UN peacekeeping forces (UNPROFOR) hand over command of military operations in Bosnia to the NATO-led Implementation Force (IFOR).

1996

- 3 January US Defence Secretary William Perry flies to Sarajevo to discuss peacekeeping with NATO military officers and Bosnian leaders.
- 4 January Negotiations open in Vienna under OSCE auspices on confidence building and arms control measures in Bosnia. The parties to the Peace Agreement sign agreements on measures to enhance mutual confidence, reduce the risk of conflict, restrict military power and improve political cooperation.
- 5 January Russian parliament votes in favour the deployment of Russian forces to Bosnia to join the NATO-led peacekeeping mission. Special arrangements apply to the command and control of Russian forces in IFOR.
- 11 January Prince El-Hassan Bin Talal of Jordan meets with Secretary General Solana in the context of NATO's Mediterranean Dialogue.
- 13 January Beginning of deployment of Russian troops supporting IFOR in Bosnia.
- 15 January The UN Security Council authorises a 5,000 men strong force backed by NATO air power for Eastern Slavonia.
- 17 January Visits to NATO by President Aleksander Kwasniewski of Poland and by Mr. Hans Koschnik, EU Administrator

- for Mostar.
- 19 January Mr. Richard Goldstone, Prosecutor of UN War Crimes Tribunal, visits NATO.
- 23 January General George Joulwan (SACEUR) visits Russia for discussions with the Russian Defence Minister and Chief of Staff.
- 24 January Mr. Tiit Vähi, Prime Minister of Estonia, visits NATO.
- 26 January The Russian Federation joins the Council of Europe.
The American Senate ratifies the START II Treaty, which will reduce the levels of both American and Russian strategic nuclear missiles.
- 29 January The Secretary General of the OSCE begins a two-day visit to former Yugoslavia to pave the way for OSCE's supervision of postwar free elections.
- 12 February The NATO Secretary General visits Mostar.
Bosnian authorities give their approval for the release of two Bosnian Serb officers to the International War Crimes Tribunal.
- 26 February Visit to NATO by Austrian Vice-Chancellor Mr. Wolfgang Schüssel.
Austria signs its Individual Partnership Programme (IPP) with NATO.
- 8 March Permanent Representatives on the North Atlantic Council visit Sarajevo.
- 13 March Russia signs IFOR Participation and Financial Agreements.
- 15 March US Secretary of State Warren Christopher visits SHAPE to meet with Supreme Allied Commander Europe, General George Joulwan, to discuss efforts to obtain compliance with the Dayton Peace Agreement on Bosnia and the subject of NATO enlargement.
- 20-21 March NATO Secretary General Solana pays an official visit to Moscow to discuss NATO and Russia relations. He meets with Russian President Yeltsin, the Speaker of the Duma, Seleznev Gennady and other senior officials.
- 20 March A Memorandum of Understanding on Civil Emergency Cooperation between NATO and Russia is signed in Moscow.
- 23 March The Foreign Ministers of the contact group on the former Yugoslavia meet in Moscow.

- ters agree to build up the European Security and Defence Identity within NATO as part of the internal adaptation of the Alliance.
- 12 June The former Yugoslav Republic of Macedonia⁴ signs the individual Partnership for Peace Programme.
- 13 June The NAC meets in Defence Minister session.
- 14-15 June NATO Secretary General Solana visits Zagreb and Sarajevo.
- 18 June Following the termination of the UN arms embargo on the former Yugoslavia, Operation Sharp Guard is suspended.
- 26-28 June NATO Economics Colloquium on Economic Developments and Reforms in Cooperation Partner countries.
- 1 July Establishment of a new NATO Consulation, Command and Control (C3) Agency.
- 3 July Boris Yeltsin is re-elected President of the Russian Federation.
- 17 July Admiral Leighton Smith is honoured with the NATO medal for his role as Commander of the Implementation Force and Commander in Chief Southern Region.
- 19 July The North Atlantic Council endorses an overall NATO Standardisation Programme involving 50 harmonised standardisation objectives.
- 13 August NATO Secretary General Solana and US Secretary of State Warren Christopher meet in Brussels to discuss the Bosnian election, enlargement of the Alliance and relations with Russia.
- 27 August An agreement signed on ending the conflict in Chechnya which began at the end of 1995 is brokered by Russian special envoy Alexander Lebed.
- 14 September IFOR troops provide security for elections held in Bosnia-Herzegovina to be monitored by the OSCE.
- 16 September Visit to NATO of Hungarian President Arpad Göncz.
- 20 September Meeting of Secretary General Solana with Russian Foreign Minister Primakov in Vienna.
- 24 September China, France, Russia, United Kingdom and United States sign a Comprehensive Test Ban Treaty.

⁴ Turkey recognises the Republic of Macedonia with its constitutional name.

- 25-26 September Informal meeting of NATO Defence Ministers in Bergen, Norway to discuss the peacekeeping operation in Bosnia.
- 2 October The WEU Council decides to end the Danube Embargo Enforcement Operation against the Federal Republic of Yugoslavia.
- 7 October Secretary of the Security Council of the Russian Federation, General Alexander Lebed, visits NATO Headquarters.
- 16 October President Algirdas Brazauskas of Lithuania visits NATO.
- 17 October Visit to NATO by President Michal Kovac of Slovakia.
- 19 October Russian President Boris Yeltsin replaces his recently-appointed Secretary of the Security Council Alexander Lebed by the Speaker of the Duma Ivan Rybkin.
- 29 October Malta announces its intention to withdraw from the Partnership for Peace Programme.
- 5 November Bill Clinton is re-elected President of the United States.
- 13 November President of Uzbekistan Mr. Islam Karimov visits NATO.
- 14 November The Spanish Parliament endorses Spanish participation in NATO's new military structure.
- 27 November Prime Minister Paavo Lipponen of Finland visits NATO.
- 2-3 December OSCE summit in Lisbon on European Security issues, adopts a Declaration on a Common and Comprehensive Security Model for Europe for the 21st Century.
- 9 December German Chancellor Kohl and French President Jacques Chirac sign an agreement on mutual security and defence.
- 10 December Ministerial meeting of the North Atlantic Council at NATO Headquarters in Brussels confirms NATO readiness to organise and lead a Stabilisation Force (SFOR) in Bosnia and Herzegovina, subject to a UN Security Council mandate. Ministers also announce further steps to be taken in the internal and external transformation of the Alliance in preparation for the July 1997 Madrid Summit. NATO issues a statement on the stationing of nuclear forces.
- 11 December Switzerland signs the Partnership for Peace Framework Document, during a meeting with the North Atlantic Council.
- 17 December Kofi Annan becomes Secretary General of the United Nations.

- 18 December H.M. The Sultan of Brunei visits NATO.
 20 December NATO's Implementation Force (IFOR) in Bosnia is replaced by SFOR (Stabilisation Force).

1997

- 16-17 January NATO Secretary General Javier Solana visits Austria and meets Federal Chancellor Franz Vranitzky and other political leaders.
 17 January Mr. Richard C. Holbrooke receives the first Manfred Woerner Medal for his contribution to peace in the former Yugoslavia.
 19-21 January First round of talks between Secretary General Javier Solana and Russian Foreign Minister Yevgeni Primakov on a NATO-Russia Document in Moscow.
 21 January Negotiations on a revision of the 1990 CFE treaty start in Vienna.
 22 January Prime Minister Thorbjörn Jagland of Norway visits NATO.
 28 January NATO Secretary General Javier Solana visits Paris to meet French President Jacques Chirac.
 29 January Visits to NATO by Bulgarian President Petar Stoyanov and Romanian President Emil Constantinescu.
 30 January NATO Secretary General Javier Solana addresses the Parliamentary Assembly of the Council of Europe.
 4 February In his State of the Union address American President Bill Clinton vows to pursue NATO's enlargement by 1999 and to establish a "stable partnership" with Russia.
 5-6 February Secretary General Javier Solana meets Turkish President Suleyman Demirel and Prime Minister Necmettin Erbakan in Ankara to discuss the expansion of the Alliance and the broader issue of Turkey's place in Europe.
 10-14 February NATO Secretary General Javier Solana visits Moldova, Georgia, Armenia, Azerbaijan to meet Heads of State and government and other leading politicians.
 12 February Former guerilla leader Aslam Maskhadov is sworn in as new Chechen President.
 18 February Newly appointed US Secretary of State, Madeleine Albright attends her first NATO Foreign Ministers Meeting in Brussels and proposes the creation of a permanent Russia-NATO brigade.

- 19 February EU High Representative in Bosnia Carl Bildt visits NATO.
- 21 February Visit to NATO by Polish Prime Minister Mr. Włodzimierz Cimoszewicz.
- 20 February NATO allies propose major changes to the CFE Treaty, which limits conventional forces in Europe. NATO now accepts the principle of limits on the arsenals of individual countries as opposed to regions. The Alliance also accepts Russia's wish on having territorial rather than national limits on troops deployment, which effectively prevents NATO from massing troops in one particular area near Russia's borders.
- 23 February NATO Secretary General Javier Solana meets Russian Foreign Minister Yevgeni Primakov for a second round of talks on a NATO-Russia document in Moscow.
- 7 March US Defence Secretary William Cohen makes his first visit to NATO headquarters in Brussels.
- 9-10 March Secretary General Javier Solana meets Russian Foreign Minister Yevgeni Primakov in Moscow for the third round of negotiations on a document to lay out the basis for NATO-Russia relations.
- 10-15 March Secretary General Javier Solana visits PfP members in Central Asia: Kazakhstan, the Kyrgyz Republic, Uzbekistan and Turkmenistan.
- 11 March WEU conference in Athens to discuss security problems in the light of NATO and EU enlargement.
- 16 March EU Foreign Ministers meet in Apeldoorn, the Netherlands, to discuss EU enlargement among other issues.
- 20-21 March US President Bill Clinton and his Russian counterpart Boris Yeltsin meet in Helsinki to talk about future NATO-Russian relations. The parties do not issue a joint statement on NATO plans to expand eastwards, but sign a general statement about European security.
- 21 March Official visit to NATO by HM Albert II, King of the Belgians.
- 24-25 March NATO Secretary General Javier Solana and General George A. Joulwan (SACEUR) visit the Former Yugoslav Republic of Macedonia⁵ and the Republic of Bosnia and Herzegovina.

- 2 April Baltic Defence Ministers meet in Vilnius, Lithuania, to discuss the formation of a joint peacekeeping battalion (BALTBAT) and a joint naval squadron (BALTRON).
- 9-11 April NATO Secretary General Javier Solana meets US Secretary of State Madeleine Albright on NATO-Russian relations and visits Canada.
- 15 April NATO Secretary General Javier Solana meets Russian Foreign Minister Yevgeni Primakov in Moscow for a fourth round of talks on a NATO-Russia document. The first of 6,000 Italian-led multinational security landing force arrive at Tirana's airport. Operation Alba aims at the protection of humanitarian aid to Albania. WEU members agree that non-members Turkey and Norway would have the option of playing a full role in any WEU operations launched with NATO equipment.
- 17 April Poland announces it will reduce its number of troops from 220,000 to 180,000 over the next seven years to meet NATO standards.
- 24 April US Senate approves the Chemical Weapons Convention, a global treaty banning chemical weapons. (The Convention comes into force on 29 April).
- 6 May NATO Secretary General Javier Solana has a fifth round of talks with Russian Foreign Minister Primakov in Luxembourg on a NATO-Russia document.
- 7 May NATO Secretary General Javier Solana visits Ukraine to meet President Leonid Kuchma and inaugurates a NATO Information and Documentation Centre in Kyiv.
- 12-13 May Foreign and Defence Ministers from 28 European countries meet in Paris, under the auspices of the WEU, to discuss security issues.
- 13-14 May NATO Secretary General Javier Solana and Russian Foreign Minister Yevgeni Primakov meet in Moscow for a sixth round of negotiations on a NATO-Russia document
- 14 May NATO Secretary General Javier Solana and Russian Foreign Minister Yevgeni Primakov reach agreement on the "Founding Act on Mutual Relations, Cooperation and Security between NATO and the Russian Federation".

⁵ Turkey recognises the Republic of Macedonia with its constitutional name.

- 22 May Russian President Boris Yeltsin replaces Minister of Defence Igor Rodionov by Viktor Samsonov.
- 27 May NATO-Russia Summit Meeting in Paris. Signature of the Founding Act on Mutual Relations, Cooperation and Security between NATO and the Russian Federation.
- 29 May On the margins of the meeting of NATO Foreign Ministers in Sintra, Portugal, NATO Secretary General Solana and Ukrainian Foreign Minister Udovenko initial a “Charter for a Distinctive Partnership Between NATO and Ukraine”.
- 30 May Concluding meeting of the North Atlantic Cooperation Council (NACC) and inaugural meeting of the Euro-Atlantic Partnership Council (EAPC) in Sintra, Portugal. NATO and Cooperation Partner Foreign Ministers approve the EAPC Basic Document.
- 2 June Signature of Treaty of Friendship and Cooperation between Romania and Ukraine.
- 12-13 June NATO’s Defence Ministers meet in Brussels for their annual spring meetings.
- 16-17 June European Council summit in Amsterdam agrees on a new EU treaty, but makes no significant move towards taking charge of their joint defence. The WEU remains an independent body sub-contracted to carry out humanitarian, peace-keeping and crisis management missions for the Union.
- 16-27 June PfP naval exercise “Baltic Operations 1997” (BALTOPS) takes place in Poland and Germany to conduct maritime search and rescue operations, coastal surveillance and customs enforcement. Participants are the United States, Denmark, Estonia, Finland, Germany, Latvia, Lithuania, the Netherlands, Norway, Poland, Russia, Sweden and the United Kingdom.
- 20-22 June Russia joins the “G7” Summit (hereafter “G 8”).
- 25-27 June NATO’s Economic Colloquium on Economic Developments in Cooperation Partner countries.
- 26 June The Conference on Disarmament (CD) in Geneva agrees to break its deadlock and to open global negotiations for the gradual elimination of land mines. The 61 participating countries appoint Ambassador John Campbell of Australia as special coordinator. Separate negotiations

- on a global land mine ban, initiated by Canada, continue in Brussels.
- 8 July Madrid Summit Meeting of the North Atlantic Council. NATO Heads of State and Government agree to invite the Czech Republic, Hungary and Poland to begin accession talks with NATO with a view to becoming members of the Alliance, after completion of the ratification process, in April 1999. They reaffirm that NATO remains open to new members under Article 10 of the North Atlantic Treaty and agree to review the process at their next meeting in 1999.
- Formal signature of the Charter on a Distinctive Partnership between NATO and Ukraine.
- NATO Heads of State and Government issue a special declaration on Bosnia and Herzegovina reaffirming their commitment to the full implementation of the Peace Agreement and to the establishment of Bosnia and Herzegovina as a single, democratic and multi-ethnic state.
- 9 July Meeting of the Heads of State and Government of NATO and Cooperation Partners under the aegis of the Euro-Atlantic Cooperation Council (EAPC). The meeting focuses on how the EAPC can most effectively be used to contribute to security and stability.
- 11 July US Army General Wesley Clark replaces General G. Joulwan to become the new Supreme Allied Commander Europe (SACEUR).
- 16 July Coordination of assistance for flooding in Poland takes place through NATO's Disaster Relief Policy at the request of the Polish government.
- 18 July First meeting of the NATO-Russia Permanent Joint Council (PJC) at Ambassadorial level in Brussels agrees on organisational and procedural arrangements.
- 22 July The WEU issues a Declaration on the Role of the Western European Union and its Relations with the European Union and the Atlantic Alliance.
- 10 September Representatives from Hungary begin accession talks with NATO.
- 15 September Operation Kozatskiy Step 97 under Partnership for Peace begins in Ukraine, involving NATO, Polish and

- Ukrainian troops. The exercise is designed to simulate an ethnic conflict.
- 16 September Representatives from Poland begin accession talks with NATO.
- 22 September Swedish Prime Minister Göran Persson visits NATO.
- 23 September Representatives from the Czech Republic begin accession talks with NATO.
- 24 September Latvian Prime Minister Guntars Krasts visits NATO.
- 26 September NATO and Russian Foreign Ministers meet for the first time as the NATO-Russia Permanent Joint Council. A Work Plan is approved, providing for consultations on confidence building measures in arms-control, joint peacekeeping in Bosnia and the stationing of Russian military representatives at NATO.
- 30 September NATO Ministers of Defence held two days of informal meetings in Maastricht, Netherlands. The planned opening up of NATO to new members, the continuation of NATO's mandate in Bosnia and the adaptation of Alliance's command structure are discussed.
- 1 October Russia's Defence Minister, Igor Sergeev, meeting with NATO Defence Ministers, agrees that Russia will send a military liaison officer to the Alliance's Brussels headquarters in the near future.
- At the request of the High Representative in Bosnia, SFOR takes action against Serbian Radio and TV transmitters, following violations and misuse.
- 2-8 October General Assembly of the Atlantic Treaty Association in Sofia, hosted by the Atlantic Club of Bulgaria.
- 8 October High Representative in Bosnia Carlos Westendorp and Ambassador Robert H. Frowick visit NATO.
- 9 October Ukraine and Hungary become the first non-NATO countries to open diplomatic missions to the Alliance.
- 13 October 43rd Annual Session of North Atlantic Assembly takes place in Bucharest.
- 24 October Following the 23 October visit to NATO of the Russian Chief of General Staff, General Kvashnin, participants in the third meeting of the NATO-Russia Permanent Joint Council at Ambassadorial level issue a statement welcoming the appointment of Lieutenant-General Zavarzin as Russia's military representative to NATO.

- 16 November Hungarians voted overwhelmingly (85%) to join NATO in a national referendum.
- 18 November Foreign and Defence Ministers of the WEU met in Erfurt, Germany and agreed on harmonising the EU and WEU presidencies.
- 25 November Russian military representative to NATO, Lieutenant-General Viktor Zavarzin, held his first official meeting with NATO Military Committee Chairman, Klaus Naumann.
- 27 November Visit to NATO by Polish Prime Minister Jerzy Buzek.
- 2-3 December First meeting of the NATO-Russia Permanent Joint Council at Defence Ministers level. Military chiefs of staff from 44 countries also meet in the framework of the Euro-Atlantic Partnership Council. Defence Ministers of 15 NATO member countries meet within the Nuclear Planning Group and Defence Planning Committee. The 16 members of the Alliance meet shortly afterwards in the North Atlantic Council.
- 4 December Meeting of NATO-Russia PJC at Chiefs of Staff level.
- 16 December NATO and Ukraine sign a Memorandum of Understanding on Civil Emergency Planning and Disaster Preparedness.
- 16-17 December NATO Foreign Ministers sign Protocols of Accession for the Czech Republic, Hungary and Poland in the presence of their respective Foreign Ministers.
- 18-19 December OSCE General Assembly meeting concludes with an agreement on guidelines to work out a European Security Charter.

1998

- 14 January Euro-Atlantic Partnership Council (EAPC) publishes its Action Plan for 1998-2000.
Visit to NATO by UN High Commissioner for Refugees, Mrs. Sadako Ogata.
- 26 January Visit to NATO by President Petra Lucinschi of Moldova.
- 4 February Visit to NATO by the Prime Minister of the Former Yugoslav Republic of Macedonia⁶, Mr. Branko Crevenkovski.

- 11 February Inauguration of the NATO Documentation Centre for European Security Issues at the Institute of Scientific Information for Social Sciences (INION) in Moscow.
- 12-18 February Annual NATO Crisis Management Exercise involving active participation of NATO Partner Countries for the first time.
- 20 February NATO announces readiness to organise and lead a multinational force in Bosnia and Herzegovina after the expiry of SFOR's mandate in June 1998, subject to UN Security Council mandate.
- 23 February Visit to NATO by President Saparmurat Niyazov of Turkmenistan.
- 25 February The Secretary General of NATO welcomes the agreement between the UN Secretary General and Iraq on a diplomatic situation to the Iraq crisis. He underlines the importance of providing immediate unconditional and unrestricted access to UNSCOM weapons inspectors in accordance with UN Security Council resolutions .
The NATO-Russia Permanent Joint Council discusses NATO-Russia cooperation in SFOR with a view to its continuation in the framework of the multinational force in Bosnia following the end of SFOR's current mandate in June 1998.
- 4 March The North Atlantic Council welcomes UN Security Council Resolution 1154 relating to Iraq and gives its strong support to UN insistence on full compliance by Iraq.
- 5 March The North Atlantic Council issues a statement expressing its concern over recent violent incidents in Kosovo and calls on all sides to take immediate steps to reduce tensions.
The Council issues a statement supporting the efforts of the OSCE Mission to Croatia relating to the resettlement of refugees and displaced persons and reminds Croatia of its obligations under the Bosnian Peace Agreement.
- 11 March Ambassadors and representatives of EAPC countries discuss the serious developments in Kosovo and enumerate the conditions needed for peaceful settlement.

6 Turkey recognises the Republic of Macedonia with its constitutional name.

- 7 April Official inauguration of the Manfred Woerner Building adjacent to the NATO Headquarters in Brussels, housing Partner countries' diplomatic missions to NATO.
- 20 April Permanent Representatives on the North Atlantic Council visit Bosnia and Herzegovina, accompanied by Secretary General Javier Solana and Chairman of the Military Committee General Naumann.
- 23 April Visit to NATO by President Valdas Adamkus of Lithuania.
- 27-28 April EAPC seminar in Bratislava on Democratic Control of Defence Expenditures.
- 28 April Visit to NATO by Mr. Josef Tosovsky, Prime Minister of the Czech Republic.
- 20 May The North Atlantic Council condemns India's decision to conduct nuclear tests.
- 28 May At the NATO-Russia Permanent Joint Council Meeting in Luxembourg, NATO and Russia condemn nuclear tests conducted by India and Pakistan.
At the meeting of the North Atlantic Council, NATO Foreign Ministers issue a statement expressing concern over the situation in Kosovo and outline measures being taken to contain the crisis and to seek a peaceful resolution.
- 29 May Establishment of the Euro-Atlantic Disaster Response Coordination Centre (EADRCC) at NATO under the aegis of the EAPC.
- 30 May The NATO Secretary General condemns further nuclear tests by Pakistan and calls on India and Pakistan to halt nuclear and missile testing, adhere to the NPT and CTBT and begin a dialogue to reduce tensions.
- 12 June The NATO-Russia Permanent Joint Council (Defence Ministers) agrees to continue NATO-Russia cooperation in SFOR and condemns Belgrade's use of force in Kosovo as well as attacks by Kosovar extremists.
- 15 June NATO air exercise "Determined Falcon" takes place in Albania and the Former Yugoslav Republic of Macedonia⁷ in agreement with the respective governments.

7 Turkey recognises the Republic of Macedonia with its constitutional name.

- 18 June At a meeting of the NATO-Russia Permanent Joint Council, NATO and Russia reaffirm their determination to contribute to international efforts to find a peaceful solution to the crisis in Kosovo.
- 17-19 June NATO Economics Colloquium on Economic Developments and Reforms in Cooperation Partner Countries takes place in Ljubljana, Slovenia.
- 2-3 July NATO Information Seminar takes place in Sarajevo, aimed at encouraging the development of democratic practices in Bosnia and Herzegovina.
- 10 July Visit to NATO by Bulgarian President Petar Stoyanov.
- 24 July Visit to NATO by Hungarian Prime Minister Viktor Orban.
- 12 August NATO Secretary General Javier Solana expresses deep concern over the continuing violence in Kosovo, indicating that the North Atlantic Council had reviewed military planning for options to bring an end to the violence and create conditions for negotiations.
- 14 September NATO Secretary General Javier Solana calls on all sides to show restraint and establish conditions for a return to a peaceful and stable environment throughout Albania.
- 18 September M. Hubert Védrine, Minister of Foreign Affairs of France, becomes President of the North Atlantic Council⁸
- 24 September The North Atlantic Council approves the issuing of an ACT WARN for both a limited air option and a phased air campaign in Kosovo.
- 24-25 September Informal meeting of NATO Defence Ministers in Vilamoura, Portugal.
- 30 September At a meeting of the Permanent Joint Council NATO and Russia discuss continuation of NATO-Russia cooperation in SFOR and reiterate concern about the humanitarian situation in Kosovo.
- 5 October Visit to NATO by President Milan Kucan of Slovenia.
- 7 October Visits to NATO by the Prime Minister of the Czech Republic, Mr. Milos Zeman and by the Prime Minister of Bulgaria, Mr. Ivan Kostov.
- 9 October NATO and Russia express full support for diplomatic

8 An honorary position held in rotation by a Foreign Minister of one of the Member countries.

efforts aimed at securing a political solution to the crisis in Kosovo and stress the need for immediate full and irreversible compliance with UN Secretary Council Resolutions 1160 and 1199.

- 13 October In the absence of compliance by the Federal Republic of Yugoslavia with UNSCR 1119, the North Atlantic Council reviews the situation in Kosovo and issues activation orders (ACTORDs) for both limited air strikes and a phased air campaign in Yugoslavia after approximately 96 hours.
- 13-15 October Under the aegis of the NATO Air Defence Committee, a first joint exercise is held at Kayseri airbase in Turkey, involving the strategic loading of a NATO mobile air defence radar by a Russian Illuyshin 76 heavy transport aircraft. The exercise is in preparation for potential co-operation in combined peace support operations.
- 15 October Visits to NATO by the President of Latvia, Mr. Guntis Ulmanis and by the Prime Minister of Poland Mr. Jerzy Buzek.
NATO Secretary General Javier Solana visits Belgrade, accompanied by the Chairman of the Military Committee General Naumann and Supreme Allied Commander Europe (SACEUR) General Clark, to insist upon full and immediate compliance by President Milosevic with UNSCR 1119 relating to Kosovo. Agreement is signed on air verification force over Kosovo.
- 16 October The North Atlantic Council announces its decision to maintain its readiness to launch air operations against Yugoslavia and extends the period before execution of air strikes to 27 October.
- 20 October Supreme Allied Commander Europe (SACEUR) General Clark meets Serbian leadership in Belgrade over the Kosovo crisis.
- 21 October Mr. Carlos Westendorp, the High Representative responsible for coordinating the civilian organisations and agencies in Bosnia and Herzegovina, visits NATO for discussions with the Secretary General and to address the North Atlantic Council.

- At a meeting of the NATO-Russia Permanent Joint Council, Ambassadors discuss the situation in Bosnia and Herzegovina and in Kosovo. NATO and Russia support the aims of securing a political solution to the crisis in Kosovo based on strict compliance with UNSCR 1160 and 1199.
- 20 October Visit to NATO by Mr. Radu Vasile, Prime Minister of Romania.
- 22 October Visit to NATO by the Prime Minister of the Former Yugoslav Republic of Macedonia⁹ Mr. Branko Crvenkovski.
- 24-25 October The Chairman of the NATO Military Committee General Naumann and General Clark return to Belgrade to meet the Serbian leadership over the Kosovo crisis.
- 27 October NATO Secretary General Javier Solana issues a statement noting improvement of the security and humanitarian situation in Kosovo following the decisions taken by the North Atlantic Council on 13 October; reaffirming the need for full compliance with UNSCR 1119 and 1203; announcing the maintenance of NATO's ACTORD for limited air operations subject to decision and assessments by the Council and maintenance of the ACTORD for a phased air campaign; and calling for equal compliance with UNSC Resolutions by the Kosovar Albanians.
- 4 November Visit to NATO by President Lennart Meri of Estonia.
- 8 November Visit to NATO by Mr. Mikulas Dzurinda, Prime Minister of Slovakia.
- 11 November Meeting of the NATO-Ukraine Commission. Members welcome information on the State Programme of Ukraine on Cooperation with NATO recently approved by President Kuchma and discuss other matters including the stationing of two NATO liaison officers in Kyiv to facilitate Ukraine's participation in PfP.

9 Turkey recognises the Republic of Macedonia with its constitutional name.

EXECUTIVE ORDER 12356

NATIONAL SECURITY INFORMATION

April 2, 1982

This Order prescribes a uniform system for classifying, declassifying, and safeguarding national security information. It recognizes that it is essential that the public be informed concerning the activities of its Government, but that the interests of the United States and its citizens require that certain information concerning the national defense and foreign relations be protected against unauthorized disclosure. Information may not be classified under this Order unless its disclosure reasonably could be expected to cause damage to the national security. NOW, by the authority vested in me as President by the Constitution and laws of the United States of America, it is hereby ordered as follows:

PART 1

Original Classification

Section 1.1 Classification Levels.

- (a) National security information (hereinafter 'classified information') shall be classified at one of the following three levels:
 - (1) 'Top Secret' shall be applied to information, the unauthorized disclosure of which reasonably could be expected to cause exceptionally grave damage to the national security.
 - (2) 'Secret' shall be applied to information, the unauthorized disclosure of which reasonably could be expected to cause serious damage to the national security.
 - (3) 'Confidential' shall be applied to information, the unauthorized disclosure of which reasonably could be expected to cause damage to the national security.
- (b) Except as otherwise provided by statute, no other terms shall be used to identify classified information.
- (c) If there is reasonable doubt about the need to classify information, it shall be safeguarded as if it were classified pending a determination by an original classification authority, who shall make this determination within thirty (30) days. If there is reasonable doubt about the appropriate level of classification, it shall be safeguarded at the higher level of classification pending a determination by an original classification authority, who shall make this determination within thirty (30) days.

Sec. 1.2 Classification Authority.

- (a) Top Secret. The authority to classify information originally as Top Secret may be exercised only by:
 - (1) the President;
 - (2) agency heads and officials designated by the President in the Federal Register; and
 - (3) officials delegated this authority pursuant to Section 1.2(d).
- (b) Secret. The authority to classify information originally as Secret may be exercised only by:
 - (1) agency heads and officials designated by the President in the Federal Register; (
 - (2) officials with original Top Secret classification authority; and
 - (3) officials delegated such authority pursuant to Section 1.2(d).
- (c) Confidential. The authority to classify information originally as Confidential may be exercised only by:
 - (1) agency heads and officials designated by the President in the Federal Register;
 - (2) officials with original Top Secret or Secret classification authority; and
 - (3) officials delegated such authority pursuant to Section 1.2(d).
- (d) Delegation of Original Classification Authority.

- (1) Delegations of original classification authority shall be limited to the minimum required to administer this Order. Agency heads are responsible for ensuring that designated subordinate officials have a demonstrable and continuing need to exercise this authority.
 - (2) Original Top Secret classification authority may be delegated only by the President; an agency head or official designated pursuant to Section 1.2(a)(2); and the senior official designated under Section 5.3(a)(1), [FN1] provided that official has been delegated original Top Secret classification authority by the agency head.
 - (3) Original Secret classification authority may be delegated only by the President; an agency head or official designated pursuant to Sections 1.2(a)(2) and 1.2(b)(1); an official with original Top Secret classification authority; and the senior official designated under Section 5.3(a)(1), [FN1] provided that official has been delegated original Secret classification authority by the agency head.
 - (4) Original Confidential classification authority may be delegated only by the President; an agency head or official designated pursuant to Sections 1.2(a)(2), 1.2(b)(1) and 1.2©(1); an official with original Top Secret classification authority; and the senior official designated under Section 5.3(a)(1), [FN1] provided that official has been delegated original classification authority by the agency head.
 - (5) Each delegation of original classification authority shall be in writing and the authority shall not be redelegated except as provided in this Order. It shall identify the official delegated the authority by name or position title. Delegated classification authority includes the authority to classify information at the level granted and lower levels of classification.
- (e) Exceptional Cases. When an employee, contractor, licensee, or grantee of an agency that does not have original classification authority originates information believed by that person to require classification, the information shall be protected in a manner consistent with this Order and its implementing directives. The information shall be transmitted promptly as provided under this Order or its implementing directives to the agency that has appropriate subject matter interest and classification authority with respect to this information. That agency shall decide within thirty (30) days whether to classify this information. If it is not clear which agency has classification responsibility for this information, it shall be sent to the Director of the Information Security Oversight Office. The Director shall determine the agency having primary subject matter interest and forward the information, with appropriate recommendations, to that agency for a classification determination.

Sec. 1.3 Classification Categories.

- (a) Information shall be considered for classification if it concerns:
 - (1) military plans, weapons, or operations;
 - (2) the vulnerabilities or capabilities of systems, installations, projects, or plans relating to the national security;
 - (3) foreign government information;
 - (4) intelligence activities (including special activities), or intelligence sources or methods;
 - (5) foreign relations or foreign activities of the United States;
 - (6) scientific, technological, or economic matters relating to the national security;
 - (7) United States Government programs for safeguarding nuclear materials or facilities;
 - (8) cryptology;
 - (9) a confidential source; or
 - (10) other categories of information that are related to the national security and that require protection against unauthorized disclosure as determined by the President or by agency heads or other officials who have been delegated original classification authority by the President. Any determination made under this subsection shall be reported promptly to the Director of the Information Security Oversight Office.
- (b) Information that is determined to concern one or more of the categories in Section 1.3(a) shall be classified when an original classification authority also determines that its unauthorized disclosure, either by itself or in the context of other information, reasonably could be expected to cause damage to the national security.
- (c) Unauthorized disclosure of foreign government information, the identity of a confidential foreign source, or intelligence sources or methods is presumed to cause damage to the national security.
- (d) Information classified in accordance with Section 1.3 shall not be declassified automatically as a result of any unofficial publication or inadvertent or unauthorized disclosure in the United States or abroad of identical or similar information.

Sec. 1.4 Duration of Classification.

- (a) Information shall be classified as long as required by national security considerations. When it can be determined, a specific date or event for declassification shall be set by the original classification authority at the time the information is originally classified.
- (b) Automatic declassification determinations under predecessor orders shall remain valid unless the classification is extended by an authorized official of the originating agency. These extensions may be by individual documents or categories of information. The agency shall be responsible for notifying holders of the information of such extensions.
- (c) Information classified under predecessor orders and marked for declassification review shall remain classified until reviewed for declassification under the provisions of this Order.

Sec. 1.5 Identification and Markings.

- (a) At the time of original classification, the following information shall be shown on the face of all classified documents, or clearly associated with other forms of classified information in a manner appropriate to the medium involved, unless this information itself would reveal a confidential source or relationship not otherwise evident in the document or information:
 - (1) one of the three classification levels defined in Section 1.1;
 - (2) the identity of the original classification authority if other than the person whose name appears as the approving or signing official;
 - (3) the agency and office of origin; and (4) the date or event for declassification, or the notation 'Originating Agency's Determination Required.'
- (b) Each classified document shall, by marking or other means, indicate which portions are classified, with the applicable classification level, and which portions are not classified. Agency heads may, for good cause, grant and revoke waivers of this requirement for specified classes of documents or information. The Director of the Information Security Oversight Office shall be notified of any waivers.
- (c) Marking designations implementing the provisions of this Order, including abbreviations, shall conform to the standards prescribed in implementing directives issued by the Information Security Oversight Office.
- (d) Foreign government information shall either retain its original classification or be assigned a United States classification that shall ensure a degree of protection at least equivalent to that required by the entity that furnished the information.
- (e) Information assigned a level of classification under predecessor orders shall be considered as classified at that level of classification despite the omission of other required markings. Omitted markings may be inserted on a document by the officials specified in Section 3.1(b).

Sec. 1.6 Limitations on Classification.

- (a) In no case shall information be classified in order to conceal violations of law, inefficiency, or administrative error; to prevent embarrassment to a person, organization, or agency; to restrain competition; or to prevent or delay the release of information that does not require protection in the interest of national security.
- (b) Basic scientific research information not clearly related to the national security may not be classified.
- (c) The President or an agency head or official designated under Sections 1.2(a)(2), 1.2(b)(1), or 1.2©(1) may reclassify information previously declassified and disclosed if it is determined in writing that
 - (1) the information requires protection in the interest of national security; and
 - (2) the information may reasonably be recovered. These reclassification actions shall be reported promptly to the Director of the Information Security Oversight Office.
- (d) Information may be classified or reclassified after an agency has received a request for it under the Freedom of Information Act (5 U.S.C. 552) or the Privacy Act of 1974 (5 U.S.A. 552a), or the mandatory review provisions of

this Order (Section 3.4) if such classification meets the requirements of this Order and is accomplished personally and on a document-by-document basis by the agency head, the deputy agency head, the senior agency official designated under Section 5.3(a)(1), [FN1] or an official with original Top Secret classification authority.

PART 2

Derivative Classification

Sec. 2.1 Use of Derivative Classification.

- (a) Derivative classification is
 - (1) the determination that information is in substance the same as information currently classified, and
 - (2) the application of the same classification markings. Persons who only reproduce, extract, or summarize classified information, or who only apply classification markings derived from source material or as directed by a classification guide, need not possess original classification authority.
- (b) Persons who apply derivative classification markings shall:
 - (1) observe and respect original classification decisions; and
 - (2) carry forward to any newly created documents any assigned authorized markings. The declassification date or event that provides the longest period of classification shall be used for documents classified on the basis of multiple sources.

Sec. 2.2 Classification Guides.

- (a) Agencies with original classification authority shall prepare classification guides to facilitate the proper and uniform derivative classification of information.
- (b) Each guide shall be approved personally and in writing by an official who:
 - (1) has program or supervisory responsibility over the information or is the senior agency official designated under Section 5.3(a)(1); [FN1] and
 - (2) is authorized to classify information originally at the highest level of classification prescribed in the guide. © Agency heads may, for good cause, grant and revoke waivers of the requirement to prepare classification guides for specified classes of documents or information. The Director of the Information Security Oversight Office shall be notified of any waivers.

PART 3

Declassification and Downgrading

Sec. 3.1 Declassification Authority.

- (a) Information shall be declassified or downgraded as soon as national security considerations permit. Agencies shall coordinate their review of classified information with other agencies that have a direct interest in the subject matter. Information that continues to meet the classification requirements prescribed by Section 1.3 despite the passage of time will continue to be protected in accordance with this Order.
- (b) Information shall be declassified or downgraded by the official who authorized the original classification, if that official is still serving in the same position; the originator's successor; a supervisory official of either, or officials delegated such authority in writing by the agency head or the senior agency official designated pursuant to Section 5.3(a)(1). [FN1]
- (c) If the Director of the Information Security Oversight Office determines that information is classified in violation of this Order, the Director may require the information to be declassified by the agency that originated the classification. Any such decision by the Director may be appealed to the National Security Council. The information shall remain classified, pending a prompt decision on the appeal.
- (d) The provisions of this Section shall also apply to agencies that, under the terms of this Order, do not have original classification authority, but that had such authority under predecessor orders.

Sec. 3.2 Transferred Information.

- (a) In the case of classified information transferred in conjunction with a transfer of functions, and not merely for storage purposes, the receiving agency shall be deemed to be the originating agency for purposes of this Order.
- (b) In the case of classified information that is not officially transferred as described in Section 3.2(a), but that originated in an agency that has ceased to exist and for which there is no successor agency, each agency in possession of such information shall be deemed to be the originating agency for purposes of this Order. Such information may be declassified or downgraded by the agency in possession after consultation with any other agency that has an interest in the subject matter of the information.
- (c) Classified information accessioned into the National Archives of the United States shall be declassified or downgraded by the Archivist of the United States in accordance with this Order, the directives of the Information Security Oversight Office, and agency guidelines.

Sec. 3.3 Systematic Review for Declassification.

- (a) The Archivist of the United States shall, in accordance with procedures and timeframes prescribed in the Information Security Oversight Office's directives implementing this Order, systematically review for declassification or downgrading
 - (1) classified records accessioned into the National Archives of the United States, and
 - (2) classified presidential papers or records under the Archivist's control. Such information shall be reviewed by the Archivist for declassification or

downgrading in accordance with systematic review guidelines that shall be provided by the head of the agency that originated the information, or in the case of foreign government information, by the Director of the Information Security Oversight Office in consultation with interested agency heads.

- (b) Agency heads may conduct internal systematic review programs for classified information originated by their agencies contained in records determined by the Archivist to be permanently valuable but that have not been accessioned into the National Archives of the United States.
- (c) After consultation with affected agencies, the Secretary of Defense may establish special procedures for systematic review for declassification of classified cryptologic information, and the Director of Central Intelligence may establish special procedures for systematic review for declassification of classified information pertaining to intelligence activities (including special activities), or intelligence sources or methods.

Sec. 3.4. Mandatory Review for Declassification.

- (a) Except as provided in Section 3.4(b), all information classified under this Order or predecessor orders shall be subject to a review for declassification by the originating agency, if:
 - (1) the request is made by a United States citizen or permanent resident alien, a federal agency, or a State or local government; and
 - (2) the request describes the document or material containing the information with sufficient specificity to enable the agency to locate it with a reasonable amount of effort.
- (b) Information originated by a President, the White House Staff, by committees, commissions, or boards appointed by the President, or others specifically providing advice and counsel to a President or acting on behalf of a President is exempted from the provisions of Section 3.4(a). The Archivist of the United States shall have the authority to review, downgrade and declassify information under the control of the Administrator of General Services or the Archivist pursuant to sections 2107, 2107 note, or 2203 of title 44, United States Code. Review procedures developed by the Archivist shall provide for consultation with agencies having primary subject matter interest and shall be consistent with the provisions of applicable laws or lawful agreements that pertain to the respective presidential papers or records. Any decision by the Archivist may be appealed to the Director of the Information Security Oversight Office. Agencies with primary subject matter interest shall be notified promptly of the Director's decision on such appeals and may further appeal to the National Security Council. The information shall remain classified pending a prompt decision on the appeal.
- (c) Agencies conducting a mandatory review for declassification shall declassify information no longer requiring protection under this Order. They shall release this information unless withholding is otherwise authorized under applicable law.
- (d) Agency heads shall develop procedures to process requests for the mandatory review of classified information. These procedures shall apply to information classified under this or predecessor orders. They shall also provide a means for administratively appealing a denial of a mandatory review request.
- (e) The Secretary of Defense shall develop special procedures for the review of cryptologic information, and the Director of Central Intelligence shall develop

special procedures for the review of information pertaining to intelligence activities (including special activities), or intelligence sources or methods, after consultation with affected agencies. The Archivist shall develop special procedures for the review of information accessioned into the National Archives of the United States.

- (f) In response to a request for information under the Freedom of Information Act, the Privacy Act of 1974, or the mandatory review provisions of this Order:
 - (1) An agency shall refuse to confirm or deny the existence or non-existence of requested information whenever the fact of its existence or non-existence is itself classifiable under this Order.
 - (2) When an agency receives any request for documents in its custody that were classified by another agency, it shall refer copies of the request and the requested documents to the originating agency for processing, and may, after consultation with the originating agency, inform the requester of the referral. In cases in which the originating agency determines in writing that a response under Section 3.4(f)(1) is required, the referring agency shall respond to the requester in accordance with that Section.

PART 4

Safeguarding

Sec. 4.1 General Restrictions on Access.

- (a) A person is eligible for access to classified information provided that a determination of trustworthiness has been made by agency heads or designated officials and provided that such access is essential to the accomplishment of lawful and authorized Government purposes.
- (b) Control shall be established by each agency to ensure that classified information is used, processed, stored, reproduced, transmitted, and destroyed only under conditions that will provide adequate protection and prevent access by unauthorized persons.
- (c) Classified information shall not be disseminated outside the executive branch except under conditions that ensure that the information will be given protection equivalent to that afforded within the executive branch.
- (d) Except as provided by directives issued by the President through the National Security Council, classified information originating in one agency may not be disseminated outside any other agency to which it has been made available without the consent of the originating agency. For purposes of this Section, the Department of Defense shall be considered one agency.

Sec. 4.2 Special Access Programs.

- (a) Agency heads designated pursuant to Section 1.2(a) may create special access programs to control access, distribution, and protection of particularly sensitive information classified pursuant to this Order or predecessor orders. Such programs may be created or continued only at the written direction of these agency heads. For special access programs pertaining to intelligence activities (including special activities but not including military operational, strategic and tactical programs), or intelligence sources or methods, this function will be exercised by the Director of Central Intelligence.
- (b) Each agency head shall establish and maintain a system of accounting for special access programs. The Director of the Information Security Oversight Office, consistent with the provisions of Section 5.2(b)(4), shall have non-delegable access to all such accountings.

Sec. 4.3 Access by Historical Researchers and Former Presidential Appointees.

- (a) The requirement in Section 4.1(a) that access to classified information may be granted only as is essential to the accomplishment of authorized and lawful Government purposes may be waived as provided in Section 4.3(b) for persons who: (1) are engaged in historical research projects, or (2) previously have occupied policy-making positions to which they were appointed by the President. (b) Waivers under Section 4.3(a) may be granted only if the originating agency: (1) determines in writing that access is consistent with the interest of national security; (2) takes appropriate steps to protect classified information from unauthorized disclosure or compromise, and ensures that the information is safeguarded in a manner consistent with this Order; and (3) limits the access granted to former presidential appointees to items that the person originated, reviewed, signed, or received while serving as a presidential appointee.

PART 5

Implementation and Review

Sec. 5.1 Policy Direction.

- (a) The National Security Council shall provide overall policy direction for the information security program. (b) The Administrator of General Services shall be responsible for implementing and monitoring the program established pursuant to this Order. The Administrator shall delegate the implementation and monitorship functions of this program to the Director of the Information Security Oversight Office.

Sec. 5.2 Information Security Oversight Office.

- (a) The Information Security Oversight Office shall have a full-time Director appointed by the Administrator of General Services subject to approval by the President. The Director shall have the authority to appoint a staff for the Office.
- (b) The Director shall:
- (1) develop, in consultation with the agencies, and promulgate, subject to the approval of the National Security Council, directives for the implementation of this Order, which shall be binding on the agencies;
 - (2) oversee agency actions to ensure compliance with this Order and implementing directives;
 - (3) review all agency implementing regulations and agency guidelines for systematic declassification review. The Director shall require any regulation or guideline to be changed if it is not consistent with this Order or implementing directives. Any such decision by the Director may be appealed to the National Security Council. The agency regulation or guideline shall remain in effect pending a prompt decision on the appeal;
 - (4) have the authority to conduct on-site reviews of the information security program of each agency that generates or handles classified information and to require of each agency those reports, information, and other cooperation that may be necessary to fulfill the Director's responsibilities. If these reports, inspections, or access to specific categories of classified information would pose an exceptional national security risk, the affected agency head or the senior official designated under Section 5.3(a)(1) [FN1] may deny access. The Director may appeal denials to the National Security Council. The denial of access shall remain in effect pending a prompt decision on the appeal;
 - (5) review requests for original classification authority from agencies or officials not granted original classification authority and, if deemed appropriate, recommend presidential approval;
 - (6) consider and take action on complaints and suggestions from persons within or outside the Government with respect to the administration of the information security program;
 - (7) have the authority to prescribe, after consultation with affected agencies, standard forms that will promote the implementation of the information security program;
 - (8) report at least annually to the President through the National Security Council on the implementation of this Order; and

- (9) have the authority to convene and chair interagency meetings to discuss matters pertaining to the information security program.

Sec. 5.3 General Responsibilities.

Agencies that originate or handle classified information shall:

- (a) designate a senior agency official to direct and administer its information security program, which shall include an active oversight and security education program to ensure effective implementation of this Order;
- (b) promulgate implementing regulations. Any unclassified regulations that establish agency information security policy shall be published in the Federal Register to the extent that these regulations affect members of the public;
- (c) establish procedures to prevent unnecessary access to classified information, including procedures that
 - (i) require that a demonstrable need for access to classified information is established before initiating administrative clearance procedures, and (ii) ensure that the number of persons granted access to classified information is limited to the minimum consistent with operational and security requirements and needs; and (d) develop special contingency plans for the protection of classified information used in or near hostile or potentially hostile areas.

Sec. 5.4 Sanctions.

- (a) If the Director of the Information Security Oversight Office finds that a violation of this Order or its implementing directives may have occurred, the Director shall make a report to the head of the agency or to the senior official designated under Section 5.3(a)(1) [FN1] so that corrective steps, if appropriate, may be taken.
- (b) Officers and employees of the United States Government, and its contractors, licensees, and grantees shall be subject to appropriate sanctions if they:
 - (1) knowingly, willfully, or negligently disclose to unauthorized persons information properly classified under this Order or predecessor orders;
 - (2) knowingly and willfully classify or continue the classification of information in violation of this Order or any implementing directive; or
 - (3) knowingly and willfully violate any other provision of this Order or implementing directive.
- (c) Sanctions may include reprimand, suspension without pay, removal, termination of classification authority, loss or denial of access to classified information, or other sanctions in accordance with applicable law and agency regulation.
- (d) Each agency head or the senior official designated under Section 5.3(a)(1) [FN1] shall ensure that appropriate and prompt corrective action is taken whenever a violation under Section 5.4(b) occurs. Either shall ensure that the Director of the Information Security Oversight Office is promptly notified whenever a violation under Section 5.4(b)(1) or (2) occurs.

PART 6

General Provisions

Sec. 6.1 Definitions.

- (a) 'Agency' has the meaning provided at 5 U.S.C. 552(e).
- (b) 'Information' means any information or material, regardless of its physical form or characteristics, that is owned by, produced by or for, or is under the control of the United States Government.
- (c) 'National security information' means information that has been determined pursuant to this Order or any predecessor order to require protection against unauthorized disclosure and that is so designated. (d) 'Foreign government information' means:
 - (1) information provided by a foreign government or governments, an international organization of governments, or any element thereof with the expectation, expressed or implied, that the information, the source of the information, or both, are to be held in confidence; or
 - (2) information produced by the United States pursuant to or as a result of a joint arrangement with a foreign government or governments or an international organization of governments, or any element thereof, requiring that the information, the arrangement, or both, are to be held in confidence.
- (e) 'National security' means the national defense or foreign relations of the United States.
- (f) 'Confidential source' means any individual or organization that has provided, or that may reasonably be expected to provide, information to the United States on matters pertaining to the national security with the expectation, expressed or implied, that the information or relationship, or both, be held in confidence.
- (g) 'Original classification' means an initial determination that information requires, in the interest of national security, protection against unauthorized disclosure, together with a classification designation signifying the level of protection required.

Sec. 6.2 General.

- (a) Nothing in this Order shall supersede any requirement made by or under the Atomic Energy Act of 1954, as amended. 'Restricted Data' and 'Formerly Restricted Data' shall be handled, protected, classified, downgraded, and declassified in conformity with the provisions of the Atomic Energy Act of 1954, as amended, and regulations issued under that Act.
- (b) The Attorney General, upon request by the head of an agency or the Director of the Information Security Oversight Office, shall render an interpretation of this Order with respect to any question arising in the course of its administration.
- (c) Nothing in this Order limits the protection afforded any information by other provisions of law.
- (d) Executive Order No. 12065 of June 28, 1978, as amended, is revoked as of the effective date of this Order.
- (e) This Order shall become effective on August 1, 1982.

RONALD REAGAN THE WHITE HOUSE, April 2, 1982.

TREATY OF AMSTERDAM
AMENDING THE TREATY
ON EUROPEAN UNION,
THE TREATIES ESTABLISHING
THE EUROPEAN COMMUNITIES
AND CERTAIN RELATED ACTS

INTRODUCTORY NOTE

This publication reproduces the text of the Treaty of Amsterdam amending the Treaty on European Union, the Treaties establishing the European Communities and certain related acts, as signed in Amsterdam on 2 October 1997.

The text has been produced for documentary purposes and does not involve the responsibility of the institutions

A great deal of additional information on the European Union is available on the Internet. It can be accessed through the Europa server (<http://europa.eu.int>)

Cataloguing data can be found at the end of this publication

PART ONE
SUBSTANTIVE AMENDMENTS

Article 1

The Treaty on European Union shall be amended in accordance with the provisions of this Article.

1. After the third recital the following recital shall be inserted:

‘CONFIRMING their attachment to fundamental social rights as defined in the European Social Charter signed at Turin on 18 October 1961 and in the 1989 Community Charter of the Fundamental Social Rights of Workers,’

2. The existing seventh recital shall be replaced by the following:

‘DETERMINED to promote economic and social progress for their peoples, taking into account the principle of sustainable development and within the context of the accomplishment of the internal market and of reinforced cohesion and environmental protection, and to implement policies ensuring that advances in economic integration are accompanied by parallel progress in other fields,’

3. The existing ninth and tenth recitals shall be replaced by the following:

‘RESOLVED to implement a common foreign and security policy including the progressive framing of a common defence policy, which might lead to a common defence in accordance with the provisions of Article J.7, thereby reinforcing the European identity and its independence in order to promote peace, security and progress in Europe and in the world,

RESOLVED to facilitate the free movement of persons, while ensuring the safety and security of their peoples, by establishing an area of freedom, security and justice, in accordance with the provisions of this Treaty,’

4. In Article A the second paragraph shall be replaced by the following:

‘This Treaty marks a new stage in the process of creating an ever closer union among the peoples of Europe, in which decisions are taken as openly as possible and as closely as possible to the citizen.’

5. Article B shall be replaced by the following:

‘Article B

The Union shall set itself the following objectives:

- to promote economic and social progress and a high level of employment and to achieve balanced and sustainable development, in particular through the creation of an area without internal frontiers, through the strengthening of economic and social cohesion and through the establishment of economic and monetary union, ultimately including a single currency in accordance with the provisions of this Treaty;

- to assert its identity on the international scene, in particular through the implementation of a common foreign and security policy including the progressive framing of a common defence policy, which might lead to a common defence, in accordance with the provisions of Article J.7;
- to strengthen the protection of the rights and interests of the nationals of its Member States through the introduction of a citizenship of the Union;
- to maintain and develop the Union as an area of freedom, security and justice, in which the free movement of persons is assured in conjunction with appropriate measures with respect to external border controls, asylum, immigration and the prevention and combating of crime;
- to maintain in full the *acquis communautaire* and build on it with a view to considering to what extent the policies and forms of cooperation introduced by this Treaty may need to be revised with the aim of ensuring the effectiveness of the mechanisms and the institutions of the Community.

The objectives of the Union shall be achieved as provided in this Treaty and in accordance with the conditions and the timetable set out therein while respecting the principle of subsidiarity as defined in Article 3b of the Treaty establishing the European Community.'

6. In Article C, the second paragraph shall be replaced by the following:

'The Union shall in particular ensure the consistency of its external activities as a whole in the context of its external relations, security, economic and development policies. The Council and the Commission shall be responsible for ensuring such consistency and shall cooperate to this end. They shall ensure the implementation of these policies, each in accordance with its respective powers.'

7. Article E shall be replaced by the following:

'Article E

The European Parliament, the Council, the Commission, the Court of Justice and the Court of Auditors shall exercise their powers under the conditions and for the purposes provided for, on the one hand, by the provisions of the Treaties establishing the European Communities and of the subsequent Treaties and Acts modifying and supplementing them and, on the other hand, by the other provisions of this Treaty.'

8. Article F shall be amended as follows:

- (a) paragraph 1 shall be replaced by the following:

'1. The Union is founded on the principles of liberty, democracy, respect for human rights and fundamental freedoms, and the rule of law, principles which are common to the Member States.'

- (b) the existing paragraph 3 shall become paragraph 4 and a new paragraph 3 shall be inserted as follows:

'3. The Union shall respect the national identities of its Member States.'

9. The following Article shall be inserted at the end of Title I:

‘Article F.1

1. The Council, meeting in the composition of the Heads of State or Government and acting by unanimity on a proposal by one third of the Member States or by the Commission and after obtaining the assent of the European Parliament, may determine the existence of a serious and persistent breach by a Member State of principles mentioned in Article F(1), after inviting the government of the Member State in question to submit its observations.

2. Where such a determination has been made, the Council, acting by a qualified majority, may decide to suspend certain of the rights deriving from the application of this Treaty to the Member State in question, including the voting rights of the representative of the government of that Member State in the Council. In doing so, the Council shall take into account the possible consequences of such a suspension on the rights and obligations of natural and legal persons.

The obligations of the Member State in question under this Treaty shall in any case continue to be binding on that State.

3. The Council, acting by a qualified majority, may decide subsequently to vary or revoke measures taken under paragraph 2 in response to changes in the situation which led to their being imposed.

4. For the purposes of this Article, the Council shall act without taking into account the vote of the representative of the government of the Member State in question. Abstentions by members present in person or represented shall not prevent the adoption of decisions referred to in paragraph 1. A qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in Article 148(2) of the Treaty establishing the European Community.

This paragraph shall also apply in the event of voting rights being suspended pursuant to paragraph 2.

5. For the purposes of this Article, the European Parliament shall act by a two thirds majority of the votes cast, representing a majority of its members.’

10. Title V shall be replaced by the following:

‘Title V

PROVISIONS ON A COMMON FOREIGN AND SECURITY POLICY

Article J.1

1. The Union shall define and implement a common foreign and security policy covering all areas of foreign and security policy, the objectives of which shall be:

— to safeguard the common values, fundamental interests, independence and integrity of the Union in conformity with the principles of the United Nations Charter;

- to strengthen the security of the Union in all ways;
- to preserve peace and strengthen international security, in accordance with the principles of the United Nations Charter, as well as the principles of the Helsinki Final Act and the objectives of the Paris Charter, including those on external borders;
- to promote international cooperation;
- to develop and consolidate democracy and the rule of law, and respect for human rights and fundamental freedoms.

2. The Member States shall support the Union's external and security policy actively and unreservedly in a spirit of loyalty and mutual solidarity.

The Member States shall work together to enhance and develop their mutual political solidarity. They shall refrain from any action which is contrary to the interests of the Union or likely to impair its effectiveness as a cohesive force in international relations.

The Council shall ensure that these principles are complied with.

Article J.2

The Union shall pursue the objectives set out in Article J.1 by:

- defining the principles of and general guidelines for the common foreign and security policy;
- deciding on common strategies;
- adopting joint actions;
- adopting common positions;
- strengthening systematic cooperation between Member States in the conduct of policy.

Article J.3

1. The European Council shall define the principles of and general guidelines for the common foreign and security policy, including for matters with defence implications.

2. The European Council shall decide on common strategies to be implemented by the Union in areas where the Member States have important interests in common.

Common strategies shall set out their objectives, duration and the means to be made available by the Union and the Member States.

3. The Council shall take the decisions necessary for defining and implementing the common foreign and security policy on the basis of the general guidelines defined by the European Council.

The Council shall recommend common strategies to the European Council and shall implement them, in particular by adopting joint actions and common positions.

The Council shall ensure the unity, consistency and effectiveness of action by the Union.

Article J.4

1. The Council shall adopt joint actions. Joint actions shall address specific situations where operational action by the Union is deemed to be required. They shall lay down their objectives, scope, the means to be made available to the Union, if necessary their duration, and the conditions for their implementation.

2. If there is a change in circumstances having a substantial effect on a question subject to joint action, the Council shall review the principles and objectives of that action and take the necessary decisions. As long as the Council has not acted, the joint action shall stand.

3. Joint actions shall commit the Member States in the positions they adopt and in the conduct of their activity.

4. The Council may request the Commission to submit to it any appropriate proposals relating to the common foreign and security policy to ensure the implementation of a joint action.

5. Whenever there is any plan to adopt a national position or take national action pursuant to a joint action, information shall be provided in time to allow, if necessary, for prior consultations within the Council. The obligation to provide prior information shall not apply to measures which are merely a national transposition of Council decisions.

6. In cases of imperative need arising from changes in the situation and failing a Council decision, Member States may take the necessary measures as a matter of urgency having regard to the general objectives of the joint action. The Member State concerned shall inform the Council immediately of any such measures.

7. Should there be any major difficulties in implementing a joint action, a Member State shall refer them to the Council which shall discuss them and seek appropriate solutions. Such solutions shall not run counter to the objectives of the joint action or impair its effectiveness.

Article J.5

The Council shall adopt common positions. Common positions shall define the approach of the Union to a particular matter of a geographical or thematic nature. Member States shall ensure that their national policies conform to the common positions.

Article J.6

Member States shall inform and consult one another within the Council on any matter of foreign and security policy of general interest in order to ensure that the Union's influence is exerted as effectively as possible by means of concerted and convergent action.

Article J.7

1. The common foreign and security policy shall include all questions relating to the security of the Union, including the progressive framing of a common defence policy, in accordance with the second subparagraph, which might lead to a common defence, should the European Council so decide. It shall in that case recommend to the Member States the adoption of such a decision in accordance with their respective constitutional requirements.

The Western European Union (WEU) is an integral part of the development of the Union providing the Union with access to an operational capability notably in the context of paragraph 2. It supports the Union in framing the defence aspects of the common foreign and security policy as set out in this Article. The Union shall accordingly foster closer institutional relations with the WEU with a view to the possibility of the integration of the WEU into the Union, should the European Council so decide. It shall in that case recommend to the Member States the adoption of such a decision in accordance with their respective constitutional requirements.

The policy of the Union in accordance with this Article shall not prejudice the specific character of the security and defence policy of certain Member States and shall respect the obligations of certain Member States, which see their common defence realised in the North Atlantic Treaty Organisation (NATO), under the North Atlantic Treaty and be compatible with the common security and defence policy established within that framework.

The progressive framing of a common defence policy will be supported, as Member States consider appropriate, by cooperation between them in the field of armaments.

2. Questions referred to in this Article shall include humanitarian and rescue tasks, peace-keeping tasks and tasks of combat forces in crisis management, including peace-making.

3. The Union will avail itself of the WEU to elaborate and implement decisions and actions of the Union which have defence implications.

The competence of the European Council to establish guidelines in accordance with Article J.3 shall also obtain in respect of the WEU for those matters for which the Union avails itself of the WEU.

When the Union avails itself of the WEU to elaborate and implement decisions of the Union on the tasks referred to in paragraph 2 all Member States of the Union shall be entitled to participate fully in the tasks in question. The Council, in agreement with the institutions of the WEU, shall adopt the necessary practical arrangements to allow all Member States contributing to the tasks in question to participate fully and on an equal footing in planning and decision taking in the WEU.

Decisions having defence implications dealt with under this paragraph shall be taken without prejudice to the policies and obligations referred to in paragraph 1, third subparagraph.

4. The provisions of this Article shall not prevent the development of closer co-operation between two or more Member States on a bilateral level, in the framework of the WEU and the Atlantic Alliance, provided such cooperation does not run counter to or impede that provided for in this Title.

5. With a view to furthering the objectives of this Article, the provisions of this Article will be reviewed in accordance with Article N.

Article J.8

1. The Presidency shall represent the Union in matters coming within the common foreign and security policy.

2. The Presidency shall be responsible for the implementation of decisions taken under this Title; in that capacity it shall in principle express the position of the Union in international organisations and international conferences.

3. The Presidency shall be assisted by the Secretary-General of the Council who shall exercise the function of High Representative for the common foreign and security policy.

4. The Commission shall be fully associated in the tasks referred to in paragraphs 1 and 2. The Presidency shall be assisted in those tasks if need be by the next Member State to hold the Presidency.

5. The Council may, whenever it deems it necessary, appoint a special representative with a mandate in relation to particular policy issues.

Article J.9

1. Member States shall coordinate their action in international organisations and at international conferences. They shall uphold the common positions in such fora.

In international organisations and at international conferences where not all the Member States participate, those which do take part shall uphold the common positions.

2. Without prejudice to paragraph 1 and Article J.4(3), Member States represented in international organisations or international conferences where not all the Member States participate shall keep the latter informed of any matter of common interest.

Member States which are also members of the United Nations Security Council will concert and keep the other Member States fully informed. Member States which are permanent members of the Security Council will, in the execution of their functions, ensure the defence of the positions and the interests of the Union, without prejudice to their responsibilities under the provisions of the United Nations Charter.

Article J.10

The diplomatic and consular missions of the Member States and the Commission Delegations in third countries and international conferences, and their representations to

international organisations, shall cooperate in ensuring that the common positions and joint actions adopted by the Council are complied with and implemented.

They shall step up cooperation by exchanging information, carrying out joint assessments and contributing to the implementation of the provisions referred to in Article 8c of the Treaty establishing the European Community.

Article J.11

The Presidency shall consult the European Parliament on the main aspects and the basic choices of the common foreign and security policy and shall ensure that the views of the European Parliament are duly taken into consideration. The European Parliament shall be kept regularly informed by the Presidency and the Commission of the development of the Union's foreign and security policy.

The European Parliament may ask questions of the Council or make recommendations to it. It shall hold an annual debate on progress in implementing the common foreign and security policy.

Article J.12

1. Any Member State or the Commission may refer to the Council any questions relating to the common foreign and security policy and may submit proposals to the Council.
2. In cases requiring a rapid decision, the Presidency, of its own motion, or at the request of the Commission or a Member State, shall convene an extraordinary Council meeting within forty-eight hours or, in an emergency, within a shorter period.

Article J.13

1. Decisions under this Title shall be taken by the Council acting unanimously. Abstentions by members present in person or represented shall not prevent the adoption of such decisions.

When abstaining in a vote, any member of the Council may qualify its abstention by making a formal declaration under the present subparagraph. In that case, it shall not be obliged to apply the decision, but shall accept that the decision commits the Union. In a spirit of mutual solidarity, the Member State concerned shall refrain from any action likely to conflict with or impede Union action based on that decision and the other Member States shall respect its position. If the members of the Council qualifying their abstention in this way represent more than one third of the votes weighted in accordance with Article 148(2) of the Treaty establishing the European Community, the decision shall not be adopted.

2. By derogation from the provisions of paragraph 1, the Council shall act by qualified majority:

- when adopting joint actions, common positions or taking any other decision on the basis of a common strategy;
- when adopting any decision implementing a joint action or a common position.

If a member of the Council declares that, for important and stated reasons of national policy, it intends to oppose the adoption of a decision to be taken by qualified majority, a vote shall not be taken. The Council may, acting by a qualified majority, request that the matter be referred to the European Council for decision by unanimity.

The votes of the members of the Council shall be weighted in accordance with Article 148(2) of the Treaty establishing the European Community. For their adoption, decisions shall require at least 62 votes in favour, cast by at least 10 members.

This paragraph shall not apply to decisions having military or defence implications.

3. For procedural questions, the Council shall act by a majority of its members.

Article J.14

When it is necessary to conclude an agreement with one or more States or international organisations in implementation of this Title, the Council, acting unanimously, may authorise the Presidency, assisted by the Commission as appropriate, to open negotiations to that effect. Such agreements shall be concluded by the Council acting unanimously on a recommendation from the Presidency. No agreement shall be binding on a Member State whose representative in the Council states that it has to comply with the requirements of its own constitutional procedure; the other members of the Council may agree that the agreement shall apply provisionally to them.

The provisions of this Article shall also apply to matters falling under Title VI.

Article J.15

Without prejudice to Article 151 of the Treaty establishing the European Community, a Political Committee shall monitor the international situation in the areas covered by the common foreign and security policy and contribute to the definition of policies by delivering opinions to the Council at the request of the Council or on its own initiative. It shall also monitor the implementation of agreed policies, without prejudice to the responsibility of the Presidency and the Commission.

Article J.16

The Secretary-General of the Council, High Representative for the common foreign and security policy, shall assist the Council in matters coming within the scope of the common foreign and security policy, in particular through contributing to the formulation, preparation and implementation of policy decisions, and, when appropriate and acting on behalf of the Council at the request of the Presidency, through conducting political dialogue with third parties.

Article J.17

The Commission shall be fully associated with the work carried out in the common foreign and security policy field.

Article J.18

1. Articles 137, 138, 139 to 142, 146, 147, 150 to 153, 157 to 163, 191a and 217 of the Treaty establishing the European Community shall apply to the provisions relating to the areas referred to in this Title.
2. Administrative expenditure which the provisions relating to the areas referred to in this Title entail for the institutions shall be charged to the budget of the European Communities.
3. Operational expenditure to which the implementation of those provisions gives rise shall also be charged to the budget of the European Communities, except for such expenditure arising from operations having military or defence implications and cases where the Council acting unanimously decides otherwise.

In cases where expenditure is not charged to the budget of the European Communities it shall be charged to the Member States in accordance with the gross national product scale, unless the Council acting unanimously decides otherwise. As for expenditure arising from operations having military or defence implications, Member States whose representatives in the Council have made a formal declaration under Article J.13(1), second subparagraph, shall not be obliged to contribute to the financing thereof.

4. The budgetary procedure laid down in the Treaty establishing the European Community shall apply to the expenditure charged to the budget of the European Communities.'

11. Title VI shall be replaced by the following:

'Title VI

PROVISIONS ON POLICE AND JUDICIAL COOPERATION IN CRIMINAL MATTERS

Article K.1

Without prejudice to the powers of the European Community, the Union's objective shall be to provide citizens with a high level of safety within an area of freedom, security and justice by developing common action among the Member States in the fields of police and judicial cooperation in criminal matters and by preventing and combating racism and xenophobia.

That objective shall be achieved by preventing and combating crime, organised or otherwise, in particular terrorism, trafficking in persons and offences against children, illicit drug trafficking and illicit arms trafficking, corruption and fraud, through:

- closer cooperation between police forces, customs authorities and other competent authorities in the Member States, both directly and through the European Police Office (Europol), in accordance with the provisions of Articles K.2 and K.4;
- closer cooperation between judicial and other competent authorities of the Member States in accordance with the provisions of Articles K.3(a) to (d) and K.4;

- approximation, where necessary, of rules on criminal matters in the Member States, in accordance with the provisions of Article K.3(e).

Article K.2

1. Common action in the field of police cooperation shall include:
 - (a) operational cooperation between the competent authorities, including the police, customs and other specialised law enforcement services of the Member States in relation to the prevention, detection and investigation of criminal offences;
 - (b) the collection, storage, processing, analysis and exchange of relevant information, including information held by law enforcement services on reports on suspicious financial transactions, in particular through Europol, subject to appropriate provisions on the protection of personal data;
 - (c) cooperation and joint initiatives in training, the exchange of liaison officers, secondments, the use of equipment, and forensic research;
 - (d) the common evaluation of particular investigative techniques in relation to the detection of serious forms of organised crime.
2. The Council shall promote cooperation through Europol and shall in particular, within a period of five years after the date of entry into force of the Treaty of Amsterdam:
 - (a) enable Europol to facilitate and support the preparation, and to encourage the co-ordination and carrying out, of specific investigative actions by the competent authorities of the Member States, including operational actions of joint teams comprising representatives of Europol in a support capacity;
 - (b) adopt measures allowing Europol to ask the competent authorities of the Member States to conduct and coordinate their investigations in specific cases and to develop specific expertise which may be put at the disposal of Member States to assist them in investigating cases of organised crime;
 - (c) promote liaison arrangements between prosecuting/investigating officials specialising in the fight against organised crime in close cooperation with Europol;
 - (d) establish a research, documentation and statistical network on cross-border crime.

Article K.3

Common action on judicial cooperation in criminal matters shall include:

- (a) facilitating and accelerating cooperation between competent ministries and judicial or equivalent authorities of the Member States in relation to proceedings and the enforcement of decisions;
- (b) facilitating extradition between Member States;
- (c) ensuring compatibility in rules applicable in the Member States, as may be necessary to improve such cooperation;
- (d) preventing conflicts of jurisdiction between Member States;
- (e) progressively adopting measures establishing minimum rules relating to the constituent elements of criminal acts and to penalties in the fields of organised crime, terrorism and illicit drug trafficking.

Article K.4

The Council shall lay down the conditions and limitations under which the competent authorities referred to in Articles K.2 and K.3 may operate in the territory of another Member State in liaison and in agreement with the authorities of that State.

Article K.5

This Title shall not affect the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security.

Article K.6

1. In the areas referred to in this Title, Member States shall inform and consult one another within the Council with a view to coordinating their action. To that end, they shall establish collaboration between the relevant departments of their administrations.
2. The Council shall take measures and promote cooperation, using the appropriate form and procedures as set out in this Title, contributing to the pursuit of the objectives of the Union. To that end, acting unanimously on the initiative of any Member State or of the Commission, the Council may:
 - (a) adopt common positions defining the approach of the Union to a particular matter;
 - (b) adopt framework decisions for the purpose of approximation of the laws and regulations of the Member States. Framework decisions shall be binding upon the Member States as to the result to be achieved but shall leave to the national authorities the choice of form and methods. They shall not entail direct effect;
 - (c) adopt decisions for any other purpose consistent with the objectives of this Title, excluding any approximation of the laws and regulations of the Member States. These decisions shall be binding and shall not entail direct effect; the Council, acting by a qualified majority, shall adopt measures necessary to implement those decisions at the level of the Union;

- (d) establish conventions which it shall recommend to the Member States for adoption in accordance with their respective constitutional requirements. Member States shall begin the procedures applicable within a time limit to be set by the Council.

Unless they provide otherwise, conventions shall, once adopted by at least half of the Member States, enter into force for those Member States. Measures implementing conventions shall be adopted within the Council by a majority of two-thirds of the Contracting Parties.

3. Where the Council is required to act by a qualified majority, the votes of its members shall be weighted as laid down in Article 148(2) of the Treaty establishing the European Community, and for their adoption acts of the Council shall require at least 62 votes in favour, cast by at least 10 members.

4. For procedural questions, the Council shall act by a majority of its members.

Article K.7

1. The Court of Justice of the European Communities shall have jurisdiction, subject to the conditions laid down in this Article, to give preliminary rulings on the validity and interpretation of framework decisions, and decisions on the interpretation of conventions established under this Title and on the validity and interpretation of the measures implementing them.

2. By a declaration made at the time of signature of the Treaty of Amsterdam or at any time thereafter, any Member State shall be able to accept the jurisdiction of the Court of Justice to give preliminary rulings as specified in paragraph 1.

3. A Member State making a declaration pursuant to paragraph 2 shall specify that either:

- (a) any court or tribunal of that State against whose decisions there is no judicial remedy under national law may request the Court of Justice to give a preliminary ruling on a question raised in a case pending before it and concerning the validity or interpretation of an act referred to in paragraph 1 if that court or tribunal considers that a decision on the question is necessary to enable it to give judgment, or
- (b) any court or tribunal of that State may request the Court of Justice to give a preliminary ruling on a question raised in a case pending before it and concerning the validity or interpretation of an act referred to in paragraph 1 if that court or tribunal considers that a decision on the question is necessary to enable it to give judgment.

4. Any Member State, whether or not it has made a declaration pursuant to paragraph 2, shall be entitled to submit statements of case or written observations to the Court in cases which arise under paragraph 1.

5. The Court of Justice shall have no jurisdiction to review the validity or proportionality of operations carried out by the police or other law enforcement services of a Member State or the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security.

6. The Court of Justice shall have jurisdiction to review the legality of framework decisions and decisions in actions brought by a Member State or the Commission on grounds of lack of competence, infringement of an essential procedural requirement, infringement of this Treaty or of any rule of law relating to its application, or misuse of powers. The proceedings provided for in this paragraph shall be instituted within two months of the publication of the measure.

7. The Court of Justice shall have jurisdiction to rule on any dispute between Member States regarding the interpretation or the application of acts adopted under Article K.6(2) whenever such dispute cannot be settled by the Council within six months of its being referred to the Council by one of its members. The Court shall also have jurisdiction to rule on any dispute between Member States and the Commission regarding the interpretation or the application of conventions established under Article K.6(2)(d).

Article K.8

1. A Coordinating Committee shall be set up consisting of senior officials. In addition to its coordinating role, it shall be the task of the Committee to:

- give opinions for the attention of the Council, either at the Council's request or on its own initiative;
- contribute, without prejudice to Article 151 of the Treaty establishing the European Community, to the preparation of the Council's discussions in the areas referred to in Article K.1.

2. The Commission shall be fully associated with the work in the areas referred to in this Title.

Article K.9

Within international organisations and at international conferences in which they take part, Member States shall defend the common positions adopted under the provisions of this Title.

Articles J.8 and J.9 shall apply as appropriate to matters falling under this Title.

Article K.10

Agreements referred to in Article J.14 may cover matters falling under this Title.

Article K.11

1. The Council shall consult the European Parliament before adopting any measure referred to in Article K.6(2)(b), (c) and (d). The European Parliament shall deliver its opinion within a time-limit which the Council may lay down, which shall not be less than three months. In the absence of an opinion within that time-limit, the Council may act.

2. The Presidency and the Commission shall regularly inform the European Parliament of discussions in the areas covered by this Title.

3. The European Parliament may ask questions of the Council or make recommendations to it. Each year, it shall hold a debate on the progress made in the areas referred to in this Title.

Article K.12

1. Member States which intend to establish closer cooperation between themselves may be authorised, subject to Articles K.15 and K.16, to make use of the institutions, procedures and mechanisms laid down by the Treaties provided that the cooperation proposed:

- (a) respects the powers of the European Community, and the objectives laid down by this Title;
- (b) has the aim of enabling the Union to develop more rapidly into an area of freedom, security and justice.

2. The authorisation referred to in paragraph 1 shall be granted by the Council, acting by a qualified majority at the request of the Member States concerned and after inviting the Commission to present its opinion; the request shall also be forwarded to the European Parliament.

If a member of the Council declares that, for important and stated reasons of national policy, it intends to oppose the granting of an authorisation by qualified majority, a vote shall not be taken. The Council may, acting by a qualified majority, request that the matter be referred to the European Council for decision by unanimity.

The votes of the members of the Council shall be weighted in accordance with Article 148(2) of the Treaty establishing the European Community. For their adoption, decisions shall require at least 62 votes in favour, cast by at least 10 members.

3. Any Member State which wishes to become a party to cooperation set up in accordance with this Article shall notify its intention to the Council and to the Commission, which shall give an opinion to the Council within three months of receipt of that notification, possibly accompanied by a recommendation for such specific arrangements as it may deem necessary for that Member State to become a party to the cooperation in question. Within four months of the date of that notification, the Council shall decide on the request and on such specific arrangements as it may deem necessary. The decision shall be deemed to be taken unless the Council, acting by a qualified majority, decides to hold it in abeyance; in this case, the Council shall state the reasons for its decision and set a deadline for re-examining it. For the purposes of this paragraph, the Council shall act under the conditions set out in Article K.16.

4. The provisions of Articles K.1 to K.13 shall apply to the closer cooperation provided for by this Article, save as otherwise provided for in this Article and in Articles K.15 and K.16.

The provisions of the Treaty establishing the European Community concerning the powers of the Court of Justice of the European Communities and the exercise of those powers shall apply to paragraphs 1, 2 and 3.

5. This Article is without prejudice to the provisions of the Protocol integrating the Schengen *acquis* into the framework of the European Union.

Article K.13

1. Articles 137, 138, 138e, 139 to 142, 146, 147, 148(3), 150 to 153, 157 to 163, 191a and 217 of the Treaty establishing the European Community shall apply to the provisions relating to the areas referred to in this Title.

2. Administrative expenditure which the provisions relating to the areas referred to in this Title entail for the institutions shall be charged to the budget of the European Communities.

3. Operational expenditure to which the implementation of those provisions gives rise shall also be charged to the budget of the European Communities, except where the Council acting unanimously decides otherwise. In cases where expenditure is not charged to the budget of the European Communities it shall be charged to the Member States in accordance with the gross national product scale, unless the Council acting unanimously decides otherwise.

4. The budgetary procedure laid down in the Treaty establishing the European Community shall apply to the expenditure charged to the budget of the European Communities.

Article K.14

The Council, acting unanimously on the initiative of the Commission or a Member State, and after consulting the European Parliament, may decide that action in areas referred to in Article K.1 shall fall under Title IIIa of the Treaty establishing the European Community, and at the same time determine the relevant voting conditions relating to it. It shall recommend the Member States to adopt that decision in accordance with their respective constitutional requirements.'

12. The following new Title shall be inserted:

'Title VIa

PROVISIONS ON CLOSER COOPERATION

Article K.15

1. Member States which intend to establish closer cooperation between themselves may make use of the institutions, procedures and mechanisms laid down by this Treaty and the Treaty establishing the European Community provided that the cooperation:

- (a) is aimed at furthering the objectives of the Union and at protecting and serving its interests;
- (b) respects the principles of the said Treaties and the single institutional framework of the Union;

- (c) is only used as a last resort, where the objectives of the said Treaties could not be attained by applying the relevant procedures laid down therein;
- (d) concerns at least a majority of Member States;
- (e) does not affect the *acquis communautaire* and the measures adopted under the other provisions of the said Treaties;
- (f) does not affect the competences, rights, obligations and interests of those Member States which do not participate therein;
- (g) is open to all Member States and allows them to become parties to the cooperation at any time, provided that they comply with the basic decision and with the decisions taken within that framework;
- (h) complies with the specific additional criteria laid down in Article 5a of the Treaty establishing the European Community and Article K.12 of this Treaty, depending on the area concerned, and is authorised by the Council in accordance with the procedures laid down therein.

2. Member States shall apply, as far as they are concerned, the acts and decisions adopted for the implementation of the cooperation in which they participate. Member States not participating in such cooperation shall not impede the implementation thereof by the participating Member States.

Article K.16

1. For the purposes of the adoption of the acts and decisions necessary for the implementation of the cooperation referred to in Article K.15, the relevant institutional provisions of this Treaty and of the Treaty establishing the European Community shall apply. However, while all members of the Council shall be able to take part in the deliberations, only those representing participating Member States shall take part in the adoption of decisions. The qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in Article 148(2) of the Treaty establishing the European Community. Unanimity shall be constituted by only those Council members concerned.

2. Expenditure resulting from implementation of the cooperation, other than administrative costs entailed for the institutions, shall be borne by the participating Member States, unless the Council, acting unanimously, decides otherwise.

Article K.17

The Council and the Commission shall regularly inform the European Parliament of the development of closer cooperation established on the basis of this Title.'

13. Article L shall be replaced by the following:

'Article L

The provisions of the Treaty establishing the European Community, the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community concerning the powers of the Court of Justice of the

European Communities and the exercise of those powers shall apply only to the following provisions of this Treaty:

- (a) provisions amending the Treaty establishing the European Economic Community with a view to establishing the European Community, the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community;
- (b) provisions of Title VI, under the conditions provided for by Article K.7;
- (c) provisions of Title VIa, under the conditions provided for by Article 5a of the Treaty establishing the European Community and Article K.12 of this Treaty;
- (d) Article F(2) with regard to action of the institutions, insofar as the Court has jurisdiction under the Treaties establishing the European Communities and under this Treaty;
- (e) Articles L to S.'

14. In Article N, paragraph 2 shall be deleted and paragraph 1 shall remain without a number.

15. In Article O, the first paragraph shall be replaced by the following:

'Any European State which respects the principles set out in Article F(1) may apply to become a member of the Union. It shall address its application to the Council, which shall act unanimously after consulting the Commission and after receiving the assent of the European Parliament, which shall act by an absolute majority of its component members.'

16. In Article S, a new paragraph shall be added as follows:

'Pursuant to the 1994 Accession Treaty, the Finnish and Swedish versions of this Treaty shall also be authentic.'

Article 2

The Treaty establishing the European Community shall be amended in accordance with the provisions of this Article.

1. In the preamble the following recital shall be inserted after the eighth recital:

'DETERMINED to promote the development of the highest possible level of knowledge for their peoples through a wide access to education and through its continuous updating,'

2. Article 2 shall be replaced by the following:

'Article 2

The Community shall have as its task, by establishing a common market and an economic and monetary union and by implementing common policies or activities referred to in Articles 3 and 3a, to promote throughout the Community a harmonious, balanced and sustainable development of economic activities, a high level of employment and of social protection, equality between men and women, sustainable and non-inflationary growth, a high degree of competitiveness and convergence of economic performance, a high level of protection and improvement of the quality of the environment, the raising of the standard of living and quality of life, and economic and social cohesion and solidarity among Member States.'

3. Article 3 shall be amended as follows:

(a) the existing text shall be numbered and become paragraph 1;

(b) in new paragraph 1, point (d) shall be replaced by the following:

‘(d) measures concerning the entry and movement of persons as provided for in Title IIIa;’;

(c) in new paragraph 1, the following new point (i) shall be inserted after point (h):

‘(i) the promotion of coordination between employment policies of the Member States with a view to enhancing their effectiveness by developing a coordinated strategy for employment;’

(d) in new paragraph 1, the existing point (i) shall become point (j) and the subsequent points shall be renumbered accordingly;

(e) the following paragraph shall be added:

‘2. In all the activities referred to in this Article, the Community shall aim to eliminate inequalities, and to promote equality, between men and women.’

4. The following Article shall be inserted:

‘Article 3c

Environmental protection requirements must be integrated into the definition and implementation of the Community policies and activities referred to in Article 3, in particular with a view to promoting sustainable development.’

5. The following Article shall be inserted:

‘Article 5a

1. Member States which intend to establish closer cooperation between themselves may be authorised, subject to Articles K.15 and K.16 of the Treaty on the European Union, to make use of the institutions, procedures and mechanisms laid down by this Treaty, provided that the cooperation proposed:

(a) does not concern areas which fall within the exclusive competence of the Community;

(b) does not affect Community policies, actions or programmes;

(c) does not concern the citizenship of the Union or discriminate between nationals of Member States;

(d) remains within the limits of the powers conferred upon the Community by this Treaty; and

(e) does not constitute a discrimination or a restriction of trade between Member States and does not distort the conditions of competition between the latter.

2. The authorisation referred to in paragraph 1 shall be granted by the Council, acting by a qualified majority on a proposal from the Commission and after consulting the European Parliament.

If a member of the Council declares that, for important and stated reasons of national policy, it intends to oppose the granting of an authorisation by qualified majority, a vote shall not be taken. The Council may, acting by a qualified majority, request that the matter be referred to the Council, meeting in the composition of the Heads of State or Government, for decision by unanimity.

Member States which intend to establish closer cooperation as referred to in paragraph 1 may address a request to the Commission, which may submit a proposal to the Council to that effect. In the event of the Commission not submitting a proposal, it shall inform the Member States concerned of the reasons for not doing so.

3. Any Member State which wishes to become a party to cooperation set up in accordance with this Article shall notify its intention to the Council and to the Commission, which shall give an opinion to the Council within three months of receipt of that notification. Within four months of the date of that notification, the Commission shall decide on it and on such specific arrangements as it may deem necessary.

4. The acts and decisions necessary for the implementation of cooperation activities shall be subject to all the relevant provisions of this Treaty, save as otherwise provided for in this Article and in Articles K.15 and K.16 of the Treaty on European Union.

5. This Article is without prejudice to the provisions of the Protocol integrating the Schengen *acquis* into the framework of the European Union.’

6. In Article 6, the second paragraph shall be replaced by the following:

‘The Council, acting in accordance with the procedure referred to in Article 189b, may adopt rules designed to prohibit such discrimination.’

7. The following Article shall be inserted:

‘Article 6a

Without prejudice to the other provisions of this Treaty and within the limits of the powers conferred by it upon the Community, the Council, acting unanimously on a proposal from the Commission and after consulting the European Parliament, may take appropriate action to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation.’

8. The following Article shall be inserted at the end of Part One:

‘Article 7d

Without prejudice to Articles 77, 90 and 92, and given the place occupied by services of general economic interest in the shared values of the Union as well as their role in promoting social and territorial cohesion, the Community and the Member States, each within their respective powers and within the scope of application of this Treaty, shall take care that such services operate on the basis of principles and conditions which enable them to fulfil their missions.’

9. Article 8(1) shall be replaced by the following:
- ‘1. Citizenship of the Union is hereby established. Every person holding the nationality of a Member State shall be a citizen of the Union. Citizenship of the Union shall complement and not replace national citizenship.’
10. Article 8a(2) shall be replaced by the following:
- ‘2. The Council may adopt provisions with a view to facilitating the exercise of the rights referred to in paragraph 1; save as otherwise provided in this Treaty, the Council shall act in accordance with the procedure referred to in Article 189b. The Council shall act unanimously throughout this procedure.’
11. In Article 8d, the following paragraph shall be added:
- ‘Every citizen of the Union may write to any of the institutions or bodies referred to in this Article or in Article 4 in one of the languages mentioned in Article 248 and have an answer in the same language.’
12. Article 51 shall be replaced by the following:
- ‘Article 51*
- The Council shall, acting in accordance with the procedure referred to in Article 189b, adopt such measures in the field of social security as are necessary to provide freedom of movement for workers; to this end, it shall make arrangements to secure for migrant workers and their dependants:
- (a) aggregation, for the purpose of acquiring and retaining the right to benefit and of calculating the amount of benefit, of all periods taken into account under the laws of the several countries;
- (b) payment of benefits to persons resident in the territories of Member States.
- The Council shall act unanimously throughout the procedure referred to in Article 189b.’
13. Article 56(2) shall be replaced by the following:
- ‘2. The Council shall, acting in accordance with the procedure referred to in Article 189b, issue directives for the coordination of the abovementioned provisions.’
14. Article 57(2) shall be replaced by the following:
- ‘2. For the same purpose, the Council shall, acting in accordance with the procedure referred to in Article 189b, issue directives for the coordination of the provisions laid down by law, regulation or administrative action in Member States concerning the taking-up and pursuit of activities as self-employed persons. The Council, acting unanimously throughout the procedure referred to in Article 189b, shall decide on directives the implementation of which involves in at least one Member State amendment of the existing principles laid down by law governing the professions with respect to training and conditions of access for natural persons. In other cases the Council shall act by qualified majority.’

15. The following title shall be inserted in Part Three:

‘Title IIIa

VISAS, ASYLUM, IMMIGRATION AND OTHER POLICIES RELATED TO FREE MOVEMENT OF PERSONS

Article 73i

In order to establish progressively an area of freedom, security and justice, the Council shall adopt:

- (a) within a period of five years after the entry into force of the Treaty of Amsterdam, measures aimed at ensuring the free movement of persons in accordance with Article 7a, in conjunction with directly related flanking measures with respect to external border controls, asylum and immigration, in accordance with the provisions of Article 73j(2) and (3) and Article 73k(1)(a) and (2)(a), and measures to prevent and combat crime in accordance with the provisions of Article K.3(e) of the Treaty on European Union;
- (b) other measures in the fields of asylum, immigration and safeguarding the rights of nationals of third countries, in accordance with the provisions of Article 73k;
- (c) measures in the field of judicial cooperation in civil matters as provided for in Article 73m;
- (d) appropriate measures to encourage and strengthen administrative cooperation, as provided for in Article 73n;
- (e) measures in the field of police and judicial cooperation in criminal matters aimed at a high level of security by preventing and combating crime within the Union in accordance with the provisions of the Treaty on European Union.

Article 73j

The Council, acting in accordance with the procedure referred to in Article 73o, shall, within a period of five years after the entry into force of the Treaty of Amsterdam, adopt:

- (1) measures with a view to ensuring, in compliance with Article 7a, the absence of any controls on persons, be they citizens of the Union or nationals of third countries, when crossing internal borders;
- (2) measures on the crossing of the external borders of the Member States which shall establish:
 - (a) standards and procedures to be followed by Member States in carrying out checks on persons at such borders;
 - (b) rules on visas for intended stays of no more than three months, including:
 - (i) the list of third countries whose nationals must be in possession of visas when crossing the external borders and those whose nationals are exempt from that requirement;

- (ii) the procedures and conditions for issuing visas by Member States;
 - (iii) a uniform format for visas;
 - (iv) rules on a uniform visa;
- (3) measures setting out the conditions under which nationals of third countries shall have the freedom to travel within the territory of the Member States during a period of no more than three months.

Article 73k

The Council, acting in accordance with the procedure referred to in Article 73o, shall, within a period of five years after the entry into force of the Treaty of Amsterdam, adopt:

- (1) measures on asylum, in accordance with the Geneva Convention of 28 July 1951 and the Protocol of 31 January 1967 relating to the status of refugees and other relevant treaties, within the following areas:
- (a) criteria and mechanisms for determining which Member State is responsible for considering an application for asylum submitted by a national of a third country in one of the Member States,
 - (b) minimum standards on the reception of asylum seekers in Member States,
 - (c) minimum standards with respect to the qualification of nationals of third countries as refugees,
 - (d) minimum standards on procedures in Member States for granting or withdrawing refugee status;
- (2) measures on refugees and displaced persons within the following areas:
- (a) minimum standards for giving temporary protection to displaced persons from third countries who cannot return to their country of origin and for persons who otherwise need international protection,
 - (b) promoting a balance of effort between Member States in receiving and bearing the consequences of receiving refugees and displaced persons;
- (3) measures on immigration policy within the following areas:
- (a) conditions of entry and residence, and standards on procedures for the issue by Member States of long term visas and residence permits, including those for the purpose of family reunion,
 - (b) illegal immigration and illegal residence, including repatriation of illegal residents;
- (4) measures defining the rights and conditions under which nationals of third countries who are legally resident in a Member State may reside in other Member States.

Measures adopted by the Council pursuant to points 3 and 4 shall not prevent any Member State from maintaining or introducing in the areas concerned national provisions which are compatible with this Treaty and with international agreements.

Measures to be adopted pursuant to points 2(b), 3(a) and 4 shall not be subject to the five year period referred to above.

Article 73l

1. This Title shall not affect the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security.

2. In the event of one or more Member States being confronted with an emergency situation characterised by a sudden inflow of nationals of third countries and without prejudice to paragraph 1, the Council may, acting by qualified majority on a proposal from the Commission, adopt provisional measures of a duration not exceeding six months for the benefit of the Member States concerned.

Article 73m

Measures in the field of judicial cooperation in civil matters having cross-border implications, to be taken in accordance with Article 73o and insofar as necessary for the proper functioning of the internal market, shall include:

(a) improving and simplifying:

- the system for cross-border service of judicial and extrajudicial documents;
- cooperation in the taking of evidence;
- the recognition and enforcement of decisions in civil and commercial cases, including decisions in extrajudicial cases;

(b) promoting the compatibility of the rules applicable in the Member States concerning the conflict of laws and of jurisdiction;

(c) eliminating obstacles to the good functioning of civil proceedings, if necessary by promoting the compatibility of the rules on civil procedure applicable in the Member States.

Article 73n

The Council, acting in accordance with the procedure referred to in Article 73o, shall take measures to ensure cooperation between the relevant departments of the administrations of the Member States in the areas covered by this Title, as well as between those departments and the Commission.

Article 73o

1. During a transitional period of five years following the entry into force of the Treaty of Amsterdam, the Council shall act unanimously on a proposal from the Commission or on the initiative of a Member State and after consulting the European Parliament.
2. After this period of five years:
 - the Council shall act on proposals from the Commission; the Commission shall examine any request made by a Member State that it submit a proposal to the Council;
 - the Council, acting unanimously after consulting the European Parliament, shall take a decision with a view to providing for all or parts of the areas covered by this Title to be governed by the procedure referred to in Article 189b and adapting the provisions relating to the powers of the Court of Justice.
3. By derogation from paragraphs 1 and 2, measures referred to in Article 73j(2)(b) (i) and (iii) shall, from the entry into force of the Treaty of Amsterdam, be adopted by the Council acting by a qualified majority on a proposal from the Commission and after consulting the European Parliament.
4. By derogation from paragraph 2, measures referred to in Article 73j(2)(b) (ii) and (iv) shall, after a period of five years following the entry into force of the Treaty of Amsterdam, be adopted by the Council acting in accordance with the procedure referred to in Article 189b.

Article 73p

1. Article 177 shall apply to this Title under the following circumstances and conditions: where a question on the interpretation of this Title or on the validity or interpretation of acts of the institutions of the Community based on this Title is raised in a case pending before a court or a tribunal of a Member State against whose decisions there is no judicial remedy under national law, that court or tribunal shall, if it considers that a decision on the question is necessary to enable it to give judgment, request the Court of Justice to give a ruling thereon.
2. In any event, the Court of Justice shall not have jurisdiction to rule on any measure or decision taken pursuant to Article 73j(1) relating to the maintenance of law and order and the safeguarding of internal security.
3. The Council, the Commission or a Member State may request the Court of Justice to give a ruling on a question of interpretation of this Title or of acts of the institutions of the Community based on this Title. The ruling given by the Court of Justice in response to such a request shall not apply to judgments of courts or tribunals of the Member States which have become *res judicata*.

Article 73q

The application of this Title shall be subject to the provisions of the Protocol on the position of the United Kingdom and Ireland and to the Protocol on the position of Denmark and without prejudice to the Protocol on the application of certain aspects of

Article 7a of the Treaty establishing the European Community to the United Kingdom and to Ireland.’

16. In Article 75(1), the introductory part shall be replaced by the following:

‘1. For the purpose of implementing Article 74, and taking into account the distinctive features of transport, the Council shall, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions, lay down:’

17. In Article 100a, paragraphs 3, 4 and 5 shall be replaced by the following paragraphs:

‘3. The Commission, in its proposals envisaged in paragraph 1 concerning health, safety, environmental protection and consumer protection, will take as a base a high level of protection, taking account in particular of any new development based on scientific facts. Within their respective powers, the European Parliament and the Council will also seek to achieve this objective.

4. If, after the adoption by the Council or by the Commission of a harmonisation measure, a Member State deems it necessary to maintain national provisions on grounds of major needs referred to in Article 36, or relating to the protection of the environment or the working environment, it shall notify the Commission of these provisions as well as the grounds for maintaining them.

5. Moreover, without prejudice to paragraph 4, if, after the adoption by the Council or by the Commission of a harmonisation measure, a Member State deems it necessary to introduce national provisions based on new scientific evidence relating to the protection of the environment or the working environment on grounds of a problem specific to that Member State arising after the adoption of the harmonisation measure, it shall notify the Commission of the envisaged provisions as well as the grounds for introducing them.

6. The Commission shall, within six months of the notifications as referred to in paragraphs 4 and 5, approve or reject the national provisions involved after having verified whether or not they are a means of arbitrary discrimination or a disguised restriction on trade between Member States and whether or not they shall constitute an obstacle to the functioning of the internal market.

In the absence of a decision by the Commission within this period the national provisions referred to in paragraphs 4 and 5 shall be deemed to have been approved.

When justified by the complexity of the matter and in the absence of danger for human health, the Commission may notify the Member State concerned that the period referred to in this paragraph may be extended for a further period of up to six months.

7. When, pursuant to paragraph 6, a Member State is authorised to maintain or introduce national provisions derogating from a harmonisation measure, the Commission shall immediately examine whether to propose an adaptation to that measure.

8. When a Member State raises a specific problem on public health in a field which has been the subject of prior harmonisation measures, it shall bring it to the attention of the Commission which shall immediately examine whether to propose appropriate measures to the Council.

9. By way of derogation from the procedure laid down in Articles 169 and 170, the Commission and any Member State may bring the matter directly before the Court of Justice if it considers that another Member State is making improper use of the powers provided for in this Article.

10. The harmonisation measures referred to above shall, in appropriate cases, include a safeguard clause authorising the Member States to take, for one or more of the non-economic reasons referred to in Article 36, provisional measures subject to a Community control procedure.'

18. Articles 100c and 100d shall be repealed.

19. The following Title shall be inserted after Title VI:

'Title VIa

EMPLOYMENT

Article 109n

Member States and the Community shall, in accordance with this Title, work towards developing a coordinated strategy for employment and particularly for promoting a skilled, trained and adaptable workforce and labour markets responsive to economic change with a view to achieving the objectives defined in Article B of the Treaty on European Union and in Article 2 of this Treaty.

Article 109o

1. Member States, through their employment policies, shall contribute to the achievement of the objectives referred to in Article 109n in a way consistent with the broad guidelines of the economic policies of the Member States and of the Community adopted pursuant to Article 103(2).

2. Member States, having regard to national practices related to the responsibilities of management and labour, shall regard promoting employment as a matter of common concern and shall coordinate their action in this respect within the Council, in accordance with the provisions of Article 109q.

Article 109p

1. The Community shall contribute to a high level of employment by encouraging cooperation between Member States and by supporting and, if necessary, complementing their action. In doing so, the competences of the Member States shall be respected.

2. The objective of a high level of employment shall be taken into consideration in the formulation and implementation of Community policies and activities.

Article 109q

1. The European Council shall each year consider the employment situation in the Community and adopt conclusions thereon, on the basis of a joint annual report by the Council and the Commission.
2. On the basis of the conclusions of the European Council, the Council, acting by a qualified majority on a proposal from the Commission and after consulting the European Parliament, the Economic and Social Committee, the Committee of the Regions and the Employment Committee referred to in Article 109s, shall each year draw up guidelines which the Member States shall take into account in their employment policies. These guidelines shall be consistent with the broad guidelines adopted pursuant to Article 103(2).
3. Each Member State shall provide the Council and the Commission with an annual report on the principal measures taken to implement its employment policy in the light of the guidelines for employment as referred to in paragraph 2.
4. The Council, on the basis of the reports referred to in paragraph 3 and having received the views of the Employment Committee, shall each year carry out an examination of the implementation of the employment policies of the Member States in the light of the guidelines for employment. The Council, acting by a qualified majority on a recommendation from the Commission, may, if it considers it appropriate in the light of that examination, make recommendations to Member States.
5. On the basis of the results of that examination, the Council and the Commission shall make a joint annual report to the European Council on the employment situation in the Community and on the implementation of the guidelines for employment.

Article 109r

The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions, may adopt incentive measures designed to encourage cooperation between Member States and to support their action in the field of employment through initiatives aimed at developing exchanges of information and best practices, providing comparative analysis and advice as well as promoting innovative approaches and evaluating experiences, in particular by recourse to pilot projects.

Those measures shall not include harmonisation of the laws and regulations of the Member States.

Article 109s

The Council, after consulting the European Parliament, shall establish an Employment Committee with advisory status to promote coordination between Member States on employment and labour market policies. The tasks of the Committee shall be:

- to monitor the employment situation and employment policies in the Member States and the Community;
- without prejudice to Article 151, to formulate opinions at the request of either the Council or the Commission or on its own initiative, and to contribute to the preparation of the Council proceedings referred to in Article 109q.

In fulfilling its mandate, the Committee shall consult management and labour.

Each Member State and the Commission shall appoint two members of the Committee.'

20. In Article 113, the following paragraph shall be added:

'5. The Council, acting unanimously on a proposal from the Commission and after consulting the European Parliament, may extend the application of paragraphs 1 to 4 to international negotiations and agreements on services and intellectual property insofar as they are not covered by these paragraphs.'

21. The following Title shall be inserted after Title VII:

'Title VIIa

CUSTOMS COOPERATION

Article 116

Within the scope of application of this Treaty, the Council, acting in accordance with the procedure referred to in Article 189b, shall take measures in order to strengthen customs cooperation between Member States and between the latter and the Commission. These measures shall not concern the application of national criminal law or the national administration of justice.'

22. Articles 117 to 120 shall be replaced by the following Articles:

Article 117

The Community and the Member States, having in mind fundamental social rights such as those set out in the European Social Charter signed at Turin on 18 October 1961 and in the 1989 Community Charter of the Fundamental Social Rights of Workers, shall have as their objectives the promotion of employment, improved living and working conditions, so as to make possible their harmonisation while the improvement is being maintained, proper social protection, dialogue between management and labour, the development of human resources with a view to lasting high employment and the combating of exclusion.

To this end the Community and the Member States shall implement measures which take account of the diverse forms of national practices, in particular in the field of contractual relations, and the need to maintain the competitiveness of the Community economy.

They believe that such a development will ensue not only from the functioning of the common market, which will favour the harmonisation of social systems, but also from the procedures provided for in this Treaty and from the approximation of provisions laid down by law, regulation or administrative action.

Article 118

1. With a view to achieving the objectives of Article 117, the Community shall support and complement the activities of the Member States in the following fields:

- improvement in particular of the working environment to protect workers' health and safety;
- working conditions;
- the information and consultation of workers;
- the integration of persons excluded from the labour market, without prejudice to Article 127;
- equality between men and women with regard to labour market opportunities and treatment at work.

2. To this end, the Council may adopt, by means of directives, minimum requirements for gradual implementation, having regard to the conditions and technical rules obtaining in each of the Member States. Such directives shall avoid imposing administrative, financial and legal constraints in a way which would hold back the creation and development of small and medium-sized undertakings.

The Council shall act in accordance with the procedure referred to in Article 189b after consulting the Economic and Social Committee and the Committee of the Regions.

The Council, acting in accordance with the same procedure, may adopt measures designed to encourage cooperation between Member States through initiatives aimed at improving knowledge, developing exchanges of information and best practices, promoting innovative approaches and evaluating experiences in order to combat social exclusion.

3. However, the Council shall act unanimously on a proposal from the Commission, after consulting the European Parliament, the Economic and Social Committee and the Committee of the Regions in the following areas:

- social security and social protection of workers;
- protection of workers where their employment contract is terminated;
- representation and collective defence of the interests of workers and employers, including co-determination, subject to paragraph 6;
- conditions of employment for third-country nationals legally residing in Community territory;
- financial contributions for promotion of employment and job-creation, without prejudice to the provisions relating to the Social Fund.

4. A Member State may entrust management and labour, at their joint request, with the implementation of directives adopted pursuant to paragraphs 2 and 3.

In this case, it shall ensure that, no later than the date on which a directive must be transposed in accordance with Article 189, management and labour have introduced the necessary measures by agreement, the Member State concerned being required to take any necessary measure enabling it at any time to be in a position to guarantee the results imposed by that directive.

5. The provisions adopted pursuant to this Article shall not prevent any Member State from maintaining or introducing more stringent protective measures compatible with this Treaty.

6. The provisions of this Article shall not apply to pay, the right of association, the right to strike or the right to impose lock-outs.

Article 118a

1. The Commission shall have the task of promoting the consultation of management and labour at Community level and shall take any relevant measure to facilitate their dialogue by ensuring balanced support for the parties.

2. To this end, before submitting proposals in the social policy field, the Commission shall consult management and labour on the possible direction of Community action.

3. If, after such consultation, the Commission considers Community action advisable, it shall consult management and labour on the content of the envisaged proposal. Management and labour shall forward to the Commission an opinion or, where appropriate, a recommendation.

4. On the occasion of such consultation, management and labour may inform the Commission of their wish to initiate the process provided for in Article 118b. The duration of the procedure shall not exceed nine months, unless the management and labour concerned and the Commission decide jointly to extend it.

Article 118b

1. Should management and labour so desire, the dialogue between them at Community level may lead to contractual relations, including agreements.

2. Agreements concluded at Community level shall be implemented either in accordance with the procedures and practices specific to management and labour and the Member States or, in matters covered by Article 118, at the joint request of the signatory parties, by a Council decision on a proposal from the Commission.

The Council shall act by qualified majority, except where the agreement in question contains one or more provisions relating to one of the areas referred to in Article 118(3), in which case it shall act unanimously.

Article 118c

With a view to achieving the objectives of Article 117 and without prejudice to the other provisions of this Treaty, the Commission shall encourage cooperation between the Member States and facilitate the coordination of their action in all social policy fields under this chapter, particularly in matters relating to:

— employment;

- labour law and working conditions;
- basic and advanced vocational training;
- social security;
- prevention of occupational accidents and diseases;
- occupational hygiene;
- the right of association and collective bargaining between employers and workers.

To this end, the Commission shall act in close contact with Member States by making studies, delivering opinions and arranging consultations both on problems arising at national level and on those of concern to international organisations.

Before delivering the opinions provided for in this Article, the Commission shall consult the Economic and Social Committee.

Article 119

1. Each Member State shall ensure that the principle of equal pay for male and female workers for equal work or work of equal value is applied.
2. For the purpose of this Article, “pay” means the ordinary basic or minimum wage or salary and any other consideration, whether in cash or in kind, which the worker receives directly or indirectly, in respect of his employment, from his employer.

Equal pay without discrimination based on sex means:

- (a) that pay for the same work at piece rates shall be calculated on the basis of the same unit of measurement;
- (b) that pay for work at time rates shall be the same for the same job.

3. The Council, acting in accordance with the procedure referred to in Article 189b, and after consulting the Economic and Social Committee, shall adopt measures to ensure the application of the principle of equal opportunities and equal treatment of men and women in matters of employment and occupation, including the principle of equal pay for equal work or work of equal value.

4. With a view to ensuring full equality in practice between men and women in working life, the principle of equal treatment shall not prevent any Member State from maintaining or adopting measures providing for specific advantages in order to make it easier for the under-represented sex to pursue a vocational activity or to prevent or compensate for disadvantages in professional careers.

Article 119a

Member States shall endeavour to maintain the existing equivalence between paid holiday schemes.

Article 120

The Commission shall draw up a report each year on progress in achieving the objectives of Article 117, including the demographic situation in the Community. It shall forward the report to the European Parliament, the Council and the Economic and Social Committee.

The European Parliament may invite the Commission to draw up reports on particular problems concerning the social situation.'

23. Article 125 shall be replaced by the following:

'Article 125

The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions, shall adopt implementing decisions relating to the European Social Fund.'

24. Article 127(4) shall be replaced by the following:

'4. The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions, shall adopt measures to contribute to the achievement of the objectives referred to in this Article, excluding any harmonisation of the laws and regulations of the Member States.'

25. Article 128(4) shall be replaced by the following:

'4. The Community shall take cultural aspects into account in its action under other provisions of this Treaty, in particular in order to respect and to promote the diversity of its cultures.'

26. Article 129 shall be replaced by the following:

'Article 129

1. A high level of human health protection shall be ensured in the definition and implementation of all Community policies and activities.

Community action, which shall complement national policies, shall be directed towards improving public health, preventing human illness and diseases, and obviating sources of danger to human health. Such action shall cover the fight against the major health scourges, by promoting research into their causes, their transmission and their prevention, as well as health information and education.

The Community shall complement the Member States' action in reducing drugs-related health damage, including information and prevention.

2. The Community shall encourage cooperation between the Member States in the areas referred to in this Article and, if necessary, lend support to their action.

Member States shall, in liaison with the Commission, coordinate among themselves their policies and programmes in the areas referred to in paragraph 1. The Commission may, in close contact with the Member States, take any useful initiative to promote such co-ordination.

3. The Community and the Member States shall foster cooperation with third countries and the competent international organisations in the sphere of public health.

4. The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions, shall contribute to the achievement of the objectives referred to in this Article through adopting:

- (a) measures setting high standards of quality and safety of organs and substances of human origin, blood and blood derivatives; these measures shall not prevent any Member State from maintaining or introducing more stringent protective measures;
- (b) by way of derogation from Article 43, measures in the veterinary and phytosanitary fields which have as their direct objective the protection of public health;
- (c) incentive measures designed to protect and improve human health, excluding any harmonisation of the laws and regulations of the Member States.

The Council, acting by a qualified majority on a proposal from the Commission, may also adopt recommendations for the purposes set out in this Article.

5. Community action in the field of public health shall fully respect the responsibilities of the Member States for the organisation and delivery of health services and medical care. In particular, measures referred to in paragraph 4(a) shall not affect national provisions on the donation or medical use of organs and blood.'

27. Article 129a shall be replaced by the following:

'Article 129a

1. In order to promote the interests of consumers and to ensure a high level of consumer protection, the Community shall contribute to protecting the health, safety and economic interests of consumers, as well as to promoting their right to information, education and to organise themselves in order to safeguard their interests.

2. Consumer protection requirements shall be taken into account in defining and implementing other Community policies and activities.

3. The Community shall contribute to the attainment of the objectives referred to in paragraph 1 through:

- (a) measures adopted pursuant to Article 100a in the context of the completion of the internal market;

(b) measures which support, supplement and monitor the policy pursued by the Member States.

4. The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee, shall adopt the measures referred to in paragraph 3(b).

5. Measures adopted pursuant to paragraph 4 shall not prevent any Member State from maintaining or introducing more stringent protective measures. Such measures must be compatible with this Treaty. The Commission shall be notified of them.'

28. In the first subparagraph of Article 129c(1), the first part of the third indent shall be replaced by the following:

'— may support projects of common interest supported by Member States, which are identified in the framework of the guidelines referred to in the first indent, particularly through feasibility studies, loan guarantees or interest-rate subsidies;'

29. Article 129d shall be amended as follows:

(a) the first paragraph shall be replaced by the following:

'The guidelines and other measures referred to in Article 129c(1) shall be adopted by the Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions.';

(b) the third paragraph shall be deleted.

30. In Article 130a, the second paragraph shall be replaced by the following:

'In particular, the Community shall aim at reducing disparities between the levels of development of the various regions and the backwardness of the least favoured regions or islands, including rural areas.'

31. In Article 130e, the first paragraph shall be replaced by the following:

'Implementing decisions relating to the European Regional Development Fund shall be taken by the Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions.'

32. In Article 130i(1), the first subparagraph shall be replaced by the following:

'1. A multi-annual framework programme, setting out all the activities of the Community, shall be adopted by the Council, acting in accordance with the procedure referred to in Article 189b after consulting the Economic and Social Committee.'

33. Article 130o shall be replaced by the following:

'Article 130o

The Council, acting by qualified majority on a proposal from the Commission and after consulting the European Parliament and the Economic and Social Committee, shall adopt the provisions referred to in Article 130n.

The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee, shall adopt the provisions referred to in Articles 130j, 130k and 130l. Adoption of the supplementary programmes shall require the agreement of the Member States concerned.'

34. Article 130r(2) shall be replaced by the following:

'2. Community policy on the environment shall aim at a high level of protection taking into account the diversity of situations in the various regions of the Community. It shall be based on the precautionary principle and on the principles that preventive action should be taken, that environmental damage should as a priority be rectified at source and that the polluter should pay.'

In this context, harmonisation measures answering environmental protection requirements shall include, where appropriate, a safeguard clause allowing Member States to take provisional measures, for non-economic environmental reasons, subject to a Community inspection procedure.'

35. Article 130s shall be amended as follows:

(a) Paragraph 1 shall be replaced by the following:

'1. The Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions, shall decide what action is to be taken by the Community in order to achieve the objectives referred to in Article 130r.';

(b) The introductory part of paragraph 2 shall be replaced by the following:

'2. By way of derogation from the decision making procedure provided for in paragraph 1 and without prejudice to Article 100a, the Council, acting unanimously on a proposal from the Commission and after consulting the European Parliament, the Economic and Social Committee and the Committee of the Regions, shall adopt:';

(c) The first subparagraph of paragraph 3 shall be replaced by the following:

'3. In other areas, general action programmes setting out priority objectives to be attained shall be adopted by the Council, acting in accordance with the procedure referred to in Article 189b and after consulting the Economic and Social Committee and the Committee of the Regions.'

36. Article 130w(1) shall be replaced by the following:

'1. Without prejudice to the other provisions of this Treaty, the Council, acting in accordance with the procedure referred to in Article 189b, shall adopt the measures necessary to further the objectives referred to in Article 130u. Such measures may take the form of multi-annual programmes.'

37. In Article 137, the following paragraph shall be added:

‘The number of Members of the European Parliament shall not exceed seven hundred.’

38. Article 138 shall be amended as follows:

(a) in paragraph 3, the first subparagraph shall be replaced by the following:

‘3. The European Parliament shall draw up a proposal for elections by direct universal suffrage in accordance with a uniform procedure in all Member States or in accordance with principles common to all Member States.’;

(b) the following paragraph shall be added:

‘4. The European Parliament shall, after seeking an opinion from the Commission and with the approval of the Council acting unanimously, lay down the regulations and general conditions governing the performance of the duties of its Members.’

39. Article 151 shall be replaced by the following:

‘Article 151

1. A committee consisting of the Permanent Representatives of the Member States shall be responsible for preparing the work of the Council and for carrying out the tasks assigned to it by the Council. The Committee may adopt procedural decisions in cases provided for in the Council’s Rules of Procedure.

2. The Council shall be assisted by a General Secretariat, under the responsibility of a Secretary-General, High Representative for the common foreign and security policy, who shall be assisted by a Deputy Secretary-General responsible for the running of the General Secretariat. The Secretary-General and the Deputy Secretary-General shall be appointed by the Council acting unanimously.

The Council shall decide on the organisation of the General Secretariat.

3. The Council shall adopt its Rules of Procedure.

For the purpose of applying Article 191a(3), the Council shall elaborate in these Rules the conditions under which the public shall have access to Council documents. For the purpose of this paragraph, the Council shall define the cases in which it is to be regarded as acting in its legislative capacity, with a view to allowing greater access to documents in those cases, while at the same time preserving the effectiveness of its decision making process. In any event, when the Council acts in its legislative capacity, the results of votes and explanations of vote as well as statements in the minutes shall be made public.’

40. In Article 158(2), the first and second subparagraphs shall be replaced by the following:

‘2. The governments of the Member States shall nominate by common accord the person they intend to appoint as President of the Commission; the nomination shall be approved by the European Parliament.

The governments of the Member States shall, by common accord with the nominee for President, nominate the other persons whom they intend to appoint as Members of the Commission.’

41. In Article 163, the following paragraph shall be inserted as the first paragraph:

‘The Commission shall work under the political guidance of its President.’

42. In Article 173, the third paragraph shall be replaced by the following:

‘The Court of Justice shall have jurisdiction under the same conditions in actions brought by the European Parliament, by the Court of Auditors and by the ECB for the purpose of protecting their prerogatives.’

43. Article 188c shall be amended as follows:

(a) The second subparagraph of paragraph 1 shall be replaced by the following:

‘The Court of Auditors shall provide the European Parliament and the Council with a statement of assurance as to the reliability of the accounts and the legality and regularity of the underlying transactions which shall be published in the *Official Journal of the European Communities*.’;

(b) The first subparagraph of paragraph 2 shall be replaced by the following:

‘2. The Court of Auditors shall examine whether all revenue has been received and all expenditure incurred in a lawful and regular manner and whether the financial management has been sound. In doing so, it shall report in particular on any cases of irregularity.’;

(c) Paragraph 3 shall be replaced by the following:

‘3. The audit shall be based on records and, if necessary, performed on the spot in the other institutions of the Community, on the premises of any body which manages revenue or expenditure on behalf of the Community and in the Member States, including on the premises of any natural or legal person in receipt of payments from the budget. In the Member States the audit shall be carried out in liaison with national audit bodies or, if these do not have the necessary powers, with the competent national departments. The Court of Auditors and the national audit bodies of the Member States shall cooperate in a spirit of trust while maintaining their independence. These bodies or departments shall inform the Court of Auditors whether they intend to take part in the audit.

The other institutions of the Community, any bodies managing revenue or expenditure on behalf of the Community, any natural or legal person in receipt of payments

from the budget, and the national audit bodies or, if these do not have the necessary powers, the competent national departments, shall forward to the Court of Auditors, at its request, any document or information necessary to carry out its task.

In respect of the European Investment Bank's activity in managing Community expenditure and revenue, the Court's rights of access to information held by the Bank shall be governed by an agreement between the Court, the Bank and the Commission. In the absence of an agreement, the Court shall nevertheless have access to information necessary for the audit of Community expenditure and revenue managed by the Bank.'

44. Article 189b shall be replaced by the following:

'Article 189b

1. Where reference is made in this Treaty to this Article for the adoption of an act, the following procedure shall apply.

2. The Commission shall submit a proposal to the European Parliament and the Council.

The Council, acting by a qualified majority after obtaining the opinion of the European Parliament,

— if it approves all the amendments contained in the European Parliament's opinion, may adopt the proposed act thus amended;

— if the European Parliament does not propose any amendments, may adopt the proposed act;

— shall otherwise adopt a common position and communicate it to the European Parliament. The Council shall inform the European Parliament fully of the reasons which led it to adopt its common position. The Commission shall inform the European Parliament fully of its position.

If, within three months of such communication, the European Parliament:

(a) approves the common position or has not taken a decision, the act in question shall be deemed to have been adopted in accordance with that common position;

(b) rejects, by an absolute majority of its component members, the common position, the proposed act shall be deemed not to have been adopted;

(c) proposes amendments to the common position by an absolute majority of its component members, the amended text shall be forwarded to the Council and to the Commission, which shall deliver an opinion on those amendments.

3. If, within three months of the matter being referred to it, the Council, acting by a qualified majority, approves all the amendments of the European Parliament, the act in question shall be deemed to have been adopted in the form of the common position thus

amended; however, the Council shall act unanimously on the amendments on which the Commission has delivered a negative opinion. If the Council does not approve all the amendments, the President of the Council, in agreement with the President of the European Parliament, shall within six weeks convene a meeting of the Conciliation Committee.

4. The Conciliation Committee, which shall be composed of the members of the Council or their representatives and an equal number of representatives of the European Parliament, shall have the task of reaching agreement on a joint text, by a qualified majority of the members of the Council or their representatives and by a majority of the representatives of the European Parliament. The Commission shall take part in the Conciliation Committee's proceedings and shall take all the necessary initiatives with a view to reconciling the positions of the European Parliament and the Council. In fulfilling this task, the Conciliation Committee shall address the common position on the basis of the amendments proposed by the European Parliament.

5. If, within six weeks of its being convened, the Conciliation Committee approves a joint text, the European Parliament, acting by an absolute majority of the votes cast, and the Council, acting by a qualified majority, shall each have a period of six weeks from that approval in which to adopt the act in question in accordance with the joint text. If either of the two institutions fails to approve the proposed act within that period, it shall be deemed not to have been adopted.

6. Where the Conciliation Committee does not approve a joint text, the proposed act shall be deemed not to have been adopted.

7. The periods of three months and six weeks referred to in this Article shall be extended by a maximum of one month and two weeks respectively at the initiative of the European Parliament or the Council.'

45. The following Article shall be inserted:

'Article 191a

1. Any citizen of the Union, and any natural or legal person residing or having their registered office in a Member State, shall have a right of access to European Parliament, Council and Commission documents, subject to the principles and the conditions to be defined in accordance with paragraphs 2 and 3.

2. General principles and limits on grounds of public or private interest governing this right of access to documents shall be determined by the Council, acting in accordance with the procedure referred to in Article 189b within two years of the entry into force of the Treaty of Amsterdam.

3. Each institution referred to above shall elaborate in its own Rules of Procedure specific provisions regarding access to its documents.'

46. In Article 198, the following paragraph shall be added:

'The Committee may be consulted by the European Parliament.'

47. In Article 198a, the third paragraph shall be replaced by the following:

‘The members of the Committee and an equal number of alternate members shall be appointed for four years by the Council acting unanimously on proposals from the respective Member States. Their term of office shall be renewable. No member of the Committee shall at the same time be a Member of the European Parliament.’

48. In Article 198b the second paragraph shall be replaced by the following:

‘It shall adopt its Rules of Procedure.’

49. Article 198c shall be amended as follows:

(a) the first paragraph shall be replaced by the following:

‘The Committee of the Regions shall be consulted by the Council or by the Commission where this Treaty so provides and in all other cases, in particular those which concern cross-border cooperation, in which one of these two institutions considers it appropriate.’;

(b) after the third paragraph, the following paragraph shall be inserted:

‘The Committee of the Regions may be consulted by the European Parliament.’

50. In Article 205, the first paragraph shall be replaced by the following:

‘The Commission shall implement the budget, in accordance with the provisions of the regulations made pursuant to Article 209, on its own responsibility and within the limits of the appropriations, having regard to the principles of sound financial management. Member States shall cooperate with the Commission to ensure that the appropriations are used in accordance with the principles of sound financial management.’

51. Article 206(1) shall be replaced by the following:

‘1. The European Parliament, acting on a recommendation from the Council which shall act by a qualified majority, shall give a discharge to the Commission in respect of the implementation of the budget. To this end, the Council and the European Parliament in turn shall examine the accounts and the financial statement referred to in Article 205a, the annual report by the Court of Auditors together with the replies of the institutions under audit to the observations of the Court of Auditors, the statement of assurance referred to in Article 188c(1), second subparagraph and any relevant special reports by the Court of Auditors.’

52. Article 209a shall be replaced by the following:

‘Article 209a

1. The Community and the Member States shall counter fraud and any other illegal activities affecting the financial interests of the Community through measures to be taken in accordance with this Article, which shall act as a deterrent and be such as to afford effective protection in the Member States.

2. Member States shall take the same measures to counter fraud affecting the financial interests of the Community as they take to counter fraud affecting their own financial interests.

3. Without prejudice to other provisions of this Treaty, the Member States shall co-ordinate their action aimed at protecting the financial interests of the Community against fraud. To this end they shall organise, together with the Commission, close and regular cooperation between the competent authorities.

4. The Council, acting in accordance with the procedure referred to in Article 189b, after consulting the Court of Auditors, shall adopt the necessary measures in the fields of the prevention of and fight against fraud affecting the financial interests of the Community with a view to affording effective and equivalent protection in the Member States. These measures shall not concern the application of national criminal law or the national administration of justice.

5. The Commission, in cooperation with Member States, shall each year submit to the European Parliament and to the Council a report on the measures taken for the implementation of this Article.'

53. The following Article shall be inserted:

'Article 213a

1. Without prejudice to Article 5 of the Protocol on the Statute of the European System of Central Banks and of the European Central Bank, the Council, acting in accordance with the procedure referred to in Article 189b, shall adopt measures for the production of statistics where necessary for the performance of the activities of the Community.

2. The production of Community statistics shall conform to impartiality, reliability, objectivity, scientific independence, cost-effectiveness and statistical confidentiality; it shall not entail excessive burdens on economic operators.'

54. The following Article shall be inserted:

'Article 213b

1. From 1 January 1999, Community acts on the protection of individuals with regard to the processing of personal data and the free movement of such data shall apply to the institutions and bodies set up by, or on the basis of, this Treaty.

2. Before the date referred to in paragraph 1, the Council, acting in accordance with the procedure referred to in Article 189b, shall establish an independent supervisory body responsible for monitoring the application of such Community acts to Community institutions and bodies and shall adopt any other relevant provisions as appropriate.'

55. Article 227(2) shall be replaced by the following:

‘2. The provisions of this Treaty shall apply to the French overseas departments, the Azores, Madeira and the Canary Islands.

However, taking account of the structural social and economic situation of the French overseas departments, the Azores, Madeira and the Canary Islands, which is compounded by their remoteness, insularity, small size, difficult topography and climate, economic dependence on a few products, the permanence and combination of which severely restrain their development, the Council, acting by a qualified majority on a proposal from the Commission and after consulting the European Parliament, shall adopt specific measures aimed, in particular, at laying down the conditions of application of the present Treaty to those regions, including common policies.

The Council shall, when adopting the relevant measures referred to in the second subparagraph, take into account areas such as customs and trade policies, fiscal policy, free zones, agriculture and fisheries policies, conditions for supply of raw materials and essential consumer goods, State aids and conditions of access to structural funds and to horizontal Community programmes.

The Council shall adopt the measures referred to in the second subparagraph taking into account the special characteristics and constraints of the outermost regions without undermining the integrity and the coherence of the Community legal order, including the internal market and common policies.’

56. Article 228 shall be amended as follows:

(a) the second subparagraph of paragraph 1 shall be replaced by the following:

‘In exercising the powers conferred upon it by this paragraph, the Council shall act by a qualified majority, except in the cases where the first subparagraph of paragraph 2 provides that the Council shall act unanimously.’;

(b) paragraph 2 shall be replaced by the following:

‘2. Subject to the powers vested in the Commission in this field, the signing, which may be accompanied by a decision on provisional application before entry into force, and the conclusion of the agreements shall be decided on by the Council, acting by a qualified majority on a proposal from the Commission. The Council shall act unanimously when the agreement covers a field for which unanimity is required for the adoption of internal rules and for the agreements referred to in Article 238.

By way of derogation from the rules laid down in paragraph 3, the same procedures shall apply for a decision to suspend the application of an agreement, and for the purpose of establishing the positions to be adopted on behalf of the Community in a body set up by an agreement based on Article 238, when that body is called upon to adopt decisions having legal effects, with the exception of decisions supplementing or amending the institutional framework of the agreement.

The European Parliament shall be immediately and fully informed on any decision under this paragraph concerning the provisional application or the suspension of agreements, or the establishment of the Community position in a body set up by an agreement based on Article 238.’

57. The following Article shall be inserted:

‘Article 236

1. Where a decision has been taken to suspend the voting rights of the representative of the government of a Member State in accordance with Article F.1(2) of the Treaty on European Union, these voting rights shall also be suspended with regard to this Treaty.

2. Moreover, where the existence of a serious and persistent breach by a Member State of principles mentioned in Article F(1) of the Treaty on European Union has been determined in accordance with Article F.1(1) of that Treaty, the Council, acting by a qualified majority, may decide to suspend certain of the rights deriving from the application of this Treaty to the Member State in question. In doing so, the Council shall take into account the possible consequences of such a suspension on the rights and obligations of natural and legal persons.

The obligations of the Member State in question under this Treaty shall in any case continue to be binding on that State.

3. The Council, acting by a qualified majority, may decide subsequently to vary or revoke measures taken in accordance with paragraph 2 in response to changes in the situation which led to their being imposed.

4. When taking decisions referred to in paragraphs 2 and 3, the Council shall act without taking into account the votes of the representative of the government of the Member State in question. By way of derogation from Article 148(2) a qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in Article 148(2).

This paragraph shall also apply in the event of voting rights being suspended in accordance with paragraph 1. In such cases, a decision requiring unanimity shall be taken without the vote of the representative of the government of the Member State in question.’

58. The Protocol on Social Policy and the Agreement on social policy attached thereto shall be repealed.

59. The Protocol on the Economic and Social Committee and the Committee of the Regions shall be repealed.

Article 3

The Treaty establishing the European Coal and Steel Community shall be amended in accordance with the provisions of this Article.

1. In Article 10(2) the first and second subparagraphs shall be replaced by the following:

‘2. The governments of the Member States shall nominate by common accord the person they intend to appoint as President of the Commission; the nomination shall be approved by the European Parliament.

The governments of the Member States shall, by common accord with the nominee for President, nominate the other persons whom they intend to appoint as Members of the Commission.'

2. In Article 13, the following paragraph shall be inserted as the first paragraph:

'The Commission shall work under the political guidance of its President.'

3. In Article 20, the following paragraph shall be added:

'The number of Members of the European Parliament shall not exceed seven hundred.'

4. Article 21 shall be amended as follows:

- (a) in paragraph 3, the first subparagraph shall be replaced by the following:

'3. The European Parliament shall draw up a proposal for elections by direct universal suffrage in accordance with a uniform procedure in all Member States or in accordance with principles common to all Member States.';

- (b) the following paragraph shall be added:

'4. The European Parliament shall, after seeking an opinion from the Commission and with the approval of the Council acting unanimously, lay down the regulations and general conditions governing the performance of the duties of its Members.'

5. Article 30 shall be replaced by the following:

'Article 30

1. A committee consisting of the Permanent Representatives of the Member States shall be responsible for preparing the work of the Council and for carrying out the tasks assigned to it by the Council. The Committee may adopt procedural decisions in cases provided for in the Council's Rules of Procedure.

2. The Council shall be assisted by a General Secretariat, under the responsibility of a Secretary-General, High Representative for the common foreign and security policy, who shall be assisted by a Deputy Secretary-General responsible for the running of the General Secretariat. The Secretary-General and the Deputy Secretary-General shall be appointed by the Council acting unanimously.

The Council shall decide on the organisation of the General Secretariat.

3. The Council shall adopt its Rules of Procedure.'

6. In Article 33, the fourth paragraph shall be replaced by the following:

'The Court of Justice shall have jurisdiction under the same conditions in actions brought by the European Parliament and by the Court of Auditors for the purpose of protecting their prerogatives.'

7. Article 45c shall be amended as follows:

- (a) The second subparagraph of paragraph 1 shall be replaced by the following:

‘The Court of Auditors shall provide the European Parliament and the Council with a statement of assurance as to the reliability of the accounts and the legality and regularity of the underlying transactions which shall be published in the *Official Journal of the European Communities*.’;

- (b) The first subparagraph of paragraph 2 shall be replaced by the following:

‘2. The Court of Auditors shall examine whether all revenue has been received and all expenditure incurred in a lawful and regular manner and whether the financial management has been sound. In doing so, it shall report in particular on any cases of irregularity.’;

- (c) Paragraph 3 shall be replaced by the following:

‘3. The audit shall be based on records and, if necessary, performed on the spot in the other institutions of the Community, on the premises of any body which manages revenue or expenditure on behalf of the Community and in the Member States, including on the premises of any natural or legal person in receipt of payments from the budget. In the Member States the audit shall be carried out in liaison with national audit bodies or, if these do not have the necessary powers, with the competent national departments. The Court of Auditors and the national audit bodies of the Member States shall cooperate in a spirit of trust while maintaining their independence. These bodies or departments shall inform the Court of Auditors whether they intend to take part in the audit.

The other institutions of the Community, any bodies managing revenue or expenditure on behalf of the Community, any natural or legal person in receipt of payments from the budget, and the national audit bodies or, if these do not have the necessary powers, the competent national departments, shall forward to the Court of Auditors, at its request, any document or information necessary to carry out its task.

In respect of the European Investment Bank’s activity in managing Community expenditure and revenue, the Court’s rights of access to information held by the Bank shall be governed by an agreement between the Court, the Bank and the Commission. In the absence of an agreement, the Court shall nevertheless have access to information necessary for the audit of Community expenditure and revenue managed by the Bank.’

8. In Article 78c, the first paragraph shall be replaced by the following:

‘The Commission shall implement the budget, in accordance with the provisions of the regulations made pursuant to Article 78h, on its own responsibility and within the limits of the appropriations, having regard to the principles of sound financial management. Member States shall cooperate with the Commission to ensure that the appropriations are used in accordance with the principles of sound financial management.’

9. Article 78g(1) shall be replaced by the following:

‘1. The European Parliament, acting on a recommendation from the Council which shall act by a qualified majority, shall give a discharge to the Commission in respect of the implementation of the budget. To this end, the Council and the European Parliament in turn shall examine the accounts and the financial statement referred to in Article 78d, the annual report by the Court of Auditors together with the replies of the institutions under audit to the observations of the Court of Auditors, the statement of assurance referred to in Article 45c(1), second subparagraph, and any relevant special reports by the Court of Auditors.’

10. The following Article shall be inserted:

‘Article 96

1. Where a decision has been taken to suspend the voting rights of the representative of the government of a Member State in accordance with Article F.1(2) of the Treaty on European Union, these voting rights shall also be suspended with regard to this Treaty.

2. Moreover, where the existence of a serious and persistent breach by a Member State of principles mentioned in Article F(1) of the Treaty on European Union has been determined in accordance with Article F.1(1) of that Treaty, the Council, acting by a qualified majority, may decide to suspend certain of the rights deriving from the application of this Treaty to the Member State in question. In doing so, the Council shall take into account the possible consequences of such a suspension on the rights and obligations of natural and legal persons.

The obligations of the Member State in question under this Treaty shall in any case continue to be binding on that State.

3. The Council, acting by a qualified majority, may decide subsequently to vary or revoke measures taken in accordance with paragraph 2 in response to changes in the situation which led to their being imposed.

4. When taking decisions referred to in paragraphs 2 and 3, the Council shall act without taking into account the votes of the representative of the government of the Member State in question. By way of derogation from Article 28, fourth paragraph, a qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in Article 28, fourth paragraph.

This paragraph shall also apply in the event of voting rights being suspended in accordance with paragraph 1. In such cases, a decision requiring unanimity shall be taken without the vote of the representative of the government of the Member State in question.’

Article 4

The Treaty establishing the European Atomic Energy Community shall be amended in accordance with the provisions of this Article.

1. In Article 107, the following paragraph shall be added:

‘The number of Members of the European Parliament shall not exceed seven hundred.’

2. Article 108 shall be amended as follows:

(a) in paragraph 3, the first subparagraph shall be replaced by the following:

‘3. The European Parliament shall draw up a proposal for elections by direct universal suffrage in accordance with a uniform procedure in all Member States or in accordance with principles common to all Member States.’;

(b) the following paragraph shall be added:

‘4. The European Parliament shall, after seeking an opinion from the Commission and with the approval of the Council acting unanimously, lay down the regulations and general conditions governing the performance of the duties of its Members.’

3. Article 121 shall be replaced by the following:

‘Article 121

1. A committee consisting of the Permanent Representatives of the Member States shall be responsible for preparing the work of the Council and for carrying out the tasks assigned to it by the Council. The Committee may adopt procedural decisions in cases provided for in the Council’s Rules of Procedure.

2. The Council shall be assisted by a General Secretariat, under the responsibility of a Secretary-General, High Representative for the common foreign and security policy, who shall be assisted by a Deputy Secretary-General responsible for the running of the General Secretariat. The Secretary-General and the Deputy Secretary-General shall be appointed by the Council acting unanimously.

The Council shall decide on the organisation of the General Secretariat.

3. The Council shall adopt its Rules of Procedure.’

4. In Article 127, the first and second subparagraphs of paragraph 2 shall be replaced by the following:

‘2. The governments of the Member States shall nominate by common accord the person they intend to appoint as President of the Commission; the nomination shall be approved by the European Parliament.

The governments of the Member States shall, by common accord with the nominee for President, nominate the other persons whom they intend to appoint as Members of the Commission.’

5. In Article 132, the following paragraph shall be inserted as the first paragraph:

‘The Commission shall work under the political guidance of its President.’

6. In Article 146, the third paragraph shall be replaced by the following:

‘The Court of Justice shall have jurisdiction under the same conditions in actions brought by the European Parliament and by the Court of Auditors for the purpose of protecting their prerogatives.’

7. Article 160c shall be amended as follows:

(a) the second subparagraph of paragraph 1 shall be replaced by the following:

‘The Court of Auditors shall provide the European Parliament and the Council with a statement of assurance as to the reliability of the accounts and the legality and regularity of the underlying transactions which shall be published in the *Official Journal of the European Communities*.’;

(b) the first subparagraph of paragraph 2 shall be replaced by the following:

‘2. The Court of Auditors shall examine whether all revenue has been received and all expenditure incurred in a lawful and regular manner and whether the financial management has been sound. In doing so, it shall report in particular on any cases of irregularity.’;

(c) paragraph 3 shall be replaced by the following:

‘3. The audit shall be based on records and, if necessary, performed on the spot in the other institutions of the Community, on the premises of any body which manages revenue or expenditure on behalf of the Community and in the Member States, including on the premises of any natural or legal person in receipt of payments from the budget. In the Member States the audit shall be carried out in liaison with national audit bodies or, if these do not have the necessary powers, with the competent national departments. The Court of Auditors and the national audit bodies of the Member States shall cooperate in a spirit of trust while maintaining their independence. These bodies or departments shall inform the Court of Auditors whether they intend to take part in the audit.

The other institutions of the Community, any bodies managing revenue or expenditure on behalf of the Community, any natural or legal person in receipt of payments from the budget, and the national audit bodies or, if these do not have the necessary powers, the competent national departments, shall forward to the Court of Auditors, at its request, any document or information necessary to carry out its task.

In respect of the European Investment Bank’s activity in managing Community expenditure and revenue, the Court’s rights of access to information held by the Bank shall be governed by an agreement between the Court, the Bank and the Commission. In the absence of an agreement, the Court shall nevertheless have access to information necessary for the audit of Community expenditure and revenue managed by the Bank.’

8. In Article 170, the following paragraph shall be added:

‘The Committee may be consulted by the European Parliament.’

9. In Article 179, the first paragraph shall be replaced by the following:

‘The Commission shall implement the budget, in accordance with the provisions of the regulations made pursuant to Article 183, on its own responsibility and within the limits of the appropriations, having regard to the principles of sound financial management. Member States shall cooperate with the Commission to ensure that the appropriations are used in accordance with the principles of sound financial management.’

10. Article 180b(1) shall be replaced by the following:

‘1. The European Parliament, acting on a recommendation from the Council which shall act by a qualified majority, shall give a discharge to the Commission in respect of the implementation of the budget. To this end, the Council and the European Parliament in turn shall examine the accounts and the financial statement referred to in Article 179a, the annual report by the Court of Auditors together with the replies of the institutions under audit to the observations of the Court of Auditors, the statement of assurance referred to in Article 160c(1), second subparagraph, and any relevant special reports by the Court of Auditors.’

11. The following Article shall be inserted:

‘Article 204

1. Where a decision has been taken to suspend the voting rights of the representative of the government of a Member State in accordance with Article F.1(2) of the Treaty on European Union, these voting rights shall also be suspended with regard to this Treaty.

2. Moreover, where the existence of a serious and persistent breach by a Member State of principles mentioned in Article F(1) of the Treaty on European Union has been determined in accordance with Article F.1(1) of that Treaty, the Council, acting by a qualified majority, may decide to suspend certain of the rights deriving from the application of this Treaty to the Member State in question. In doing so, the Council shall take into account the possible consequences of such a suspension on the rights and obligations of natural and legal persons.

The obligations of the Member State in question under this Treaty shall in any case continue to be binding on that State.

3. The Council, acting by a qualified majority, may decide subsequently to vary or revoke measures taken in accordance with paragraph 2 in response to changes in the situation which led to their being imposed.

4. When taking decisions referred to in paragraphs 2 and 3, the Council shall act without taking into account the votes of the representative of the government of the Member State in question. By way of derogation from Article 118(2) a qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in Article 118(2).

This paragraph shall also apply in the event of voting rights being suspended in accordance with paragraph 1. In such cases, a decision requiring unanimity shall be taken without the vote of the representative of the government of the Member State in question.'

Article 5

The Act concerning the election of the representatives of the European Parliament by direct universal suffrage annexed to the Council Decision of 20 September 1976 shall be amended in accordance with the provisions of this Article.

1. In Article 2, the following paragraph shall be added:

'In the event of amendments to this Article, the number of representatives elected in each Member State must ensure appropriate representation of the peoples of the States brought together in the Community.'

2. In Article 6(1), the following indent shall be inserted after the fifth indent:

'— member of the Committee of the Regions,'

3. Article 7(2) shall be replaced by the following:

'2. Pending the entry into force of a uniform electoral procedure or a procedure based on common principles and subject to the other provisions of this Act, the electoral procedure shall be governed in each Member State by its national provisions.'

4. Article 11 shall be replaced by the following:

'Pending the entry into force of the uniform electoral procedure or the procedure based on common principles referred to in Article 7, the European Parliament shall verify the credentials of representatives. For this purpose it shall take note of the results declared officially by the Member States and shall rule on any disputes which may arise out of the provisions of this Act other than those arising out of the national provisions to which the Act refers.'

5. Article 12(1) shall be replaced by the following:

'1. Pending the entry into force of the uniform electoral procedure or the procedure based on common principles referred to in Article 7 and subject to the other provisions of this Act, each Member State shall lay down appropriate procedures for filling any seat which falls vacant during the five-year term of office referred to in Article 3 for the remainder of that period.'

PART TWO
SIMPLIFICATION

Article 6

The Treaty establishing the European Community, including the annexes and protocols thereto, shall be amended in accordance with the provisions of this Article for the purpose of deleting lapsed provisions of the Treaty and adapting in consequence the text of certain of its provisions.

I. TEXT OF THE ARTICLES OF THE TREATY

1. In Article 3, point (a), the word ‘elimination’ shall be replaced by ‘prohibition’.
2. Article 7 shall be repealed.
3. Article 7a shall be amended as follows:
 - (a) the first and second paragraphs shall be numbered and thus become paragraphs 1 and 2;
 - (b) in the new paragraph 1, the following references shall be deleted: ‘7b’, ‘70(1)’ and ‘and 100b’; before the citation of Article 100a, the comma shall be replaced by the word ‘and’;
 - (c) there shall be added a paragraph 3 with the wording of the second paragraph of Article 7b which reads as follows:

‘3. The Council, acting by a qualified majority on a proposal from the Commission, shall determine the guidelines and conditions necessary to ensure balanced progress in all the sectors concerned.’
4. Article 7b shall be repealed.
5. Article 8b shall be amended as follows:
 - (a) in paragraph 1 the words ‘to be adopted before 31 December 1994’ shall be replaced by ‘adopted’;
 - (b) in paragraph 2, first sentence, the reference to ‘Article 138(3)’ shall become ‘Article 138(4)’;
 - (c) in paragraph 2, second sentence, the words ‘to be adopted before 31 December 1993’ shall be replaced by ‘adopted’.
6. In Article 8c, second sentence, the words ‘Before 31 December 1993, Member States ...’ shall be replaced by ‘Member States ...’.
7. In Article 8e, first paragraph, the words ‘before 31 December 1993 and then,’ shall be deleted, as well as the comma after the words ‘every three years’.

8. In Article 9(2), the words ‘The provisions of Chapter 1, Section 1, and of Chapter 2 ...’ shall be replaced by ‘The provisions of Article 12 and of Chapter 2 ...’.
9. In Article 10, paragraph 2 shall be deleted and paragraph 1 shall remain without a number.
10. Article 11 shall be repealed.
11. In Chapter 1, The Customs Union, the heading ‘Section 1 — Elimination of customs duties between Member States’ shall be deleted.
12. Article 12 shall be replaced by the following:

‘Article 12

Customs duties on imports and exports and charges having equivalent effect shall be prohibited between Member States. This prohibition shall also apply to customs duties of a fiscal nature.’.
13. Articles 13 to 17 shall be repealed.
14. The heading ‘Section 2 — Setting up of the Common Customs Tariff’ shall be deleted.
15. Articles 18 to 27 shall be repealed.
16. Article 28 shall be replaced by the following:

‘Article 28

Common Customs Tariff duties shall be fixed by the Council acting by a qualified majority on a proposal from the Commission.’.
17. In the introductory part of Article 29, the words ‘this Section’ shall be replaced by ‘this Chapter’.
18. In the title of Chapter 2, the word ‘Elimination’ shall be replaced by ‘Prohibition’.
19. In Article 30, the words ‘shall, without prejudice to the following provisions, be prohibited ...’ shall be replaced by ‘shall be prohibited ...’.
20. Articles 31, 32 and 33 shall be repealed.
21. In Article 34, paragraph 2 shall be deleted and paragraph 1 shall remain without a number.
22. Article 35 shall be repealed.
23. In Article 36, the words ‘The provisions of Articles 30 to 34’ shall be replaced by ‘The provisions of Articles 30 and 34’.

24. Article 37 shall be amended as follows:

- (a) in paragraph 1, first subparagraph, the word ‘progressively’ and the words ‘when the transitional period has ended’ shall be deleted;
- (b) in paragraph 2, the word ‘abolition’ shall be replaced by ‘prohibition’;
- (c) paragraphs 3, 5 and 6 shall be deleted and paragraph 4 shall become paragraph 3;
- (d) in the new paragraph 3, the words ‘account being taken of the adjustments that will be possible and the specialization that will be needed with the passage of time.’ shall be deleted and the comma after ‘concerned’ shall become a full stop.

25. Article 38 shall be amended as follows:

- (a) in paragraph 3, first sentence, the reference to Annex II shall be replaced by a reference to Annex I and the second sentence, beginning with the words ‘Within two years of the entry into force . . .’ shall be deleted;
- (b) in paragraph 4, the words ‘among the Member States.’ shall be deleted.

26. Article 40 shall be amended as follows:

- (a) paragraph 1 shall be deleted and paragraphs 2, 3 and 4 shall become paragraphs 1, 2 and 3;
- (b) (does not concern the English language version);
- (c) in new paragraph 2, the reference to ‘paragraph 2’ shall become ‘paragraph 1’;
- (d) in new paragraph 3, the reference to ‘paragraph 2’ shall become ‘paragraph 1’;

27. Article 43 shall be amended as follows:

- (a) in paragraph 2, third subparagraph, the words ‘acting unanimously during the first two stages and by a qualified majority thereafter’ shall be replaced by ‘acting by a qualified majority’;
- (b) in paragraphs 2 and 3, the reference to ‘Article 40(2)’ shall become ‘Article 40(1)’.

28. Articles 44 and 45 and Article 47 shall be repealed.

29. In Article 48(1), the words ‘by the end of the transitional period at the latest’ shall be deleted.

30. Article 49 shall be amended as follows:

- (a) in the introductory part, the words ‘As soon as this Treaty enters into force, the Council . . .’ shall be replaced by ‘The Council . . .’ and the words ‘by progressive stages’ together with the commas preceding and following those words shall be deleted;
- (b) in points (b) and (c) respectively, the words ‘systematically and progressively’ shall be deleted.

31. The first paragraph of Article 52 shall be amended as follows:
 - (a) in the first sentence, the words 'abolished by progressive stages in the course of the transitional period' shall be replaced by the word 'prohibited';
 - (b) in the second sentence, the words 'progressive abolition' shall be replaced by the word 'prohibition'.
32. Article 53 shall be repealed.
33. Article 54 shall be amended as follows:
 - (a) paragraph 1 shall be deleted and paragraphs 2 and 3 shall become paragraphs 1 and 2;
 - (b) in new paragraph 1, the words 'implement this general programme or, in the absence of such a programme, in order to achieve a stage in attaining' shall be replaced by 'attain'.
34. In Article 59, first paragraph, the words 'progressively abolished during the transitional period' shall be replaced by 'prohibited'.
35. In Article 61(2), the word 'progressive' shall be deleted.
36. Article 62 shall be repealed.
37. Article 63 shall be amended as follows:
 - (a) paragraph 1 shall be deleted and paragraphs 2 and 3 shall become paragraphs 1 and 2;
 - (b) in new paragraph 1, the words 'implement this general programme or, in the absence of such a programme, in order to achieve a stage in' shall be replaced by the word 'achieve' and the words 'unanimously until the end of the first stage and by a qualified majority thereafter' shall be replaced by the words 'by a qualified majority';
 - (c) in new paragraph 2, the words 'As regards the proposals and decisions referred to in paragraphs 1 and 2' shall be replaced by 'As regards the directives referred to in paragraph 1'.
38. In Article 64, first paragraph, 'Article 63(2)' shall be replaced by 'Article 63(1)'.
39. Articles 67 to 73a, Article 73e and Article 73h shall be repealed.
40. Article 75(2) shall be deleted and paragraph 3 shall become paragraph 2.
41. In Article 76, the words 'when this Treaty enters into force' shall be replaced by 'on 1 January 1958 or, for acceding States, the date of their accession'.

42. Article 79 shall be amended as follows:

- (a) in paragraph 1 the words ‘at the latest, before the end of the second stage’ shall be deleted;
- (b) in paragraph 3, the words ‘Within two years of the entry into force of this Treaty, the Council shall’ shall be replaced by ‘The Council shall’.

43. In Article 80(1), the words ‘as from the beginning of the second stage’ shall be deleted.

44. In Article 83, the words ‘without prejudice to the powers of the transport section of the Economic and Social Committee.’ shall be replaced by ‘without prejudice to the powers of the Economic and Social Committee.’

45. In Article 84(2), second subparagraph, the words ‘procedural provisions of Article 75(1) and (3)’ shall be replaced by ‘procedural provisions of Article 75’.

46. In Article 87, the two subparagraphs of paragraph 1 shall be merged into a single paragraph. This new paragraph shall read as follows:

‘1. The appropriate regulations or directives to give effect to the principles set out in Articles 85 and 86 shall be laid down by the Council, acting by a qualified majority on a proposal from the Commission and after consulting the European Parliament.’

47. In Article 89(1), the words ‘, as soon as it takes up its duties,’ shall be deleted.

48. After Article 90, the heading ‘Section 2 — Dumping’ shall be deleted.

49. Article 91 shall be repealed.

50. Before Article 92, the heading ‘Section 3’ shall be replaced by ‘Section 2’.

51. In Article 92(3)(c), the second sentence, beginning ‘However, the aids granted to ship-building . . .’ and ending ‘towards third countries;’ shall be deleted and the remaining part of point (c) shall end with a semicolon.

52. In Article 95, the third paragraph shall be deleted.

53. Article 97 and Article 100b shall be repealed.

54. In Article 101, second paragraph, the words ‘acting unanimously during the first stage and by a qualified majority thereafter’ shall be replaced by ‘acting by a qualified majority’.

55. In Article 109e(2)(a), first indent, the following words shall be deleted: ‘, without prejudice to Article 73e.’

56. Article 109f shall be amended as follows:

- (a) in paragraph 1, second subparagraph, the words ‘on a recommendation from, as the case may be, the Committee of Governors of the central banks of the Member States (hereinafter referred to as “Committee of Governors”) or the Council of the EMI’ shall be replaced by ‘on a recommendation from the Council of the EMI’;
- (b) in paragraph 1, the fourth subparagraph which states ‘The Committee of Governors shall be dissolved at the start of the second stage.’ shall be deleted;
- (c) in paragraph 8, the second subparagraph which states ‘Where this Treaty provides for a consultative role for the EMI, references to the EMI shall be read, before 1 January 1994, as referring to the Committee of Governors.’ shall be deleted.

57. Article 112 shall be amended as follows:

- (a) in paragraph 1, first subparagraph, the words ‘before the end of the transitional period’ shall be deleted;
- (b) in paragraph 1, second subparagraph, the words ‘acting unanimously until the end of the second stage and by a qualified majority thereafter’ shall be replaced by ‘acting by a qualified majority’.

58. In Article 129c(1), first subparagraph, third indent, the words ‘Cohesion Fund to be set up no later than 31 December 1993’ shall be replaced by ‘Cohesion Fund set up’.

59. In Article 130d, second paragraph, the words ‘The Council, acting in accordance with the same procedure, shall before 31 December 1993 set up a Cohesion Fund to’ shall be replaced by ‘A Cohesion Fund set up by the Council in accordance with the same procedure shall’.

60. In Article 130s, paragraph 5, second indent, the words ‘Cohesion Fund to be set up no later than 31 December 1993 pursuant to Article 130d’ shall be replaced by ‘Cohesion Fund set up pursuant to Article 130d.’

61. In Article 130w, paragraph 3, the words ‘ACP-EEC Convention’ shall be replaced by ‘ACP-EC Convention’.

62. In Article 131, first paragraph, the words ‘Belgium’ and ‘Italy’ shall be deleted and the reference to Annex IV shall be replaced by a reference to Annex II.

63. Article 133 shall be amended as follows:

- (a) in paragraph 1, the words ‘completely abolished’ shall be replaced by the word ‘prohibited’ and the words ‘progressive abolition’ shall be replaced by the word ‘prohibition’;

- (b) in paragraph 2, the words ‘progressively abolished’ shall be replaced by the word ‘prohibited’ and the references to Articles 13, 14, 15 and 17 shall be deleted with the result that the paragraph ends with the words ‘... in accordance with the provisions of Article 12.’;
- (c) in paragraph 3, second subparagraph, the words ‘shall nevertheless be progressively reduced to’ shall be replaced by ‘may not exceed’ and the second sentence beginning ‘The percentages and the timetable ...’ and ending with ‘importing country or territory.’ shall be deleted;
- (d) in paragraph 4, the words ‘when this Treaty enters into force’ shall be deleted.

64. Article 136 shall be replaced by the following:

‘Article 136

The Council, acting unanimously, shall, on the basis of the experience acquired under the association of the countries and territories with the Community and of the principles set out in this Treaty, lay down provisions as regards the detailed rules and the procedure for the association of the countries and territories with the Community.’.

65. Article 138 shall be amended as follows, to include Article 1, Article 2 as amended by Article 5 of this Treaty, and Article 3(1) of the Act concerning the election of the representatives of the European Parliament by direct universal suffrage, annexed to the Council Decision of 20 September 1976; Annex II of that Act shall continue to be applied:

- (a) in the place of paragraphs 1 and 2, which lapsed in accordance with Article 14 of the Act concerning the election of the representatives of the European Parliament, there shall be inserted the text of Articles 1 and 2 of the said Act as paragraphs 1 and 2; the new paragraphs 1 and 2 shall read as follows:

‘1. The representatives in the European Parliament of the peoples of the States brought together in the Community shall be elected by direct universal suffrage.

2. The number of representatives elected in each Member State shall be as follows:

| | |
|----------------|-----|
| Belgium | 25 |
| Denmark | 16 |
| Germany | 99 |
| Greece | 25 |
| Spain | 64 |
| France | 87 |
| Ireland | 15 |
| Italy | 87 |
| Luxembourg | 6 |
| Netherlands | 31 |
| Austria | 21 |
| Portugal | 25 |
| Finland | 16 |
| Sweden | 22 |
| United Kingdom | 87. |

In the event of amendments to this paragraph, the number of representatives elected in each Member State must ensure appropriate representation of the peoples of the States brought together in the Community.’;

(b) after the new paragraphs 1 and 2, there shall be inserted the text of Article 3(1) of the aforesaid Act as paragraph 3; the new paragraph 3 shall read as follows:

‘3. Representatives shall be elected for a term of five years.’;

(c) the existing paragraph 3 as amended by Article 2 of this Treaty shall become paragraph 4;

(d) paragraph 4 as added by Article 2 of this Treaty shall become paragraph 5.

66. Article 158(3) shall be deleted.

67. In Article 166, first paragraph, the words ‘as from the date of accession’ shall be replaced by ‘as from 1 January 1995’.

68. In Article 188b(3), the second subparagraph, commencing ‘However, when the first appointments ...’ shall be deleted.

69. In Article 197, the second paragraph, commencing ‘In particular, it shall ...’ shall be deleted.

70. In Article 207, the second, third, fourth and fifth paragraphs shall be deleted.

71. In the place of Article 212 there shall be inserted the text of Article 24(1), second subparagraph, of the Treaty establishing a Single Council and a Single Commission of the European Communities; the new Article 212 shall accordingly read as follows:

‘Article 212

The Council shall, acting by a qualified majority on a proposal from the Commission and after consulting the other institutions concerned, lay down the Staff Regulations of officials of the European Communities and the Conditions of Employment of other servants of those Communities.’.

72. In the place of Article 218 there shall be inserted the adapted text of Article 28, first paragraph, of the Treaty establishing a Single Council and a Single Commission of the European Communities; the new Article 218 shall accordingly read as follows:

‘Article 218

The Community shall enjoy in the territories of the Member States such privileges and immunities as are necessary for the performance of its tasks, under the conditions laid down in the Protocol of 8 April 1965 on the privileges and immunities of the European Communities. The same shall apply to the European Central Bank, the European Monetary Institute, and the European Investment Bank.’.

73. In Article 221 the words ‘Within three years of the entry into force of this Treaty, Member States shall accord ...’ shall be replaced by ‘Member States shall accord ...’.

74. In Article 223, paragraphs 2 and 3 shall be merged and replaced by the following:

‘2. The Council may, acting unanimously on a proposal from the Commission, make changes to the list, which it drew up on 15 April 1958, of the products to which the provisions of paragraph 1(b) apply.’.

75. Article 226 shall be repealed.

76. Article 227 shall be amended as follows:

(a) in paragraph 3, the reference to Annex IV shall be replaced by a reference to Annex II;

(b) after paragraph 4, a new paragraph shall be inserted as follows:

‘5. The provisions of this Treaty shall apply to the Åland Islands in accordance with the provisions set out in Protocol No 2 to the Act concerning the conditions of accession of the Republic of Austria, the Republic of Finland and the Kingdom of Sweden.’;

(c) the former paragraph 5 shall become paragraph 6 and point (d) thereof, concerning the Åland Islands shall be deleted; point (c) shall end with a full stop.

77. In Article 229, first paragraph, the words ‘organs of the United Nations, of its specialised agencies and of the General Agreement on Tariffs and Trade.’ shall be replaced by ‘organs of the United Nations and of its specialised agencies.’

78. In Article 234, first paragraph, the words ‘before the entry into force of this Treaty’ shall be replaced by ‘before 1 January 1958 or, for acceding States, before the date of their accession’.

79. The heading preceding Article 241 entitled ‘Setting up of the institutions’ shall be deleted.

80. Articles 241 to 246 shall be repealed.

81. In Article 248 a new paragraph shall be added as follows:

‘Pursuant to the Accession Treaties, the Danish, English, Finnish, Greek, Irish, Portuguese, Spanish and Swedish versions of this Treaty shall also be authentic.’.

II. ANNEXES

1. Annex I ‘Lists A to G referred to in Articles 19 and 20 of the Treaty’ shall be deleted.

2. Annex II ‘List referred to in Article 38 of the Treaty’ shall become Annex I and the reference to ‘Annex II to the Treaty’ under numbers ex 22.08 and ex 22.09 shall become a reference to ‘Annex I to the Treaty’.

3. Annex III ‘List of invisible transactions referred to in Article 73h of the Treaty’ shall be deleted.

4. Annex IV 'Overseas countries and territories to which the provisions of Part IV of the Treaty apply' shall become Annex II. It is brought up to date and reads as follows:

'ANNEX II

OVERSEAS COUNTRIES AND TERRITORIES

to which the provisions of Part IV of the Treaty apply

- | | |
|--|---|
| <ul style="list-style-type: none"> — Greenland, — New Caledonia and Dependencies, — French Polynesia, — French Southern and Antarctic Territories, — Wallis and Futuna Islands, — Mayotte, — Saint Pierre and Miquelon, — Aruba, — Netherlands Antilles: <ul style="list-style-type: none"> — Bonaire, — Curaçao, — Saba, — Sint Eustatius, — Sint Maarten, | <ul style="list-style-type: none"> — Anguilla, — Cayman Islands, — Falkland Islands, — South Georgia and the South Sandwich Islands, — Montserrat, — Pitcairn, — Saint Helena and Dependencies, — British Antarctic Territory, — British Indian Ocean Territory, — Turks and Caicos Islands, — British Virgin Islands, — Bermuda.'. |
|--|---|

III. PROTOCOLS AND OTHER ACTS

1. The following protocols and acts shall be repealed:
 - (a) Protocol amending the Protocol on the privileges and immunities of the European Communities;
 - (b) Protocol on German internal trade and connected problems;
 - (c) Protocol on certain provisions relating to France;
 - (d) Protocol on the Grand Duchy of Luxembourg;
 - (e) Protocol on the treatment to be applied to products within the province of the European Coal and Steel Community in respect of Algeria and the overseas departments of the French Republic;
 - (f) Protocol on mineral oils and certain of their derivatives;

-
- (g) Protocol on the application of the Treaty establishing the European Community to the non-European parts of the Kingdom of the Netherlands;
- (h) Implementing Convention on the Association of the Overseas Countries and Territories with the Community;
- Protocol on the tariff quota for imports of bananas (ex 08.01 of the Brussels Nomenclature);
 - Protocol on the tariff quota for imports of raw coffee (ex 09.01 of the Brussels Nomenclature).
2. At the end of the Protocol on the Statute of the European Investment Bank, the list of signatories shall be deleted.
3. Protocol on the Statute of the Court of Justice of the European Community shall be amended as follows:
- (a) the words ‘HAVE DESIGNATED as their plenipotentiaries for this purpose:’ and the list of Heads of State and their plenipotentiaries shall be deleted;
 - (b) the words ‘WHO, having exchanged their full powers, found in good and due form,’ shall be deleted;
 - (c) in Article 3, the adapted text of Article 21 of the Protocol on the privileges and immunities of the European Communities shall be added as a fourth paragraph; this new fourth paragraph shall accordingly read as follows:

‘Articles 12 to 15 and 18 of the Protocol on the privileges and immunities of the European Communities shall apply to the Judges, Advocates-General, Registrar and Assistant Rapporteurs of the Court of Justice, without prejudice to the provisions relating to immunity from legal proceedings of Judges which are set out in the preceding paragraphs.’;
 - (d) Article 57 shall be repealed;
 - (e) the concluding formula ‘IN WITNESS WHEREOF, the undersigned Plenipotentiaries have signed this Protocol.’ shall be deleted;
 - (f) the list of signatories shall be deleted.
4. In Article 40 of the Protocol on the Statute of the European System of Central Banks and of the European Central Bank, the words ‘annexed to the Treaty establishing a Single Council and a Single Commission of the European Communities’ shall be deleted.
5. In Article 21 of the Protocol on the Statute of the European Monetary Institute, the words ‘annexed to the Treaty establishing a Single Council and a Single Commission of the European Communities’ shall be deleted.
6. The Protocol on Italy shall be amended as follows:
- (a) in the last paragraph commencing ‘RECOGNISE that in the event . . .’, the reference to Articles 108 and 109 shall be replaced by a reference to Articles 109h and 109i;

- (b) the list of signatories shall be deleted.
7. The Protocol on goods originating in and coming from certain countries and enjoying special treatment when imported into a Member State shall be amended as follows:
- (a) in the introductory part of point 1:
- the words ‘applicable, at the time of the entry into force of this Treaty’ shall be replaced by ‘applicable on 1 January 1958.’;
 - after the words ‘to imports’, the text of point (a) shall follow on immediately; the text resulting therefrom shall read as follows:
‘... to imports into the Benelux countries of goods originating in and coming from Suriname or the Netherlands Antilles.’;
- (b) in point 1, points (a), (b) and (c) shall be deleted;
- (c) in point 3, the words ‘Before the end of the first year after the entry into force of this Treaty, Member States ...’ shall be replaced by ‘Member States’;
- (d) the list of signatories shall be deleted.
8. The Protocol concerning imports into the European Community of petroleum products refined in the Netherlands Antilles shall be amended as follows:
- (a) the concluding formula ‘IN WITNESS WHEREOF the undersigned Plenipotentiaries have placed their signatures below this Protocol.’ shall be deleted;
- (b) the list of signatories shall be deleted.
9. In the Protocol on special arrangements for Greenland, Article 3 shall be repealed.

Article 7

The Treaty establishing the European Coal and Steel Community, including the annexes, protocols and other acts annexed thereto, shall be amended in accordance with the provisions of this Article for the purpose of deleting lapsed provisions of the Treaty and adapting in consequence the text of certain of its provisions.

I. TEXT OF THE ARTICLES OF THE TREATY

1. In Article 2, second paragraph, the word ‘progressively’ shall be deleted.
2. In Article 4, in the introductory part, the words ‘abolished and’ shall be deleted.
3. Article 7 shall be amended as follows:
 - (a) in the first indent, the words ‘a HIGH AUTHORITY (hereinafter referred to as “the Commission”)’ shall be replaced by ‘a COMMISSION’;

- (b) in the second indent, the words ‘a COMMON ASSEMBLY (hereinafter referred to as “the European Parliament”)’ shall be replaced by ‘a EUROPEAN PARLIAMENT’;
- (c) in the third indent, the words ‘a SPECIAL COUNCIL OF MINISTERS (hereinafter referred to as “the Council”)’ shall be replaced by ‘a COUNCIL’;

4. Article 10(3) shall be deleted.

5. In Article 16, the first and second paragraphs shall be deleted.

6. Article 21 shall be amended as follows, to include Article 1, Article 2 as amended by Article 5 of this Treaty, and Article 3(1) of the Act concerning the election of the representatives of the European Parliament by direct universal suffrage, annexed to the Council Decision of 20 September 1976; Annex II of that Act shall continue to be applied:

- (a) in the place of paragraphs 1 and 2, which lapsed in accordance with Article 14 of the Act concerning the election of the representatives of the European Parliament, there shall be inserted the text of Articles 1 and 2 of the said Act as paragraphs 1 and 2; the new paragraphs 1 and 2 shall read as follows:

‘1. The representatives in the European Parliament of the peoples of the States brought together in the Community shall be elected by direct universal suffrage.

2. The number of representatives elected in each Member State shall be as follows:

| | |
|----------------|-----|
| Belgium | 25 |
| Denmark | 16 |
| Germany | 99 |
| Greece | 25 |
| Spain | 64 |
| France | 87 |
| Ireland | 15 |
| Italy | 87 |
| Luxembourg | 6 |
| Netherlands | 31 |
| Austria | 21 |
| Portugal | 25 |
| Finland | 16 |
| Sweden | 22 |
| United Kingdom | 87. |

In the event of amendments to this paragraph, the number of representatives elected in each Member State must ensure appropriate representation of the peoples of the States brought together in the Community.’;

(b) after the new paragraphs 1 and 2, there shall be inserted the text of Article 3(1) of the aforesaid Act as paragraph 3; the new paragraph 3 shall read as follows:

‘3. Representatives shall be elected for a term of five years.’;

(c) the existing paragraph 3 as amended by Article 3 of this Treaty shall become paragraph 4;

(d) paragraph 4 as added by Article 3 of this Treaty shall become paragraph 5.

7. In Article 32a, first paragraph, the words ‘the date of accession’ shall be replaced by ‘1 January 1995’.

8. In Article 45b(3), the second subparagraph commencing ‘However, when the first appointments ...’ shall be deleted.

9. In Article 50, the adapted text of paragraphs 2 and 3 of Article 20 of the Treaty establishing a Single Council and a Single Commission of the European Communities shall be inserted as new paragraphs 4 and 5; the new paragraphs 4 and 5 shall accordingly read as follows:

‘4. The portion of the expenditure of the budget of the Communities covered by the levies provided for in Article 49 shall be fixed at 18 million units of account.

The Commission shall submit annually to the Council a report on the basis of which the Council shall examine whether there is reason to adjust this figure to changes in the budget of the Communities. The Council shall act by the majority laid down in the first sentence of the fourth paragraph of Article 28. The adjustment shall be made on the basis of an assessment of developments in expenditure arising from the application of this Treaty.

5. The portion of the levies assigned to cover expenditure under the budget of the Communities shall be allocated by the Commission for the implementation of that budget in accordance with the timetable provided for in the financial regulations adopted pursuant to Article 209(b) of the Treaty establishing the European Community and Article 183(b) of the Treaty establishing the Atomic Energy Community.’.

10. Article 52 shall be repealed.

11. In the place of Article 76 there shall be inserted the adapted text of Article 28, first paragraph, of the Treaty establishing a Single Council and a Single Commission of the European Communities; the new Article 76 shall accordingly read as follows:

‘Article 76

The Community shall enjoy in the territories of the Member States such privileges and immunities as are necessary for the performance of its tasks, under the conditions laid down in the Protocol of 8 April 1965 on the privileges and immunities of the European Communities.’.

12. Article 79 shall be amended as follows:

(a) in the second sentence of the first paragraph, the part of the sentence which commences ‘as regards the Saar ...’ shall be deleted and the semicolon shall be replaced by a full stop;

(b) after the first paragraph, a second paragraph shall be inserted as follows:

‘The provisions of this Treaty shall apply to the Åland Islands in accordance with the provisions of Protocol No 2 of the Act concerning the conditions of accession of the Republic of Austria, the Republic of Finland and the Kingdom of Sweden.’;

(c) in the existing second paragraph, in the introductory part, the words ‘Notwithstanding the preceding paragraph:’ shall be replaced by ‘Notwithstanding the preceding paragraphs:’;

(d) in the existing second paragraph, point (d) concerning the Åland Islands shall be deleted.

13. In Article 84, the words ‘Treaty and its Annexes, of the Protocols annexed thereto and of the Convention on the transitional Provisions.’ shall be replaced by ‘Treaty and its Annexes and of the Protocols annexed thereto.’

14. Article 85 shall be repealed.

15. In Article 93, the words ‘Organisation for European Economic Cooperation’ shall be replaced by ‘Organisation for Economic Cooperation and Development’.

16. In Article 95, third paragraph, the words ‘If, after the end of the transitional period provided in the Convention on the Transitional Provisions, unforeseen difficulties ...’ shall be replaced by ‘If unforeseen difficulties ...’.

17. In Article 97, the wording ‘This Treaty is concluded for a period of 50 years from its entry into force.’ shall be replaced by ‘This Treaty shall expire on 23 July 2002.’.

II. TEXT OF ANNEX III ‘Special steels’

At the end of Annex III, the initials of the plenipotentiaries of the Heads of State and Government shall be deleted.

III. PROTOCOLS AND OTHER ACTS ANNEXED TO THE TREATY

1. The following acts shall be repealed:

(a) Exchange of letters between the Government of the Federal Republic of Germany and the Government of the French Republic concerning the Saar;

(b) Convention on the Transitional Provisions.

2. The Protocol on the Statute of the Court of Justice of the European Coal and Steel Community shall be amended as follows:

(a) Titles I and II of the Protocol shall be replaced by the text of Titles I and II of the Protocol on the Statute of the Court of Justice of the European Community annexed to the Treaty establishing the European Community;

- (b) Article 56 shall be repealed and the heading 'Transitional provision' which precedes it shall be deleted;
 - (c) the list of signatories shall be deleted.
3. The Protocol on relations with the Council of Europe shall be amended as follows:
- (a) Article 1 shall be repealed;
 - (b) the list of signatories shall be deleted.

Article 8

The Treaty establishing the European Atomic Energy Community, including the annexes and protocols thereto, shall be amended in accordance with the provisions of this Article for the purpose of deleting lapsed provisions of the Treaty and adapting in consequence the text of certain of its provisions.

I. TEXT OF THE ARTICLES OF THE TREATY

1. In Article 76, second paragraph, the words 'after the entry into force of this Treaty' shall be replaced by 'after 1 January 1958'.
2. In the introductory part to the first paragraph of Article 93, the words 'Member States shall abolish between themselves, one year after the entry into force of this Treaty, all customs duties ...' shall be replaced by 'Member States shall prohibit between themselves all customs duties ...'.
3. Articles 94 and 95 shall be repealed.
4. In Article 98, second paragraph, the words 'Within two years of the entry into force of this Treaty, the Council ...' shall be replaced by 'The Council ...'.
5. Article 100 shall be repealed.
6. Article 104 shall be amended as follows:
 - (a) in the first paragraph, the words 'after the entry into force of this Treaty' shall be replaced by 'after 1 January 1958 or, for acceding States, after the date of their accession,';
 - (b) in the second paragraph the words 'after the entry into force of this Treaty, within the purview thereof' shall be replaced by 'after the dates referred to in the first paragraph, within the scope of this Treaty'.

7. Article 105 shall be amended as follows:

- (a) in the first paragraph, the words ‘concluded before its entry into force by a Member State’ shall be replaced by ‘concluded before 1 January 1958 or, for acceding States, before the date of their accession, by a Member State’. At the end of that paragraph the words ‘the entry into force of this Treaty’ shall be replaced by ‘the aforesaid dates’;
- (b) in the second paragraph, the words ‘concluded between the signature and the entry into force of this Treaty’ shall be replaced by ‘concluded between 25 March 1957 and 1 January 1958 or, for acceding States, between the signature of the instrument of accession and the date of their accession’.

8. In Article 106, first paragraph, the words ‘before the entry into force of this Treaty’ shall be replaced by ‘before 1 January 1958 or, for acceding States, before the date of their accession’.

9. Article 108 shall be amended as follows, to include Article 1, Article 2 as amended by Article 5 of this Treaty, and Article 3(1) of the Act concerning the election of the representatives of the European Parliament by direct universal suffrage, annexed to the Council Decision of 20 September 1976; Annex II of that Act shall continue to be applied:

- (a) in the place of paragraphs 1 and 2, which lapsed in accordance with Article 14 of the Act concerning the election of the representatives of the European Parliament, there shall be inserted the text of Articles 1 and 2 of the said Act as paragraphs 1 and 2; the new paragraphs 1 and 2 shall read as follows:

‘1. The representatives in the European Parliament of the peoples of the States brought together in the Community shall be elected by direct universal suffrage.

2. The number of representatives elected in each Member State shall be as follows:

| | |
|----------------|-----|
| Belgium | 25 |
| Denmark | 16 |
| Germany | 99 |
| Greece | 25 |
| Spain | 64 |
| France | 87 |
| Ireland | 15 |
| Italy | 87 |
| Luxembourg | 6 |
| Netherlands | 31 |
| Austria | 21 |
| Portugal | 25 |
| Finland | 16 |
| Sweden | 22 |
| United Kingdom | 87. |

In the event of amendments to this paragraph, the number of representatives elected in each Member State must ensure appropriate representation of the peoples of the States brought together in the Community.’;

(b) after the new paragraphs 1 and 2, there shall be inserted the text of Article 3(1) of the aforesaid Act as paragraph 3; the new paragraph 3 shall read as follows:

‘3. Representatives shall be elected for a term of five years.’;

(c) the existing paragraph 3 as amended by Article 4 of this Treaty shall become paragraph 4;

(d) paragraph 4 as added by Article 4 of this Treaty shall become paragraph 5.

10. In Article 127, paragraph 3 shall be deleted.

11. In Article 138, first paragraph, the words ‘the date of accession’ shall be replaced by ‘1 January 1995’.

12. In Article 160b(3), the second subparagraph commencing ‘However, when the first appointments ...’ shall be deleted.

13. In Article 181, the second, third and fourth paragraphs shall be deleted.

14. In the place of Article 191 there shall be inserted the adapted text of Article 28, first paragraph, of the Treaty establishing a Single Council and a Single Commission of the European Communities; the new Article 191 shall accordingly read as follows:

‘Article 191

The Community shall enjoy in the territories of the Member States such privileges and immunities as are necessary for the performance of its tasks, under the conditions laid down in the Protocol of 8 April 1965 on the privileges and immunities of the European Communities.’.

15. Article 198 shall be amended as follows:

(a) after the second paragraph there shall be inserted a third paragraph as follows:

‘The provisions of this Treaty shall apply to the Åland Islands in accordance with the provisions set out in Protocol No 2 to the Act concerning the conditions of accession of the Republic of Austria, the Republic of Finland and the Kingdom of Sweden.’;

(b) in the existing third paragraph, point (e) concerning the Åland Islands shall be deleted.

16. In Article 199, first paragraph, the words ‘and of the General Agreement on Tariffs and Trade’ shall be replaced by ‘and of the World Trade Organisation’.

17. Title VI, 'Provisions relating to the initial period', comprising Section 1, 'Setting up of the institutions', Section 2, 'Provisions for the initial application of this Treaty' and Section 3, 'Transitional provisions' and Articles 209 to 223, shall be repealed.
18. In Article 225 there shall be added a new paragraph as follows:

'Pursuant to the Accession treaties the Danish, English, Finnish, Greek, Irish, Portuguese, Spanish and Swedish versions of this Treaty shall also be authentic.'

II. ANNEXES

Annex V, 'Initial research and training programme referred to in Article 215 of this Treaty' including the table 'Breakdown by main headings ...' shall be deleted.

III. PROTOCOLS

1. The Protocol on the application of the Treaty establishing the European Atomic Energy Community to the non-European parts of the Kingdom of the Netherlands shall be repealed.
2. The Protocol on the Statute of the Court of Justice of the European Atomic Energy Community shall be amended as follows:
 - (a) the words 'HAVE DESIGNATED as their Plenipotentiaries for this Purpose:' and the list of Heads of State and their plenipotentiaries shall be deleted;
 - (b) the words 'WHO, having exchanged their full powers, found in good and due form,' shall be deleted;
 - (c) in Article 3, the adapted text of Article 21 of the Protocol on the privileges and immunities of the European Communities shall be added as a fourth paragraph; this new fourth paragraph shall accordingly read as follows:

'Articles 12 to 15 and 18 of the Protocol on the privileges and immunities of the European Community shall apply to the Judges, Advocates-General, Registrar and Assistant Rapporteurs of the Court of Justice, without prejudice to the provisions relating to immunity from legal proceedings of Judges which are set out in the preceding paragraphs.'
 - (d) Article 58 shall be repealed;
 - (e) the concluding formula 'IN WITNESS WHEREOF, the undersigned Plenipotentiaries have signed this Protocol.' shall be deleted;
 - (f) the list of signatories shall be deleted.

Article 9

1. Without prejudice to the paragraphs following hereinafter, which have as their purpose to retain the essential elements of their provisions, the Convention of 25 March 1957 on

certain institutions common to the European Communities and the Treaty of 8 April 1965 establishing a Single Council and a Single Commission of the European Communities, but with the exception of the Protocol referred to in paragraph 5, shall be repealed.

2. The powers conferred on the European Parliament, the Council, the Commission, the Court of Justice and the Court of Auditors by the Treaty establishing the European Community, the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community shall be exercised by the single institutions under the conditions laid down respectively by the said Treaties and this Article.

The functions conferred on the Economic and Social Committee by the Treaty establishing the European Community and the Treaty establishing the European Atomic Energy Community shall be exercised by a single committee under the conditions laid down respectively by the said Treaties. The provisions of Articles 193 and 197 of the Treaty establishing the European Community shall apply to that Committee.

3. The officials and other staff of the European Communities shall form part of the single administration of those Communities and shall be governed by the provisions adopted pursuant to Article 212 of the Treaty establishing the European Community.

4. The European Communities shall enjoy in the territories of the Member States such privileges and immunities as are necessary for the performance of their tasks under the conditions set out in the Protocol referred to in paragraph 5. The position shall be the same as regards the European Central Bank, the European Monetary Institute and the European Investment Bank.

5. In the Protocol of 8 April 1965 on the privileges and immunities of the European Communities there shall be inserted an Article 23, as laid down in Protocol amending the said Protocol; that Article reads as follows:

‘Article 23

This Protocol shall also apply to the European Central Bank, to the members of its organs and to its staff, without prejudice to the provisions of the Protocol on the Statute of the European System of Central Banks and the European Central Bank.

The European Central Bank shall, in addition, be exempt from any form of taxation or imposition of a like nature on the occasion of any increase in its capital and from the various formalities which may be connected therewith in the State where the Bank has its seat. The activities of the Bank and of its organs carried on in accordance with the Statute of the European System of Central Banks and of the European Central Bank shall not be subject to any turnover tax.

The above provisions shall also apply to the European Monetary Institute. Its dissolution or liquidation shall not give rise to any imposition.’

6. The revenue and expenditure of the European Community, the administrative expenditure of the European Coal and Steel Community and the revenue relating thereto and the revenue and expenditure of the European Atomic Energy Community, except for those of the Supply Agency and Joint Undertakings, shall be shown in the budget of the European Communities, under the conditions laid down respectively in the Treaties establishing the three Communities.

7. Without prejudice to the application of Article 216 of the Treaty establishing the European Community, Article 77 of the Treaty establishing the European Coal and Steel Community, Article 189 of the Treaty establishing the European Atomic Energy Community and the second paragraph of Article 1 of the Protocol on the Statute of the European Investment Bank, the representatives of the Governments of the Member States shall adopt by common accord the necessary provisions for the purpose of dealing with certain problems particular to the Grand Duchy of Luxembourg which arise from the creation of a Single Council and a Single Commission of the European Communities.

Article 10

1. The repeal or deletion in this Part of lapsed provisions of the Treaty establishing the European Community, the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community as in force before the entry into force of this Treaty of Amsterdam and the adaptation of certain of their provisions shall not bring about any change in the legal effects of the provisions of those Treaties, in particular the legal effects arising from the time limits laid down by the said Treaties, nor of Accession Treaties.

2. There shall be no change in the legal effects of the acts in force adopted on the basis of the said Treaties.

3. The position shall be the same as regards the repeal of the Convention of 25 March 1957 on certain institutions common to the European Communities and the repeal of the Treaty of 8 April 1965 establishing a Single Council and a Single Commission of the European Communities.

Article 11

The provisions of the Treaty establishing the European Community, the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community relating to the powers of the Court of Justice of the European Communities and to the exercise of those powers shall apply to the provisions of this Part and to the Protocol on privileges and immunities referred to in Article 9(5).

PART THREE

GENERAL AND FINAL PROVISIONS

Article 12

1. The articles, titles and sections of the Treaty on European Union and of the Treaty establishing the European Community, as amended by the provisions of this Treaty, shall be renumbered in accordance with the tables of equivalences set out in the Annex to this Treaty, which shall form an integral part thereof.

2. The cross references to articles, titles and sections in the Treaty on European Union and in the Treaty establishing the European Community, as well as between them, shall be adapted in consequence. The same shall apply as regards references to articles, titles and sections of those treaties contained in the other Community treaties.

3. The references to the articles, titles and sections of the Treaties referred to in paragraph 2 contained in other instruments or acts shall be understood as references to the articles, titles and sections of the Treaties as renumbered pursuant to paragraph 1 and, respectively, to the paragraphs of the said articles, as renumbered by certain provisions of Article 6.

4. References, contained in other instruments or acts, to paragraphs of articles of the Treaties referred to in Articles 7 and 8 shall be understood as referring to those paragraphs as renumbered by certain provisions of the said Articles 7 and 8.

Article 13

This Treaty is concluded for an unlimited period.

Article 14

1. This Treaty shall be ratified by the High Contracting Parties in accordance with their respective constitutional requirements. The instruments of ratification shall be deposited with the Government of the Italian Republic.

2. This Treaty shall enter into force on the first day of the second month following that in which the instrument of ratification is deposited by the last signatory State to fulfil that formality.

Article 15

This Treaty, drawn up in a single original in the Danish, Dutch, English, Finnish, French, German, Greek, Irish, Italian, Portuguese, Spanish and Swedish languages, the texts in each of these languages being equally authentic, shall be deposited in the archives of the Government of the Italian Republic, which will transmit a certified copy to each of the governments of the other signatory States.

(*) New Article introduced by the Treaty of Amsterdam.

PROTOCOLS

A. PROTOCOL ANNEXED TO THE TREATY ON EUROPEAN UNION

Protocol on Article J.7 of the Treaty on European Union

THE HIGH CONTRACTING PARTIES,

BEARING IN MIND the need to implement fully the provisions of Article J.7(1), second subparagraph, and (3) of the Treaty on European Union,

BEARING IN MIND that the policy of the Union in accordance with Article J.7 shall not prejudice the specific character of the security and defence policy of certain Member States and shall respect the obligations of certain Member States, which see their common defence realised in NATO, under the North Atlantic Treaty and be compatible with the common security and defence policy established within that framework,

HAVE AGREED UPON the following provision, which is annexed to the Treaty on European Union,

The European Union shall draw up, together with the Western European Union, arrangements for enhanced cooperation between them, within a year from the entry into force of the Treaty of Amsterdam.

B. PROTOCOLS ANNEXED TO THE TREATY ON EUROPEAN UNION AND TO THE
TREATY ESTABLISHING THE EUROPEAN COMMUNITY

Protocol integrating the Schengen *acquis* into the framework of the European Union

THE HIGH CONTRACTING PARTIES,

NOTING that the Agreements on the gradual abolition of checks at common borders signed by some Member States of the European Union in Schengen on 14 June 1985 and on 19 June 1990, as well as related agreements and the rules adopted on the basis of these agreements, are aimed at enhancing European integration and, in particular, at enabling the European Union to develop more rapidly into an area of freedom, security and justice,

DESIRING to incorporate the abovementioned agreements and rules into the framework of the European Union,

CONFIRMING that the provisions of the Schengen *acquis* are applicable only if and as far as they are compatible with the European Union and Community law,

TAKING INTO ACCOUNT the special position of Denmark,

TAKING INTO ACCOUNT the fact that Ireland and the United Kingdom of Great Britain and Northern Ireland are not parties to and have not signed the abovementioned agreements; that provision should, however, be made to allow those Member States to accept some or all of the provisions thereof,

RECOGNISING that, as a consequence, it is necessary to make use of the provisions of the Treaty on European Union and of the Treaty establishing the European Community concerning closer cooperation between some Member States and that those provisions should only be used as a last resort,

TAKING INTO ACCOUNT the need to maintain a special relationship with the Republic of Iceland and the Kingdom of Norway, both States having confirmed their intention to become bound by the provisions mentioned above, on the basis of the Agreement signed in Luxembourg on 19 December 1996,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty on European Union and to the Treaty establishing the European Community,

Article 1

The Kingdom of Belgium, the Kingdom of Denmark, the Federal Republic of Germany, the Hellenic Republic, the Kingdom of Spain, the French Republic, the Italian Republic, the Grand Duchy of Luxembourg, the Kingdom of the Netherlands, the Republic of Austria, the Portuguese Republic, the Republic of Finland and the Kingdom of Sweden, signatories to the Schengen agreements, are authorised to establish closer cooperation among themselves within the scope of those agreements and related provisions, as they are listed in the Annex to this Protocol, hereinafter referred to as the 'Schengen *acquis*'. This cooperation shall be conducted within the institutional and legal framework of the European Union and with respect for the relevant provisions of the Treaty on European Union and of the Treaty establishing the European Community.

Article 2

1. From the date of entry into force of the Treaty of Amsterdam, the Schengen *acquis*, including the decisions of the Executive Committee established by the Schengen agreements which have been adopted before this date, shall immediately apply to the thirteen Member States referred to in Article 1, without prejudice to the provisions of paragraph 2 of this Article. From the same date, the Council will substitute itself for the said Executive Committee.

The Council, acting by the unanimity of its Members referred to in Article 1, shall take any measure necessary for the implementation of this paragraph. The Council, acting unanimously, shall determine, in conformity with the relevant provisions of the Treaties, the legal basis for each of the provisions or decisions which constitute the Schengen *acquis*.

With regard to such provisions and decisions and in accordance with that determination, the Court of Justice of the European Communities shall exercise the powers conferred upon it by the relevant applicable provisions of the Treaties. In any event, the Court of Justice shall have no jurisdiction on measures or decisions relating to the maintenance of law and order and the safeguarding of internal security.

As long as the measures referred to above have not been taken and without prejudice to Article 5(2), the provisions or decisions which constitute the Schengen *acquis* shall be regarded as acts based on Title VI of the Treaty on European Union.

2. The provisions of paragraph 1 shall apply to the Member States which have signed accession protocols to the Schengen agreements, from the dates decided by the Council, acting with the unanimity of its Members mentioned in Article 1, unless the conditions for the accession of any of those States to the Schengen *acquis* are met before the date of the entry into force of the Treaty of Amsterdam.

Article 3

Following the determination referred to in Article 2(1), second subparagraph, Denmark shall maintain the same rights and obligations in relation to the other signatories to the Schengen agreements, as before the said determination with regard to those parts of the Schengen *acquis* that are determined to have a legal basis in Title IIIa of the Treaty establishing the European Community.

With regard to those parts of the Schengen *acquis* that are determined to have legal base in Title VI of the Treaty on European Union, Denmark shall continue to have the same rights and obligations as the other signatories to the Schengen agreements.

Article 4

Ireland and the United Kingdom of Great Britain and Northern Ireland, which are not bound by the Schengen *acquis*, may at any time request to take part in some or all of the provisions of this *acquis*.

The Council shall decide on the request with the unanimity of its members referred to in Article 1 and of the representative of the Government of the State concerned.

Article 5

1. Proposals and initiatives to build upon the Schengen *acquis* shall be subject to the relevant provisions of the Treaties.

In this context, where either Ireland or the United Kingdom or both have not notified the President of the Council in writing within a reasonable period that they wish to take part, the authorisation referred to in Article 5a of the Treaty establishing the European Community or Article K.12 of the Treaty on European Union shall be deemed to have been granted to the Members States referred to in Article 1 and to Ireland or the United Kingdom where either of them wishes to take part in the areas of cooperation in question.

2. The relevant provisions of the Treaties referred to in the first subparagraph of paragraph 1 shall apply even if the Council has not adopted the measures referred to in Article 2(1), second subparagraph.

Article 6

The Republic of Iceland and the Kingdom of Norway shall be associated with the implementation of the Schengen *acquis* and its further development on the basis of the Agreement signed in Luxembourg on 19 December 1996. Appropriate procedures shall be agreed to that effect in an Agreement to be concluded with those States by the Council, acting by the unanimity of its Members mentioned in Article 1. Such Agreement shall include provisions on the contribution of Iceland and Norway to any financial consequences resulting from the implementation of this Protocol.

A separate Agreement shall be concluded with Iceland and Norway by the Council, acting unanimously, for the establishment of rights and obligations between Ireland and the United Kingdom of Great Britain and Northern Ireland on the one hand, and Iceland and Norway on the other, in domains of the Schengen *acquis* which apply to these States.

Article 7

The Council shall, acting by a qualified majority, adopt the detailed arrangements for the integration of the Schengen Secretariat into the General Secretariat of the Council.

Article 8

For the purposes of the negotiations for the admission of new Member States into the European Union, the Schengen *acquis* and further measures taken by the institutions within its scope shall be regarded as an *acquis* which must be accepted in full by all States candidates for admission.

—

ANNEX

SCHENGEN ACQUIS

1. The Agreement, signed in Schengen on 14 June 1985, between the Governments of the States of the Benelux Economic Union, the Federal Republic of Germany and the French Republic on the gradual abolition of checks at their common borders.
2. The Convention, signed in Schengen on 19 June 1990, between the Kingdom of Belgium, the Federal Republic of Germany, the French Republic, the Grand Duchy of Luxembourg and the Kingdom of the Netherlands, implementing the Agreement on the gradual abolition of checks at their common borders, signed in Schengen on 14 June 1985, with related Final Act and common declarations.
3. The Accession Protocols and Agreements to the 1985 Agreement and the 1990 Implementation Convention with Italy (signed in Paris on 27 November 1990), Spain and Portugal (signed in Bonn on 25 June 1991), Greece (signed in Madrid on 6 November 1992), Austria (signed in Brussels on 28 April 1995) and Denmark, Finland and Sweden (signed in Luxembourg on 19 December 1996), with related Final Acts and declarations.
4. Decisions and declarations adopted by the Executive Committee established by the 1990 Implementation Convention, as well as acts adopted for the implementation of the Convention by the organs upon which the Executive Committee has conferred decision making powers.

—

Protocol on the application of certain aspects of Article 7a of the Treaty establishing the European Community to the United Kingdom and to Ireland

THE HIGH CONTRACTING PARTIES,

DESIRING to settle certain questions relating to the United Kingdom and Ireland,

HAVING REGARD to the existence for many years of special travel arrangements between the United Kingdom and Ireland,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty establishing the European Community and to the Treaty on European Union,

Article 1

The United Kingdom shall be entitled, notwithstanding Article 7a of the Treaty establishing the European Community, any other provision of that Treaty or of the Treaty on European Union, any measure adopted under those Treaties, or any international agreement concluded by the Community or by the Community and its Member States with one or more third States, to exercise at its frontiers with other Member States such controls on persons seeking to enter the United Kingdom as it may consider necessary for the purpose:

- (a) of verifying the right to enter the United Kingdom of citizens of States which are Contracting Parties to the Agreement on the European Economic Area and of their dependants exercising rights conferred by Community law, as well as citizens of other States on whom such rights have been conferred by an agreement by which the United Kingdom is bound; and
- (b) of determining whether or not to grant other persons permission to enter the United Kingdom.

Nothing in Article 7a of the Treaty establishing the European Community or in any other provision of that Treaty or of the Treaty on European Union or in any measure adopted under them shall prejudice the right of the United Kingdom to adopt or exercise any such controls. References to the United Kingdom in this Article shall include territories for whose external relations the United Kingdom is responsible.

Article 2

The United Kingdom and Ireland may continue to make arrangements between themselves relating to the movement of persons between their territories ('the Common Travel Area'), while fully respecting the rights of persons referred to in Article 1, first paragraph, point (a) of this Protocol. Accordingly, as long as they maintain such arrangements, the provisions of

Article 1 of this Protocol shall apply to Ireland under the same terms and conditions as for the United Kingdom. Nothing in Article 7a of the Treaty establishing the European Community, in any other provision of that Treaty or of the Treaty on European Union or in any measure adopted under them, shall affect any such arrangements.

Article 3

The other Member States shall be entitled to exercise at their frontiers or at any point of entry into their territory such controls on persons seeking to enter their territory from the United Kingdom or any territories whose external relations are under its responsibility for the same purposes stated in Article 1 of this Protocol, or from Ireland as long as the provisions of Article 1 of this Protocol apply to Ireland.

Nothing in Article 7a of the Treaty establishing the European Community or in any other provision of that Treaty or of the Treaty on European Union or in any measure adopted under them shall prejudice the right of the other Member States to adopt or exercise any such controls.

Protocol on the position of the United Kingdom and Ireland

THE HIGH CONTRACTING PARTIES,

DESIRING to settle certain questions relating to the United Kingdom and Ireland,

HAVING REGARD to the Protocol on the application of certain aspects of Article 7a of the Treaty establishing the European Community to the United Kingdom and to Ireland,

HAVE AGREED UPON the following provisions which shall be annexed to the Treaty establishing the European Community and to the Treaty on European Union,

Article 1

Subject to Article 3, the United Kingdom and Ireland shall not take part in the adoption by the Council of proposed measures pursuant to Title IIIa of the Treaty establishing the European Community. By way of derogation from Article 148(2) of the Treaty establishing the European Community, a qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in the said Article 148(2). The unanimity of the members of the Council, with the exception of the representatives of the governments of the United Kingdom and Ireland, shall be necessary for decisions of the Council which must be adopted unanimously.

Article 2

In consequence of Article 1 and subject to Articles 3, 4 and 6, none of the provisions of Title IIIa of the Treaty establishing the European Community, no measure adopted pursuant to that Title, no provision of any international agreement concluded by the Community pursuant to that Title, and no decision of the Court of Justice interpreting any such provision or measure shall be binding upon or applicable in the United Kingdom or Ireland; and no such provision, measure or decision shall in any way affect the competences, rights and obligations of those States; and no such provision, measure or decision shall in any way affect the *acquis communautaire* nor form part of Community law as they apply to the United Kingdom or Ireland.

Article 3

1. The United Kingdom or Ireland may notify the President of the Council in writing, within three months after a proposal or initiative has been presented to the Council pursuant to Title IIIa of the Treaty establishing the European Community, that it wishes to take part in the adoption and application of any such proposed measure, whereupon that State shall be entitled to do so. By way of derogation from Article 148(2) of the Treaty establishing the European Community, a qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in the said Article 148(2).

The unanimity of the members of the Council, with the exception of a member which has not made such a notification, shall be necessary for decisions of the Council which must be adopted unanimously. A measure adopted under this paragraph shall be binding upon all Member States which took part in its adoption.

2. If after a reasonable period of time a measure referred to in paragraph 1 cannot be adopted with the United Kingdom or Ireland taking part, the Council may adopt such measure in accordance with Article 1 without the participation of the United Kingdom or Ireland. In that case Article 2 applies.

Article 4

The United Kingdom or Ireland may at any time after the adoption of a measure by the Council pursuant to Title IIIa of the Treaty establishing the European Community notify its intention to the Council and to the Commission that it wishes to accept that measure. In that case, the procedure provided for in Article 5a(3) of the Treaty establishing the European Community shall apply *mutatis mutandis*.

Article 5

A Member State which is not bound by a measure adopted pursuant to Title IIIa of the Treaty establishing the European Community shall bear no financial consequences of that measure other than administrative costs entailed for the institutions.

Article 6

Where, in cases referred to in this Protocol, the United Kingdom or Ireland is bound by a measure adopted by the Council pursuant to Title IIIa of the Treaty establishing the European Community, the relevant provisions of that Treaty, including Article 73p, shall apply to that State in relation to that measure.

Article 7

Articles 3 and 4 shall be without prejudice to the Protocol integrating the Schengen *acquis* into the framework of the European Union.

Article 8

Ireland may notify the President of the Council in writing that it no longer wishes to be covered by the terms of this Protocol. In that case, the normal treaty provisions will apply to Ireland.

Protocol on the position of Denmark

THE HIGH CONTRACTING PARTIES,

RECALLING the Decision of the Heads of State or Government, meeting within the European Council at Edinburgh on 12 December 1992, concerning certain problems raised by Denmark on the Treaty on European Union,

HAVING NOTED the position of Denmark with regard to Citizenship, Economic and Monetary Union, Defence Policy and Justice and Home Affairs as laid down in the Edinburgh Decision,

BEARING IN MIND Article 3 of the Protocol integrating the Schengen *acquis* into the framework of the European Union,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty establishing the European Community and to the Treaty on European Union,

PART I

Article 1

Denmark shall not take part in the adoption by the Council of proposed measures pursuant to Title IIIa of the Treaty establishing the European Community. By way of derogation from Article 148(2) of the Treaty establishing the European Community, a qualified majority shall be defined as the same proportion of the weighted votes of the members of the Council concerned as laid down in the said Article 148(2). The unanimity of the members of the Council, with the exception of the representative of the government of Denmark, shall be necessary for the decisions of the Council which must be adopted unanimously.

Article 2

None of the provisions of Title IIIa of the Treaty establishing the European Community, no measure adopted pursuant to that Title, no provision of any international agreement concluded by the Community pursuant to that Title, and no decision of the Court of Justice interpreting any such provision or measure shall be binding upon or applicable in Denmark; and no such provision, measure or decision shall in any way affect the competences, rights and obligations of Denmark; and no such provision, measure or decision shall in any way affect the *acquis communautaire* nor form part of Community law as they apply to Denmark.

Article 3

Denmark shall bear no financial consequences of measures referred to in Article 1, other than administrative costs entailed for the institutions.

Article 4

Articles 1, 2 and 3 shall not apply to measures determining the third countries whose nationals must be in possession of a visa when crossing the external borders of the Member States, or measures relating to a uniform format for visas.

Article 5

1. Denmark shall decide within a period of 6 months after the Council has decided on a proposal or initiative to build upon the Schengen *acquis* under the provisions of Title IIIa of the Treaty establishing the European Community, whether it will implement this decision in its national law. If it decides to do so, this decision will create an obligation under international law between Denmark and the other Member States referred to in Article 1 of the Protocol integrating the Schengen *acquis* into the framework of the European Union as well as Ireland or the United Kingdom if those Member States take part in the areas of cooperation in question.

2. If Denmark decides not to implement a decision of the Council as referred to in paragraph 1, the Member States referred to in Article 1 of the Protocol integrating the Schengen *acquis* into the framework of the European Union will consider appropriate measures to be taken.

PART II*Article 6*

With regard to measures adopted by the Council in the field of Articles J.3(1) and J.7 of the Treaty on European Union, Denmark does not participate in the elaboration and the implementation of decisions and actions of the Union which have defence implications, but will not prevent the development of closer cooperation between Member States in this area. Therefore Denmark shall not participate in their adoption. Denmark shall not be obliged to contribute to the financing of operational expenditure arising from such measures.

PART III*Article 7*

At any time Denmark may, in accordance with its constitutional requirements, inform the other Member States that it no longer wishes to avail itself of all or part of this Protocol. In that event, Denmark will apply in full all relevant measures then in force taken within the framework of the European Union.

C. PROTOCOLS ANNEXED TO THE TREATY ESTABLISHING THE EUROPEAN COMMUNITY

Protocol on asylum for nationals of Member States of the European Union

THE HIGH CONTRACTING PARTIES,

WHEREAS pursuant to the provisions of Article F(2) of the Treaty on European Union the Union shall respect fundamental rights as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms signed in Rome on 4 November 1950;

WHEREAS the Court of Justice of the European Communities has jurisdiction to ensure that in the interpretation and application of Article F(2) of the Treaty on European Union the law is observed by the European Community;

WHEREAS pursuant to Article O of the Treaty on European Union any European State, when applying to become a Member of the Union, must respect the principles set out in Article F(1) of the Treaty on European Union;

BEARING IN MIND that Article 236 of the Treaty establishing the European Community establishes a mechanism for the suspension of certain rights in the event of a serious and persistent breach by a Member State of those principles;

RECALLING that each national of a Member State, as a citizen of the Union, enjoys a special status and protection which shall be guaranteed by the Member States in accordance with the provisions of Part Two of the Treaty establishing the European Community;

BEARING IN MIND that the Treaty establishing the European Community establishes an area without internal frontiers and grants every citizen of the Union the right to move and reside freely within the territory of the Member States;

RECALLING that the question of extradition of nationals of Member States of the Union is addressed in the European Convention on Extradition of 13 December 1957 and the Convention of 27 September 1996 drawn up on the basis of Article K.3 of the Treaty on European Union relating to extradition between the Member States of the European Union;

WISHING to prevent the institution of asylum being resorted to for purposes alien to those for which it is intended;

WHEREAS this Protocol respects the finality and the objectives of the Geneva Convention of 28 July 1951 relating to the status of refugees;

HAVE AGREED UPON the following provisions which shall be annexed to the Treaty establishing the European Community,

Sole Article

Given the level of protection of fundamental rights and freedoms by the Member States of the European Union, Member States shall be regarded as constituting safe countries of origin in respect of each other for all legal and practical purposes in relation to asylum matters. Accordingly, any application for asylum made by a national of a Member State may be taken into consideration or declared admissible for processing by another Member State only in the following cases:

- (a) if the Member State of which the applicant is a national proceeds after the entry into force of the Treaty of Amsterdam, availing itself of the provisions of Article 15 of the Convention for the Protection of Human Rights and Fundamental Freedoms, to take measures derogating in its territory from its obligations under that Convention;
 - (b) if the procedure referred to in Article F.1(1) of the Treaty on European Union has been initiated and until the Council takes a decision in respect thereof;
 - (c) if the Council, acting on the basis of Article F.1(1) of the Treaty on European Union, has determined, in respect of the Member State which the applicant is a national, the existence of a serious and persistent breach by that Member State of principles mentioned in Article F(1);
 - (d) if a Member State should so decide unilaterally in respect of the application of a national of another Member State; in that case the Council shall be immediately informed; the application shall be dealt with on the basis of the presumption that it is manifestly unfounded without affecting in any way, whatever the cases may be, the decision-making power of the Member State.
-

Protocol on the application of the principles of subsidiarity and proportionality

THE HIGH CONTRACTING PARTIES,

DETERMINED to establish the conditions for the application of the principles of subsidiarity and proportionality enshrined in Article 3b of the Treaty establishing the European Community with a view to defining more precisely the criteria for applying them and to ensure their strict observance and consistent implementation by all institutions;

WISHING to ensure that decisions are taken as closely as possible to the citizens of the Union;

TAKING ACCOUNT of the Interinstitutional Agreement of 25 October 1993 between the European Parliament, the Council and the Commission on procedures for implementing the principle of subsidiarity;

HAVE CONFIRMED that the conclusions of the Birmingham European Council on 16 October 1992 and the overall approach to the application of the subsidiarity principle agreed by the European Council meeting in Edinburgh on 11-12 December 1992 will continue to guide the action of the Union's institutions as well as the development of the application of the principle of subsidiarity, and, for this purpose,

HAVE AGREED UPON the following provisions which shall be annexed to the Treaty establishing the European Community:

- (1) In exercising the powers conferred on it, each institution shall ensure that the principle of subsidiarity is complied with. It shall also ensure compliance with the principle of proportionality, according to which any action by the Community shall not go beyond what is necessary to achieve the objectives of the Treaty.
- (2) The application of the principles of subsidiarity and proportionality shall respect the general provisions and the objectives of the Treaty, particularly as regards the maintaining in full of the *acquis communautaire* and the institutional balance; it shall not affect the principles developed by the Court of Justice regarding the relationship between national and Community law, and it should take into account Article F(4) of the Treaty on European Union, according to which 'the Union shall provide itself with the means necessary to attain its objectives and carry through its policies'.
- (3) The principle of subsidiarity does not call into question the powers conferred on the European Community by the Treaty, as interpreted by the Court of Justice. The criteria referred to in the second paragraph of Article 3b of the Treaty shall relate to areas for which the Community does not have exclusive competence. The principle of subsidiarity provides a guide as to how those powers are to be exercised at the Community level. Subsidiarity is a dynamic concept and should be applied in the light of the objectives set

out in the Treaty. It allows Community action within the limits of its powers to be expanded where circumstances so require, and conversely, to be restricted or discontinued where it is no longer justified.

- (4) For any proposed Community legislation, the reasons on which it is based shall be stated with a view to justifying its compliance with the principles of subsidiarity and proportionality; the reasons for concluding that a Community objective can be better achieved by the Community must be substantiated by qualitative or, wherever possible, quantitative indicators.
- (5) For Community action to be justified, both aspects of the subsidiarity principle shall be met: the objectives of the proposed action cannot be sufficiently achieved by Member States' action in the framework of their national constitutional system and can therefore be better achieved by action on the part of the Community.

The following guidelines should be used in examining whether the abovementioned condition is fulfilled:

- the issue under consideration has transnational aspects which cannot be satisfactorily regulated by action by Member States;
 - actions by Member States alone or lack of Community action would conflict with the requirements of the Treaty (such as the need to correct distortion of competition or avoid disguised restrictions on trade or strengthen economic and social cohesion) or would otherwise significantly damage Member States' interests;
 - action at Community level would produce clear benefits by reason of its scale or effects compared with action at the level of the Member States.
- (6) The form of Community action shall be as simple as possible, consistent with satisfactory achievement of the objective of the measure and the need for effective enforcement. The Community shall legislate only to the extent necessary. Other things being equal, directives should be preferred to regulations and framework directives to detailed measures. Directives as provided for in Article 189 of the Treaty, while binding upon each Member State to which they are addressed as to the result to be achieved, shall leave to the national authorities the choice of form and methods.
 - (7) Regarding the nature and the extent of Community action, Community measures should leave as much scope for national decision as possible, consistent with securing the aim of the measure and observing the requirements of the Treaty. While respecting Community law, care should be taken to respect well established national arrangements and the organisation and working of Member States' legal systems. Where appropriate and subject to the need for proper enforcement, Community measures should provide Member States with alternative ways to achieve the objectives of the measures.

-
- (8) Where the application of the principle of subsidiarity leads to no action being taken by the Community, Member States are required in their action to comply with the general rules laid down in Article 5 of the Treaty, by taking all appropriate measures to ensure fulfilment of their obligations under the Treaty and by abstaining from any measure which could jeopardise the attainment of the objectives of the Treaty.
- (9) Without prejudice to its right of initiative, the Commission should:
- except in cases of particular urgency or confidentiality, consult widely before proposing legislation and, wherever appropriate, publish consultation documents;
 - justify the relevance of its proposals with regard to the principle of subsidiarity; whenever necessary, the explanatory memorandum accompanying a proposal will give details in this respect. The financing of Community action in whole or in part from the Community budget shall require an explanation;
 - take duly into account the need for any burden, whether financial or administrative, falling upon the Community, national governments, local authorities, economic operators and citizens, to be minimised and proportionate to the objective to be achieved;
 - submit an annual report to the European Council, the European Parliament and the Council on the application of Article 3b of the Treaty. This annual report shall also be sent to the Committee of the Regions and to the Economic and Social Committee.
- (10) The European Council shall take account of the Commission report referred to in the fourth indent of point 9 within the report on the progress achieved by the Union which it is required to submit to the European Parliament in accordance with Article D of the Treaty on European Union.
- (11) While fully observing the procedures applicable, the European Parliament and the Council shall, as an integral part of the overall examination of Commission proposals, consider their consistency with Article 3b of the Treaty. This concerns the original Commission proposal as well as amendments which the European Parliament and the Council envisage making to the proposal.
- (12) In the course of the procedures referred to in Articles 189b and 189c of the Treaty, the European Parliament shall be informed of the Council's position on the application of Article 3b of the Treaty, by way of a statement of the reasons which led the Council to adopt its common position. The Council shall inform the European Parliament of the reasons on the basis of which all or part of a Commission proposal is deemed to be inconsistent with Article 3b of the Treaty.
- (13) Compliance with the principle of subsidiarity shall be reviewed in accordance with the rules laid down by the Treaty.
-

Protocol on external relations of the Member States with regard to the crossing of external borders

THE HIGH CONTRACTING PARTIES,

TAKING INTO ACCOUNT the need of the Member States to ensure effective controls at their external borders, in cooperation with third countries where appropriate,

HAVE AGREED UPON the following provision, which shall be annexed to the Treaty establishing the European Community,

The provisions on the measures on the crossing of external borders included in Article 73j(2)(a) of Title IIIa of the Treaty shall be without prejudice to the competence of Member States to negotiate or conclude agreements with third countries as long as they respect Community law and other relevant international agreements.

Protocol on the system of public broadcasting in the Member States

THE HIGH CONTRACTING PARTIES,

CONSIDERING that the system of public broadcasting in the Member States is directly related to the democratic, social and cultural needs of each society and to the need to preserve media pluralism,

HAVE AGREED UPON the following interpretative provisions, which shall be annexed to the Treaty establishing the European Community,

The provisions of the Treaty establishing the European Community shall be without prejudice to the competence of Member States to provide for the funding of public service broadcasting insofar as such funding is granted to broadcasting organisations for the fulfilment of the public service remit as conferred, defined and organised by each Member State, and insofar as such funding does not affect trading conditions and competition in the Community to an extent which would be contrary to the common interest, while the realisation of the remit of that public service shall be taken into account.

Protocol on protection and welfare of animals

THE HIGH CONTRACTING PARTIES,

DESIRING to ensure improved protection and respect for the welfare of animals as sentient beings,

HAVE AGREED UPON the following provision which shall be annexed to the Treaty establishing the European Community,

In formulating and implementing the Community's agriculture, transport, internal market and research policies, the Community and the Member States shall pay full regard to the welfare requirements of animals, while respecting the legislative or administrative provisions and customs of the Member States relating in particular to religious rites, cultural traditions and regional heritage.

D. PROTOCOLS ANNEXED TO THE TREATY ON EUROPEAN UNION AND THE TREATIES ESTABLISHING THE EUROPEAN COMMUNITY, THE EUROPEAN COAL AND STEEL COMMUNITY AND THE EUROPEAN ATOMIC ENERGY COMMUNITY

Protocol on the institutions with the prospect of enlargement of the European Union

THE HIGH CONTRACTING PARTIES,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty on European Union and to the Treaties establishing the European Communities,

Article 1

At the date of entry into force of the first enlargement of the Union, notwithstanding Article 157(1) of the Treaty establishing the European Community, Article 9(1) of the Treaty establishing the European Coal and Steel Community and Article 126(1) of the Treaty establishing the European Atomic Energy Community, the Commission shall comprise one national of each of the Member States, provided that, by that date, the weighting of the votes in the Council has been modified, whether by re-weighting of the votes or by dual majority, in a manner acceptable to all Member States, taking into account all relevant elements, notably compensating those Member States which give up the possibility of nominating a second member of the Commission.

Article 2

At least one year before the membership of the European Union exceeds twenty, a conference of representatives of the governments of the Member States shall be convened in order to carry out a comprehensive review of the provisions of the Treaties on the composition and functioning of the institutions.

**Protocol on the location of the seats of the institutions and of certain bodies and departments
of the European Communities and of Europol**

THE REPRESENTATIVES OF THE GOVERNMENTS OF THE MEMBER STATES,

HAVING REGARD to Article 216 of the Treaty establishing the European Community, Article 77 of the Treaty establishing the European Coal and Steel Community and Article 189 of the Treaty establishing the European Atomic Energy Community,

HAVING REGARD to the Treaty on European Union,

RECALLING AND CONFIRMING the Decision of 8 April 1965, and without prejudice to the decisions concerning the seat of future institutions, bodies and departments,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty on European Union and the Treaties establishing the European Communities,

Sole Article

- (a) The European Parliament shall have its seat in Strasbourg where the 12 periods of monthly plenary sessions, including the budget session, shall be held. The periods of additional plenary sessions shall be held in Brussels. The committees of the European Parliament shall meet in Brussels. The General Secretariat of the European Parliament and its departments shall remain in Luxembourg.
 - (b) The Council shall have its seat in Brussels. During the months of April, June and October, the Council shall hold its meetings in Luxembourg.
 - (c) The Commission shall have its seat in Brussels. The departments listed in Articles 7, 8 and 9 of the Decision of 8 April 1965 shall be established in Luxembourg.
 - (d) The Court of Justice and the Court of First Instance shall have their seats in Luxembourg.
 - (e) The Court of Auditors shall have its seat in Luxembourg.
 - (f) The Economic and Social Committee shall have its seat in Brussels.
 - (g) The Committee of the Regions shall have its seat in Brussels.
 - (h) The European Investment Bank shall have its seat in Luxembourg.
 - (i) The European Monetary Institute and the European Central Bank shall have their seat in Frankfurt.
 - (j) The European Police Office (Europol) shall have its seat in The Hague.
-

Protocol on the role of national parliaments in the European Union

THE HIGH CONTRACTING PARTIES,

RECALLING that scrutiny by individual national parliaments of their own government in relation to the activities of the Union is a matter for the particular constitutional organisation and practice of each Member State,

DESIRING, however, to encourage greater involvement of national parliaments in the activities of the European Union and to enhance their ability to express their views on matters which may be of particular interest to them,

HAVE AGREED UPON the following provisions, which shall be annexed to the Treaty on European Union and the Treaties establishing the European Communities,

I. INFORMATION FOR NATIONAL PARLIAMENTS OF MEMBER STATES

1. All Commission consultation documents (green and white papers and communications) shall be promptly forwarded to national parliaments of the Member States.
2. Commission proposals for legislation as defined by the Council in accordance with Article 151(3) of the Treaty establishing the European Community, shall be made available in good time so that the government of each Member State may ensure that its own national parliament receives them as appropriate.
3. A six-week period shall elapse between a legislative proposal or a proposal for a measure to be adopted under Title VI of the Treaty on European Union being made available in all languages to the European Parliament and the Council by the Commission and the date when it is placed on a Council agenda for decision either for the adoption of an act or for adoption of a common position pursuant to Article 189b or 189c of the Treaty establishing the European Community, subject to exceptions on grounds of urgency, the reasons for which shall be stated in the act or common position.

II. THE CONFERENCE OF EUROPEAN AFFAIRS COMMITTEES

4. The Conference of European Affairs Committees, hereinafter referred to as COSAC, established in Paris on 16-17 November 1989, may make any contribution it deems appropriate for the attention of the institutions of the European Union, in particular on the basis of draft legal texts which representatives of governments of the Member States may decide by common accord to forward to it, in view of the nature of their subject matter.

5. COSAC may examine any legislative proposal or initiative in relation to the establishment of an area of freedom, security and justice which might have a direct bearing on the rights and freedoms of individuals. The European Parliament, the Council and the Commission shall be informed of any contribution made by COSAC under this point.
 6. COSAC may address to the European Parliament, the Council and the Commission any contribution which it deems appropriate on the legislative activities of the Union, notably in relation to the application of the principle of subsidiarity, the area of freedom, security and justice as well as questions regarding fundamental rights.
 7. Contributions made by COSAC shall in no way bind national parliaments or prejudice their position.
-

FINAL ACT

The CONFERENCE OF THE REPRESENTATIVES OF THE GOVERNMENTS OF THE MEMBER STATES convened in Turin on the twenty-ninth day of March in the year nineteen hundred and ninety-six to adopt by common accord the amendments to be made to the Treaty on European Union, the Treaties establishing respectively the European Community, the European Coal and Steel Community and the European Atomic Energy Community and certain related Acts has adopted the following texts:

I. The Treaty of Amsterdam amending the Treaty on European Union, the Treaties establishing the European Communities and certain related Acts

II. Protocols

A. Protocol annexed to the Treaty on European Union:

1. Protocol on Article J.7 of the Treaty on European Union

B. Protocols annexed to the Treaty on European Union and to the Treaty establishing the European Community:

2. Protocol integrating the Schengen *acquis* into the framework of the European Union
3. Protocol on the application of certain aspects of Article 7a of the Treaty establishing the European Community to the United Kingdom and to Ireland
4. Protocol on the position of the United Kingdom and Ireland
5. Protocol on the position of Denmark

C. Protocols annexed to the Treaty establishing the European Community:

6. Protocol on asylum for nationals of Member States of the European Union
7. Protocol on the application of the principles of subsidiarity and proportionality
8. Protocol on external relations of the Member States with regard to the crossing of external borders
9. Protocol on the system of public broadcasting in the Member States
10. Protocol on protection and welfare of animals

D. Protocols annexed to the Treaty on European Union and to the Treaties establishing the European Community, the European Coal and Steel Community and the European Atomic Energy Community

11. Protocol on the institutions with the prospect of enlargement of the European Union
12. Protocol on the location of the seats of the institutions and of certain bodies and departments of the European Communities and of Europol
13. Protocol on the role of national parliaments in the European Union

III. Declarations

The Conference adopted the following declarations annexed to this Final Act:

1. Declaration on the abolition of the death penalty
2. Declaration on enhanced cooperation between the European Union and the Western European Union
3. Declaration relating to Western European Union
4. Declaration on Articles J.14 and K.10 of the Treaty on European Union
5. Declaration on Article J.15 of the Treaty on European Union
6. Declaration on the establishment of a policy planning and early warning unit
7. Declaration on Article K.2 of the Treaty on European Union
8. Declaration on Article K.3(e) of the Treaty on European Union
9. Declaration on Article K.6(2) of the Treaty on European Union
10. Declaration on Article K.7 of the Treaty on European Union
11. Declaration on the status of churches and non-confessional organisations
12. Declaration on environmental impact assessments
13. Declaration on Article 7d of the Treaty establishing the European Community
14. Declaration on the repeal of Article 44 of the Treaty establishing the European Community

15. Declaration on the preservation of the level of protection and security provided by the Schengen *acquis*
16. Declaration on Article 73j(2)(b) of the Treaty establishing the European Community
17. Declaration on Article 73k of the Treaty establishing the European Community
18. Declaration on Article 73k(3)(a) of the Treaty establishing the European Community
19. Declaration on Article 73l(1) of the Treaty establishing the European Community
20. Declaration on Article 73m of the Treaty establishing the European Community
21. Declaration on Article 73o of the Treaty establishing the European Community
22. Declaration regarding persons with a disability
23. Declaration on incentive measures referred to in Article 109r of the Treaty establishing the European Community

40. Declaration concerning the procedure for concluding international agreements by the European Coal and Steel Community
41. Declaration on the provisions relating to transparency, access to documents and the fight against fraud
42. Declaration on the consolidation of the Treaties
43. Declaration relating to the Protocol on the application of the principles of subsidiarity and proportionality
44. Declaration on Article 2 of the Protocol integrating the Schengen *acquis* into the framework of the European Union
45. Declaration on Article 4 of the Protocol integrating the Schengen *acquis* into the framework of the European Union
46. Declaration on Article 5 of the Protocol integrating the Schengen *acquis* into the framework of the European Union
47. Declaration on Article 6 of the Protocol integrating the Schengen *acquis* into the framework of the European Union
48. Declaration relating to the Protocol on asylum for nationals of Member States of the European Union
49. Declaration relating to subparagraph (d) of the Sole Article of the Protocol on asylum for nationals of Member States of the European Union
50. Declaration relating to the Protocol on the institutions with the prospect of enlargement of the European Union
51. Declaration on Article 10 of the Treaty of Amsterdam

The Conference also took note of the following declarations annexed to this Final Act:

1. Declaration by Austria and Luxembourg on credit institutions
2. Declaration by Denmark relating to Article K.14 of the Treaty on European Union
3. Declaration by Germany, Austria and Belgium on subsidiarity
4. Declaration by Ireland on Article 3 of the Protocol on the position of the United Kingdom and Ireland
5. Declaration by Belgium on the Protocol on asylum for nationals of Member States of the European Union
6. Declaration by Belgium, France and Italy on the Protocol on the institutions with the prospect of enlargement of the European Union
7. Declaration by France concerning the situation of the overseas departments in the light of the Protocol integrating the Schengen *acquis* into the framework of the European Union
8. Declaration by Greece concerning the Declaration on the status of churches and non-confessional organisations

Finally, the Conference agreed to attach, for illustrative purposes, to this Final Act the texts of the Treaty on European Union and the Treaty establishing the European Community, as they result from the amendments made by the Conference.

DECLARATIONS ADOPTED BY THE CONFERENCE

1. Declaration on the abolition of the death penalty

With reference to Article F(2) of the Treaty on European Union, the Conference recalls that Protocol No. 6 to the European Convention for the Protection of Human Rights and Fundamental Freedoms signed in Rome on 4 November 1950, and which has been signed and ratified by a large majority of Member States, provides for the abolition of the death penalty.

In this context, the Conference notes the fact that since the signature of the abovementioned Protocol on 28 April 1983, the death penalty has been abolished in most of the Member States of the Union and has not been applied in any of them.

2. Declaration on enhanced cooperation between the European Union and the Western European Union

With a view to enhanced cooperation between the European Union and the Western European Union, the Conference invites the Council to seek the early adoption of appropriate arrangements for the security clearance of the personnel of the General Secretariat of the Council.

3. Declaration relating to Western European Union

The Conference notes the following Declaration, adopted by the Council of Ministers of the Western European Union on 22 July 1997

'DECLARATION OF WESTERN EUROPEAN UNION ON THE ROLE OF WESTERN EUROPEAN UNION AND ITS RELATIONS WITH THE EUROPEAN UNION AND WITH THE ATLANTIC ALLIANCE

INTRODUCTION

1. The Western European Union (WEU) Member States agreed at Maastricht in 1991 on the need to develop a genuine European Security and Defence Identity (ESDI) and to assume a greater European responsibility for defence matters. In the light of the Treaty of Amsterdam, they reaffirm the importance of continuing and strengthening these efforts. WEU is an integral part of the development of the European Union (EU) providing the Union with access to an operational capability, notably in the context of the Petersberg tasks and is an essential element of the development of the ESDI within the Atlantic Alliance in accordance with the Paris Declaration and with the decisions taken by NATO ministers in Berlin.
2. Today the WEU Council brings together all the Member States of the European Union and all the European Members of the Atlantic Alliance in accordance with their respective status. The Council also brings together those States with the Central and Eastern

European States linked to the European Union by an Association Agreement and that are applicants for accession to both the European Union and the Atlantic Alliance. WEU is thus establishing itself as a genuine framework for dialogue and cooperation among Europeans on wider European security and defence issues.

3. In this context, WEU takes note of Title V of the Treaty on European Union regarding the EU's common foreign and security policy, in particular Articles J.3(1), J.7 and the Protocol to Article J.7, which read as follows:

Article J.3(1)

“1. The European Council shall define the principles and general guidelines for the common foreign and security policy, including for matters with defence implications.”

Article J.7

“1. The common foreign and security policy shall include all questions relating to the security of the Union, including the progressive framing of a common defence policy, in accordance with the second subparagraph, which might lead to a common defence, should the European Council so decide. It shall in that case recommend to the Member States the adoption of such a decision in accordance with their respective constitutional requirements.

The Western European Union (WEU) is an integral part of the development of the Union providing the Union with access to an operational capability notably in the context of paragraph 2. It supports the Union in framing the defence aspects of the common foreign and security policy as set out in this Article. The Union shall accordingly foster closer institutional relations with the WEU with a view to the possibility of the integration of the WEU into the Union, should the European Council so decide. It shall in that case recommend to the Member States the adoption of such a decision in accordance with their respective constitutional requirements.

The policy of the Union in accordance with this Article shall not prejudice the specific character of the security and defence policy of certain Member States and shall respect the obligations of certain Member States, which see their common defence realised in the North Atlantic Treaty Organisation (NATO), under the North Atlantic Treaty and be compatible with the common security and defence policy established within that framework.

The progressive framing of a common defence policy will be supported, as Member States consider appropriate, by cooperation between them in the field of armaments.

2. Questions referred to in this Article shall include humanitarian and rescue tasks, peace-keeping tasks and tasks of combat forces in crisis management, including peace making.

3. The Union will avail itself of the WEU to elaborate and implement decisions and actions of the Union which have defence implications.

The competence of the European Council to establish guidelines in accordance with Article J.3 shall also obtain in respect of the WEU for those matters for which the Union avails itself of the WEU.

When the Union avails itself of the WEU to elaborate and implement decisions of the Union on the tasks referred to in paragraph 2, all Member States of the Union shall be entitled to participate fully in the tasks in question. The Council, in agreement with the institutions of the WEU, shall adopt the necessary practical arrangements to allow all Member States contributing to the tasks in question to participate fully and on an equal footing in planning and decision-taking in the WEU.

Decisions having defence implications dealt with under this paragraph shall be taken without prejudice to the policies and obligations referred to in paragraph 1, third subparagraph.

4. The provisions of this Article shall not prevent the development of closer cooperation between two or more Member States on a bilateral level, in the framework of the WEU and the Atlantic Alliance, provided such cooperation does not run counter to or impede that provided for in this Title.

5. With a view to furthering the objectives of this Article, the provisions of this Article will be reviewed in accordance with Article N.”

Protocol on Article J.7

“THE HIGH CONTRACTING PARTIES,

BEARING IN MIND the need to implement fully the provisions of Article J.7(1), second subparagraph, and (3) of the Treaty on European Union,

BEARING IN MIND that the policy of the Union in accordance with Article J.7 shall not prejudice the specific character of the security and defence policy of certain Member States and shall respect the obligations of certain Member States, which see their common defence realised in NATO, under the North Atlantic Treaty and be compatible with the common security and defence policy established within that framework,

HAVE AGREED UPON the following provision, which is annexed to the Treaty on European Union,

The European Union shall draw up, together with the Western European Union, arrangements for enhanced cooperation between them, within a year from the entry into force of the Treaty of Amsterdam.”

A. WEU'S RELATIONS WITH THE EUROPEAN UNION: ACCOMPANYING THE IMPLEMENTATION OF THE TREATY OF AMSTERDAM

4. In the "Declaration on the Role of the Western European Union and its Relations with the European Union and with the Atlantic Alliance" of 10 December 1991, WEU Member States set as their objective "to build up WEU in stages as the defence component of the European Union". They today reaffirm this aim as developed by the Treaty of Amsterdam.
5. When the Union avails itself of WEU, WEU will elaborate and implement decisions and actions of the EU which have defence implications.

In elaborating and implementing decisions and actions of the EU for which the Union avails itself of WEU, WEU will act consistently with guidelines established by the European Council.

WEU supports the Union in framing the defence aspects of the European Union Common Foreign and Security Policy as set out in Article J.7 of the Treaty on European Union.

6. WEU confirms that when the European Union avails itself of WEU to elaborate and implement decisions of the Union on the tasks referred to in Article J.7(2) of the Treaty on European Union, all Member States of the Union shall be entitled to participate fully in the tasks in question in accordance with Article J.7(3) of the Treaty on European Union.

WEU will develop the role of the Observers in WEU in line with provisions contained in Article J.7(3) and will adopt the necessary practical arrangements to allow all Member States of the EU contributing to the tasks undertaken by WEU at the request of the EU to participate fully and on an equal footing in planning and decision-taking in the WEU.

7. Consistent with the Protocol on Article J.7 of the Treaty on European Union, WEU shall draw up, together with the European Union, arrangements for enhanced cooperation between them. In this regard, a range of measures, on some of which work is already at hand in WEU, can be taken forward now, such as:
 - arrangements for improving the coordination of the consultation and decision-making processes of the respective Organisations, in particular in crisis situations;
 - holding of joint meetings of the relevant bodies of the two Organisations;
 - harmonisation as much as possible of the sequence of the Presidencies of WEU and the EU, as well as the administrative rules and practices of the two Organisations;
 - close coordination of the work of the staff of the Secretariat-General of the WEU and the General Secretariat of the Council of the EU, including through the exchange and secondment of personnel;

- arrangements to allow the relevant bodies of the EU, including its Policy Planning and Early Warning Unit, to draw on the resources of WEU's Planning Cell, Situation Centre and Satellite Centre;
- cooperation in the field of armaments, as appropriate, within the framework of the Western European Armaments Group (WEAG), as the European forum for armaments cooperation, the EU and WEU in the context of rationalisation of the European armaments market and the establishment of a European Armaments Agency;
- practical arrangements for ensuring cooperation with the European Commission reflecting its role in the CFSP as defined in the revised Treaty on European Union;
- improved security arrangements with the European Union.

B. RELATIONS BETWEEN WEU AND NATO IN THE FRAMEWORK OF THE DEVELOPMENT OF AN ESDI WITHIN THE ATLANTIC ALLIANCE

8. The Atlantic Alliance continues to be the basis of collective defence under the North Atlantic Treaty. It remains the essential forum for consultation among Allies and the framework in which they agree on policies bearing on their security and defence commitments under the Washington Treaty. The Alliance has embarked on a process of adaptation and reform so that it can more effectively carry out the full range of its missions. This process is aimed at strengthening and renewing the transatlantic partnership, including building an ESDI within the Alliance.
9. WEU is an essential element of the development of the European Security and Defence Identity within the Atlantic Alliance and will accordingly continue its efforts to strengthen institutional and practical cooperation with NATO.
10. In addition to its support for the common defence enshrined in Article 5 of the Washington Treaty and Article V of the modified Brussels Treaty, WEU takes an active role in conflict prevention and crisis management as provided for in the Petersberg Declaration. In this context, WEU undertakes to perform its role to the full, respecting the full transparency and complementarity between the two Organisations.
11. WEU affirms that this identity will be grounded on sound military principles and supported by appropriate military planning and will permit the creation of militarily coherent and effective forces capable of operating under the political control and strategic direction of WEU.
12. To this end, WEU will develop its cooperation with NATO, in particular in the following fields:
 - mechanisms for consultation between WEU and NATO in the context of a crisis;

- WEU's active involvement in the NATO defence planning process;
- operational links between WEU and NATO for the planning, preparation and conduct of operations using NATO assets and capabilities under the political control and strategic direction of WEU, including:
 - military planning, conducted by NATO in coordination with WEU, and exercises;
 - a framework agreement on the transfer, monitoring and return of NATO assets and capabilities;
 - liaison between WEU and NATO in the context of European command arrangements.

This cooperation will continue to evolve, also taking account of the adaptation of the Alliance.

C. WEU's OPERATIONAL ROLE IN THE DEVELOPMENT OF THE ESDI

13. WEU will develop its role as the European politico-military body for crisis management, by using the assets and capabilities made available by WEU nations on a national or multinational basis, and having recourse, when appropriate, to NATO's assets and capabilities under arrangements being worked out. In this context, WEU will also support the UN and OSCE in their crisis management tasks.

WEU will contribute, in the framework of Article J.7 of the Treaty on European Union, to the progressive framing of a common defence policy and carry forward its concrete implementation through the further development of its own operational role.

14. To this end, WEU will take forward work in the following fields:

- WEU has developed crisis management mechanisms and procedures which will be updated as WEU gains experience through exercises and operations. The implementation of Petersberg missions calls for flexible modes of action geared to the diversity of crisis situations and making optimum use of the available capabilities including through recourse to national headquarters, which might be one provided by a framework nation, or to multinational headquarters answerable to WEU or to NATO assets and capabilities;
- WEU has already worked out Preliminary Conclusions on the Formulation of a Common European Defence Policy which is an initial contribution on the objectives, scope and means of a common European defence policy.

WEU will continue this work on the basis in particular of the Paris Declaration and taking account of the relevant elements of the decisions of WEU and NATO summits and ministerial meetings since Birmingham. It will focus on the following fields:

- definition of principles for the use of armed forces of the WEU States for WEU Petersberg operations in pursuit of common European security interests;
- organisation of operational means for Petersberg tasks, such as generic and contingency planning and exercising, preparation and interoperability of forces, including through participation in the NATO defence planning process, as appropriate;
- strategic mobility on the basis of its current work;
- defence intelligence, through its Planning Cell, Situation Centre and Satellite Centre;
- WEU has adopted many measures to strengthen its operational role (Planning Cell, Situation Centre, Satellite Centre). The improvement of the functioning of the military components at WEU Headquarters and the establishment, under the Council's authority, of a military committee will represent a further enhancement of structures which are important for the successful preparation and conduct of WEU operations;
- with the aim of opening participation in all its operations to Associate Members and Observer States, WEU will also examine the necessary modalities to allow Associate Members and Observer States to participate fully in accordance with their status in all operations undertaken by WEU;
- WEU recalls that Associate Members take part on the same basis as full members in operations to which they contribute, as well as in relevant exercises and planning. WEU will also examine the question of participation of the Observers as fully as possible in accordance with their status in planning and decision-taking within WEU in all operations to which they contribute;
- WEU will, in consultation where appropriate with the relevant bodies, examine the possibilities for maximum participation in its activities by Associate Members and Observer States in accordance with their status. It will address in particular activities in the fields of armaments, space and military studies;
- WEU will examine how to strengthen the Associate Partners' participation in an increasing number of activities.'

4. Declaration on Articles J.14 and K.10 of the Treaty on European Union

The provisions of Articles J.14 and K.10 of the Treaty on European Union and any agreements resulting from them shall not imply any transfer of competence from the Member States to the European Union.

5. Declaration on Article J.15 of the Treaty on European Union

The Conference agrees that Member States shall ensure that the Political Committee referred to in Article J.15 of the Treaty on European Union is able to meet at any time, in the event of international crises or other urgent matters, at very short notice at Political Director or deputy level.

6. Declaration on the establishment of a policy planning and early warning unit

The Conference agrees that:

1. A policy planning and early warning unit shall be established in the General Secretariat of the Council under the responsibility of its Secretary-General, High Representative for the CFSP. Appropriate cooperation shall be established with the Commission in order to ensure full coherence with the Union's external economic and development policies.
2. The tasks of the unit shall include the following:
 - (a) monitoring and analysing developments in areas relevant to the CFSP;
 - (b) providing assessments of the Union's foreign and security policy interests and identifying areas where the CFSP could focus in future;
 - (c) providing timely assessments and early warning of events or situations which may have significant repercussions for the Union's foreign and security policy, including potential political crises;
 - (d) producing, at the request of either the Council or the Presidency or on its own initiative, argued policy options papers to be presented under the responsibility of the Presidency as a contribution to policy formulation in the Council, and which may contain analyses, recommendations and strategies for the CFSP.
3. The unit shall consist of personnel drawn from the General Secretariat, the Member States, the Commission and the WEU.
4. Any Member State or the Commission may make suggestions to the unit for work to be undertaken.
5. Member States and the Commission shall assist the policy planning process by providing, to the fullest extent possible, relevant information, including confidential information.

7. Declaration on Article K.2 of the Treaty on European Union

Action in the field of police cooperation under Article K.2 of the Treaty on European Union, including activities of Europol, shall be subject to appropriate judicial review by the competent national authorities in accordance with rules applicable in each Member State.

8. Declaration on Article K.3(e) of the Treaty on European Union

The Conference agrees that the provisions of Article K.3(e) of the Treaty on European Union shall not have the consequence of obliging a Member State whose legal system does not provide for minimum sentences to adopt them.

9. Declaration on Article K.6(2) of the Treaty on European Union

The Conference agrees that initiatives for measures referred to in Article K.6(2) of the Treaty on European Union and acts adopted by the Council thereunder shall be published in the *Official Journal of the European Communities*, in accordance with the relevant Rules of Procedure of the Council and the Commission.

10. Declaration on Article K.7 of the Treaty on European Union

The Conference notes that Member States may, when making a declaration pursuant to Article K.7(2) of the Treaty on European Union, reserve the right to make provisions in their national law to the effect that, where a question relating to the validity or interpretation of an act referred to in Article K.7(1) is raised in a case pending before a national court or tribunal against whose decision there is no judicial remedy under national law, that court or tribunal will be required to refer the matter to the Court of Justice.

11. Declaration on the status of churches and non-confessional organisations

The European Union respects and does not prejudice the status under national law of churches and religious associations or communities in the Member States.

The European Union equally respects the status of philosophical and non-confessional organisations.

12. Declaration on environmental impact assessments

The Conference notes that the Commission undertakes to prepare environmental impact assessment studies when making proposals which may have significant environmental implications.

13. Declaration on Article 7d of the Treaty establishing the European Community

The provisions of Article 7d of the Treaty establishing the European Community on public services shall be implemented with full respect for the jurisprudence of the Court of Justice, *inter alia* as regards the principles of equality of treatment, quality and continuity of such services.

14. Declaration on the repeal of Article 44 of the Treaty establishing the European Community

The repeal of Article 44 of the Treaty establishing the European Community, which contains a reference to a natural preference between Member States in the context of fixing minimum prices during the transitional period, has no effect on the principle of Community preference as defined by the case law of the Court of Justice.

15. Declaration on the preservation of the level of protection and security provided by the Schengen *acquis*

The Conference agrees that measures to be adopted by the Council, which will have the effect of replacing provisions on the abolition of checks at common borders contained in the 1990 Schengen Convention, should provide at least the same level of protection and security as under the aforementioned provisions of the Schengen Convention.

16. Declaration on Article 73j(2)(b) of the Treaty establishing the European Community

The Conference agrees that foreign policy considerations of the Union and the Member States shall be taken into account in the application of Article 73j(2)(b) of the Treaty establishing the European Community.

17. Declaration on Article 73k of the Treaty establishing the European Community

Consultations shall be established with the United Nations High Commissioner for Refugees and other relevant international organisations on matters relating to asylum policy.

18. Declaration on Article 73k(3)(a) of the Treaty establishing the European Community

The Conference agrees that Member States may negotiate and conclude agreements with third countries in the domains covered by Article 73k(3)(a) of the Treaty establishing the European Community as long as such agreements respect Community law.

19. Declaration on Article 73l(1) of the Treaty establishing the European Community

The Conference agrees that Member States may take into account foreign policy considerations when exercising their responsibilities under Article 73l(1) of the Treaty establishing the European Community.

20. Declaration on Article 73m of the Treaty establishing the European Community

Measures adopted pursuant to Article 73m of the Treaty establishing the European Community shall not prevent any Member State from applying its constitutional rules relating to freedom of the press and freedom of expression in other media.

21. Declaration on Article 73o of the Treaty establishing the European Community

The Conference agrees that the Council will examine the elements of the decision referred to in Article 73o(2), second indent, of the Treaty establishing the European Community before the end of the five year period referred to in Article 73o with a view to taking and applying this decision immediately after the end of that period.

22. Declaration regarding persons with a disability

The Conference agrees that, in drawing up measures under Article 100a of the Treaty establishing the European Community, the institutions of the Community shall take account of the needs of persons with a disability.

23. Declaration on incentive measures referred to in Article 109r of the Treaty establishing the European Community

The Conference agrees that the incentive measures referred to in Article 109r of the Treaty establishing the European Community should always specify the following:

- the grounds for taking them based on an objective assessment of their need and the existence of an added value at Community level;
- their duration, which should not exceed five years;
- the maximum amount for their financing, which should reflect the incentive nature of such measures.

24. Declaration on Article 109r of the Treaty establishing the European Community

It is understood that any expenditure under Article 109r of the Treaty establishing the European Community will fall within Heading 3 of the financial perspectives.

25. Declaration on Article 118 of the Treaty establishing the European Community

It is understood that any expenditure under Article 118 of the Treaty establishing the European Community will fall within Heading 3 of the financial perspectives.

26. Declaration on Article 118(2) of the Treaty establishing the European Community

The High Contracting Parties note that in the discussions on Article 118(2) of the Treaty establishing the European Community it was agreed that the Community does not intend, in laying down minimum requirements for the protection of the safety and health of employees, to discriminate in a manner unjustified by the circumstances against employees in small and medium-sized undertakings.

27. Declaration on Article 118b(2) of the Treaty establishing the European Community

The High Contracting Parties declare that the first of the arrangements for application of the agreements between management and labour at Community level — referred to in Article 118b(2) of the Treaty establishing the European Community — will consist in developing, by collective bargaining according to the rules of each Member State, the content of the agreements, and that consequently this arrangement implies no obligation on the Member States to apply the agreements directly or to work out rules for their transposition, nor any obligation to amend national legislation in force to facilitate their implementation.

28. Declaration on Article 119(4) of the Treaty establishing the European Community

When adopting measures referred to in Article 119(4) of the Treaty establishing the European Community, Member States should, in the first instance, aim at improving the situation of women in working life.

29. Declaration on sport

The Conference emphasises the social significance of sport, in particular its role in forging identity and bringing people together. The Conference therefore calls on the bodies of the European Union to listen to sports associations when important questions affecting sport are at issue. In this connection, special consideration should be given to the particular characteristics of amateur sport.

30. Declaration on island regions

The Conference recognises that island regions suffer from structural handicaps linked to their island status, the permanence of which impairs their economic and social development.

The Conference accordingly acknowledges that Community legislation must take account of these handicaps and that specific measures may be taken, where justified, in favour of these regions in order to integrate them better into the internal market on fair conditions.

31. Declaration relating to the Council Decision of 13 July 1987

The Conference calls on the Commission to submit to the Council by the end of 1998 at the latest a proposal to amend the Council decision of 13 July 1987 laying down the procedures for the exercise of implementing powers conferred on the Commission.

32. Declaration on the organisation and functioning of the Commission

The Conference notes the Commission's intention to prepare a reorganization of tasks within the college in good time for the Commission which will take up office in 2000, in order to ensure an optimum division between conventional portfolios and specific tasks.

In this context, it considers that the President of the Commission must enjoy broad discretion in the allocation of tasks within the college, as well as in any reshuffling of those tasks during a Commission's term of office.

The Conference also notes the Commission's intention to undertake in parallel a corresponding reorganisation of its departments. It notes in particular the desirability of bringing external relations under the responsibility of a Vice-President.

33. Declaration on Article 188c(3) of the Treaty establishing the European Community

The Conference invites the Court of Auditors, the European Investment Bank and the Commission to maintain in force the present Tripartite Agreement. If a succeeding or amending text is required by any party, they shall endeavour to reach agreement on such a text having regard to their respective interests.

34. Declaration on respect for time limits under the co-decision procedure

The Conference calls on the European Parliament, the Council and the Commission to make every effort to ensure that the co-decision procedure operates as expeditiously as possible. It recalls the importance of strict respect for the deadlines set out in Article 189b of the Treaty establishing the European Community and confirms that recourse, provided for in paragraph 7 of that Article, to extension of the periods in question should be considered only when strictly necessary. In no case should the actual period between the second reading by the European Parliament and the outcome of the Conciliation Committee exceed nine months.

35. Declaration on Article 191a(1) of the Treaty establishing the European Community

The Conference agrees that the principles and conditions referred to in Article 191a(1) of the Treaty establishing the European Community will allow a Member State to request the Commission or the Council not to communicate to third parties a document originating from that State without its prior agreement.

36. Declaration on the Overseas Countries and Territories

The Conference recognises that the special arrangements for the association of the overseas countries and territories (OCTs) under Part Four of the Treaty establishing the European Community were designed for countries and territories that were numerous, covered vast areas and had large populations. The arrangements have changed little since 1957.

The Conference notes that there are today only 20 OCTs and that they are extremely scattered island territories with a total population of approximately 900 000. Moreover, most OCTs lag far behind in structural terms, a fact linked to their particularly severe geographical and economic handicaps. In these circumstances, the special arrangements for association as they were conceived in 1957 can no longer deal effectively with the challenges of OCT development.

The Conference solemnly restates that the purpose of association is to promote the economic and social development of the countries and territories and to establish close economic relations between them and the Community as a whole.

The Conference invites the Council, acting in accordance with the provisions of Article 136 of the Treaty establishing the European Community, to review the association arrangements by February 2000, with the fourfold objective of:

- promoting the economic and social development of the OCTs more effectively;
- developing economic relations between the OCTs and the European Union;
- taking greater account of the diversity and specific characteristics of the individual OCTs, including aspects relating to freedom of establishment;
- ensuring that the effectiveness of the financial instrument is improved.

37. Declaration on public credit institutions in Germany

The Conference notes the Commission's opinion to the effect that the Community's existing competition rules allow services of general economic interest provided by public credit institutions existing in Germany and the facilities granted to them to compensate for the costs connected with such services to be taken into account in full. In this context, the way in which Germany enables local authorities to carry out their task of making available in their regions a comprehensive and efficient financial infrastructure is a matter for the organisation of that Member State. Such facilities may not adversely affect the conditions of competition to an extent beyond that required in order to perform these particular tasks and which is contrary to the interests of the Community.

The Conference recalls that the European Council has invited the Commission to examine whether similar cases exist in the other Member States, to apply as appropriate the same standards on similar cases and to inform the Council in its ECOFIN formation.

38. Declaration on voluntary service activities

The Conference recognises the important contribution made by voluntary service activities to developing social solidarity.

The Community will encourage the European dimension of voluntary organisations with particular emphasis on the exchange of information and experiences as well as on the participation of the young and the elderly in voluntary work.

39. Declaration on the quality of the drafting of Community legislation

The Conference notes that the quality of the drafting of Community legislation is crucial if it is to be properly implemented by the competent national authorities and better understood by the public and in business circles. It recalls the conclusions on this subject reached by the Presidency of the European Council in Edinburgh on 11 and 12 December 1992, as well as the Council Resolution on the quality of drafting of Community legislation adopted on 8 June 1993 (*Official Journal of the European Communities*, C 166 of 17 June 1993, p. 1).

The Conference considers that the three institutions involved in the procedure for adopting Community legislation, the European Parliament, the Council and the Commission, should lay down guidelines on the quality of drafting of the said legislation. It also stresses that Community legislation should be made more accessible and welcomes in this regard the adoption and first implementation of an accelerated working method for official codification of legislative texts, established by the Interinstitutional Agreement of 20 December 1994 (*Official Journal of the European Communities*, C 102 of 4 April 1996, p. 2).

Therefore, the Conference declares that the European Parliament, the Council and the Commission ought to:

- establish by common accord guidelines for improving the quality of the drafting of Community legislation and follow those guidelines when considering proposals for Community legislation or draft legislation, taking the internal organisational measures they deem necessary to ensure that these guidelines are properly applied;
- make their best efforts to accelerate the codification of legislative texts.

40. Declaration concerning the procedure for concluding international agreements by the European Coal and Steel Community

The repeal of Article 14 of the Convention on the Transitional Provisions annexed to the Treaty establishing the European Coal and Steel Community does not alter existing practice concerning the procedure for the conclusion of international agreements by the European Coal and Steel Community.

41. Declaration on the provisions relating to transparency, access to documents and the fight against fraud

The Conference considers that the European Parliament, the Council and the Commission, when they act in pursuance of the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community, should draw guidance from the provisions relating to transparency, access to documents and the fight against fraud in force within the framework of the Treaty establishing the European Community.

42. Declaration on the consolidation of the Treaties

The High Contracting Parties agreed that the technical work begun during the course of this Intergovernmental Conference shall continue as speedily as possible with the aim of drafting a consolidation of all the relevant Treaties, including the Treaty on European Union.

They agreed that the final results of this technical work, which shall be made public for illustrative purposes under the responsibility of the Secretary-General of the Council, shall have no legal value.

43. Declaration relating to the Protocol on the application of the principles of subsidiarity and proportionality

The High Contracting Parties confirm, on the one hand, the Declaration on the implementation of Community law annexed to the Final Act of the Treaty on European Union and, on the other, the conclusions of the Essen European Council stating that the administrative implementation of Community law shall in principle be the responsibility of the Member States in accordance with their constitutional arrangements. This shall not affect the supervisory, monitoring and implementing powers of the Community Institutions as provided under Articles 145 and 155 of the Treaty establishing the European Community.

44. Declaration on Article 2 of the Protocol integrating the Schengen *acquis* into the framework of the European Union

The High Contracting Parties agree that the Council shall adopt all the necessary measures referred to in Article 2 of the Protocol integrating the Schengen *acquis* into the framework of the European Union upon the date of entry into force of the Treaty of Amsterdam. To that end, the necessary preparatory work shall be undertaken in due time in order to be completed prior to that date.

45. Declaration on Article 4 of the Protocol integrating the Schengen *acquis* into the framework of the European Union

The High Contracting Parties invite the Council to seek the opinion of the Commission before it decides on a request under Article 4 of the Protocol integrating the Schengen *acquis* into the framework of the European Union by Ireland or the United Kingdom of Great Britain and Northern Ireland to take part in some or all of the provisions of the Schengen *acquis*.

They also undertake to make their best efforts with a view to allowing Ireland or the United Kingdom of Great Britain and Northern Ireland, if they so wish, to use the provisions of Article 4 of the said Protocol so that the Council may be in a position to take the decisions referred to in that Article upon the date of entry into force of that Protocol or at any time thereafter.

46. Declaration on Article 5 of the Protocol integrating the Schengen *acquis* into the framework of the European Union

The High Contracting Parties undertake to make all efforts in order to make action among all Member States possible in the domains of the Schengen *acquis*, in particular whenever Ireland and the United Kingdom of Great Britain and Northern Ireland have accepted some or all of the provisions of that *acquis* in accordance with Article 4 of the Protocol integrating the Schengen *acquis* into the framework of the European Union.

47. Declaration on Article 6 of the Protocol integrating the Schengen *acquis* into the framework of the European Union

The High Contracting Parties agree to take all necessary steps so that the Agreements referred to in Article 6 of the Protocol integrating the Schengen *acquis* into the framework of the European Union may enter into force on the same date as the date of entry into force of the Treaty of Amsterdam.

48. Declaration relating to the Protocol on asylum for nationals of Member States of the European Union

The Protocol on asylum for nationals of Member States of the European Union does not prejudice the right of each Member State to take the organisational measures it deems necessary to fulfil its obligations under the Geneva Convention of 28 July 1951 relating to the status of refugees.

49. Declaration relating to subparagraph (d) of the Sole Article of the Protocol on asylum for nationals of Member States of the European Union

The Conference declares that, while recognising the importance of the Resolution of the Ministers of the Member States of the European Communities responsible for immigration of 30 November/1 December 1992 on manifestly unfounded applications for asylum and of the Resolution of the Council of 20 June 1995 on minimum guarantees for asylum procedures, the question of abuse of asylum procedures and appropriate rapid procedures to dispense with manifestly unfounded applications for asylum should be further examined with a view to introducing new improvements in order to accelerate these procedures.

50. Declaration relating to the Protocol on the institutions with the prospect of enlargement of the European Union

Until the entry into force of the first enlargement it is agreed that the decision of the Council of 29 March 1994 ('the Ioannina Compromise') will be extended and, by that date, a solution for the special case of Spain will be found.

51. Declaration on Article 10 of the Treaty of Amsterdam

The Treaty of Amsterdam repeals and deletes lapsed provisions of the Treaty establishing the European Community, the Treaty establishing the European Coal and Steel Community and the Treaty establishing the European Atomic Energy Community as they were in force before the entry into force of the Treaty of Amsterdam and adapts certain of their provisions, including the insertion of certain provisions of the Treaty establishing a single Council and a single Commission of the European Communities and the Act concerning the election of the representatives of the European Parliament by direct universal suffrage. Those operations do not affect the *'acquis communautaire'*.

DECLARATIONS OF WHICH THE CONFERENCE TOOK NOTE

1. Declaration by Austria and Luxembourg on credit institutions

Austria and Luxembourg consider that the Declaration on public credit institutions in Germany also applies to credit institutions in Austria and Luxembourg with a comparable organisational structure.

2. Declaration by Denmark on Article K.14 of the Treaty on European Union

Article K.14 of the Treaty on European Union requires the unanimity of all members of the Council of the European Union, i.e. all Member States, for the adoption of any decision to apply the provisions of Title IIIa of the Treaty establishing the European Community on visas, asylum, immigration and other policies related to free movement of persons to action in areas referred to in Article K.1. Moreover, any unanimous decision of the Council, before coming into force, will have to be adopted in each Member State, in accordance with its constitutional requirements. In Denmark, such adoption will, in the case of a transfer of sovereignty, as defined in the Danish constitution, require either a majority of five sixths of members of the Folketing or both a majority of the members of the Folketing and a majority of voters in a referendum.

3. Declaration by Germany, Austria and Belgium on subsidiarity

It is taken for granted by the German, Austrian and Belgian governments that action by the European Community in accordance with the principle of subsidiarity not only concerns the Member States but also their entities to the extent that they have their own law-making powers conferred on them under national constitutional law.

4. Declaration by Ireland on Article 3 of the Protocol on the position of the United Kingdom and Ireland

Ireland declares that it intends to exercise its right under Article 3 of the Protocol on the position of the United Kingdom and Ireland to take part in the adoption of measures pursuant to Title IIIa of the Treaty establishing the European Community to the maximum extent compatible with the maintenance of its Common Travel Area with the United Kingdom. Ireland recalls that its participation in the Protocol on the application of certain aspects of Article 7a of the Treaty establishing the European Community reflects its wish to maintain its Common Travel Area with the United Kingdom in order to maximise freedom of movement into and out of Ireland.

5. Declaration by Belgium on the Protocol on asylum for nationals of Member States of the European Union

In approving the Protocol on asylum for nationals of Member States of the European Union, Belgium declares that, in accordance with its obligations under the 1951 Geneva Convention and the 1967 New York Protocol, it shall, in accordance with the provision set out in point (d) of the sole Article of that Protocol, carry out an individual examination of any asylum request made by a national of another Member State.

6. Declaration by Belgium, France and Italy on the Protocol on the institutions with the prospect of enlargement of the European Union

Belgium, France and Italy observe that, on the basis of the results of the Intergovernmental Conference, the Treaty of Amsterdam does not meet the need, reaffirmed at the Madrid European Council, for substantial progress towards reinforcing the institutions.

Those countries consider that such reinforcement is an indispensable condition for the conclusion of the first accession negotiations. They are determined to give the fullest effect appropriate to the Protocol as regards the composition of the Commission and the weighting of votes and consider that a significant extension of recourse to qualified majority voting forms part of the relevant factors which should be taken into account.

7. Declaration by France concerning the situation of the overseas departments in the light of the Protocol integrating the Schengen *acquis* into the framework of the European Union

France considers that the implementation of the Protocol integrating the Schengen *acquis* into the framework of the European Union does not affect the geographical scope of the Convention implementing the Schengen Agreement of 14 June 1985 signed in Schengen on 19 June 1990, as it is defined by Article 138, first paragraph, of that Convention.

8. Declaration by Greece concerning the Declaration on the status of churches and non-confessional organisations

With reference to the Declaration on the status of churches and non-confessional organisations, Greece recalls the Joint Declaration on Mount Athos annexed to the Final Act of the Treaty of Accession of Greece to the European Communities.

W O O R D V O O R A F

Nederland lijkt op een kleine, veilige haven in een wereld vol conflicten. Een democratisch land waar veel kan en mag en waar we niet voortdurend stil hoeven te staan bij bedreigingen die ons omringen. Toch wordt ook ons land af en toe opgeschrikt door gewelddadige acties, berichten over anti-democratische organisaties of ongeoorloofde inmenging in Nederlandse aangelegenheden vanuit het buitenland. Met andere woorden, door verschijnselen en ontwikkelingen die de stabiliteit van onze samenleving kunnen ondermijnen.

De Binnenlandse Veiligheidsdienst (BVD) heeft de taak tijdig te waarschuwen voor dergelijke verschijnselen en ontwikkelingen die veelal voor de buitenwereld verborgen zijn. Op die manier draagt de BVD er aan bij risico's voor de nationale veiligheid te beperken.

Het dagelijkse werk van de BVD speelt zich grotendeels buiten de openbaarheid af. Dat neemt niet weg dat in een democratisch land als het onze helderheid moet bestaan over de organisatie, de taken en werkwijze van deze dienst. Met deze brochure wil ik u daarom graag informeren over het werk van de BVD.

De minister van Binnenlandse Zaken en Koninkrijksrelaties

A. Peper

DE GESCHIEDENIS VAN DE BINNENLANDSE VEILIGHEIDSDIENST

De geschiedenis van de Binnenlandse Veiligheidsdienst begint direct na de Tweede Wereldoorlog met de oprichting van het Bureau Nationale Veiligheid (BNV) in 1945. Deze voorloper van de BVD krijgt als opdracht de restanten van het Duitse inlichtingennetwerk in Nederland in kaart te brengen. De Binnenlandse Veiligheidsdienst wordt in 1949 opgericht. De dienst richt zich vooral op spionage vanuit Oost-Europa en op de activiteiten van de Communistische Partij Nederland (CPN). Het is het tijdperk van de Koude Oorlog en het communisme in binnen- en buitenland wordt als voornaamste dreiging gezien.

Over het werk van de BVD in de periode van de Koude Oorlog verscheen in 1995 het boek 'Geschiedenis van de Binnenlandse Veiligheidsdienst' van dr. D. Engelen.

In de jaren zeventig maakt Nederland kennis met terrorisme en ontstaat een nieuwe taak voor de BVD. Gewelddadige politieke groeperingen vormen nog altijd een belangrijk aandachtsgebied van de BVD. Ontwikkelingen in het buitenland worden daarbij nauwlettend gevolgd, aangezien politieke conflicten elders in de wereld hun weerslag kunnen hebben op de veiligheidssituatie in Nederland.

Andere onderwerpen die op dit moment de aandacht van de BVD vragen zijn illegale wapenhandel, de activiteiten van buitenlandse inlichtingendiensten in Nederland en de aantasting van de integriteit van de overheid.

DE TAKEN VAN DE BINNENLANDSE VEILIGHEIDSDIENST

De BVD levert een bijdrage aan de bescherming van de nationale veiligheid door het uitvoeren van drie taken: het verzamelen van gegevens, het verrichten van veiligheidsonderzoeken en het bevorderen van beveiligingsmaatregelen. Deze taken zijn vastgelegd in de Wet op de inlichtingen- en veiligheidsdiensten (1987).

1. De BVD verzamelt gegevens

De BVD verzamelt gegevens over personen en organisaties die een bedreiging kunnen vormen voor de samenleving. Veel van de gegevens die de BVD verzamelt, komen uit openbare bronnen zoals de media, wetenschappelijke publicaties of voor iedereen toegankelijke databestanden. De bevolking speelt eveneens een belangrijke rol bij het vergaren van informatie. Tal van zaken zijn tijdig ontdekt omdat burgers de BVD daarop attendeerden. De BVD staat altijd open voor bijdragen uit de samenleving en vraagt daar ook om.

Vaak ontstaan risico's voor de nationale veiligheid buiten onze landsgrenzen. Om daar tijdig op te kunnen reageren, is de BVD ook actief in het buitenland. In een aantal landen beschikt de BVD over een steunpunt op de Nederlandse ambassade namelijk in Washington, Caracas, Amman, Singapore en Moskou.

Soms leveren bovenstaande bronnen niet voldoende gegevens op over de personen of organisaties die een veiligheidsrisico vormen. Om achter hun werkelijke intenties te komen, moeten de nodige gegevens dan op andere manieren worden ingewonnen. Hoewel de overheid gehouden is de grondrechten van de burger te respecteren, is het verzamelen van gegevens in die gevallen meestal alleen mogelijk met middelen die inbreuk maken op de persoonlijke levenssfeer. De BVD heeft de wettelijke bevoegdheid in bepaalde omstandigheden die middelen te gebruiken. Het voorgaande in aanmerking genomen, gebruikt de BVD deze zogenaamde bijzondere inlichtingenmiddelen pas na een zorgvuldige afweging. En alleen dan wanneer de inzet van het middel in verhouding staat tot de ernst van de zaak én het onmogelijk is de gegevens op een minder ingrijpende wijze te verkrijgen.

Eén van de manieren om gedetailleerde gegevens te verzamelen, is het opvragen van persoonsgegevens uit de bevolkingsadministratie of het strafregister. Maar ook de Militaire Inlichtingendienst (MID) of buitenlandse inlichtingen- en veiligheidsdiensten kunnen als bron fungeren.

In een enkel geval is het nodig om bepaalde personen enige tijd te volgen en observeren, gesprekken af te luisteren met behulp van microfoons, dan wel door telefoonlijnen af te tappen. Hier gaat een extra zorgvuldige procedure aan vooraf. Zo is er schriftelijke toestemming nodig van de minister-president en de ministers van Binnenlandse Zaken en Koninkrijksrelaties en Justitie. In geval van het aftappen van telefoongesprekken moet ook de minister van Verkeer en Waterstaat goedkeuring geven.

Ook komt het voor dat de BVD aan mensen vraagt bij een onderzoek te assisteren. Bijvoorbeeld door lid te worden van een organisatie of onder een dekmantel gegevens te vergaren. Deze medewerking vindt altijd plaats op basis van vrijwilligheid.

2. De BVD verricht veiligheidsonderzoeken.

De BVD voert veiligheidsonderzoeken uit naar kandidaten voor vertrouwensfuncties. Het gaat onder meer om functies bij de overheid en in het bedrijfsleven, waarin men de veiligheid of andere gewichtige belangen van de staat schade kan berokkenen. In het bedrijfsleven komen vertrouwensfuncties voor bij zogenaamde vitale bedrijven: ondernemingen die essentieel zijn voor het goed functioneren van de maatschappij. Voorbeelden daarvan zijn elektriciteits- en waterleidingbedrijven, ondernemingen in de olie- en chemiesector, telecommunicatiebedrijven, de transportsector en de financiële sector.

In Nederland kennen we circa 50.000 vertrouwensfuncties, exclusief de functies bij het ministerie van Defensie. Er worden drie categorieën vertrouwensfuncties onderscheiden: A, B en C. Bij een A-functie kan men de bovengenoemde belangen van de staat meer schade toebrengen dan bij een B- of C-functie.

In de Wet veiligheidsonderzoeken die op 1 februari 1997 in werking trad, staat beschreven wanneer een veiligheidsonderzoek wordt ingesteld en wat een vertrouwensfunctie is. De onderzoeken bestaan voor het overgrote deel uit het opvragen van gegevens uit databestanden. Bij de zogenaamde A-functies - vijf procent van het totale aantal vertrouwensfuncties - vindt bovendien een 'veldonderzoek' plaats. Het veldonderzoek bestaat uit gesprekken met betrokkene en enkele andere personen uit zijn of haar directe omgeving.

De personen naar wie een veiligheidsonderzoek wordt ingesteld, zijn daarover (en over hun beroepsmogelijkheden) altijd van tevoren ingelicht. Zij vullen zelf een inlichtingenformulier in. Indien uit het veiligheidsonderzoek blijkt dat betrokkene zonder gevaar voor de veiligheid van de staat de vertrouwensfunctie kan vervullen, geeft de minister van Binnenlandse Zaken en Koninkrijksrelaties een 'verklaring van geen bezwaar' af. Dit betekent dat de werkgever kan overgaan tot aanstelling.

3. *De BVD bevordert beveiligingsmaatregelen.*

De BVD bevordert de beveiliging van gegevens waarvan geheimhouding door het belang van de staat wordt geboden. Tevens bevordert de BVD de beveiliging van onderdelen van overheid en bedrijfsleven die van vitaal belang zijn voor de instandhouding van het maatschappelijk leven. Deze taak houdt in dat de BVD overheidsinstellingen en vitale bedrijven informeert over de veiligheidsrisico's en adviseert over noodzakelijke beveiligingsmaatregelen. Het advies kan betrekking hebben op uiteenlopende onderwerpen. De fysieke beveiliging van gebouwen en bedrijfsterreinen is daar slechts een onderdeel van. De BVD houdt eveneens procedures tegen het licht voor de wijze waarop met vertrouwelijke informatie moet worden omgegaan. En wanneer die informatie in geautomatiseerde systemen is opgeslagen, kan de BVD in overleg met de betrokken instantie overgaan tot het testen van beveiligingsmaatregelen. Ook voor adviezen over de beveiliging van personen en het geven van aanwijzingen voor de instelling van vertrouwensfuncties is de BVD het aangewezen orgaan.

EEN NIEUWE WET

De huidige Wet op de inlichtingen- en veiligheidsdiensten zal worden vervangen door een nieuwe wet. Deze zal in werking treden nadat het parlement het inmiddels ingediende wetsvoorstel heeft aanvaard. In de nieuwe wet worden regelingen vastgelegd voor de inzet van bijzondere inlichtingenmiddelen. Ook voorziet de wet in een regeling voor de kennisneming van persoonsgegevens en andere gegevens die verwerkt worden door de dienst. Het takenpakket van de BVD wordt uitgebreid met de taak inlichtingen te verzamelen over het buitenland. Tenslotte legt deze wet een basis voor een nieuwe onafhankelijke commissie van toezicht

voor de inlichtingen- en veiligheidsdiensten.

De naam van de BVD wordt in het voorstel gewijzigd in Algemene Inlichtingen- en Veiligheidsdienst (AIVD), waarmee de naam meer in overeenstemming komt met het takenpakket.

WANNEER WORDT DE BVD INGEZET?

Alleen als de veiligheidssituatie in ons land dit vereist, is de inzet van de BVD gerechtvaardigd. Elke keer opnieuw moet de vraag gesteld worden of er in een bepaalde situatie een taak voor de BVD is. Dit gebeurt door een grondige risico-analyse.

De BVD heeft geen opsporingsbevoegdheid. Wanneer er concrete aanwijzingen zijn dat er strafbare feiten worden gepleegd, meldt de BVD dit aan justitie. De politie of een andere opsporingsinstantie kan dan een justitieel onderzoek instellen. De BVD zal hierbij nooit de identiteit van haar bron prijsgeven.

Daarnaast kunnen BVD-prognoses bijdragen tot een bijstelling van beleid. De BVD is een flexibele organisatie die haar taken voortdurend aanpast aan nieuwe ontwikkelingen en rekening houdt met de eisen die de politiek en de maatschappij aan een dergelijke organisatie stelt.

DE Plicht tot GEHEIMHOUDING

De medewerkers van de BVD hebben een geheimhoudingsplicht. In eerste instantie dient deze ter bescherming van de mensen die meewerken aan een onderzoek van de BVD waardoor mogelijke risico's voor hun veiligheid kunnen ontstaan. Bescherming van informatiebronnen is voor de BVD een zeer belangrijk uitgangspunt bij de taakuitoefening.

Voorts houdt de BVD de verzamelde gegevens geheim om te voorkomen dat de actuele kennis van de BVD over een persoon of organisatie, die een veiligheidsrisico vormt, in de openbaarheid komt en daardoor afbreuk wordt gedaan aan de werkwijze van de dienst.

De geheimhoudingsplicht geldt voor iedere medewerker van de BVD en voor iedereen die betrokken is bij de uitvoering van de taken van de BVD. Uiteraard krijgen instanties die de informatie van de BVD nodig hebben om hun taak uit te oefenen alle noodzakelijke informatie. De identiteit van informanten blijft echter altijd geheim.

Overigens probeert de BVD zoveel mogelijk openheid te geven over zijn taken, organisatie en werkwijze in het algemeen (o.a. via een jaarverslag). Informatie over de BVD kan men ook vinden op de website van het ministerie van Binnenlandse zaken en Koninkrijksrelaties: (www.minbzk.nl).

SAMENWERKING

Alleen door nauwe samenwerking van de verantwoordelijke instanties is het mogelijk aantastingen van de nationale veiligheid met succes te voorkomen. De Binnenlandse Veiligheidsdienst onderhoudt daarom contacten met onder andere het Openbaar Ministerie, de politie, andere opsporings- en controlediensten, de Militaire Inlichtingendienst en buitenlandse inlichtingen- en veiligheidsdiensten.

Het Openbaar Ministerie

Tussen het hoofd van de BVD en de procureurs-generaal vindt regelmatig overleg plaats. Daarbij gaat het vooral over de vraag of informatie van de BVD aanleiding is om een strafzaak te starten en zo ja, in welk stadium en aan welke officier van justitie de informatie moet worden overgedragen. Een speciaal daartoe aangewezen landelijk officier van justitie heeft, op voorwaarde van geheimhouding, inzage in alle gegevens van de BVD die op een concrete zaak betrekking hebben. Overigens kan de informatie van de BVD nooit als bewijslast dienen.

De politie en andere opsporingsinstanties

De BVD en de politie stemmen hun werkzaamheden regelmatig op elkaar af, omdat er in de taakuitoefening duidelijke raakvlakken zijn. Deze samenwerking is officieel geregeld in samenwerkingsprotocollen tussen de BVD en de politiekorpsen. Uitgangspunt is dat, gelet op het verschil in bevoegdheden en verantwoordelijkheden, het werk van politie en BVD gescheiden blijft.

In de samenwerking tussen de BVD en de politie spelen bepaalde, aangewezen politieambtenaren een belangrijke rol. Deze ambtenaren vormen de regionale inlichtingendiensten van de politiekorpsen en verrichten (een deel van) hun taken onder verantwoordelijkheid van de BVD.

Behalve met de politie werkt de BVD nauw samen met de Koninklijke marechaussee en de douane, en de bijzondere opsporingsdiensten als de Economische Controle Dienst (ECD) en de Fiscale Inlichtingen- en Opsporingsdienst (FIOD). Een aantal medewerkers van de Koninklijke marechaussee en douane die belast zijn met de grensbewaking, werken eveneens onder verantwoordelijkheid van de BVD.

Militaire Inlichtingendienst

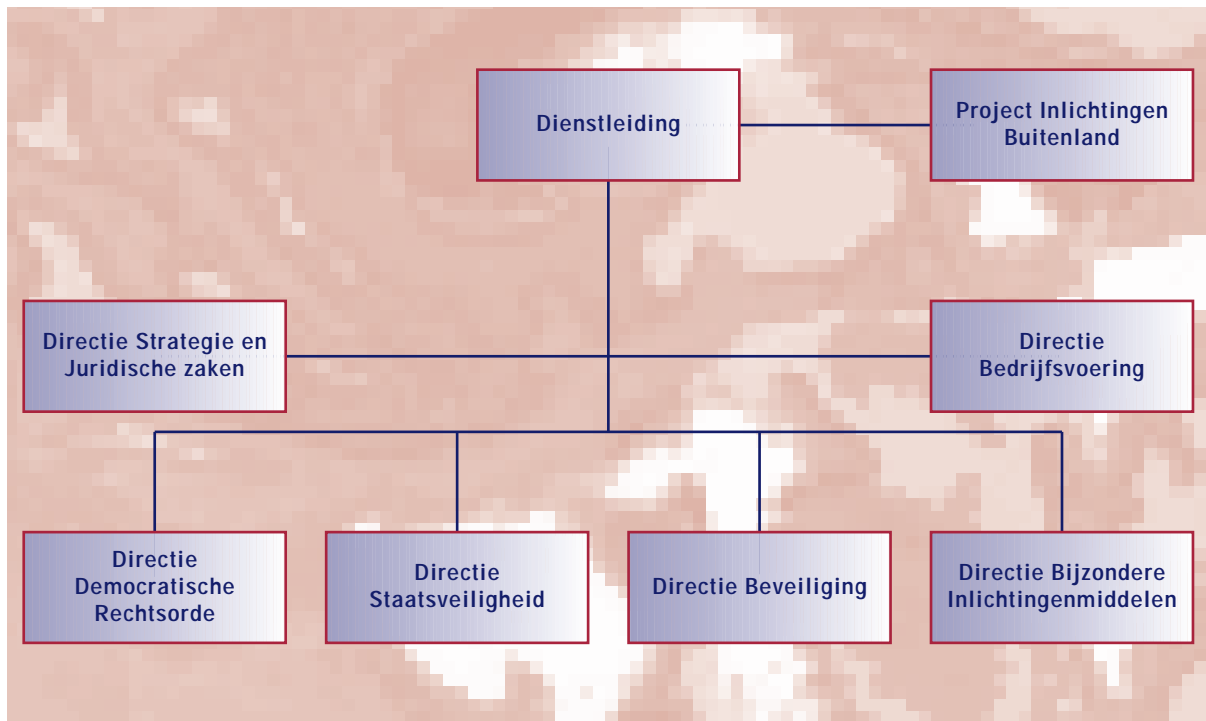

De zusterdienst van de BVD in Nederland is de Militaire Inlichtingendienst (MID). De MID werkt op vergelijkbare wijze als de BVD, maar heeft zijn taken toegespitst op militair relevante onderwerpen. De MID verzamelt gegevens over het potentieel en de strijdkrachten van buitenlandse mogendheden en stelt de dienst veiligheidsonderzoeken in naar personeel van de krijgsmacht en bedrijven die voor defensie werken. Bovendien moet de MID voorkomen dat de veiligheid of paraatheid van de Nederlandse krijgsmacht in gevaar wordt gebracht. Omdat er raakvlakken zijn tussen de twee diensten, vindt voortdurend afstemming plaats over de werkzaamheden.

Buitenlandse inlichtingen- en veiligheidsdiensten

Veiligheidsvraagstukken hebben in veel gevallen een grensoverschrijdend karakter. Terrorisme, de ongecontroleerde verbreiding van massavernietigingswapens en radicale ideologieën bijvoorbeeld zijn alleen goed te bestrijden in internationaal verband. Daarom werkt de BVD samen met zo'n negentig inlichtingen- en veiligheidsdiensten in de gehele wereld.

De Binnenlandse Veiligheidsdienst maakt deel uit van het ministerie van Binnenlandse Zaken en Koninkrijksrelaties. De BVD bestaat -behalve uit twee stafdirecties- uit vier directies die werken aan het verzamelen van gegevens, het verwerken en analyseren van gegevens en het verstrekken van informatie aan de voor de staatsveiligheid verantwoordelijke instanties. Tevens is er een project Inlichtingen Buitenland dat, gelet op de nieuwe wetgeving, voorbereidingen treft voor de toekomstige inlichtingentaak buitenland.

De werkzaamheden binnen de directies worden uitgevoerd door teams en afdelingen. Zo zijn er teams die zich bezig houden met onderzoek naar illegale wapenhandel, extremistische organisaties van linkse en rechtse signatuur en aspecten van de georganiseerde misdaad. Daarnaast kent de BVD afdelingen die zich onder meer richten op beveiligingsbevordering, veiligheidsonderzoeken en contacten met de buitenlandse relaties van de BVD.

Bij de BVD werken circa 560 mensen. Het jaarlijks budget bedraagt zo'n 80 miljoen gulden. Dit is verdeeld over de posten personeel (75%), materieel (19%) en geheime uitgaven (6%).

De politieke verantwoordelijkheid voor de BVD en het toezicht op de taakuitvoering is in Nederland op verschillende manieren geregeld.

De minister en het parlement

De minister van Binnenlandse Zaken en Koninkrijksrelaties is verantwoordelijk voor de BVD. Het hoofd van de BVD overlegt regelmatig met de minister over de taakuitoefening van de dienst. De minister informeert het parlement over de werkzaamheden van de BVD en brengt jaarlijks een openbaar verslag uit over onderwerpen die dat jaar de aandacht van de BVD kregen. Dit jaarverslag wordt met de Kamer besproken. Ook bij andere gelegenheden wordt de Kamer - al dan niet op verzoek - geïnformeerd.

De Commissie voor de inlichtingen- en veiligheidsdiensten

De Tweede Kamer heeft een controlerende taak ten aanzien van de BVD. Om die taak zo goed mogelijk te vervullen heeft de Kamer een speciale commissie in het leven geroepen die behalve de werkzaamheden van de BVD ook die van de MID controleert. De nadruk ligt vooral op de vertrouwelijke aspecten van het werk van de diensten, reden waarom de leden een geheimhoudingsplicht hebben. De commissie - die bestaat uit de fractievoorzitters van de vier grote partijen - behandelt ook klachten van burgers over de handelwijze van de BVD. Een taak waarmee eveneens de Nationale ombudsman is belast.

Accountantsdienst en Algemene Rekenkamer

De uitgaven van de BVD vallen - net als die van de andere onderdelen van Binnenlandse Zaken en Koninkrijksrelaties - onder de normale departementale accountantscontrole. De directeur van de accountantsdienst van het ministerie van Binnenlandse Zaken en Koninkrijksrelaties controleert jaarlijks de geheime uitgaven (slechts zes procent van de begroting) van de BVD. Zijn rapport wordt voorgelegd aan de President van de Algemene Rekenkamer. De president heeft inzage in alle dossiers en is tot geheimhouding verplicht over de operationele bijzonderheden.

Nationale ombudsman

Klachten over de BVD kunnen worden onderzocht door de Nationale ombudsman die daarvoor toegang heeft tot alle relevante informatie. Ook de ombudsman heeft een geheimhoudingsplicht over de operationele bijzonderheden.

✓ [Defensive Information Warfare](#)

The Information Age carries implications for virtually all human endeavors, including the military profession. It's likely that these implications have or will produce revolutionary changes in warfare, but that issue remains unresolved among academics and military specialists alike. The search for answers, however, has generated a new intellectual excitement about military theory. It also has uncovered some preliminary notions about national security that require attention now.

✓ [Introduction to Information Warfare](#) new

In this paper, "real" Information Warfare (IW) will be defined and it will show how IW is or could be used in the present or in the near future. This paper is been written with a target audience of non technical readers in mind. The paper will provide an introduction to Information Warfare to everyone who is interested in this field and link the experienced reader to supplementary documentation.

✓ [NATO 1997; Year of Change](#)

Dramatic changes since 1989 have required the North Atlantic Treaty Organization to rethink its force structure as well as to reconsider how to maintain the peace and security of Europe. In the strategic vacuum created by the dissolution of the Warsaw Pact, NATO sought to establish cooperative relations with the nations of Central and Eastern Europe. Organizing that cooperation rapidly led to the Partnership for Peace program and the enlargement of the alliance to include new democratic states in the region.

✓ [NSA new employee security manual](#)

✓ [Open Source Intelligence: Professional Handbook 1.0](#)

This handbook is based almost entirely on six of the eight lessons comprising the Open Source Training Course funded by the Defense Intelligence Agency (DIA). It has been prepared by the staff of the Navy-Marine Corps Intelligence Center as a means for consolidating the course materials in a form which could be most useful to Marine Air Ground Task Force (MAGTF) staff.

✓ [Patterns of Global Terrorism: 1998](#)

Publication of the US Department of State

✓ [Psychology of Intelligence Analysis](#) new

By Richards J. Heuer, Jr.

The articles are based on reviewing cognitive psychology literature concerning how people process information to make judgments on incomplete and ambiguous information. I selected the experiments and findings that seem most relevant to intelligence analysis and most in need of communication to intelligence analysts. I then translated the technical reports into language that intelligence analysts can understand and interpreted the relevance of these findings to the problems intelligence analysts face.

✓ [Strategic Assessment 1997; Flashpoints en Force Structure](#)

The Strategic Assessment applies the research expertise of the National Defense University, under the leadership of its interdisciplinary research arm, the Institute for National Strategic Studies, with the generous assistance of analysts from elsewhere in the U.S. government and from the private sector. Offering such analyses, in both general and more specialized areas of interest to the national security community, is one part of NDU's educational mission. That

mission, as defined by the Joint Chiefs of Staff, is to educate senior military and government officials on issues related to national strategy, security policy, resources management, and warfare in the information age.

✓ [Strategic Assessment 1998; Engaging Power for Peace](#)

This is the fourth volume in the annual Strategic Assessment series produced by the Institute for National Strategic Studies at the National Defense University, and undertaken to contribute to the national effort to understand more clearly the nature of, and the U.S. role in, the new international system. This volume complements the Strategic Forum series (issue papers on key national security topics), Joint Force Quarterly (a professional military journal published for the Chairman of the Joint Chiefs), and other titles issued by INSS. While Strategic Assessment is not an official government publication, we trust that it will inform and influence policymakers and academics alike.
