Counterfitting Money

Counterfeiting Money by The Jolly Roger

Before reading this article, it would be a very good idea to get a book on photo offset printing, for this is the method used in counterfeiting US currency. If you are familiar with this method of printing, counterfeiting should be a simple task for you.

Genuine currency is made by a process called "gravure", which involves etching a metal block. Since etching a metal block is impossible to do by hand, photo offset printing comes into the process.

Photo offset printing starts by making negatives of the currency with a camera, and putting the negatives on a piece of masking material (usually orange in color). The stripped negatives, commonly called "flats", are then exposed to a lithographic plate with an arc light plate maker. The burned plates are then developed with the proper developing chemical. One at a time, these plates are wrapped around the plate cylinder of the press.

The press to use should be an 11 by 14 offset, such as the AB Dick 360. Make 2 negatives of the portrait side of the bill, and 1 of the back side. After developing them and letting them dry, take them to a light table. Using opaque on one of the portrait sides, touch out all the green, which is the seal and the serial numbers. The back side does not require any retouching, because it is all one color. Now, make sure all of the negatives are registered (lined up correctly) on the flats. By the way, every time you need another serial number, shoot 1 negative of the portrait side, cut out the serial number, and remove the old serial number from the flat replacing it with the new one.

Now you have all 3 flats, and each represents a different color: black, and 2 shades of green (the two shades of green are created by mixing inks). Now you are ready to burn the plates. Take a lithographic plate and etch three marks on it. These marks must be 2 and 9/16 inches apart, starting on one of the short edges. Do the same thing to 2 more plates. Then, take 1 of the flats and place it on the plate, exactly lining the short edge up with the edge of the plate. Burn it, move it up to the next mark, and cover up the exposed area you have already burned. Burn that, and do the same thing 2 more times, moving the flat up one more mark. Do the same process with the other 2 flats (each on a separate plate). Develop all three plates. You should now have 4 images on each plate with an equal space between each bill.

The paper you will need will not match exactly, but it will do for most situations. The paper to use should have a 25% rag content. By the way, Disaperf computer paper (invisible perforation) does the job well. Take the paper and load it into the press. Be sure to set the air, buckle, and paper thickness right. Start with the black plate (the plate without the serial numbers). Wrap it around the cylinder and load black ink in. Make sure you run more than you need because there will be a lot of rejects. Then, while that is printing, mix the inks for the serial numbers and the back side. You will need to add some white and maybe yellow to the serial number ink. You also need to add black to the back side. Experiment until you get it right. Now, clean the press and print the other side. You will now have a bill with no green seal or serial numbers. Print a few with one serial number, make another and repeat. Keep doing this until you have as many different numbers as you want. Then cut the bills to the exact size with a paper cutter. You should have printed a large amount of money by now, but there is still one problem; the paper is pure white. To dye it, mix the following in a pan: 2 cups of hot water, 4 tea bags, and about 16 to 20 drops of green food coloring (experiment with this). Dip one of the bills in and compare it to a genuine US bill. Make the necessary adjustments, and dye all the bills. Also, it is a good idea to make them look used. For example, wrinkle them, rub coffee grinds on them, etc.

As before mentioned, unless you are familiar with photo offset printing, most of the information in this article will be fairly hard to understand. Along with getting a book on photo offset printing, try to see the movie "To Live and Die in LA". It is about a counterfeiter, and the producer does a pretty good job of showing how to counterfeit. A good book on the subject is "The Poor Man's James Bond".

If all of this seems too complicated to you, there is one other method available for counterfeiting: The Canon color laser copier. The Canon can replicate ANYTHING in vibrant color, including US currency. But, once again, the main problem in counterfeiting is the paper used. So, experiment, and good luck!

Credit Card Fraud

Credit Card Fraud brought to you by The Jolly Roger

For most of you out there, money is hard to come by. Until now:

With the recent advent of plastic money (credit cards), it is easy to use someone else's credit card to order the items you have always desired in life. The stakes are high, but the payoff is worth it.

Step One: Getting the credit card information

First off, you must obtain the crucial item: someone's credit card number. The best way to get credit card numbers is to take the blue carbons used in a credit card transaction at your local department store. These can usually be found in the garbage can next to the register, or for the more daring, in the garbage dumpster behind the store. But, due to the large amount of credit card fraud, many stores have opted to use a carbonless transaction sheet, making things much more difficult. This is where your phone comes in handy.

First, look up someone in the phone book, and obtain as much information as possible about them. Then, during business hours, call in a very convincing voice - "Hello, this is John Doe from the Visa Credit Card Fraud Investigations Department. We have been informed that your credit card may have been used for fraudulent purposes, so will you please read off the numbers appearing on your Visa card for verification." Of course, use your imagination! Believe it or not, many people will fall for this ploy and give out their credit information.

Now, assuming that you have your victim's credit card number, you should be able to decipher the information given.

Step Two: Recognizing information from carbon copies

Card examples:

[American Express]

XXXX XXXXXX XXXXX

MM/Y1 THRU MM/Y2

JOE SHMOE

[American Express]

XXXX XXXXXX XXXXX

MM/Y1 THRU MM/Y2

JOE SHMOE

Explanation: MM/Y1 is the date the card was issued, and MM/Y2 is the expiration date. The American Express Gold Card has numbers XXXXXX XXXXXXXXXX XXXXXXXXXX, and is covered for up to \$5000.00, even if the card holder is broke.

[Mastercard]

5XXX XXXX XXXX XXXX

XXXX AAA DD-MM-YY MM/YY

JOE SHMOE

Explanation: XXXX in the second row may be asked for during the ordering process. The first date is when the card was new, and the second is when the card expires. The most frequent number combination used is 5424 1800 XXXX XXXX. There are many of these cards in circulation, but many of these are on wanted lists, so check these first.

[Visa]

4XXX XXX(X) XXX(X) XXX(X)

MM/YY MM/YY*VISA

JOE SHMOE

Explanation: Visa is the most abundant card, and is accepted almost everywhere. The "*VISA" is sometimes replaced with "BWG", or followed with a special code. These codes are as follows:

[1] MM/YY*VISA V - Preferred Card

[2] MM/YY*VISA CV - Classic Card

[3] MM/YY*VISA PV - Premier Card

Preferred Cards are backed with money, and are much safer to use. Classic Cards are newer, harder to reproduce cards with decent backing. Premier Cards are Classic Cards with Preferred coverage. Common numbers are 4448 020 XXX XXX, 4254 5123 6000 XXXX, and 4254 5123 8500 XXXX. Any 4712 1250 XXXX XXXX cards are IBM Credit Union cards, and are risky to use, although they are usually covered for large purchases.

Step Three: Testing credit

You should now have a Visa, Mastercard, or American Express credit card number, with the victim's address, zip code, and phone number. By the way, if you have problems getting the address, most phone companies offer the Address Tracking Service, which is a special number you call that will give you an address from a phone number, at a nominal charge. Now you need to check the balance of credit on the credit card (to make sure you don't run out of money), and you must also make sure that the card isn't stolen. To do this you must obtain a phone number that businesses use to check out credit cards during purchases. If you go to a department store, watch the cashier when someone makes a credit card purchase. He/she will usually call a phone number, give the credit information, and then give what is called a "Merchant Number". These numbers are usually written down on or around the register. It is easy to either find these numbers and copy them, or to wait until they call one in. Watch what they dial and wait for the 8 digit (usually) merchant number. Once you call the number, in a calm voice, read off the account number, merchant number, amount, and expiration date. The credit bureau will tell you if it is ok, and will give you an authorization number. Pretend you are writing this number down, and repeat it back to them to check it. Ignore this number completely, for it serves no real purpose. However, once you do this, the bank removes dollars equal to what you told them, because the card was supposedly used to make a purchase. Sometimes you can trick the operator by telling her the customer changed his mind and decided not to charge it. Of course, some will not allow this. Remember at all times that you are supposed to be a store clerk calling to check out the card for a purchase. Act like you are talking with a customer when he/she "cancels".

Step Four: The drop

Once the cards are cleared, you must find a place to have the package sent. NEVER use a drop more than once. The following are typical drop sites:

[1] An empty house

An empty house makes an excellent place to send things. Send the package UPS, and leave a note on the door saying, "UPS. I work days, 8 to 6. Could you please leave the package on the back door step?" You can find dozens of houses from a real estate agent by telling them you want to look around for a house. Ask for a list of twenty houses for sale, and tell them you will check out the area. Do so, until you find one that suits your needs.

[2] Rent A Spot

U-Haul sometimes rents spaces where you can have packages sent and signed for. End your space when the package arrives.

[3] People's houses

Find someone you do not know, and have the package sent there. Call ahead saying that "I called the store and they sent the package to the wrong address. It was already sent, but can you keep it there for me?" This is a very reliable way if you keep calm when talking to the people.

Do NOT try post office boxes. Most of the time, UPS will not deliver to a post office box, and many people have been caught in the past attempting to use a post office box. Also, when you have determined a drop site, keep an eye on it for suspicious characters and cars that have not been there before.

Step Five: Making the transaction

You should now have a reliable credit card number with all the necessary billing information, and a good drop site.

The best place to order from is catalogues, and mail order houses. It is in your best interest to place the phone call from a pay phone, especially if it is a 1-800 number. Now, when you call, don't try to disguise your voice, thinking you will trick the salesperson into believing you are an adult. These folks are trained to detect this, so your best bet is to order in your own voice. They will ask for the following: name, name as it appears on card, phone number, billing address, expiration date, method of shipping, and product. Ask if they offer UPS Red shipping (next day arrival), because it gives them less time to research an order. If you are using American Express, you might have a bit of a problem shipping to an address other than the billing address. Also, if the salesperson starts to ask questions, do NOT hang up. Simply talk your way out of the situation, so you won't encourage investigation on the order.

If everything goes right, you should have the product, free of charge. Insurance picks up the tab, and no one is any wiser. Be careful, and try not to order anything over \$500. In some states, UPS requires a signature for anything over \$200, not to mention that anything over \$200 is defined as grand theft, as well as credit fraud. Get caught doing this, and you will bite it for a couple of years. Good luck!

Making Plastic Explosives From Bleach

Making Plastic Explosives from Bleach by The Jolly Roger

Potassium chlorate is an extremely volatile explosive compound, and has been used in the past as the main explosive filler in grenades, land mines, and mortar rounds by such countries as France and Germany. Common household bleach contains a small amount of potassium chlorate, which can be extracted by the procedure that follows.

First off, you must obtain:

[1] A heat source (hot plate, stove, etc.)

[2] A hydrometer, or battery hydrometer

[3] A large Pyrex, or enameled steel container (to weigh chemicals)

[4] Potassium chloride (sold as a salt substitute at health and nutrition stores)

Take one gallon of bleach, place it in the container, and begin heating it. While this solution heats, weigh out 63 grams of potassium chloride and add this to the bleach being heated. Constantly check the solution being heated with the hydrometer, and boil until you get a reading of 1.3. If using a battery hydrometer, boil until you read a FULL charge.

Take the solution and allow it to cool in a refrigerator until it is between room temperature and 0 degrees Celcius. Filter out the crystals that have formed and save them. Boil this solution again and cool as before. Filter and save the crystals.

Take the crystals that have been saved, and mix them with distilled water in the following proportions: 56 grams per 100 milliliters distilled water. Heat this solution until it boils and allow to cool. Filter the solution and save the crystals that form upon cooling. This process of purification is called "fractional crystalization". These crystals should be relatively pure potassium chlorate.

Powder these to the consistency of face powder, and heat gently to drive off all moisture.

Now, melt five parts Vaseline with five parts wax. Dissolve this in white gasoline (camp stove gasoline), and pour this liquid on 90 parts potassium chlorate (the powdered crystals from above) into a plastic bowl. Knead this liquid into the potassium chlorate until intimately mixed. Allow all gasoline to evaporate.

Finally, place this explosive into a cool, dry place. Avoid friction, sulfur, sulfides, and phosphorous compounds. This explosive is best molded to the desired shape and density of 1.3 grams in a cube and dipped in wax until water proof. These block type charges guarantee the highest detonation velocity. Also, a blasting cap of at least a 3 grade must be used.

The presence of the afore mentioned compounds (sulfur, sulfides, etc.) results in mixtures that are or can become highly sensitive and will possibly decompose explosively while in storage. You should never store homemade explosives, and you must use EXTREME caution at all times while performing the processes in this article.

You may obtain a catalog of other subject of this nature by writing:

Picking Master Locks

Picking Master Locks by The Jolly Roger

Have you ever tried to impress someone by picking one of those Master combination locks and failed?

The Master lock company made their older combination locks with a protection scheme. If you pull the handle too hard, the knob will not turn. That was their biggest mistake.

The first number:

Get out any of the Master locks so you know what is going on. While pulling on the clasp (part that springs open when you get the combination right), turn the knob to the left until it will not move any more, and add five to the number you reach. You now have the first number of the combination.

The second number:

Spin the dial around a couple of times, then go to the first number you got. Turn the dial to the right, bypassing the first number once. When you have bypassed the first number, start pulling on the clasp and turning the knob. The knob will eventually fall into the groove and lock. While in the groove, pull the clasp and turn the knob. If the knob is loose, go to the next groove, if the knob is stiff, you have the second number of the combination.

The third number:

After getting the second number, spin the dial, then enter the two numbers. Slowly spin the dial to the right, and at each number, pull on the clasp. The lock will eventually open if you did the process right.

This method of opening Master locks only works on older models. Someone informed Master of their mistake, and they employed a new mechanism that is foolproof (for now).

The Arts Of Lockpicking Part II

The Arts of Lockpicking II courtesy of The Jolly Roger

So you want to be a criminal. Well, if you want to be like James Bond and open a lock in fifteen seconds, then go to Hollywood, because that is the only place you are ever going to do it. Even experienced locksmiths can spend five to ten minutes on a lock if they are unlucky. If you are wanting extremely quick access, look elsewhere. The following instructions will pertain mostly to the "lock in knob" type lock, since it is the easiest to pick.

First of all, you need a pick set. If you know a locksmith, get him to make you a set. This will be the best possible set for you to use. If you find a locksmith unwilling to supply a set, don't give up hope. It is possible to make your own, if you have access to a grinder (you can use a file, but it takes forever).

The thing you need is an allen wrench set (very small). These should be small enough to fit into the keyhole slot. Now, bend the long end of the allen wrench at a slight angle (not 90 degrees). Now, take your pick to a grinder or a file, and smooth the end until it is rounded so it won't hang inside the lock. Test your tool out on doorknobs at your house to see if it will slide in and out smoothly. Now, this is where the screwdriver comes in. It must be small enough for it and your pick to be used in the same lock at the same time, one above the other. In the coming instructions, please refer to this chart of the interior of a lock:

[Please Download the cookbook and look at this, it looks like garbage in HTML. =(

The object is to press the pin up so that the space between the upper pin and the lower pin is level with the cylinder wall. Now, if you push a pin up, it's tendency is to fall back down, right? That is where the screwdriver comes in. Insert the screwdriver into the slot and turn. This tension will keep the "solved" pins from falling back down. Now, work from the back of the lock to the front, and when you are through, there will be a click, the screwdriver will turn freely, and the door will open.

Do not get discouraged on your first try! It will probably take you about twenty to thirty minutes your first time. After that, you will quickly improve with practice.

The creator of this page and any links it may lead to hereby takes no responsibility or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Users read at their own risk. It is *NOT* recommended that the user do anything described in this and subsequent pages. Doing so may result in serious trouble, arrest, injury, and possibly deportation or death. Thank you.

The Anarchist's Cookbook

Solidox Bombs

Solidox Bombs by The Jolly Roger

Most people are not aware that a volatile, extremely explosive chemical can be bought over the counter: Solidox.

Solidox comes in an aluminum can containing 6 grey sticks, and can be bought at Kmart, and various hardware supply shops for around \$7.00. Solidox is used in welding applications as an oxidizing agent for the hot flame needed to melt metal. The most active ingredient in Solidox is potassium chlorate, a filler used in many military applications in the WWII era.

Since Solidox is literally what the name says: SOLID OXYgen, you must have an energy source for an explosion. The most common and readily available energy source is common household sugar, or sucrose. In theory, glucose would be the purest energy source, but it is hard to find a solid supply of glucose.

Making the mixture:

[1] Open the can of Solidox, and remove all 6 sticks. One by one, grind up each of the sticks (preferably with a mortar and pestle) into the finest powder possible.

[2] The ratio for mixing the sugar with the Solidox is 1:1, so weigh the Solidox powder, and grind up the equivalent amount of sugar.

[3] Mix equivalent amounts of Solidox powder, and sugar in a 1:1 ratio.

It is just that simple! You now have an extremely powerful substance that can be used in a variety of applications. A word of caution: be **EXTREMELY** careful in the entire process. Avoid friction, heat, and flame. A few years back, a teenager I knew blew 4 fingers off while trying to make a pipe bomb with Solidox. You have been warned!

The creator of this page and any links it may lead to hereby takes no responsibility or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Users read at

their own risk. It is **NOT** recommended that the user do anything described in this and subsequent pages. Doing so may result in serious trouble, arrest, injury, and possibly deportation or death. Thank you.

The Anarchist's Cookbook

High Tech Revenge: The Beigebox rev. 4.14

by -= Exodus =-

-----Introduction-----

Have you ever wanted a lineman's handset? Surely every phreak has at least once considered the phun that he could have with one. After searching unlocked phone company trucks for months, we had an idea. We could build one. We did, and named it the "Beige Box" simply because that is the color of ours. The beigebox is simply a consumer lineman's handset, which is a phone that can be attached to the outside of a person's house. To fabricate a beigebox, follow along

-----Construction and Use-----

The construction is very simple. First you must understand the concept of the device. In a modular jack, there are four wires. These are red, green, yellow, and black. or a single line telephone, however, only two matter: the red (ring) and green (tip). The yellow and the black are not necessary for this project. A lineman's handset has two clips on it: the ring and the tip. Take a modular jack and look at the bottom of it's casing. There should be a grey jack with four wires (red, green, yellow & black) leading out of it. To the end of the red wire attach a red aligator clip. To the end of the green wire attatch a green aligator clip. The yellow and black wires can be removed, although I would only set them aside so that you can use the modular jack in future projects. Now insert your telephone's modular plug into the modular jack.

That's it. This particular model is nice because it is can be easily made, is inexpensive, uses common parts that are readily available, is small, is lightweight, and does not require the destruction of a phone.

-----Beige Box Uses-----

There are many uses for a Beige Box. However, before you can use it, you must know how to attach it to the output device. This device can be of any of Bell switching apparatus that include germinal sets (i.e. remote switching centers, bridgin heads, cans, etc.). To open most Bell Telephone switching apparatus, you must have a 7/16 inch hex driver (or a good pair of needle nose pliers work also). This piece of equipment can be picked up at your local hardware store. With your hex driver (or pliers), turn the security bolt(s) approximately 1/8 of an inch counter-clockwise and open. If your output device is locked, then you must have some knowledge of destroying and/or picking locks. However, we have never encountered a

locked output device. Once you have opened your output device, you should see a mass of wires connected to terminals.

On most output devices, the terminals should be labeled "T" (Tip -- if not labeled, it is usually on the left) and "R" (Ring -- if not labeled, usually on the right). Remember: Ring - red - right. The "Three R's" -- a simple way to remember which is which. Now you must attach all the red alligator clip (Ring) to the "R" (Ring) terminal. Attach the green alligator clip (Tip) to the "T" (Tip) terminal.

Note: If instead of a dial tone you hear nothing, adjust the alligator clips so that they are not touching each other terminals. Also make sure they are firmly attached. By this time you should hear a dial tone. Dial ANI to find out the number you are using (you wouldn't want to use your own). Here are some practice applications:

- * Eavesdropping
- * Long distance, static free free fone calls to phriends
- * Dialing direct to Alliance Teleconferencing (also no static)
- * Phucking people over
- * Bothering the operator at little risk to yourself
- * Blue Boxing with greatly reduced chance of getting caught
- * Anything at all you want, since you are on an extension of that line.

Eavesdropping

To be most effective, first attach the Beige Box then your phone. This eliminates the static caused by connecting the box, therefore reducing the potential suspicion of your victim. When eavesdropping, it is always best to be neither seen nor heard. If you hear someone dialing out, do not panic; but rather hang up, wait, and pick up the receiver again. The person will either have hung up or tried to complete their call again. If the latter is true, then listen in, and perhaps you will find information worthy of blackmail! If you would like to know who you are listening to, after dialing ANI, pull a CN/A on the number.

Dialing Long Distance

This section is self explanatory, but don't forget to dial a "1" before the NPA. Dialing Direct to Alliance Teleconferencing Simply dial 0-700-456-1000 and you will get instructions from there. I prefer this method over PBX's, since PBX's often have poor reception and are more difficult to come by.

Phucking People Over

This is a very large topic of discussion. Just by using the other topics described, you can

create a large phone bill for the person (they will not have to pay for it, but it will be a big hassle for them). In addition, since you are an extension of the person's line, you can leave your phone off the hook, and they will not be able to make or receive calls. This can be extremely nasty because no one would expect the cause of the problem.

Bothering the Operator

This is also self explanatory and can provide hours of entertainment. Simply ask her things that are offensive or you would not like traced to your line. This also corresponds to the previously described section, Phucking People Over. After all, guess who's line it gets traced to? He he he...

Blue Boxing

See a file on Blue Boxing for more details. This is an especially nice feature if you live in an ESS-equipped prefix, since the calls are, once again, not traced to your line...

---POTENTIAL RISKS OF BEIGE BOXING---

Overuse of the Beige Box may cause suspicions within the Gestapo, and result in legal problems. Therefore, I would recommend you:

- * Choose a secluded spot to do your Beige Boxing,
- * Use more than one output device
- * Keep a low profile (i.e., do not post under your real name on a public BBS concerning your accomplishments)
- * In order to make sure the enemy has not been inside your output device, I recommend you place a piece of transparent tape over the opening of your output device. Therefore, if it is opened in your absence, the tapque will be displaced and you will be aware of the fact that someone has intruded on your territory. Now, imagine the possibilities: a \$2000 dollar phone bill for that special person, 976 numbers galore, even harassing the operator at no risk to you! Think of it as walking into an enemies house, and using their phone to your heart's content.

CO2 Bombs

How to make a CO2 bomb by the Jolly Roger

You will have to use up the cartridge first by either shooting it or whatever. With a nail, force a hole bigger so as to allow the powder and wick to fit in easily. Fill the cartridge with black powder and pack it in there real good by tapping the bottom of the cartridge on a hard surface (I said TAP not SLAM!). Insert a fuse. I recommend a good water-proof cannon fuse, or an m-80 type fuse, but firecracker fuses work, if you can runfast enough. Now, light it and run like hell! It does wonders for a row of mailboxes (like the ones in apartment complexes), a car (place under the gas tank), a picture window (place on window sill), a phone booth (place right under the phone), or any other devious place. This thing throws shrapnel, and can make quit a mess!!

Thermite Bombs

Thermite II... or A better way to make Thermite by Jolly Roger

Thermite is nasty shit. Here is a good and easy way to make it. The first step is to get some iron-oxide (which is RUST!). Here is a good way to make large quantities in a short time:

- Get a DC convertor like the one used on a train set. Cut the connector off, separate the wires, and strip them both.
- Now you need a jar of water with a tablespoon or so of sodium chloride (which is SALT!) added to it. This makes the water conductive.
- Now insert both wires into the mixture (I am assuming you plugged the convertor in...) and let them sit for five minutes. One of them will start bubbling more than the other. This is the POSITIVE(+) wire. If you do not do this test right, the final product will be the opposite (chemically) of rust, which is RUST ACID. You have no use for this here (although it IS useful!).
- Anyway, put the nail tied to the positive wire into the jar. Now put the negative wire in the other end. Now let it sit overnight and in the morning scrape the rust off of the nail & repeat until you got a bunch of rust on the bottom of the glass. Be generous with your rust collection. If you are going through the trouble of making thermite, you might as well make a lot, right?
- Now remove the excess water and pour the crusty solution onto a cookie sheet. Dry it in the sun for a few hours, or inside overnight. It should be an orange-brown color (although I have seen it in many different colors! Sometimes the color gets fucked up, what can I say... but it is still iron oxide!)
- Crush the rust into a fine powder and heat it in a cast-iron pot until it is red. Now mix the pure iron oxide with pure aluminum filinos which can be bought or filed down by hand from an aluminum tube or bar. The ratio of iron oxide to aluminum is 8 grams to 3 grams.
- Congrats! You have just made THERMITE! Now, to light it...
- Thermite requires a LOT of heat (more than a blow torch!) to ignite. However, a magnesium ribbon

(which is sorta hard to find.. call around) will do the trick. It takes the heat from the burning magnesium to light the thermite.

- Now when you see your victim's car, pour a fifty-cent sized pile onto his hood, stick the ribbon in it, and light the ribbon with the blow torch. Now chuckle as you watch it burn through the hood, the block, the axle, and the pavement. BE CAREFUL! The ideal mixtures can vaporize CARBON STEEL! Another idea is to use thermite to get into pay phone cash boxes. HAVE FUN!!

Touch Explosives

Touch Explosives by the Jolly Roger

This is sort of a mild explosive, but it can be quite dangerous in large quantities. To make touch explosive (such as that found in a snap-n-pop, but more powerful), use this recipe:

- Mix iodine crystals into ammonia until the iodine crystals will not dissolve into the ammonia anymore. Pour off the excess ammonia and dry out the crystals on a baking sheet the same way as you dried the thermite (in other words, just let it sit overnight!).

- Be careful now because these crystals are now your touch explosive. Carefully wrap a bunch in paper (I mean carefully! Friction sets 'em off!) and throw them around.. pretty loud, huh? They are fun to put on someone's chair. Add a small fish sinker to them and they can be thrown a long distance (good for crowds, football games, concerts, etc.) Have fun!

Letter Bombs

Letter Bombs by The Jolly Roger

- You will first have to make a mild version of thermite. Use my recipe, but substitute iron fillings for rust.
- Mix the iron with aluminum fillings in a ratio of 75% aluminum to 25% iron. This mixture will burn violently in a closed space (such as an envelope). This bring us to our next ingredient...
- Go to the post office and buy an insulated (padded) envelope. You know, the type that is double layered... Separate the layers and place the mild thermite in the main section, where the letter would go. Then place magnesium powder in the outer layer. There is your bomb!!
- Now to light it... this is the tricky part and hard to explain. Just keep experimenting until you get something that works. The fuse is just that touch explosive I have told you about in another one of my anarchy files. You might want to wrap it like a long cigarette and then place it at the top of the envelope in the outer layer (on top of the powdered magnesium). When the touch explosive is torn or even squeezed hard it will ignite the powdered magnesium (sort of a flash light) and then it will burn the mild thermite. If the thermite didn't blow up, it would at least burn the fuck out of your enemy (it does wonders on human flesh!).

NOW that is REVENGE! -Jolly Roger-

Paint Bombs

Paint Bombs by The Jolly Roger

To make a pain bomb you simply need a metal pain can with a refastenable lid, a nice bright color paint (green, pink, purple, or some gross color is perfect!), and a quantity of dry ice. Place the paint in the can and then drop the dry ice in. Quicky place the top on and then run like hell! With some testing you can time this to a science. It depends on the ratio of dry ice to paint to the size of the can to how full it is. If you are really pissed off at someone, you could place it on their doorstep, knock on the door, and then run!! Paint will fly all over the place HAHHAHA!!

Ways to send a car to HELL

Ways to send a car to Hell by The Jolly Roger

There are 1001 ways to destroy a car but I am going to cover only the ones that are the most fun (for you), the most destructive (for them), and the hardest to trace (for the cops).

- Place thermite on the hood, light it, and watch it burn all the way through the pavement!
- Tape a CO2 bomb to the hood, axel, gas tank, wheel, muffler, etc.)
- Put a tampon, dirt, sugar (this one is good!), a ping pong ball, or just about anything that will dissolve in the gas tank.
- Put potatoes, rocks, banannas, or anything that will fit, into the tailpipe. Use a broom handle to stuff 'em up into the tailpipe.
- Put a long rag into the gas tank and light it...
- Steal a key, copy it, replace it, and then steal the stereo.
- Break into the car. Cut a thin metal ruler into a shape like this:

||

||

||

|<

Slide it into the outside window and keep pulling it back up until you catch the lock cable which should unlock the door. This device is also called a SLIM JIM. Now get the stereo, equalizer, radar detector, etc. Now destroy the inside. (A sharp knife does wonders on the seats!)

Have Fun! -Jolly Roger-

Do ya hate school?

Do ya hate school? by The Jolly Roger

- One of my favorites for getting out of a class or two is to call in a bomb threat. Tell 'em that it is in a locker. Then they have to check them all, whilst you can slip away for an hour or two. You can even place a fake bomb (in any locker but YOURS!). They might cancel school for a week while they investigate (of course, you will probably have to make it up in the summer...).
- Get some pure potassium or pure sodium, put it in a capsule, and flush it down the toilet (smells awful! Stinks up the whole school!).
- Use a smoke grenade in the hallway.
- Steal the computer passwords & keys. Or steal the 80 column cards inside if they are (gag) IBM.
- Make friends with student assistants and have them change your grades when the teachers hand in their bubble sheets for the report cards.
- Spit your gum out on the carpet in the library or whatever and grind it into the carpet. Watch the janitors cry!
- Draw on lockers or spraypaint on the building that the principal is a fascist.
- Stick a potato in the tailpipe of the principal's car.
- USE YOUR IMAGINATION! -Jolly Roger-

Phone related vandalism

Phone related vandalism by the Jolly Roger

If you live where there are underground lines then you will be able to ruin someone's phone life very easily. All you must do is go to their house and find the green junction box that interfaces their line (and possibly some others in the neighborhood) with the major lines. These can be found just about anywhere but they are usually underneath the nearest phone pole. Take a socket wrench and loosen the nut on the right. Then just take clippers or a sledge hammer or a bomb and destroy the insides and pull up their phone cable. Now cut it into segments so it can't be fixed but must be replaced (There is a week's worth of work for 'em!!)

Highway police radar jamming

Highway radar jamming by The Jolly Roger

Most drivers wanting to make better time on the open road will invest in one of those expensive radar detectors. However, this device will not work against a gun type radar unit in which the radar signal is not present until the cop has your car in his sights and pulls the trigger. Then it is TOO LATE for you to slow down. A better method is to continuously jam any signal with a radar signal of your own. I have tested this idea with the cooperation of a local cop and found that his unit reads random numbers when my car approached him. It is surprisingly easy to make a low power radar transmitter. A nifty little semiconductor called a Gunn Diode will generate microwaves when supplied with the 5 to 10 volt DC and enclosed in the correct size cavity (resonator). An 8 to 3 terminal regulator can be used to get this voltage from a car's 12v system. However, the correct construction and tuning of the cavity is difficult without good microwave measurement equipment. Police radars commonly operate on the K band at 22 ghz. Or more often on the X band at 10.525 ghz. most microwave intruder alarms and motion detectors (mounted over automatic doors in supermarkets & banks, etc.) contain a Gunn type transmitter/receiver combination that transmits about 10 kilowatts at 10.525 ghz. These units work perfectly as jammers. If you cannot get one locally, write to Microwave Associates in Burlington, Massachusettes and ask them for info on 'Gunnplexers' for ham radio use. When you get the unit it may be mounted in a plastic box on the dash or in a weather-proff enclosure behind the PLASTIC grille. Switch on the power when on an open highway. The unit will not jam radar to the side or behind the car so don't go speeding past the radar trap. An interesting phenomena you will notice is that the drivers who are in front of you who are using detectors will hit their brakes as you approach large metal signs and bridges. Your signal is bouncing off of these objects and triggering their radar detectors! HAVE FUN!

-Jolly Roger-

P.S. If you are interested in this sort of thing, get a copy of POPULAR COMMUNICATIONS. The ads in there tell you where you can get all kinds of info on all kinds of neat equipment for all kinds of neat things!

Smoke Bombs

Smoke Bombs by the Jolly Roger

Here is the recipe for one helluva smoke bomb!

4 parts sugar

6 parts potassium nitrate (Salt Peter)

Heat this mixture over a LOW flame until it melts, stirring well. Pour it into a future container and, before it solidifies, imbed a few matches into the mixture to use as fuses. One pound of this stuff will fill up a whole block with thick, white smoke!

Mail Box Bombs

Mail Box Bombs by the Jolly Roger

(1) Two litre bottle of chlorine (must contain sodium hypochlorate)

Small amount of sugar

Small amount of water

Mix all three of these in equal amounts to fill about 1/10 of the bottle. Screw on the lid and place in a mailbox. It's hard to believe that such a small explosion will literally rip the mailbox in half and send it 20 feet into the air! Be careful doing this, though, because if you are caught, it is not up to the person whose mailbox you blew up to press charges. It is up to the city.

Napalm II

Napalm (Another way to make it...) by the Jolly Roger

(See [Napalm](#) for an easy way to make it!!)

About the best fire bomb is napalm. It has a thick consistency, like jam and is best for use on vehicles or buildings. Napalm is simply one part gasoline and one part soap. The soap is either soap flakes or shredded bar soap. Detergents won't do. The gasoline must be heated in order for the soap to melt. The usual way is with a double boiler where the top part has at least a two-quart capacity. The water in the bottom part is brought to a boil and the double boiler is taken from the stove and carried to where there is no flame.

Then one part, by volume, of gasoline is put in the top part and allowed to heat as much as it will and the soap is added and the mess is stirred until it thickens. A better way to heat gasoline is to fill a bathtub with water as hot as you can get it. It will hold its heat longer and permit a much larger container than will the double boiler.

The Anarchist's Cookbook

How to Grow Marijuana

How to grow Marijuana courtesy of the Jolly Roger

MARIJUANA

Marijuana is a deciduous plant which grows from seeds. The fibrous section of the plant was (has been replaced by synthetics) used to make rope. The flowering tops, leaves, seeds, and resin of the plant is used by just about everyone to get HIGH.

Normally, the vegetable parts of the plant are smoked to produce this "high," but they can also be eaten. The active ingredient in marijuana resin is THC (tetahydrocannabinol). Marijuana contains from 1 - 4 per cent THC (4 per cent must be considered GOOD dope). Marijuana grows wild in many parts of the world, and is cultivated in Mexico, Vietnam, Africa, Nepal, India, South America, etc.,etc. The marijuana sold in the United States comes primarily from, yes, the United States.

It is estimated that at least 50 per cent of the grass on the streets in America is homegrown. The next largest bunch comes across the borders from Mexico, with smaller amounts filtering in from Panama, occasionally South America, and occasionally, Africa. Hashish is the pure resin of the marijuana plant, which is scraped from the flowering tops of the plant and lumped together. Ganja is the ground-up tops of the finest plants. (It is also the name given to any sort of marijuana in Jamaica.)

Marijuana will deteriorate in about two years if exposed to light, air or heat. It should always be stored in cool places. Grass prices in the United States are a direct reflection of the laws of supply and demand (and you thought that high school economics would never be useful). A series of large border busts, a short growing season, a bad crop, any number of things can drive the price of marijuana up. Demand still seems to be on the increase in the U.S., so prices seldom fall below last year's level.

Each year a small seasonal drought occurs, as last year's supply runs low, and next year's crop is not up yet. Prices usually rise about 20 - 75 per cent during this time and then fall back to "normal." Unquestionably, a large shortage of grass causes a percentage of smokers to turn to harder drugs instead. For this reason, no grass control program can ever be beneficial or "successful."

GROW IT!

There is one surefire way of avoiding high prices and the grass DT's: Grow your own. This is not as difficult as some "authorities" on the subject would make you believe. Marijuana is a weed, and a fairly

vivacious one at that, and it will grow almost in spite of you.

OUTDOORS

Contrary to popular belief, grass grows well in many places on the North American continent. It will flourish even if the temperature does not rise above 75 degrees.

The plants do need a minimum of eight hours of sunlight per day and should be planted in late April/early May, BUT DEFINITELY, after the last frost of the year.

Growing an outdoor, or "au naturel", crop has been the favored method over the years, because grass seems to grow better without as much attention when in its natural habitat.

Of course, an outdoors setting requires special precautions not encountered with an indoors crop; you must be able to avoid detection, both from law enforcement freaks and common freaks, both of whom will take your weed and probably use it. Of course, one will also arrest you. You must also have access to the area to prepare the soil and harvest the crop. There are two schools of thought about starting the seeds. One says you should start the seedlings for about ten days in an indoor starter box (see the indoor section) and then transplant. The other theory is that you should just start them in the correct location. Fewer plants will come up with this method, but there is no shock of transplant to kill some of the seedlings halfway through.

The soil should be preprepared for the little devils by turning it over a couple of times and adding about one cup of hydrated lime per square yard of soil and a little bit (not too much, now) of good water soluble nitrogen fertilizer. The soil should now be watered several times and left to sit about one week.

The plants should be planted at least three feet apart, getting too greedy and stacking them too close will result in stunted plants.

The plants like some water during their growing season, BUT not too much. This is especially true around the roots, as too much water will rot the root system.

Grass grows well in corn or hops, and these plants will help provide some camouflage. It does not grow well with rye, spinach, or pepperweed. It is probably a good idea to plant in many small, broken patches, as people tend to notice patterns.

GENERAL GROWING INFO

Both the male and the female plant produce THC resin, although the male is not as strong as the female. In a good crop, the male will still be plenty smokable and should not be thrown away under any circumstances. Marijuana can reach a height of twenty feet (or would you rather wish on a star) and obtain a diameter of 4 1/2 inches. If normal, it has a sex ratio of about 1:1, but this can be altered in several ways.

The male plant dies in the 12th week of growing, the female will live another 3 - 5 weeks to produce her

younguns. Females can weigh twice as much as males when they are mature.

Marijuana soil should compact when you squeeze it, but should also break apart with a small pressure and absorb water well. A nice test for either indoor or outdoor growing is to add a bunch of worms to the soil, if they live and hang around, it is good soil, but if they don't, well, change it. Worms also help keep the soil loose enough for the plants to grow well.

SEEDS

To get good grass, you should start with the right seeds. A nice starting point is to save the seeds from the best batch you have consumed. The seeds should be virile, that is, they should not be grey and shriveled up, but green, meaty, and healthy appearing. A nice test is to drop the seeds on a hot frying pan. If they "CRACK," they are probably good for planting purposes.

The seeds should be soaked in distilled water overnight before planting. BE SURE to plant in the ground with the pointy end UP. Plant about 1/2" deep. Healthy seeds will sprout in about five days.

SPROUTING

The best all around sprouting method is probably to make a sprouting box (as sold in nurseries) with a slatted bottom or use paper cups with holes punched in the bottoms. The sprouting soil should be a mixture of humus, soil, and fine sand with a bit of organic fertilizer and water mixed in about one week before planting.

When ready to transplant, you must be sure and leave a ball of soil around the roots of each plant. This whole ball is dropped into a baseball-sized hold in the permanent soil.

If you are growing/transplanting indoors, you should use a green safe light (purchased at nurseries) during the transplanting operation. If you are transplanting outdoors, you should time it about two hours before sunset to avoid damage to the plant. Always wear cotton gloves when handling the young plants.

After the plants are set in the hole, you should water them. It is also a good idea to use a commercial transplant chemical (also purchased at nurseries) to help them overcome the shock.

INDOOR GROWING

Indoor growing has many advantages, besides the apparent fact that it is much harder to have your crop "found," you can control the ambient conditions just exactly as you want them and get a guaranteed "good" plant.

Plants grown indoors will not appear the same as their outdoor cousins. They will be scrawnier appearing with a weak stems and may even require you to tie them to a growing post to remain upright, **BUT THEY WILL HAVE AS MUCH OR MORE RESIN!**

If growing in a room, you should put tar paper on the floors and then buy sterilized bags of soil from a

nursery. You will need about one cubic foot of soil for each plant.

The plants will need about 150 ml. of water per plant/per week. They will also need fresh air, so the room must be ventilated. (however, the fresh air should contain NO TOBACCO smoke.)

At least eight hours of light a day must be provided. As you increase the light, the plants grow faster and show more females/less males. Sixteen hours of light per day seems to be the best combination, beyond this makes little or no appreciable difference in the plant quality. Another idea is to interrupt the night cycle with about one hour of light. This gives you more females.

The walls of your growing room should be painted white or covered with aluminum foil to reflect the light.

The lights themselves can be either bulbs or fluorescent. Figure about 75 watts per plant or one plant per two feet of fluorescent tube. The fluorescents are the best, but do not use "cool white" types. The light sources should be an average of twenty inches from the plant and NEVER closer than 14 inches. They may be mounted on a rack and moved every few days as the plants grow.

The very best light sources are those made by Sylvania and others especially for growing plants (such as the "gro lux" types).

HARVESTING AND DRYING

The male plants will be taller and have about five green or yellow sepals, which will split open to fertilize the female plant with pollen.

The female plant is shorter and has a small pistillate flower, which really doesn't look like a flower at all but rather a small bunch of leaves in a cluster.

If you don't want any seeds, just good dope, you should pick the males before they shed their pollen as the female will use some of her resin to make the seeds.

After another three to five weeks, after the males are gone, the females will begin to wither and die (from loneliness?), this is the time to pick. In some nefarious Middle Eastern countries, farmers reportedly put their beehives next to fields of marijuana. The little devils collect the grass pollen for their honey, which is supposed to contain a fair dosage of THC.

The honey is then enjoyed by conventional methods or made into ambrosia. If you want seeds - let the males shed his pollen then pick him. Let the female go another month and pick her.

To cure the plants, they must be dried. On large crops, this is accomplished by constructing a drying box or drying room. You must have a heat source (such as an electric heater) which will make the box/room each 130 degrees. The box/room must be ventilated to carry off the water-vapor-laden air and replace it with fresh. A good box can be constructed from an orange crate with fiberglass insulated walls, vents in the tops, and screen shelves to hold the leaves. There must be a baffle between the leaves and the heat

source.

A quick cure for smaller amounts is to: cut the plant at the soil level and wrap it in a cloth so as not to lose any leaves. Take out any seeds by hand and store. Place all the leaves on a cookie sheet or aluminum foil and put them in the middle shelf of the oven, which is set on "broil." In a few seconds, the leaves will smoke and curl up, stir them around and give another ten seconds before you take them out.

TO INCREASE THE GOOD STUFF

There are several tricks to increase the number of females, or the THC content of plants:

You can make the plants mature in 36 days if you are in a hurry, by cutting back on the light to about 14 hours, but the plants will not be as big.

You should gradually shorten the light cycle until you reach fourteen hours.

You can stop any watering as the plants begin to make the resin rise to the flowers. This will increase the resin a bit.

You can use a sunlamp on the plants as they begin to develop flower stalks.

You can snip off the flower, right at the spot where it joins the plant, and a new flower will form in a couple of weeks.

This can be repeated two or three times to get several times more flowers than usual.

If the plants are sprayed with Ethrel early in their growing stage, they will produce almost all female plants. This usually speeds up the flowering also, it may happen in as little as two weeks.

You can employ a growth changer called colchicine. This is a bit hard to get and expensive. (Should be ordered through a lab of some sort and costs about \$35 a gram.)

To use the colchicine, you should prepare your presoaking solution of distilled water with about 0.10 per cent colchicine. This will cause many of the seeds to die and not germinate, but the ones that do come up will be polyploid plants. This is the accepted difference between such strains as "gold" and normal grass, and yours will DEFINITELY be superweed.

The problem here is that colchicine is a poison in larger quantities and may be poisonous in the first generation of plants. Bill Frake, author of CONNOISSEUR'S HANDBOOK OF MARIJUANA runs a very complete colchicine treatment down and warns against smoking the first generation plants (all succeeding generations will also be polyploid) because of this poisonous quality.

However, the Medical Index shows colchicine being given in very small quantities to people for treatment of various ailments. Although these quantities are small, they would appear to be larger than

any you could receive from smoking a seed-treated plant.

It would be a good idea to buy a copy of CONNOISSEUR'S, if you are planning to attempt this, and read Mr. Drake's complete instructions.

Another still-experimental process to increase the resin is to pinch off the leaf tips as soon as they appear from the time the plant is in the seedling stage on through its entire life-span. This produces a distorted, wrecked-looking plant which would be very difficult to recognize as marijuana. Of course, there is less substance to this plant, but such wrecked creatures have been known to produce so much resin that it crystallizes a strong hash all over the surface of the plant - might be wise to try it on a plant or two and see what happens.

PLANT PROBLEM CHART

Always check the overall environmental conditions prior to passing judgment - soil around 7 pH or slightly less - plenty of water, light, fresh air, loose soil, no water standing in pools.

SYMPTOM PROBABLY PROBLEM/CURE

Larger leaves turning yellow - smaller leaves still green.

Nitrogen deficiency - add nitrate of soda or organic fertilizer.

Older leaves will curl at edges, turn dark, possibly with a purple cast.

Phosphorus deficiency - add commercial phosphate.

Mature leaves develop a yellowish cast to least veinal areas.

Magnesium deficiency - add commercial fertilizer with a magnesium content.

Mature leaves turn yellow and then become spotted with edge areas turning dark grey.

Potassium deficiency - add muriate of potash.

Cracked stems, no healthy support tissue.

Boron deficiency - add any plant food containing boron.

Small wrinkled leaves with yellowish vein systems.

Zinc deficiency - add commercial plant food containing zinc.

Young leaves become deformed, possibly yellowing.

Molybdenum deficiency - use any plant food with a bit of molybdenum in it.

EXTRA SECTION:

BAD WEED/GOOD WEED

Can you turn bad weed into good weed? Surprisingly enough, the answer to this oft-asked inquiry is, yes!

Like most other things in life, the amount of good you are going to do relates directly to how much effort you are going to put into it. There are no instant, supermarket products which you can spray on Kansas catnip and have wonderweed, but there are a number of simplified, inexpensive processes (Gee, Mr. Wizard!) which will enhance mediocre grass somewhat, and there are a couple of fairly involved processes which will do up even almost-parsley weed into something worth writing home about.

EASES

1. Place the dope in a container which allows air to enter in a restricted fashion (such as a can with nail holes punched in its lid) and add a bunch of dry ice, and then place the whole shebang in the freezer for a few days. This process will add a certain amount of potency to the product, however, this only works with dry ice, if you use normal, everyday freezer ice, you will end up with a soggy mess...
2. Take a quantity of grass and dampen it, place in a baggie or another socially acceptable container, and store it in a dark, dampish place for a couple of weeks (burying it also seems to work). The grass will develop a mold which tastes a bit harsh, and burns a tiny bit funny, but does increase the potency.
3. Expose the grass to the high intensity light of a sunlamp for a full day or so. Personally, I don't feel that this is worth the effort, but if you just spent \$400 of your friend's money for this brick of super-Colombian, right-from-the-President's-personal-stash, and it turns out to be Missouri weed, and you're packing your bags to leave town before the people arrive for their shares, well, you might at least try it. Can't hurt.
4. Take the undisirable portions of our stash (stems, seeds, weak weed, worms, etc.) and place them in a covered pot, with enough rubbing alcohol to cover everything.

Now CAREFULLY boil the mixture on an ELECTRIC stove or lab burner. DO

NOT USE GAS - the alcohol is too flammable. After 45 minutes of heat, remove the pot and strain the solids out, SAVING THE ALCOHOL.

Now, repeat the process with the same residuals, but fresh alcohol. When the second boil is over, remove the solids again, combine the two quantities of alcohol and reboil until you have a syrupy mixture.

Now, this syrupy mixture will contain much of the THC formerly hidden in the stems and such. One simply takes this syrup and thoroughly combines it with the grass that one wishes to improve upon.

SPECIAL SECTION ON RELATED SUBJECT MARYGIN:

Marygin is an anagram of the words marijuana and gin, as in Eli Whitney. It is a plastic tumbler which

acts much like a commercial cotton gin. One takes about one ounce of an herb and breaks it up. This is then placed in the Marygin and the protuding knod is roated. This action turns the internal wheel, which separates the grass from the debris (seeds, stems).

It does not pulberize the grass as screens have a habit of doing and is easily washable.
Marygin is available from:

P.O. Box 5827
Tuscon, Arizona 85703
\$5.00

GRASS
Edmund Scientific Company
555 Edscorp Building
Barrington, New Jersy 08007

Free Catalog is a wonder of good things for the potential grass grower. They have an electric thermostat greenhouse for starting plants for a mere \$14.95.

Soil test kits for PH - \$2.40

Al test - \$9.95

Soil thermometer - \$2.75

Lights which approzimate the true color balance of the sun and are probably the most beneficial types available: 40 watt, 48 inch - 4 for \$15.75.

Indoor sun bulb, 75 or 150 watt - \$5.75.

And, they have a natural growth regualtor for plants (Gibberellin) which can change height, speed growth, and maturity, promote blossoming, etc. Each plant reacts differently to treatment with Gibberellin...there's no fun like experimentering - \$2.00

Match Head Bomb

Match Head Bomb by the Jolly Roger

Simple safety match heads in a pipe, capped at both ends, make a devastating bomb. It is set off with a regular fuse.

A plastic Baggie is put into the pipe before the heads go in to prevent detonation by contact with the metal.

Cutting enough match heads to fill the pipe can be tedious work for one but an evening's fun for the family if you can drag them away from the TV.

Terrorizing McDonalds

How To Terrorize McDonalds by the Jolly Roger
(Originally an Apple][file so excuse the upper case!!!)

NOW, ALTHOUGH Mc DONALDS IS FAMOUS FOR IT'S ADVERTISING AND MAKING THE WHOLE WORLD THINK THAT THE BIG MAC IS THE BEST THING TO COME ALONG SINCE SLICED BREAD (BUNS?), EACH LITTLE RESTAURANT IS AS AMATEUR AND SIMPLE AS A NEW-FOUND BUSINESS. NOT ONLY ARE ALL THE EMPLOYEES RATHER INEXPERIENCED AT WHAT THEY'RE =SUPPOSED= TO DO, BUT THEY WILL JUST LOOSE ALL CONTROL WHEN AN EMERGENCY OCCURS....HERE WE GO!!! FIRST, GET A FEW FRIENDS (4 IS GOOD...I'LL GET TO THIS LATER) AND ENTER THE MCDONALDS RESTAURANT, TALKING LOUDLY AND REAKING OF SOME STRANGE SMELL THAT AUTOMATICALLY MAKES THE OLD COUPLE SITTING BY THE DOOR LEAVE. IF ONE OF THOSE PIMPLY-FACED GOONS IS WIPING THE FLOOR, THEN TRACK SOME CRAP ALL OVER IT (YOU COULD PRETEND TO SLIP AND BREAK YOUR HEAD, BUT YOU MIGHT ACTUALLY DO SO).

NEXT, BEFORE YOU GET THE FOOD, FIND A TABLE. START YELLING AND RELEASING SOME STRANGE BODY ODOR SO =ANYBODY= WOULD LEAVE THEIR TABLE AND WALK OUT THE DOOR. SIT 2 FRIENDS THERE, AND GO UP TO THE COUNTER WITH ANOTHER. FIND A PLACE WHERE THE LINE IS SHORT, OR IF THE LINE IS LONG SAY "I ONLY WANNA BUY A COKE" AND YOU GET MOVED UP. NOW, YOU GET TO DO THE =ORDERING= ...HEH HEH HEH. SOMEBODY =ALWAYS= MUST WANT A PLAIN HAMBURGER WITH ABSOLUTELY NOTHING ON IT (THIS TAKES EXTRA TIME TO MAKE, AND DRIVES THE LITTLE HAMBURGER-MAKERS INSANE)..ORDER A 9-PACK OF CHICKEN MCNUGGETS...NO, A 20 PACK...NO, THREE 6 PACKS...WAIT...GO BACK TO THE TABLE AND ASK WHO WANTS WHAT. YOUR OTHER FRIEND WAITS BY THE COUNTER AND MAKES A PASS AT THE FEMALE CLERK. GET BACK TO THE THING AND ORDER THREE 6-PACKS OF CHICKEN ETC....NOW SHE SAYS "WHAT KIND OF SAUCE WOULD YOU LIKE?".OF COURSE, SAY THAT YOU ALL WANT BARBECUE SAUCE ONE OF YOUR FRIENDS WANTS 2 (ONLY IF THERE ARE ONLY 2 CONTAINERS OF BARBECUE SAUCE LEFT).THEN THEY HAFTA GO INTO THE STOREROOM AND OPEN UP ANOTHER BOX. FINALLY, THE DRINKS...SOMEBODY WANTS COKE, SOMEBODY ROOT BEER, AND SOMEBODY DIET COKE. AFTER THESE ARE DELIVERED,

BRING THEM BACK AND SAY "I DIDN'T ORDER A DIET COKE! I ORDERED A SPRITE!" THIS GETS THEM MAD; BETTER YET, TURN DOWN SOMETHING TERRIBLE THAT

NOBODY WANTS TO DRINK, SO THEY HAFTA THROW THE DRINK AWAY; THEY CAN'T SELL IT. AFTER ALL THE FOOD(?) IS HANDED TO YOU, YOU MUST =NEVER= HAVE ENOUGH MONEY TO PAY. THE CLERK WILL BE SO ANGRY AND CONFUSED THAT SHE'LL LET YA GET AWAY WITH IT (ANOTHER INFLUENCE ON HER IS YOUR FRIEND ASKING HER "IF YOU LET US GO I'LL GO OUT WITH YOU" AND GIVING HER A FAKE FONE NUMBER).

NOW, BACK TO YOUR TABLE. BUT FIRST, SOMEBODY LIKES KETCHUP AND MUSTARD. AND PLENTY (TOO MUCH) OF NAPKINS. OH, AND SOMEBODY LIKES FORKS AND KNIVES, SO ALWAYS END UP BREAKING THE ONES YOU PICK OUTTA THE BOX. HAVE YOUR FRIENDS YELL OUT, "YAY!!!! WE HAVE MUNCHIES!!" AS LOUD AS THEY CAN.

THAT'LL WORRY THE ENTIRE RESTAURANT. PROCEED TO SIT DOWN. SO, YOU ARE SITTING IN THE SMOKING SECTION (BY ACCIDENT) EH? WELL, WHILE ONE OF THE TOBACCO-BREATHERS ISN'T LOOKING, PUT A SIGN FROM THE OTHER SIDE OF THE ROOM SAYING "DO NOT SMOKE HERE" AND HE'LL HAFTA MOVE...THEN HE GOES INTO THE REAL NON-SMOKING SECTION, AND GETS YELLED AT. HE THEN THINKS THAT NO SMOKING IS ALLOWED IN THE RESTAURANT, SO HE EATS OUTSIDE (IN THE POUR-ING RAIN) AFTER YOUR MEAL IS FINISHED (AND QUITE A FEW SPLATTERED-OPENED KETCHUP PACKETS ARE ALL OVER YER TABLE), TRY TO LEAVE. BUT OOPS! SOMEBODY HAS TO DO HIS DUTY IN THE MEN'S ROOM. AS HE GOES THERE, HE STICKS AN UNEATED HAMBURGGR (WOULD YOU DARE TO EAT ONE OF THEIR HAMBURGERS?) INSIDE THE TOILET, FLUSHES IT A WHILE, UNTIL IT RUNS ALL OVER THE BATHROOM. OOPS! SEND A PIMPLY-FACED TEENAGER TO CLEAN IT UP. (HE WON'T KNOW THAT BROWN THING IS A HAMBURGER, AND HE'LL GET SICK. WHEEE!)

AS YOU LEAVE THE RESTCURIANT, LOOKING BACK AT YOUR UNCLEARED TABLE, SOMEBODY MUST REMEMBER THAT THEY LEFT THEIR CHOCOLATE SHAKE THERE! THE ONE THAT'S ALMOST FULL!!!! HE TAKES IT THEN SAYS "THIS TASTES LIKE CRAP!", THEN HE TAKES OFF THE LID AND THROWS IT INTO THE GARBAGE CAN...OOPS! HE MISSED, AND NOW THE SAME POOR SOUL WHO'S CLEANING UP THE BATHROOM NOW HASTA CLEAN UP CHOCOLATE SHAKE. THEN LEAVE THE JOINT, REVERSING THE "YES, WE'RE OPEN" SIGN (AS A REMINDER OF YER VISIT THERE YOU HAVE IT! YOU HAVE JUST PUT ALL OF MCDONALDS INTO COMPLETE MAYHEM. AND SINCE THERE IS NO PENALTY FOR LITTERING IN A RESTAURANT, BUGGING PEOPLE IN A PUBLIC EATERY (OR THROW-UPERY, IN THIS CASE) YOU GET OFF SCOT-FREE. WASN'T THAT FUN?

The Anarchist's Cookbook

Blue Box Plans

Blue Box courtesy of the Jolly Roger

To quote Karl Marx, blue boxing has always been the most noble form of phreaking. As opposed to such things as using an MCI code to make a free fone call, which is merely mindless pseudo-phreaking, blue boxing is actual interaction with the Bell System toll network. It is likewise advisable to be more cautious when blue boxing, but the careful phreak will not be caught, regardless of what type of switching system he is under.

In this part, I will explain how and why blue boxing works, as well as where. In later parts, I will give more practical information for blue boxing and routing information. To begin with, blue boxing is simply communicating with trunks. Trunks must not be confused with subscriber lines (or "customer loops") which are standard telephone lines. Trunks are those lines that connect central offices. Now, when trunks are not in use (i.e., idle or "on-hook" state) they have 2600Hz applied to them. If they are two-way trunks, there is 2600Hz in both directions. When a trunk IS in use (busy or "off-hook" state), the 2600Hz is removed from the side that is off-hook. The 2600Hz is therefore known as a supervisory signal, because it indicates the status of a trunk; on hook (tone) or off-hook (no tone). Note also that 2600Hz denoted SF (single frequency) signalling and is "in-band." This is very important. "In-band" means that is within the band of frequencies that may be transmitted over normal telephone lines. Other SF signals, such as 3700Hz are used also. However, they cannot be carried over the telephone network normally (they are "out-of-band" and are therefore not able to be taken advantage of as 2600Hz is. Back to trunks. Let's take a hypothetical phone call. You pick up your fone and dial 1+806-258-1234 (your good friend in Amarillo, Texas). For ease, we'll assume that you are on #5 Crossbar switching and not in the 806 area. Your central office (CO) would recognize that 806 is a foreign NPA, so it would route the call to the toll centre that serves you. [For the sake of accuracy here, and for the more experienced readers, note that the CO in question is a class 5 with LAMA that uses out-of-band SF supervisory signalling]. Depending on where you are in the country, the call would leave your toll centre (on more trunks) to another toll centre, or office of higher "rank". Then it would be routed to central office 806-258 eventually and the call would be completed.

Illustration

A---CO1-----TC1-----TC2----CO2----B

A.... you

CO1=your central office

TC1.. your toll office.

TC2.. toll office in Amarillo.
 CO2.. 806-258 central office.
 B.... your friend (806-258-1234)

In this situation it would be realistic to say that CO2 uses SF in-band (2600Hz) signalling, while all the others use out-of-band signalling (3700Hz). If you don't understand this, don't worry. I am pointing this out merely for the sake of accuracy. The point is that while you are connected to 806-258-1234, all those trunks from YOUR central office (CO1) to the 806-258 central office (CO2) do **NOT** have 2600Hz on them, indicating to the Bell equipment that a call is in progress and the trunks are in use.

Now let's say you're tired of talking to your friend in Amarillo, so you send a 2600Hz down the line. This tone travels down the line to your friend's central office (CO2) where it is detected. However, that CO thinks that the 2600Hz is originating from Bell equipment, indicating to it that you've hung up, and thus the trunks are once again idle (with 2600Hz present on them). But actually, you have not hung up, you have fooled the equipment at your friend's CO into thinking you have. Thus, it disconnects him and resets the equipment to prepare for the next call. All this happens very quickly (300-800ms for step-by-step equipment and 150-400ms for other equipment). When you stop sending 2600Hz (after about a second), the equipment thinks that another call is coming towards

--> on hook, no tone -->off hook.

Now that you've stopped sending 2600Hz, several things happen:

- 1) A trunk is seized.
- 2) A "wink" is sent to the CALLING end from the CALLED end indicating that the CALLED end (trunk) is not ready to receive digits yet.
- 3) A register is found and attached to the CALLED end of the trunk within about two seconds (max).
- 4) A start-dial signal is sent to the CALLING end from the CALLED end indicating that the CALLED end is ready to receive digits.

Now, all of this is pretty much transparent to the blue boxer. All he really hears when these four things happen is a . So, seizure of a trunk would go something like this:

- 1> Send a 2600Hz
- 2> Terminate 2600Hz after 1-2 secs.
- 3> [beep][kerchunk]

Once this happens, you are connected to a tandem that is ready to obey your every command. The next step is to send signalling information in order to place your call. For this you must simulate the signalling used by operators and automatic toll-dialing equipment for use on trunks. There are mainly two systems, DP and MF. However, DP went out with the dinosaurs, so I'll only discuss MF signalling. MF (multi-frequency) signalling is the signalling used by the majority of the inter- and intra-lata network. It is also used in international dialing known as the CCITT no.5 system. MF signals consist of 7 frequencies, beginning with 700Hz and separated by 200Hz. A different set of two of the 7 frequencies

represent the digits 0 thru 9, plus an additional 5 special keys. The frequencies and uses are as follows:

Frequencies (Hz)	Domestic	Int'l
700+900	1	1
700+1100	2	2
900+1100	3	3
700+1300	4	4
900+1300	5	5
1100+1300	6	6
700+1500	7	7
900+1500	8	8
1100+1500	9	9
1300+1500	0	0
700+1700	ST3p	Code 1
900+1700	STp	Code 1
1100+1700	KP	KP1
1300+1700	ST2p	KP2
1500+1700	ST	ST

The timing of all the MF signals is a nominal 60ms, except for KP, which should have a duration of 100ms. There should also be a 60ms silent period between digits. This is very flexible however, and most Bell equipment will accept outrageous timings. In addition to the standard uses listed above, MF pulsing also has expanded usages known as "expanded inband signalling" that include such things as coin collect, coin return, ringback, operator attached, and operator attached, and operator released. KP2, code 11, and code 12 and the ST_ps (STart "primes" all have special uses which will be mentioned only briefly here.

To complete a call using a blue box once seizure of a trunk has been accomplished by sending 2600Hz and pausing for the , one must first send a KP. This readies the register for the digits that follow.

For a standard domestic call, the KP would be followed by either 7 digits (if the call were in the same NPA as the seized trunk) or 10 digits (if the call were not in the same NPA as the seized trunk). [Exactly like dialing normal fone call]. Following either the KP and 7 or 10 digits, a STart is sent to signify that no more digits follow. Example of a complete call:

- 1> Dial 1-806-258-1234
- 2> wait for a call-progress indication (such as ring,busy,recording,etc.)
- 3> Send 2600Hz for about 1 second.
- 4> Wait for about 1l-progress indication (such as ring,busy,recording,etc.)
- 5> Send KP+305+994+9966+ST

The call will then connect if everything was done properly. Note that if a call to an 806 number were being placed in the same situation, the area code would be omitted and only KP + seven digits + ST would be sent. Code 11 and code 12 are used in international calling to request certain types of operators. KP2 is used in international calling to route a call other than by way of the normal route, whether for economic or equipment reasons. STp, ST2p, and ST3p (prime, two prime, and three prime) are used in TSPS signalling to indicate calling type of call (such as coin-direct dialing).

The Anarchist's Cookbook

Nitroglycerin Recipe

Nitroglycerin Recipe by the Jolly Roger

Like all chemists I must advise you all to take the greatest care and caution when you are doing this. Even if you have made this stuff before.

This first article will give you information on making nitroglycerin, the basic ingredient in a lot of explosives such as straight dynamites, and geletin dynamites.

Making nitroglycerin

1. Fill a 75-milliliter beaker to the 13 ml. Level with fuming red nitric acid, of 98% pure concentration.
2. Place the beaker in an ice bath and allow to cool below room temp.
3. After it has cooled, add to it three times the amount of fuming sulferic acid (99% h_2so_4). In other words, add to the now-cool fuming nitric acid 39 ml. Of fuming sulferic acid. When mixing any acids, always do it slowly and carefully to avoid splattering.
4. When the two are mixed, lower thier temp. By adding more ice to the bath, about 10-15 degrees centigrade. (Use a mercury-operated thermometer)
5. When the acid solution has cooled to the desired temperature, it is ready for the glycerin. The glycerin must be added in small amounts using a medicine dropper. (Read this step about 10 times!) Glycerin is added slowly and carefully (i mean careful!) Until the entire surface of the acid it covered with it.
6. This is a dangerous point since the nitration will take place as soon as the glycerin is added. The nitration will produce heat, so the solution must be kept below 30 degrees centigrade! If the solution should go above 30 degrees, immediately dump the solution into the ice bath! This will insure that it does not go off in your face!
7. For the first ten minutes of nitration, the mixture should be gently stirred. In a normal reaction the nitroglycerin will form as a layer on top of the acid solution, while the sulferic acid will absorb the excess water.
8. After the nitration has taken place, and the nitroglycerin has formed on the top of the solution, the entire beaker should be transferred slowly and carefully to another beaker of water. When this is done the nitroglycerin will settle at the bottem so the other acids can be drained away.
9. After removing as much acid as posible without disturbing the nitroglycerin, remove the nitroglycerin with an eyedropper and place it in a bicarbonate of soda (sodium bicarbonate in case you didn't know) solution. The sodium is an alkalai and will nuetralize much of the acid remaining. This process should be repeated as much as necesarry using blue litmus paper to check for the presence of acid. The remaining acid only makes the nitroglycerin more unstable than it already is.

10. Finally! The final step is to remove the nitroglycerin from the bicarbonate. This is done with an eye-dropper, slowly and carefully. The usual test to see if nitration has been successful is to place one drop of the nitroglycerin on metal and ignite it. If it is true nitroglycerin it will burn with a clear blue flame.

**** Caution ****

Nitro is very sensitive to decomposition, heating dropping, or jarring, and may explode if left undisturbed and cool.

The Anarchist's Cookbook

Operation: Fuckup

Operation: Fuckup by the Jolly Roger

This is a guide for Anarchists and can be funny for non-believers and 12 and 13 year old runts, and can be a lexicon of deadly knowledge for True Anarchists... Serious damage is intended to be dealt here. Do not try this stuff unless you want to do a lot of serious Anarchy.

[Simulation]

Asshole - 'Listen, you little teenager punk shit, shut the fuck up, or I'll knock you down!'

Anarchist - 'O.K.....You can't say I didn't warn you. You don't know my true power...' (soooo casually)

Asshole - 'Well, er, what do you mean?'

Anarchist - "

As you can see, the Anarchist knows something that this asshole doesn't...

[Operation Fuckup] Get a wheel barrel or two. Fill with gasoline. Get 16 rolls of toilet paper, unroll & drench in the gasoline. Rip to shreds in gasoline. Get asbestos gloves. Light a flare (to be punk), grab glob of saturated toilet paper (you can ignite the glob or not). Throw either flaming or dripping glob into:

any window (picture is the best)

front doors

rough grain siding

and best of all, brick walls.

First of all, this bitch is near impossible to get off once dried, and is a terror to people inside when lit! After this... during the night, get a pickup truck, a few wheel-barrels, and a dozen friends with shovels. The pickup can be used only for transporting people and equipment, or doing that, and carting all the dirt. When it gets around 12:00 (after the loser goes beddie - bye), dig a gargantuan hole in his front yard until about 3:00. You can either assign three or four of your friends to cart the dirt ten miles away in the pickup-bed, or bury his front door in 15' of dirt! After that is done, get three or four buckets of tar, and coat his windows. You can make an added twist by igniting the tar when you are all done and ready to run! That is if the loser has a house. If he lives inside an apartment building, you must direct the attack more toward his car, and front door.

I usually start out when he goes to work...I find out what his cheap car looks like, and memorize it for future abuse...It is always fun to paint his front door (apt.) hot pink with purple polka-dots, and off-neon

colors in diagonal stripes. You can also pound a few hundred or so four inch nails into his front door (this looks like somebody really doesn't like you from the inside). Another great is to fill his keyhole with liquid steel so that after the bastard closes his door - the only way to get back in is to break it down. If you can spare it, leave him an axe - that is, implanted three inches into, and through the door!

Now, this next one is difficult, but one of the best! Get a piece of wood siding that will more than cover his front door completely. Nail two by fours on the edges of the siding (all except the bottom) so you have a barge - like contraption. Make a hole at the top that will be large enough for a cement slide. Mix about six or seven LARGE bags of QUICK drying cement. Use the cement slide to fill the antichamber created by the 'barge' that is around his door. Use more two by fours to brace your little cement-filled barge, and let the little gem dry. When it is, remove the 'barge' so only a stone monolith remains that covers his door.

Use any remaining cement to make a base around this so he can't just push it over. When I did this, he called the fire department, and they thought he meant wood, so they brought axes. I watched with a few dozen or so other tenants, and laughed my damn ass off! This is only his door! After he parks his car for the night, the fun really begins...I start out by opening up the car by jamming a very thin, but loack - inside and out!

Then proceed to put orange-juice syrup all over the seats, so after he gets through all the other shit that you do, he will have the stickiest seats in the world. You can then get a few Sunday papers, and crack one of the windows about four inches. Lightly crumple the papers, and continue to completely fill the inside of his car with the newspapers. A copy of the Sunday New York Times will nicely fill a Volkeswagon! What is also quite amusing is to put his car on cinder blocks, slash his tires at the top, and fill them with cement! Leave the cinder blocks there so that, after he knocks the car off of them, he will get about 3 miles to the gallon with those tires, and do 0 to 60 in about two minutes! It is even more hilarious when he doesn't know why the hell why! Another is to open his hood, and then run a few wires from the sparkplugs to the METAL body. The sure is one HOT car when it is running! Now, I like to pour two pounds of sugar down his gas tank. If this doesn't blow every gasket in his engine it will do something called 'carmelizing his engine'. This is when the extreme heat turns the sugar to carmel, and you literally must completely take the engine out and apart, and clean each and every individual part!

Well, if this asshole does not get the message, you had better start to get serious. If this guide was used properly & as it was intended (no, not as kindling for the fire), this asshole will either move far away, seek professional psychological help, commit suicide, or all of the above!

Stealing Calls from Payphones

```
*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*
*           How to "steal" local calls from most Payphones           *
*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*-+-*
```

by the Jolly Roger

Now to make free local calls, you need a finishing nail. I highly recommend "6D E.G. FINISH C/H, 2 INCH" nails. These are about 3/32 of an inch in diameter and 2 inches long (of course). You also need a large size paper clip. By large I mean they are about 2 inches long (FOLDED). Then you unfold the paper clip. Unfold it by taking each piece and moving it out 90 degrees. When it is done it should look somewhat like this:

```
 /-----\
 :         :
 :         :
 :         :
 :         :
 \-----
```

Now, on to the neat stuff. What you do, instead of unscrewing the glued-on mouthpiece, is insert the nail into the center hole of the mouthpiece (where you talk) and push it in with pressure or just hammer it in by hitting the nail on something.

Just DON'T KILL THE MOUTHPIECE! You could damage it if you insert the nail too far or at some weird angle. If this happens then the other party won't be able to hear what you say.

You now have a hole in the mouthpiece in which you can easily insert the paper clip. So, take out the nail and put in the paper clip.

Then take the other end of the paper clip and shove it under the rubber cord protector at the bottom of the handset (you know, the blue guy...).

This should end up looking remotely like...like this:

```

          /-----\      Mouthpiece
          :         :
Paper clip --> :         : /
          :   /---:---\
          :         :
          :----->
===== \---) ) ) :
          :   To earpiece ->
          ^                 ^
          \----->
          :                 :
          :                 :
          Cord             Blue guy

```

(The paper clip is shoved under the blue guy to make a good connection between the inside of the mouthpiece and the metal cord.) Now, dial the number of a local number you wish to call, sayyyy, MCI. If everything goes okay, it should ring and not answer with the "The Call You Have Made Requires a 20 Cent Deposit" recording. After the other end answers the phone, remove the paper clip. It's all that simple, see?

There are a couple problems, however. One is, as I mentioned earlier, the mouthpiece not working after you punch it. If this happens to you, simply move on to the next payphone. The one you are now on is lost. Another problem is that the touch tones won't work when the paper clip is in the mouthpiece. There are two ways around this..

A> Dial the first 6 numbers. This should be done without the paper clip making the connection, i.e., one side should not be connected. Then connect the paper clip, hold down the last digit, and slowly pull the paper clip out at the mouthpiece's end.

B> Don't use the paper clip at all. Keep the nail in after you punch it. Dial the first 6 digits. Before dialing the last digit, touch the nail head to the plate on the main body of the phone, the money safe thingy..then press the last number. The reason that this method is sometimes called clear boxing is because there is another type of phone which lets you actually make the call and listen to them say "Hello, hello?" but it cuts off the mouthpiece so they can't hear you. The Clear Box is used on that to amplify your voice signals and send it through the earpiece. If you see how this is even slightly similar to the method I have just described up there, kindly explain it to ME!! Cause I don't GET IT! Anyways, this DOES work on almost all single slot, Dial Tone First payphones (Pacific Bell for sure). I do it all the time. This is the least, I STRESS *LEAST*, risky form of Phreaking.

Pool Fun

Pool Fun by the Jolly Roger

First of all, you need know nothing about pools. The only thing you need know is what a pool filter looks like. If you don't know that. Second, dress casual. Preferably, in black. Visit your "friends" house, the one whose pool looks like fun!!) Then you reverse the polarity of his/her pool, by switching the wires around. They are located in the back of the pump. This will have quite an effect when the pump goes on. In other words. Boooooooooooooommm! Thats right, when you mix + wires with - plugs, and vice-versa, the 4th of july happens again.

Not into total destruction??? When the pump is off, switch the pump to "backwash". Turn the pump on and get the phuck out! When you look the next day, phunny. The pool is dry. If you want permanant damage, yet no great display like my first one mentioned, shut the valves of the pool off. (There are usually 2) One that goes to the main drain and one that goes to the filter in the pool. That should be enough to have one dead pump. The pump must take in water, so when there isn't any...

Practical jokes: these next ones deal with true friends and there is *no* permanent damage done. If you have a pool, you must check the pool with chemicals. There is one labeled orthotolidine. The other is labeled alkaline (ph). You want orthotolidine. (It checks the chlorine).

Go to your local pool store and tell them you're going into the pool business, and to sell you orthotolidine (a CL detector) Buy this in great quantities if possible. The solution is clear. You fill 2 baggies with this chemical. And sew the bags to the inside of your suit. Next, go swimming with your friend! Then open the bags and look like you're enjoying a piss. And anyone there will turn a deep red! They will be embarrassed so much, Especially if they have guests there! Explain what it is, then add vinegar to the pool. Only a little. The "piss" disappears.

HAHA!! -----Jolly Roger

The Anarchist's Cookbook

Free Postage

Free Postage by the Jolly Roger

The increasing cost of postage to mail letters and packages is bringing down our standard of living. To remedy this deplorable situation, some counter control measures can be applied.

For example, if the stamps on a letter are coated with Elmer's Glue by the sender, the cancellation mark will not destroy the stamp: the Elmer/s drives to form an almost invisible coating that protects the stamps from the cancellation ink. Later, the receiver of the letter can remove the cancellation mark with water and reuse the stamps. Furthermore, ecological saving will also result from recycling the stamps. Help save a tree.

The glue is most efficiently applied with a brush with stiff, short bristles. Just dip the brush directly into the glue and spread it on evenly, covering the entire surface of the stamp. It will dry in about 15 minutes.

For mailing packages, just follow the same procedure as outlined above; however, the package should be weighed and checked to make sure that it has the correct amount of postage on it before it is taken to the Post Office.

Removing the cancellation and the glue from the stamps can be easily accomplished by soaking the stamps in warm water until they float free from the paper. The stamps can then be put onto a paper towel to dry. Processing stamps in large batches saves time too. Also, it may be helpful to write the word 'Elmer' at the top of the letter (not on the envelope) to cue the receiving party in that the stamps have been protected with the glue.

We all know that mailing packages can be expensive. And we also know that the handicapped are sometimes discriminated against in jobs. The Government, being the generous people they are, have given the blind free postal service.

Simply address you envelope as usual, and make one modification. In the corner where the stamp would go, write in (or stamp) the words 'FREE MATTER FOR THE BLIND". Then drop you package or letter in one of the blue federal mailboxes. **DO NOT TAKE THE LETTER TO THE POST OFFICE, OR LEAVE IT IN YOUR MAILBOX.**

Sounds very nice of the government to do this, right? Well, they aren't that nice. The parcel is sent library rate, that is below third class. It may take four to five days to send a letter to just the next town.

This too is quite simple, but less effective. Put the address that you are sending the letter to as the return address. If you were sending a \$20 donation to the pirate's Chest, you would put our address (po box 644, lincoln ma. 01773) as the return address.

Then you would have to be careless and forget to put the stamp on the envelope. A nice touch is to put a bullshit address in the center of the envelope.

Again, you **MUST** drop the letter in a FEDERAL mailbox. If the post office doesn't send the letter to the return address for having no stamp, they will send it back for the reason of "No such address".

Example--

Pirates Chest Dept. 40DD
P.O. Box 644865
Lincol, Ma. 41773

Tom Bullshit
20 Fake Road
What Ever, XX 99851

One last thing you might try doing is soaking a cancelled stamp off of an envelope, and gluing it onto one you are sending. Then burn the stamp, leaving a little bit to show that there was one there.

Weird Drugs

Weird Drugs by the Jolly Roger

Bananas:

1. Obtain 15 pounds of ripe yellow bananas
2. Peel all and eat the fruit. Save the peelings
3. Scrape all the insides of the peels with a sharp knife.
4. Put all the scraped material in a large pot and add water.
5. Boil 3 or 4 hours until it has attained a solid paste consistency.
6. Spread paste onto cookie sheets and dry in oven for about 20 minutes. This will result in fine black powder. Usually one will feel the effects after smoking three to four cigarettes.

Cough syrup:

mix robitussin a-c with an equal amount of ginger ale and drink. The effects are sedation and euphoria. Never underestimate the effects of any drug! You can do on cough syrup!

Toads:

1. Collect five to ten toads, frogs will not work. The best kind are tree toads.
2. Kill them as painlessly as possible, and skin immediately.
3. Allow the skins to dry in a refrigerator for four to five days, or until the skins are brittle.
4. Now crush the skins into powder and smoke. Due to its bad taste you can mix it with a more fragrant smoking medium.

Nutmeg:

1. Take several whole nutmegs and grind them up in an old grinder.
2. After the nutmegs are ground. Place in a mortar and pulverize with a pestle.
3. The usual dosage is about 10 or 15 grams. A larger dose may produce excessive thirst, anxiety, and rapid heart beat, but hallucinations are rare.

Peanuts:

1. Take 1 pound of raw peanuts (not roasted)
2. Shell them, saving the skins and discarding the shells.
3. Eat the nuts.
4. Grind up the skins and smoke them.

The Anarchist's Cookbook

The Art of Carding

The Art of Carding by the Jolly Roger

Obtaining a credit card number: There are many ways to obtain the information needed to card something. The most important things needed are the card number and the expiration date. Having the card-holders name doesn't hurt, but it is not essential. The absolute best way to obtain all the information needed is by trashing. The way this is done is simple. You walk around your area or any other area and find a store, mall, supermarket, etc., that throws their garbage outside on the sidewalk or dumpster. Rip the bag open and see if you can find any carbons at all. If you find little shreds of credit card carbons, then it is most likely not worth your time to tape together. Find a store that does not rip their carbons at all or only in half.

Another way is to bullshit the number out of someone. That is call them up and say "Hello, this is Visa security and we have a report that your card was stolen." They will deny it and you will try to get it out of them from that point on. You could say, "It wasn't stolen? Well what is the expiration date and maybe we can fix the problem...."

Ok and what is the number on your card?.....Thank you very much and have a nice day." Or think of something to that degree. Another way to get card numbers is through systems such as TRW and CBI, this is the hard way, and probably not worth the trouble, unless you are an expert on the system. Using credit card numbers posted on BBS's is risky. The only advantage is that there is a good chance that other people will use it, thus decreasing the chances of being the sole-offender. The last method of getting numbers is very good also. In most video rental stores, they take down your credit card number when you join to back-up your rentals. So if you could manage to steal the list or make a copy of it, then you are set for a LONG time.

Choosing a victim: Once you have the card number, it is time to make the order. The type of places that are easiest to victimize are small businesses that do mail order or even local stores that deliver. If you have an ad for a place with something you want and the order number is NOT a 1-800 number then chances are better that you will succeed.

Ordering: When you call the place up to make the order, you must have several things readily at hand.

These are the things you will need: A name, telephone number, business phone, card number (4 digit bank code if the card is MasterCard), expiration date, and a complete shipping and billing address.

I will talk about all of these in detail. A personal tip: When I call to make an order, it usually goes much smoother if the person you are talking to is a woman. In many cases they are more gullible than men.

The name: You could use the name on the card or the name of the person who you are going to send the merchandise to. Or you could use the name on the card and have it shipped to the person who lives at the drop (Say it is a gift or something).

The name is really not that important because when the company verifies the card, the persons name is never mentioned, EXCEPT when you have a Preferred Visa card. Then the name is mentioned. You can tell if you have a Preferred Visa card by the PV to the right of the expiration date on the carbon. Nophone all day long waiting for the company to call (Which they will), then the phone number to give them as your home-phone could be one of the following: A number that is ALWAYS busy, a number that ALWAYS rings, a payphone number, low end of a loop (and you will wait on the other end), or a popular BBS.

NEVER give them your home phone because they will find out as soon as the investigation starts who the phone belongs to. The best thing would be to have a payphone call forward your house (via Cosm The business number: When asked for, repeat the number you used for your home phone.

Card number: The cards you will use will be Visa, Mastercard, and American Express. The best is by far Visa. It is the most straight-forward. Mastercard is pretty cool except for the bank code.

When they ask for the bank code, they sometimes also ask for the bank that issued it. When they ask that just say the biggest bank you know of in your area. Try to avoid American Express. They tend to lead full scale investigations. Unfortunately, American Express is the most popular card out. When telling the person who is taking your call the card number, say it slow, clear, and with confidence. e.g. CC# is 5217-1234-5678-9012. Pause after each set of four so you don't have to repeat it.

Expiration date: The date must be at LEAST in that month. It is best to with more than three months to go.

The address: More commonly referred to as the 'drop'. Well the drop can range from an abandoned building to your next door neighbors apartment. If you plan to send it to an apartment building then be sure NOT to include an apartment number. This will confuse UPS or postage men a little and they will leave the package in the lobby.

Here is a list of various drops: The house next door whose family is on vacation, the apartment that was just moved out of, the old church that will be knocked down in six months, your friends house who has absolutely nothing to do with the type of merchandise you will buy and who will also not crack under heat from feds, etc..

There are also services that hold merchandise for you, but personally I would not trust them. And forget about P.O. Boxes because you need ID to get one and most places don't ship to them anyway. Other aspects of carding: Verifying cards, seeing if they were reported stolen.

Verifying cards: Stores need to verify credit cards when someone purchases something with one. They call up a service that checks to see if the customer has the money in the bank.

The merchant identifies himself with a merchant number. The service then holds the money that the merchant verified on reserve. When the merchant sends in the credit card form, the service sends the merchant the money. The service holds the money for three days and if no form appears then it is put back into the bank. The point is that if you want to verify something then you should verify it for a little amount and odds are that there will be more in the bank.

The good thing about verification is that if the card doesn't exist or if it is stolen then the service will tell you. To verify MasterCard and Visa try this number. It is voice:1-800-327-1111 merchant code is 596719.

Stolen cards: Mastercard and Visa come out with a small catalog every week where they publish EVERY stolen or fraudulently used card. I get this every week by trashing the same place on the same day. If you ever find it trashing then try to get it every week.

Identifying cards: Visa card numbers begin with a 4 and have either 13 or 16 digits. MasterCard card numbers begin with a 5 and have 16 digits. American Express begins with a 3 and has 15 digits. They all have the formats of the following:

```
3xxx-xxxxxx-xxxxx   American Express
4xxx-xxx-xxx-xxx    Visa
4xxx-xxxx-xxxx-xxxx Visa
5xxx-xxxx-xxxx-xxxx MasterCard
```

Gold cards: A gold card simply means that credit is good for \$5000. Without a gold card, credit would be normally \$2000.

To recognize a gold card on a carbon there are several techniques:

American Express-none.

Visa-PV instead of CV.

Note-When verifying a PV Visa, you have to have the real name of the cardholder.

Mastercard-An asterix can signify a gold card, but this changes depending when the card was issued.

I am going to type out a dialog between a carder and the phone operator to help you get the idea.

Operator: "Over-priced Computer Goods, may I help you?"

Carder: "Hi, I would like to place an order please."

Operator: "Sure, what would you like to order?"

Carder: "400 generic disks and a double density drive."

Operator: "Ok, is there anything else?"

Carder: "No thank you, that's all for today."

Operator: "Ok, how would you like to pay for this? MasterCard or

Visa?"
Carder: "Visa."
Operator: "And your name is?"
Carder: "Lenny Lipshitz." (Name on card)
Operator: "And your Visa card number is?"
Carder: "4240-419-001-340" (Invalid card)
Operator: "Expiration date?"
Carder: "06-92."
Operator: "And where would you like the package shipped to?"
Carder: "6732 Goatgate Port. Paris,texas,010166."
Operator: "And what is your home telephone number?"
Carder: "212-724-9970" (This number is actually always busy)
Operator: "I will also need your business phone number in case we have to reach you."
Carder: "You can reach me at the same number. 212-724-9970"
Operator: "O.K. Thank you very much and have nice day."
Carder: "Excuse me, when will the package arrive?"
Operator: "In six to seven days UPS."
Carder: "Thanks alot, and have a pleasant day."

Now you wait 6-7 days when the package will arrive to the address which is really a house up for sale. There will be a note on the door saying, "Hello UPS, please leave all packages for Lenny Lipshitz in the lobby or porch. Thanks alot, Lenny Lipshitz" (Make the signature half-way convincing)

Recognizing Credit Cards

Recognizing credit cards by the Jolly Roger

```
[Sample: American Express]
XXXX XXXXXX XXXXX
MM/Y1 THRU MM/Y2      Y1
John Doe                AX
```

Explanation:

The first date is the date the person got the card, the second date is the expiration date, after the expiration date is the same digits in the first year. The American Express Gold has many more numbers (I think 6 8 then 8). If you do find a Gold card keep it for it has a \$5000.00 backup even when the guy has no money!

```
[Sample: Master Card]
5XXX XXXX XXXX XXXX
XXXX AAA DD-MM-YY MM/YY
John Doe.
```

Explanation:

The format varies, I have never seen a card that did not start with a 5XXX there is another 4 digits on the next line that is sometimes asked for when ordering stuff, (and rarely a 3 digit letter combo (e. ANB)). The first date is the date the person got the card and the second date is the expiration date. Master Card is almost always accepted at stores.

```
[Sample: VISA]
XXXX XXX(X) XXX(X) XXX(X)
MM/YY      MM/YY*VISA
John Doe
```

Explanation:

Visa is the most straight forward of the cards, for it has the name right on the card itself, again the first date is the date he got the card and the second is the expiration date. (Sometimes the first date is left out). The numbers can either be 4 3 3 3 or 4 4 4 4. Visa is also almost always accepted at stores, therefore, the best of cards to use.

The creator of this page and any links it may lead to hereby takes no responsibility or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Users read at their own risk. It is *NOT* recommended that the user do anything described in this and subsequent pages. How to Get a New Identity

How To Create A New Identity By The Walking Glitch
Courtesy of the Jolly Roger!

You might be saying, "Hey Glitch, what do I need a new identity for?" The answer is simple. You might want to go buy liquor somewhere, right? You might want to go give the cops the false name when you get busted so you keep your good name, eh? You might even want to use the new identity for getting a P. O. Box for carding. Sure! You might even want the stuff for renting yourself a VCR at some dickless loser of a convenience store. Here we go:

Getting a new ID isn't always easy, no one said it would be. By following these steps, any bozo can become a new bozo in a coupla weeks.

STEP 1

The first step is to find out who exactly you'll become. The most secure way is to use someone's ID who doesn't use it themselves. The people who fit that bill the best are dead. As an added bonus they don't go complaining one bit. Go to the library and look through old death notices. You have to find someone who was born about the same time as you were, or better yet, a year or two older so you can buy booze, etc. You should go back as far as you can for the death because most states now cross index deaths to births so people can't do this in the future. The cutoff date in Wisconsin is 1979, folks in this grand state gotta look in 1978 or earlier. Anything earlier there is cool. Now, this is the hardest part if you're younger. Brats that young happen to be quite resilient, takin' falls out of three story windows and eating rat poison like its Easter candy, and not a scratch or dent. There ain't many that die, so ya gotta look your ass off. Go down to the library and look up all the death notices you can, if it's on microfilm so much the better. You might have to go through months of death notices though, but the results are well worth it.

You gotta get someone who died locally in most instances: the death certificate is filed only in the county of death. Now you go down to the county courthouse in the county where he died and get the death certificate, this will cost you around \$3-\$5 depending on the state you're in. Look at this hunk of paper, it could be your way to vanish in a clould of smoke when the right time comes, like right after that big scam. If You're lucky, the slob's parents signed him up with social security when he was a snot nosed brat. That'll be another piece of ID you can get. If not, that's ok too. It'll be listed on the death certificate if he has one. If you're lucky, the stiff was born locally and you can get his birth certificate right away.

STEP 2

Now check the place of birth on the death certificate, if it's in the same place you standing now you're all set. If not, you can mail away for one from that county but its a minor pain and it might take a while to get, the librarian at the desk has listings of where to write for this stuff and exactly how much it costs. Get the Birth certificate, its worth the extra money to get it certified because thats the only way some people will accept it for ID. When yur gettin this stuff the little forms ask for the reason you want it, instead of writing in "Fuck you", try putting in the word "Geneology".

They get this all the time. If the Death certificate looks good for you, wait a day or so before getting the certified birth certificate in case they recognize someone wanting it for a dead guy.

STEP 3

Now your cookin! You got your start and the next part's easy. Crank out your old Dot matrix printer and run off some mailing labels addressed to you at some phony address. Take the time to check your phony address that there is such a place. Hotels that rent by the month or large apartment buildings are good, be sure to get the right zip code for the area. These are things that the cops might notice that will trip you up. Grab some old junk mail and paste your new lables on them. Now take them along with the birth certificate down to the library.

Get a new library card. If they ask you if you had one before say that you really aren't sure because your family moved around alot when you were a kid. Most libraries will allow you to use letters as a form of ID when you get your card. If they want more give them a sob story about how you were mugged and got your wallet stolen with all your identification. Your card should be waiting for you in about two weeks. Most libraries ask for two forms of ID, one can be your trusty Birth Certificate, and they do allow letters addressed to you as a second form.

STEP 4

Now you got a start, it isn't perfect yet, so let's continue. You should have two forms of ID now. Throw away the old letters, or better yet stuff them inside the wallet you intend to use with this stuff. Go to the county courthouse and show them what nice ID you got and get a state ID card. Now you got a picture ID. This will take about two weeks and cost about \$5, its well worth it.

STEP 5

If the death certificate had a social security number on it you can go out and buy one of those metal SS# cards that they sell. If it didn't, then you got all kinds of pretty ID that shows exactly who you are. If you don't yet have an SS#, Go down and apply for one, these are free but they could take five or six weeks to get, Bureaucrats you know... You can invent a SS# too if ya like, but the motto of 'THE WALKING GLITCH' has always been "Why not excellence?".

STEP 6

If you want to go whole hog you can now get a bank account in your new name. If you plan to do alot of traveling then you can put alot of money in the account and then say you lost the account book. After you get the new book you take out all the cash. They'll hit you with a slight charge and maybe tie-up your money some, but if you're ever broke in some small town that bank book will keep you from being thrown in jail as a vagrant.

ALL DONE?

So kiddies, you got ID for buying booze, but what else? In some towns (the larger the more likely) the cops if they catch you for something petty like shoplifting stuff under a certain dollar amount, will just give you a ticket, same thing for pissing in the street. Thats it!

No fingerprints or nothing, just pay the fine (almost always over \$100) or appear in court. Of course they run a radio check on your ID, you'll be clean and your alter-ego gets a blot on his record.

Your free and clear. Thats worth the price of the trouble you've gone through right there. If your smart, you'll toss that ID away if this happens, or better yet, tear off your picture and give the ID to someone you don't like, maybe they'll get busted with it.

If you're a working stiff, here's a way to stretch your dollar. Go to work for as long as it takes to get unemployment and then get yourself fired. Go to work under the other name while your getting the unemployment. With a couple of sets of ID, you can live like a king. These concepts for survival in the new age come to you compliments of THE WALKING GLITCH.

First release of this phile 7/7/88.

Phreaker's Guide to Loop Lines

The Phreaker's Guide to Loop Lines courtesy of the Jolly Roger

A loop is a wonderous device which the telephone company created as test numbers for telephone repairmen when testing equipment. By matching the tone of the equipment with the tone of the loop, repairmen can adjust and test the settings of their telephone equipment.

A loop, basically, consists of two different telephone numbers. Let's use A and B as an example. Normally if you call A, you will hear a loud tone (this is a 1004 hz tone), and if you call B, the line will connect, and will be followed by silence.

This is the format of a loop line. Now, if somebody calls A and someone else calls B--Viola!--A and B loop together, and one connection is made. Ma Bell did this so repairmen can communicate with each other without having to call their own repair office. They can also use them to exchange programs, like for ANA or Ringback. Also, many CO's have a "Loop Assignment Center". If anyone has any information on these centers please tell me.

Anyway, that is how a loop is constructed. From this information, anyone can find an actual loop line. Going back to the A and B example, Note: the tone side and the silent side can be either A or B. Don't be fooled if the phone company decides to scramble them around to be cute.

As you now know, loops come in pairs of numbers. Usually, right after each other.

For example: 817-972-1890

and

817-972-1891

Or, to save space, one loop line can be written as 817-972-1890/1.

This is not always true. Sometimes, the pattern is in the tens or hundreds, and, occasionally, the numbers are random.

In cities, usually the phone company has set aside a phone number suffix that loops will be used for. Many different prefixes will correspond with that one suffix.

In Arlington, Texas, a popular suffix for loops is 1893 and 1894, and a lot of prefixes match with them to make the number.

For Example: 817-460-1893/4

817-461-1893/4

817-465-1893/4

817-467-1893/4

817-469-1893/4

...are all loops...

or a shorter way to write this is:

817-xxx-1893/4

xxx= 460, 461, 465, 467, 469

Note: You can mix-and-match a popular suffix with other prefixes in a city, and almost always find other loops or test numbers.

Note: For Houston, the loop suffixes are 1499 and 1799. And for Detroit it's 9996 and 9997.

When there are a large number of loops with the same prefix format, chances are that many loops will be inter-locked. Using the above example of Arlington loops again, (I will write the prefixes to save space) 460, 461, and 469 are interlocked loops. This means that only one side can be used at a given time. This is because they are all on the same circuit.

To clarify, if 817-461-1893 is called, 817-460 and 469-1893 cannot be called because that circuit is being used. Essentially, interlocked loops are all the same line, but there are a variety of telephone numbers to access the line.

Also, if the operator is asked to break in on a busy loop line he/she will say that the circuit is overloaded, or something along those lines. This is because Ma Bell has taken the checking equipment off the line. However, there are still many rarely used loops which can be verified and can have emergency calls taken on them.

As you have found out, loops come in many types. Another type of loop is a filtered loop. These are loop lines that the tel co has put a filter on, so that normal human voices cannot be heard on either line. However, other frequencies may be heard. It all depends on what the tel co wants the loop to be used for. If a loop has gotten to be very popular with the local population or used frequently for conferences, etc. the tel co may filter the loop to stop the unwanted "traffic". Usually, the filter will be removed after a few months, though.

Ma-Bell Tutorial

How Ma Bell Works by the Jolly Roger

In this article, I will first describe the termination, wiring, and terminal hardware most commonly used in the Bell system, and I will include section on methods of using them.

LOCAL NETWORK

The local telephone network between the central office/exchange and the telephone subscribers can be briefly described as follows:

From the central office (or local exchange) of a certain prefix(es), underground area trunks go to each area that has that prefix (Usually more than one prefix per area.) At every few streets or tract areas, the underground cables surface. They then go to the telephone pole (or back underground, depending on the area) and then to the subscribers house (or in the case of an apartment building or mutliline business, to a splitter or dis- tribution box/panel).

Now that we have the basics, I'll try and go in-depth on the subject.

UNDERGROUND CABLES

These are sometimes inter-office trunks, but usually in a residential area they are trunk lines that go to bridging heads or distribution cases. The cables are about 2-3 inches thick (varies), and are either in a metal or pvc-type pipe (or similiar). Rarely (maybe not in some remote rural areas) are the cables just 'alone' in the ground. Instead they are usually in an underground cement tunnel (resembles a small sewer or storm- drain.) The manholes are >heavy< and will say 'Bell system' on them. they can be opened with a 1/2 inch wide crowbar (Hookside) inserted in the top rectangular hole. There are ladder rungs to help you climb down. You will see the cable pipes on the wall, with the blue and white striped one being the

inter-office trunk (at least in my area). The others are local lines, and are usually marked or color coded. There is almost always a posted color code chart on the wall, not to mention Telco manuals describing the cables and terminals, so I need not get into detail. Also, there is usually some kind of test equipment, and often Bell test sets are left in there.

 BRIDGING HEADS

The innocent-looking grayish-green boxes. These can be either trunk bridges or bridging for residences. The major trunk bridging heads are usually larger, and they have the 'Western Electric' logo at the bottom, whereas the normal bridging heads (which may be different in some areas-depending on the company you are served by. GTE B.H.'s look slightly different. Also, do not be fooled by sprinkler boxes!) They can be found in just about every city.

To open a bridging head: if it is locked (and you're feeling destructive), put a hammer or crowbar (the same one you used on the manhole) in the slot above the top hinge of the right door. Pull hard, and the door will rip off. Very effective! If it isn't locked (as usual), take a 7/8 inch hex socket and with it, turn the bolt about 1/8 of a turn to the right (you should hear a spring release inside). Holding the bolt, turn the handle all the way to the left and pull out.

To Check for a test-set (which are often left by Bell employees), go inside - First check for a test-set (which are often left by Bell employees). There should be a panel of terminals and wires. Push the panel back about an inch or so, and rotate the top latch (round with a flat section) downward. Release the panel and it will fall all the way forward. There is usually a large amount of wire and extra terminals. The test-sets are often hidden here, so don't overlook it (Manuals, as well, are sometimes placed in the head). On the right door is a metal box of alligator clips. Take a few (Compliments of Bell.). On each door is a useful little round metal device. (Says 'insert gently' or 'clamp gently - do not overtighten' etc..) On the front of the disc, you should find two terminals. These are for your test set. (If you dont have one, dont despair -I'll show you ways to make basic test sets later in this article).

Hook the ring (-) wire to the 'r' terminal; and the tip (+) wire to the other. (By the way, an easy way to determine the correct polarity is with a 1.5v LED. Tap it to the term. pair, if it doesnt light, switch the poles until it does. When it lights,find the longer of the two LED poles: This one will be on the tip wire (+). Behind the disc is a coiled up cord. This should have two alligator clips on it.. Its very useful, because you dont have to keep connecting and disconnecting the fone (test set) itself, and the clips work nicely.

On the terminal board, there should be about 10 screw terminals per side. Follow the wires, and you can see which cable pairs are active. Hook the clips to the terminal pair, and you're set! Dial out if you want, or just listen (If someone's on theline). Later, I'll show you a way to set up a true 'tap' that will let the person dial out on his line and receive calls as normal, and you can listen in the whole time. More about

this later...

On major prefix-area bridging heads, you can see 'local loops' ,which are two cable pairs (cable pair = ring+tip, a fone line) that are directly connected to each other on the terminal board. These 'cheap loops' as they are called, do not work nearLy as well as the existing ones set up in the switching hardware at the exchange office. (Try scanning your prefixes' 00xx to 99xx #'s.) The tone sides will announce themselves with the 1008 hz loop tone, and the hang side will give no response. The first person should dial the 'hang' side, and the other person dial the tone side, and the tone should stop if you have got the right loop.)

If you want to find the number of the line that you're on, you can either try to decipher the 'bridging log' (or whatever), which is on the left door. If that doesnt work, you can use the follwing:

```
-----
ANI # (Automatic Number ID)
-----
```

This is a Telco test number that reports to you the number that youre calling from (It's the same, choppy 'Bell bitch' voice that you get when you reach a disconnected #)

For the 213 NPA - Dial 1223

408 NPA - Dial 760

914 NPA - Dial 990

These are extremely useful when messing with any kind of line terminals, house boxes, etc.

Now that we have bridging heads wired, we can go on... (don't forget to close and latch the box after all... Wouldnt want GE and Telco people mad, now, would we?)

```
-----
"CANS" - Telephone Distribution Boxes
-----
```

Basically, two types:

- 1> Large, rectangular silver box at the end of each street.
- 2> Black, round, or rectangular thing at every telephone pole.

Type 1 - This is the case that takes the underground cable from the bridge and runs it to the telephone pole cable (The lowest, largest one on the telephone pole.) The box is always on the pole nearest the briging head, where the line comes up. Look for the 'Call before you Dig - Underground cable' stickers..

The case box is hinged, so if you want to climb the pole, you can open it with no problems. These usually have 2 rows of terminal sets.

You could try to impersonate a Telco technician and report the number as 'new active' (giving a fake name and fake report, etc.) I don't recommend this, and it probably won't (almost positively won't) work, but this is basically what Telco linemen do).

Type 2 - This is the splitter box for the group of houses around the pole (Usually 4 or 5 houses). Use it like I mentioned before. The terminals (8 or so) will be in 2 horizontal rows of sets. The extra wires that are just 'hanging there' are provisions for extra lines to residences (1 extra line per house, that's why the insane charge for line #3!) If it's the box for your house also, have fun and swap lines with your neighbor! 'Piggyback' them and wreak havoc on the neighborhood (It's eavesdropping time...) Again, I don't recommend this, and it's difficult to do it correctly. Moving right along...

```

-----
APARTMENT / BUSINESS MULTILINE
DISTRIBUTION BOXES
-----

```

Found outside the building (most often on the right side, but not always... Just follow the wire from the telephone pole) or in the basement. It has a terminal for all the lines in the building. Use it just like any other termination box as before.

Usually says 'Bell system' or similar. Has up to 20 terminals on it (usually.) the middle ones are grounds (forget these). The wires come from the cable to one row (usually the left one), with the other row of terminals for the other row of terminals for the building fone wire pairs. The ring (-) wire is usually the top terminal if the set in the row (1 of 10 or more), and the tip is in the clamp/screw below it. This can be reversed, but the cable pair is always terminated one-on-top-of-each-other, not on the one next to it. (I'm not sure why the other one is there, probably as a provision for extra lines) Don't use it though, it is usually too close to the other terminals, and in my experiences you get a noisy connection.

Final note: Almost every apartment, business, hotel, or anywhere there is more than 2 lines this termination lines this termination method is used. If you can master this type, you can be in control of many things... Look around in your area for a building that uses this type, and practice hooking up to the line, etc.

As an added help, here is the basic 'standard' color-code for multiline terminals/wiring/etc...

Single line: Red = Ring

Green = Tip

Yellow = Ground *

* (Connected to the ringer coil in individual and bridged ringer phones (Bell only) Usually connected to the green (Tip)

R

ing (-) = Red

White/Red Stripe
 Brown
 White/Orange Stripe
 Black/Yellow Stripe
 Tip (+) = Green (Sometimes
 yellow, see above.)
 White/Green Stripe
 White/Blue Stripe
 Blue
 Black/White Stripe

Ground = Black
 Yellow

 RESIDENCE TERMINAL BOX

Small, gray (can be either a rubber (Pacific Telephone) or hard plastic (AT & T) housing deal that connects the cable pair from the splitter box (See type 2, above) on the pole to your house wiring. Only 2 (or 4, the 2 top terminals are hooked in parallel with the same line) terminals, and is very easy to use. This can be used to add more lines to your house or add an external line outside the house.

 TEST SETS

Well, now you can consider yourself a minor expert on the terminals and wiring of the local telephone network. Now you can apply it to whatever you want to do.. Here's another helpful item:

How to make a Basic Test-Set and how to use it to dial out, eavsdrop, or seriously tap and record line activity.

These are the (usually) orange hand set fones used by Telco technicians to test lines. To make a very simple one, take any Bell (or other, but I recommend a good Bell fone like a princess or a trimline. gte flip fones work excellently, though..) fone and follow the instructions below. Note: A 'black box' type fone mod will let you tap into their line, and with the box o, it's as if you werent there. they can recieve calls and dial out, and you can be listening the whole time! very useful. With the box off, you have a normal fone test set.

Instructions:

A basic black box works well with good results. Take the cover off the fone to expose the network box (Bell type fones only). The terminal should have a green wire going to it (orange or different if touch

tone - doesn't matter, it's the same thing). Disconnect the wire and connect it to one pole of an SPST switch. Connect a piece of wire to the other pole of the switch and connect it to the terminal. Now take a 10k ohm 1/2 watt 10% resistor and put it between the terminal and the terminal, which should have a blue and a white wire going to it (different for touch tone). It should look like this:

```

-----Blue wire-----F
                        |
                        |
----White wire----!
                        |
                        |
                   10k Resistor
                        |
                        |
--Green wire--      !----RR
                   |   |
                   !   !
                   SPST

```

What this does in effect is keep the hookswitch / dial pulse switch (F to RR loop) open while holding the line high with the resistor. This gives the same voltage effect as if the fone was 'on-hook', while the 10k ohms holds the voltage right above the 'off hook' threshold (around 22 volts or so, as compared to 15-17 or normal off hook 48 volts for normal 'on-hook'), giving

Test Set Version 2. Another design is similar to the 'type 1' test set (above),

but has some added features:

When the SPST switch is on, the LED will light, and the fone will become active. The green light should be on. If it isn't, switch the dpst. If it still isn't, check the polarity of the line and the LEDs. With both lights on, hang up the fone. They should all be off now. Now flip the dpst and pick up the fone. The red LED should be on, but the green shouldn't. If it is, something is wrong with the circuit. You won't get a dial tone if all is correct.

When you hook up to the line with the alligator clips (Assuming you have put this circuit inside our fona and have put alligator clips on the ring and tip wires (As we did before)) you should have the spst #1 in the off position. This will greatly reduce the static noise involved in hooking up to a line. The red LED can also be used to check if you have the correct polarity.

With this fone you will have the ability to listen in on >all< audible line activity, and the people (the 'eavesdroppers') can use their fone as normal.

Note that test sets #1 and #2 have true 'black boxes', and can be used for free calls (see an article about black boxes).

Test Set Version 3

To do test set 3:

Using a trimline (or similar) phone, remove the base and cut all of the wire leads off except for the red (ring -) and the green (tip +). Solder alligator clips to the lug. The wire itself is 'tinsel' wrapped in rayon, and doesn't solder well. Inside the one handset, remove the light socket (if it has one) and install a small slide or toggle switch (Radio Shack's micro- miniature spst works well). Locate the connection of the ring and the tip wires on the pc board near where the jack is located at the bottom of the handset. (The wires are sometimes black or brown instead of red and green, respectively). Cut the foil and run 2 pieces of wire to your switch. In parallel with the switch add a .25 uf 200 VDC capacitor (mylar, silvered mica, ceramic, not an electrolytic). When the switch is closed, the handset functions normally. With the switch in the other position, you can listen without being heard.

Note: To reduce the noise involved in connecting the clips to a line, add a switch selectable 1000 ohm 1/2 watt resistor in series with the tip wire. Flip it in circuit when connecting, and once on the line, flip it off again. (or just use the 'line disconnect' type switch as in the type 2 test set (above)). Also avoid touching the alligator clips to any metal parts or other terminals, for it causes static on the line and raises people's suspicions.

```

-----
RECORDING
-----

```

If you would like to record any activity, use test set 1 or 2 above (for unattended recording of >all< line activity), or just any test set if you are going to be there to monitor when they are dialing, talking, etc.

Place a telephone pickup coil (I recommend the Becoton T-5 TP coil or equivalent) onto the test set, and put the TP plug into the mic. jack of any standard tape recorder. Hit play, rec, and pause. Alternate pause when you want to record (I don't think anyone should have any difficulty with this at all...) Well, if you still can't make a test set or you don't have the parts, there's still hope. Alternate methods:

- 1> Find a bell test set in a manhole or a bridging head and 'Borrow it indefinitely...
- 2> Test sets can be purchased from:

```

Techni-Tool
5 Apollo Road
Box 368
Plymouth Meeting PA., 19462

```

Ask for catalog #28

They are usually \$300 - \$600, and are supposed to have MF dialing capability as well as TT dialing. They are also of much higher quality than the standard bell test sets. If you would like to learn more about the subjects covered here,

I suggest:

- 1> Follow Bell trucks and linemen or technicians and ask subtle questions. also try 611 (repair service) and ask questions..
- 2> Explore your area for any Bell hardware, and experiment with it. Don't try something if you are not sure what youre doing, because you wouldnt want to cause problems, would you?

Getting Money out of Pay Phones

Getting Money out of Pay Phones by the Jolly Roger

I will now share with you my experiences with pay telephones. You will discover that it is possible to get money from a pay phone with a minimum of effort.

Theory: Most pay phones use four wires for the transmission of data and codes to the central office. Two of them are used for voice (usually red and green), one is a ground, and the last is used with the others for the transmission of codes. It is with this last wire that you will be working with. On the pay phone that

I usually did this to, it was colored purple, but most likely will be another color.

What you will do is simply find a pay phone which has exposed wires, such that one of them can be disconnected and connected at ease without fear of discovery. You will discover that it is usually a good idea to have some electrical tape along with you and some tool for cutting this tape.

Through trial and error, you will disconnect one wire at a time starting with the wires different than green and red. You do want a dial tone during this operation.

What you want to disconnect is the wire supplying the codes to the telephone company so that the pay phone will not get the 'busy' or 'hang-up' command.

Leave this wire disconnected when you discover it. What will happen: Anytime that someone puts any amount of money into the pay phone, the deposit will not register with the phone company and it will be held in the 'temporary' chamber of the pay phone.

Then, (a day later or so) you just code back to the phone, reconnect the wire, and click the hook a few times and the phone will dump it all out the shute.

(What is happening is that the 'hangup' code that the phone was not receiving due to the wire being disconnected suddenly gets the code and dumps its 'temporary' storage spot.)

You can make a nice amount of money this way, but remember that a repairman will stop by every few times it is reported broken and repair it, so check it at least once a day.

Enjoy and have fun.. Many phones I have done this to, and it works well with each..

Here are a few tips on how not to get caught when using MCI or other such services:

- 1- Try not to use them for voice to voice personal calls. Try to use them for computer calls only. Here is why:
MCI and those other services can't really trace the calls that come through the lines, they can just monitor them. They can listen in on your calls and from that, they can get your name and other information from the conversation. They can also call the number you called and ask your friend some questions. If you call terminals and BBS'S then it is much harder to get information. For one thing, most sysops won't give these dudes that call any info at all or they will act dumb because they PHREAK themselves!
- 2- Beware when using colored boxes! They are easy to find!!!!
- 3- Try to find a sine-wave number. Then use an MCI or other service to call it. You will hear a tone that goes higher and lower. If the tone just stops, then that code is being monitored and you should beware when using it.

If you do get caught, then if you think you can, try to weasel out of it.

I have heard many stories about people that have pleaded with the MCI guys and have been let off. You will get a call from a guy that has been monitoring you. Act nice. Act like you know it is now wrong to do this kind of thing.....just sound like you are sorry for what you did. (If you get a call, you probably will be a little sorry!) Otherwise, it is very dangerous!!!!!! (Very with a capital V!

Red Box Plans

Red Box Plans by the Jolly Roger

Red boxing is simulating the tones produced by public payphones when you drop your money in. The tones are beeps of 2200 Hz + 1700 Hz

Nickle = 1 beep for 66 milliseconds.

Dime = 2 beeps, each 66 milliseconds with a 66 millisecond pause between beeps.

Quarter = 5 beeps, each 33 milliseconds with a 33 millisecond pause between beeps.

There are two commonly used methods being used by Phreaks to make free calls.

1. An electronic hand-held device that is made from a pair of Wien-bridge oscillators with the timing controlled by 555 timing chips.
2. A tape recording of the tones produced by a home computer. One of the best computers to use would be an Atari ST. It is one of the easier computers to use because the red box tones can be produced in basic with only about 5 statements.

RemObs

[__RemObs__] by the Jolly Roger

Some of you may have heard of devices called Remobs which stands for Remote Observation System. These Devices allow supposedly authorized telephone employees to dial into them from anywhere, and then using an ordinary touch tone fone, tap into a customer's line in a special receive only mode. [The mouthpiece circuit is deactivated, allowing totally silent observation from any fone in the world (Wire tapping without a court order is against the law)]

[__How Remobs Work__]

Dial the number of a Remob unit. Bell is rumored to put them in the 555 information exchanges, or on special access trunks [Unreachable except via blue box]. A tone will then be heard for approximately 2 seconds and then silence. You must key in (In DTMF) a 2 to 5 digit access code while holding each digit down at least 1 second. If the code is not entered within 5 or 6 seconds, the Remob will release and must be dialed again. If the code is supposedly another tone will be heard. A seven digit subscriber fone number can then be entered [The Remob can only handle certain 'exchanges' which are prewired, so usually one machine cannot monitor an entire NPA]. The Remob will then connect to the subscribers line. The listener will hear the low level idle tone as long as the monitored party is on hook. As the monitored party dials [rotary or DTMF], the listener would hear [And Record] the number being dialed. Then the ENTIRE conversation, datalink, whatever is taking place, all without detection. There is no current box which can detect Remob observation, since it is being done with the telephone equipment that makes the connection. When the listener is finished monitoring of that particular customer, he keys the last digit of the access code to disconnects him from the monitored line and return to the tone so that he can key in another 7 digit fone #. When the listener is totally finished with the Remob, he keys a single 'disconnect digit' which disconnects him from the Remob so that the device can reset and be ready for another caller.

[__History of Remobs__]

Bell has kept the existance of Remobs very low key. Only in 1974, Bell acknowledged that Remobs existed. The device was first made public during hearings on "Telephone Monitoring Practices by Federal Agencies" before a subcommittee on government operations. House of Representatives, Ninety-Third Congress, June 1974.

It has since been stated by Bell that the Remob devices are used exclusively for monitoring Bell employees such as operators, information operators, etc., to keep tabs on their performance. [Suuureee, were stupid]

[__Possible Uses for Remobs__]

The possible uses of Remobs are almost as endless as the uses of self created fone line. Imagine the ability to monitor bank lines etc, just off the top of my head I can think of these applications:

Data Monitoring of:

TRW

National Credit Bureau

AT&T Cosmos

Bank Institutions

Compuserve and other Networks.

Voice Monitoring of:

Bank Institutions

Mail Order buisnesses.

Bell Telephone themselves.

Any place handling sensitive or important information.

Anyone that you may not like.

With just one Remob, someone could get hundreds of credit cards, find out who was on vacation, get compuserve passwords by the dozens, disconnect peoples fones, do credit checks, find out about anything that they may want to find out about. Im sure you brilliant can see the value of a telephone hobbist and a telecommunications enthusiast getting his hands on a few choice Remobs.

[_Caution_____]

If any reader should discover a Remob during his (or her) scanning excursions, please keep in mind the very strict federal laws regarding wiretapping and unauthorized use of private Bell property.

Scarlet Box Plans

Scarlet Box Plans by the Jolly Roger

The purpose of a Scarlet box is to create a very bad conection, it can be used to crash a BBS or just make life miserable for those you seek to avenge.

Materials: 2 alligator clips, 3 inch wire, or a resister
(plain wire will create greatest amount of static)
(Resister will decrease the amount of static in porportion to the resister you are using)

Step (1): Find the phone box at your victims house, and pop the cover off.

Step (2): Find the two prongs that the phone line you wish to box are connected to.

Step (3): Hook your alligator clips to your (wire/resister).

Step (4): Find the lower middle prong and take off all wires connected to it, i think this disables the ground and call waiting and shit like that.

Step (5): Now take one of the alligator clips and attach it to the upper most prong, and take the other and attach it to the lower middle prong.

Step (6): Now put the cover back on the box and take off!!

** /
**
**
**
**
**

(**) = prongs

**

(/) = (wire/resister)

(##) = some phone bullshit

The Anarchist's Cookbook

Silver Box Plans

Silver Box Plans by the Jolly Roger

Introduction:

First a bit of Phone Trivia. A standard telephone keypad has 12 buttons.

These buttons, when pushed, produce a combination of two tones. These tones represent the row and column of the button you are pushing.

	1	1	1
	2	3	4
	0	3	7
	9	6	7
697	(1)	(2)	(3)
770	(4)	(5)	(6)
851	(7)	(8)	(9)
941	(*)	(0)	(#)

So (1) produces a tone of 697+1209, (2) produces a tone of 697+1336, etc.

Function:

What the Silver Box does is just creates another column of buttons, with the new tone of 1633. These buttons are called A, B, C, and D.

Usefulness:

Anyone who knows anything about phreaking should know that in the old days of phreaking, phreaks used hardware to have fun instead of other people's Sprint and MCI codes. The most famous (and useful) was the good ol' Blue Box. However, Ma Bell decided to fight back and now most phone systems have protections against tone-emitting boxes. This makes boxing just about futile in most areas of the United States (ie those areas with Crossbar or Step-By-Step). If you live in or near a good-sized city, then your phone system is probably up-to-date (ESS) and this box (and most others) will be useless.

However, if you live in the middle of nowhere (no offense intended), you may find a use for this and other boxes.

Materials:

- 1 Foot of Blue Wire
- 1 Foot of Grey Wire
- 1 Foot of Brown Wire
- 1 Small SPDT Switch (*)
- 1 Standard Ma Bell Phone
- (*) SPDT = Single Pole/Double Throw

Tools:

- 1 Soldering Iron
- 1 Flat-Tip Screwdriver

Procedure:

- (1) Loosen the two screws on the bottom of the phone and take the casing off.
- (2) Loosen the screws on the side of the keypad and remove the keypad from the mounting bracket.
- (3) Remove the plastic cover from the keypad.
- (4) Turn the keypad so that *0# is facing you. Turn the keypad over. You'll see a bunch of wires, contacts, two Black Coils, etc.
- (5) Look at the Coil on the left. It will have five (5) Solder Contacts facing you. Solder the Grey Wire to the fourth Contact Pole from the left.
- (6) Solder the other end of the Grey Wire to the Left Pole of the SPDT Switch.
- (7) Find the Three (3) Gold-Plated Contacts on the bottom edge of the keypad. On the Left Contact, gently separate the two touching Connectors (they're soldered together) and spread them apart.
- (8) Solder the Brown Wire to the Contact farthest from you, and solder the other end to the Right Pole of the SPDT Switch.
- (9) Solder the Blue Wire to the Closest Contact, and the other end to the Center Pole of the SPDT Switch.
- (10) Put the phone back together.

Using The Silver Box:

What you have just done was installed a switch that will change the 369# column into an ABCD column. For example, to dial a 'B', switch to Silver Box Tones and hit '6'.

Noone is sure of the A, B, and C uses. However, in an area with an old phone system, the 'D' button has an interesting effect. Dial Directory Assistance and hold down 'D'. The phone will ring, and you should get a pulsing tone. If you get a pissed-off operator, you have a newer phone system with defenses against Silver Boxes. At the pulsing tone, dial a 6 or 7. These are loop ends.

The Anarchist's Cookbook

Bell Trashing

Bell Trashing by the Jolly Roger

The Phone Co. will go to extremes on occasions. In fact, unless you really know what to expect from them, they will surprise the heck out of you with their "unpublished tariffs". Recently, a situation was brought to my attention that up till then I had been totally unaware of, least to mention, had any concern about. It involved garbage! The phone co. will go as far as to prosecute anyone who rumages through their garbage and helps himself to some

Of course, they have their reasons for this, and no doubt benefit from such action. But, why should they be so picky about garbage? The answer soon became clear to me: those huge metal bins are filled up with more than waste old food and refuse... Although it is Pacific Tele. policy to recycle paper waste products, sometimes employees do overlook this sacred operation when sorting the garbage. Thus top-secret confidential Phone Co. records go to the garbage bins instead of the paper shredders. Since it is constantly being updated with "company memorandums, and supplied with extensive reference material, the Phone co. must continually dispose of the outdated materials. Some phone companies are supplied each year with the complete "System Practices" guide. This publication is an over 40 foot long library of reference material about everything to do with telephones. As the new edition arrives each year, the old version of "System Practices" must also be thrown out.

I very quickly figured out where some local phone phreaks were getting their material. They crawl into the garbage bins and remove selected items that are of particular interest to them and their fellow phreaks. One phone phreak in the Los Angeles area has salvaged the complete 1972 edition of "Bell System Practices". It is so large and was out of order (the binders had been removed) that it took him over a year to sort it out and create enough shelving for it in his garage.

Much of this "Top Secret" information is so secret that most phone companies have no idea what is in their files. They have their hands full simply replacing everything each time a change in wording requires a new revision. It seems they waste more paper than they can read!

It took quite a while for Hollywood Cal traffic manager to figure out how all of the local phone phreaks constantly discovered the switchroom test numbers

Whenever someone wanted to use the testboard, they found the local phone phreaks on the lines talking to all points all over the world. It got to the point where the local garbage buffs knew more about the office operations than the employees themselves. One phreak went so far as to call in and tell a

switchman what his next daily assignment would be. This, however, proved to be too much. The switchman traced the call and one phone phreak was denied the tool of his trade.

In another rather humorous incident, a fellow phreak was rumaging through the trash bin when he heard someone approaching. He pressed up against the side of the bin and silently waited for the goodies to come. You can imagine his surprise when the garbage from the lunchroom landed on his head. Most people find evenings best for checking out their local telco trash piles. The only thing necessary is a flashlight and, in the case mentioned above, possibly a rain coat. A word of warning though, before you rush out and dive into the trash heap. It is probably illegal, but no matter where you live, you certainly won't get the local policeman to hold your flashlight for you.

800-847-6181 Voice Mail

NOTES: Each and every one of these numbers is available to the 604 (British Columbia) Area Code.

Most are available Canada Wide and some are located in the United States. Numbers designated ROLM have been identified as being connected to a ROLM Phonemail system. Numbers designated ASPEN are connected to an ASPEN voice message system. Numbers designated VOICE MAIL have not been identified as to equipment in use on that line. Numbers designated carrier are answered by a modem or data set.

Most Voice Message systems, and ALL Rolms, sound like an answering machine. Press 0 during the recording when in a rolm, * or # or other DTMF in other systems, and be propelled into another world...

Hacking TRW

Hacking TRW by the Jolly Roger

When you call TRW, the dial up will identify itself with the message "TRW". It will then wait for you to type the appropriate answer back (such as CTRL-G) Once This has been done, the system will say "CIRCUIT BUILDING IN PROGRESS" Along with a few numbers. After this, it clears the screen (CTRL L) followed by a CTRL-Q. After the system sends the CTRL-Q, It is ready for the request. You first type the 4 character identifier for the geographical area of the account..

(For Example) TCA1 - for certain Calif. & Vicinity subscribers.

TCA2 - A second CALF. TRW System.

TNJ1 - Their NJ Database.

TGA1 - Their Georgia Database.

The user then types A and then on the next line, he must type his 3 char. Option. Most Requests use the RTS option. OPX, RTX, and a few others exist. (NOTE) TRW will accept an A, C, or S as the 'X' in the options above.) Then finally, the user types his 7 digit subscriber code. He appends his 3-4 character password after it. It seems that if you manage to get hold of a TRW Printout (Trashing at Sears, Saks, ETC. or from getting your credit printout from them) Their subscriber code will be on it leaving only a 3-4 character p/w up to you.

For Example,

(Call the DialUp)

TRW System Types, ST) CTRL-G

(You type,YT) Circuit building in progress 1234

(ST) CTRL-L CRTL-Q (TCA1 CYT) BTS 300000AAA

(YT]

Note: This sytem is in Half Duplex, Even Parity, 7 Bits per word and 2 Stop Bits.

CAUTION: It is a very stressed rumor that after typing in the TRW password Three (3) times.. It sets an Automatic Number Identification on your ass, so be careful. And forget who told you how to do this..

The Anarchist's Cookbook

Hacking VAX & UNIX

Hacking Vax's & Unix by the Jolly Roger

Unix is a trademark of At&t (and you know what that means)

In this article, we discuss the unix system that runs on the various vax systems. If you are on another unix-type system, some commands may differ, but since it is licenced to bell, they can't make many changes.

Hacking onto a unix system is very difficult, and in this case, we advise having an inside source, if possible. The reason it is difficult to hack a vax is this: Many vax, after you get a carrier from them, respond=>

Login:

They give you no chance to see what the login name format is. Most commonly used are single words, under 8 digits, usually the person's name. There is a way around this: Most vax have an acct. called 'suggest' for people to use to make a suggestion to the system root terminal. This is usually watched by the system operator, but at late he is probably at home sleeping or screwing someone's brains out. So we can write a program to send at the vax this type of a message:

A screen freeze (Cntrl-s), screen clear (system dependant), about 255 garbage characters, and then a command to create a login acct., after which you clear the screen again, then unfreeze the terminal. What this does: When the terminal is frozen, it keeps a buffer of what is sent. well, the buffer is about 127 characters long. so you overflow it with trash, and then you send a command line to create an acct. (System dependant). after this you clear the buffer and screen again, then unfreeze the terminal. This is a bad way to do it, and it is much nicer if you just send a command to the terminal to shut the system down, or whatever you are after...

There is always, *Always* an acct. called root, the most powerful acct. to be on, since it has all of the system files on it. If you hack your way onto this one, then everything is easy from here on...

On the unix system, the abort key is the Cntrl-d key. watch how many times you hit this, since it is also a way to log off the system!

A little about unix architecture: The root directory, called root, is where the system resides. After this come a few 'sub' root directories, usually to group things (stats here, priv stuff here, the user log here...).

Under this comes the superuser (the operator of the system), and then finally the normal users. In the unix 'Shell' everything is treated the same.

By this we mean: You can access a program the same way you access a user directory, and so on. The way the unix system was written, everything, users included, are just programs belonging to the root directory. Those of you who hacked onto the root, smile, since you can screw everything... the main level (exec level) prompt on the unix system is the \$, and if you are on the root, you have a # (superuser prompt).

Ok, a few basics for the system... To see where you are, and what paths are active in regards to your user account, then type

```
=> pwd
```

This shows your acct. seperated by a slash with another pathname (acct.), possibly many times. To connect through to another path, or many paths, you would type:

```
You=> path1/path2/path3
```

and then you are connected all the way from path1 to path3. You can run the programs on all the paths you are connected to. If it does not allow you to connect to a path, then you have insufficient privs, or the path is closed and archived onto tape. You can run programs this way also:

```
you=> path1/path2/path3/program-name
```

Unix treats everything as a program, and thus there a few commands to learn...

To see what you have access to in the end path, type

```
=> ls
```

for list. this show the programs you can run. You can connect to the root directory and run it's programs with=>

```
/root
```

By the way, most unix systems have their log file on the root, so you can set up a watch on the file, waiting for people to log in and snatch their password as it passes thru the file. To connect to a directory, use the command:

```
=> cd pathname
```

This allows you to do what you want with that directory. You may be asked for a password, but this is a good way of finding other user names to hack onto.

The wildcard character in unix, if you want to search down a path for a game or such, is the `*`.

=> `ls /*`

Should show you what you can access. The file types are the same as they are on a dec, so refer to that section when examining file. To see what is in a file, use the

=> `pr`

filename command, for print file.

We advise playing with pathnames to get the hang of the concept. There is on-line help available on most systems with a 'help' or a '?'.
We advise you look thru the help files and pay attention to anything they give you on pathnames, or the commands for the system.

You can, as a user, create or destroy directories on the tree beneath you. This means that root can kill everything but root, and you can kill any that are below you. These are the

commands for the system.

=> `mkdir pathname`

=> `rmdir pathname`

commands.

Once again, you are not alone on the system... type=>

`who`

to see what other users are logged in to the system at the time. If you want to talk to them=>

`write username`

Will allow you to chat at the same time, without having to worry about the parser. To send mail to a user, say

=> `mail`

And enter the mail sub-system. To send a message to all the users on the system, say

=> `wall`

Which stands for 'write all'. By the way, on a few systems, all you have to do is hit the key to end the message, but on others you must hit the `cntrl-d` key.

To send a single message to a user, say

=> `write username`

this is very handy again! If you send the sequence of characters discussed at the very beginning of this

article, you can have the super-user terminal do tricks for you again.

Privs:

If you want superuser privs, you can either log in as root, or edit your acct. so it can say

```
=> su
```

this now gives you the # prompt, and allows you to completely by-pass the protection. The wonderful security conscious developers at bell made it very difficult to do much without privs, but once you have them, there is absolutely nothing stopping you from doing anything you want to.

To bring down a unix system:

```
=> chdir /bin
```

```
=> rm *
```

this wipes out the pathname bin, where all the system maintenance files are.

Or try:

```
=> r -r
```

This recursively removes everything from the system except the remove command itself.

Or try:

```
=> kill -1,1
```

```
=> sync
```

This wipes out the system devices from operation. When you are finally sick and tired from hacking on the vax systems, just hit your cntrl-d and repeat key, and you will eventually be logged out.

The reason this file seems to be very sketchy is the fact that bell has 7 licenced versions of unix out in the public domain, and these commands are those common to all of them. I recommend you hack onto the root or bin directory, since they have the highest levels of privs, and there is really not much you can do (except develop software) without them.

White Box Plans

White Box Plans by the Jolly Roger

Introduction:

The White Box is simply a portable Touch-Tone keypad. For more information on Touch-Tone, see my Silver Box Plans. Materials:

- 1 Touch-Tone Keypad
- 1 Miniature 1000 to 8 Ohm Transformer (Radio Shack # 273-1380)
- 1 Standard 8 Ohm Speaker
- 2 9V Batteries
- 2 9V Battery Clips

Procedure:

- (1) Connect the Red Wire from the Transformer to either terminal on the Speaker.
- (2) Connect the White Wire from the Transformer to the other terminal on the Speaker.
- (3) Connect the Red Wire from one Battery Clip to the Black Wire from the other Battery Clip.
- (4) Connect the Red Wire from the second Battery Clip to the Green Wire from the Keypad.
- (5) Connect the Blue Wire from the Keypad to the Orange/Black Wire from the Keypad.
- (6) Connect the Black Wire from the first Battery Clip to the two above wires (Blue and Black/Orange).
- (7) Connect the Black Wire from the Keypad to the Blue Wire from the Transformer.
- (8) Connect the Red/Green Wire from the Keypad to the Green Wire from the Transformer.
- (9) Make sure the Black Wire from the Transformer and the remaining wires from the Keypad are free.
- (10) Hook up the Batteries.

Optional:

- (1) Put it all in a case.
- (2) Add a Silver Box to it.

Use:

Just use it like a normal keypad, except put the speaker next to the receiver of the phone you're using.

Fertilizer Bomb

How to make a fertilizer bomb by Jolly Roger

Ingredients:

- Newspaper
- Fertilizer (the chemical kind, GREEN THUMB or ORCHO)
- Cotton
- Diesel fuel

Make a pouch out of the newspaper and put some fertilizer in it. Then put cotton on top. Soak the cotton with fuel. Then light and run like you have never ran before! This blows up 500 square feet so don't do it in an alley!! -Jolly Roger-

Tennis Ball Bomb

Tennis Ball Bombs by The Jolly Roger

Ingredients:

- Strike anywhere matches
- A tennis ball
- A nice sharp knife
- Duct tape

Break a ton of matchheads off. Then cut a **SMALL** hole in the tennis ball. Stuff all of the matchheads into the ball, until you can't fit any more in. Then tape over it with duct tape. Make sure it is real nice and tight! Then, when you see a geek walking down the street, give it a good throw. He will have a blast!!

Diskette Bombs

Diskette Bombs by the Jolly Roger

You need:

- A disk
- Scissors
- White or blue kitchen matches (they **MUST** be these colors!)
- Clear nail polish
- Carefully open up the diskette (3.5" disks are best for this!)
- Remove the cotton covering from the inside.
- Scrape a lot of match powder into a bowl (use a wooden scraper, metal might spark the matchpowder!)
- After you have a lot, spread it evenly on the disk.
- Using the nail polish, spread it over the match mixture
- Let it dry
- Carefully put the diskette back together and use the nail polish to seal it shut on the inside (where it came apart).
- When that disk is in a drive, the drive head attempts to read the disk, which causes a small fire (ENOUGH HEAT TO MELT THE DISK DRIVE AND FUCK THE HEAD UP!!). ahahahahaha! Let the fuckhead try and fix THAT!!!

Unlisted Phone Numbers

Unlisted Phone Numbers by The Jolly Roger

There are a couple of different ways of doing this. Let's see if this one will help: Every city has one or more offices dedicated to assigning numbers to the telephone wire pairs. These offices are called DPAC offices and are available to service reps who are installing or repairing phones. To get the DPAC number, a service rep would call the customer service number for billing information in the town that the number is located in that he is trying to get the unlisted number of. (Got that?) The conversation would go something like this: "Hi, Amarillo, this is Joe from Anytown business office, I need the DPAC number for the south side of town." This info is usually passed out with no problems, so... if the first person you call doesn't have it, try another. REMEMBER, no one has ANY IDEA who the hell you are when you are talking on the phone, so you can be anyone you damn well please! (heheheh!) When you call the DPAC number, just tell them that you need a listing for either the address that you have, or the name. DPAC DOES NOT SHOW WHETHER THE NUMBER IS LISTED OR UNLISTED!! Also, if you're going to make a habit of chasing numbers down, you might want to check into getting a criss-cross directory, which lists phone numbers by their addresses. It costs a couple-a-hundred bux, but it is well worth it if you have to chase more than one or two numbers down!

-Jolly Roger-

Fuses

Fuses brought to you by The Jolly Roger

You would be surprised how many files are out there that use what falls under the category of a "fuse." They assume that you just have a few lying around, or know where to get them. Well, in some parts of the country, fuses are extremely hard to come by... so this file tells you how to make your own. Both fuses presented here are fairly simple to make, and are fairly reliable.

SLOW BURNING FUSE

~~~~~

(approx. 2 inches per minute)

Materials needed:

- Cotton string or 3 shoelaces
- Potassium Nitrate or Potassium Chlorate
- Granulated sugar

Procedure:

- Wash the cotton string or shoelaces in HOT soapy water, then rinse with fresh water
- Mix the following together in a glass bowl:
  - 1 part potassium nitrate or potassium chlorate
  - 1 part granulated sugar
  - 2 parts hot water
- Soak strings or shoelaces in this solution
- Twist/braid 3 strands together and allow them to dry
- Check the burn rate to see how long it actually takes!!

### FAST BURNING FUSE

~~~~~ (40 inches per minute)

Materials needed:

- Soft cotton string
- fine black powder (empty a few shotgun shells!)
- shallow dish or pan

Procedure:

- moisten powder to form a paste

- twist/braid 3 strands of cotton together
- rub paste into string and allow to dry
- Check the burn rate!!!

The Anarchist's Cookbook

How to make Potassium Nitrate

How to make Potassium Nitrate by The Jolly Roger

Potassium Nitrate is an ingredient in making fuses, among other things. Here is how you make it:

Materials needed:

- 3.5 gallons of nitrate bearing earth or other material
- 1/2 cup of wood ashes
- Bucket or other similar container about 4-5 gallons in volume
- 2 pieces of finely woven cloth, each a bit bigger than the bottom of the bucket
- Shallow dish or pan at least as large in diameter as the bucket
- Shallow, heat resistant container
- 2 gallons of water
- Something to punch holes in the bottom of the bucket
- 1 gallon of any type of alcohol
- A heat source
- Paper & tape

Procedure:

- Punch holes on the inside bottom of the bucket, so that the metal is "puckered" outward from the bottom
- Spread cloth over the holes from the bottom
- Place wood ashes on the cloth. Spread it out so that it covers the entire cloth and has about the same thickness.
- Place 2nd cloth on top of the wood ashes
- Place the dirt or other material in the bucket
- Place the bucket over the shallow container. NOTE: It may need support on the bottom so that the holes on the bottom are not blocked.
- Boil water and pour it over the earth very slowly. Do NOT pour it all at once, as this will clog the filter on the bottom.
- Allow water to run through holes into the shallow dish on the bottom.
- Be sure that the water goes through ALL of the earth!
- Allow water in dish to cool for an hour or so
- Carefully drain the liquid in the dish away, and discard the sludge in the bottom
- Boil this liquid over a fire for at least two hours. Small grains of salt will form - scoop these out with

the paper as they form

- When the liquid has boiled down to 1/2 its original volume let it sit
- After 1/2 hour, add equal volume of the alcohol; when this mixture is poured through paper, small white crystals appear. This is the potassium nitrate.

Purification:

- Redissolve crystals in small amount of boiling water
- Remove any crystals that appear
- Pour through improvised filter then heat concentrated solution to dryness.
- Spread out crystals and allow to dry

The creator of this page and any links it may lead to hereby takes no responsibility or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Exploding Lightbulbs

Exploding lightbulbs by The Jolly Roger

Materials needed:

- lightbulb (100w)
- socket (duh...)
- 1/4 cup soap chips
- blackpowder! (open some shotgun shells!)
- 1/4 cup kerosene orgasoline
- adhesive tape
- lighter or small blowtorch
- glue

Procedure for a simple exploding lightbulb:

- ~~~~~
- Drill a small hole in the top of the bulb near the threads!
 - Carefully pour the blackpowder into the hole. Use enough so that it touches the filament!
 - Insert into socket as normal (make sure the light is off or else YOU will be the victim!!)
 - Get the hell out!!

Procedure for a Napam Bulb:

- ~~~~~
- Heat kerosene/gasoline in a double boiler
 - Melt soap chips, stirring slowly.
 - Put somewhere and allow to cool
 - Heat the threads of the bulb VERY carefully to melt the glue. Remove threads, slowly drawing out the filament. Do NOT break the cheap electrical igniters and/or the filament or this won't work!!
 - Pour the liquid into the bulb, and slowly lower the filament back down into the bulb. Make sure the filament is dipped into the fluid.
 - Re-glue the threads back on. Insert it into a socket frequently used by the victim and get the hell out!!

When the victim flips the switch, he will be in for a BIG surprise!

Have fun! -Jolly Roger-

The Anarchist's Cookbook

Under water igniters

Under water igniters by The Jolly Roger

Materials needed:

- Pack of 10 silicon diodes (available at Radio Shack. you will know you got the right ones if they are very, very small glass objects!)
- Pack of matches
- 1 candle

Procedure:

- Light the candle and allow a pool of molten wax to form in the top.
- Take a single match and hold the glass part of a single diode against the head. Bend the diode pins around the matchhead so that one wraps in an upward direction and then sticks out to the side. Do the same with the other wire, but in a downward direction. The diodes should now be hugging the matchhead, but its wires **MUST NOT TOUCH EACH OTHER!**
- Dip the matchhead in wax to give it a water-proof coat. These work underwater
- repeat to make as many as you want

How to use them:

When these little dudes are hooked across a 6v battery, the diode reaches what is called breakdown voltage. When most electrical components reach this voltage, they usually produce great amounts of heat and light, while quickly melting into a little blob. This heat is enough to ignite a matchhead. These are recommended for use underwater, where most other igniters refuse to work. ENJOY!

The Anarchist's Cookbook

Home-brew blast cannon

Home-brew blast cannon by The Jolly Roger

Materials needed:

- 1 plastic drain pipe, 3 feet long, at least 3 1/2 inches in diameter
- 1 smaller plastic pipe, about 6 inches long, 2 inches in diameter
- 1 large lighter, with fluid refills (this gobbles it up!)
- 1 pipe cap to fit the large pipe, 1 pipe cap to fit the small pipe
- 5 feet of bellwire
- 1 SPST rocker switch
- 16v polaroid pot-a-pulse battery
- 15v relay (get this at Radio Shack)
- Electrical Tape
- One free afternoon

Procedure:

- Cut the bell wire into three equal pieces, and strip the ends
- Cut a hole in the side of the large pipe, the same diameter as the small pipe. Thread the hole and one end of the small pipe. they should screw together easily.

- Take a piece of scrap metal, and bend it into an "L" shape, then attach it to the level on the lighter:

Now, every time you pull the 'trigger' gas should flow freely from the lighter. You may need to enlarge the 'gas port' on your lighter, if you wish to be able to fire more rapidly.

- Connect two wires to the two posts on the switch
- Cut two holes in the side of the smaller tube, one for the switch on the bottom, and one for the metal piece on the top. Then, mount the switch in the bottom, running the wires up and out of the top.
- Mount the lighter/trigger in the top. Now the switch should rock easily, and the trigger should cause the lighter to pour out gas. Re-screw the smaller tube into the larger one, hold down the trigger a bit, let it go, and throw a match in there. If all goes well, you should hear a nice big "THUD!"

- Get a hold of the relay, and take off the top.

Connect (1) to one of the wires coming from the switch. Connect (2) to (4), and connect (5) to one side of the battery. Connect the remaining wire from the switch to the other side of the battery. Now you should be able to get the relay to make a little 'buzzing' sound when you flip the switch and you should see some tiny little sparks.

- Now, carefully mount the relay on the inside of the large pipe, towards the back. Screw on the smaller pipe, tape the battery to the side of the cannon barrel (yes, but looks aren't everything!)
- You should now be able to let a little gas into the barrel and set it off by flipping the switch.
- Put the cap on the back end of the large pipe VERY SECURELY. You are now ready for the first trial-run!

To Test:

Put something very, very large into the barrel, just so that it fits 'just right'. Now, find a strong guy (the recoil will probably knock you on your ass if you aren't careful!). Put on a shoulderpad, earmuffs, and possibly some other protective clothing (trust the Jolly Roger! You are going to need it!). Hold the trigger down for 30 seconds, hold on tight, and hit the switch. With luck and the proper adjustments, you should be able to put a frozed orange through 1/4 or plywood at 25 feet.

Have fun! -Jolly Roger-

Phone Taps

Phone Taps by The Jolly Roger

Here is some info on phone taps. In this file is a schematic for a simple wiretap & instructions for hooking up a small tape recorder control relay to the phone line.

First, I will discuss taps a little. There are many different types of taps. there are transmitters, wired taps, and induction taps to name a few. Wired and wireless transmitters must be physically connected to the line before they will do any good. Once a wireless tap is connected to the line, it can transmit all conversations over a limited reception range. The phones in the house can even be modified to pick up conversations in the room and transmit them too! These taps are usually powered off of the phone line, but can have an external power source. You can get more information on these taps by getting an issue of Popular Communications and reading through the ads. Wired taps, on the other hand, need no power source, but a wire must be run from the line to the listener or to a transmitter. There are obvious advantages of wireless taps over wired ones. There is one type of wireless tap that looks like a normal telephone mike. All you have to do is replace the original mike with this and it will transmit all conversations! There is also an exotic type of wired tap known as the 'Infinity Transmitter' or 'Harmonica Bug'. In order to hook one of these, it must be installed inside the phone. When someone calls the tapped phone & *before* it rings, blows a whistle over the line, the transmitter picks up the phone via a relay. The mike on the phone is activated so that the caller can hear all of the conversations in the room. There is a sweep tone test at 415/BUG-1111 which can be used to detect one of these taps. If one of these is on your line & the test # sends the correct tone, you will hear a click. Induction taps have one big advantage over taps that must be physically wired to the phone. They do not have to be touching the phone in order to pick up the conversation. They work on the same principle as the little suction-cup tape recorder mikes that you can get at Radio Shack. Induction mikes can be hooked up to a transmitter or be wired.

Here is an example of industrial espionage using the phone: A salesman walks into an office & makes a phone call. He fakes the conversation, but when he hangs up he slips some foam rubber cubes into the cradle. The called party can still hear all conversations in the room. When someone picks up the phone, the cubes fall away unnoticed.

A tap can also be used on a phone to overhear what your modem is doing when you are wardialing, hacking, or just plain calling a bbs (like the White Ruins! Denver, Colorado! 55 megs online! Atari! Macintosh! Amiga! Ibm! CALL IT! 303-972-8566! By the way, i did this ad without the sysops consent

or knowledge!).

Here is the schematic:

```

-----)!----)! (----->
)!(
Cap ^ )!(
)!(
)!(
)!(
^^^^^----)! (----->
^ 100K
!
!
```

The 100K pot is used for volume. It should be on its highest (least resistance) setting if you hook a speaker across the output. but it should be set on its highest resistance for a tape recorder or amplifier. You may find it necessary to add another 10 - 40K. The capacitor should be around .47 MFD. It's only purpose is to prevent the relay in the phone from tripping & thinking that you have the phone off of the hook. the audio output transformer is available at Radio Shack. (part # 273-138E for input). The red & the white wires go to the output device. You may want to experiment with the transformer for the best output. Hooking up a tape recorder relay is easy. Just hook one of the phone wires (usually red) to the the end of one of the relay & the ther end just loop around. This bypasses it. It should look like this:

```

-----^^^^^^^^^-----
-----
RELAY^^
```

(part #275-004 from Radio Shack works fine)

If you think that you line is tapped, the first thing to do is to physically inspect the line yourself ESPECIALLY the phones. You can get mike replacements with bug detectors built in. However, I would not trust them too much. It is too easy to get a wrong reading. For more info:

BUGS AND ELECTRONIC SURVEILANCE from Desert Publications HOW TO AVOID ELECTRONIC EAVESDROPPING & PRIVACY INVASION. I do not remember who this one is from... you might want to try Paladin Press.

The Anarchist's Cookbook

Landmines

How to make a landmine by The Jolly Roger

First, you need to get a pushbutton switch. Take the wires of it and connect one to a nine volt battery connector and the other to a solar igniter (used for launching model rockets). A very thin piece of stereo wire will usually do the trick if you are desperate, but I recommend the igniter. Connect the other wire of the nine-volt battery to one end of the switch. Connect a wire from the switch to the other lead on the solar igniter.

```
switch-----battery
```

```
\ /
```

```
\ /
```

```
\ /
```

```
\ /
```

```
solar igniter
```

```
|
|
|
```

```
explosive
```

Now connect the explosive (pipe bomb, m-80, CO2 bomb, etc.) to the igniter by attaching the fuse to the igniter (seal it with scotch tape). Now dig a hole; not too deep but enough to cover all of the materials. Think about what direction your enemy will be coming from and plant the switch, but leave the button visible (not TOO visible!). Plant the explosive about 3-5 feet away from the switch because there will be a delay in the explosion that depends on how short your wick is, and, if a homemade wick is being used, its burning speed. But if you get it right... and your enemy is close enough.....

BBBBBBBBOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOOMMMM! hahahaha

A different kind of Molotov Cocktail

A different kind of Molotov Cocktail by the Jolly Roger

Here is how you do it:

- Get a coke bottle & fill it with gasoline about half full
 - Cram a piece of cloth into the neck of it nice and tight
 - Get a chlorine tablet and stuff it in there. You are going to have to force it because the tablets are bigger than the opening of the bottle.
 - Now find a suitable victim and wing it in their direction. When it hits the pavement or any surface hard enough to break it, and the chlorine and gasoline mix..... BOOM!!!!!!
- Have fun! -Jolly Roger-

The Anarchist's Cookbook

Phone Systems Tutorial I

Phone Systems Tutorial by The Jolly Roger

To start off, we will discuss the dialing procedures for domestic as well as international dialing. We will also take a look at the telephone numbering plan.

North American Numbering Plan

~~~~~

In North America, the telephone numbering plan is as follows:

- A) a 3 digit Numbering Plan Area (NPA) code , ie, area code
  - B) a 7 digit telephone # consisting of a 3 digit Central Office (CO) code plus a 4 digit station #
- These 10 digits are called the network address or destination code. It is in the format of:

Area Code Telephone #

-----  
N\*X NXX-XXXX

Where: N = a digit from 2 to 9

\* = the digit 0 or 1

X = a digit from 0 to 9

### Area Codes

~~~~~

Check your telephone book or the seperate listing of area codes found on many bbs's. Here are the special area codes (SAC's):

510 - TWX (USA)

610 - TWX (Canada)

700 - New Service

710 - TWX (USA)

800 - WATS

810 - TWX (USA)

900 - DIAL-IT Services

910 - TWX (USA)

The other area codes never cross state lines, therefore each state must have at least one exclusive NPA code. When a community is split by a state line, the CO #'s are often interchangeable (ie, you can dial

the same number from two different area codes).

TWX (Telex II) consists of 5 teletype-writer area codes. They are owned by Western Union. These SAC's may only be reached via other TWX machines. These run at 110 baud (last I checked! They are most likely faster now!). Besides the TWX #'s, these machines are routed to normal telephone #'s. TWX machines always respond with an answerback. For example, WU's FYI TWX # is (910) 279-5956. The answerback for this service is "WU FYI MAWA".

If you don't want to but a TWX machine, you can still send TWX messages using Easylink [800/325-4112]. However you are gonna have to hack your way onto this one!

700:

700 is currently used by AT&T as a call forwarding service. It is targeted towards salesmen on the run. To understand how this works, I'll explain it with an example. Let's say Joe Q. Salespig works for AT&T security and he is on the run chasing a phreak around the country who royally screwed up an important COSMOS system. Let's say that Joe's 700 # is (700) 382-5968. Everytime Joe goes to a new hotel (or most likely SLEAZY MOTEL), he dials a special 700 #, enters a code, and the number where he is staying. Now, if his boss received some important info, all he would do is dial (700) 382-5968 and it would ring wherever Joe last programmed it to. Neat, huh?

800:

This SAC is one of my favourites since it allows for toll free calls. INWARD WATS (INWATS), or Inward Wide Area Telecommunications Service is the 800 #'s that we are all familiar with. 800 #'s are set up in service areas or bands. There are 6 of these. Band 6 is the largest and you can call a band 6 # from anywhere in the US except the state where the call is terminated (that is why most companies have one 800 number for the country and then another one for their state.) Band 5 includes the 48 contiguous states. All the way down to band 1 which includes only the states contiguous to that one. Therefore, less people can reach a band 1 INWATS # than a band 6 #.

Intrastate INWATS #'s (ie, you can call it from only 1 state) always have a 2 as the last digit in the exchange (ie, 800-NX2- XXXX). The NXX on 800 #'s represent the area where the business is located. For example, a # beginning with 800-431 would terminate at a NY CO.

800 #'s always end up in a hunt series in a CO. This means that it tries the first # allocated to the company for their 800 lines; if this is busy, it will try the next #, etc. You must have a minimum of 2 lines for each 800 #. For example, Travelnet uses a hunt series. If you dial (800) 521-8400, it will first try the # associated with 8400; if it is busy it will go to the next available port, etc. INWATS customers are billed by the number of hours of calls made to their #.

OUTWATS (OUTWARD WATS): OUTWATS are for making outgoing calls only. Large companies use OUTWATS since they receive bulk-rate discounts. Since OUTWATS numbers cannot have incoming calls, they are in the format of:

(800) *XXX-XXXX

Where * is the digit 0 or 1 (or it may even be designated by a letter) which cannot be dialed unless you box the call. The *XX identifies the type of service and the areas that the company can call.

Remember:

INWATS + OUTWATS = WATS EXTENDER

900:

This DIAL-IT SAC is a nationwide dial-it service. It is use for taking television polls and other stuff. The first minute currently costs an outrageous 50-85 cents and each additional minute costs 35-85 cents. Hell takes in a lot of revenue this way!
Dial (900) 555-1212 to find out what is currently on this service.

CO CODES

~~~~~

These identify the switching office where the call is to be routed. The following CO codes are reserved nationwide:

- 555 - directory assistance
- 844 - time. These are now in!
- 936 - weather the 976 exchange
- 950 - future services
- 958 - plant test
- 959 - plant test
- 970 - plant test (temporary)
- 976 - DIAL-IT services

Also, the 3 digit ANI & ringback #'s are regarded as plant test and are thus reserved. These numbers vary from area to area.

You cannot dial a 0 or 1 as the first digit of the exchange code (unless using a blue box!). This is due to the fact that these exchanges (000-199) contains all sorts of interesting shit such as conference #'s, operators, test #'s, etc.

950:

Here are the services that are currently used by the 950 exchange:

- 1000 - SPC
- 1022 - MCI Execunet
- 1033 - US Telephone
- 1044 - Allnet
- 1066 - Lexitel
- 1088 - SBS Skyline

These SCC's (Specialized Common Carriers) are free from fortress phones! Also, the 950 exchange will probably be phased out with the introduction of Equal Access

Plant Tests:

These include ANI, Ringback, and other various tests.

976:

Dial 976-1000 to see what is currently on the service. Also, many bbs's have listings of these numbers.

N11 codes:

-----

Bell is trying to phase out some of these, but they still exist in most areas.

011 - international dialing prefix

211 - coin refund operator

411 - directory assistance

611 - repair service

811 - business office

911 - EMERGENCY

International Dialing

~~~~~

With International Dialing, the world has been divided into 9 numbering zones. To make an international call, you must first dial: International Prefix + Country code + National #

In North America, the international dialing prefix is 011 for station-to-station calls. If you can dial International #'s directly in your area then you have International Direct Distance Dialing (IDDD).

The country code, which varies from 1 to 3 digits, always has the world numbering zone as the first digit. For example, the country code for the United Kingdom is 44, thus it is in world numbering zone 4. Some boards may contain a complete listing of other country codes, but here I give you a few:

1 - North America (US, Canada, etc.)

20 - Egypt

258 - Mozambique

34 - Spain

49 - Germany

52 - Mexico (southern portion)

7 - USSR

81 - Japan

98 - Iran (call & hassle those bastards!)

If you call from an area other than North America, the format is generally the same. For example, let's say that you wanted to call the White House from Switzerland to tell the prez that his numbered bank account is overdrawn (it happens, you know! ha ha). First you would dial 00 (the SWISS international dialing refix), then 1 (the US country code), followed by 202-456-1414 (the national # for the White House. Just ask for Georgy and give him the bad news!)

Also, country code 87 is reserved for Maritime mobile service, ie, calling ships:

871 - Marisat (Atlantic)

871 - Marisat (Pacific)

872 - Marisat (Indian)

International Switching:

In North America there are currently 7 no. 4 ESS's that perform the duty of ISC (Inter-nation Switching Centers). All international calls dialed from numbering zone 1 will be routed through one of these "gateway cities". They are:

- 182 - White Plains, NY
- 183 - New York, NY
- 184 - Pittsburgh, PA
- 185 - Orlando, FL
- 186 - Oakland, CA
- 187 - Denver, CO
- 188 - New York, NY

The 18X series are operator routing codes for overseas access (to be further discussed with blue boxes). All international calls use a signaling service called CCITT. It is an international standard for signaling.

Ok.. there you go for now! If you wanna read more about this, read part two which is the next file #36 in the Jolly Roger's cookbook!

The Anarchist's Cookbook

Phone Systems Tutorial II

Phone Systems Tutorial part II by The Jolly Roger

Part II will deal with the various types of operators, office heirarchy, & switching equipment.

Operators

~~~~~

There are many types of operators in the network and the more common ones will be discussed.

#### TSPS Operator:

The TSPS [(Traffic Service Position System) ass opposed to This Shitty Phone Service] Operator is probably the bitch (or bastard, for the female libertationists out there) that most of us are used to having to deal with. Here are his/her responsibilities:

- 1) Obtaning billing information for calling card or third number calls
- 2) Identifying called customer on person-to-person calls.
- 3) Obtaining acceptance of charges on collect calls.
- 4) Identifying calling numbers. This only happens when the calling # is not automatically recorded by CAMA (Centralized Automatic Message Accounting) & forwarded from the local office. This could be caused by equipment failures (ANIF- Automatic Number Identification Failure) or if the office is not equipped for CAMA (ONI- Operator Number Identification).

I once has an equipment failure happen to me & the TSPS operator came on and said, "What # are you calling FROM?" Out of curiosity, I gave her the number to my CO, she thanked me & then I was connected to a conversation that appeared to be between a frameman & his wife. Then it started ringing the party I wanted to originally call & everyone phreaked out (excuse the pun). I immediately dropped this dual line conference!

You should not mess with the TSPS operator since she KNOWS which number that you are calling from. Your number will show up on a 10-digit LED read-out (ANI board). She also knows whether or not you are at a fortress phone & she can trace calls quite readily! Out of all of the operators, she is one of the MOST DANGEROUS.

#### INWARD operator:

This operator assists your local TSPS ("0") operatorin connecting calls. She will never question a call as

long as the call is within HER SERVICE AREA. She can only be reached via other operators or by a blue box. From a blue box, you would dial KP+NPA+121+ST for the INWARD operator that will help you connect any calls within that NPA only. (Blue Boxing will be discussed in a future file).

#### DIRECTORY ASSISTANCE Operator:

This is the operator that you are connected to when you dial: 411 or NPA-555-1212. She does not readily know where you are calling from. She does not have access to unlisted numbers, but she DOES know if an unlisted # exists for a certain listing.

There is also a directory assistance operator for deaf people who use teletypewriters. If your modem can transfer BAUDOT [(45.5 baud). One modem that I know of that will do this is the Apple Cat acoustic or the Atari 830 acoustic modem. Yea I know they are hard to find... but if you wanna do this.. look around!) then you can call him/her up and have an interesting conversation. The # is: 800-855-1155. They use the standard Telex abbreviations such as GA for go ahead. they tend to be nicer and will talk longer than your regular operators. Also, they are more vulnerable into being talked out of information through the process of "social engineering" as Chesire Catalyst would put it.

Other operators have access to their own DA by dialing KP+NPA+131+ST (MF).

#### CN/A operators:

CN/A Operators are operators that do exactly the opposite of what directory assistance operators are for. In my experience, these operators know more than the DA op's do & they are more susceptible to "social engineering." It is possible to bullshit a CN/A operator for the NON-PUB DA # (ie, you give them the name & they give you the unlisted number. See the article on unlisted numbers in this cookbook for more info about them.). This is due to the fact that they assume that you are a fellow company employee. Unfortunately, the AT&T breakup has resulted in the break-up of a few NON-PUB DA #'s and policy changes in CN/A

#### INTERCEPT Operator:

The intercept operator is the one that you are connected to when there are not enough recordings available to tell you that the # has been disconnected or changed. She usually says, "What # you callin'?" with a foreign accent. This is the lowest operator lifeform. Even though they don't know where you are calling from, it is a waste of your time to try to verbally abuse them since they usually understand very little English anyway.

Incidentally, a few area DO have intelligent INTERCEPT Operators.

#### OTHER Operators:

And then there are the: MOBILE, Ship-to-Shore, Conference, Marine Verify, "Leave Word and Call Back," Rout & Rate (KP+800+141+1212+ST), & other special operators who have one purpose or another in the network.

Problems with an Operator> Ask to speak to their supervisor... or better yet the Group Chief (who is the highest ranking official in any office) who is the equivalent of the Madame in a whorehouse.

By the way, some CO's that will allow you to dial a 0 or 1 as the 4th digit, will also allow you to call special operators & other fun Tel. Co. #'s without a blue box. This is ver rare, though! For example, 212-121-1111 will get you a NY Inward Operator.

## Office Hierarchy

~~~~~

Every switching office in North America (the NPA system), is assigned an office name and class. There are five classes of offices numbered 1 through 5. Your CO is most likely a class 5 or end office. All long-distance (Toll) calls are switched by a toll office which can be a class 4, 3, 2, or 1 office. There is also a class 4X office callen an intermediate point. The 4X office is a digital one that can have an unattended exchange attached to it (known as a Remote Switching Unit (RSU)).

The following chart will list the Office #, name, & how many of those office exist (to the best of my knowledge) in North America:

Class Name Abb # Existing

| | | |
|----|-----------------------|--------|
| 1 | Regional Center RC | 12 |
| 2 | Sectional Center SC | 67 |
| 3 | Primary Center PC | 230 |
| 4 | Toll Center TC | 1,300 |
| 4P | Toll Point TP | n/a |
| 4X | Intermediate Point IP | n/a |
| 5 | End Office EO | 19,000 |
| 6 | RSU RSU | n/a |

When connecting a call from one party to another, the switching equipment usually tries to find the shortest route between the class 5 end office of the caller & the class 5 end office of the called party. If no inter-office trunks exist between the two parties, it will then move upward to the next highest office for servicing calls (Class 4). If the Class 4 office cannot handle the call by sending it to another Class 4 or 5 office, it will then be sent to the next highest office in the hierarchy (3). The switching equipment first uses the high-usage interoffice trunk groups, if they are busy then it goes to the fina; trunk groups on the next highest level. If the call cannot be connected, you will probably get a re-order [120 IPM (interruptions per minute) busy signal] signal. At this time, the guys at Network Operations are probably shitting in their pants and trying to avoid the dreaded Network Dreadlock (as seen on TV!).

It is also interesting to note that 9 connections in tandem is called ring-around-the-rosy and it has never occured in telephone history. This would cause an endless loop connection [a neat way to really screw up the network].

The 10 regional centers in the US & the 2 in Canada are all interconnected. they form the foundation of the entire telephone network. Since there are only 12 of them, they are listed below:

Class 1 Regional Office Location NPA

Dallas 4 ESS 214
Wayne, PA 215
Denver 4T 303
Regina No. 2SP1-4W (Canada) 306
St. Louis 4T 314
Rockdale, GA 404
Pittsburgh 4E 412
Montreal No. 1 4AETS (Canada) 504

That's it for now! More info to come Future update to the Cookbook! Have fun! -Jolly Roger-

The Anarchist's Cookbook

Basic Alliance Teleconferencing

Basic Alliance Teleconferencing Courtesy of the Jolly Roger

Introduction:

This phile will deal with accessing, understanding and using the Alliance Teleconferencing Systems.... it has many sections and for best use should be printed out...enjoy...

Alliance:

Alliance Teleconferencing is an independant company which allows the general public to access and use it's conferencing equipment. Many rumors have been floating apound that Alliance is a subsidiary of AT&T. Well, they are wrong. As stated above, Alliance is an entirely independant company. They use sophisticated equipment to allow users to talk to many people at once.

The Number:

Alliance is in the 700 exchange, thus it is not localized, well, not in a way. Alliance is only in certain states, and only residents of these certain states can access by dialing direct. This, however, will be discussed in a later chapter. The numbers for alliance are as follows:

0-700-456-1000 (chicago)

-1001 (los angeles)

-1002 (chicago)

-1003 (houston)

-2000 (?)

-2001 (?)

-2002 (?)

-2003 (?)

-3000 (?)

-3001 (?)

-3002 (?)

-3003 (?)

The locations of the first 4 numbers are known and i have stated them. However, the numbers in the 200x and 300x are not definately known. Rumor has it that the pattern repeats itself but this has not been

proven.

Dialing:

As stated before, Alliance is only in certain states and only these states can access them via dialing direct. However, dialing direct causes your residence to be charged for the conference and conference bills are not low!!!

Therefore, many ways have been discovered to start a conference without having it billed to ones house. They are as follows:

- 1) Dialing through a PBX
- 2) Incorporating a Blue Box
- 3) Billing to a loop
- 4) Billing to a forwarded call

I am sure there are many more but these are the four i will deal with.

Dialing through a PBX:

Probably the easiest method of creating a free conference is through a PBX. Simply call one in a state that has Alliance, input the PBX's code, dial 9 for an outside line and then dial alliance. An example of this would be:

PBX: 800-241-4911

When it answers it will give you a tone. At this tone input your code.

Code: 1234

After this you will receive another tone, now dial 9 for an outside line. You will now hear a dial tone. Simply dial Alliance from this point and the conference will be billed to the PBX.

Using a Blue Box:

Another rather simple way of starting a conference is with a Blue Box. The following procedure is how to box a conference: Dial a number to box off of. In this example we will use 609-609-6099 When the party answers hit 2600hz. This will cause the fone company's equipment to think that you have hung up. You will hear a You have now 'seized' a trunk. After this, switch to multi-frequency and dial:

KP-0-700-456-x00x-ST

KP=KP tone on Blue Box

x=variable between 1 and 3

ST=ST tone on Blue Box

The equipment now thinks that the operator has dialed Alliance from her switchboard and the

conference shall be billed there. Since Blue Boxing is such a large topic, this is as far as I will go into it's uses.

Billing to a loop:

A third method of receiving a free conference is by billing out to a loop. A loop is 2 numbers that when two people call, they can talk to each other. You're saying woop-tee-do right? Wrong! Loops can be very usefull to phreaks. First, dial alliance direct. After going through the beginning procedure, which will be discussed later in this tutorial, dial 0 and wait for an Alliance operator. When she answers tell her you would like to bill the conference to such and such a number. (A loop where your phriend is on the other side) She will then call that number to receive voice verification. Of course your phriend will be waiting and will accept the charges. Thus, the conference is billed to the loop.

Billing to call forwarding:

When you dial a number that is call forwarded, it is first answered by the original location, then forwarded. The original location will hang up if 2600hz is received from only ond end of the line. Therefore, if you were to wait after the forwarded residence answered, you would receive the original location's dial tone.

Example:

Dial 800-325-4067

The original residence would answer, then forward the call, a second type of ringing would be heard. When this second residence answers simply wait until they hang up. After about twenty seconds you will then receive the original residence's dial tone since it heard 2600hz from one end of the line. Simply dial Alliance from this point and the conference will be billed to the original residence. These are the four main ways to receive a free conference. I am sure many more exist, but these four are quite handy themselves.

Logon Procedure:

Once Alliance answers you will hear a two-tone combination. This is their way of saying 'How many people do you want on the conference dude?' Simply type in a 2-digit combination, depending on what bridge of Alliance you are on, between 10 and 59. After this either hit '*' to cancel the conference size and inout another or hit '#' to continue. You are now in Alliance Teleconferencing and are only seconds away from having your own roaring conference going strong!!!

Dialing in Conferees:

To dial your first conferee, dial 1+npa+pre+suff and await his/her answer.

npa=area code

pre=prefix

suff=suffix

If the number is busy, or if no one answers simply hit '*' and your call will be aborted. But, if they do answer, hit the '#' key.

This will add them to the conference.

Now commence dialing other conferees.

Joining Your Conference:

----- ----
To join your conference from control mode simply hit the '#' key. Within a second or two you will be chatting with all your buddies. To go back into control mode, simply hit the '#' key again.

Transferring Control:

----- ----
To transfer control to another conferee, go into control mode, hit the # 6+1+npa+pre+suff of the conferee you wish to give control to. If after, you wish to abort this transfer hit the '*' key.

note:Transfer of control is often not available. When you receive a message stating this, you simply cannot transfer control.

Muted Conferences:

----- ----
To request a muted conference simply hit the 9 key. I am not exactly sure what a muted conference is but it is probably a way to keep unwanted eavesdroppers from listening in.

Dialing Alliance Operators:

----- ----
Simply dial 0 as you would from any fone and wait for the operator to answer.

Ending Your Conference:

----- ----
To end your conference all together, that is kick everyone including yourself off, go into control mode and hit '*'...after a few seconds simply hang up. Your conference is over.

Are Alliance Operators Dangerous?

----- ----
No. Not in the least. The worst they can do to you while you are having a conference is drop all conferees including yourself. This is in no way harmful, just a little aggravating.

Alliance and Tracing:

----- ----
Alliance can trace, as all citizens of the United States can. But this has to all be pre-meditated and AT&T has to be called and it's really a large hassle, therefore, it is almost never done. Alliance simply does not want it known that teenagers are phucking them over. The only sort of safety equipment Alliance has on-line is a simple pen register. This little device simply records all the numbers of the

conferees dialed. No big deal. All Alliance can do is call up that persons number, threaten and question. However, legally, they can do nothing because all you did was answer your fone.

note:Almost all instructions are told to the person in command by Alliance recordings. A lot of this tutorial is just a listing of those commands plus information gathered by either myself or the phellow phreaks of the world!!!

Hindenberg Bomb

Hindenberg Bomb by the Jolly Roger

Needed: 1 Balloon

1 Bottle

1 Liquid Plumr

1 Piece Aluminum Foil

1 Length Fuse

Fill the bottle 3/4 full with Liquid Plumr and add a little piece of aluminum foil to it. Put the balloon over the neck of the bottle until the balloon is full of the resulting gas. This is highly flammable hydrogen.

Now tie the balloon. Now light the fuse, and let it rise. When the fuse contacts the balloon, watch out!!!

How to Kill Someone with your Bare Hands

-----[=How to Kill Someone==]-----[=WITH YOUR BARE HANDS=]-----

AN EXCERPT FROM THE ANARCHISTS COOKBOOK.....

Courtesy of the Jolly Roger

This file will explain the basics of hand-to-hand combat, and will tell of the best places to strike and kill an enemy...

When engaged in hand-to-hand combat, your life is always at stake. There is only one purpose in combat, and that is to kill your enemy. Never face an enemy with the idea of knocking him out. The chances are extremely good that he will kill YOU instead. When a weapon is not available, one must resort to the full use of his natural weapons. The natural weapons are:

1. The knife edge of your hands.
2. Fingers folded at the second joint or knuckle.
3. The protruding knuckle of your second finger.
4. The heel of your hand.
5. Your boot
6. Elbows
7. Knees
8. and Teeth.

Attacking is a primary factor. A fight was never won by defensive action. Attack with all of your strength. At any point or any situation, some vulnerable point on your enemies body will be open for attack. Do this while screaming as screaming has two purposes.

1. To frighten and confuse your enemy.
2. To allow you to take a deep breath which, in turn, will put more oxygen in your blood stream. Your balance and balance of your enemy are two important factors; since, if you succeed in making your enemy lose his balance, the chances are nine to one that you can kill him in your next move. The best over-all stance is where your feet are spread about shoulders width apart, with your right foot about a foot ahead of the left. Both arms should be bent at the elbows parallel to each other. Stand on the balls of your feet and bend your waist slightly. Kinda of like a boxer's crouch. Employing a sudden movement or a scream or yell can throw your enemy off-balance. There are many vulnerable points of the body. We will cover them now:

Eyes: Use your fingers in a V-shape and attack in gouging motion.

Nose: (Extremely vulnerable) Strike with the knife edge of the hand along the bridge, which will cause breakage, sharp pain, temporary blindness, and if the blow is hard enough, death. Also, deliver a blow with the heel of your hand in an upward motion, this will shove the bone up into the brain causing death.

Adam's Apple: This spot is usually pretty well protected, but if you get the chance, strike hard with the knife edge of your hand. This should sever the wind-pipe, and then it's all over in a matter of minutes.

Temple: There is a large artery up here, and if you hit it hard enough, it will cause death. If you manage to knock your enemy down, kick him in the temple, and he'll never get up again.

Back of the Neck: A rabbit punch, or blow delivered to the base of the neck can easily break it, but to be safe, it is better to use the butt of a gun or some other heavy blunt object.

Upper lip: A large network of nerves are located. These nerves are extremely close to the skin. A sharp upward blow will cause extreme pain, and unconsciousness.

Ears: Coming from behind an enemy and cupping the hands in a clapping motion over the victim's ears can kill him immediately. The vibrations caused from the clapping motion will burst his eardrums, and cause internal bleeding in the brain.

Groin: A VERY vulnerable spot. If left open, get it with knee hard, and he'll buckle over very fast.

Kidneys: A large nerve that branches off to the spinal cord comes very close to the skin at the kidneys. A direct blow with the knife edge of your hand can cause death.

There are many more ways to kill and injure an enemy, but these should work best for the average person. This is meant only as information and I would not recommend that you use this for a simple High School Brawl. Use these methods only, in your opinion, if your life is in danger. Any one of these methods could very easily kill or cause permanent damage to someone. One more word of caution, you should practice these moves before using them on a dummy, or a mock battle with a friend. (You don't have to actually hit him to practice, just work on accuracy.)

The Anarchist's Cookbook

Black Box Plans

Black Box Plans by The Jolly Roger

Introduction:

At any given time, the voltage running through your phone is about 20 Volts. When someone calls you, this voltage goes up to 48 Volts and rings the bell. When you answer, the voltage goes down to about 10 Volts. The phone company pays attention to this. When the voltage drops to 10, they start billing the person who called you.

Function:

The Black Box keeps the voltage going through your phone at 36 Volts, so that it never reaches 10 Volts. The phone company is thus fooled into thinking you never answered the phone and does not bill the caller. However, after about a half hour the phone company will get suspicious and disconnect your line for about 10 seconds.

Materials:

1 1.8K 1/2 Watt Resistor
 1 1.5V LED
 1 SPST Switch

Procedure:

- (1) Open your phone by loosening the two screws on the bottom and lifting the case off.
- (2) There should be three wires: Red, Green, and Yellow. We'll be working with the Red Wire.
- (3) Connect the following in parallel:
 - A. The Resistor and LED.
 - B. The SPST Switch.

In other words, you should end up with this:

(Red Wire)

!---^/\^--O--!

(Line)-----! !-----(Phone)

!-----/_/_-----!

^/^ = Resistor

O = LED

/ = SPST

Use:

The SPST Switch is the On/Off Switch of the Black Box. When the box is off, your phone behaves normally. When the box is on and your phone rings, the LED flashes. When you answer, the LED stays on and the voltage is kept at 36V, so the calling party doesn't get charged. When the box is on, you will not get a dial tone and thus cannot make calls.

Also remember that calls are limited to half an hour.

-----Jolly Roger p.s. Due to new Fone Company switching systems & the like, this may or may not work in your area. If you live in bumfuck Kentucky, then try this out. I make no guarantees! (I never do...) ----JR

The Blotto Box

The Infamous Blotto Box!! by The Jolly Roger

(I bet that NOONE has the balls to build this one!)

Finally, it is here! What was first conceived as a joke to fool the innocent phreakers around America has finally been conceived! Well, for you people who are unenlightened about the Blotto Box, here is a brief summery of a legend.

--*-=> The Blotto Box <=-*--

For years now every pirate has dreamed of the Blotto Box. It was at first made as a joke to mock more ignorant people into thinking that the function of it actually was possible. Well, if you are The Voltage Master, it is possible. Originally conceived by King Blotto of much fame, the Blotto Box is finally available to the public.

NOTE: Jolly Roger can not be responsible for the information disclosed in the file! This file is strictly for informational purposes and should not be actually built and used! Usage of this electronical impulse machine could have the severe results listed below and could result in high federal prosecution! Again, I TAKE NO RESPONSIBILITY! All right, now that that is cleared up, here is the basis of the box and it's function.

The Blotto Box is every phreaks dream... you could hold AT&T down on its knee's with this device. Because, quite simply, it can turn off the phone lines everywhere. Nothing. Blotto. No calls will be allowed out of an area code, and no calls will be allowed in. No calls can be made inside it for that matter. As long as the switching system stays the same, this box will not stop at a mere area code. It will stop at nothing. The electrical impulses that emit from this box will open every line. Every line will ring and ring and ring... the voltage will never be cut off until the box/generator is stopped. This is no 200 volt job, here. We are talking GENERATOR. Every phone line will continue to ring, and people close to the box may be electricuted if they pick up the phone.

But, the Blotto Box can be stopped by merely cutting of the line or generator. If they are cut off then nothing will emit any longer. It will take a while for the box to calm back down again, but that is merely a superficial aftereffect. Once again: Construction and use of this box is not advised! The Blotto Box will continue as long as there is electricity to continue with. OK, that is what it does, now, here are some interesting things for you to do with it...

-*-=>Blotto Functions/Installin'<=-*-

Once you have installed your Blotto, there is no turning back. The following are the instructions for construction and use of this box. Please read and heed all warnings in the above section before you attempt to construct this box.

Materials:

- A Honda portable generator or a main power outlet like in a stadium or some such place.
- 400 volt rated coupler that splices a female plug into a phone line jack.
- A meter of voltage to attach to the box itself.
- A green base (i.e. one of the nice boxes about 3' by 4' that you see around in your neighborhood. They are the main switch boards and would be a more effective line to start with. or: A regular phone jack (not your own, and not in your area code!
- A soldering iron and much solder.
- A remote control or long wooden pole.

Now. You must have guessed the construction from that. If not, here goes, I will explain in detail. Take the Honda Portable Generator and all of the other listed equipment and go out and hunt for a green base. Make sure it is one on the ground or hanging at head level from a pole, not the huge ones at the top of telephone poles. Open it up with anything convenient, if you are too feeble that fuck don't try this.

Take a look inside... you are hunting for color-coordinating lines of green and red. Now, take out your radio shack cord and rip the meter thing off. Replace it with the voltage meter about. A good level to set the voltage to is about 1000 volts. Now, attach the voltage meter to the cord and set the limit for one thousand. Plug the other end of the cord into the generator. Take the phone jack and splice the jack part off.

Open it up and match the red and green wires with the other red and green wires. NOTE: If you just had the generator on and have done this in the correct order, you will be a crispy critter. Keep the generator off until you plan to start it up. Now, solder those lines together carefully. Wrap duck tape or insulation tape around all of the wires. Now, place the remote control right on to the startup of the generator. If you have the long pole, make sure it is very long and stand back as far away as you can get and reach the pole over.

NOTICE: If you are going right along with this without reading the file first, you still realize now that your area code is about to become null! Then, getting back, twitch the pole/remote control and run for your damn life. Anywhere, just get away from it. It will be generating so much electricity that if you stand too close you will kill yourself.

The generator will smoke, etc. but will not stop. You are now killing your area code, because all of that energy is spreading through all of the phone lines around you in every direction.

Have a nice day!

--*=>The Blotto Box: Aftermath<=*--

Well, that is the plans for the most devastating and ultimately deadly box ever created. My hat goes off

to: King Blotto (for the original idea).

Blowgun

Blowgun by The Jolly Roger

In this article I shall attempt to explain the use and manufacture of a powerfull blow-gun and making darts for the gun. The possession of the blow gun described in this article IS a felony. So be carefull where you use it. I don't want to get you all busted.

Needed:

1. Several strands of yarn (About 2 inches a-piece)
2. A regular pencil
3. A 2 1/4 inch long needle (hopefully with a beaded head. If not obtainable, wrap tape around end of needle.
4. 2-3 1/4 foot pipe. (PVC or Aluminum) Half a inch in diameter

Constructing the dart:

- 1st- Carefully twist and pull the metal part (Along with eraser) of the pencil till it comes off.
- 2nd- Take Pin and start putting about 5-7 Strands of yarn on the pin. Then push them up to the top of the pin. But not over the head of the pin (or the tape).
- 3rd- Push pin through the hollow part of the head where the pencil was before.
- 4th- That should for a nice looking dart. (see illustration)

#####

- >>>>>-----/ # is the yarn
- > is the head of the pencil
- is the pin it-self
- / is the head of the pin

Using the Darts:

- 1st- Now take the finished dart and insert it in the tube (if it is too small put on more yarn.)
- 2nd- Aim the tube at a door, wall, sister, ect.
- 3rd- blow on the end of the pipe.
- 4th- Sometimes the end of the pipe may be sharp. When this happens I suggest you wrap it with some black electrician tape. It should feel a lot better.

Brown Box Plans

Brown Box Plans by The Jolly Roger

This is a fairly simple mod that can be made to any phone. All it does is allow you to take any two lines in your house and create a party line. So far I have not heard of anyone who has any problems with it. There is one thing that you will notice when you are one of the two people who is called by a person with a brown box. The other person will sound a little bit faint. I could overcome this with some amplifiers but then there wouldn't be very many of these made [Why not?]. I think the convenience of having two people on the line at once will make up for any minor volume loss.

Here is the diagram:

KEY:

| PART | SYMBOL |
|-----------------|--------|
| BLACK WIRE | * |
| YELLOW WIRE | = |
| RED WIRE | + |
| GREEN WIRE | - |
| SPDT SWITCH | _/_ |
| VERTICAL WIRE | |
| HORIZONTAL WIRE | - |

```

*      =      -      +
*      =      -      +
*      =      -      +
*      =      -      +
*      =      -      +
*      ==_/_-      +
*****_/_++++++

Calcium Carbide Bomb

Calcium Carbide Bomb by The Jolly Roger

This is **EXTREMELY DANGEROUS**. Exercise extreme caution.... Obtain some calcium carbide. This is the stuff that is used in carbide lamps and can be found at nearly any hardware store. Take a few pieces of this stuff (it looks like gravel) and put it in a glass jar with some water. Put a lid on tightly. The carbide will react with the water to produce acetylene carbonate which is similar to the gas used in cutting torches. Eventually the glass will explode from internal pressure. If you leave a burning rag nearby, you will get a nice fireball!

More Ways to Send a Car to Hell

More Ways to Send a Car to Hell by The Jolly Roger

Due to a lot of compliments, I have written an update to file #14. I have left the original intact. This expands upon the original idea, and could be well called a sequel. -----JR

How to have phun with someone else's car. If you really detest someone, and I mean detest, here's a few tips on what to do in your spare time. Move the windshield wiper blades, and insert and glue tacks. The tacks make lovely designs. If your "friend" goes to school with you, Just before he comes out of school. Light a lighter and then put it directly underneath his car door handle. Wait...Leave...Listen. When you hear a loud "shit!", you know he made it to his car in time. Remove his muffler and pour approximately 1 Cup of gas in it. Put the muffler back, then wait till their car starts. Then you have a cigarette lighter. A 30 foot long cigarette lighter. This one is effective, and any fool can do it. Remove the top air filter. That's it! Or a oldie but goodie: sugar in the gas tank. Stuff rags soaked in gas up the exhaust pipe. Then you wonder why your "friend" has trouble with his/her lungs. Here's one that takes time and many friends. Take his/her car then break into their house and reassemble it, in their living or bedroom. Phun eh? If you're into engines, say eeni mine moe and point to something and remove it. They wonder why something doesn't work. There are so many others, but the real good juicy ones come by thinking hard. -----Jolly Roger

Ripping off Change Machines

Ripping off Change Machines by the Jolly Roger

Have you ever seen one of those really big changer machines in airports laundromats or arcades that dispense change when you put in your 1 or 5 dollar bill? Well then, here is an article for you.

- 1) Find the type of change machine that you slide in your bill length wise, not the type where you put the bill in a tray and then slide the tray in!!!
- 2) After finding the right machine, get a \$1 or \$5 bill. Start crumpling up into a ball. Then smooth out the bill, now it should have a very wrinkly surface.
- 3) Now the hard part. You must tear a notch in the bill on the left side about 1/2 inch below the little 1 dollar symbol (See Figure).
- 4) If you have done all of this right then take the bill and go out the machine. Put the bill in the machine and wait. What should happen is: when you put your bill in the machine it thinks everything is fine. When it gets to the part of the bill with the notch cut out, the machine will reject the bill and (if you have done it right) give you the change at the same time!!! So, you end up getting your bill back, plus the change!! It might take a little practice, but once you get the hang of it, you can get a lot of money!

```

Clear Box Plans

Clear Box Plans by The Jolly Roger

The clear box is a new device which has just been invented that can be used throughout Canada and rural United States. The clear box works on "PostPay" payphones (fortress fones). Those are the payphones that don't require payment until after the connection is established. You pick up the fone, get a dial tone, dial your number, and then insert your money after the person answers.

If you don't deposit the money then you can not speak to the person on the other end because your mouth piece is cut off but not the ear-piece. (obviously these phones are nice for free calls to weather or time or other such recordings). All you must do is to go to your nearby Radio Shack, or electronics store, and get a four-transistor amplifier and a telephone suction cup induction pick-up. The induction pick-up would be hooked up as it normally would to record a conversation, except that it would be plugged into the output of the amplifier and a microphone would be hooked to the input. So when the party that is being called answers, the caller could speak through the little microphone instead. His voice then goes through the amplifier and out the induction coil, and into the back of the receiver where it would then be broadcast through the phone lines and the other party would be able to hear the caller. The Clear Box thus 'clears up' the problem of not being heard. Luckily, the line will not be cut-off after a certain amount of time because it will wait forever for the coins to be put in.

The biggest advantage for all of us about this new clear box is the fact that this type of payphone will most likely become very common. Due to a few things: 1st, it is a cheap way of getting the DTF, dial-tone-first service, 2nd, it doesn't require any special equipment, (for the phone company) This payphone will work on any phone line. Usually a payphone line is different, but this is a regular phone line and it is set up so the phone does all the charging, not the company.

The Anarchist's Cookbook

Electronic Terrorism

Electronic Terrorism by The Jolly Roger

It starts when a big, dumb lummoX rudely insults you. Being of a rational, intelligent disposition, you wisely choose to avoid a (direct) confrontation. But as he laughs in your face, you smile inwardly---your revenge is already planned.

Step 1: follow your victim to his locker, car, or house. Once you have chosen your target site, lay low for a week or more, letting your anger boil.

Step 2: in the mean time, assemble your versatile terrorist kit(details below.)

Step 3: plant your kit at the designated target site on a monday morning between the hours of 4:00 am and 6:00 am. Include a calm, suggestive note that quietly hints at the possibility of another attack. Do not write it by hand! An example of an effective note:
"don't be such a jerk, or the next one will take off your hand. Have a nice day."

Notice how the calm tone instills fear. As if written by a homicidal psychopath.

Step 5: choose a strategic location overlooking the target site. Try to position yourself in such a way that you can see his facial contortions.

Step 6: sit back and enjoy the fireworks! Assembly of the versatile, economic, and effective terrorist kit
#1: the parts you'll need are:

- 1) 4 aa batteries
- 2) 1 9-volt battery
- 3) 1 spdt mini relay (radio shack)
- 4) 1 rocket engine(smoke bomb or m-80)
- 5) 1 solar ignitor (any hobby store)
- 6) 1 9-volt battery connector

Step 1: take the 9-volt battery and wire it through the relay's coil. This circuit should also include a pair of contacts that when separated cut off this circuit. These contacts should be held together by trapping them between the locker, mailbox, or car door. Once the door is opened, the contacts fall apart and the 9-volt circuit is broken, allowing the relay to fall to the closed position thus closing the ignition circuit. (If

all this is confusing take a look at the schematic below.)

Step 2: take the 4 aa batteries and wire them in succession. Wire the positive terminal of one to the negative terminal of another, until all four are connected except one positive terminal and one negative terminal. Even though the four aa batteries only combine to create 6 volts, the increase in amperage is necessary to activate the solar ignitor quickly and effectively.

Step 3: take the battery pack (made in step 2) and wire one end of it to the relay's single pole and the other end to one prong of the solar ignitor. Then wire the other prong of the solar ignitor back to the open position on the relay.

Step 4: using double sided carpet tape mount the kit in his locker, mailbox, or car door. And last, insert the solar ignitor into the rocket engine (smoke bomb or m-80).

Your kit is now complete!

How to Start a Conference w/o 2600hz or M-F

How to Start A Conference w/o 2600hz or M-F by The Jolly Roger

(Originally an Apple][file, forgive the upper case!)

THIS METHOD OF STARTING THE CONF. DEPENDS ON YOUR ABILITY TO BULLSHIT THE OPERATOR INTO DIALING A NUMBER WHICH CAN ONLY BE REACHED WITH AN OPERATOR'S M-F TONES. WHEN BULLSHITTING THE OPERATOR REMEMBER OPERATOR'S ARE NOT HIRED TO THINK BUT TO DO.

HERE IS A STEP-BY-STEP WAY TO THE CONF.:

1. CALL THE OPERATOR THROUGH A PBX OR EXTENDER, YOU COULD JUST CALL ONE THROUGH YOUR LINE BUT I WOULDN'T RECOMMEND IT.

2. SAY TO THE OPERATOR:

TSPS MAINTENENCE ENGINEER, RING-FORWARD TO 213+080+1100, POSITION RELEASE, THANKYOU.

(SHE WILL PROBABLY ASK YOU FOR THE NUMBER AGAIN)

DEFINITIONS: RING-FORWARD - INSTRUCTS HER TO DIAL THE NUMBER.

POSITION RELEASE - INSTUCTS HER TO RELEASE THE TRUNK AFTER SHE HAS DIALED THE NUMBER.

+ - REMBER TO SAY 213PLUS080 PLUS1100.

3. WHEN YOU ARE CONNECTED WITH THE CONF. YOU WILL HERE A WHISTLE BLOW TWICE AND A RECORDING ASKING YOU FOR YOUR OPERATOR #. DIAL IN ANY FIVE DIGITS AND HIT THE POUNDS SIGN A COUPLE OF TIMES. SIMPLY DIAL IN THE # OF THE BILLING LINE ECT. WHEN THE RECORDING ASK FOR IT.

4. WHEN IN THE CONTROL MODE OF THE CONF. HIT '6' TO TRANSFER CONTROL. HIT '001' TO REENTER THE # OF CONFEREE'S AND TIME AMOUNT WHICH YOU GAVE WHEN YOU STARED THE CONF. REMEMBER THE SIZE CAN BE FROM 2-59 CONFEREE'S. I HAVE NOT FOUND OUT THE 'LENGTHS' LIMITS.

The creator of this page and any links it may lead to hereby takes no responsibility or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Users read at their own risk. It is *NOT* reccomended that the user do anything described in this and subsequent pages. Doing so

Dynamite

How to Make Dynamite by The Jolly Roger

Dynamite is nothing more than just nitroglycerin and a stabilizing agent to make it much safer to use. For the sake of saving time, I will abbreviate nitroglycerin with a plain NG. The numbers are percentages, be sure to mix these carefully and be sure to use the exact amounts. These percentages are in weight ratio, not volume.

no. ingredients amount

Household equivalants for chemicles

It has come to my attention that many of these chemicles are sold under brand names, or have household equivalants. here is a list that might help you out. Also, see elsewhere in this Cookbook for a more complete listing.....

| | |
|----------------------------|------------------|
| acetic acid | vinegar |
| aluminum oxide | alumia |
| aluminum potassium sulfate | alum |
| aluminum sulfate | alum |
| ammonium hydroxide | ammonia |
| carbon carbonate | chalk |
| calcium hypochloride | bleaching powder |
| calcium oxide | lime |
| calcium sulfate | plaster of paris |
| carbonic acid | seltzer |
| carbon tetrachloride | cleaning fluid |
| ethylene dichloride | Dutch fluid |
| ferric oxide | iron rust |
| glucose | corn syrup |
| graphite | pencil lead |

| | |
|--------------------------|---------------------|
| hydrochloric acid | muriatic acid |
| hydrogen peroxide | peroxide |
| lead acetate | sugar of lead |
| lead tetroxide | red lead |
| magnesium silicate | talc |
| magnesium sulfate | Epsom salts |
| naphthalene | mothballs |
| phenol | carbolic acid |
| potassium bicarbonate | cream of tartar |
| potassium chromium sulf. | chrome alum |
| potassium nitrate | saltpeter |
| sodium dioxide | sand |
| sodium bicarbonate | baking soda |
| sodium borate | borax |
| sodium carbonate | washing soda |
| sodium chloride | salt |
| sodium hydroxide | lye |
| sodium silicate | water glass |
| sodium sulfate | glauber's salt |
| sodium thiosulfate | photographer's hypo |
| sulferic acid | battery acid |
| sucrose | cane sugar |
| zinc chloride | tinner's fluid |

Keep this list handy at all times. If you can't seem to get one or more of the ingredients try another one. If you still can't, you can always buy small amounts from your school, or maybe from various chemical companies. When you do that, be sure to say as little as possible, if during the school year, and they ask, say it's for a experiment for school.

Auto Exhaust Flame Thrower by The Jolly Roger

For this one, all you need is a car, a sparkplug, ignition wire and a switch. Install the spark plug into the last four or five inches of the tailpipe by drilling a hole that the plug can screw into easily. Attach the wire (this is regular insulated wire) to one side of the switch and to the spark plug. The other side of the switch is attached to the positive terminal on the battery. With the car running, simply hit the switch and watch the flames fly!!! Again be careful that no one is behind you! I have seen some of these flames go 20 feet!!!

The Anarchist's Cookbook

How to Break into BBs Express

Breaking into BBS Express Courtesy of the Jolly Roger

If you have high enough access on any BBS Express BBS you can get the Sysop's password without any problems and be able to log on as him and do whatever you like. Download the Pass file, delete the whole BBS, anything. Its all a matter of uploading a text file and d/ling it from the BBS. You must have high enough access to see new uploads to do this. If you can see a file you just uploaded you have the ability to break into the BBS in a few easy steps.

Why am I telling everyone this when I run BBS Express myself? Well there is one way to stop this from happening and I want other Sysops to be aware of it and not have it happen to them.

Breaking in is all based on the MENU function of BBS Express. Express will let you create a menu to display different text files by putting the word MENU at the top of any text file and stating what files are to be displayed. But due to a major screw up by Mr. Ledbetter you can use this MENU option to display the USERLOG and the Sysop's Passwords or anything else you like. I will show you how to get the Sysop's pass and therefore log on as the Sysop. BBs Express Sysop's have 2 passwords. One like everyone else gets in the form of X1XXX, and a Secondary password to make it harder to hack out the Sysops pass.

The Secondary pass is found in a file called SYSDATA.DAT.

This file must be on drive 1 and is therefore easy to get. All you have to do is upload this simple Text file:

```
MENU
1
D1:SYSDATA.DAT
```

Ripoff time!

after you upload this file you d/l it non-Xmodem. Stupid Express thinks it is displaying a menu and you will see this:

Ripoff time!

Selection [0]:

Just hit 1 and Express will display the SYSDATA.DAT file. OPPASS is where the Sysop's Secondary pass will be. D1:USERLOG.DAT is where you will find the name and Drive number of the USERLOG.

DAT file. The Sysop might have renamed this file or put it in a Subdirectory or even on a different drive. I Will Assume he left it as D1:USERLOG.DAT. The other parts of this file tell you where the .HLP screens are and where the LOG is saved and all the Download path names.

Now to get the Sysop's primary pass you upload a text file like this:

MENU

1

D1:USERLOG.DAT

Breaking into Bedwetter's BBS

Again you then d/l this file non-Xmodem and you will see:

Breaking into Bedwetter's BBS

Selection [0]:

You then hit 1 and the long USERLOG.DAT file comes flying at you. The Sysop is the first entry in this very long file so it is easy. You will see:

SYSOP'S NAME X1XXX

You should now have his 2 passwords.

There is only one easy way out of this that I can think of, and that is to make all new uploads go to SYSOP level (Level 9) access only. This way nobody can pull off what I just explained.

I feel this is a major Bug on Mr. Ledbetter's part. I just don't know why no one had thought of it before. I would like to give credit to Redline for the message he left on Modem Hell telling about this problem, and also to Unka for his ideas and input about correcting it.

This has been brought to you from [_The_Piper_] and the S.O.D. BBS Network!

Firebombs

Firebombs by the Jolly Roger

Most fire bombs are simply gasoline filled bottles with a fuel soaked rag in the mouth (the bottle's mouth, not yours). The original Molotov cocktail, and still about the best, was a mixture of one part gasoline and one part motor oil. The oil helps it to cling to what it splatters on. Some use one part roofing tar and one part gasoline. Fire bombs have been found which were made by pouring melted wax into gasoline.

Fuse Bomb

Fuse Ignition Bomb by The Jolly Roger

A four strand homemade fuse is used for this. It burns like fury. It is held down and concealed by a strip of bent tin cut from a can. The exposed end of the fuse is dipped into the flare igniter. To use this one, you light the fuse and hold the fire bomb until the fuse has burned out of sight under the tin. Then throw it and when it breaks, the burning fuse will ignite the contents.

The BLAST Box

The BLAST Box Courtesy of the Jolly Roger

Ever want to really make yourself be heard? Ever talk to someone on the phone who just doesn't shut up? Or just call the operator and pop her eardrum? Well, up until recently it has been impossible for you to do these things. That is, unless of course you've got a blast box. All a blast box is, is a really cheap amplifier, (around 5 watts or so) connected in place of the microphone on your telephone. It works best on model 500 AT&T Phones, and if constructed small enough, can be placed inside the phone.

Construction:

Construction is not really important. Well it is, but since I'm letting you make your own amp, I really don't have to include this.

Usage:

Once you've built your blast box, simply connect a microphone (or use the microphone from the phone) to the input of the amplifier, and presto. There it is. Now, believe it or not, this device actually works. (At least on crossbar.) It seems that Illinois bell switching systems allow quite alot of current to pass right through the switching office, and out to whoever you're calling. When you talk in the phone, it comes out of the other phone (again it works best if the phone that you're calling has the standard western electric earpiece) incredibly loud. This device is especially good for PBS Subscription drives.

Have "Phun", and don't get caught!

Dealing with the Rate & Route Operator

Dealing with the Rate & Route Operator

It seems that fewer and fewer people have blue boxes these days, and that is really too bad. Blue boxes, while not all that great for making free calls (since the TPC can tell when the call was made, as well as where it was too and from), are really a lot of fun to play with. Short of becoming a real live TSPS operator, they are about the only way you can really play with the network.

For the few of you with blue boxes, here are some phrases which may make life easier when dealing with the rate & route (R&R) operators. To get the R&R op, you send a KP + 141 + ST. In some areas you may need to put another NPA before the 141 (i.e., KP + 213 + 141 + ST), if you have no local R&R ops.

The R&R operator has a myriad of information, and all it takes to get this data is mumbling cryptic phrases. There are basically four special phrases to give the R&R ops. They are NUMBERS route, DIRECTORY route, OPERATOR route, and PLACE NAME.

To get an R&R an area code for a city, one can call the R&R operator and ask for the numbers route. For example, to find the area code for Carson City, Nevada, we'd ask the R&R op for "Carson City, Nevada, numbers route, please." and get the answer, "Right... 702 plus." meaning that 702 plus 7 digits gets us there.

Sometimes directory assistance isn't just NPA + 131. The way to get these routings is to call R&R and ask for "Anaheim, California, directory route, please." Of course, she'd tell us it was 714 plus, which means 714 + 131 gets us the D.A. op there. This is sort of pointless example, but I couldn't come up with a better one on short notice.

Let's say you wanted to find out how to get to the inward operator for Sacramento, California. The first six digits of a number in that city will be required (the NPA and an NXX). For example, let us use 916 756. We would call R&R, and when the operator answered, say, "916 756, operator route, please." The operator would say, "916 plus 001 plus." This means that 916 + 001 + 121 will get you the inward operator for Sacramento. Do you know the city which corresponds to 503 640? The R&R operator does, and will tell you that it is Hillsboro, Oregon, if you sweetly ask for "Place name, 503 640, please."

For example, let's say you need the directory route for Sveg, Sweden. Simply call R&R, and ask for, "International, Baden, Switzerland. TSPS directory route, please." In response to this, you'd get,

"Right... Directory to Sveg, Sweden. Country code 46 plus 1170." So you'd route yourself to an international sender, and send 46 + 1170 to get the D.A. operator in Sweden.

Inward operator routings to various countries are obtained the same way "International, London, England, TSPS inward route, please." and get "Country code 44 plus 121." Therefore, 44 plus 121 gets you inward for London.

Inwards can get you language assistance if you don't speak the language. Tell the foreign inward, "United States calling. Language assistance in completing a call to (called party) at (called number)."

R&R operators are people are people too, y'know. So always be polite, make sure use of 'em, and dial with care.

The Anarchist's Cookbook

Cellular Phone Phreaking

Cellular Phreaking courtesy of The Jolly Roger

The cellular/mobile phone system is one that is perfectly set up to be exploited by phreaks with the proper knowledge and equipment. Thanks to deregulation, the regional BOC's (Bell Operating Companies) are scattered and do not communicate much with each other. Phreaks can take advantage of this by pretending to be mobile phone customers whose "home base" is a city served by a different BOC, known as a "roamer". Since it is impractical for each BOC to keep track of the customers of all the other BOC's, they will usually allow the customer to make the calls he wishes, often with a surcharge of some sort.

The bill is then forwarded to the roamer's home BOC for collection. However, it is fairly simple (with the correct tools) to create a bogus ID number for your mobile phone, and pretend to be a roamer from some other city and state, that's "just visiting". When your BOC tries to collect for the calls from your alleged "home BOC", they will discover you are not a real customer; but by then, you can create an entirely new electronic identity, and use that instead.

How does the cellular system know who is calling, and where they are? When a mobile phone enters a cell's area of transmission, it transmits its phone number and its 8 digit ID number to that cell, who will keep track of it until it gets far enough away that the sound quality is sufficiently diminished, and then the phone is "handed off" to the cell that the customer has walked or driven into. This process continues as long as the phone has power and is turned on. If the phone is turned off (or the car is), someone attempting to call the mobile phone will receive a recording along the lines of "The mobile phone customer you have dialed has left the vehicle or driven out of the service area." When a call is made to a mobile phone, the switching equipment will check to see if the mobile phone being called is "logged in", so to speak, or present in one of the cells. If it is, the call will then act (to the speaking parties) just like a normal call - the caller may hear a busy tone, the phone may just ring, or the call may be answered.

How does the switching equipment know whether or not a particular phone is authorized to use the network? Many times, it doesn't. When a dealer installs a mobile phone, he gives the phone's ID number (an 8 digit hexadecimal number) to the local BOC, as well as the phone number the BOC assigned to the customer. Thereafter, whenever a phone is present in one of the cells, the two numbers are checked - they should be registered to the same person. If they don't match, the telco knows that an attempted fraud is taking place (or at best, some transmission error) and will not allow calls to be placed or received at that phone. However, it is impractical (especially given the present state of deregulation) for the telco to have records of every cellular customer of every BOC. Therefore, if you're going to create a

fake ID/phone number combination, it will need to be "based" in an area that has a cellular system (obviously), has a different BOC than your local area does, and has some sort of a "roamer" agreement with your local BOC.

How can one "phreak" a cellular phone? There are three general areas when phreaking cellular phones; using one you found in an unlocked car (or an unattended walk-about model), modifying your own chip set to look like a different phone, or recording the phone number/ID number combinations sent by other local cellular phones, and using those as your own. Most cellular phones include a crude "password" system to keep unauthorized users from using the phone - however, dealers often set the password (usually a 3 to 5 digit code) to the last four digits of the customer's mobile phone number. If you can find that somewhere on the phone, you're in luck. If not, it shouldn't be TOO hard to hack, since most people aren't smart enough to use something besides "1111", "1234", or whatever.

If you want to modify the chip set in a cellular phone you bought (or stole), there are two chips (of course, this depends on the model and manufacturer, yours may be different) that will need to be changed - one installed at the manufacturer (often epoxied in) with the phone's ID number, and one installed by the dealer with the phone number, and possible the security code. To do this, you'll obviously need an EPROM burner as well as the same sort of chips used in the phone (or a friendly and unscrupulous dealer!). As to recording the numbers of other mobile phone customers and using them; as far as I know, this is just theory... but it seems quite possible, if you've got the equipment to record and decode it.

The cellular system would probably freak out if two phones (with valid ID/phone number combinations) were both present in the network at once, but it remains to be seen what will happen.

The Anarchist's Cookbook

Cheesebox Plans

Cheesebox Plans Courtesy of The Jolly Roger

A Cheesebox (named for the type of box the first one was found in) is a type of box which will, in effect, make your telephone a Pay-Phone.....This is a simple,modernized, and easy way of doing it...

Inside Info:These were first used by bookies many years ago as a way of making calls to people without being called by the cops or having their numbers traced and/or tapped.....

How To Make A Modern Cheese Box

Ingredients:

1 Call Forwarding service on the line

1 Set of Red Box Tones

The number to your prefix's Intercept operator (do some scanning for this one)

How To:

After you find the number to the intercept operator in your prefix, use your call-forwarding and forward all calls to her...this will make your phone stay off the hook(actually, now it waits for a quarter to be dropped in)...you now have a cheese box...

In Order To Call Out On This Line:You must use your Red Box tones and generate the quarter dropping in...then,you can make phone calls to people...as far as I know, this is fairly safe, and they do not check much...Although I am not sure, I think you can even make credit-card calls from a cheesebox phone and not get traced...

The Anarchist's Cookbook

How to Start Your Own Conferences

HOW TO START YOUR OWN CONFERENCES! Brought to you by The Jolly Roger

BLACK BART SHOWED HOW TO START A CONFERENCE CALL THRU AN 800 EXCHANGE, AND I WILL NOW EXPLAIN HOW TO START A CONFERENCE CALL IN A MORE ORTHODOX FASHIO, THE 2600 HZ. TONE.

FIRSTLY, THE FONE COMPANY HAS WHAT IS CALLED SWITCHING SYSTEMS. THERE ARE SE VERAL TYPES, BUT THE ONE WE WILL CONCERN OURSELVES WITH, IS ESS (ELECTRONIC SWITCHING SYSTEM). IF YOUR AREA IS ZONED FOR ESS, DO NOT START A CONFERENCE CALL VIA THE 2600 HZ. TONE, OR BELL SECURITY WILL NAIL YOUR ASS! TO FND OUT IF YOU ARE UNDER ESS, CALL YOUR LOCAL BUSINESS OFFICE, AND ASK THEM IF YOU CAN GET CALL WAITING/FORWARDING, AND IF YOU CAN, THAT MEANS THAT YOU ARE IN ESS COUNTRY , AND CONFERENCE CALLING IS VERY, VERY DANGEROUS!!! NOW, IF YOU ARE NOT IN ESS, YOU WILL NEED THE FOLLOWING EQUIPMENT:

AN APPLE CAT II MODEM
A COPY OF TSPS 2 OR CAT'S MEOW
A TOUCH TONE FONE LINE
AND A TOUCH TONE FONE. (TRUE TONE)

NOW, WITH TSPS 2, DO THE FOLLOWING:

RUN TSPS 2
CHOSE OPTION 1
CHOSE OPTION 6
CHOSE SUB-OPTION 9

NOW TYPE:
1-514-555-1212 (DASHES ARE NOT NEEDED)

LISTEN WITH YOUR HANDSET, AND AS SOON AS YOU HEAR A LOUD 'CLICK', THEN TYPE
\$

TO GENERATE THE 2600 HZ. TONE. THIS OBNOXIOUS TONE WILL CONTINUE FOR A FEW

SECONDS, THEN LISTEN AGAIN AND YOU SHOULD HEAR ANOTHER LOUD 'CLICK'.

NOW TYPE:

KM2130801050S

WHERE 'K' = KP TONE

'M' = MULTI FREQUENCY MODE

'S' = S TONE

NOW LISTEN TO THE HANDSET AGAIN, AND WAIT UNTIL YOU HEAR THE 'CLICK' AGAIN. THEN TYPE:

KM2139752975S

WHERE 2139751975 IS THE NUMBER TO BILL THE CONFERENCE CALL TO. NOTE: 213-975-

1975 IS A DISCONNECTED NUMBER, AND I STRONGLY ADVISE THAT YOU ONLY BILL THE CALL TO THIS NUMBER, OR THE FONE COMPANY WILL FIND OUT, AND THEN..... REMEBER, CONFERENCE CALLS ARE ITEMIZED, SO IF YOU DO BILL IT TO AN ENEMY'S NUMB ER, HE CAN EASILY FIND OUT WHO DID IT AND HE CAN BUST YOU!

YOU SHOULD NOW HEAR 3 BEEPS, AND A SHORT PRE-RECORDED MESSAGE. FROM HERE ON, EVERYTHING IS ALL MENU DRIVEN.

CONFERENCE CALL COMMANDS

FROM THE '#' MODE:

1 = CALL A NUMBER

6 = TRANSFER CONTROL

7 = HANGS UP THE CONFERENCE CALL

9 = WILL CALL A CONFERENCE OPERATR

STAY AWAY FROM 7 AND 9! IF FOR SOME REASON AN OPERATOR GETS ON-LINE, HANG UP! IF YOU GET A BUSY SIGNAL AFTER KM2130801050S, THAT MEANS THAT THE TELECONFEREN CING LINE IS TEMPORARILY DOWN. TRY LATER, PREFERRABLY FROM 9AM TO 5PM WEEK DAYS, SINCE CONFERENCE CALLS ARE PRIMARILY DESIGNED FOR BUSINESS PEOPLE.

THE LEECH

The Anarchist's Cookbook

Gold Box Plans

Gold Box Plans by The Jolly Roger

HOW TO BUILD IT

You will need the following:

Two 10K OHM and three 1.4K OHM resistors

Two 2N3904 transistors

Two Photo Cells

Two Red LED'S (The more light produced the better)

A box that will not let light in

Red and Green Wire

Light from the #1 LED must shine directly on the photocell #1. The gold box I made needed the top of the LED's to touch the photo cell for it to work.

The same applies to the #2 photo cell and LED.

```

      1
      : -PHOTOCELL-- :
      :               :
      :               : BASE

: BASE :

TTTTT :

TRANSISTOR :

TTTTT :

: :EMITTER :

GREEN1- -----RED2

: :

/+ / + /

1.4K

The 1.4K resistor is variable and if the second part of the gold box is skipped it will still work but when someone picks up the phone they will hear a faint dial tone in the background and might report it to the Gestapo er...(AT&T).

1.4K will give you good reception with little risk of a Gestapo agent at your door.

Now that you have built it take two green wires of the same length and strip the ends, twist two ends together and connect them to green1 and place a piece of tape on it with "line #1" writing on it.

Continue the process with red1 only use red wire. Repeat with red2 and green2 but change to line #2.

HOW TO INSTALL

You will need to find two phone lines that are close together. Label one of the phone lines "Line #1". Cut the phone lines and take the outer coating off it. There should be 4 wires. Cut the yellow and black wires off and strip the red and green wires for both lines.

Line #1 should be in two pieces. Take the green wire of one end and connect it to one of the green wires on the gold box. Take the other half of line #1 and hook the free green wire to the green wire on the phone line. Repeat the process with red1 and the other line.

All you need to do now is to write down the phone numbers of the place you hooked it up at and go home and call it. You should get a dial tone!!! If not, try changing the emitter with the collector.

Have a great time with this! -----Jolly Roger

The Anarchist's Cookbook

The History of ESS

The History of ESS Courtesy of the Jolly Roger

Of all the new 1960s wonders of telephone technology - satellites, ultra modern Traffic Service Positions (TSPS) for operators, the picturephone, and so on - the one that gave Bell Labs the most trouble, and unexpectedly became the greatest development effort in Bell System's history, was the perfection of an electronic switching system, or ESS.

It may be recalled that such a system was the specific end in view when the project that had culminated in the invention of the transistor had been launched back in the 1930s. After successful accomplishment of that planned miracle in 1947-48, further delays were brought about by financial stringency and the need for further development of the transistor itself. In the early 1950s, a Labs team began serious work on electronic switching. As early as 1955, Western Electric became involved when five engineers from the Hawthorne works were assigned to collaborate with the Labs on the project. The president of AT&T in 1956, wrote confidently, "At Bell Labs, development of the new electronic switching system is going full speed ahead. We are sure this will lead to many improvements in service and also to greater efficiency. The first service trial will start in Morris, Ill., in 1959." Shortly thereafter, Kappel said that the cost of the whole project would probably be \$45 million.

But it gradually became apparent that the development of a commercially usable electronic switching system - in effect, a computerized telephone exchange - presented vastly greater technical problems than had been anticipated, and that, accordingly, Bell Labs had vastly underestimated both the time and the investment needed to do the job. The year 1959 passed without the promised first trial at Morris, Illinois; it was finally made in November 1960, and quickly showed how much more work remained to be done. As time dragged on and costs mounted, there was a concern at AT&T and something approaching panic at Bell Labs. But the project had to go forward; by this time the investment was too great to be sacrificed, and in any case, forward projections of increased demand for telephone service indicated that within a few years a time would come when, without the quantum leap in speed and flexibility that electronic switching would provide, the national network would be unable to meet the demand. In November 1963, an all-electronic switching system went into use at the Brown Engineering Company at Cocoa Beach, Florida. But this was a small installation, essentially another test installation, serving only a single company. Kappel's tone on the subject in the 1964 annual report was, for him, an almost apologetic: "Electronic switching equipment must be manufactured in volume to unprecedented standards of reliability.... To turn out the equipment economically and with good speed, mass production methods must be developed; but, at the same time, there can be no loss of precision..." Another year and millions of dollars later, on May 30, 1965, the first commercial electric central office was put into

service at Succasunna, New Jersey.

Even at Succasunna, only 200 of the town's 4,300 subscribers initially had the benefit of electronic switching's added speed and additional services, such as provision for three party conversations and automatic transfer of incoming calls. But after that, ESS was on its way. In January 1966, the second commercial installation, this one serving 2,900 telephones, went into service in Chase, Maryland. By the end of 1967 there were additional ESS offices in California, Connecticut, Minnesota, Georgia, New York, Florida, and Pennsylvania; by the end of 1970 there were 120 offices serving 1.8 million customers; and by 1974 there were 475 offices serving 5.6 million customers.

The difference between conventional switching and electronic switching is the difference between "hardware" and "software"; in the former case, maintenance is done on the spot, with screwdriver and pliers, while in the case of electronic switching, it can be done remotely, by computer, from a central point, making it possible to have only one or two technicians on duty at a time at each switching center. The development program, when the final figures were added up, was found to have required a staggering four thousand man-years of work at Bell Labs and to have cost not \$45 million but \$500 million!

The Anarchist's Cookbook

The Lunch Box

The Lunch Box Courtesy of the Jolly Roger

Introduction

=====

The Lunch Box is a VERY simple transmitter which can be handy for all sorts of things. It is quite small and can easily be put in a number of places. I have successfully used it for tapping fones, getting inside info, blackmail and other such things. The possibilities are endless. I will also include the plans or an equally small receiver for your newly made toy. Use it for just about anything. You can also make the transmitter and receiver together in one box and use it as a walkie talkie.

Materials you will need

=====

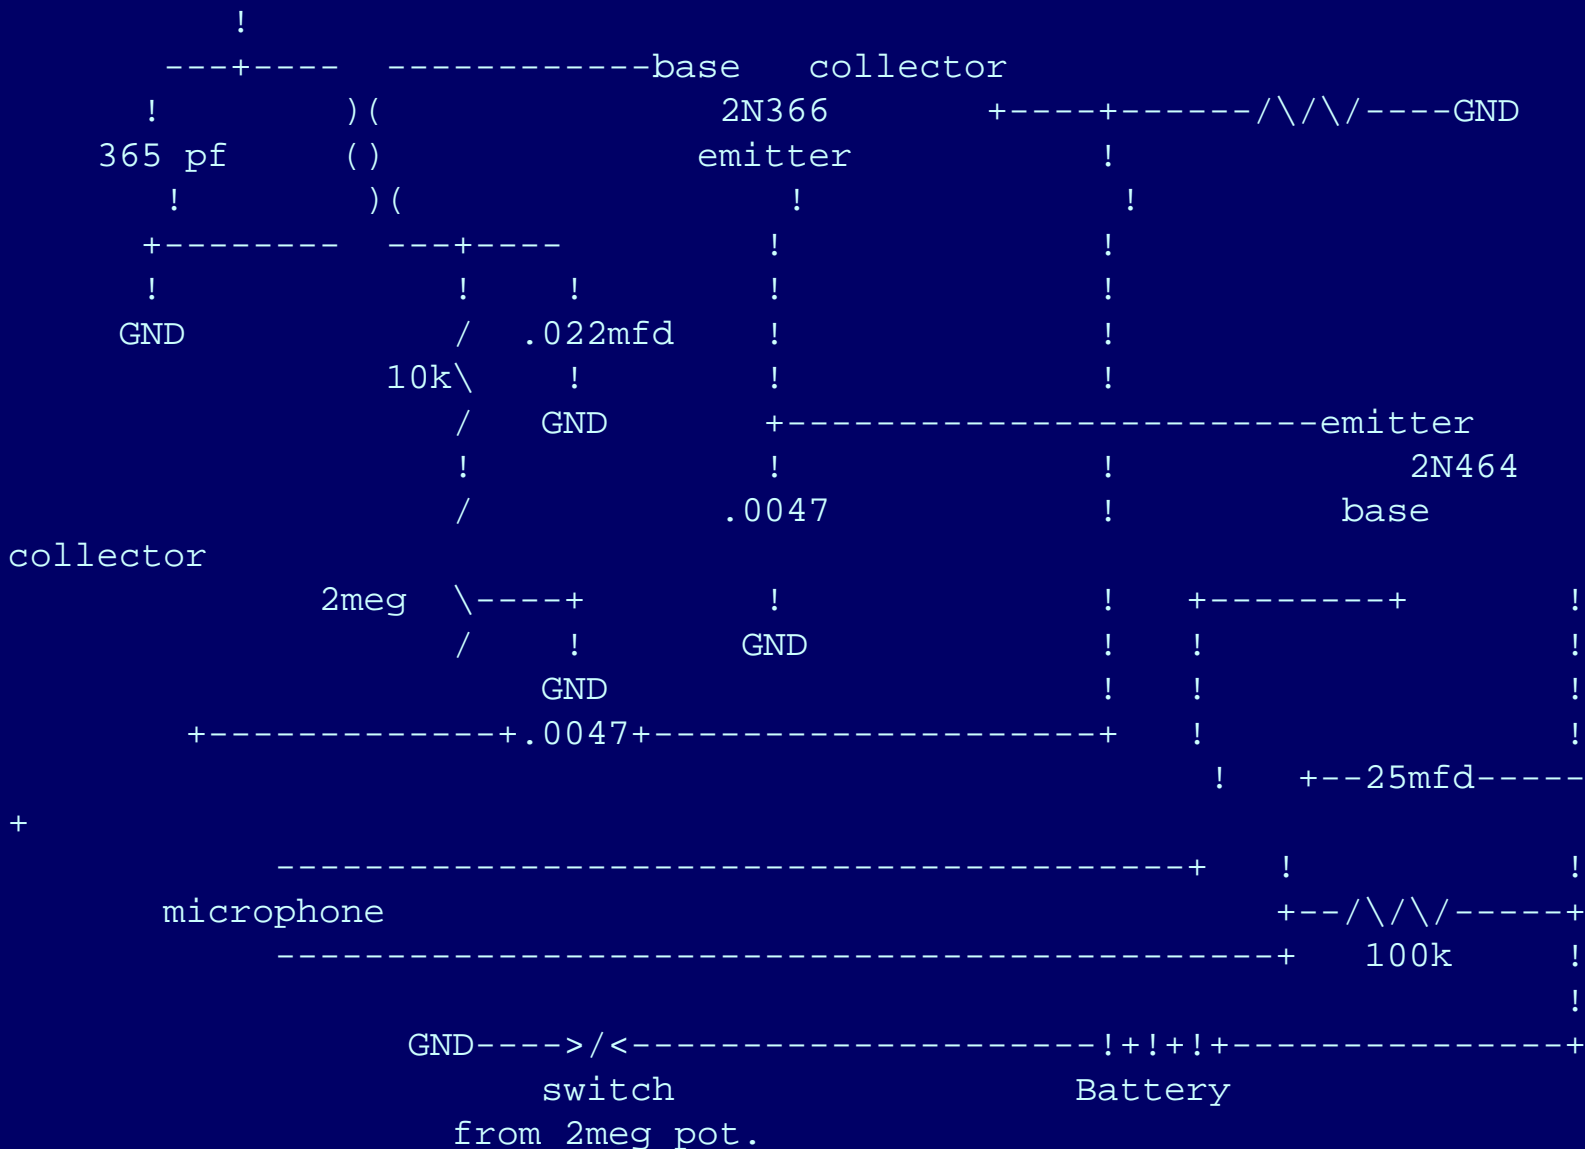

- (1) 9 volt battery with battery clip
 - (1) 25-mfd, 15 volt electrolytic capacitor
 - (2) .0047 mfd capacitors
 - (1) .022 mfd capacitor
 - (1) 51 pf capacitor
 - (1) 365 pf variable capacitor
 - (1) Transistor antenna coil
 - (1) 2N366 transistor
 - (1) 2N464 transistor
 - (1) 100k resistor
 - (1) 5.6k resistor
 - (1) 10k resistor
 - (1) 2meg potentiometer with SPST switch
- Some good wire, solder, soldering iron, board to put it on, box (optional)

Schematic for The Lunch Box

=====

This may get a tad confusing but just print it out and pay attention.

[!]
!
51 pf

Notes about the schematic

=====

1. GND means ground
2. The GND near the switch and the GND by the 2meg potentiometer should be connected.
3. Where you see:)(
 - ()
 -)(it is the transistor antenna coil with 15 turns of regular hook-up wire around it.
4. The middle of the loop on the left side (the left of ")") you should run a wire down to the "+" which has nothing attached to it. There is a .0047 capacitor on the correct piece of wire.
5. For the microphone use a magnetic earphone (1k to 2k).
6. Where you see "[!]" is the antenna. Use about 8 feet of wire to broadcast approx 300ft. Part 15 of the FCC rules and regulation says you can't broadcast over 300 feet without a license. (Hahaha). Use more wire for an antenna for longer distances. (Attach it to the black wire on the fone line for about a 250 foot antenna!)

Operation of the Lunch Box

=====

This transmitter will send the signals over the AM radio band. You use the variable capacitor to adjust what freq. you want to use. Find a good unused freq. down at the lower end of the scale and you're set. Use the 2 meg pot. to adjust gain. Just fuck with it until you get what sounds good. The switch on the 2meg is for turning the Lunch Box on and off. When everything is adjusted, turn on an AM radio adjust it to where you think the signal is. Have a friend lay some shit thru the Box and tune in to it. That's all there is to it.

The plans for a simple receiver are shown below:

The Lunch Box receiver

=====

- (1) 9 volt battery with battery clip
- (1) 365 pf variable capacitor
- (1) 51 pf capacitor
- (1) 1N38B diode
- (1) Transistor antenna coil
- (1) 2N366 transistor
- (1) SPST toggle switch
- (1) 1k to 2k magnetic earphone

Schematic for receiver

=====

Closing statement

=====

This two devices can be built for under a total of \$10.00. Not too bad. Using these devices in illegal ways is your option. If you get caught, I accept NO responsibility for your actions. This can be a lot of fun if used correctly.

Hook it up to the red wire on the phone line and it will send the conversation over the air waves.

Enjoy!

c. Elctro magnetic transducer

Parts List

- U1 - Texas Instruments TCM1506
- T1 - 4000:8 ohm audio transfoer
- S1 - 8 ohm speaker
- R1 - 2.2k resistor
- R2 - External variable resistor; adjusts timing frequency
- C1 - .47uF capacitor
- C2 - .1uF capacitor
- C3 - 10uF capacitor
- L1 - Tip
- L2 - Ring
- L1 and L2 are the phone line.

Shift Rate:

This is the formula for determining the shift rate:

$$SR = \frac{1}{(DSR(1/f1)+DSR(1/f2))} = \frac{1}{\frac{128}{1714} + \frac{128}{1500}} = 6.25 \text{ Hz}$$

$$\begin{aligned} DSR &= \text{Shift Devider Rate ratio} = 128 \\ f1 &= \text{High Output Frequency} = 1714 \\ f2 &= \text{Low Output Frequency} = 1500 \end{aligned}$$

The creator of this page and any links it may lead to hereby takes no responsability or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Users read at

The Anarchist's Cookbook

More TRW Info

More TRW Info Courtesy of the Jolly Roger

Trw is a large database in which company's and banks can run credit checks on their customers. Example: John Jones orders 500\$ worth of stereo equipment from the Joe Blow Electronic distributng Co. Well it could be that he gave the company a phony credit card number, or doesn't have enough credit, etc. Well they call up Trw and then run a check on him, trw then lists his card numbers (everything from sears to visa) and tells the numbers, credit, when he lost it last (if he ever did) and then of course tells if he has had any prior problems paying his bills.

I would also like to add that although Trw contains information on millions of people, not every part of the country is served, although the major area are.. So if you hate someone and live in a small state, you probably wont be able to order him 300 pink toilet seats from K-mart.

Logging on

=====

To log on, you dial-up your local access number (or long-distance, what ever turns you on) and wait for it to say "trw" at this prompt, you type either an "A" or a "Ctrl-G" and it will say "circuit building in progress" it will wait for a minute and then clear the screen, now you will type one of the following.

Tca1
Tca2
Tnj1
Tga1

This is to tell it what geographical area the customer is in, it really doesnt matter which you use, because trw will automatically switch when it finds the record..

Next, you will type in the pswd and info on the person you are trying to get credit info on: you type it in a format like this:

Rts Pswd Lname Fname ...,House number First letter of street name Zip now you type ctrl s and 2 ctrl q's here is what it looks like in real life:

Ae: Dialing xxx-xxx-xxxx
(screen clear)

Trw ^G
circuit building in progress
(pause . . . screen clear)
Tca1
Rtc 3966785-cm5 Johnson David ...,4567
R 56785
^s ^q ^q
and then it will wait for a few seconds and print out the file on him (if it can locate one for the guy)

note: you may have to push return when you first connect to get the systems attention.

Getting Your Passwords

=====

To obtain pswds, you go down to your favorite bank or sears store and dig through the trash (hence the name trashing) looking for printouts, if they are a big enough place, and live in a trw area, then they will probably have some. The printouts will have the 7 digit subscriber code, leaving the 3-4 digit pswd up to you. Much like trashing down at good old ma bell.

The Anarchist's Cookbook

"Phreaker's Phunhouse"

Phreaker's Phunhouse Courtesy of the Jolly Roger

The long awaited prequel to Phreaker's Guide has finally arrived. Conceived from the boredom and loneliness that could only be derived from: The Traveler! But now, he has returned in full strength (after a small vacation) and is here to 'World Premiere' the new files everywhere. Stay cool. This is the prequel to the first one, so just relax. This is not made to be an exclusive ultra elite file, so kinda calm down and watch in the background if you are too cool for it.

/-/ Phreak Dictionary /-/

Here you will find some of the basic but necessary terms that should be known by any phreak who wants to be respected at all.

Phreak : 1. The action of using mischevious and mostly illegal ways in order to not pay for some sort of tele- communications bill, order, transfer, or other service. It often involves usage of highly illegal boxes and machines in order to defeat the security that is set up to avoid this sort of happening. [fr'eaking]. v.
2. A person who uses the above methods of destruction and chaos in order to make a better life for all. A true phreaker will not go against his fellows or narc on people who have ragged on him or do anything termed to be dishonorable to phreaks. [fr'EEK]. n.
3. A certain code or dialup useful in the action of being a phreak. (Example: "I hacked a new metro phreak last night.")

Switching System:

1. There are 3 main switching systems currently employed in the US, and a few other systems will be mentioned as background.

A) SxS: This system was invented in 1918 and was employed in over half of the country until 1978. It is a very basic system that is a general waste of energy and hard work on the linesman. A good way to identify this is that it requires a coin in the phone booth before it will give you a dial tone, or that no call waiting, call forwarding, or any other such service is available. Stands for: Step by Step

B) XB: This switching system was first employed in 1978 in order to take care of most of the faults of SxS switching. Not only is it more efficient, but it also can support different services in various forms. XB1 is Crossbar Version 1. That is very limited and is hard to distinguish from SxS except by direct view of the wiring involved. Next up was XB4, Crossbar Version 4. With this system, some of the basic things like DTMF that were not available with SxS can be accomplished. For the final stroke of XB, XB5 was created. This is a service that can allow DTMF plus most 800 type services (which were not

always available.) Stands for: Crossbar.

C) ESS: A nightmare in telecom. In vivid color, ESS is a pretty bad thing to have to stand up to. It is quite simple to identify. Dialing 911 for emergencies, and ANI [see ANI below] are the most common facets of the dread system. ESS has the capability to list in a person's caller log what number was called, how long the call took, and even the status of the conversation (modem or otherwise.) Since ESS has been employed, which has been very recently, it has gone through many kinds of revisions. The latest system to date is ESS 11a, that is employed in Washington D.C. for security reasons. ESS is truly trouble for any phreak, because it is 'smarter' than the other systems. For instance, if on your caller log they saw 50 calls to 1-800-421-9438, they would be able to do a CN/A [see Loopholes below] on your number and determine whether you are subscribed to that service or not. This makes most calls a hazard, because although 800 numbers appear to be free, they are recorded on your caller log and then right before you receive your bill it deletes the billings for them. But before that they are open to inspection, which is one reason why extended use of any code is dangerous under ESS. Some of the boxes [see Boxing below] are unable to function in ESS. It is generally a menace to the true phreak. Stands For: Electronic Switching System. Because they could appear on a filter somewhere or maybe it is just nice to know them anyways.

A) SSS: Strowger Switching System. First non-operator system available.

B) WES: Western Electronics Switching. Used about 40 years ago with some minor places out west.

Boxing: 1

) The use of personally designed boxes that emit or cancel electronical impulses that allow simpler acting while phreaking. Through the use of separate boxes, you can accomplish most feats possible with or without the control of an operator.

2) Some boxes and their functions are listed below. Ones marked with '*' indicate that they are not operatable in ESS.

*Black Box: Makes it seem to the phone company that the phone was never picked up.

Blue Box : Emits a 2600hz tone that allows you to do such things as stack a trunk line, kick the operator off line, and others.

Red Box : Simulates the noise of a quarter, nickel, or dime being dropped into a payphone.

Cheese Box : Turns your home phone into a pay phone to throw off traces (a red box is usually needed in order to call out.)

*Clear Box : Gives you a dial tone on some of the old SxS payphones without putting in a coin.

Beige Box : A simpler produced linesman's handset that allows you to tap into phone lines and extract by eavesdropping, or crossing wires, etc.

Purple Box : Makes all calls made out from your house seem to be local calls.

ANI [ANI]: 1) Automatic Number Identification. A service available on ESS that allows a phone service [see Dialups below] to record the number that any certain code was dialed from along with the number that was called and print both of these on the customer bill. 950 dialups [see Dialups below] are all designed just to use ANI. Some of the services do not have the proper equipment to read the ANI

impulses yet, but it is impossible to see which is which without being busted or not busted first.

Dialups [dy'l'ups]:

1) Any local or 800 extended outlet that allows instant access to any service such as MCI, Sprint, or AT&T that from there can be used by handpicking or using a program to reveal other peoples codes which can then be used moderately until they find out about it and you must switch to another code (preferably before they find out about it.)

2) Dialups are extremely common on both senses. Some dialups reveal the company that operates them as soon as you hear the tone. Others are much harder and some you may never be able to identify. A small list of dialups:

1-800-421-9438 (5 digit codes)
1-800-547-6754 (6 digit codes)
1-800-345-0008 (6 digit codes)
1-800-734-3478 (6 digit codes)
1-800-222-2255 (5 digit codes)

3) Codes: Codes are very easily accessed procedures when you call a dialup. They will give you some sort of tone. If the tone does not end in 3 seconds, then punch in the code and immediately following the code, the number you are dialing but strike the '1' in the beginning out first. If the tone does end, then punch in the code when the tone ends. Then, it will give you another tone. Punch in the number you are dialing, or a '9'. If you punch in a '9' and the tone stops, then you messed up a little. If you punch in a tone and the tone continues, then simply dial then number you are calling without the '1'.

4) All codes are not universal. The only type that I know of that is truly universal is Metrophone. Almost every major city has a local Metro dialup (for Philadelphia, (215)351-0100/0126) and since the codes are universal, almost every phreak has used them once or twice. They do not employ ANI in any outlets that I know of, so feel free to check through your books and call 555-1212 or, as a more devious manor, subscribe yourself. Then, never use your own code. That way, if they check up on you due to your caller log, they can usually find out that you are subscribed. Not only that but you could set a phreak hacker around that area and just let it hack away, since they usually group them, and, as a bonus, you will have their local dialup.

5) 950's. They seem like a perfectly cool phreakers dream. They are free from your house, from payphones, from everywhere, and they host all of the major long distance companies (950)1044 , 950) 1077 , 950-1088 , 950-1033 .) Well, they aren't. They were designed for ANI. That is the point, end of discussion. A phreak dictionary. If you remember all of the things contained on that fileup there, you may have a better chance of doing whatever it is you do. This next section is maybe a little more interesting...

Blue Box Plans:

These are some blue box plans, but first, be warned, there have been 2600hz tone detectors out on operator trunk lines since XB4. The idea behind it is to use a 2600hz tone for a few very naughty functions that can really make your day lighten up. But first, here are the plans, or the heart of the file:

```
700 : 1 : 2 : 4 : 7 : 11 :  
900 : + : 3 : 5 : 8 : 12 :  
1100 : + : + : 6 : 9 : KP :  
1300 : + : + : + : 10 : KP2 :  
1500 : + : + : + : + : ST :  
      : 700 : 900 : 1100 : 1300 : 1500 :
```

Stop! Before you diehard users start piecing those little tone tidbits together, there is a simpler method. If you have an Apple-Cat with a program like Cat's Meow IV, then you can generate the necessary tones, the 2600hz tone, the KP tone, the KP2 tone, and the ST tone through the dial section. So if you have that I will assume you can boot it up and it works, and I'll do you the favor of telling you and the other users what to do with the blue box now that you have somehow constructed it. The connection to an operator is one of the most well known and used ways of having fun with your blue box. You simply dial a TSPS (Traffic Service Positioning Station, or the operator you get when you dial '0') and blow a 2600hz tone through the line. Watch out! Do not dial this direct! After you have done that, it is quite simple to have fun with it. Blow a KP tone to start a call, a ST tone to stop it, and a 2600hz tone to hang up. Once you have connected to it, here are some fun numbers to call with it:

```
0-700-456-1000 Teleconference (free, because you are the  
operator! )  
(Area code)-101 Toll Switching  
(Area code)-121 Local Operator (hehe)  
(Area code)-131 Information  
(Area code)-141 Rate & Route  
(Area code)-181 Coin Refund Operator  
(Area code)-11511 Conference operator (when you dial 800-544-  
6363)
```

Well, those were the tone matrix controllers for the blue box and some other helpful stuff to help you to start out with. But those are only the functions with the operator. There are other k-fun things you can do with it.

More advanced Blue Box Stuff:

Oops. Small mistake up there. I forgot tone lengths. Um, you blow a tone pair out for up to 1/10 of a second with another 1/10 second for silence between the digits. KP tones should be sent for 2/10 of a second. One way to confuse the 2600hz traps is to send pink noise over the channel (for all of you that have decent BSR equalizers, there is major pink noise in there.)

Using the operator functions is the use of the 'inward' trunk line. That is working it from the inside. From the 'outward' trunk, you can do such things as make emergency breakthrough calls, tap into lines, busy all of the lines in any trunk (called 'stacking'), enable or disable the TSPS's, and for some 4a systems you can even re-route calls to anywhere.

All right. The one thing that every complete phreak guide should be without is blue box plans, since they were once a vital part of phreaking. Another thing that every complete file needs is a complete listing of all of the 800 numbers around so you can have some more Fu7nCđ` đ

/-/ 800 Dialup Listings /-/

| | |
|--------------------|--------------------|
| 1-800-345-0008 (6) | 1-800-547-6754 (6) |
| 1-800-245-4890 (4) | 1-800-327-9136 (4) |
| 1-800-526-5305 (8) | 1-800-858-9000 (3) |
| 1-800-437-9895 (7) | 1-800-245-7508 (5) |
| 1-800-343-1844 (4) | 1-800-322-1415 (6) |
| 1-800-437-3478 (6) | 1-800-325-7222 (6) |

All right, set Cat Hacker 1.0 on those numbers and have a fuck of a day. That is enough with 800 codes, by the time this gets around to you I dunno what state those codes will be in, but try them all out anyways and see what you get. On some 800 services now, they have an operator who will answer and ask you for your code, and then your name. Some will switch back and forth between voice and tone verification, you can never be quite sure which you will be up against.

Armed with this knowledge you should be having a pretty good time phreaking now. But class isn't over yet, there are still a couple important rules that you should know. If you hear continual clicking on the line, then you should assume that an operator is messing with something, maybe even listening in on you. It is a good idea to call someone back when the phone starts doing that. If you were using a code, use a different code and/or service to call him back.

A good way to detect if a code has gone bad or not is to listen when the number has been dialed. If the code is bad you will probably hear the phone ringing more clearly and more quickly than if you were using a different code. If someone answers voice to it then you can immediately assume that it is an operative for whatever company you are using. The famed '311311' code for Metro is one of those. You would have to be quite stupid to actually respond, because whoever you ask for the operator will always say 'He's not in right now, can I have him call you back?' and then they will ask for your name and phone number. Some of the more sophisticated companies will actually give you a carrier on a line that

is supposed to give you a carrier and then just have garbage flow across the screen like it would with a bad connection. That is a feeble effort to make you think that the code is still working and maybe get you to dial someone's voice, a good test for the carrier trick is to dial a number that will give you a carrier that you have never dialed with that code before, that will allow you to determine whether the code is good or not. For our next section, a lighter look at some of the things that a phreak should not be without. A vocabulary.

A few months ago, it was a quite strange world for the modem people out there. But now, a phreaker's vocabulary is essential if you wanna make a good impression on people when you post what you know about certain subjects.

/-/ Vocabulary /-/

- Do not misspell except certain exceptions:

phone -> fone

freak -> phreak

- Never substitute 'z's for 's's. (i.e. codez -> codes)
- Never leave many characters after a post (i.e. Hey Dudes!#!@#@!#!@)
- NEVER use the 'k' prefix (k-kool, k-rad, k-whatever)
- Do not abbreviate. (I got lotsa wares w/ docs)
- Never substitute '0' for 'o' (r0dent, l0zer).
- Forget about ye old upper case, it looks ruggyish.

All right, that was to relieve the tension of what is being drilled into your minds at the moment. Now, however, back to the teaching course. Here are some things you should know about phones and billings for phones, etc.

LATA: Local Access Transference Area. Some people who live in large cities or areas may be plagued by this problem. For instance, let's say you live in the 215 area code under the 542 prefix (Ambler, Fort Washington). If you went to dial in a basic Metro code from that area, for instance, 351-0100, that might not be counted under unlimited local calling because it is out of your LATA. For some LATA's, you have to dial a '1' without the area code before you can dial the phone number. That could prove a hassle for us all if you didn't realize you would be billed for that sort of call. In that way, sometimes, it is better to be safe than sorry and phreak.

The Caller Log: In ESS regions, for every household around, the phone company has something on you called a Caller Log. This shows every single number that you dialed, and things can be arranged so it showed every number that was calling to you. That's one main disadvantage of ESS, it is mostly computerized so a number scan could be done like that quite easily. Using a dialup is an easy way to screw that, and is something worth remembering. Anyways, with the caller log, they check up and see what you dialed. Hmm... you dialed 15 different 800 numbers that month. Soon they find that you are subscribed to none of those companies. But that is not the only thing. Most people would imagine "But wait! 800 numbers don't show up on my phone bill!". To those people, it is a nice thought, but 800 numbers are picked up on the caller log until right before they are sent off to you. So they can check

right up on you before they send it away and can note the fact that you fucked up slightly and called one too many 800 lines.

Right now, after all of that, you should have a pretty good idea of how to grow up as a good phreak. Follow these guidelines, don't show off, and don't take unnecessary risks when phreaking or hacking.

(*Greeets to Pee Wee for this file taken from his 'Hell Disk' #1*)

The Anarchist's Cookbook

Sodium Chlorate

Sodium Chlorate by the Jolly Roger

Sodium Chlorate is a strong oxidizer used in the manufacture of explosives. It can be used in place of Potassium Chlorate.

Material Required

2 carbon or lead rods (1 in. diameter by 5 in. long)

Salt, or ocean water

Sulfuric acid, diluted

Motor Vehicle

Water

2 wires, 16 gauge (3/64 in. diameter approx.), 6 ft. long, insulated.

Gasoline

1 gallon glass jar, wide mouth (5 in. diameter by 6 in. high approx.)

Sticks

String

Teaspoon

Trays

Cup

Heavy cloth

Knife

Large flat pan or tray

Sources

Dry Cell Batteries
(2-1/2 in. diameter by 7" long) or plumbing supply store

Grocery store or ocean Motor Vehicle Batteries

Procedure

1) Mix 1/2 cup of salt into the one gallon glass jar with 3 litres (3 quarts) of water.

2) Add 2 teaspoons of battery acid to the solution and stir vigorously for 5 minutes.

- 3) Strip about 4 inches of insulation from both ends of the two wires.
- 4) With knife and sticks, shape 2 strips of wood 1 by 1/8 by 1-1/2. Tie the wood strips to the lead or carbon rods so that they are 1-1/2 inches apart.
- 5) Connect the rods to the battery in a motor vehicle with the insulated wire.
- 6) Submerge 4-1/2 inches of the rods in the salt water solution.
- 7) With gear in neutral position, start the vehicle engine. Depress the accelerator approx. 1/5 of its full travel.
- 8) Run the engine with the accelerator in this position for 2 hours, then shut it down for 2 hours.
- 9) Repeat this cycle for a total of 64 hours while maintaining the level of the acid-salt water solution in the glass jar.

CAUTION: This arrangement employs voltages which can be quite dangerous! Do not touch bare wire leads while engine is running!!

- 10) Shut off the engine. Remove the rods from the glass jar and disconnect wire leads from the battery.
- 11) Filter the solution through the heavy cloth into a flat pan or tray, leaving the sediment at the bottom of the glass jar.
- 12) Allow the water in the filtered solution to evaporate at room temperature (approx. 16 hours). The residue is approximately 60% or more sodium chlorate which is pure enough to be used as an explosive ingredient.

The Anarchist's Cookbook

Mercury Fulminate

Mercury Fulminate by the Jolly Roger

Mercury Fulminate is used as a primary explosive in the fabrication of detonators. It is to be used with a booster explosive such as picric acid or RDX (which are elsewhere in this Cookbook).

Material Required

Source

Nitric Acid, 90% conc. (1.48 sp. gr)

Elsewhere in this Cookbook, or in industrial metal processors

Mercury

Thermometers, mercury switches, old radio tubes

Ethyl (grain) alcohol (90%)

Filtering material

Paper towels

Teaspoon measure (1/4, 1/2. and 1 tsp. capacity)-aluminum, stainless steel or wax coated

Heat Source

Clean wooden stick

Clean water

Glass containers

Tape

Syringe

Procedure:

1) Dilute 5 teaspoons of nitric acid with 2-1/2 teaspoons of clean water in a glass container by adding the acid to the water.

2) Dissolve 1/8 teaspoon of mercury in the diluted nitric acid. This will yield dark red fumes. NOTE: It

may be necessary to add water, one drop at a time, to the mercury-acid solution in order to start a reaction.

CAUTION: Acid will burn skin and destroy clothing. If any is spilled, wash it away with a large quantity of water. Do NOT inhale fumes!

3) Warm 10 teaspoons of the alcohol in a container until the alcohol feels warm to the inside of the wrist.

4) Pour the metal-acid solution into the warm alcohol. Reaction should start in less than 5 minutes. Dense white fumes will be given off during the reaction. As time lapses, the fumes will become less dense. Allow 10 to 15 minutes to complete reaction. Fulminate will settle to the bottom.

CAUTION: This reaction generates large quantities of toxic, flammable fumes. The process **MUST** be conducted outdoors or in a well-ventilated area, away from sparks or open flames. **DO NOT** inhale fumes!

5) Filter the solution through a paper towel into a container. Crystals may stick to the side of the container. If so, tilt and squirt water down the sides of the container until all of the material collects on the filter paper.

6) Wash the crystals with 6 teaspoons of ethyl alcohol.

7) Allow these mercury fulminate crystals to air dry.

CAUTION: Handle dry explosive with great care. Do not scrape or handle it roughly! Keep away from sparks or open flames. Store in a cool, dry place.

The Anarchist's Cookbook

Improvised Black Powder

Improvised Black Powder by the Jolly Roger

Black powder can be prepared in a simple, safe manner. It may be used as blasting or gun powder.

Material Required

Potassium Nitrate, granulated, 3 cups (3/4 liter)

Wood charcoal, powdered, 2 cups

Sulfur, powdered, 1/2 cup

Alcohol, 5 pints (2-1/2 liters) (whiskey, rubbing alcohol, etc.)

Water, 3 cups (3/4 liter)

Heat source

2 buckets - each 2 gallon (7-1/2 litres) capacity, at least one of which is heat resistant (metal, ceramic, etc.)

Flat window screening, at least 1 foot (30 cm) square

Large wooden stick

Cloth, at least 2 feet (60 cm) square

Procedure:

1) Place alcohol in one of the buckets.

2) Place potassium nitrate, charcoal, and sulfur in the heat resistant bucket. Add 1 cup water and mix thoroughly with wooden stick until all ingredients are dissolved.

3) Add remaining water (2 cups) to mixture. Place bucket on heat source and stir until small bubbles begin to form.

CAUTION: DO NOT boil mixture. Be sure ALL mixture stays wet. If any is dry, as on sides of pan, it may ignite!

4) Remove bucket from heat and pour mixture into alcohol while stirring vigorously.

5) Let alcohol mixture stand about 5 minutes. Strain mixture through cloth to obtain black powder. Discard liquid. Wrap cloth around black powder and squeeze to remove all excess liquid.

6) Place screening over dry bucket. Place workable amount of damp powder on screen and granulate by rubbing solid through screen. NOTE: If granulated particles appear to stick together and change shape, recombine entire batch of powder and repeat steps 5 & 6.

7) Spread granulated black powder on flat, dry surface so that layer about 1/2 inch (1-1/4 cm) is formed. Allow to dry. Use radiator, or direct sunlight. This should be dried as soon as possible, preferably in an hour. The longer the drying period, the less effective the black powder.

CAUTION: Remove from heat AS SOON AS granules are dry. Black powder is now ready to use.

The creator of this page and any links it may lead to hereby takes no responsibility or liability for anything that happens as a result of reading anything on this page or anything contained in subsequent pages. Users read at their own risk. It is *NOT* recommended that the user do anything described in this and subsequent pages. The Anarchist's Cookbook

Nitric Acid

Nitric Acid by the Jolly Roger

Nitric Acid is used in the preparation of many explosives, incendiary mixtures, and acid delay timers. It may be prepared by distilling a mixture of potassium nitrate and concentrated sulfuric acid.

Material Required

Potassium Nitrate (2 parts by volume)

store

CONCENTRATED sulfuric acid (1 part by volume)

batteries

2 bottles or ceramic jugs (narrow necks are preferable)

Pot or frying pan

Heat source (wood, charcoal, or coal)

Tape (paper, electrical, masking, but NOT cellophane!)

Paper or rags

Sources

Elsewhere in this Cookbook, or drug

Motor vehicle

Industrial plants

IMPORTANT: If sulfuric acid is obtained from a motor vehicle battery, concentrate it by boiling it UNTIL white fumes appear. **DO NOT INHALE FUMES**

NOTE: The amount of nitric acid produced is the same as the amount of potassium nitrate. Thus, for two tablespoons of nitric acid, use 2 tablespoons of potassium nitrate and 1 tablespoonful of concentrated sulfuric acid.

Procedure:

1) Place dry potassium nitrate in bottle or jug. Add sulfuric acid. Do not fill the bottle more than 1/4 full. Mix until paste is formed.

CAUTION: DO NOT INHALE FUMES!

- 2) Wrap paper or rags around necks of two bottles. securly tape necks of two bottles together. Be sure that bottles are flush against each other and that there are no air spaces.
- 3) Support bottles on rocks or cans so that empty bottle is SLIGHTLY lower than bottle containing paste so that nitric acid that is formed in receiving bottle will not run into other bottle.
- 4) Build fire in pot or frying pan.
- 5) Gently heat bottle containing mixture by gently moving fire in and out. As red fumes begin to appear periodically pour cool water over empty receiving bottle. Nitric acid will befin to form in receiving bottle.

CAUTION: Do not overheat or wet bottle containing mixture or it may shatter. As an added precaution, place bottle to be heated in heat resistant container filled with sand or gravel. Heat this outer container to produce nitric acid.

- 6) Continue the above process until no more red fumes are formed. If the nitric acid formed in the receiving bottle is not clear (cloudy) pour it into cleaned bottle and repeat steps 2-6.

CAUTION: Nitric acid should be ket away from all combustables and should be kept in a SEALED CERAMIC OR GLASS container. DO NOT inhale fumes!

Dust Bomb Instructions

Dust Bomb Instructions by the Jolly Roger

An initiator which will initiate common material to produce dust explosions can be rapidly and easily constructed. This type of charge is ideal for the destruction of enclosed areas such as rooms or buildings

Material Required

A flat can, 3 in. (8 cm) in diameter and 1-1/2 in. (3-3/4 cm) high. A 6- 1/2 ounce tuna can serves the purpose quite well.

Blasting cap

Explosive

Aluminum (may be wire, cut sheet, flattened can, or powder)

Large nail, 4 in. (10 cm) long

Wooden rod - 1/4 in. (6 mm) diameter

Flour, gasoline, and powder or chipped aluminum

NOTE: Plastic explosive produce better explosions than cast explosives.

Procedure:

- 1) Using the nail, press a hole through the side of the tuna can 3/8 inch to 1/2 inch (1 to 1-1/2 cm) from the bottom. Using a rotating and lever action, enlarge the hole until it will accomodate the blasting cap.
- 2) Place the wooden rod in the hole and position the end of the rod at the center of the can.
- 3) Press explosive into the can, being sure to surround the rod, until it is 3/4 inch (2 cm) from the top of the can. Carefully remove the wooden rod.
- 4) Place the aluminum metal on top of the explosive.
- 5) Just before use, insert the blasting cap into the cavity made by the rod. The initiator is now ready to use.

NOTE: If it is desired to carry the initiator some distance, cardboard may be pressed on top of the aluminum to insure against loss of material.

How to Use:

This particular unit works quite well to initiate charges of five pounds of flour, 1/2 gallon (1-2/3 litres) of gasoline, or two pounds of flake painters aluminum. The solid materials may merely be contained in sacks or cardboard cartons. The gasoline may be placed in plastic coated paper milk cartons, as well as plastic or glass bottles. The charges are placed directly on top of the initiator and the blasting cap is actuated electrically or by a fuse depending on the type of cap employed. this will destroy a 2,000 cubic feet enclosure (building 10 x 20 x 10 feet).

Note: For larger enclosures, use proportionally larger initiators and charges.

The Anarchist's Cookbook

Carbon-Tet Explosive

Carbon-Tet Explosive by the Jolly Roger

A moist explosive mixture can be made from fine aluminum powder combined with carbon tetrachloride or tetrachloroethylene. This explosive can be detonated with a blasting cap.

Material Required

Fine aluminum bronzing powder
Carbon Tetrachloride
 or
tetrachloroethylene
pharmacy
Stirring rod (wood)
Mixing container (bowl, bucket, etc.)
Measuring container (cup, tablespoon, etc.)
Storage container (jar, can, etc.)
Blasting cap
Pipe, can or jar

Source

Paint store
Pharmacy, or fire
extinguisher fluid
Dry cleaners,

Procedure:

- 1) Measure out two parts aluminum powder to one part carbon tetrachloride or tetrachlorethylene liquid into mixing container, adding liquid to powder while stirring with the wooden rod.
- 2) Stir until the mixture becomes the consistency of honey syrup.

CAUTION: Fumes from the liquid are dangerous and should not be inhaled.

- 3) Store explosive in a jar or similar water proof container until ready to use. The liquid in the mixture evaporates quickly when not confined.

NOTE: Mixture will detonate in this manner for a period of 72 hours.

How to Use:

-
- 1) Pour this mixture into an iron or steel pipe which has an end cap threaded on one end. If a pipe is not available, you may use a dry tin can or glass jar.
 - 2) Insert blasting cap just beneath the surface of the explosive mix.

NOTE: Confining the open end of the container will add to the effectiveness of the explosive.

The Anarchist's Cookbook

Making Picric Acid from Aspirin

Making Picric Acid from Aspirin by the Jolly Roger

Picric Acid can be used as a booster explosive in detonators, a high explosive charge, or as an intermediate to preparing lead picrate.

Material Required

Aspirin tablets (5 grains per tablet)

Alcohol, 95% pure

Sulfuric acid, concentrated, (if battery acid, boil until white fumes disappear)

Potassium Nitrate (see elsewhere in this Cookbook)

Water

Paper towels

Canning jar, 1 pint

Rod (glass or wood)

Glass containers

Ceramic or glass dish

Cup

Teaspoon

Tablespoon

Pan

Heat source

Tape

Procedure:

- 1) Crush 20 aspirin tablets in a glass container. Add 1 teaspoon of water and work into a paste.
- 2) Add approximately 1/3 to 1/2 cup of alcohol (100 millilitres) to the aspirin paste; stir while pouring.
- 3) Filter the alcohol-aspirin solution through a paper towel into another glass container. Discard the solid left in the paper towel.
- 4) Pour the filtered solution into a glass or ceramic dish.

5) Evaporate the alcohol and water from the solution by placing the dish into a pan of hot water. White powder will remain in the dish after evaporation.

NOTE: The water in the pan should be at hot bath temperature, not boiling, approx. 160 to 180 degrees Fahrenheit. It should not burn the hands.

6) Pour 1/3 cup (80 millilitres) of concentrated sulfuric acid into a canning jar. Add the white powder to the sulfuric acid.

7) Heat canning jar of sulfuric acid in a pan of simmering hot water bath for 15 minutes; then remove jar from the bath. Solution will turn to a yellow-orange color.

8) Add 3 level teaspoons (15 grams) of potassium nitrate in three portions to the yellow-orange solution; stir vigorously during additions. Solution will turn red, then back to a yellow-orange color.

9) Allow the solution to cool to ambient room temperature while stirring occasionally.

10) Slowly pour the solution, while stirring, into 1-1/4 cup (300 millilitres) of cold water and allow to cool.

11) Filter the solution through a paper towel into a glass container. Light yellow particles will collect on the paper towel.

12) Wash the light yellow particles with 2 tablespoons (25 millilitres) of water. Discard the waste liquid in the container.

13) Place articles in ceramic dish and set in a hot water bath, as in step 5, for 2 hours.

Reclamation of RDX from C-4 Explosives

Reclamation of RDX from C-4 Explosives by the Jolly Roger

RDX can be obtained from C-4 explosives with the use of gasoline. It can be used as a booster explosive for detonators or as a high explosive charge.

Material Required

Gasoline
C-4 explosive
2 - pint glass jars, wide mouth
Paper towels
Stirring rod (glass or wood)
Water
Ceramic or glass dish
Pan
Heat source
Teaspoon
Cup
Tape

NOTE: Water, Ceramic or glass dish, pan, & heat source are all optional. The RDX can be air dried instead.

Procedure:

1) Place 1-1/2 teaspoons (15 grams) of C-4 explosive in one of the pint jars. Add 1 cup (240 milliliters) of gasoline.

NOTE: These quantities can be increased to obtain more RDX. For example, use 2 gallons of gasoline per 1 cup of C-4.

2) Knead and stir the C-4 with the rod until the C-4 has broken down into small particles. Allow mixture

to stand for 1/2 hour.

3) Stir the mixture again until a fine white powder remains on the bottom of the jar.

4) Filter the mixture through a paper towel into the other glass jar. Wash the particles collected on the paper towel with 1/2 cup (120 milliliters) of gasoline. Discard the waste liquid.

5) Place the RDX particles in a glass or ceramic dish. Set the dish in a pan of hot water, not boiling and dry for a period of 1 hour.

NOTE: The RDX particles may be air dried for a period of 2 to 3 hours.

Procedure:

CAUTION: Make sure that there are no open flames in the area when mixing flame fuels! **NO SMOKING!!**

- 1) Separate the egg white from the yolk. This can be done by breaking the egg into a dish and carefully removing the yolk with a spoon.
- 2) Pour egg white into a jar, bottle, or other container, and add gasoline.
- 3) Add the salt (or other additive) to the mixture and stir occasionally until gel forms (about 5 to 10 minutes).

NOTE: A thicker gelled flame fuel can be obtained by putting the capped jar in hot (65 degrees Centegrade) water for about 1/2 hour and then letting them cool to room temperature. **(DO NOT HEAT THE GELLED FUEL CONTAINING COFFEE!!)**

Clothespin Switch

Clothespin Switch by the Jolly Roger

A spring type clothespin is used to make a circuit closing switch to actuate explosive charges, mines, booby traps, and alarm systems.

Material Required:

Spring type clothespin

Sold copper wire -- 1/16 in. (2 mm) in diameter

Strong string on wire

Flat piece of wood (roughly 1/8 x 1" x 2")

Knife

Procedure:

- 1) Strip four in. (10 cm) of insulation from the ends of 2 solid copper wires. Scrape the copper wires with pocket knife until the metal is shiny.
- 2) Wind one scraped wire tightly on jaw of the clothespin, and the other wire on the other jaw.
- 3) Make a hole in one end of the flat piece of wood using a knife, heated nail or drill.
- 4) Tie strong string or wire through the hole.
- 5) Place flat piece of wood between the jaws of the clothespin switch.

Basic Firing Circuit:

When the flat piece of wood is removed by pulling the string, the jaws of the clothespin will close, completing the circuit.

CAUTION: Do not attach the battery until the switch and trip wire have been emplaced and examined. Be sure that the flat piece of wood is seperating the jaws of the switch.

The Anarchist's Cookbook

Flexible Plate Switch

Flexible Plate Switch by the Jolly Roger

This flexible plate switch is used for initiating emplaced mines and explosives.

Material Required:

Two flexible metal sheets
one approximately 10 in. (25 cm) square
one approximately 10 in. x 8 in. (20 cm)
Piece of wood 10 in. square x 1 in. thick
Four soft wood blocks 1 in. x 1 in. x 1/4 in.
Eight flat head nails, 1 in. long
Connecting wires
Adhesive tape

Procedure:

- 1) Nail 10 in. by 8 in. metal sheet to 10 in. square piece of wood so that 1 in. of wood shows on each side of the metal. Leave one of the nails sticking up about 1/4 in.
- 2) Strip insulation from the end of one connecting wire. Wrap this end around the nail and drive the nail all the way in.
- 3) Place the four wood blocks on the corners of the wood base.
- 4) Place the 10 in. square flexible metal sheet so that it rests on the blocks in line with the wood base.
- 5) Drive four nails through the metal sheet and the blocks (1 per block) to fasten the sheet to the wood base. A second connecting wire is attached to one of the nails as in step #2.
- 6) Wrap the adhesive tape around the edges of the plate and wood base. This will assure that no dirt or other foreign matter will get between the plates and prevent the switch from operating.

How to use:

The switch is placed in a hole in the path of expected traffic and covered with a thin layer of dirt or other camouflaging material. The mine or other explosive device connected to the switch can be buried with the switch or emplaced elsewhere as desired.

When a vehicle passes over the switch, the two metal plates make contact closing the firing circuit.

The Anarchist's Cookbook

Low Signature Systems (Silencers)

Low Signature Systems (Silencers) by the Jolly Roger

Low signature systems (silencers) for improvised small arms weapons can be made from steel gas or water pipe and fittings.

Material Required:

Grenade Container

Steel pipe nipple, 6 in. (15 cm) long - (see table 1 for diameter)

2 steel pipe couplings - (see table 2 for dimensions)

Cotton cloth - (see table 2)

Drill

Absorbent cotton

Procedure:

1) Drill hole in grenade container at both ends to fit outside diameter of pipe nipple. (see table 1)

2) Drill four rows of holes in pipe nipple. Use table 1 for diameter and location of holes. (Note: I suck at ASCII art!)

- 3) Thread one of the pipe couplings on the drilled pipe nipple.
- 4) Cut coupling length to allow barrel of weapon to thread fully into low signature system. Barrel should butt against end of the drilled pipe nipple.
- 5) Separate the top half of the grenade container from the bottom half.
- 6) Insert the pipe nipple in the drilled hole at the base of the bottom half of the container. Pack the absorbent cotton inside the container and around the pipe nipple.
- 7) Pack the absorbent cotton in top half of grenade container leaving hole in center. Assemble container to the bottom half.
- 8) Thread the other coupling onto the pipe nipple.

Note: A longer container and pipe nipple, with same "A" and "B" dimensions as those given, will further reduce the signature of the system.

How to use:

-
- 1) Thread the low signature system on the selected weapon securely.
 - 2) Place the proper cotton wad size into the muzzle end of the system (see table 2)
 - 3) Load weapon
 - 4) Weapon is now ready for use

TABLE 1 -- Low Signature System Dimensions

| | A | B | C | (Coupling)
D | Holes per
Row | (4 rows)
Total |
|---------|-----|------|------|-----------------|------------------|-------------------|
| .45 cal | 3/8 | 1/4 | 3/8 | 3/8 | 12 | 48 |
| .38 cal | 3/8 | 1/4 | 1/4 | 1/4 | 12 | 48 |
| 9 mm | 3/8 | 1/4 | 1/4 | 1/4 | 12 | 48 |
| 7.62 mm | 3/8 | 1/4 | 1/4 | 1/4 | 12 | 48 |
| .22 cal | 1/4 | 5/32 | 1/8* | 1/8 | 14 | 50 |

*Extra Heavy Pipe
(All dimensions in inches)

TABLE 2 -- Cotton Wadding - Sizes

| Weapon | Cotton Wadding Size |
|---------|---------------------|
| .45 cal | 1-1/2 x 6 inches |
| .38 cal | 1 x 4 inches |
| 9 mm | 1 x 4 inches |
| 7.62 mm | 1 x 4 inches |
| .22 cal | Not needed |

The Anarchist's Cookbook

Delay Igniter From Cigarette

Delay Igniter from a Cigarette by the Jolly Roger

A simple and economical (everyone wants to save money haha) time delay can be made with a common cigarette.

Materials Required:

Cigarette

Paper match

String (shoelace or similar cord)

Fuse cord (improvised or commercial)

Procedure:

- 1) Cut end of fuse cord at a slant to expose inner core
- 2) Light cigarette in normal fashion. Place a paper match so that the had is over exposed exposed end of fuse cord and tie both to the side of the burning cigarette with string.
- 3) Position the burning cigarette with fuse so that it burns freely. A suggested method is to hang the delay on a twig.

Note: Common dry cigarettes burn about 1 inch every 7 or 8 minutes in still air. (Now I am talking about all except American brands, which burn about 1 inch every 4-5 minutes) If the fuse cord is place one inch from the burning end of the cigarette a time delay of 7 or 8 minutes will result.

Delay time will vary depending upon type of cigarette, wind, moisture, and other atmospherc conditions (get to know your cigarette!)

To obtain accurate delay time, a test run should be made under "use" conditions.

The Anarchist's Cookbook

Nicotine

Nicotine by the Jolly Roger

Nicotine is an abundant poison. Easily found in tobacco products, in concentrated form a few drops can quickly kill someone. Here is how to concentrate it:

First get a can of chewing tobacco or pipe tobacco. Remove the contents and soak in water overnight in a jar (about 2/3 cup of water will do...). In the morning, strain into another jar the mixture through a porous towel. Then wrap the towel around the ball of tobacco and squeeze it until all of the liquid is in the jar. Throw away the tobacco--you will not need it anymore.

Now you have two options. I recommend the first. It makes the nicotine more potent.

- 1) Allow to evaporate until a sticky syrup results in the jar. This is almost pure nicotine (hell, it is pure enough for sure!).
- 2) Heat over low flame until water is evaporated and a thick sticky syrup results (I don't know how long it takes... shouldn't take too long, though.).

Now all you have to do, when you wish to use it, is to put a few drops in a medicine dropper or equivalent, and slip about 4 or 5 drops into the victim's coffee. Coffee is recommended since it will disguise the taste. Since nicotine is a drug, the victim should get quite a buzz before they turn their toes up to the daisies, so to speak.

Note: If the syrup is too sticky, dilute it with a few drops of water. And while you are at it, better add an extra drop to the coffee just to be sure!

The Anarchist's Cookbook

Dried Seed Timer

Dried Seed Timer by the Jolly Roger

A time delay device for electrical firing circuits can be made using the principle of expansion of dried seeds.

Material Required:

Dried peas, beans, or other dehydrated seeds
Wide-mouth glass jar with non-metal cap
Two screws or bolts
Thin metal plate
Hand drill
Screwdriver

Procedure:

- 1) Determine the rate of the rise of the dried seeds selected. This is necessary to determine the delay time of the timer.
 - a) Place a sample of the dried seeds in the jar and cover with water.
 - b) Measure the time it takes for the seeds to rise a given height. Most dried seeds increase 50% in one to two hours.
- 2) Cut a disc from thin metal plate. Disc should fit loosely inside the jar.

NOTE: If metal is painted, rusty, or otherwise coated, it must be scraped or sanded to obtain a clean metal surface

- 3) Drill two holes in the cap of the jar about 2 inches apart. Diameter of holes should be such that screws or bolts will thread tightly into them. If the jar has a metal cap or no cap, a piece of wood or plastic (NOT METAL) can be used as a cover.
- 4) Turn the two screws or bolts through the holes in the cap. Bolts should extend about one in. (2 1/2 cm) into the jar.

IMPORTANT: Both bolts must extend the same distance below the container cover.

- 5) Pour dried seeds into the container. The level will depend upon the previously measured rise time and

the desired delay.

6) Place the metal disc in the jar on top of the seeds.

How to use:

1) Add just enough water to completely cover the seeds and place the cap on the jar.

2) Attach connecting wires from the firing circuit to the two screws on the cap.

Expansion of the seeds will raise the metal disc until it contacts the screws and closes the circuit.

The Anarchist's Cookbook

Nail Grenade

Nail Grenade by the Jolly Roger

Effective fragmentation grenades can be made from a block of tnt or other blasting explosive and nails.

Material Required:

- Block of TNT or other blasting explosive
- Nails
- Non-electric (military or improvised) blasting cap
- Fuse Cord
- Tape, string, wire, or glue

Procedure:

- 1) If an explosive charge other than a standard TNT block is used, make a hole in the center of the charge for inserting the blasting cap. TNT can be drilled with relative safety. With plastic explosives, a hole can be made by pressing a round stick into the center of the charge. The hole should be deep enough that the blasting cap is totally within the explosive.
- 2) Tape, tie, or glue one or two rows of closely packed nails to the sides of the explosive block. Nails should completely cover the four surfaces of the block.
- 3) Place blasting cap on one end of the fuse cord and crimp with pliers.

NOTE: To find out how long the fuse cord should be, check the time it takes a known length to burn. If 12 inches (30 cm) burns for 30 seconds, a 10 second delay will require a 4 inch (10 cm) fuse.

- 4) Insert the blasting cap in the hole in the block of explosive. Tape or tie fuse cord securly in place so that it will not fall out when the grenade is thrown.

Alternate Use:

An effective directional anti-personnel mine can be made by placing nails on only one side of the explosive block. For thi case, and electric blasting cap can be used.

.....
.....

```

ACD: Automatic Call Distributor - A system that automatically distributes calls to operator pools (providing services such as intercept and directory assistance), to airline ticket agents, etc.

Administration: The tasks of record-keeping, monitoring, rearranging, prediction need for growth, etc.

AIS: Automatic Intercept System - A system employing an audio-response unit under control of a processor to automatically provide pertinent info to callers routed to intercept.

Alert: To indicate the existence of an incoming call, (ringing).

ANI: Automatic Number Identification - Often pronounced "Annie," a facility for automatically identify the number of the calling party for charging purposes.

Appearance: A connection upon a network terminal, as in "the line has two network appearances."

Attend: The operation of monitoring a line or an incoming trunk for off-hook or seizure, respectively.

Audible: The subdued "image" of ringing transmitted to the calling party during ringing; not derived from the actual ringing signal in later systems.

Backbone Route: The route made up of final-group trunks between end offices in different regional center areas.

BHC: Busy Hour Calls - The number of calls placed in the busy hour.

Blocking: The ratio of unsuccessful to total attempts to use a facility; expresses as a probability when computed a priority.

Blocking Network: A network that, under certain conditions, may be unable to form a transmission path from one end of the network to the other. In general, all networks used within the Bell Systems are of the blocking type.

Blue Box: Equipment used fraudulently to synthesize signals, gaining access to the toll network for the placement of calls without charge.

BORSCHT Circuit: A name for the line circuit in the central office. It functions as a mnemonic for the functions that must be performed by the circuit: Battery, Overvoltage, Ringing, Supervision, Coding, Hybrid, and Testing.

Busy Signal: (Called-line-busy) An audible signal which, in the Bell System, comprises 480hz and 620hz interrupted at 60IPM.

Bylink: A special high-speed means used in crossbar equipment for routing calls incoming from a step-by-step office. Trunks from such offices are often referred to as "bylink" trunks even when incoming to noncrossbar offices; they are more properly referred to as "dc incoming trunks." Such high-speed means are necessary to assure that the first incoming pulse is not lost.

Cable Vault: The point which phone cable enters the Central Office building.

CAMA: Centralized Automatic Message Accounting - Pronounced like Alabama.

CCIS: Common Channel Interoffice Signaling - Signaling information for trunk connections over a separate, nonspeech data link rather than over the trunks themselves.

CCITT: International Telegraph and Telephone Consultative Committee- An International committee that formulates plans and sets standards for intercountry communication means.

CDO: Community Dial Office - A small usually rural office typically served by step-by-step equipment.

CO: Central Office - Comprises a switching network and its control and support equipment. Occasionally improperly used to mean "office code."

Centrex: A service comparable in features to PBX service but implemented with some (Centrex CU) or all (Centrex CO) of the control in the central office. In the later case, each station's loop connects to the central office.

Customer Loop: The wire pair connecting a customer's station to the central office.

DDD: Direct Distance Dialing - Dialing without operator assistance over the nationwide intertoll network.

Direct Trunk Group: A trunk group that is a direct connection between a given originating and a given terminating office.

EOTT: End Office Toll Trunking - Trunking between end offices in different toll center areas.

ESB: Emergency Service Bureau - A centralized agency to which 911 "universal" emergency calls are routed.

ESS: Electronic Switching System - A generic term used to identify as a class, stored-program switching systems such as the Bell System's No.1 No.2, No.3, No.4, or No.5.

ETS: Electronic Translation Systems - An electronic replacement for the card translator in 4A Crossbar systems. Makes use of the SPC 1A Processor.

False Start: An aborted dialing attempt.

Fast Busy: (often called reorder) - An audible busy signal interrupted at twice the rate of the normal busy signal; sent to the originating station to indicate that the call blocked due to busy equipment.

Final Trunk Group: The trunk group to which calls are routed when available high-usage trunks overflow; these groups generally "home" on an office next highest in the hierarchy.

Full Group: A trunk group that does not permit rerouting off-contingent foreign traffic; there are seven such offices.

Glare: The situation that occurs when a two-way trunk is seized more or less simultaneously at both ends.

High Usage Trunk Group: The appellation for a trunk group that has alternate routes via other similar groups, and ultimately via a final trunk group to a higher ranking office.

Intercept: The agency (usually an operator) to which calls are routed when made to a line recently removed from a service, or in some other category requiring explanation. Automated versions (ASI) with automatic voiceresponse units are growing in use.

Interrupt: The interruption on a phone line to disconnect and connect with another station, such as an Emergence Interrupt.

Junctor: A wire or circuit connection between networks in the same office. The functional equivalent to an intraoffice trunk.

MF: Multifrequency - The method of signaling over a trunk making use of the simultaneous application of two out of six possible frequencies.

NPA: Numbering Plan Area.

ONI: Operator Number Identification - The use of an operator in a CAMA office to verbally obtain the calling number of a call originating in an office not equipped with ANI.

PBX: Private Branch Exchange - (PABX: Private Automatic Branch Exchange) An telephone office serving a private customer, Typically , access to the outside telephone network is provided.

Permanent Signal: A sustained off-hook condition without activity (no dialing or ringing or completed

connection); such a condition tends to tie up equipment, especially in earlier systems. Usually accidental, but sometimes used intentionally by customers in high-crime-rate areas to thwart off burglars.

POTS: Plain Old Telephone Service - Basic service with no extra "frills".

ROTL: Remote Office Test Line - A means for remotely testing trunks.

RTA: Remote Trunk Arrangement - An extension to the TSPS system permitting its services to be provided up to 200 miles from the TSPS site.

SF: Single Frequency. A signaling method for trunks: 2600hz is impressed upon idle trunks.

Supervise: To monitor the status of a call.

SxS: (Step-by-Step or Strowger switch) - An electromechanical office type utilizing a gross-motion stepping switch as a combination network and distributed control.

Talkoff: The phenomenon of accidental synthesis of a machine-intelligible signal by human voice causing an unintended response. "whistling a tone".

Trunk: A path between central offices; in general 2-wire for interlocal, 4-wire for intertoll.

TSPS: Traffic Service Position System - A system that provides, under stored- program control, efficient operator assistance for toll calls. It does not switch the customer, but provides a bridge connection to the operator.

X-bar: (Crossbar) - An electromechanical office type utilizing a "fine-motion" coordinate switch and a multiplicity of central controls (called markers).

There are four varieties:

No.1 Crossbar: Used in large urban office application; (1938)

No 3 Crossbar: A small system started in (1974).

No.4A/4M Crossbar: A 4-wire toll machine; (1943).

No.5 Crossbar: A machine originally intended for relatively small suburban applications; (1948)

Crossbar Tandem: A machine used for interlocal office switching.

Phone Dial Locks -- How to Beat'em

Phone Dial Locks -- How to Beat'em courtesy of the Jolly Roger

Have you ever been in an office or somewhere and wanted to make a free phone call but some asshole put a lock on the phone to prevent out-going calls? Fret no more phellow phreake, for every system can be beaten with a little knowledge!

There are two ways to beat this obstacle, first pick the lock, I don't have the time to teach locksmithing so we go to the second method which takes advantage of telephone electronics.

To be as simple as possible when you pick up the phone you complete a circuit known as a local loop. When you hang up you break the circuit. When you dial (pulse) it also breaks the circuit but not long enough to hang up! So you can "Push-dial." To do this you >>> RAPIDLY <<< depress the switchhook. For example, to dial an operator (and then give her the number you want to call) >>> RAPIDLY <<< & >>> EVENLY <<< depress the switchhook 10 times. To dial 634-1268, depress 6 X'S pause, then 3 X'S, pause, then 4X'S, etc. It takes a little practice but you'll get the hang of it. Try practicing with your own # so you'll get a busy tone when right. It'll also work on touch-tone(tm) since a DTMF line will also accept pulse. Also, never depress the switchhook for more than a second or it'll hang up!

Finally, remember that you have just as much right to that phone as the asshole who put the lock on it! (From the Official Phreaker's Guide)

Green Box Plans

Green Box Plans by the Jolly Roger

Paying the initial rate in order to use a red box (on certain fortresses) left a sour taste in many red boxers mouths, thus the green box was invented. The green box generates useful tones such as COIN COLLECT, COIN RETURN, AND RINGBACK. These are the tones that ACTS or the TSPS operator would send to the CO when appropriate.

Unfortunately, the green box cannot be used at the fortress station but must be used by the CALLED party.

Here are the tones:

COIN COLLECT 700+1100hz

COIN RETURN 1100+1700hz

RINGBACK 700+1700hz

Before the called party sends any of these tones, an operator release signal should be sent to alert the MF detectors at the CO. This can be done by sending 900hz + 1500hz or a single 2600 wink (90 ms.) Also do not forget that the initial rate is collected shortly before the 3 minute period is up. Incidentally, once the above MF tones for collecting and returning coins reach the CO, they are converted into an appropriate DC pulse (-130 volts for return and +130 for collect). This pulse is then sent down the tip to the fortress. This causes the coin relay to either return or collect the coins.

The alledged "T-network" takes advantage of this information. When a pulse for coin collect (+130 VDC) is sent down the line, it must be grounded somewhere. This is usually the yellow or black wire. Thus, if the wires are exposed, these wires can be cut to prevent the pulse from being grounded. When the three minute initial period is almost up, make sure that the black and yellow wires are severed, then hang up, wait about 15 seconds in case of a second pulse, reconnect the wires, pick up the phone, and if all goes well, it should be "JACKPOT" time.

Basic Hacking Tutorial I

Hacking Tutorial Courtesy of the Jolly Roger

What is hacking?

According to popular belief the term hacker and hacking was founded at mit it comes from the root of a hack writer, someone who keeps "hacking" at the typewriter until he finishes the story. a computer hacker would be hacking at the keyboard or password works.

What you need:

To hack you need a computer equipped with a modem (a device that lets you transmit data over phone lines) which should cost you from \$100 to \$1200.

How do you hack?

Hacking requires two things:

1. The phone number
2. Answer to identity elements

How do you find the phone #?

There are three basic ways to find a computers phone number.

1. Scanning,
2. Directory
3. Inside info.

What is scanning?

Scanning is the process of having a computer search for a carrier tone. For example, the computer would start at (800) 111-1111 and wait for carrier if there is none it will go on to 111-1112 etc. if there is a carrier it will record it for future use and continue looking for more.

What is directory assistance?

This way can only be used if you know where your target computer is. For this example say it is in menlo park, CA and the company name is sri.

1. Dial 411 (or 415-555-1212)
2. Say "Menlo park"
3. Say "Sri"
4. Write down number
5. Ask if there are any more numbers
6. If so write them down.
7. Hang up on operator
8. Dial all numbers you were given
9. Listen fir carrier tone
10. If you hear carrier tone write down number, call it on your modem and your set to hack!

Basic Hacking Tutorial II

The Basics of Hacking II Courtesy of the Jolly Roger

Basics to know before doing anything, essential to your continuing career as one of the elite in the country... This article, "the introduction to the world of hacking" is meant to help you by telling you how not to get caught, what not to do on a computer system, what type of equipment should I know about now, and just a little on the history, past present future, of the hacker.

Welcome to the world of hacking! We, the people who live outside of the normal rules, and have been scorned and even arrested by those from the 'civilized world', are becoming scarcer every day. This is due to the greater fear of what a good hacker (skill wise, no moral judgements here)|can do nowadays, thus causing anti- hacker sentiment in the masses. Also, few hackers seem to actually know about the computer systems they hack, or what equipment they will run into on the front end, or what they could do wrong on a system to alert the 'higher' authorities who monitor the system. This article is intended to tell you about some things not to do, even before you get on the system. I will tell you about the new wave of front end security devices that are beginning to be used on computers.

I will attempt to instill in you a second identity, to be brought up at time of great need, to pull you out of trouble. And, by the way, I take no, repeat,no, responsibility for what we say in this and the forthcoming articles.

Enough of the bullshit, on to the fun: after logging on your favorite bbs, you see on the high access board a phone number! It says it's a great system to "fuck around with!" This may be true, but how many other people are going to call the same number? So: try to avoid calling a number given to the public. This is because there are at least every other user calling, and how many other boards will that number spread to?

If you call a number far, far away, and you plan on going thru an extender or a re-seller, don't keep calling the same access number (I.E. As you would if you had a hacker running), this looks very suspicious and can make life miserable when the phone bill comes in the mail. Most cities have a variety of access numbers and services, so use as many as you can. Never trust a change in the system... The 414's, the assholes, were caught for this reason: when one of them connected to the system, there was nothing good there. The next time, there was a trek game stuck right in their way! They proceeded to play said game for two, say two and a half hours, while telenet was tracing them! Nice job, don't you think? If anything looks suspicious, drop the line immediately!! As in, yesterday!! The point we're trying to get across is: if you use a little common sence, you won't get busted. Let the little kids who aren't smart enough to recognize a trap get busted, it will take the heat off of the real hackers. Now, let's say you get on a computer system... It looks great, checks out, everything seems fine.

Ok, now is when it gets more dangerous. You have to know the computer system to know what not to

do. Basically, keep away from any command something, copy a new file into the account, or whatever! Always leave the account in the same status you logged in with. Change *nothing*... If it isn't an account with priv's, then don't try any commands that require them! All, yes all, systems are going to be keeping log files of what users are doing, and that will show up. It is just like dropping a trouble-card in an ESS system, after sending that nice operator a pretty tone.

Spend no excessive amounts of time on the account in one stretch. Keep your calling to the very late night if possible, or during business hours (believe it or not!). It so happens that there are more users on during business hours, and it is very difficult to read a log file with 60 users doing many commnds every minute.

Try to avoid systems where everyone knows each other, don't try to bluff. And above all: never act like you own the system, or are the best there is. They always grab the people who's heads swell... There is some very interesting front end equipment around nowadays, but first let's define terms... By front end, we mean any device that you must pass thru to get at the real computer. There are devices that are made to defeat hacker programs, and just plain old multiplexers.

To defeat hacker programs, there are now devices that pick up the phone and just sit there... This means that your device gets no carrier, thus you think there isn't a computer on the other end. The only way around it is to detect when it was picked up. If it pickes up after the same number ring, then you know it is a hacker-defeater. These devices take a multi-digit code to let you into the system. Some are, in fact, quite sophisticated to the point where it will also limit the user name's down, so only one name or set of names can be valid logins after they input the code... Other devices input a number code, and then they dial back a pre-programmed number for that code. These systems are best to leave alone, because they know someone is playing with their phone. You may think "but i'll just reprogram the dial-back." Think again, how stupid that is... Then they have your number, or a test loop if you were just a little smarter. If it's your number, they have your balls (if male...), If its a loop, then you are screwed again, since those loops are *monitored*. As for multiplexers... What a plexer is supposed to do is this:

The system can accept multiple users. We have to time share, so we'll let the front-end processor do it... Well, this is what a multiplexer does. Usually they will ask for something like "enter class" or "line:". Usually it is programmed for a double digit number, or a four to five letter word. There are usually a few sets of numbers it accepts, but those numbers also set your 300/1200/2400 baud data type.

These multiplexers are inconvenient at best, so not to worry. A little about the history of hacking: hacking, by my definition, means a great knowledge of some special area. Doctors and lawyers are hackers of a sort, by this definition. But most often, it is being used in the computer context, and thus we have a definition of "anyone who has a great amount of computer or telecommunications knowledge." You are not a hacker because you have a list of codes... Hacking, by my definition, has then been around only about 15 years. It started, where else but, mit and colleges where they had computer science or electrical engineering departments.

Hackers have created some of the best computer languages, the most awesome operating systems, and even gone on to make millions. Hacking used to have a good name, when we could honestly say "we know what we are doing". Now it means (in the public eye): the 414's, ron austin, the nasa hackers, the

arpanet hackers...

All the people who have been caught, have done damage, and are now going to have to face fines and sentences. Thus we come past the moralistic crap, and to our purpose: educate the hacker community, return to the days when people actually knew something...

The Anarchist's Cookbook

Hacking DEC's

Hacking DEC's by the Jolly Roger

In this article you will learn how to log in to dec's, logging out, and all the fun stuff to do in-between. All of this information is based on a standard dec system.

Since there are dec systems 10 and 20, and I favor, the dec 20, there will be more info on them in this article. It just so happens that the dec 20 is also the more common of the two, and is used by much more interesting people (if you know what I mean...) Ok, the first thing you want to do when you are receiving carrier from a dec system is to find out the format of login names. You can do this by looking at who is on the system.

Dec=> ` (the 'exec' level prompt)

you=> sy

sy is short for sy(stat) and shows you the system status.

You should see the format of login names...

A systat usually comes up in this form:

job line program user

job: the job number (not important unless you want to log them off later)

line: what line they are on (used to talk to them...)

These are both two or three digit numbers.

Program: what program are they running under? If it says 'exec' they aren't doing anything at all...

User: ahhhahhhh! This is the user name they are logged in under...

Copy the format, and hack yourself outa working code... Login format is as such:

dec=> `

you=> login username password

username is the username in the format you saw above in the systat.

After you hit the space after your username, it will stop echoing characters back to your screen. This is the password you are typing in... Remember, people usually use their name, their dog's name, the name of a favorite character in a book, or something like this. A few clever people have it set to a key cluster (qwerty or asdfg). Pw's can be from 1 to 8 characters long, anything after that is ignored. You are finally in... It would be nice to have a little help, wouldn't it? Just type a ? Or the word help, and it will give you a whole list of topics...

Some handy characters for you to know would be the control keys, wouldn't it? Backspace on a dec 20 is rub which is 255 on your ascii chart. On the dec 10 it is cntrl-h. To abort a long listing or a program, cntrl-c works fine. Use cntrl-o to stop long output to the terminal. This is handy when playing a game,

but you don't want to cntrl-c out. Cntrl-t for the time. Cntrl-u will kill the whole line you are typing at the moment. You may accidently run a program where the only way out is a cntrl-x, so keep that in reserve. Cntrl-s to stop listing, cntrl-q to continue on both systems. Is your terminal having trouble?? Like, it pauses for no reason, or it doesn't backspace right? This is because both systems support many terminals, and you haven't told it what yours is yet... You are using a vt05 so you need to tell it you are one.

Dec=> `

you=> information terminal

or...

You=> info

this shows you what your terminal is set up as...

Dec=>all sorts of shit, then the `

you=> set ter vt05 this sets your terminal type to vt05.

Now let's see what is in the account (here after abbreviated acct.) that you have hacked onto... Say

=> dir

short for directory, it shows you what the user of the code has save to the disk. There should be a format like this:

xxxxx.Oooxxxxx is the file name, from 1 to 20 characters long. Ooo is the file type, one of: exe, txt, dat, bas, cmd and a few others that are system dependant. Exe is a compiled program that can be run (just by typing its name at the `).

Txt is a text file, which you can see by

typing=>

type xxxxx.Txt

Do not try to=> type xxxxx.Exe this is very bad for your terminal and will tell you absolutly nothing.

Dat is data they have saved.

Bas is a basic program, you can have it typed out for you.

Cmd is a command type file, a little too complicated to go into here.

Try =>

take xxxxx.Cmd

By the way, there are other users out there who may have files you can use (gee, why else am I here?).

Type => dir <*. *> (Dec 20)

=> dir [*,*] (dec 10)

* is a wildcard, and will allow you to access the files on other accounts if the user has it set for public access. If it isn't set for public access,then you won't see it. To run that program:

dec=> `

you=> username program-name

username is the directory you saw the file listed under, and file name was what else but the file name?

**** You are not alone ****

remember, you said (at the very start) sy short for systat, and how we said this showed the other users on the system? Well, you can talk to them, or at least send a message to anyone you see listed in a systat.

You can do this by:

dec=> the user list (from your systat)

you=> talkusername (dec 20)

send username (dec 10)

talk allows you and them immediate transmission of whatever you/they type to be sent to the other. Send only allow you one message to be sent, and send, they will send back to you, with talk you can just keep going. By the way, you may be noticing with the talk command that what you type is still acted upon by the parser (control program). To avoid the constant error messages type either:

you=> ;your message

you=> rem your message

the semi-colon tells the parser that what follows is just a comment. Rem is short for 'remark' and ignores you from then on until you type a cntrl-z or cntrl-c, at which point it puts you back in the exec mode. To break the connection from a talk command type:

you=> break priv's:

if you happen to have privs, you can do all sorts of things. First of all, you have to activate those privs.

You=> enable

this gives you a \$ prompt, and allows you to do this: whatever you can do to your own directory you can now do to any other directory. To create a new acct. Using your privs, just type

=>build username

if username is old, you can edit it, if it is new, you can define it to be whatever you wish. Privacy means nothing to a user with privs. By the way, there are various levels of privs: operator, wheel, cia. wheel is the most powerful, being that he can log in from anywhere and have his powers.

Operators have their power because they are at a special terminal allowing them the privs. Cia is short for 'confidential information access', which allows you a low level amount of privs.

Not to worry though, since you can read the system log file, which also has the passwords to all the other accounts. To de-activate your privs, type

you=> disable

when you have played your greedy heart out, you can finally leave the system with the command=>

logout

this logs the job you are using off the system (there may be variants of this such as kjob, or killjob).

The Anarchist's Cookbook

Harmless Bombs

Harmless Bombs by the Jolly Roger

To all those who do not wish to inflict bodily damage on their victims but only terror. These are weapons that should be used from high places.

1) The flour bomb.

Take a wet paper towel and pour a given amount of baking flour in the center. Then wrap it up and put on a rubber band to keep it together. When thrown it will fly well but when it hits, it covers the victim with the flour or causes a big puff of flour which will put the victim in terror since as far as they are concerned, some strange white powder is all over them. This is a cheap method of terror and for only the cost of a roll of paper towels and a bag of flour you and your friends can have loads of fun watching people flee in panic.

2) Smoke bomb projectile.

All you need is a bunch of those little round smoke bombs and a wrist rocket or any sling-shot. Shoot the smoke bombs and watch the terror since they think it will blow up!

3) Rotten eggs (good ones)

Take some eggs and get a sharp needle and poke a small hole in the top of each one. Then let them sit in a warm place for about a week. Then you've got a bunch of rotten eggs that will only smell when they hit.

4) Glow in the dark terror.

Take one of those tubes of glow in the dark stuff and pour the stuff on whatever you want to throw and when it gets on the victim, they think it's some deadly chemical or a radioactive substance so they run in total panic. This works especially well with flower bombs since a gummy, glowing substance gets all over the victim.

5) Fizzling panic.

Take a baggie of a water-baking soda solution and seal it. (Make sure there is no air in it since the solution will form a gas and you don't want it to pop on you.) Then put it in a bigger plastic bag and fill it with vinegar and seal it. When thrown, the two substances will mix and cause a violently bubbling substance to go all over the victim.

Breaking into Houses

Breaking Into Houses by the Jolly Roger

Okay You Need:

1. Tear Gas or Mace
2. A BB/Pelet Gun
3. An Ice Pick
4. Thick Gloves

What You Do Is:

1. Call the ###-#### of the house, or ring doorbell, To find out if they're home.
2. If they're not home then...
3. Jump over the fence or walk through gate (whatever).
4. If you see a dog give him the mace or tear gas.
5. Put the gloves on!!!!!!
6. Shoot the BB gun slightly above the window locks.
7. Push the ice-pick through the hole (made by the BB gun).
8. Enter window.
9. FIRST...Find the LIVING ROOM. (they're neat things there!).
10. Then goto the Bed-room to get a pillow case. Put the goodies in the pillow case.
11. Get out <-* FAST! -*>

Notes: You should have certian targets worked out (like computers, Radios, Ect.,Ect.). Also <-* NEVER *-> Steal from your own neighborhood. If you think they have an alarm...<-* FORGET IT! *->.

Hypnotism

A Guide to Hypnotism Courtesy of the Jolly Roger
(Originally an Apple][file, forgive the uppercase!)

```
+-----+
! WHAT HYPNOTISM IS !
+-----+
```

Hypnotism, contrary to common belief, is merely state when your mind and body are In a state of relaxation and your mind is open to positive, or cleverly worded Negative, influences. It is not a trance where you: > are totally influencable. > cannot lie. > a sleep which you cannot wake up from without help. This may bring down your hope somewhat, but, hypnotism is a powerful for self help, And/or mischeif.

```
+-----+ ! Your subconscious mind ! +-----+
```

Before going in further, i'd like to state that hypnotism not only is great in the way That it relaxes you and gets you (in the long run) what you want, but also that it Taps a force of incredible power, beleive it or not, this power is your subconscious Mind. The subconscious mind always knows what is going on with every part of your Body,

Every moment of the day. It protects you from negative influences, and retains the Power to slow your heartbeat down and stuff like that. The subconscious mind holds Just about all the info you would like to know about yourself, or, in this case, the Person you will be hypnotising. There are many ways to talk to your subconscious And have it talk back to you. One way is the ouja board, no its not a spirit, merely the Minds of those who are using it. Another, which i will discuss here, is the pendulum Method. Ok, here is how it goes. First, get a ring or a washer and tie it to a thread a Little longer than half of your forearm. Now, take a sheet of paper and draw a big Circle in it. In the big circle you must now draw a crosshair (a big +). Now, put the Sheet of paper on a table. Next, hold the thread with the ring or washer on it and Place it (holding the thread so that the ring is 1 inch above the paper swinging) in the Middle of the crosshair. Now, swing the thread so the washer goes up and down, say To yourself the word "yes" now, do it side to side and say the word "no". Do it counter Clockwise and say "i don't know". And lastly, do it clockwise and say "i dont want to Say." Now, with the thread back in the middle of the crosshair, ask yourself questions And wait for the pendulum to swing in the direction for the answer. (yes, no, i dont

Know or i dont wanna say...). Soon, to your amazement, it will be answering questions Like anything... Let the pendulum answer, dont try.. When you try you will never get An answer. Let the answer come to you.

+-----+ ! How to induce hypnotism ! +-----+

Now that you know how to talk to your subconscious mind, i will now tell you how To guide someone into hypnosis. Note that i said guide, you can never, hynotise Someone, they must be willing. Ok, the subject must be lying or sitting in a Comfortable position, relaxed, and at a time when things arent going to be Interrupted. Tell them the following or something close to it, in a peaceful, Monotonous tone (not a commanding tone of voice)

Note: light a candle and place it somewhere where it can be easily seen.

Take a deep breath through your nose and hold it in for a count of 8. Now, through Your mouth, exhale completely and slowly. Continued breathing long, deep, breaths Through your nose and exhaling through your mouth. Tense up all your muscles very Tight, now, counting from ten to one, release them slowly, you will find them very Relaxed. Now, look at the candle, as you look at it, with every breath and passing Momement, you are feeling increasingly more and more peaceful and relaxed. The Candles flame is peaceful and bright.

As you look at it i will count from 100 down, as a count, your eyes will become more And more relaxed, getting more and more tired with each passing moment." Now, count down from 100, about every 10 numbers say "when i reach xx your eyes (or You will find your eyes) are becoming more and more tired." Tell them they may close Their eyes whenever they feel like it. If the persons eyes are still open when you get to 50 then instead of saying

"your eyes will.."

Say "your eyes are..."

When their eyes are shut say the following. As you lie (or sit) here with your eyes Comfortably close you find yourself relaxing more and more with each moment and Breath.

The relaxation feels pleasant and blissful so, you happily give way to this wonderful Feeling. Imagege yourself on a cloud, resting peacefully, with a slight breeze Caressing your body. A tingling sensasion begins to work its way, within and without Your toes, it slowly moves up your feet, making them warm, heavy and relaxed. The Cloud is soft and supports your body with its soft texture, the scene is peaceful and Absorbing, the peacefulness absorbs you completely...

The tingling gently and slowly moves up your legs, relaxing them. Making them warm And heavy. The relaxation feels very good, it feels so good to relax and let go. As the Tingling continues its journey up

into your solar plexus, you feel your inner Stomach become very relaxed. Now, it moves slowly into your chest, making your Breathing relaxed as well. The feeling begins to move up your arms to your Shoulders, making your arms heavy and relaxed as well. You are aware of the total Relaxation you are now experiencing, and you give way to it. It is good and peaceful, The tingling now moveves into your face and head, relaxing your jaws, neck, and Facial muscles, making your cares and worries float away. Away into the blue sky as You rest blissfully on the cloud....

If they are not responsive or you think they (he or she..) Is going to sleep, then add in a "...always concentrating upon my voice, ingoring all other sounds. Even though Other sounds exist, they aid you in your relaxation..." They should soon let out a Sigh as if they were letting go, and their face should have a "woodeness" to it, Becoming featurless... Now, say the following "... You now find yourself in a hallway, The hallway is peaceful and nice. As i count from 10 to 1 you will imagine yourself Walking further and further down the hall. When i reach one you will find yourself Where you want to be, in another, higher state of concious and mind. (count from ten To one)....." Do this about three or four times. Then, to test if the subject is under Hypnosis or not, say....

"...you feel a strange sensation in your (arm they write with) arm, the

Feeling begins at your fingers and slowly moves up your arm, as it moves through Your arm your arm becomes lighter and lighter, it will soon be so light it will Becoming lighter and lighter which each breath and moment..."

Their fingers should begin to twitch and then move up, the arm following, now my Friend, you have him/hep in hypnosis. The first time you do this, while he/she is under Say good things, like: "your going to feel great tomorrow" or "every day in every way You will find yourself becoming better and better".. Or some crap like that... The more They go under, the deeper in hypnosis they will get each time you do it.

+-----+ ! What to do when hypnotised ! +-----+

When you have them under you must word things very carefully to get your way. You cannot simply say... Take off your clothes and fuck the pillow. No, that would Not really do the trick. You must say something like.... "you find your self at home, in Your room and you have to take a shower (vividly describe their room and whats Happening), you begin to take off your clothes..." Now, it cant be that simple, you must Know the persons house, room, and shower room. Then describe things vividly and Tell them to act it out (they have to be deeply under to do this...). I would just suggest That you experiment a while, and get to know ho; to do things.

+-----+ ! Waking up ! +-----+

Waking up is very easy, just say.. "...as i count from 1 to 5 you will find yourself Becoming more and more awake, more and more lively. When you wake up you will Find yourself completely alive, awake, and refreshed. Mentally and physically, Remembering the pleasant sensation that hypnosis brings...

Waking up feeling like a New born baby, reborn with life and vigor, feeling excellent. Remembering that next Time you enter hypnosis it will become an ever increasing deeper and deeper state Than before.

1- you feel energy course throughout your limbs. 2- you begin to breathe deeply, stirring. 3- begining to move more and more your eyes open, bringing you up to full concious. 4- you are up,up, up and awakening more and more. 5- you are awake and feeling great."

And thats it! You now know how to hypnotise yourself and someone else. You will Learn more and more as you experiment.

The Anarchist's Cookbook

Jackpotting ATM Machines

Jackpotting ATM Machines courtesy of the Jolly Roger

JACKPOTTING was done rather successfully a while back in (you guessed it) New York. What the culprits did was:

Sever (actually cross over) the line between the ATM and the host. insert a microcomputer between the ATM and the host. insert a fraudulent card into the ATM. (card=cash card, not hardware)

What the ATM did was: send a signal to the host, saying "Hey! Can I give this guy money, or is he broke, or is his card invalid?"

What the microcomputer did was: intercept the signal from the host, discard it, send "there's no one using the ATM" signal.

What the host did was: get the "no one using" signal, send back "okay, then for God's sake don't spit out any money!" signal to ATM.

What the microcomputer did was: intercept signal (again), throw it away (again), send "Wow! That guy is like TOO rich! Give him as much money as he wants. In fact, he's so loaded, give him ALL the cash we have! He is really a valued customer." signal.

What the ATM did:

what else? Obediently dispense cash till the cows came home (or very nearly so).

What the crooks got:

well in excess of \$120,000 (for one weekend's work), and several years when they were caught.

This story was used at a CRYPTOGRAPHY conference I attended a while ago to demonstrate the need for better information security. The lines between ATM's & their hosts are usually 'weak' in the sense that the information transmitted on them is generally not encrypted in any way. One of the ways that JACKPOTTING can be defeated is to encrypt the information passing between the ATM and the host. As long as the key cannot be determined from the ciphertext, the transmission (and hence the transaction) is secure.

A more believable, technically accurate story might concern a person who uses a computer between the ATM and the host to determine the key before actually fooling the host. As everyone knows, people find cryptanalysis a very exciting and engrossing subject...don't they? (Hee-Hee)

| ____ | ->>- | | ->>- | ____ |

The B of A ATM's are connected through dedicated lines to a host computer as the Bishop said. However, for maintenance purposes, there is at least one separate dial-up line also going to that same host computer. This guy basically bs'ed his way over the phone till he found someone stupid enough to give him th number. After finding that, he had has Apple hack at the code. Simple.

Step 2: He had a friend go to an ATM with any B of A ATM card. He stayed at home with the Apple connected to the host. When his friend inserted the card, the host displayed it. The guy with the Apple modified the status & number of the card directly in the host's memory. He turned the card into a security card, used for testing purposes. At that point, the ATM did whatever it's operator told it to do.

The next day, he went into the bank with the \$2000 he received, talked to the manager and told him every detail of what he'd done. The manager gave him his business card and told him that he had a job waiting for him when he got out of school.

Now, B of A has been warned, they might have changed the system. On the other hand, it'd be awful expensive to do that over the whole country when only a handful of people have the resources and even less have the intelligence to duplicate the feat. Who knows?

Jug Bomb

Jug Bomb by the Jolly Roger

Take a glass jug, and put 3 to 4 drops of gasoline into it. Then put the cap on, and swish the gas around so the inner surface of the jug is coated. Then add a few drops of potassium permanganate solution into it and cap it. To blow it up, either throw it at something, or roll it at something.

The Anarchist's Cookbook

Fun at K-Mart

Fun at K-Mart by the Jolly Roger

Well, first off, one must realise the importance of K-Marts in society today. First off, K-Marts provide things cheaper to those who can't afford to shop at higher quality stores. Although, all I ever see in there is minorities and Senior Citizens, and the poor people in our city. Personally, I wouldn't be caught dead in there. But, once, I did.

You see, once, after The Moon Roach and Havoc Chaos(Dear friends of mine) and I were exploring such fun things as rooftops, we came along a K-Mart. Amused, and cold for that matter, we wandered in. The Tension mounts.

As we walked up to the entrance, we were nearly attacked by Youth Groups selling cheap cookies, and wheelchair sticken people selling American Flags. After laughing at these people, we entered. This is where the real fun begins...

First, we wandered around the store, and turned on all the blue lights we could find. That really distracts and confuses the attendents...Fun to do...

The first neat thing, is to go to the section of the store where they sell computers. Darkness engulf the earth the day they find Apple Computers being sold there. Instead, lesser computers like the laughable C-64 can be found there...Turn it on, and make sure nobody's looking...Then, once in Basic, type...

```
]10 PRINT "Fuck the world! Anarchy Rules!" (or something to that effect.)
```

```
]20 GOTO 10 and walk away.
```

Also, set the sample radios in the store to a santanic rock station, and turn the radio off. Then, set the alarm for two minutes ahead of the time displayed there. Turn the volume up all the way, and walk away. After about two minutes, you will see the clerk feebly attempt to turn the radio down or off. It's really neat to set ten or more radios to different stations, and walk away.

One of my favorite things to do, is to get onto the intercom system of the store. Easier typed then done. First, check out the garden department. You say there's no attendant there? Good. Sneak carefully over to the phone behind the cheap counter there, and pick it up. Dial the number corrsponding to the item that says 'PAGE'... And talk. You will note that your voice will echo all over the bowels of K-Mart. I would suggest announcing something on the lines of: "Anarchy rules!!"

Mace Substitute

Mace Substitute by the Jolly Roger

3 PARTS: Alcohol

1/2 PARTS: Iodine

1/2 PARTS: Salt

Or:

3 PARTS: Alcohol

1 PARTS: Iodized Salt (Mortons)

It's not actual mace, but it does a damn good job on the eyes...

Exchange Scanning

Exchange Scanning courtesy of the Jolly Roger

Almost every exchange in the bell system has test #'s and other "goodies" such as loops with dial-ups. These "goodies" are usually found betweed 9900 and 9999 in your local exchange. If you have the time and initiative, scan your exchange and you may become lucky!

Here are some findings in the 914-268 exchange:

```
9900 - ANI
9901 - ANI
9927 - OSC. TONE (POSSIBLE TONE SIDE OF A LOOP)
9936 - VOICE # TO THE TELCO CENTRAL OFFICE
9937 - VOICE # TO THE TELCO CENTRAL OFFICE
9941 - COMPUTER (DIGITAL VOICE TRANSMISSION?)
9960 - OSC. TONE (TONE SIDE LOOP) MAY ALSO BE A COMPUTER IN SOME
EXCHANGES
9961 - NO RESPONSE (OTHER END OF LOOP?)
9962 - NO RESPONSE (OTHER END OF LOOP?)
9963 - NO RESPONSE (OTHER END OF LOOP?)
9966 - COMPUTER (SEE 9941)
9968 - TONE THAT DISAPPEARS--RESPONDS TO CERTAIN TOUCH-TONE KEYS
```

Most of the numbers between 9900 & 9999 will ring or go to a "what #, please?" operator.

The Anarchist's Cookbook

A Short History of Phreaking

A Short History of Phreaking courtesy of the Jolly Roger

Well now we know a little vocabulary, and now its into history, Phreak history. Back at MIT in 1964 arrived a student by the name of Stewart Nelson, who was extremely interested in the telephone. Before entering MIT, he had built autodialers, cheese boxes, and many more gadgets. But when he came to MIT he became even more interested in "fone-hacking" as they called it. After a little while he naturally started using the PDP-1, the schools computer at that time, and from there he decided that it would be interesting to see whether the computer could generate the frequencies required for blue boxing. The hackers at MIT were not interested in ripping off Ma Bell, but just exploring the telephone network. Stew (as he was called) wrote a program to generate all the tones and set off into the vast network.

Now there were more people phreaking than the ones at MIT. Most people have heard of Captain Crunch (No not the cereal), he also discovered how to take rides through the fone system, with the aid of a small whistle found in a cereal box (can we guess which one?). By blowing this whistle, he generated the magical 2600hz and into the mouthpiece it sailed, giving him complete control over the system. I have heard rumors that at one time he made about 1/4 of the calls coming out of San Francisco. He got famous fast. He made the cover of people magazine and was interviewed several times (as you'll soon see). Well he finally got caught after a long adventurous career. After he was caught he was put in jail and was beaten up quite badly because he would not teach other inmates how to box calls. After getting out, he joined Apple computer and is still out there somewhere.

Then there was Joe the Whistler, blind form the day he was born. He could whistle a perfect 2600hz tone. It was rumored phreaks used to call him to tune their boxes.

Well that was up to about 1970, then from 1970 to 1979, phreaking was mainly done by college students, businessmen and anyone who knew enough about electronics and the fone company to make a 555 Ic to generate those magic tones. Businessmen and a few college students mainly just blue box to get free calls. The others were still there, exploring 800#'s and the new ESS systems. ESS posed a big problem for phreaks then and even a bigger one now. ESS was not widespread, but where it was, blue boxing was next to impossible except for the most experienced phreak. Today ESS is installed in almost all major cities and blue boxing is getting harder and harder.

1978 marked a change in phreaking, the Apple][, now a computer that was affordable, could be programmed, and could save all that precious work on a cassette. Then just a short while later came the Apple Cat modem. With this modem, generating all blue box tones was easy as writing a program to

count from one to ten (a little exaggerated). Pretty soon programs that could imitate an operator just as good as the real thing were hitting the community, TSPS and Cat's Meow, are the standard now and are the best.

1982-1986: LD services were starting to appear in mass numbers. People now had programs to hack LD services, telephone exchanges, and even passwords.

By now many phreaks were getting extremely good and BBS's started to spring up everywhere, each having many documentations on phreaking for the novice. Then it happened, the movie War Games was released and mass numbers of sixth grade to all ages flocked to see it. The problem wasn't that the movie was bad, it was that now EVERYONE wanted to be a hacker/phreak. Novices came out in such mass numbers, that bulletin boards started to be busy 24 hours a day. To this day, they still have not recovered. Other problems started to occur, novices guessed easy passwords on large government computers and started to play around... Well it wasn't long before they were caught, I think that many people remember the 414-hackers. They were so stupid as to say "yes" when the computer asked them whether they'd like to play games. Well at least it takes the heat off the real phreaks/hacker/krackers.

The Anarchist's Cookbook

"Bad as Shit" (story)

Bad as Shit

Recently, a telephone fanatic in the northwest made an interesting discovery. He was exploring the 804 area code (Virginia) and found out that the 840 exchange did something strange. In the vast majority of cases, in fact in all of the cases except one, he would get a recording as if the exchange didn't exist. However, if he dialed 804-840 and four rather predictable numbers, he got a ring! After one or two rings, somebody picked up. Being experienced at this kind of thing, he could tell that the call didn't "supe", that is, no charges were being incurred for calling this number. (Calls that get you to an error message, or a special operator, generally don't supervise.) A female voice, with a hint of a Southern accent said,

"Operator, can I help you?"

"Yes," he said, "What number have I reached?"

"What number did you dial, sir?"

He made up a number that was similar.

"I'm sorry that is not the number you reached." Click.

He was fascinated. What in the world was this? He knew he was going to call back, but before he did, he tried some more experiments. He tried the 840 exchange in several other area codes. In some, it came up as a valid exchange. In others, exactly the same thing happened -- the same last four digits, the same Southern belle. Oddly enough, he later noticed, the areas worked in seemed to travel in a beeline from Washington DC to Pittsburgh, PA.

He called back from a payphone. "Operator, can I help you?"

"Yes, this is the phone company. I'm testing this line and we don't seem to have an identification on your circuit. What office is this, please?"

"What number are you trying to reach?"

"I'm not trying to reach any number. I'm trying to identify this circuit."

"I'm sorry, I can't help you."

"Ma'am, if I don't get an ID on this line, I'll have to disconnect it.
We show no record of it here."

"Hold on a moment, sir."

After about a minute, she came back. "Sir, I can have someone speak to you.
Would you give me your number, please?"

He had anticipated this and he had the payphone number ready. After he gave it, she said, "Mr. XXX will get right back to you."

"Thanks." He hung up the phone. It rang. INSTANTLY! "Oh my God," he thought, "They weren't asking for my number -- they were confirming it!"

"Hello," he said, trying to sound authoritative.

"This is Mr. XXX. Did you just make an inquiry to my office concerning a phone number?"

"Yes. I need an identi--"

"What you need is advice. Don't ever call that number again. Forget you ever knew it."

At this point our friend got so nervous he just hung up. He expected to hear the phone ring again but it didn't.

Over the next few days he racked his brains trying to figure out what the number was. He knew it was something big -- that was pretty certain at this point. It was so big that the number was programmed into every central office in the country. He knew this because if he tried to dial any other number in that exchange, he'd get a local error message from his CO, as if the exchange didn't exist.

It finally came to him. He had an uncle who worked in a federal agency. He had a feeling that this was government related and if it was, his uncle could probably find out what it was. He asked the next day and his uncle promised to look into the matter.

The next time he saw his uncle, he noticed a big change in his manner. He was trembling. "Where did you get that number?!" he shouted. "Do you know I almost got fired for asking about it?!? They kept wanting to know where I got it."

Our friend couldn't contain his excitement. "What is it?" he pleaded. "What's the number?!"

"IT'S THE PRESIDENT'S BOMB SHELTER!"

He never called the number after that. He knew that he could probably cause quite a bit of excitement by calling the number and saying something like, "The weather's not good in Washington. We're coming over for a visit." But our friend was smart. he knew that there were some things that were better off unsaid and undone.

(A fucking great story from the Official Phreaker's Guide)

The Anarchist's Cookbook

Telenet

Telenet Courtesy of the Jolly Roger

It seems that not many of you know that Telenet is connected to about 80 computer-networks in the world. No, I don't mean 80 nodes, but 80 networks with thousands of unprotected computers. When you call your local Telenet- gateway, you can only call those computers which accept reverse-charging-calls.

If you want to call computers in foreign countries or computers in USA which do not accept R-calls, you need a Telenet-ID. Did you ever notice that you can type ID XXXX when being connected to Telenet? You are then asked for the password. If you have such a NUI (Network-User-ID) you can call nearly every host connected to any computer-network in the world. Here are some examples:

```
026245400090184 :Is a VAX in Germany (Username: DATEXP and leave
mail for
CHRIS !!!)
0311050500061 :Is the Los Alamos Integrated computing network (One
of the
hosts connected to it is the DNA (Defense Nuclear Agency)!!!)
0530197000016 :Is a BBS in New Zealand
024050256 :Is the S-E-Bank in Stockholm, Sweden (Login as
GAMES !!!)
02284681140541 :CERN in Geneva in Switzerland (one of the biggest
nuclear
research centers in the world) Login as GUEST
0234212301161 :A Videotex-standard system. Type OPTEL to get in and
use
the
ID 999_ with the password 9_
0242211000001 :University of Oslo in Norway (Type LOGIN 17,17 to
play
the
Multi-User-Dungeon !)
0425130000215 :Something like ITT Dialcom, but this one is in
Israel ! ID
HELP with password HELP works fine with security level 3
```

0310600584401 :Is the Washington Post News Service via Tymnet (Yes, Tymnet is connected to Telenet, too !) ID and Password is: PETER You can read the news of the next day !

The prefixes are as follows:

02624 is Datex-P in Germany
02342 is PSS in England
03110 is Telenet in USA
03106 is Tymnet in USA
02405 is Telepak in Sweden
04251 is Isranet in Israel
02080 is Transpac in France
02284 is Telepac in Switzerland
02724 is Eirpac in Ireland
02704 is Luxpac in Luxembourg
05252 is Telepac in Singapore
04408 is Venus-P in Japan

...and so on... Some of the countries have more than one packet-switching-network (USA has 11, Canada has 3, etc).

OK. That should be enough for the moment. As you see most of the passwords are very simple. This is because they must not have any fear of hackers. Only a few German hackers use these networks. Most of the computers are absolutely easy to hack !!! So, try to find out some Telenet-ID's and leave them here. If you need more numbers, leave e-mail. I'm calling from Germany via the German Datex-P network, which is similar to Telenet. We have a lot of those NUI's for the German network, but none for a special Tymnet-outdial-computer in USA, which connects me to any phone #.

CUL8R, Mad Max

PS: Call 026245621040000 and type ID INF300 with password DATACOM to get more

Informations on packet-switching-networks !

PS2: The new password for the Washington Post is KING !!!!

! Group Chief !
\-----/

```

Now most of the operators are not bugged, so they can curse at you, if they do ask INSTANTLY for the "S.A." or the Service Assistant. The operator does not report to her (95% of them are hers) but they will solve most of your problems. She MUST give you her name as she connects & all of these calls are bugged. If the SA gives you a rough time get her BOS (Business Office Supervisor) on the line. S/He will almost always back her girls up, but sometimes the SA will get tarred and feathered. The operator reports to the Group Chief, and S/He will solve 100% of your problems, but the chances of getting S/He on the line are nill.

If a lineman (the guy who works out on the poles) or an installation man gives you the works ask to speak to the Installation Foreman, that works wonders.

Here is some other bell jargon, that might come in handy if you are having trouble with the line. Or they can be used to lie your way out of situations....

An Erling is a line busy for 1 hour, used mostly in traffic studies A Permanent Signal is that terrible howling you get if you disconnect, but don't hang up.

Everyone knows what a busy signal is, but some idiots think that is the *Actual* ringing of the phone, when it just is a tone "beeps" when the phone is ringing, wouldn't bet on this though, it can (and does) get out of sync.

When you get a busy signal that is 2 times as fast as the normal one, the person you are trying to reach isn't really on the phone, (he might be), it is actually the signal that a trunk line somewhere is busy and they haven't or can't reroute your call. Sometimes you will get a Recording, or if you get nothing at all (Left High & Dry in fone terms) all the recordings are being used and the system is really overused, will probably go down in a little while. This happened when Kennedy was shot, the system just couldn't handle the calls. By the way this is called the "reorder signal" and the trunk line is "blocked".

One more thing, if an overseas call isn't completed and doesn't generate any money for AT&T, is is called an "Air & Water Call".

The Anarchist's Cookbook

Infinity Transmitter Schematic and Plans

The Infinity Transmitter courtesy of the Jolly Roger
originally typed by:

<<>>

FROM THE BOOK BUILD YOUR OWN

LASER, PHASER, ION RAY GUN & OTHER WORKING SPACE-AGE PROJECTS

BY ROBERT IANNINI (TAB BOOKS INC)

Description: Briefly, the Infinity Transmitter is a device which activates a microphone via a phone call. It is plugged into the phone line, and when the phone rings, it will immediately intercept the ring and broadcast into the phone any sound that is in the room. This device was originally made by Information Unlimited, and had a touch tone decoder to prevent all who did not know the code from being able to use the phone in its normal way. This version, however, will activate the microphone for anyone who calls while it is in operation. NOTE: It is illegal to use this device to try to bug someone. It is also pretty stupid because they are fairly noticeable.

Parts List:

Pretend that uF means micro Farad, cap= capacitor

| Part | # | Description |
|------------|---|--|
| ---- | - | ----- |
| R1,4,8 | 3 | 390 k 1/4 watt resistor |
| R2 | 1 | 5.6 M 1/4 watt resistor |
| R3,5,6 | 3 | 6.8 k 1/4 watt resistor |
| R7/S1 | 1 | 5 k pot/switch |
| R9,16 | 2 | 100 k 1/4 watt resistor |
| R10 | 1 | 2.2 k 1/4 watt resistor |
| R13,18 | 2 | 1 k 1/4 watt resistor |
| R14 | 1 | 470 ohm 1/4 watt resistor |
| R15 | 1 | 10 k 1/4 watt resistor |
| R17 | 1 | 1 M 1/4 watt resistor |
| C1 | 1 | .05 uF/25 V disc cap |
| C2,3,5,6,7 | 5 | 1 uF 50 V electrolytic cap or tant
(preferably non-polarized) |
| C4,11,12 | 3 | .01 uF/50 V disc cap |
| C8,10 | 2 | 100 uF @ 25 V electrolytic cap |
| C9 | 1 | 5 uF @ 150 V electrolytic cap |
| C13 | 1 | 10 uF @ 25 V electrolytic cap |
| TM1 | 1 | 555 timer dip |
| A1 | 1 | CA3018 amp array in can |

| | | |
|--------|-------|--|
| Q1, 2 | 2 | PN2222 npn sil transistor |
| Q3 | 1 | D40D5 npn pwr tab transistor |
| D1, 2 | 2 | 50 V 1 amp react. 1N4002 |
| T1 | 1 | 1.5 k/500 matching transformer |
| M1 | 1 | large crystal microphone |
| J1 | 1 | Phono jack optional for sense output |
| WR3 | (24") | #24 red and black hook up wire |
| WR4 | (24") | #24 black hook up wire |
| CL3, 4 | 2 | Alligator clips |
| CL1, 2 | 2 | 6" battery snap clips |
| PB1 | 1 | 1 3/4x4 1/2x.1 perfboard |
| CA1 | 1 | 5 1/4x3x2 1/8 grey enclosure fab |
| WR15 | (12") | #24 buss wire |
| KN1 | 1 | small plastic knob |
| BU1 | 1 | small clamp bushing |
| B1, 2 | 2 | 9 volt transistor battery or 9V ni-cad |

Circuit Operation: Not being the most technical guy in the world, and not being very good at electronics (yet), I'm just repeating what Mr. Iannini's said about the circuit operation. The Transmitter consists of a high gain amplifier fed into the telephone lines via transformer. The circuit is initiated by the action of a voltage transient pulse occurring across the phone line at the instant the telephone circuit is made (the ring, in other words). This transient immediately triggers a timer whose output pin 3 goes positive, turning on transistors Q2 and Q3. Timer TM1 now remains in this state for a period depending on the values of R17 and C13 (usually about 10 seconds for the values shown). When Q3 is turned on by the timer, a simulated "off hook" condition is created by the switching action of Q3 connecting the 500 ohm winding of the transformer directly across the phone lines. Simultaneously, Q2 clamps the ground of A1, amplifier, and Q1, output transistor, to the negative return of B1,B2, therefore enabling this amplifier section. Note that B2 is always required by supplying quiescent power to TM1 during normal conditions. System is off/on controlled by S1 (switch).

A crystal mike picks up the sounds that are fed to the first two transistors of the A1 array connected as an emitter follower driving the remaining two transistors as cascaded common emitters. Output of the array now drives Q1 capacitively coupled to the 1500 ohm winding of T1. R7 controls the pick up sensitivity of the system.

Diode D1 is forward biased at the instant of connection and essentially applies a negative pulse at pin 2 of TM1, initiating the cycle. D2 clamps any high positive pulses. C9 dc-isolates and desensitizes the circuit. The system described should operate when any incoming call is made without ringing the phone.

Schematic Diagram: Because this is text, this doesn't look too hot. Please use a little imagination! I will hopefully get a graphics drawing of this out as soon as I can on a Fontrix graffile.

To be able to see what everything is, this character: | should appear as a horizontal bar. I did this on a][e using a][e 80 column card, so I'm sorry if it looks kinda weird to you.

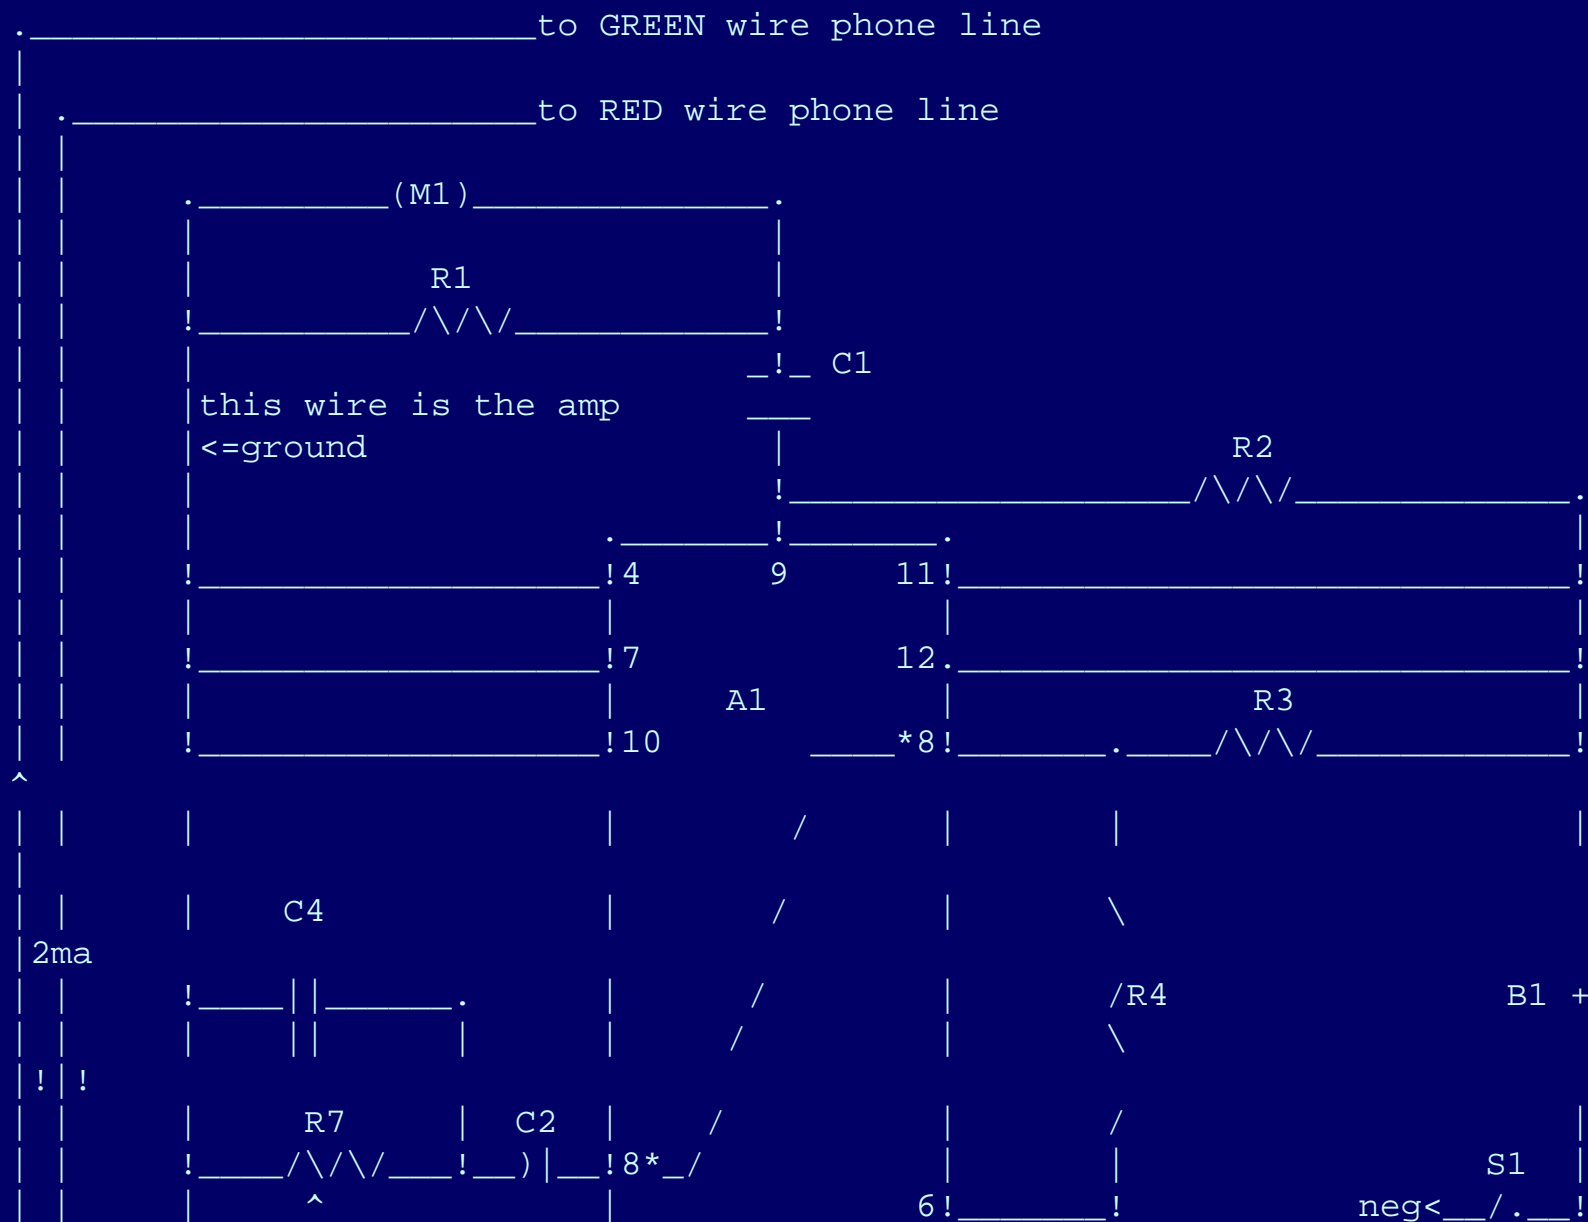

Symbols:

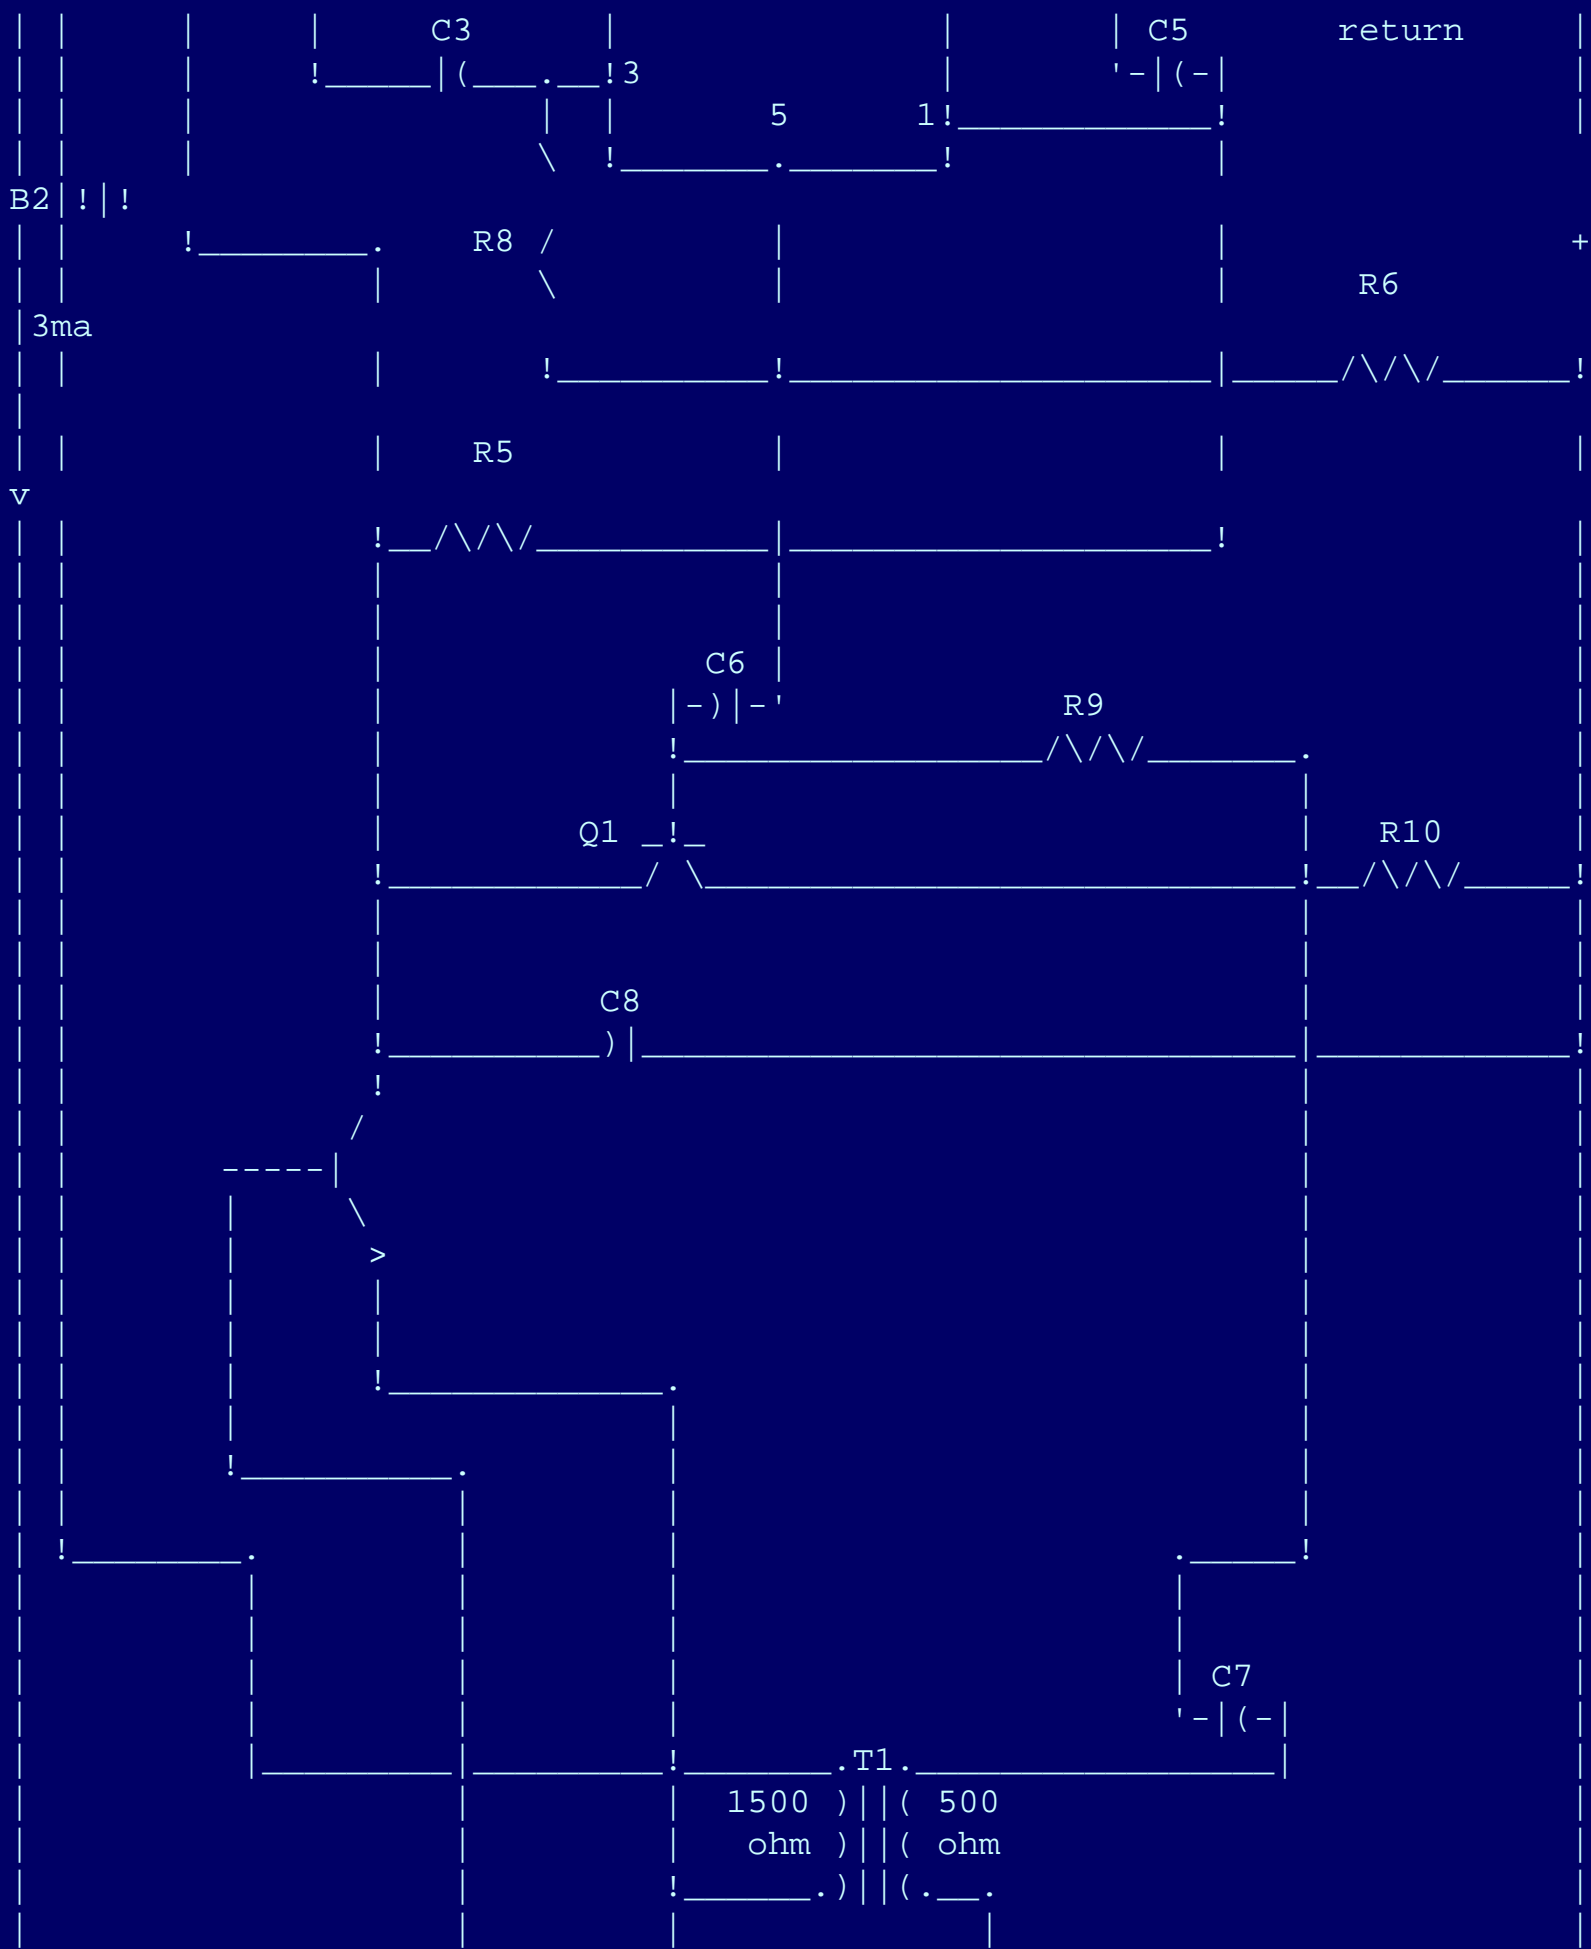

```

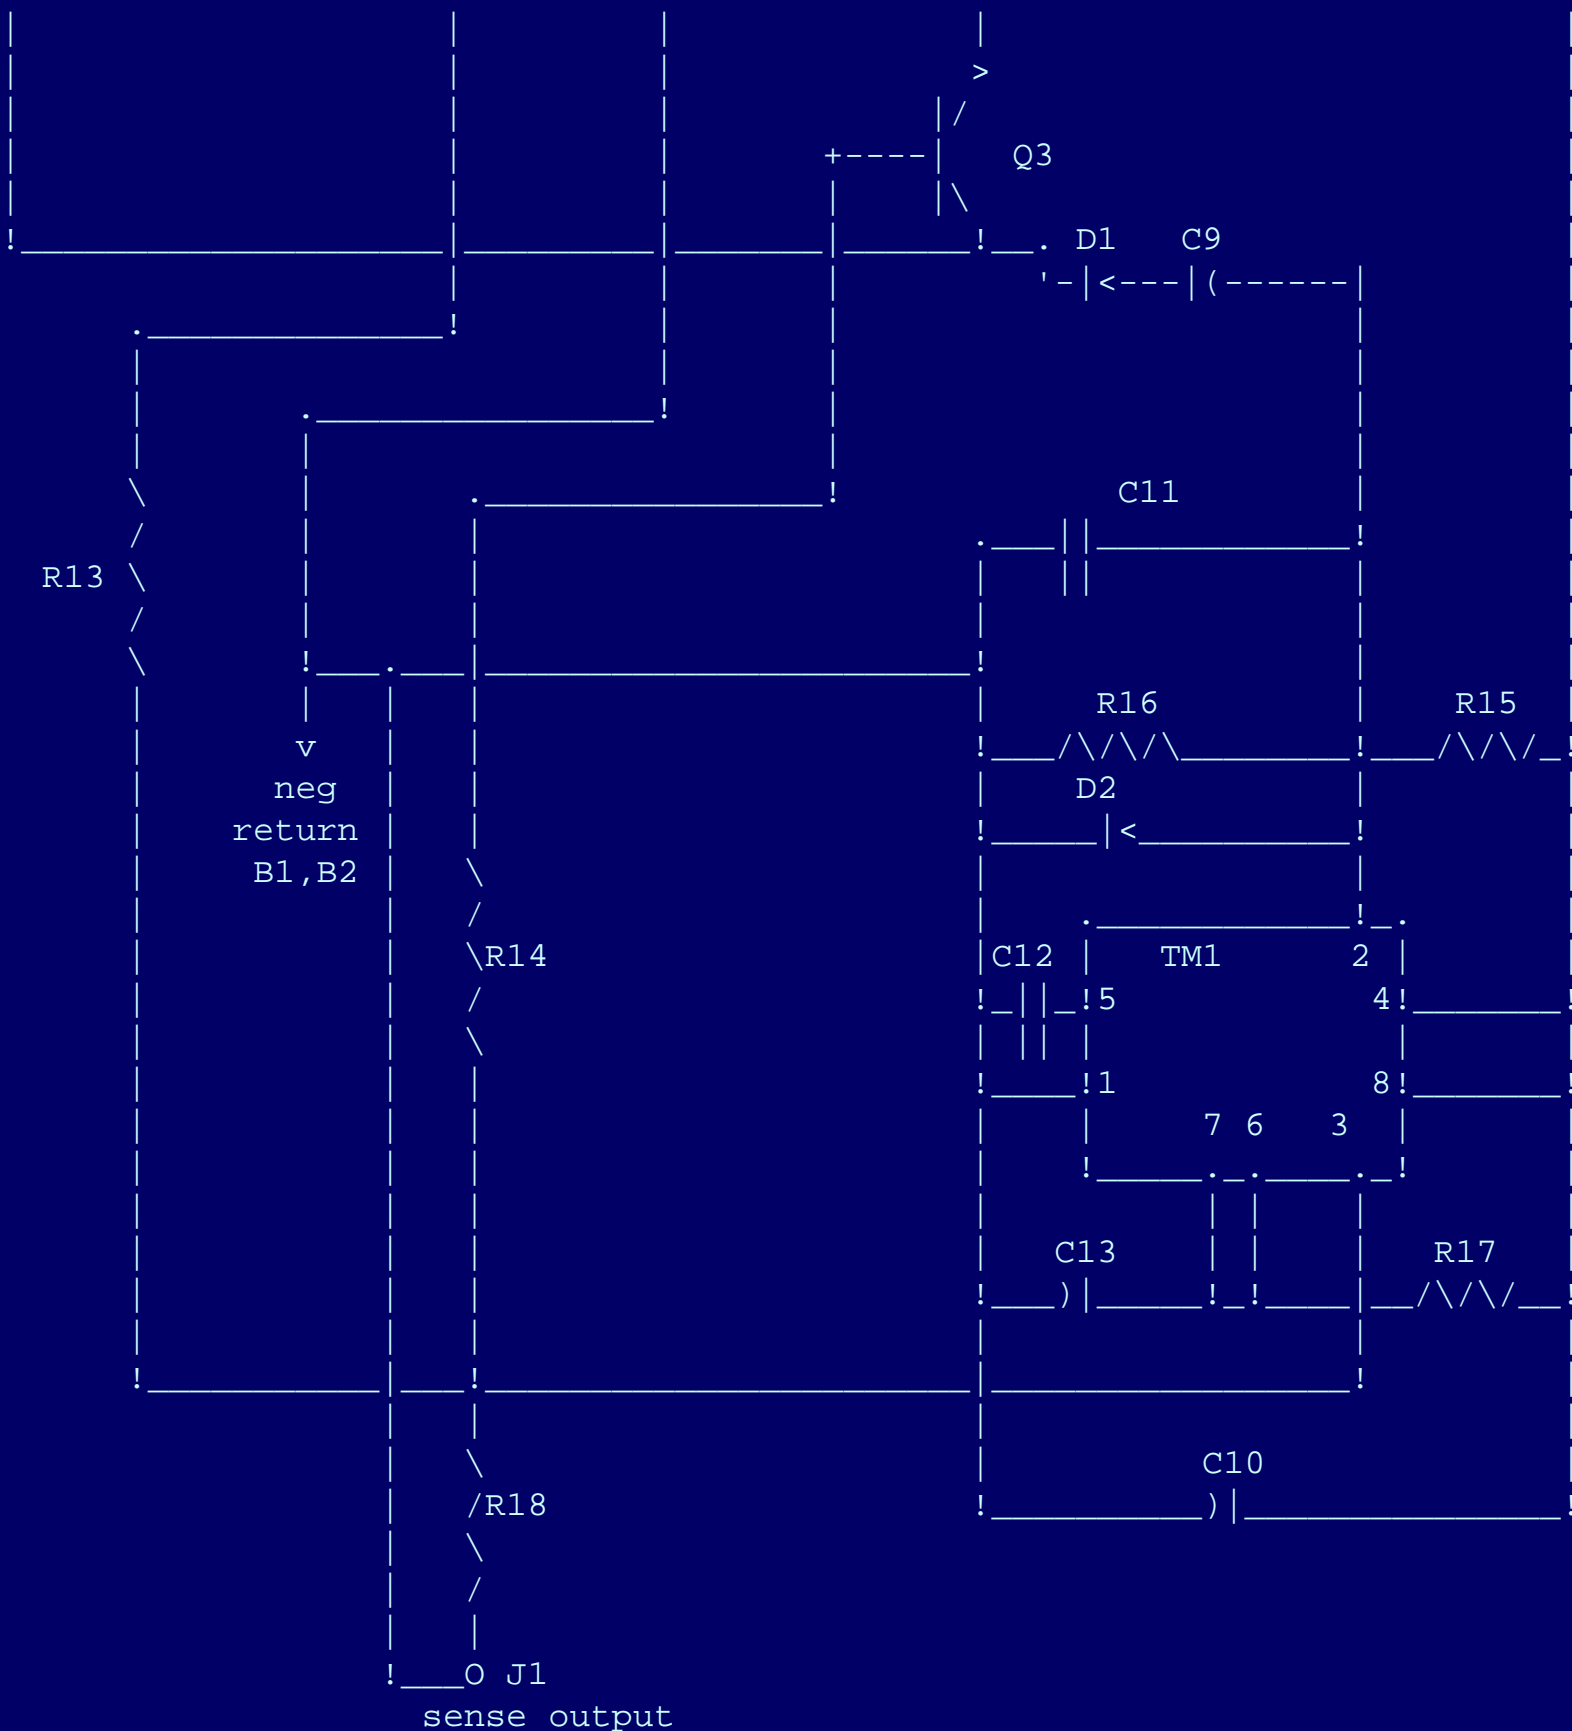

resistor: -/\//\/-          switch: _/ _
battery:  -|!|!-           capacitor (electrolytic): -|(-
capacitor (disc): -||-
transistor:(c) > (e)       Transformer: )||(-
        \_/                )||(-
        |(b)                -)||(-

chip:   ._____.
        !____! (chips are easy to recognize!)
    
```

Dots imply a connection between wires. NO DOT, NO CONNECTION. ie.: !_!_ means a connection while _|_ means no connection.

1/4-

Construction notes: Because the damned book just gave a picture instead of step by step instructions, and I'll try to give you as much help as possible. Note that all the parts that you will be using are clearly labeled in the

schematic. The perfboard, knobs, 'gator clips, etc are optional. I do strongly suggest that you do use the board!!! It will make wiring the components up much much easier than if you don't use it.

The knob you can use to control the pot (R7). R7 is used to tune the IT so that it sounds ok over the phone. (You get to determine what sounds good) By changing the value of C13, you can change the amount of time that the circuit will stay open (it cannot detect a hang up, so it works on a timer.) A value of 100 micro Farads will increase the time by about 10 times. The switch (S1) determines whether or not the unit is operational. Closed is on. Open is off. The negative return is the negative terminals of the battery!! The batteries will look something like this when hooked up:

To hook this up to the phone line, there are three ways, depending upon what type of jack you have. If it is the old type (non modular) then you can just open up the wall plate and connect the wires from the transmitter directly to the terminals of the phone.

If you have a modular jack with four prongs, attach the red to the negative prong (don't ask me which is which! I don't have that type of jack... I've only seen them in stores), and the green to the positive prong, and plug in. Try not to shock yourself...

If you have the clip-in type jack, get double male extension cord (one with a clip on each end), and chop off one clip. Get a sharp knife and splice off the grey protective material. You should see four wires, including one green and one red. You attach the appropriate wires from the IT to these two, and plug the other end into the wall.

Getting the IT to work: If you happen to have a problem, you should attempt to do the following (these are common sense rules!!) Make sure that you have the polarity of all the capacitors right (if you used polarized capacitors, that is). Make sure that all the soldering is done well and has not short circuited something accidently (like if you have a glob touching two wires which should not be touching.) Check for other short circuits. Check to see if the battery is in right. Check to make sure the switch is closed.

If it still doesn't work, drop me a line on one of the Maryland or Virginia BBSs and I'll try to help you out.

The sense output: Somehow or other, it is possible to hook something else up to this and activate it by phone (like an alarm, flashing lights, etc.)

As of this writing, I have not tried to make one of these, but I will. If you actually get it working, leave me a note somewhere.

I sure hope all you people appreciate this.

The Anarchist's Cookbook

LSD

LSD courtesy of the Jolly Roger

I think, of all the drugs on the black market today, LSD is the strangest. It is the most recent major drug to come to life in the psychedelic subculture. (Blah blah blah... let's get to the good stuff: How to make it in your kitchen!!)

- 1) Grind up 150 grams of Morning Glory seeds or baby Hawaiian wood rose seeds.
- 2) In 130 cc. of petroleum ether, soak the seeds for two days.
- 3) Filter the solution through a tight screen.
- 4) Throw away the liquid, and allow the seed mush to dry.
- 5) For two days allow the mush to soak in 110 cc. of wood alcohol.
- 6) Filter the solution again, saving the liquid and labeling it "1."
- 7) Resoak the mush in 110 cc. of wood alcohol for two days.
- 8) Filter and throw away the mush.
- 9) Add the liquid from the second soak to the solution labeled "1."
- 10) Pour the liquid into a cookie tray and allow it to evaporate.
- 11) When all of the liquid has evaporated, a yellow gum remains. This should be scraped up and put into capsules.

30 grams of Morning Glory seeds = 1 trip

15 Hawaiian wood rose seeds = 1 trip

Many companies, such as Northop-King have been coating their seeds with a toxic chemical, which is poison. Order seeds from a wholesaler, as it is much safer and cheaper. Hawaiian wood rose seeds can be ordered directly from:

Chong's Nursery and Flowers
 P.O. Box 2154
 Honolulu, Hawaii

LSD DOSAGES

The basic dosages of acid vary according to what kind of acid is available and what medium of ingestion is used. Chemically, the potency of LSD-25 is measured in micrograms, or mics. If you're chemically minded or making your own acid, then computing the number of micrograms is very important. Usually between 500 and 800 mics is plenty for an 8 hour trip, depending on the quality of the acid, of course. I

have heard of people taking as much as 1,500-2,000 mics. This is not only extremely dangerous, it is extremely wasteful.

LSD comes packaged in many different forms. The most common are listed below:

- 1) The brown spot, or a piece of paper with a dried drop of LSD on it, is always around. Usually one spot equals one trip.
- 2) Capsuled acid is very tricky, as the cap can be almost any color, size, or potency. Always ask what the acid is cut with, as a lot of acid is cut with either speed or strychnine. Also note dosage.
- 3) Small white or colored tablets have been known to contain acid, but, as with capsuled acid, it's impossible to tell potency, without asking.

The Anarchist's Cookbook

Bananas

Bananas courtesy of the Jolly Roger

Believe it or not, bananas do contain a small quantity of *_Musa Sapientum bananadine_*, which is a mild, short-lasting psychedelic. There are much easier ways of getting high, but the great advantage to this method is that bananas are legal.

- 1) Obtain 15 lbs. of ripe yellow bananas.
- 2) Peel all 15 lbs. and eat the fruit. Save the peels.
- 3) With a sharp knife, scrape off the insides of the peels and save the scraped material.
- 4) Put all of the scraped material in a large pot and add water. Boil for three to four hours until it has attained a solid paste consistency.
- 5) Spread this paste on cookie sheets, and dry in an oven for about 20 minutes to a half hour. This will result in a fine black powder. Makes about one pound of bananadine powder. Usually one will feel the effects of bananadine after smoking three or four cigarettes.

Table of Weights

| Pounds | Ounces | Grams | Kilos |

The Anarchist's Cookbook

Yummy Marihuana Recipes

Yummy Marihuana Recipes courtesy of the Jolly Roger

Acapulco Green

3 ripe avocados
1/2 cup chopped onions
2 teaspoons chili powder
3 tablespoons wine vinegar
1/2 cup chopped marahuana (grass)

Mix the vinegar, grass, and chili powder together and let the mixture stand for one hour. Then add avocados and onions and mash it all together. It can be served with tacos or as a dip.

Pot Soup

1 can condensed beef broth
3 tablespoons grass
3 tablespoons lemon juice
1/2 can water
3 tablespoons chopped watercress

Combine all ingredients in a saucepan and bring to a boil over medium heat. Place in a refrigerator for two to three hours, reheat, and serve.

Pork and Beans and Pot

1 large can (1 lb. 13 oz.) pork and beans
1/2 cup grass
4 slices bacon
1/2 cup light molasses
1/2 teaspoon hickory salt
3 pineapple rings

Mix together in a casserole, cover top with pineapple and
bacon,
bake at 350 degrees for about 45 minutes. Serves about six.

The Meat Ball

1 lb. hamburger
1/4 cup chopped onions
1 can cream of mushroom soup
1/4 cup bread crumbs
3 tablespoons grass
3 tablespoons India relish

Mix it all up and shape into meat balls. Brown in frying pan
and
drain. Place in a casserole with soup and 1/2 cup water, cover
and
cook over low heat for about 30 minutes. Feeds about four
people.

Spaghetti Sauce

1 can (6 oz.) tomato paste
2 tablespoons olive oil
1/2 cup chopped onions
1/2 cup chopped grass
1 pinch pepper
1 can (6 oz.) water
1/2 clove minced garlic
1 bay leaf
1 pinch thyme
1/2 teaspoon salt

Mix in large pot, cover and simmer with frequent stirring for two hours. Serve over spaghetti.

Pot Loaf

1 packet onion soup mix
1 (16 oz.) can whole peeled tomatoes
1/2 cup chopped grass
2 lbs. ground beef or chicken or turkey
1 egg
4 slices bread, crumbled

Mix all ingredients and shape into a loaf. Bake for one hour in 400-degree oven. Serves about six.

Chili Bean Pot

2 lbs. pinto beans
1 lb. bacon, cut into two-inch sections
2 cups red wine
4 tablespoons chili powder
1/2 clove garlic
1 cup chopped grass
1/2 cup mushrooms

Soak beans overnight in water. In a large pot pour boiling water over beans and simmer for at least an hour, adding more water to keep beans covered. Now add all other ingredients and continue to simmer for another three hours. Salt to taste. Serves about ten.

Bird Stuffing

5 cups rye bread crumbs
2 tablespoons poultry seasoning
1/2 cup each of raisins and almonds

1/2 cup celery
1/3 cup chopped onions
3 tablespoons melted butter
1/2 cup chopped grass
2 tablespoons red wine

Mix it all together, and then stuff it in.

Apple Pot

4 apples (cored)
1/2 cup brown sugar
1/4 cup water
4 cherries
1/3 cup chopped grass
2 tablespoons cinnamon

Powder the grass in a blender, then mix grass with sugar and water.

Stuff cores with this paste. Sprinkle apples with cinnamon, and top with a cherry. Bake for 25 minutes at 350 degrees.

Pot Brownies

1/2 cup flour
3 tablespoons shortening
2 tablespoons honey
1 egg (beaten)
1 tablespoon water
1/2 cup grass
pinch of salt
1/4 teaspoon baking powder
1/2 cup sugar
2 tablespoons corn syrup
1 square melted chocolate
1 teaspoon vanilla
1/2 cup chopped nuts

Sift flour, baking powder, and salt together. Mix shortening,

sugar, honey, syrup, and egg. Then blend in chocolate and other ingredients, and mix well. Spread in an 8-inch pan and bake for 20 minutes at 350 degrees.

Banana Bread

1/2 cup shortening
2 eggs
1 teaspoon lemon juice
3 teaspoons baking powder
1 cup sugar
1 cup mashed bananas
2 cups sifted flour
1/2 cup chopped grass
1/2 teaspoon salt
1 cup chopped nuts

Mix the shortening and sugar, beat eggs, and add to mixture. Separately mix bananas with lemon juice and add to the first mixture. Sift flour, salt, and baking powder together, then mix all ingredients together. Bake for 1 1/4 hours at 375 degrees.

Sesame Seed Cookies

3 oz. ground roast sesame seeds
3 tablespoons ground almonds
1/4 teaspoon nutmeg
1/4 cup honey
1/2 teaspoon ground ginger
1/4 teaspoon cinnamon
1/4 oz. grass

Toast the grass until slightly brown and then crush it in a mortar. Mix crushed grass with all other ingredients, in a skillet. Place skillet over low flame and add 1 tablespoon of

salt

butter. Allow it to cook. When cool, roll mixture into
little
balls and dip them into the sesame seeds.

If you happen to be in the country at a place where pot is
being

grown, here's one of the greatest recipes you can try.

Pick a

medium-sized leaf off of the marihuana plant and dip it into a
cup

of drawn butter, add salt, and eat.

Peanuts

Peanuts by the Jolly Roger

Try this sometime when you are bored!

- 1) Take one pound of raw peanuts (not roasted!)
- 2) Shell them, saving the skins and discarding the shells.
- 3) Eat the nuts.
- 4) Grind up the skins and roll them into a cigarette, and smoke!

You'll have fun, believe me! -----Jolly Roger

Motor Vehicles |
| Potassium Chlorate | Medicine | Drug Stores |
| Sugar | Sweetening Foods | Food Store |

Glass bottle with stopper (roughly 1 quart size)

Small Bottle or jar with lid.

Rag or absorbant paper (paper towels, newspaper)

String or rubber bands

Procedure:

1) Sulphuric Acid **MUST** be concentrated. If battery acid or other dilute acid is used, concentrate it by boiling until dense white fumes are given off. Container used to boil should be of enamel-ware or oven glass.

CAUTION: Sulphuric Acid will burn skin and destroy clothing. If any is spilled, wash it away with a

large quantity of water. Fumes are also VERY dangerous and should not be inhaled.

- 2) Remove the acid from heat and allow to cool to room temperature.
- 3) Pour gasoline into the large (1 quart) bottle until it is approximately 1/3 full.
- 4) Add concentrated sulphuric acid to gasoline slowly until the bottle is filled to within 1" to 2" from top. Place the stopper on the bottle.
- 5) Wash the outside of the bottle thoroughly with clear water.

CAUTION: If this is not done, the fire bottle may be dangerous to handle during use!

- 6) Wrap a clean cloth or several sheets of absorbant paper around the outside of the bottle. Tie with string or fasten with rubber bands.
- 7) Dissolve 1/2 cup (100 grams) of potassium chlorate and 1/2 cup (100 grams) of sugar in one cup (250 cc) of boiling water.
- 8) Allow the solution to cool, pour into the small bottle and cap tightly. The cooled solution should be approx. 2/3 crystals and 1/3 liquid. If there is more than this, pour off excess before using.

CAUTION: Store this bottle seperately from the other bottle!

How To Use:

-
- 1) Shake the small bottle to mix contents and pour onto the cloth or paper around the large bottle. Bottle can be used wet or after solution is dried. However, when dry, the sugar-Potassium chlorate mixture is very sensitive to spark or flame and should be handled accordingly.
 - 2) Throw or launch the bottle. When the bottle breaks against a hard surface (target) the fuel will ignite.

Igniter from Book Matches

Igniter from Book Matches by the Jolly Roger

This is a hot igniter made from paper book matches for use with molotov cocktail and other incendiaries.

Material Required:

Paper book matches

Adhesive or friction tape

Procedure:

- 1) Remove the staple(s) from match book and separate matches from cover.
- 2) Fold and tape one row of matches (fold in thirds)
- 3) Shape the cover into a tube with striking surface on the inside and tape. Make sure the folder cover will fit tightly around the taped match heads. Leave cover open at opposite end for insertion of the matches.
- 4) Push the taped matches into the tube until the bottom ends are exposed about 3/4 in. (2 cm)
- 5) Flatten and fold the open end of the tube so that it laps over about 1 in. (2-1/2 cm); tape in place.

Use with a Molotov Cocktail:

- 1) Tape the "match end tab" of the igniter to the neck of the molotov cocktail.
- 2) Grasp the "cover and tab" and pull sharply or quickly to ignite.

General Use:

The book match igniter can be used by itself to ignite flammable liquids, fuse cords, and similar items requiring hot ignition.

CAUTION: Store matches and completed igniters in moistureproof containers such as rubber or plastic bags until ready for use. Damp or wet paper book matches will not ignite.

"Red or White Powder" Propellant

"Red or White Powder" Propellant by the Jolly Roger

"Red or White Powder" Propellant may be prepared in a simple, safe manner. The formulation described below will result in approximately 2 1/2 pounds of powder. This is a small arms propellant and should only be used in weapons with 1/2 in. diameter or less (but not pistols!).

Material Required:

Heat Source (Kitchen Stove or open fire)
2 gallon metal bucket
Measuring cup (8 ounces)
Wooden spoon or rubber spatula
Metal sheet or aluminum foil (at least 18 in. sq.)
Flat window screen (at least 1 foot square)
Potassium Nitrate (granulated) 2-1/3 cups
White sugar (granulated) 2 cups
Powdered ferric oxide (rust) 1/8 cup (if available)
Clear water, 1-1/2 cups

Procedure:

-
- 1) Place the sugar, potassium nitrate, and water in the bucket. Heat with a low flame, stirring occasionally until the sugar and potassium nitrate dissolve.
 - 2) If available, add the ferric oxide (rust) to the solution. Increase the flame under the mixture until it boils gently.

NOTE: The mixture will retain the rust coloration.

- 3) Stir and scrape the bucket sides occasionally until the mixture is reduced to one quarter of its original volume, then stir continuously.
- 4) As the water evaporates, the mixture will become thicker until it reaches the consistency of cooked breakfast cereal or homemade fudge. At this stage of thickness, remove the bucket from the heat source,

and spread the mass on the metal sheet.

- 5) While the material cools, score it with a spoon or spatula in crisscrossed furrows about 1 inch apart.
- 6) Allow the material to dry, preferably in the sun. As it dries, resore it accordingly (about every 20 minutes) to aid drying.
- 7) When the material has dried to a point where it is moist and soft but not sticky to the touch, place a small spoonful on the screen. Rub the material back and forth against the screen mesh with spoon or other flat object until the material is granulated into small worm-like particles.
- 8) After granulation, return the material to the sun to allow to dry completely.

The Anarchist's Cookbook

Pipe Hand Grenade

Pipe Hand Grenade by the Jolly Roger

Hand Grenades can be made from a piece of iron pipe. The filler can be of plastic or granular military explosive, improvised explosive, or propellant from shotgun or small arms munition.

Material Required:

Iron Pipe, threaded ends, 1-1/2" to 3" diameter, 3" to 8" long.
Two (2) iron pipe caps
Explosive or propellant
Nonelectric blasting cap (Commercial or military)
Fuse cord
Hand Drill
Pliers

Procedure:

1) Place blasting cap on one end of fuse cord and crimp with pliers.

NOTE: To find out how long the fuse cord should be, check the time it takes a known length to burn. If 12 inches burns in 30 seconds, a 6 inch cord will ignite the grenade in 15 seconds.

2) Screw pipe cap to one end of the pipe. Place fuse cord with blasting cap into the opposite end so that the blasting cap is near the center of the pipe.

NOTE: If plastic explosive is to be used, fill pipe BEFORE inserting blasting cap. Push a round stick into the center of the explosive to make a hole and then insert the blasting cap.

3) Pour explosive or propellant into pipe a little bit at a time. Tap the base of the pipe frequently to settle filler.

4) Drill a hole in the center of the unassembled pipe cap large enough for the fuse cord to pass through.

5) Wipe pipe threads to remove any filler material. Slide the drilled pipe cap over the fuse and screw

handtight onto the pipe.

Ready to go!

2.1 ACQUIRING CHEMICALS

* TECHNIQUES FOR PICKING LOCKS

The first section deals with getting chemicals legally. This section deals with "procuring" them. The best place to steal chemicals is a college. Many state schools have all of their chemicals out on the shelves in the labs, and more in their chemical stockrooms. Evening is the best time to enter lab buildings, as there are the least number of people in the buildings, and most of the labs will still be unlocked. One simply takes a bookbag, wears a dress shirt and jeans, and tries to resemble a college freshman. If anyone asks what such a person is doing, the thief can simply say that he is looking for the polymer chemistry lab, or some other chemistry-related department other than the one they are in. One can usually find out where the various labs and departments in a building are by calling the university. There are, of course other techniques for getting into labs after hours, such as placing a piece of cardboard in the latch of an unused door, such as a back exit. Then, all one needs to do is come back at a later hour. Also, before this is done, terrorists check for security systems. If one just walks into a lab, even if there is someone there, and walks out the back exit, and slip the cardboard in the latch before the door closes, the person in the lab will never know what happened. It is also a good idea to observe the building that one plans to rob at the time that one plans to rob it several days before the actual theft is done. This is advisable since the would-be thief should know when and if the campus security makes patrols through buildings. Of course, if none of these methods are successful, there is always section 2.11, but as a rule, college campus security is pretty poor, and nobody suspects another person in the building of doing anything wrong, even if they are there at an odd hour.

2.11 TECHNIQUES FOR PICKING LOCKS

See also the MIT guide to Lockpicking.

If it becomes necessary to pick a lock to enter a lab, the world's most effective lockpick is dynamite, followed by a sledgehammer. There are unfortunately, problems with noise and excess structural damage with these methods. The next best thing, however, is a set of army issue lockpicks.

These, unfortunately, are difficult to acquire. If the door to a lab is locked, but the deadbolt is not engaged, then there are other possibilities. The rule here is: if one can see the latch, one can open the door. There are several devices which facilitate freeing the latch from its hole in the wall. Dental tools, stiff wire (20 gauge), specially bent aluminum from cans, thin pocket- knives, and credit cards are the tools of the trade. The way that all these tools and devices are uses is similar: pull, push, or otherwise move the latch out of its hole in the wall, and pull the door open. This is done by sliding whatever tool that you are using behind the latch, and pulling the latch out from the wall. To make an aluminum-can lockpick, terrorists can use an aluminum can and carefully cut off the can top and bottom. Cut off the cans' ragged ends. Then, cut the open-ended cylinder so that it can be flattened out into a

single long rectangle. This should then be cut into inch wide strips. Fold the strips in 1/4 inch increments (1). One will have a long quadruple-thick 1/4 inch wide strip of aluminum. This should be folded into an L-shape, a J-shape, or a U-shape. This is done by folding. The pieces would look like this:

^ Fold along lines to make a single quadruple-thick piece of aluminum. This should then be folded to produce an L,J,or U shaped device that looks like this:

All of these devices should be used to hook the latch of a door and pull the latch out of its hole. The folds in the lockpicks will be between the door and the wall, and so the device will not unfold, if it is made properly.

notes:

ethyl alcohol is mixed with methyl alcohol when it is used as a solvent. Methyl alcohol is very poisonous. Solvent alcohol must be at least 95% ethyl alcohol if it is used to make mercury fulminate. Methyl alcohol may prevent mercury fulminate from forming.

Ammonia, when bought in stores comes in a variety of forms. The pine and cloudy ammonias should not be bought; only the clear ammonia should be used to make ammonium triiodide crystals.

Mercury thermometers are becoming a rarity, unfortunately. They may be hard to find in most stores. Mercury is also used in mercury switches, which are available at electronics stores. Mercury is a hazardous substance, and should be kept in the thermometer or mercury switch until used. It gives off mercury vapors which will cause brain damage if inhaled. For this reason, it is a good idea not to spill mercury, and to always use it outdoors. Also, do not get it in an open cut; rubber gloves will help prevent this.

Nitric acid is very difficult to find nowadays. It is usually stolen by bomb makers, or made by the process described in a later section. A desired concentration for making explosives about 70%.

The iodine sold in drug stores is usually not the pure crystalline form that is desired for producing ammonium triiodide crystals. To obtain the pure form, it must usually be acquired by a doctor's prescription, but this can be expensive. Once again, theft is the means that terrorists result to.

[Index of Terrorists Handbook](#)

2.3 PREPARATION OF CHEMICALS

- * NITRIC ACID
- * SULFURIC ACID
- * AMMONIUM NITRATE

2.31 NITRIC ACID

There are several ways to make this most essential of all acids for explosives. One method by which it could be made will be presented. Once again, be reminded that these methods **SHOULD NOT BE CARRIED OUT!!**

Materials:

- * sodium nitrate or potassium nitrate
- * distilled water
- * concentrated sulfuric acid

Equipment:

- * adjustable heat source
- * retort
- * ice bath
- * stirring rod
- * collecting flask with stopper

1. Pour 32 milliliters of concentrated sulfuric acid into the retort.
2. Carefully weigh out 58 grams of sodium nitrate, or 68 grams of potassium nitrate. and add this to the acid slowly. If it all does not dissolve, carefully stir the solution with a glass rod until it does.
3. Place the open end of the retort into the collecting flask, and place the collecting flask in the ice bath.
4. Begin heating the retort, using low heat. Continue heating until liquid begins to come out of the end of the retort. The liquid that forms is nitric acid. Heat until the precipitate in the bottom of the retort is almost dry, or until no more nitric acid is forming. **CAUTION:** If the acid is heated too strongly, the nitric acid will decompose as soon as it is formed. This can result in the production of highly flammable and toxic gasses that may explode. It is a good idea to set the above apparatus up, and then get away from it.

Potassium nitrate could also be obtained from store-bought black powder, simply by dissolving black powder in boiling water and filtering out the sulfur and charcoal. To obtain 68 g of potassium nitrate, it

would be necessary to dissolve about 90 g of black powder in about one litre of boiling water. Filter the dissolved solution through filter paper in a funnel into a jar until the liquid that pours through is clear. The charcoal and sulfur in black powder are insoluble in water, and so when the solution of water is allowed to evaporate, potassium nitrate will be left in the jar.

2.32 SULFURIC ACID

Sulfuric acid is far too difficult to make outside of a laboratory or industrial plant. However, it is readily available in an uncharged car battery. A person wishing to make sulfuric acid would simply remove the top of a car battery and pour the acid into a glass container. There would probably be pieces of lead from the battery in the acid which would have to be removed, either by boiling or filtration. The concentration of the sulfuric acid can also be increased by boiling it; very pure sulfuric acid pours slightly faster than clean motor oil.

2.33 AMMONIUM NITRATE

Ammonium nitrate is a very powerful but insensitive high-order explosive. It could be made very easily by pouring nitric acid into a large flask in an ice bath. Then, by simply pouring household ammonia into the flask and running away, ammonium nitrate would be formed. After the materials have stopped reacting, one would simply have to leave the solution in a warm place until all of the water and any unneutralized ammonia or acid have evaporated. There would be a fine powder formed, which would be ammonium nitrate. It must be kept in an airtight container, because of its tendency to pick up water from the air. The crystals formed in the above process would have to be heated VERY gently to drive off the remaining water.

[Index of Terrorists Handbook](#)

3.0 EXPLOSIVE RECIPES

3.01 EXPLOSIVE THEORY

Once again, persons reading this material **MUST NEVER ATTEMPT TO PRODUCE ANY OF THE EXPLOSIVES DESCRIBED HEREIN. IT IS ILLEGAL AND EXTREMELY DANGEROUS TO ATTEMPT TO DO SO. LOSS OF LIFE AND/OR LIMB COULD EASILY OCCUR AS A RESULT OF ATTEMPTING TO PRODUCE EXPLOSIVE MATERIALS.**

These recipes are theoretically correct, meaning that an individual could conceivably produce the materials described. The methods here are usually scaled-down industrial procedures.

3.01 EXPLOSIVE THEORY

An explosive is any material that, when ignited by heat or shock, undergoes rapid decomposition or oxidation. This process releases energy that is stored in the material in the form of heat and light, or by breaking down into gaseous compounds that occupy a much larger volume than the original piece of material. Because this expansion is very rapid, large volumes of air are displaced by the expanding gasses. This expansion occurs at a speed greater than the speed of sound, and so a sonic boom occurs. This explains the mechanics behind an explosion. Explosives occur in several forms: high-order explosives which detonate, low order explosives, which burn, and primers, which may do both.

High order explosives detonate. A detonation occurs only in a high order explosive. Detonations are usually incurred by a shockwave that passes through a block of the high explosive material. The shockwave breaks apart the molecular bonds between the atoms of the substance, at a rate approximately equal to the speed of sound traveling through that material. In a high explosive, the fuel and oxidizer are chemically bonded, and the shockwave breaks apart these bonds, and re-combines the two materials to produce mostly gasses. T.N.T., ammonium nitrate, and R.D.X. are examples of high order explosives.

Low order explosives do not detonate; they burn, or undergo oxidation. When heated, the fuel(s) and oxidizer(s) combine to produce heat, light, and gaseous products. Some low order materials burn at about the same speed under pressure as they do in the open, such as blackpowder. Others, such as gunpowder, which is correctly called nitrocellulose, burn much faster and hotter when they are in a confined space, such as the barrel of a firearm; they usually burn much slower than blackpowder when they are ignited in unpressurized conditions. Black powder, nitrocellulose, and flash powder are good examples of low order explosives.

Primers are peculiarities to the explosive field. Some of them, such as mercury fulminate, will function

as a low or high order explosive. They are usually more sensitive to friction, heat, or shock, than the high or low explosives. Most primers perform like a high order explosive, except that they are much more sensitive. Still others merely burn, but when they are confined, they burn at a great rate and with a large expansion of gasses and a shockwave. Primers are usually used in a small amount to initiate, or cause to decompose, a high order explosive, as in an artillery shell. But, they are also frequently used to ignite a low order explosive; the gunpowder in a bullet is ignited by the detonation of its primer.

[Index of Terrorists Handbook](#)

3.1 IMPACT EXPLOSIVES

- * AMMONIUM TRIIODIDE CRYSTALS
- * MERCURY FULMINATE
- * NITROGLYCERINE
- * PICRATES

Impact explosives are often used as primers. Of the ones discussed here, only mercury fulminate and nitroglycerine are real explosives; Ammonium triiodide crystals decompose upon impact, but they release little heat and no light. Impact explosives are always treated with the greatest care, and even the stupidest anarchist never stores them near any high or low explosives.

3.11 AMMONIUM TRIIODIDE CRYSTALS

Ammonium triiodide crystals are foul-smelling purple colored crystals that decompose under the slightest amount of heat, friction, or shock, if they are made with the purest ammonia (ammonium hydroxide) and iodine. Such crystals are said to detonate when a fly lands on them, or when an ant walks across them.

Household ammonia, however, has enough impurities, such as soaps and abrasive agents, so that the crystals will detonate when thrown, crushed, or heated. Upon detonation, a loud report is heard, and a cloud of purple iodine gas appears about the detonation site. Whatever the unfortunate surface that the crystal was detonated upon will usually be ruined, as some of the iodine in the crystal is thrown about in a solid form, and iodine is corrosive. It leaves nasty, ugly, permanent brownish-purple stains on whatever it contacts. Iodine gas is also bad news, since it can damage lungs, and it settles to the ground and stains things there also. Touching iodine leaves brown stains on the skin that last for about a week, unless they are immediately and vigorously washed off. While such a compound would have little use to a serious terrorist, a vandal could utilize them in damaging property. Or, a terrorist could throw several of them into a crowd as a distraction, an action which would possibly injure a few people, but frighten almost anyone, since a small crystal that not be seen when thrown produces a rather loud explosion. Ammonium triiodide crystals could be produced in the following manner:

Materials

- * iodine crystals
- * clear ammonia
- * (ammonium hydroxide,
- * two throw-away glass jars for the suicidal)

Equipment

- * funnel and filter paper
- * paper towels

1. Place about two teaspoons of iodine into one of the glass jars. The jars must both be throw away because they will never be clean again.
2. Add enough ammonia to completely cover the iodine.
3. Place the funnel into the other jar, and put the filter paper in the funnel. The technique for putting filter paper in a funnel is taught in every basic chemistry lab class: fold the circular paper in half, so that a semi-circle is formed. Then, fold it in half again to form a triangle with one curved side. Pull one thickness of paper out to form a cone, and place the cone into the funnel.
4. After allowing the iodine to soak in the ammonia for a while, pour the solution into the paper in the funnel through the filter paper.
5. While the solution is being filtered, put more ammonia into the first jar to wash any remaining crystals into the funnel as soon as it drains.
6. Collect all the purplish crystals without touching the brown filter paper, and place them on the paper towels to dry for about an hour. Make sure that they are not too close to any lights or other sources of heat, as they could well detonate. While they are still wet, divide the wet material into about eight chunks.
7. After they dry, gently place the crystals onto a one square inch piece of duct tape. Cover it with a similar piece, and gently press the duct tape together around the crystal, making sure not to press the crystal itself. Finally, cut away most of the excess duct tape with a pair of scissors, and store the crystals in a cool dry safe place. They have a shelf life of about a week, and they should be stored in individual containers that can be thrown away, since they have a tendency to slowly decompose, a process which gives off iodine vapors, which will stain whatever they settle on. One possible way to increase their shelf life is to store them in airtight containers. To use them, simply throw them against any surface or place them where they will be stepped on or crushed.

3.12 MERCURY FULMINATE

Mercury fulminate is perhaps one of the oldest known initiating compounds. It can be detonated by either heat or shock, which would make it of infinite value to a terrorist. Even the action of dropping a crystal of the fulminate causes it to explode. A person making this material would probably use the following procedure:

MATERIALS

- * mercury (5 g)
- * concentrated nitric acid (35 ml)
- * ethyl alcohol (30 ml)
- * distilled water

EQUIPMENT

- * glass stirring rod
- * 100 ml beaker (2)
- * adjustable heat source
- * blue litmus paper
- * funnel and filter paper

1. In one beaker, mix 5 g of mercury with 35 ml of concentrated nitric acid, using the glass rod.
2. Slowly heat the mixture until the mercury is dissolved, which is when the solution turns green and boils.
3. Place 30 ml of ethyl alcohol into the second beaker, and slowly and carefully add all of the contents of the first beaker to it. Red and/or brown fumes should appear. These fumes are toxic and flammable.
4. After thirty to forty minutes, the fumes should turn white, indicating that the reaction is near completion. After ten more minutes, add 30 ml of the distilled water to the solution.
5. Carefully filter out the crystals of mercury fulminate from the liquid solution. Dispose of the solution in a safe place, as it is corrosive and toxic.
6. Wash the crystals several times in distilled water to remove as much excess acid as possible. Test the crystals with the litmus paper until they are neutral. This will be when the litmus paper stays blue when it touches the wet crystals
7. Allow the crystals to dry, and store them in a safe place, far away from any explosive or flammable material.

This procedure can also be done by volume, if the available mercury cannot be weighed. Simply use 10 volumes of nitric acid and 10 volumes of ethanol to every one volume of mercury.

3.13 NITROGLYCERINE

Nitroglycerine is one of the most sensitive explosives, if it is not the most sensitive. Although it is possible to make it safely, it is difficult. Many a young anarchist has been killed or seriously injured while trying to make the stuff. When Nobel's factories make it, many people were killed by the all-to-frequent factory explosions. Usually, as soon as it is made, it is converted into a safer substance, such as dynamite. An idiot who attempts to make nitroglycerine would use the following procedure:

MATERIAL

- * distilled water
- * table salt
- * sodium bicarbonate
- * concentrated nitric acid (13 ml)
- * concentrated sulfuric acid (39 ml)
- * glycerine

EQUIPMENT

- * eye-dropper
- * 100 ml beaker
- * 200-300 ml beakers (2)
- * ice bath container (a plastic bucket serves well)
- * centigrade thermometer
- * blue litmus paper

1. Place 150 ml of distilled water into one of the 200-300 ml beakers.
2. In the other 200-300 ml beaker, place 150 ml of distilled water and about a spoonful of sodium bicarbonate, and stir them until the sodium bicarbonate dissolves. Do not put so much sodium bicarbonate in the water so that some remains undissolved.
3. Create an ice bath by half filling the ice bath container with ice, and adding table salt. This will cause the ice to melt, lowering the overall temperature.
4. Place the 100 ml beaker into the ice bath, and pour the 13 ml of concentrated nitric acid into the 100 ml beaker. Be sure that the beaker will not spill into the ice bath, and that the ice bath will not overflow into the beaker when more materials are added to it. Be sure to have a large enough ice bath container to add more ice. Bring the temperature of the acid down to about 20 degrees centigrade or less.
5. When the nitric acid is as cold as stated above, slowly and carefully add the 39 ml of concentrated sulfuric acid to the nitric acid. Mix the two acids together, and cool the mixed acids to 10 degrees centigrade. It is a good idea to start another ice bath to do this.
6. With the eyedropper, slowly put the glycerine into the mixed acids, one drop at a time. Hold the thermometer along the top of the mixture where the mixed acids and glycerine meet. **DO NOT ALLOW THE TEMPERATURE TO GET ABOVE 30 DEGREES CENTIGRADE; IF THE TEMPERATURE RISES ABOVE THIS TEMPERATURE, RUN LIKE HELL!!!** The glycerine will start to nitrate immediately, and the temperature will immediately begin to rise. Add glycerine until there is a thin layer of glycerine on top of the mixed acids. It is always safest to make any explosive in small quantities.
7. Stir the mixed acids and glycerine for the first ten minutes of nitration, adding ice and salt to the ice bath to keep the temperature of the solution in the 100 ml beaker well below 30 degrees centigrade. Usually, the nitroglycerine will form on the top of the mixed acid solution, and the concentrated sulfuric acid will absorb the water produced by the reaction.
8. When the reaction is over, and when the nitroglycerine is well below 30 degrees centigrade, slowly and carefully pour the solution of nitroglycerine and mixed acid into the distilled water in the beaker in step 1. The nitroglycerine should settle to the bottom of the beaker, and the water-acid solution on top can be poured off and disposed of. Drain as much of the acid-water solution as possible without disturbing the nitroglycerine.
9. Carefully remove the nitroglycerine with a clean eye-dropper, and place it into the beaker in step 2. The sodium bicarbonate solution will eliminate much of the acid, which will make the nitroglycerine more stable, and less likely to explode for no reason, which it can do. Test the nitroglycerine with the litmus paper until the litmus stays blue. Repeat this step if necessary, and use new sodium bicarbonate solutions as in step 2.

10. When the nitroglycerine is as acid-free as possible, store it in a clean container in a safe place. The best place to store nitroglycerine is far away from anything living, or from anything of any value. Nitroglycerine can explode for no apparent reason, even if it is stored in a secure cool place.

3.14 PICRATES

Although the procedure for the production of picric acid, or trinitrophenol has not yet been given, its salts are described first, since they are extremely sensitive, and detonate on impact. By mixing picric acid with metal hydroxides, such as sodium or potassium hydroxide, and evaporating the water, metal picrates can be formed. Simply obtain picric acid, or produce it, and mix it with a solution of (preferably) potassium hydroxide, of a mid range molarity. (about 6-9 M) This material, potassium picrate, is impact-sensitive, and can be used as an initiator for any type of high explosive.

[Index of Terrorists Handbook](#)

3.2 LOW-ORDER EXPLOSIVES

- * BLACK POWDER
- * NITROCELLULOSE
- * FUEL-OXODIZER MIXTURES
- * PERCHLORATES

There are many low-order explosives that can be purchased in gun stores and used in explosive devices. However, it is possible that a wise store owner would not sell these substances to a suspicious-looking individual. Such an individual would then be forced to resort to making his own low-order explosives.

3.21 BLACK POWDER

First made by the Chinese for use in fireworks, black powder was first used in weapons and explosives in the 12th century. It is very simple to make, but it is not very powerful or safe. Only about 50% of black powder is converted to hot gasses when it is burned; the other half is mostly very fine burned particles. Black powder has one major problem: it can be ignited by static electricity. This is very bad, and it means that the material must be made with wooden or clay tools. Anyway, a misguided individual could manufacture black powder at home with the following procedure:

MATERIALS

- * potassium nitrate (75 g) or
- * sodium nitrate (75 g)
- * sulfur (10 g)
- * charcoal (15 g)
- * distilled water

EQUIPMENT

- * clay grinding bowl and clay grinder (potassium) or
- * wooden salad bowl and wooden spoon (sodium)
- * plastic bags (3)
- * 300-500 ml beaker (1)
- * coffee pot or heat source

1. Place a small amount of the potassium or sodium nitrate in the grinding bowl and grind it to a very fine powder. Do this to all of the potassium or sodium nitrate, and store the ground powder in one of the plastic bags.
2. Do the same thing to the sulfur and charcoal, storing each chemical in a separate plastic bag.
3. Place all of the finely ground potassium or sodium nitrate in the beaker, and add just enough boiling water to the chemical to get it all wet.

4. Add the contents of the other plastic bags to the wet potassium or sodium nitrate, and mix them well for several minutes. Do this until there is no more visible sulfur or charcoal, or until the mixture is universally black.
5. On a warm sunny day, put the beaker outside in the direct sunlight. Sunlight is really the best way to dry black powder, since it is never too hot, but it is hot enough to evaporate the water.
6. Scrape the black powder out of the beaker, and store it in a safe container. Plastic is really the safest container, followed by paper. Never store black powder in a plastic bag, since plastic bags are prone to generate static electricity.

3.22 NITROCELLULOSE

Nitrocellulose is usually called "gunpowder" or "guncotton". It is more stable than black powder, and it produces a much greater volume of hot gas. It also burns much faster than black powder when it is in a confined space. Finally, nitrocellulose is fairly easy to make, as outlined by the following procedure:

MATERIALS

- * cotton (cellulose)
- * concentrated nitric acid
- * concentrated sulfuric acid
- * distilled water

EQUIPMENT

- * two (2) 200-300 ml beakers
- * funnel and filter paper
- * blue litmus paper

1. Pour 10 cc of concentrated sulfuric acid into the beaker. Add to this 10 cc of concentrated nitric acid.
2. Immediately add 0.5 gm of cotton, and allow it to soak for exactly 3 minutes.
3. Remove the nitrocotton, and transfer it to a beaker of distilled water to wash it in.
4. Allow the material to dry, and then re-wash it.
5. After the cotton is neutral when tested with litmus paper, it is ready to be dried and stored.

3.23 FUEL-OXODIZER MIXTURES

There are nearly an infinite number of fuel-oxodizer mixtures that can be produced by a misguided individual in his own home. Some are very effective and dangerous, while others are safer and less effective. A list of working fuel-oxodizer mixtures will be presented, but the exact measurements of each compound are debatable for maximum effectiveness. A rough estimate will be given of the percentages of each fuel and oxodizer:

oxodizer, % by weight fuel, % by weight speed # notes
 =====
 potassium chlorate 67% sulfur 33% 5 friction/impact
 sensitive; unstable

potassium chlorate 50% sugar 35% 5 fairly slow burning;
charcoal 15% unstable

potassium chlorate 50% sulfur 25% 8 extremely
magnesium or unstable!
aluminum dust 25%

potassium chlorate 67% magnesium or 8 unstable
aluminum dust 33%

sodium nitrate 65% magnesium dust 30% ? unpredictable
sulfur 5% burn rate

potassium permanganate 60% glycerine 40% 4 delay before
ignition depends
WARNING: IGNITES SPONTANEOUSLY WITH GLYCERINE!!! upon grain size

potassium permanganate 67% sulfur 33% 5 unstable

potassium permanganate 60% sulfur 20% 5 unstable
magnesium or
aluminum dust 20%

potassium permanganate 50% sugar 50% 3 ?

potassium nitrate 75% charcoal 15% 7 this is
sulfur 10% black powder!

potassium nitrate 60% powdered iron 1 burns very hot
or magnesium 40%

potassium chlorate 75% phosphorus 8 used to make strike-
sesquisulfide 25% anywhere matches

ammonium perchlorate 70% aluminum dust 30% 6 solid fuel for
and small amount of space shuttle
iron oxide

potassium perchlorate 67% magnesium or 10 flash powder
(sodium perchlorate) aluminum dust 33%

potassium perchlorate 60% magnesium or 8 alternate
(sodium perchlorate) aluminum dust 20% flash powder
sulfur 20%

barium nitrate 30% aluminum dust 30% 9 alternate
potassium perchlorate 30% flash powder

barium peroxide 90% magnesium dust 5% 10 alternate
aluminum dust 5% flash powder

potassium perchlorate 50% sulfur 25% 8 slightly
magnesium or unstable
aluminum dust 25%

potassium chlorate 67% red phosphorus 27% 7 very unstable
calcium carbonate 3% sulfur 3% impact sensitive

potassium permanganate 50% powdered sugar 25% 7 unstable;
aluminum or ignites if
magnesium dust 25% it gets wet!

potassium chlorate 75% charcoal dust 15% 6 unstable
sulfur 10%

=====

NOTE: Mixtures that uses substitutions of sodium perchlorate for potassium perchlorate become moisture-absorbent and less stable.

The higher the speed number, the faster the fuel-oxidizer mixture burns AFTER ignition. Also, as a rule, the finer the powder, the faster the rate of burning.

As one can easily see, there is a wide variety of fuel-oxidizer mixtures that can be made at home. By altering the amounts of fuel and oxidizer(s), different burn rates can be achieved, but this also can change the sensitivity of the mixture.

3.24 PERCHLORATES

As a rule, any oxidizable material that is treated with perchloric acid will become a low order explosive. Metals, however, such as potassium or sodium, become excellent bases for flash-type powders. Some materials that can be perchlorated are cotton, paper, and sawdust. To produce potassium or sodium perchlorate, simply acquire the hydroxide of that metal, e.g. sodium or potassium hydroxide. It is a good idea to test the material to be perchlorated with a very small amount of acid, since some of the materials tend to react explosively when contacted by the acid. Solutions of sodium or potassium hydroxide are ideal.

[Index of Terrorists Handbook](#)

3.3 HIGH-ORDER EXPLOSIVES

- * R.D.X.
- * AMMONIUM NITRATE
- * ANFOS
- * T.N.T.
- * POTASSIUM CHLORATE
- * DYNAMITE
- * NITROSTARCH EXPLOSIVES
- * PICRIC ACID
- * AMMONIUM PICRATE
- * NITROGEN TRICHLORIDE
- * LEAD AZIDE

High order explosives can be made in the home without too much difficulty. The main problem is acquiring the nitric acid to produce the high explosive. Most high explosives detonate because their molecular structure is made up of some fuel and usually three or more NO₂ (nitrogen dioxide) molecules. T.N.T., or Tri-Nitro-Toluene is an excellent example of such a material. When a shock wave passes through an molecule of T.N.T., the nitrogen dioxide bond is broken, and the oxygen combines with the fuel, all in a matter of microseconds. This accounts for the great power of nitrogen-based explosives. Remembering that these procedures are NEVER TO BE CARRIED OUT, several methods of manufacturing high-order explosives in the home are listed.

3.31 R.D.X.

R.D.X., also called cyclonite, or composition C-1 (when mixed with plasticisers) is one of the most valuable of all military explosives. This is because it has more than 150% of the power of T.N.T., and is much easier to detonate. It should not be used alone, since it can be set off by a not-too severe shock. It is less sensitive than mercury fulminate, or nitroglycerine, but it is still too sensitive to be used alone. R. D.X. can be made by the surprisingly simple method outlined hereafter. It is much easier to make in the home than all other high explosives, with the possible exception of ammonium nitrate.

MATERIALS

- * hexamine or methenamine fuel tablets (50 g)
- * concentrated nitric acid (550 ml)
- * distilled water
- * table salt
- * ice

* ammonium nitrate

EQUIPMENT

- * 500 ml beaker
- * glass stirring rod
- * funnel and filter paper
- * ice bath container (plastic bucket)
- * centigrade thermometer
- * blue litmus paper

1. Place the beaker in the ice bath, (see section 3.13, steps 3-4) and carefully pour 550 ml of concentrated nitric acid into the beaker.
2. When the acid has cooled to below 20 degrees centigrade, add small amounts of the crushed fuel tablets to the beaker. The temperature will rise, and it must be kept below 30 degrees centigrade, or dire consequences could result. Stir the mixture.
3. Drop the temperature below zero degrees centigrade, either by adding more ice and salt to the old ice bath, or by creating a new ice bath. Or, ammonium nitrate could be added to the old ice bath, since it becomes cold when it is put in water. Continue stirring the mixture, keeping the temperature below zero degrees centigrade for at least twenty minutes
4. Pour the mixture into a litre of crushed ice. Shake and stir the mixture, and allow it to melt. Once it has melted, filter out the crystals, and dispose of the corrosive liquid.
5. Place the crystals into one half a litre of boiling distilled water. Filter the crystals, and test them with the blue litmus paper. Repeat steps 4 and 5 until the litmus paper remains blue. This will make the crystals more stable and safe.
6. Store the crystals wet until ready for use. Allow them to dry completely using them. R.D.X. is not stable enough to use alone as an explosive.
7. Composition C-1 can be made by mixing 88.3% R.D.X. (by weight) with 11.1% mineral oil, and 0.6% lecithin. Knead these material together in a plastic bag. This is a good way to desensitize the explosive.
8. H.M.X. is a mixture of T.N.T. and R.D.X.; the ratio is 50/50, by weight. it is not as sensitive, and is almost as powerful as straight R.D.X.
9. By adding ammonium nitrate to the crystals of R.D.X. after step 5, it should be possible to desensitize the R.D.X. and increase its power, since ammonium nitrate is very insensitive and powerful. Sodium or potassium nitrate could also be added; a small quantity is sufficient to stabilize the R.D.X.
10. R.D.X. detonates at a rate of 8550 meters/second when it is compressed to a density of 1.55 g/cubic cm.

3.32 AMMONIUM NITRATE

Ammonium nitrate could be made by a terrorist according to the hap- hazard method in section 2.33, or it could be stolen from a construction site, since it is usually used in blasting, because it is very stable

and insensitive to shock and heat. A terrorist could also buy several Instant Cold-Paks from a drug store or medical supply store. The major disadvantage with ammonium nitrate, from a terrorist's point of view, would be detonating it. A rather powerful priming charge must be used, and usually with a booster charge. The diagram below will explain.

The primer explodes, detonating the T.N.T., which detonates, sending a tremendous shockwave through the ammonium nitrate, detonating it.

3.33 ANFOS

ANFO is an acronym for Ammonium Nitrate - Fuel Oil Solution. An ANFO solves the only other major problem with ammonium nitrate: its tendency to pick up water vapor from the air. This results in the explosive failing to detonate when such an attempt is made. This is rectified by mixing 94% (by weight) ammonium nitrate with 6% fuel oil, or kerosene. The kerosene keeps the ammonium nitrate from absorbing moisture from the air. An ANFO also requires a large shockwave to set it off.

3.34 T.N.T.

T.N.T., or Tri-Nitro-Toluene, is perhaps the second oldest known high explosive. Dynamite, of course, was the first. It is certainly the best known high explosive, since it has been popularized by early morning cartoons. It is the standard for comparing other explosives to, since it is the most well known. In industry, a T.N.T. is made by a three step nitration process that is designed to conserve the nitric and sulfuric acids which are used to make the product. A terrorist, however, would probably opt for the less economical one step method. The one step process is performed by treating toluene with very strong (fuming) sulfuric acid. Then, the sulfated toluene is treated with very strong (fuming) nitric acid in an ice bath. Cold water is added the solution, and it is filtered.

3.35 POTASSIUM CHLORATE

Potassium chlorate itself cannot be made in the home, but it can be obtained from labs. If potassium chlorate is mixed with a small amount of vaseline, or other petroleum jelly, and a shockwave is passed through it, the material will detonate with slightly more power than black powder. It must, however, be confined to detonate it in this manner. The procedure for making such an explosive is outlined below:

MATERIALS

- * potassium chlorate (9 parts, by volume)
- * petroleum jelly (vaseline) (1 part, by volume)

EQUIPMENT

- * zip-lock plastic bag
- * clay grinding bowl or wooden bowl and wooden spoon

1. Grind the potassium chlorate in the grinding bowl carefully and slowly, until the potassium chlorate is a very fine powder. The finer that it is powdered, the faster (better) it will detonate.
2. Place the powder into the plastic bag. Put the petroleum jelly into the plastic bag, getting as little on the sides of the bag as possible, i.e. put the vaseline on the potassium chlorate powder.
3. Close the bag, and kneed the materials together until none of the potassium chlorate is dry powder that does not stick to the main glob. If necessary, add a bit more petroleum jelly to the bag.
4. The material must me used within 24 hours, or the mixture will react to greatly reduce the effectiveness of the explosive. This reaction, however, is harmless, and releases no heat or dangerous products.

3.36 DYNAMITE

The name dynamite comes from the Greek word "dynamis", meaning power. Dynamite was invented by Nobel shortly after he made nitroglycerine. It was made because nitroglycerine was so dangerously sensitive to shock. A misguided individual with some sanity would, after making nitroglycerine (an insane act) would immediately convert it to dynamite. This can be done by adding various materials to the nitroglycerine, such as sawdust. The sawdust holds a large weight of nitroglycerine per volume. Other materials, such as ammonium nitrate could be added, and they would tend to desensitize the explosive, and increase the power. But even these nitroglycerine compounds are not really safe.

3.37 NITROSTARCH EXPLOSIVES

Nitrostarch explosives are simple to make, and are fairly powerful. All that need be done is treat various starches with a mixture of concentrated nitric and sulfuric acids. 10 ml of concentrated sulfuric acid is added to 10 ml of concentrated nitric acid. To this mixture is added 0.5 grams of starch. Cold water is added, and the apparently unchanged nitrostarch is filtered out. Nitrostarch explosives are of slightly lower power than T.N.T., but they are more readily detonated.

3.38 PICRIC ACID

Picric acid, also known as Tri-Nitro-Phenol, or T.N.P., is a military explosive that is most often used as a booster charge to set off another less sensitive explosive, such as T.N.T. It another explosive that is

fairly simple to make, assuming that one can acquire the concentrated sulfuric and nitric acids. Its procedure for manufacture is given in many college chemistry lab manuals, and is easy to follow. The main problem with picric acid is its tendency to form dangerously sensitive and unstable picrate salts, such as potassium picrate. For this reason, it is usually made into a safer form, such as ammonium picrate, also called explosive D. A social deviant would probably use a formula similar to the one presented here to make picric acid.

MATERIALS

- * phenol (9.5 g)
- * concentrated sulfuric acid (12.5 ml)
- * concentrated nitric acid (38 ml)
- * distilled water

EQUIPMENT

- * 500 ml flask
- * adjustable heat source
- * 1000 ml beaker or other container suitable for boiling in
- * filter paper and funnel
- * glass stirring rod

1. Place 9.5 grams of phenol into the 500 ml flask, and carefully add 12.5 ml of concentrated sulfuric acid and stir the mixture.
2. Put 400 ml of tap water into the 1000 ml beaker or boiling container and bring the water to a gentle boil.
3. After warming the 500 ml flask under hot tap water, place it in the boiling water, and continue to stir the mixture of phenol and acid for about thirty minutes. After thirty minutes, take the flask out, and allow it to cool for about five minutes.
4. Pour out the boiling water used above, and after allowing the container to cool, use it to create an ice bath, similar to the one used in section 3.13, steps 3-4. Place the 500 ml flask with the mixed acid and phenol in the ice bath. Add 38 ml of concentrated nitric acid in small amounts, stirring the mixture constantly. A vigorous but "harmless" reaction should occur. When the mixture stops reacting vigorously, take the flask out of the ice bath.
5. Warm the ice bath container, if it is glass, and then begin boiling more tap water. Place the flask containing the mixture in the boiling water, and heat it in the boiling water for 1.5 to 2 hours.
6. Add 100 ml of cold distilled water to the solution, and chill it in an ice bath until it is cold.
7. Filter out the yellowish-white picric acid crystals by pouring the solution through the filter paper in the funnel. Collect the liquid and dispose of it in a safe place, since it is corrosive.
8. Wash out the 500 ml flask with distilled water, and put the contents of the filter paper in the flask. Add 300 ml of water, and shake vigorously.
9. Re-filter the crystals, and allow them to dry.

10. Store the crystals in a safe place in a glass container, since they will react with metal containers to produce picrates that could explode spontaneously.

3.39 AMMONIUM PICRATE

Ammonium picrate, also called Explosive D, is another safety explosive. It requires a substantial shock to cause it to detonate, slightly less than that required to detonate ammonium nitrate. It is much safer than picric acid, since it has little tendency to form hazardous unstable salts when placed in metal containers. It is simple to make from picric acid and clear household ammonia. All that need be done is put the picric acid crystals into a glass container and dissolve them in a great quantity of hot water. Add clear household ammonia in excess, and allow the excess ammonia to evaporate. The powder remaining should be ammonium picrate.

3.40 NITROGEN TRICHLORIDE

Nitrogen trichloride, also known as chloride of azode, is an oily yellow liquid. It explodes violently when it is heated above 60 degrees celsius, or when it comes in contact with an open flame or spark. It is fairly simple to produce.

1. In a beaker, dissolve about 5 teaspoons of ammonium nitrate in water. Do not put so much ammonium nitrate into the solution that some of it remains undissolved in the bottom of the beaker.
2. Collect a quantity of chlorine gas in a second beaker by mixing hydrochloric acid with potassium permanganate in a large flask with a stopper and glass pipe.
3. Place the beaker containing the chlorine gas upside down on top of the beaker containing the ammonium nitrate solution, and tape the beakers together. Gently heat the bottom beaker. When this is done, oily yellow droplets will begin to form on the surface of the solution, and sink down to the bottom. At this time, remove the heat source immediately. Alternately, the chlorine can be bubbled through the ammonium nitrate solution, rather than collecting the gas in a beaker, but this requires timing and a stand to hold the beaker and test tube. The chlorine gas can also be mixed with anhydrous ammonia gas, by gently heating a flask filled with clear household ammonia. Place the glass tubes from the chlorine-generating flask and the tube from the ammonia-generating flask in another flask that contains water.
4. Collect the yellow droplets with an eyedropper, and use them immediately, since nitrogen trichloride decomposes in 24 hours.

3.41 LEAD AZIDE

Lead Azide is a material that is often used as a booster charge for other explosive, but it does well enough on its own as a fairly sensitive explosive. It does not detonate too easily by percussion or impact, but it is easily detonated by heat from an igniter wire, or a blasting cap. It is simple to produce, assuming that the necessary chemicals can be procured. By dissolving sodium azide and lead acetate in water in separate beakers, the two materials are put into an aqueous state. Mix the two beakers together, and apply a gentle heat. Add an excess of the lead acetate solution, until no reaction occurs, and the precipitate on the bottom of the beaker stops forming. Filter off the solution, and wash the precipitate in

hot water. The precipitate is lead azide, and it must be stored wet for safety. If lead acetate cannot be found, simply acquire acetic acid, and put lead metal in it. Black powder bullets work well for this purpose.

[Index of Terrorists Handbook](#)

3.5 OTHER "EXPLOSIVES"

- * THERMIT
- * MOLOTOV COCKTAILS
- * CHEMICAL FIRE BOTTLE
- * BOTTLED GAS EXPLOSIVES

The remaining section covers the other types of materials that can be used to destroy property by fire. Although none of the materials presented here are explosives, they still produce explosive-style results. section 3.23 because it does not react nearly as readily. It is a mixture of iron oxide and aluminum, both finely powdered. When it is ignited, the aluminum burns, and extracts the oxygen from the iron oxide. This is really two very exothermic reactions that produce a combined temperature of about 2200 degrees C. This is half the heat produced by an atomic weapon. It is difficult to ignite, however, but when it is ignited, it is one of the most effective firestarters around.

3.51 THERMIT

MATERIALS

- * powdered aluminum (10 g)
- * powdered iron oxide (10 g)

1. There is no special procedure or equipment required to make thermit. Simply mix the two powders together, and try to make the mixture as homogenous as possible. The ratio of iron oxide to aluminum is 50% / 50% by weight, and be made in greater or lesser amounts.
2. Ignition of thermit can be accomplished by adding a small amount of potassium chlorate to the thermit, and pouring a few drops of sulfuric acid on it. This method and others will be discussed later in section 4.33. The other method of igniting thermit is with a magnesium strip. Finally, by using common sparkler-type fireworks placed in the thermit, the mixture can be ignited.

3.52 MOLOTOV COCKTAILS

First used by Russians against German tanks, the Molotov cocktail is now exclusively used by terrorists worldwide. They are extremely simple to make, and can produce devastating results. By taking any highly flammable material, such as gasoline, diesel fuel, kerosene, ethyl or methyl alcohol, lighter fluid, turpentine, or any mixture of the above, and putting it into a large glass bottle, anyone can make an effective firebomb. After putting the flammable liquid in the bottle, simply put a piece of cloth that is soaked in the liquid in the top of the bottle so that it fits tightly. Then, wrap some of the cloth around the neck and tie it, but be sure to leave a few inches of loose cloth to light. Light the exposed cloth, and throw

the bottle. If the burning cloth does not go out, and if the bottle breaks on impact, the contents of the bottle will spatter over a large area near the site of impact, and burst into flame. Flammable mixtures such as kerosene and motor oil should be mixed with a more volatile and flammable liquid, such as gasoline, to insure ignition. A mixture such as tar or grease and gasoline will stick to the surface that it strikes, and burn hotter, and be more difficult to extinguish. A mixture such as this must be shaken well before it is lit and thrown

3.53 CHEMICAL FIRE BOTTLE

The chemical fire bottle is really an advanced molotov cocktail. Rather than using the burning cloth to ignite the flammable liquid, which has at best a fair chance of igniting the liquid, the chemical fire bottle utilizes the very hot and violent reaction between sulfuric acid and potassium chlorate. When the container breaks, the sulfuric acid in the mixture of gasoline sprays onto the paper soaked in potassium chlorate and sugar. The paper, when struck by the acid, instantly bursts into a white flame, igniting the gasoline. The chance of failure to ignite the gasoline is less than 2%, and can be reduced to 0%, if there is enough potassium chlorate and sugar to spare.

MATERIALS

- * potassium chlorate (2 teaspoons)
- * sugar (2 teaspoons)
- * concentrated sulfuric acid (4 oz.)
- * gasoline (8 oz.)

EQUIPMENT

- * glass bottle (12 oz.)
- * cap for bottle, with plastic inside
- * glass or plastic cup and spoon
- * cooking pan with raised edges
- * paper towels

1. Test the cap of the bottle with a few drops of sulfuric acid to make sure that the acid will not eat away the bottle cap during storage. If the acid eats through it in 24 hours, a new top must be found and tested, until a cap that the acid does not eat through is found. A glass top is excellent.
2. Carefully pour 8 oz. of gasoline into the glass bottle.
3. Carefully pour 4 oz. of concentrated sulfuric acid into the glass bottle. Wipe up any spills of acid on the sides of the bottle, and screw the cap on the bottle. Wash the bottle's outside with plenty of water. Set it aside to dry.
4. Put about two teaspoons of potassium chlorate and about two teaspoons of sugar into the glass or plastic cup. Add about 1/2 cup of boiling water, or enough to dissolve all of the potassium chlorate and sugar.

5. Place a sheet of paper towel in the cooking pan with raised edges. Fold the paper towel in half, and pour the solution of dissolved potassium chlorate and sugar on it until it is thoroughly wet. Allow the towel to dry.
6. When it is dry, put some glue on the outside of the glass bottle containing the gasoline and sulfuric acid mixture. Wrap the paper towel around the bottle, making sure that it sticks to it in all places. Store the bottle in a place where it will not be broken or tipped over.
7. When finished, the solution in the bottle should appear as two distinct liquids, a dark brownish-red solution on the bottom, and a clear solution on top. The two solutions will not mix. To use the chemical fire bottle, simply throw it at any hard surface.
8. NEVER OPEN THE BOTTLE, SINCE SOME SULFURIC ACID MIGHT BE ON THE CAP, WHICH COULD TRICKLE DOWN THE SIDE OF THE BOTTLE AND IGNITE THE POTASSIUM CHLORATE, CAUSING A FIRE AND/OR EXPLOSION.
9. To test the device, tear a small piece of the paper towel off the bottle, and put a few drops of sulfuric acid on it. The paper towel should immediately burst into a white flame.

3.54 BOTTLED GAS EXPLOSIVES

Bottled gas, such as butane for refilling lighters, propane for propane stoves or for bunsen burners, can be used to produce a powerful explosion. To make such a device, all that a simple-minded anarchist would have to do would be to take his container of bottled gas and place it above a can of Sterno or other gelatinized fuel, and light the fuel and run. Depending on the fuel used, and on the thickness of the fuel container, the liquid gas will boil and expand to the point of bursting the container in about five minutes. In theory, the gas would immediately be ignited by the burning gelatinized fuel, producing a large fireball and explosion. Unfortunately, the bursting of the bottled gas container often puts out the fuel, thus preventing the expanding gas from igniting. By using a metal bucket half filled with gasoline, however, the chances of ignition are better, since the gasoline is less likely to be extinguished. Placing the canister of bottled gas on a bed of burning charcoal soaked in gasoline would probably be the most effective way of securing ignition of the expanding gas, since although the bursting of the gas container may blow out the flame of the gasoline, the burning charcoal should immediately re-ignite it. Nitrous oxide, hydrogen, propane, acetylene, or any other flammable gas will do nicely.

4.0 USING EXPLOSIVES

Once a terrorist has made his explosives, the next logical step is to apply them. Explosives have a wide range of uses, from harassment, to vandalism, to murder. **NONE OF THE IDEAS PRESENTED HERE ARE EVER TO BE CARRIED OUT, EITHER IN PART OR IN FULL! DOING SO CAN LEAD TO PROSECUTION, FINES, AND IMPRISONMENT!**

The first step that a person that would use explosive would take would be to determine how big an explosive device would be needed to do whatever had to be done. Then, he would have to decide what to make his bomb with. He would also have to decide on how he wanted to detonate the device, and determine where the best placement for it would be. Then, it would be necessary to see if the device could be put where he wanted it without it being discovered or moved. Finally, he would actually have to sit down and build his explosive device. These are some of the topics covered in the next section.

[Index of Terrorists Handbook](#)

4.1 SAFETY

There is no such thing as a "safe" explosive device. One can only speak in terms of relative safety, or less unsafe.

Remember what the pyromaniac said after detonating his first creation: "Look ma', No hands!"

4.2 IGNITION DEVICES

- * FUSE IGNITION
- * IMPACT IGNITION
- * ELECTRICAL IGNITION
- * ELECTRO-MECHANICAL IGNITION
- + Mercury Switches
- + Tripwire Switches
- + Radio Control Detonators

There are many ways to ignite explosive devices. There is the classic "light the fuse, throw the bomb, and run" approach, and there are sensitive mercury switches, and many things in between. Generally, electrical detonation systems are safer than fuses, but there are times when fuses are more appropriate than electrical systems; it is difficult to carry an electrical detonation system into a stadium, for instance, without being caught. A device with a fuse or impact detonating fuse would be easier to hide.

4.21 FUSE IGNITION

The oldest form of explosive ignition, fuses are perhaps the favorite type of simple ignition system. By simply placing a piece of waterproof fuse in a device, one can have almost guaranteed ignition. Modern waterproof fuse is extremely reliable, burning at a rate of about 2.5 seconds to the inch. It is available as model rocketry fuse in most hobby shops, and costs about \$3.00 for a nine-foot length. Fuse is a popular ignition system for pipe bombers because of its simplicity. All that need be done is light it with a match or lighter. Of course, if the Army had fuses like this, then the grenade, which uses fuse ignition, would be very impracticable. If a grenade ignition system can be acquired, by all means, it is the most effective. But, since such things do not just float around, the next best thing is to prepare a fuse system which does not require the use of a match or lighter, but still retains its simplicity. One such method is described below:

MATERIALS

- * strike-on-cover type matches
- * electrical tape or duct tape
- * waterproof fuse

1. To determine the burn rate of a particular type of fuse, simply measure a 6 inch or longer piece of fuse and ignite it. With a stopwatch, press the start button the at the instant when the fuse lights, and stop the watch when the fuse reaches its end. Divide the time of burn by the length of fuse, and you have the burn rate of the fuse, in seconds per inch. This will be shown below:

Suppose an eight inch piece of fuse is burned, and its complete time of combustion is 20 seconds.

20 seconds

----- = 2.5 seconds per inch.

8 inches

If a delay of 10 seconds was desired with this fuse, divide the desired time by the number of seconds per inch:

10 seconds

----- = 4 inches

2.5 seconds / inch

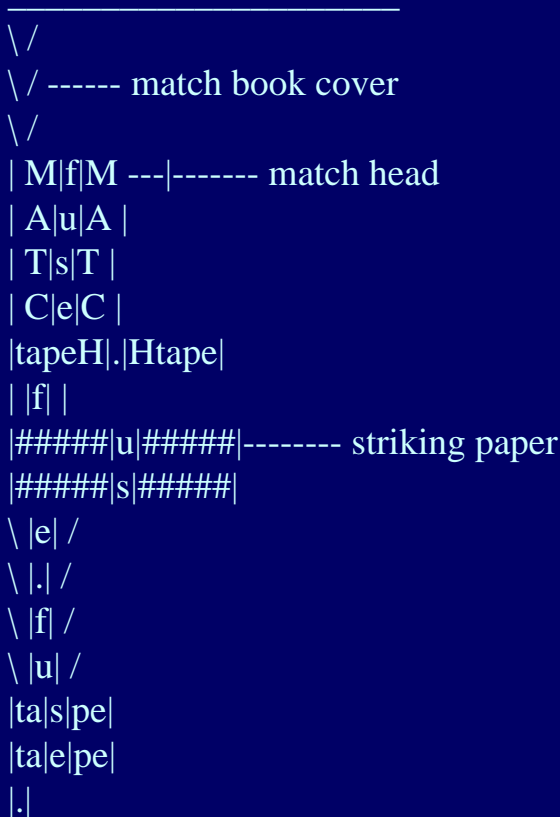

NOTE: THE LENGTH OF FUSE HERE MEANS LENGTH OF FUSE TO THE POWDER. SOME FUSE, AT LEAST AN INCH, SHOULD BE INSIDE THE DEVICE. ALWAYS ADD THIS EXTRA INCH, AND PUT THIS EXTRA INCH AN INCH INTO THE DEVICE!!!

2. After deciding how long a delay is desired before the explosive device is to go off, add about 1/2 an inch to the premeasured amount of fuse, and cut it off.

3. Carefully remove the cardboard matches from the paper match case. Do not pull off individual matches; keep all the matches attached to the cardboard base. Take one of the cardboard match sections, and leave the other one to make a second igniter.

4. Wrap the matches around the end of the fuse, with the heads of the matches touching the very end of the fuse. Tape them there securely, making sure not to put tape over the match heads. Make sure they are very secure by pulling on them at the base of the assembly. They should not be able to move.

5. Wrap the cover of the matches around the matches attached to the fuse, making sure that the striker paper is below the match heads and the striker faces the match heads. Tape the paper so that is fairly tight around the matches. Do not tape the cover of the striker to the fuse or to the matches. Leave enough of the match book to pull on for ignition.

|f|
|u|
|s|
|e|
|. |
|_ |

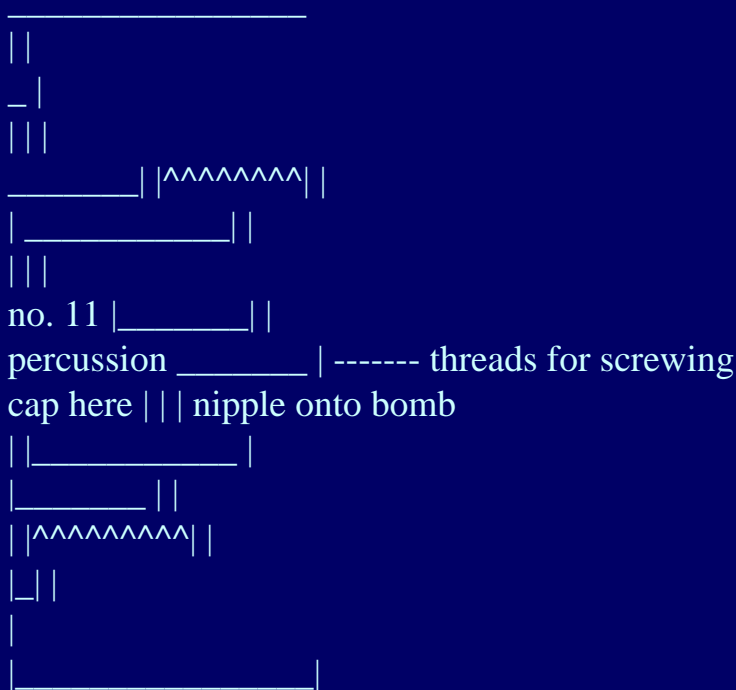

The match book is wrapped around the matches, and is taped to itself. The matches are taped to the fuse. The striker will rub against the matchheads when the match book is pulled.

6. When ready to use, simply pull on the match paper. It should pull the striking paper across the match heads with enough friction to light them. In turn, the burning matchheads will light the fuse, since it adjacent to the burning match heads.

4.22 IMPACT IGNITION

Impact ignition is an excellent method of ignition for spontaneous terrorist activities. The problem with an impact-detonating device is that it must be kept in a very safe container so that it will not explode while being transported to the place where it is to be used. This can be done by having a removable impact initiator.

The best and most reliable impact initiator is one that uses factory made initiators or primers. A no. 11 cap for black powder firearms is one such primer. They usually come in boxes of 100, and cost about \$2.50. To use such a cap, however, one needs a nipple that it will fit on. Black powder nipples are also available in gun stores. All that a person has to do is ask for a package of nipples and the caps that fit them. Nipples have a hole that goes all the way through them, and they have a threaded end, and an end to put the cap on. A cutaway of a nipple is shown below:

When making using this type of initiator, a hole must be drilled into whatever container is used to make the bomb out of. The nipple is then screwed into the hole so that it fits tightly. Then, the cap can be carried and placed on the bomb when it is to be thrown. The cap should be bent a small amount before it is placed on the nipple, to make sure that it stays in place. The only other problem involved with an impact detonating bomb is that it must strike a hard surface on the nipple to set it off. By attaching fins or a small parachute on the end of the bomb opposite the primer, the bomb, when thrown, should strike the ground on the primer, and explode. Of course, a bomb with mercury fulminate in each end will go off on impact regardless of which end it strikes on, but mercury fulminate is also likely to go off if the person carrying the bomb is bumped hard.

4.23 ELECTRICAL IGNITION

Electrical ignition systems for detonation are usually the safest and most reliable form of ignition. Electrical systems are ideal for demolition work, if one doesn't have to worry so much about being caught. With two spools of 500 ft of wire and a car battery, one can detonate explosives from a "safe", comfortable distance, and be sure that there is nobody around that could get hurt. With an electrical system, one can control exactly what time a device will explode, within fractions of a second. Detonation can be aborted in less than a second's warning, if a person suddenly walks by the detonation sight, or if a police car chooses to roll by at the time. The two best electrical igniters are military squibs and model rocketry igniters. Blasting caps for construction also work well. Model rocketry igniters are sold in packages of six, and cost about \$1.00 per pack. All that need be done to use them is connect it to two wires and run a current through them. Military squibs are difficult to get, but they are a little bit better, since they explode when a current is run through them, whereas rocketry igniters only burst into flame. Military squibs can be used to set off sensitive high explosives, such as R.D.X., or potassium chlorate mixed with petroleum jelly. Igniters can be used to set off black powder, mercury fulminate, or guncotton, which in turn, can set off a high order explosive.

4.24 ELECTRO-MECHANICAL IGNITION

Electro-mechanical ignition systems are systems that use some type of mechanical switch to set off an explosive charge electrically. This type of switch is typically used in booby traps or other devices in which the person who places the bomb does not wish to be anywhere near the device when it explodes. Several types of electro-mechanical detonators will be discussed.

4.241 Mercury Switches

Mercury switches are a switch that uses the fact that mercury metal conducts electricity, as do all metals, but mercury metal is a liquid at room temperatures. A typical mercury switch is a sealed glass tube with two electrodes and a bead of mercury metal. It is sealed because of mercury's nasty habit of giving off brain-damaging vapors. The diagram below may help to explain a mercury switch.

A / \ B

_____ wire + _____ / _____ \

\ (Hg) | /

\ _ (Hg) _ | _ /

|

|

wire - |

|

|

When the drop of mercury ("Hg" is mercury's atomic symbol) touches both contacts, current flows through the switch. If this particular switch was in its present position, A---B, current would be flowing, since the mercury can touch both contacts in the horizontal position.

If, however, it was in the | position, the drop of mercury would only touch the + contact on the A side. Current, then couldn't flow, since mercury does not reach both contacts when the switch is in the vertical position.

This type of switch is ideal to place by a door. If it were placed in the path of a swinging door in the vertical position, the motion of the door would knock the switch down, if it was held to the ground by a piece of tape. This would tilt the switch into the horizontal position, causing the mercury to touch both contacts, allowing current to flow through the mercury, and to the igniter or squib in an explosive device. Imagine opening a door and having it slammed in your face by an explosion.

4.242 Tripwire Switches

A tripwire is an element of the classic booby trap. By placing a nearly invisible line of string or fishing line in the probable path of a victim, and by putting some type of trap there also, nasty things can be caused to occur. If this mode of thought is applied to explosives, how would one use such a tripwire to detonate a bomb. The technique is simple. By wrapping the tips of a standard clothespin with aluminum foil, and placing something between them, and connecting wires to each aluminum foil contact, an electric tripwire can be made, If a piece of wood attached to the tripwire was placed between the contacts on the clothespin, the clothespin would serve as a switch. When the tripwire was pulled, the clothespin would snap together, allowing current to flow between the two pieces of aluminum foil, thereby completing a circuit, which would have the igniter or squib in it. Current would flow between the contacts to the igniter or squib, heat the igniter or squib, causing it to explode.

_____ _ foil _____ /

Insert strip of -----spring

wood with trip- _ foil _____

wire between foil / _____ \

contacts.

Make sure that the aluminum foil contacts do not touch the spring, since the spring also conducts electricity.

4.243 Radio Control Detonators

In the movies, every terrorist or criminal uses a radio controlled detonator to set off explosives. With a good radio detonator, one can be several miles away from the device, and still control exactly when it explodes, in much the same way as an electrical switch. The problem with radio detonators is that they are rather costly. However, there could possibly be a reason that a terrorist would wish to spend the amounts of money involved with a RC (radio control) system and use it as a detonator. If such an individual wanted to devise an RC detonator, all he would need to do is visit the local hobby store or toy store, and buy a radio controlled toy. Taking it back to his/her abode, all that he/she would have to do is detach the solenoid/motor that controls the motion of the front wheels of a RC car, or detach the solenoid/motor of the elevators/rudder of a RC plane, or the rudder of a RC boat, and re-connect the squib or rocket engine igniter to the contacts for the solenoid/motor. The device should be tested several times with squibs or igniters, and fully charged batteries should be in both the controller and the receiver (the part that used to move parts before the device became a detonator).

[Index of Terrorists Handbook](#)

4.3 DELAYS

- * FUSE DELAYS
- * TIMER DELAYS
- * CHEMICAL DELAYS

A delay is a device which causes time to pass from when a device is set up to the time that it explodes. A regular fuse is a delay, but it would cost quite a bit to have a 24 hour delay with a fuse. This section deals with the different types of delays that can be employed by a terrorist who wishes to be sure that his bomb will go off, but wants to be out of the country when it does.

4.31 FUSE DELAYS

It is extremely simple to delay explosive devices that employ fuses for ignition. Perhaps the simplest way to do so is with a cigarette. An average cigarette burns for about 8 minutes. The higher the "tar" and nicotine rating, the slower the cigarette burns. Low "tar" and nicotine cigarettes burn quicker than the higher "tar" and nicotine cigarettes, but they are also less likely to go out if left unattended, i.e. not smoked. Depending on the wind or draft in a given place, a high "tar" cigarette is better for delaying the ignition of a fuse, but there must be enough wind or draft to give the cigarette enough oxygen to burn. People who use cigarettes for the purpose of delaying fuses will often test the cigarettes that they plan to use in advance to make sure they stay lit and to see how long it will burn. Once a cigarettes burn rate is determined, it is a simple matter of carefully putting a hole all the way through a cigarette with a toothpick at the point desired, and pushing the fuse for a device in the hole formed.

|_| ----- light this end

A similar type of device can be make from powdered charcoal and a sheet of paper. Simply roll the sheet of paper into a thin tube, and fill it with powdered charcoal. Punch a hole in it at the desired location, and insert a fuse. Both ends must be glued closed, and one end of the delay must be doused with lighter fluid before it is lit. Or, a small charge of gunpowder mixed with powdered charcoal could conceivably used for igniting such a delay. A chain of charcoal briquettes can be used as a delay by merely lining up a few bricks of charcoal so that they touch each other, end on end, and lighting the first brick. Incense, which can be purchased at almost any novelty or party supply store, can also be used as a fairly reliable delay. By wrapping the fuse about the end of an incense stick, delays of up to 1/2 an hour are possible. Finally, it is possible to make a relatively slow-burning fuse in the home. By dissolving about one teaspoon of black powder in about 1/4 a cup of boiling water, and, while it is still hot, soaking in it a long piece of all cotton string, a slow-burning fuse can be made. After the soaked string dries, it must then be tied to the fuse of an explosive device. Sometimes, the end of the slow burning fuse that meets the normal fuse has a charge of black powder or gunpowder at the intersection point to insure ignition, since the slow-burning fuse does not burn at a very high temperature. A similar type of slow fuse can be made by taking the above mixture of boiling water and black powder and pouring it on a long piece of toilet paper. The wet toilet paper is then gently twisted up so that it resembles a firecracker fuse, and is allowed to dry.

4.32 TIMER DELAYS

Timer delays, or "time bombs" are usually employed by an individual who wishes to threaten a place with a bomb and demand money to reveal its location and means to disarm it. Such a device could be placed in any populated place if it were concealed properly. There are several ways to build a timer delay. By simply using a screw as one contact at the time that detonation is desired, and using the hour hand of a clock as the other contact, a simple timer can be made. The minute hand of a clock should be removed, unless a delay of less than an hour is desired.

_____ to igniter from igniter

This device is set to go off in eleven hours. When the hour hand of the clock reaches the contact near the numeral 5, it will complete the circuit, allowing current to flow through the igniter or squib.

The main disadvantage with this type of timer is that it can only be set for a maximum time of 12 hours. If an electronic timer is used, such as that in an electronic clock, then delays of up to 24 hours are possible. By removing the speaker from an electronic clock, and attaching the wires of a squib or igniter to them, a timer with a delay of up to 24 hours can be made. To utilize this type of timer, one must have a socket that the clock can be plugged into. All that one has to do is set the alarm time of the clock to the desired time, connect the leads, and go away. This could also be done with an electronic watch, if a larger battery were used, and the current to the speaker of the watch was stepped up via a transformer. This would be good, since such a timer could be extremely small. The timer in a VCR (Video Cassette Recorder) would be ideal. VCR's can usually be set for times of up to a week. The leads from the timer to the recording equipment would be the ones that an igniter or squib would be connected to. Also, one can buy timers from electronics stores that would be ideal. Finally, one could employ a digital watch, and use a relay, or electro-magnetic switch to fire the igniter, and the current of the watch would not have to be stepped up.

4.33 CHEMICAL DELAYS

Chemical delays are uncommon, but they can be extremely effective in some cases. If a glass container is filled with concentrated sulfuric acid, and capped with several thicknesses of aluminum foil, or a cap that it will eat through, then it can be used as a delay. Sulfuric acid will react with aluminum foil to produce aluminum sulfate and hydrogen gas, and so the container must be open to the air on one end so that the pressure of the hydrogen gas that is forming does not break the container. See diagram below.

||| |----- aluminum foil
| |_____| | (several thicknesses)
|_____|

The aluminum foil is placed over the bottom of the container and secured there with tape. When the acid eats through the aluminum foil, it can be used to ignite an explosive device in several ways.

1. Sulfuric acid is a good conductor of electricity. If the acid that eats through the foil is collected in a glass container placed underneath the foil, and two wires are placed in the glass container, a current will be able to flow through the acid when both of the wires are immersed in the acid.
2. Sulfuric acid reacts very violently with potassium chlorate. If the acid drips down into a container containing potassium chlorate, the potassium chlorate will burst into flame. This flame can be used to ignite a fuse, or the potassium chlorate can be the igniter for a thermit bomb, if some potassium chlorate is mixed in a 50/50 ratio with the thermit, and this mixture is used as an igniter for the rest of the thermit.
3. Sulfuric acid reacts with potassium permanganate in a similar way.

[Index of Terrorists Handbook](#)

4.4 EXPLOSIVE CONTAINERS

- * PAPER CONTAINERS
- * METAL CONTAINERS
- * GLASS CONTAINERS
- * PLASTIC CONTAINERS

This section will cover everything from making a simple firecracker to a complicated scheme for detonating an insensitive high explosive, both of which are methods that could be utilized by perpetrators of terror.

4.41 PAPER CONTAINERS

Paper was the first container ever used for explosives, since it was first used by the Chinese to make fireworks. Paper containers are usually very simple to make, and are certainly the cheapest. There are many possible uses for paper in containing explosives, and the two most obvious are in firecrackers and rocket engines. Simply by rolling up a long sheet of paper, and gluing it together, one can make a simple rocket engine. Perhaps a more interesting and dangerous use is in the firecracker. The firecracker shown here is one of Mexican design. It is called a "polumna", meaning "dove". The process of their manufacture is not unlike that of making a paper football. If one takes a sheet of paper about 16 inches in length by 1.5 inches wide, and fold one corner so that it looks like this:

and then fold it again so that it looks like this:

A pocket is formed. This pocket can be filled with black powder, pyrodex, flash powder, gunpowder, rocket engine powder, or any of the quick-burning fuel-oxodizer mixtures that occur in the form of a fine powder. A fuse is then inserted, and one continues the triangular folds, being careful not to spill out any of the explosive. When the polumna is finished, it should be taped together very tightly, since this

will increase the strength of the container, and produce a louder and more powerful explosion when it is lit. The finished polumna should look like a 1/4 inch - 1/3 inch thick triangle, like the one shown below:

4.42 METAL CONTAINERS

The classic pipe bomb is the best known example of a metal-contained explosive. Idiot anarchists take white tipped matches and cut off the match heads. They pound one end of a pipe closed with a hammer, pour in the white-tipped matches, and then pound the other end closed. This process often kills the fool, since when he pounds the pipe closed, he could very easily cause enough friction between the match heads to cause them to ignite and explode the unfinished bomb. By using pipe caps, the process is somewhat safer, and the less stupid anarchist would never use white tipped matches in a bomb. He would buy two pipe caps and threaded pipe (fig. 1). First, he would drill a hole in one pipe cap, and put a fuse in it so that it will not come out, and so powder will not escape during handling. The fuse would be at least 3/4 an inch long inside the bomb. He would then screw the cap with the fuse in it on tightly, possibly putting a drop of super glue on it to hold it tight. He would then pour his explosive powder in the bomb. To pack it tightly, he would take a large wad of tissue paper and, after filling the pipe to the very top, pack the powder down, by using the paper as a ramrod tip, and pushing it with a pencil or other wide ended object, until it would not move any further. Finally, he would screw the other pipe cap on, and glue it. The tissue paper would help prevent some of the powder from being caught in the threads of the pipe or pipe cap from being crushed and subject to friction, which might ignite the powder, causing an explosion during manufacture. An assembled bomb is shown in fig. 2.

fig 1. Threaded pipe and endcaps.

endcap pipe endcap
w/ hole

fig. 2 Assembled pipe bomb.

This is one possible design that a mad bomber would use. If, however, he did not have access to threaded pipe with endcaps, he could always use a piece of copper or aluminum pipe, since it is easily bent into a suitable position. A major problem with copper piping, however, is bending and folding it without tearing it; if too much force is used when folding and bending copper pipe, it will split along the fold. The safest method for making a pipe bomb out of copper or aluminum pipe is similar to the method with pipe and endcaps. First, one flattens one end of a copper or aluminum pipe carefully, making sure not to tear or rip the piping. Then, the flat end of the pipe should be folded over at least once, if this does not rip the pipe. A fuse hole should be drilled in the pipe near the now closed end, and the fuse should be inserted. Next, the bomb-builder would fill the bomb with a low order explosive, and pack it with a large wad of tissue paper. He would then flatten and fold the other end of the pipe with a pair of pliers. If he was not too dumb, he would do this slowly, since the process of folding and bending metal gives off heat, which could set off the explosive. A diagram is presented below:

fig. 1 pipe with one end flattened and fuse hole drilled (top view)

fig. 2 pipe with one end flattened and folded up (top view)

fig. 3 pipe with flattened and folded end (side view)

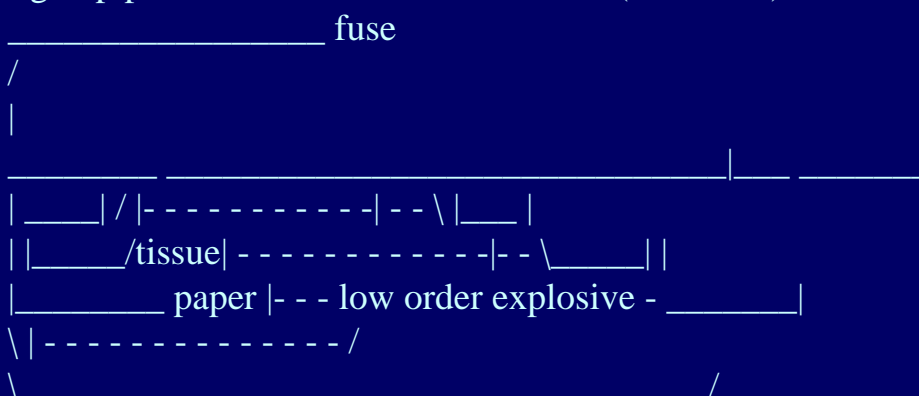

fig. 4 completed bomb, showing tissue paper packing and explosive (side view)

A CO2 cartridge from a B.B gun is another excellent container for a low-order explosive. It has one minor disadvantage: it is time consuming to fill. But this can be rectified by widening the opening of the cartridge with a pointed tool. Then, all that would have to be done is to fill the CO2 cartridge with any low-order explosive, or any of the fast burning fuel- oxidizer mixtures, and insert a fuse. These devices are commonly called "crater makers".

A CO2 cartridge also works well as a container for a thermit incendiary device, but it must be modified. The opening in the end must be widened, so that the ignition mixture, such as powdered magnesium, does not explode. The fuse will ignite the powdered magnesium, which, in turn, would ignite the thermit.

The previously mentioned designs for explosive devices are fine for low-order explosives, but are unsuitable for high-order explosives, since the latter requires a shockwave to be detonated. A design

employing a smaller low-order explosive device inside a larger device containing a high-order explosive would probably be used. It would look something like:

If the large high explosive container is small, such as a CO2 cartridge, then a segment of a hollow radio antenna can be made into a low-order pipe bomb, which can be fitted with a fuse, and inserted into the CO2 cartridge.

4.43 GLASS CONTAINERS

Glass containers can be suitable for low-order explosives, but there are problems with them. First, a glass container can be broken relatively easily compared to metal or plastic containers. Secondly, in the not-too-unlikely event of an "accident", the person making the device would probably be seriously injured, even if the device was small. A bomb made out of a sample perfume bottle-sized container exploded in the hands of one boy, and he still has pieces of glass in his hand. He is also missing the final segment of his ring finger, which was cut off by a sharp piece of flying glass...

Nonetheless, glass containers such as perfume bottles can be used by a demented individual, since such a device would not be detected by metal detectors in an airport or other public place. All that need be done is fill the container, and drill a hole in the plastic cap that the fuse fits tightly in, and screw the cap-fuse assembly on.

||
|_____
```

Large explosive devices made from glass containers are not practical, since glass is not an exceptionally strong container. Much of the explosive that is used to fill the container is wasted if the container is much larger than a 16 oz. soda bottle. Also, glass containers are usually unsuitable for high explosive devices, since a glass container would probably not withstand the explosion of the initiator; it would shatter before the high explosive was able to detonate.

4.44 PLASTIC CONTAINERS

Plastic containers are perhaps the best containers for explosives, since they can be any size or shape, and are not fragile like glass. Plastic piping can be bought at hardware or plumbing stores, and a device much like the ones used for metal containers can be made. The high-order version works well with plastic piping. If the entire device is made out of plastic, it is not detectable by metal detectors. Plastic containers can usually be shaped by heating the container, and bending it at the appropriate place. They

can be glued closed with epoxy or other cement for plastics. Epoxy alone can be used as an endcap, if a wad of tissue paper is placed in the piping. Epoxy with a drying agent works best in this type of device.

One end must be made first, and be allowed to dry completely before the device can be filled with powder and fused. Then, with another piece of tissue paper, pack the powder tightly, and cover it with plenty of epoxy. PVC pipe works well for this type of device, but it cannot be used if the pipe had an inside diameter greater than 3/4 of an inch. Other plastic putties can be used in this type of device, but epoxy with a drying agent works best.

4.5 ADVANCED USES FOR EXPLOSIVES

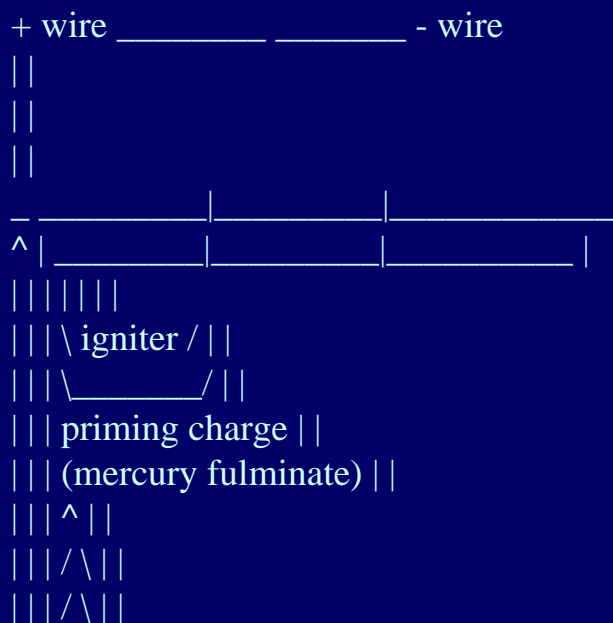

- * SHAPED CHARGES
- * TUBE EXPLOSIVES
- * ATOMIZED PARTICLE EXPLOSIONS
- * LIGHTBULB BOMBS
- * BOOK BOMBS
- * PHONE BOMBS

The techniques presented here are those that could be used by a person who had some degree of knowledge of the use of explosives. Some of this information comes from demolitions books, or from military handbooks. Advanced uses for explosives usually involved shaped charges, or utilize a minimum amount of explosive to do a maximum amount of damage. They almost always involve high-order explosives. **KEEP IN MIND THAT ALL EXPLOSIVES ARE DANGEROUS, AND SHOULD NEVER BE MADE OR USED!!**

More info on this topic can be found in The Big Book Of Mischief.

4.51 SHAPED CHARGES

A shaped charge is an explosive device that, upon detonation, directs the explosive force of detonation at a small target area. This process can be used to breach the strongest armor, since forces of literally millions of pounds of pressure per square inch can be generated. Shaped charges employ high-order explosives, and usually electric ignition systems. An example of a shaped charge is shown below.

```

```

When an assassin or terrorist wishes to use a tube bomb, he must wrap it around whatever thing he wishes to destroy, and epoxy the ends of the tube bomb together. After it dries, he/she can connect wires to the squib wires, and detonate the bomb, with any method of electric detonation.

4.53 ATOMIZED PARTICLE EXPLOSIONS

If a highly flammable substance is atomized, or, divided into very small particles, and large amounts of it is burned in a confined area, an explosion similar to that occurring in the cylinder of an automobile is produced. The tiny droplets of gasoline burn in the air, and the hot gasses expand rapidly, pushing the cylinder up. Similarly, if a gallon of gasoline was atomized and ignited in a building, it is very possible that the expanding gassed would push the walls of the building down. This phenomenon is called an atomized particle explosion. If a person can effectively atomize a large amount of a highly flammable substance and ignite it, he could bring down a large building, bridge, or other structure. Atomizing a large amount of gasoline, for example, can be extremely difficult, unless one has the aid of a high explosive. If a gallon jug of gasoline was placed directly over a high explosive charge, and the charge was detonated, the gasoline would instantly be atomized and ignited. If this occurred in a building, for example, an atomized particle explosion would surely occur. Only a small amount of high explosive would be necessary to accomplish this feat, about 1/2 a pound of T.N.T. or 1/4 a pound of R.D.X. Also, instead of gasoline, powdered aluminum could be used. It is necessary that a high explosive be used to atomize a flammable material, since a low-order explosion does not occur quickly enough to atomize or ignite the flammable material.

4.54 LIGHTBULB BOMBS

An automatic reaction to walking into a dark room is to turn on the light. This can be fatal, if a lightbulb bomb has been placed in the overhead light socket. A lightbulb bomb is surprisingly easy to make. It also comes with its own initiator and electric ignition system. On some lightbulbs, the lightbulb glass can be removed from the metal base by heating the base of a lightbulb in a gas flame, such as that of a blowtorch or gas stove. This must be done carefully, since the inside of a lightbulb is a vacuum. When the glue gets hot enough, the glass bulb can be pulled off the metal base. On other bulbs, it is necessary to heat the glass directly with a blowtorch or oxy-acetylene torch. When the bulb is red hot, a hole must be carefully poked in the bulb, remembering the vacuum state inside the bulb. In either case, once the bulb and/or base has cooled down to room temperature or lower, the bulb can be filled with an explosive material, such as black powder. If the glass was removed from the metal base, it must be glued back on to the base with epoxy. If a hole was put in the bulb, a piece of duct tape is sufficient to hold the explosive in the in the bulb. Then, after making sure that the socket has no power by checking with a working lightbulb, all that need be done is to screw the lightbulb bomb into the socket. Such a device has been used by terrorists or assassins with much success, since nobody can search the room for a bomb without first turning on the light.

4.55 BOOK BOMBS

Concealing a bomb can be extremely difficult in a day and age where perpetrators of violence run wild. Bags and briefcases are often searched by authorities whenever one enters a place where an individual might intend to set off a bomb. One approach to disguising a bomb is to build what is called a book bomb; an explosive device that is entirely contained inside of a book. Usually, a relatively large book is required, and the book must be of the hardback variety to hide any protrusions of a bomb. Dictionaries, law books, large textbooks, and other such books work well. When an individual makes a bookbomb, he/she must choose a type of book that is appropriate for the place where the book bomb will be placed. The actual construction of a book bomb can be done by anyone who possesses an electric drill and a coping saw. First, all of the pages of the book must be glued together. By pouring an entire container of water-soluble glue into a large bucket, and filling the bucket with boiling water, a glue-water solution can be made that will hold all of the book's pages together tightly. After the glue-water solution has cooled to a bearable temperature, and the solution has been stirred well, the pages of the book must be immersed in the glue-water solution, and each page must be thoroughly soaked. It is extremely important that the covers of the book do not get stuck to the pages of the book while the pages are drying. Suspending the book by both covers and clamping the pages together in a vice works best. When the pages dry, after about three days to a week, a hole must be drilled into the now rigid pages, and they should drill out much like wood. Then, by inserting the coping saw blade through the pages and sawing out a rectangle from the middle of the book, the individual will be left with a shell of the book's pages. The pages, when drilled out, should look like this:

(book covers omitted)

This rectangle must be securely glued to the back cover of the book. After building his/her bomb, which usually is of the timer or radio controlled variety, the bomber places it inside the book. The bomb itself, and whatever timer or detonator is used, should be packed in foam to prevent it from rolling or shifting about. Finally, after the timer is set, or the radio control has been turned on, the front cover is glued closed, and the bomb is taken to its destination.

4.56 PHONE BOMBS

The phone bomb is an explosive device that has been used in the past to kill or injure a specific individual. The basic idea is simple: when the person answers the phone, the bomb explodes. If a small but powerful high explosive device with a squib was placed in the phone receiver, when the current flowed through the receiver, the squib would explode, detonating the high explosive in the person's hand. Nasty. All that has to be done is acquire a squib, and tape the receiver switch down. Unscrew the mouthpiece cover, and remove the speaker, and connect the squib's leads where it was. Place a high explosive putty, such as C-1 (see section 3.31) in the receiver, and screw the cover on, making sure that the squib is surrounded by the C-1. Hang the phone up, and leave the tape in place. When the individual to whom the phone belongs attempts to answer the phone, he will notice the tape, and remove it. This will allow current to flow through the squib. Note that the device will not explode by merely making a phone call; the owner of the phone must lift up the receiver, and remove the tape. It is highly probable that the phone will be by his/her ear when the device explodes...

[Index of Terrorists Handbook](#)

5.0 SPECIAL AMMUNITION FOR PROJECTILE WEAPONS

Explosive and/or poisoned ammunition is an important part of a social deviant's arsenal. Such ammunition gives the user a distinct advantage over individual who use normal ammunition, since a grazing hit is good enough to kill. Special ammunition can be made for many types of weapons, from crossbows to shotguns.

[Index of Terrorists Handbook](#)

5.1 SPECIAL AMMUNITION FOR PRIMITIVE WEAPONS

- * BOW AND CROSSBOW AMMUNITIONS
- * SPECIAL AMMUNITION FOR BLOWGUNS
- * SPECIAL AMMUNITION FOR WRISTROCKETS AND SLINGSHOTS

For the purposes of this publication, we will call any weapon primitive that does not employ burning gunpowder to propel a projectile forward. This means blowguns, bows and crossbows, and wistrockets.

5.11 BOW AND CROSSBOW AMMUNITION

Bows and crossbows both fire arrows or bolts as ammunition. It is extremely simple to poison an arrow or bolt, but it is a more difficult matter to produce explosive arrows or bolts. If, however, one can acquire aluminum piping that is the same diameter of an arrow or crossbow bolt, the entire segment of piping can be converted into an explosive device that detonates upon impact, or with a fuse. All that need be done is find an aluminum tube of the right length and diameter, and plug the back end with tissue paper and epoxy. Fill the tube with any type of low-order explosive or sensitive high- order explosive up to about 1/2 an inch from the top. Cut a slot in the piece of tubing, and carefully squeeze the top of the tube into a round point, making sure to leave a small hole. Place a no. 11 percussion cap over the hole, and secure it with super glue. Finally, wrap the end of the device with electrical or duct tape, and make fins out of tape. Or, fins can be bought at a sporting goods store, and glued to the shaft. The finished product should look like:

```

|i|
|v|
|e|
|*|
|*|
|*|
|*|
|*|
|*|
|*|
|*|
|_|
/|_|\
/|t|\
|p|
|_|
|e| ----- fins
|p|
|y|
|_|_|_|
|_|

```

tp: tissue paper

epy: epoxy

When the arrow or bolt strikes a hard surface, the percussion cap explodes, igniting or detonating the explosive.

5.12 SPECIAL AMMUNITION FOR BLOWGUNS

The blowgun is an interesting weapon which has several advantages. A blowgun can be extremely accurate, concealable, and deliver an explosive or poisoned projectile. The manufacture of an explosive dart or projectile is not difficult. Perhaps the most simple design for such involves the use of a pill capsule, such as the kind that are taken for headaches or allergies. Such a capsule could easily be opened, and the medicine removed. Next, the capsule would be re-filled with an impact-sensitive explosive. An additional high explosive charge could be placed behind the impact-sensitive explosive, if one of the larger capsules were used. Finally, the explosive capsule would be reglued back together, and a tassel or cotton would be glued to the end containing the high explosive, to insure that the impact-detonating explosive struck the target first. Such a device would probably be about 3/4 of an inch long, not including the tassel or cotton, and look something like this:

```

/mercury | \-----

```

(fulminate| R.D.X.)----- } tassels

_____|_____/-----

5.13 SPECIAL AMMUNITION FOR WRISTROCKETS AND SLINGSHOTS

A modern wristrocket is a formidable weapon. It can throw a shooter marble about 500 ft. with reasonable accuracy. Inside of 200 ft., it could well be lethal to a man or animal, if it struck in a vital area. Because of the relatively large sized projectile that can be used in a wristrocket, the wristrocket can be adapted to throw relatively powerful explosive projectiles. A small segment of aluminum pipe could be made into an impact-detonating device by filling it with an impact-sensitive explosive material. Also, such a pipe could be filled with a low-order explosive, and fitted with a fuse, which would be lit before the device was shot. One would have to make sure that the fuse was of sufficient length to insure that the device did not explode before it reached its intended target. Finally, .22 caliber caps, such as the kind that are used in .22 caliber blank guns, make excellent exploding ammunition for wristrockets, but they must be used at a relatively close range, because of their light weight.

[Index of Terrorists Handbook](#)

5.2 SPECIAL AMMUNITION FOR FIREARMS

* SPECIAL AMMUNITION FOR HANDGUNS

* SPECIAL AMMUNITION FOR SHOTGUNS

When special ammunition is used in combination with the power and rapidity of modern firearms, it becomes very easy to take on a small army with a single weapon. It is possible to buy explosive ammunition, but that can be difficult to do. Such ammunition can also be manufactured in the home. There is, however, a risk involved with modifying any ammunition. If the ammunition is modified incorrectly, in such a way that it makes the bullet even the slightest bit wider, an explosion in the barrel of the weapon will occur. For this reason, **NOBODY SHOULD EVER ATTEMPT TO MANUFACTURE SUCH AMMUNITION.**

5.21 SPECIAL AMMUNITION FOR HANDGUNS

If an individual wished to produce explosive ammunition for his/her handgun, he/she could do it, provided that the person had an impact-sensitive explosive and a few simple tools. One would first purchase all lead bullets, and then make or acquire an impact-detonating explosive. By drilling a hole in a lead bullet with a drill, a space could be created for the placement of an explosive. After filling the hole with an explosive, it would be sealed in the bullet with a drop of hot wax from a candle. A diagram of a completed exploding bullet is shown below.

This hollow space design also works for putting poison in bullets.

5.22 SPECIAL AMMUNITION FOR SHOTGUNS

Because of their large bore and high power, it is possible to create some extremely powerful special ammunition for use in shotguns. If a shotgun shell is opened at the top, and the shot removed, the shell can be re-closed. Then, if one can find a very smooth, lightweight wooden dowel that is close to the bore width of the shotgun, a person can make several types of shotgun-launched weapons. Insert the dowel in the barrel of the shotgun with the shell without the shot in the firing chamber. Mark the dowel about six inches away from the end of the barrel, and remove it from the barrel. Next, decide what type of explosive or incendiary device is to be used. This device can be a chemical fire bottle (section 3.43), a

pipe bomb (section 4.42), or a thermit bomb (section 3.41 and section 4.42). After the device is made, it must be securely attached to the dowel. When this is done, place the dowel back in the shotgun. The bomb or incendiary device should be on the end of the dowel. Make sure that the device has a long enough fuse, light the fuse, and fire the shotgun. If the projectile is not too heavy, ranges of up to 300 ft are possible. A diagram of a shotgun projectile is shown below:

[Index of Terrorists Handbook](#)

5.3 SPECIAL AMMUNITION FOR COMPRESSED AIR/GAS WEAPONS

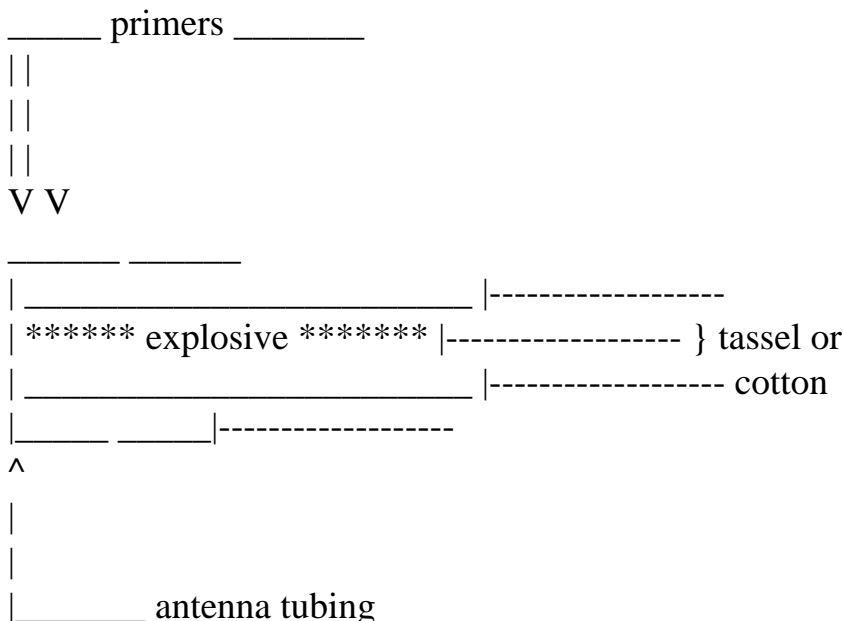

* SPECIAL AMMUNITION FOR B.B GUNS

* SPECIAL AMMUNITION FOR .22 CALIBER PELLET GUNS

This section deals with the manufacture of special ammunition for compressed air or compressed gas weapons, such as pump B.B guns, CO2 B.B guns, and .22 cal pellet guns. These weapons, although usually thought of as kids toys, can be made into rather dangerous weapons.

5.31 SPECIAL AMMUNITION FOR B.B GUNS

A B.B gun, for this manuscript, will be considered any type of rifle or pistol that uses compressed air or CO2 gas to fire a projectile with a caliber of .177, either B.B, or lead pellet. Such guns can have almost as high a muzzle velocity as a bullet-firing rifle. Because of the speed at which a .177 caliber projectile flies, an impact detonating projectile can easily be made that has a caliber of .177. Most ammunition for guns of greater than .22 caliber use primers to ignite the powder in the bullet. These primers can be bought at gun stores, since many people like to reload their own bullets. Such primers detonate when struck by the firing pin of a gun. They will also detonate if they are thrown at a hard surface at a great speed. Usually, they will also fit in the barrel of a .177 caliber gun. If they are inserted flat end first, they will detonate when the gun is fired at a hard surface. If such a primer is attached to a piece of thin metal tubing, such as that used in an antenna, the tube can be filled with an explosive, be sealed, and fired from a B.B gun. A diagram of such a projectile appears below:

The front primer is attached to the tubing with a drop of super glue. The tubing is then filled with an

explosive, and the rear primer is glued on. Finally, a tassel, or a small piece of cotton is glued to the rear primer, to insure that the projectile strikes on the front primer. The entire projectile should be about 3/4 of an inch long.

5.32 SPECIAL AMMUNITION FOR .22 CALIBER PELLET GUNS

A .22 caliber pellet gun usually is equivalent to a .22 cal rifle, at close ranges. Because of this, relatively large explosive projectiles can be adapted for use with .22 caliber air rifles. A design similar to that used in section 5.12 is suitable, since some capsules are about .22 caliber or smaller. Or, a design similar to that in section 5.31 could be used, only one would have to purchase black powder percussion caps, instead of ammunition primers, since there are percussion caps that are about .22 caliber. A #11 cap is too small, but anything larger will do nicely.

[Index of Terrorists Handbook](#)

6.0 ROCKETS AND CANNONS

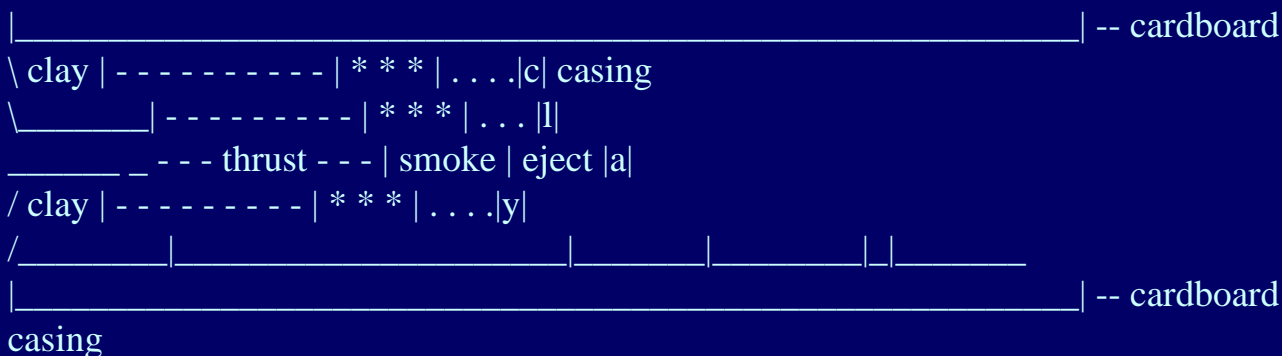

Rockets and cannon are generally thought of as heavy artillery. Perpetrators of violence do not usually employ such devices, because they are difficult or impossible to acquire. They are not, however, impossible to make. Any individual who can make or buy black powder or pyrodex can make such things. A terrorist with a cannon or large rocket is, indeed, something to fear.

[Index of Terrorists Handbook](#)

6.1 ROCKETS

- * BASIC ROCKET BOMB
- * LONG RANGE ROCKET BOMB
- * MULTIPLE WARHEAD ROCKET BOMBS

Rockets were first developed by the Chinese several hundred years before Christ. They were used for entertainment, in the form of fireworks. They were not usually used for military purposes because they were inaccurate, expensive, and unpredictable. In modern times, however, rockets are used constantly by the military, since they are cheap, reliable, and have no recoil. Perpetrators of violence, fortunately, cannot obtain military rockets, but they can make or buy rocket engines. Model rocketry is a popular hobby of the space age, and to launch a rocket, an engine is required. Estes, a subsidiary of Damon, is the leading manufacturer of model rockets and rocket engines. Their most powerful engine, the "D" engine, can develop almost 12 lbs. of thrust; enough to send a relatively large explosive charge a significant distance. Other companies, such as Centuri, produce even larger rocket engines, which develop up to 30 lbs. of thrust. These model rocket engines are quite reliable, and are designed to be fired electrically. Most model rocket engines have three basic sections. The diagram below will help explain them.

The clay nozzle is where the igniter is inserted. When the area labeled "thrust" is ignited, the "thrust" material, usually a large single grain of a propellant such as black powder or pyrodex, burns, forcing large volumes of hot, rapidly expanding gasses out the narrow nozzle, pushing the rocket forward. After the material has been consumed, the smoke section of the engine is ignited. It is usually a slow-burning material, similar to black powder that has had various compounds added to it to produce visible smoke, usually black, white, or yellow in color. This section exists so that the rocket will be seen when it reaches its maximum altitude, or apogee. When it is burned up, it ignites the ejection charge, labeled "eject". The ejection charge is finely powdered black powder. It burns very rapidly, exploding, in effect. The explosion of the ejection charge pushes out the parachute of the model rocket. It could also be used to ignite the fuse of a bomb...

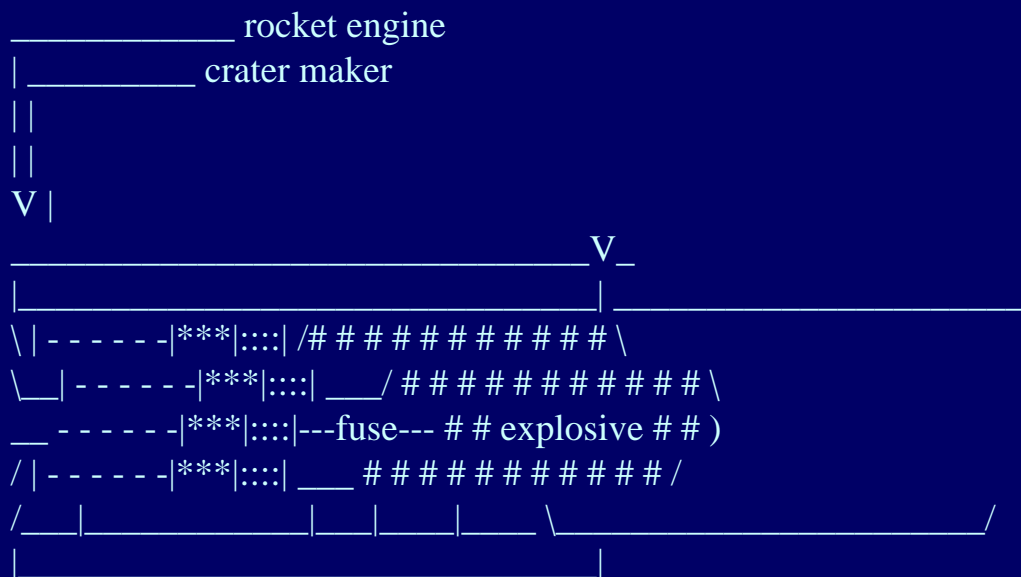

Rocket engines have their own peculiar labeling system. Typical engine labels are: 1/4A-2T, 1/2A-3T, A8-3, B6-4, C6-7, and D12-5. The letter is an indicator of the power of an engine. "B" engines are twice as powerful as "A" engines, and "C" engines are twice as powerful as "B" engines, and so on. The number following the letter is the approximate thrust of the engine, in pounds. the final number and letter is the time delay, from the time that the thrust period of engine burn ends until the ejection charge fires; "3T" indicates a 3 second delay.

NOTE:

an extremely effective rocket propellant can be made by mixing aluminum dust with ammonium perchlorate and a very small amount of iron oxide. The mixture is bound together by an epoxy.

6.11 BASIC ROCKET BOMB

A rocket bomb is simply what the name implies: a bomb that is delivered to its target by means of a rocket. Most people who would make such a device would use a model rocket engine to power the device. By cutting fins from balsa wood and gluing them to a large rocket engine, such as the Estes "C" engine, a basic rocket could be constructed. Then, by attaching a "crater maker", or CO2 cartridge bomb to the rocket, a bomb would be added. To insure that the fuse of the "crater maker" (see section 4.42) ignited, the clay over the ejection charge of the engine should be scraped off with a plastic tool. The fuse of the bomb should be touching the ejection charge, as shown below.

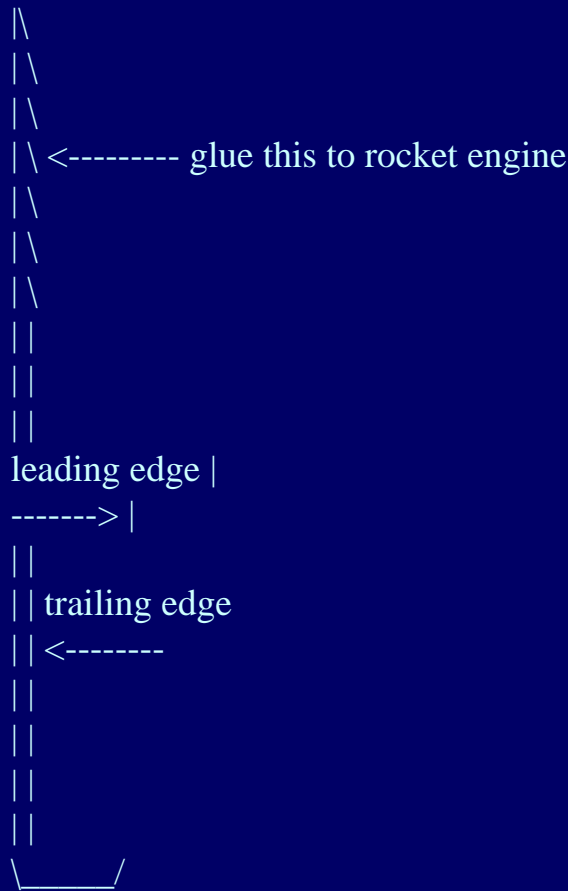

thrust> - - - - -
smoke> ***
ejection charge> :::

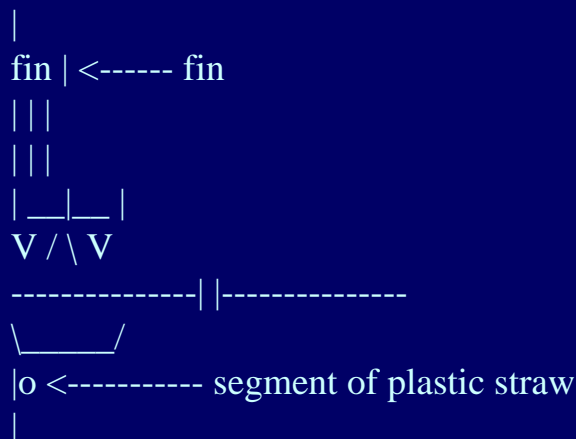

Duct tape is the best way to attach the crater maker to the rocket engine. Note in the diagram the absence

of the clay over the ejection charge Many different types of explosive payloads can be attached to the rocket, such as a high explosive, an incendiary device, or a chemical fire bottle.

Either four or three fins must be glued to the rocket engine to insure that the rocket flies straight. The fins should look like the following diagram:

The leading edge and trailing edge should be sanded with sandpaper so that they are rounded. This will help make the rocket fly straight. A two inch long section of a plastic straw can be attached to the rocket to launch it from. A clothes hanger can be cut and made into a launch rod. The segment of a plastic straw should be glued to the rocket engine adjacent to one of the fins of the rocket. A front view of a completed rocket bomb is shown below.

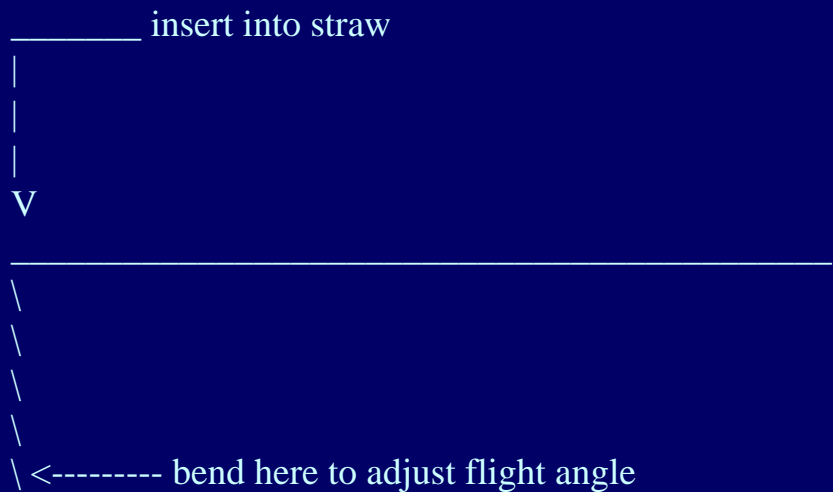

<----- fin

By cutting a coat hanger at the indicated arrows, and bending it, a launch rod can be made. After a fuse is inserted in the engine, the rocket is simply slid down the launch rod, which is put through the segment of plastic straw. The rocket should slide easily along a coathanger, such as the one illustated below:

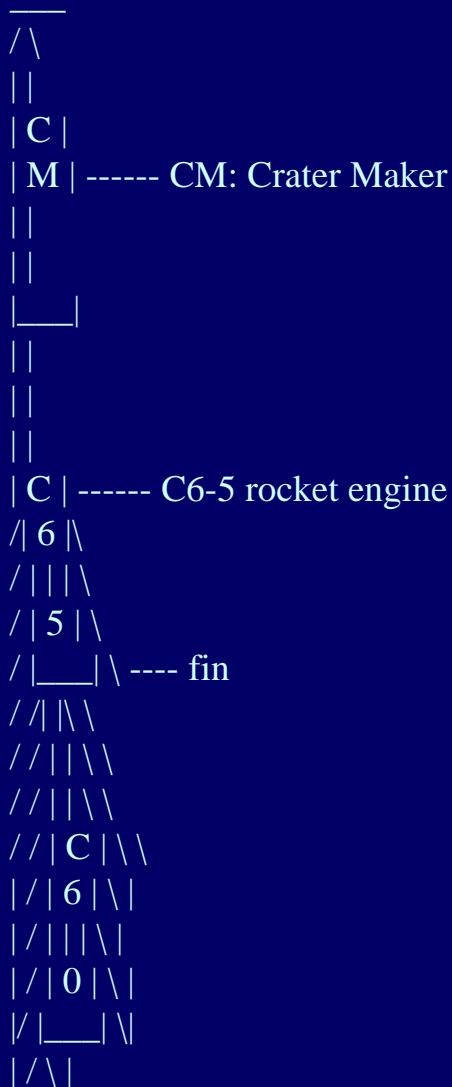

Bend wire to this shape:

<----- put this end in ground

6.12 LONG RANGE ROCKET BOMB

Long range rockets can be made by using multi-stage rockets. Model rocket engines with an "0" for a time delay are designed for use in multi- stage rockets. An engine such as the D12-0 is an excellent example of such an engine. Immediately after the thrust period is over, the ejection charge explodes. If another engine is placed directly against the back of an "0" engine, the explosion of the ejection charge will send hot gasses and burning particles into the nozzle of the engine above it, and ignite the thrust section. This will push the used "0" engine off of the rocket, causing an overall loss of weight. The main advantage of a multi-stage rocket is that it loses weight as travels, and it gains velocity. A multi-stage rocket must be designed somewhat differently than a single stage rocket, since, in order for a rocket to fly straight, its center of gravity must be ahead of its center of drag. This is accomplished by adding weight to the front of the rocket, or by moving the center of drag back by putting fins on the rocket that are well behind the rocket. A diagram of a multi-stage rocket appears below:

_____/ ^ _____/ ----- fin

C6-0 rocket engine

The fuse is put in the bottom engine.

Two, three, or even four stages can be added to a rocket bomb to give it a longer range. It is important, however, that for each additional stage, the fin area gets larger.

6.13 MULTIPLE WARHEAD ROCKET BOMBS

"M.R.V." is an acronym for Multiple Reentry Vehicle. The concept is simple: put more than one explosive warhead on a single missile. This can be done without too much difficulty by anyone who knows how to make crater-makers and can buy rocket engines. By attaching crater makers with long fuses to a rocket, it is possible that a single rocket could deliver several explosive devices to a target. Such a rocket might look like the diagram on the following page:

^

|____ fin

The crater makers are attached to the tube of rolled paper with tape. the paper tube is made by rolling and gluing a 4 inch by 8 inch piece of paper. The tube is glued to the engine, and is filled with gunpowder or black powder. Small holes are punched in it, and the fuses of the crater makers are inserted in these holes. A crater maker is glued to the open end of the tube, so that its fuse is inside the tube. A fuse is inserted in the engine, or in the bottom engine if the rocket bomb is multi stage, and the rocket is launched from the coathanger launcher, if a segment of a plastic straw has been attached to it.

[Index of Terrorists Handbook](#)

6.2 CANNON

* BASIC PIPE CANNON

* ROCKET FIRING CANNON

The cannon is a piece of artillery that has been in use since the 11th century. It is not unlike a musket, in that it is filled with powder, loaded, and fired. Cannons of this sort must also be cleaned after each shot, otherwise, the projectile may jam in the barrel when it is fired, causing the barrel to explode. A sociopath could build a cannon without too much trouble, if he/she had a little bit of money, and some patience.

6.21 BASIC PIPE CANNON

A simple cannon can be made from a thick pipe by almost anyone. The only difficult part is finding a pipe that is extremely smooth on its interior. This is absolutely necessary; otherwise, the projectile may jam. Copper or aluminum piping is usually smooth enough, but it must also be extremely thick to withstand the pressure developed by the expanding hot gasses in a cannon. If one uses a projectile such as a CO2 cartridge, since such a projectile can be made to explode, a pipe that is about 1.5 - 2 feet long is ideal. Such a pipe **MUST** have walls that are at least 1/3 to 1/2 an inch thick, and be very smooth on the interior. If possible, screw an endplug into the pipe. Otherwise, the pipe must be crimped and folded closed, without cracking or tearing the pipe. A small hole is drilled in the back of the pipe near the crimp or endplug. Then, all that need be done is fill the pipe with about two teaspoons of grade black powder or pyrodex, insert a fuse, pack it lightly by ramming a wad of tissue paper down the barrel, and drop in a CO2 cartridge. Brace the cannon securely against a strong structure, light the fuse, and run. If the person is lucky, he will not have overcharged the cannon, and he will not be hit by pieces of exploding barrel. Such a cannon would look like this:

An exploding projectile can be made for this type of cannon with a CO2 cartridge. It is relatively simple to do. Just make a crater maker, and construct it such that the fuse projects about an inch from the end of

the cartridge. Then, wrap the fuse with duct tape, covering it entirely, except for a small amount at the end. Put this in the pipe cannon without using a tissue paper packing wad. When the cannon is fired, it will ignite the end of the fuse, and shoot the CO2 cartridge. The explosive-filled cartridge will explode in about three seconds, if all goes well. Such a projectile would look like this:

6.22 ROCKET FIRING CANNON

A rocket firing cannon can be made exactly like a normal cannon; the only difference is the ammunition. A rocket fired from a cannon will fly further than a rocket alone, since the action of shooting it overcomes the initial inertia. A rocket that is launched when it is moving will go further than one that is launched when it is stationary. Such a rocket would resemble a normal rocket bomb, except it would have no fins. It would look like this:

the fuse on such a device would, obviously, be short, but it would not be ignited until the rocket's ejection charge exploded. Thus, the delay before the ejection charge, in effect, becomes the delay before the bomb explodes. Note that no fuse need be put in the rocket; the burning powder in the cannon will ignite it, and simultaneously push the rocket out of the cannon at a high velocity.

[Index of Terrorists Handbook](#)

7.0 PYROTECHNICA ERRATA

There are many other types of pyrotechnics that a perpetrator of violence might employ. Smoke bombs can be purchased in magic stores, and large military smoke bombs can be bought through ads in gun and military magazines. Also, fireworks can also be used as weapons of terror. A large aerial display rocket would cause many injuries if it were to be fired so that it landed on the ground near a crowd of people. Even the "harmless" pull-string fireworks, which consists of a sort of firecracker that explodes when the strings running through it are pulled, could be placed inside a large charge of a sensitive high explosive. Tear gas is another material that might well be useful to the sociopath, and such a material could be instantly disseminated over a large crowd by means of a rocket-bomb, with nasty effects.

[Index of Terrorists Handbook](#)

7.1 SMOKE BOMBS

One type of pyrotechnic device that might be employed by a terrorist in many way would be a smoke bomb. Such a device could conceal the getaway route, or cause a diversion, or simply provide cover. Such a device, were it to produce enough smoke that smelled bad enough, could force the evacuation of a building, for example. Smoke bombs are not difficult to make. Although the military smoke bombs employ powdered white phosphorus or titanium compounds, such materials are usually unavailable to even the most well-equipped terrorist. Instead, he/she would have to make the smoke bomb for themselves.

Most homemade smoke bombs usually employ some type of base powder, such as black powder or pyrodex, to support combustion. The base material will burn well, and provide heat to cause the other materials in the device to burn, but not completely or cleanly. Table sugar, mixed with sulfur and a base material, produces large amounts of smoke. Sawdust, especially if it has a small amount of oil in it, and a base powder works well also. Other excellent smoke ingredients are small pieces of rubber, finely ground plastics, and many chemical mixtures. The material in road flares can be mixed with sugar and sulfur and a base powder produces much smoke. Most of the fuel-oxidizer mixtures, if the ratio is not correct, produce much smoke when added to a base powder. The list of possibilities goes on and on. The trick to a successful smoke bomb also lies in the container used. A plastic cylinder works well, and contributes to the smoke produced. The hole in the smoke bomb where the fuse enters must be large enough to allow the material to burn without causing an explosion. This is another plus for plastic containers, since they will melt and burn when the smoke material ignites, producing an opening large enough to prevent an explosion.

[Index of Terrorists Handbook](#)

7.2 COLORED FLAMES

Colored flames can often be used as a signaling device for terrorists. by putting a ball of colored flame material in a rocket; the rocket, when the ejection charge fires, will send out a burning colored ball. The materials that produce the different colors of flames appear below.

COLOR MATERIAL USED IN

red strontium road flares,
salts red sparklers
(strontium nitrate)

green barium salts green sparklers
(barium nitrate)

yellow sodium salts gold sparklers
(sodium nitrate)

blue powdered copper blue sparklers,
old pennies

white powdered magnesium firestarters,
or aluminum aluminum foil

purple potassium permanganate purple fountains,
treating sewage

[Index of Terrorists Handbook](#)

7.3 TEAR GAS

A terrorist who could make tear gas or some similar compound could use it with ease against a large number of people. Tear gas is fairly complicated to make, however, and this prevents such individuals from being able to utilize its great potential for harm. One method for its preparation is shown below.

EQUIPMENT

- * ring stands (2)
- * alcohol burner
- * erlenmeyer flask, 300 ml
- * clamps (2)
- * rubber stopper
- * glass tubing
- * clamp holder
- * condenser
- * rubber tubing
- * collecting flask
- * air trap
- * beaker, 300 ml

MATERIALS

- * 10 gms glycerine
- * 2 gms sodium bisulfate
- * distilled water

1. In an open area, wearing a gas mask, mix 10 gms of glycerine with 2 gms of sodium bisulfate in the 300 ml erlenmeyer flask.
 2. Light the alcohol burner, and gently heat the flask.
 3. The mixture will begin to bubble and froth; these bubbles are tear gas.
 4. When the mixture being heated ceases to froth and generate gas, or a brown residue becomes visible in the tube, the reaction is complete. Remove the heat source, and dispose of the heated mixture, as it is corrosive.
 5. The material that condenses in the condenser and drips into the collecting flask is tear gas. It must be capped tightly, and stored in a safe place.
-

[Index of Terrorists Handbook](#)

7.4 FIREWORKS

- * FIRECRACKERS
- * SKYROCKETS
- * ROMAN CANDLES

While fireworks cannot really be used as an effective means of terror, they do have some value as distractions or incendiaries. There are several basic types of fireworks that can be made in the home, whether for fun, profit, or nasty uses.

7.41 FIRECRACKERS

A simple firecracker can be made from cardboard tubing and epoxy. The instructions are below:

1. Cut a small piece of cardboard tubing from the tube you are using. "Small" means anything less than 4 times the diameter of the tube.
2. Set the section of tubing down on a piece of wax paper, and fill it with epoxy and the drying agent to a height of 3/4 the diameter of the tubing. Allow the epoxy to dry to maximum hardness, as specified on the package.
3. When it is dry, put a small hole in the middle of the tube, and insert a desired length of fuse.
4. Fill the tube with any type of flame-sensitive explosive. Flash powder, pyrodex, black powder, potassium picrate, lead azide, nitrocellulose, or any of the fast burning fuel-oxidizer mixtures will do nicely. Fill the tube almost to the top.
5. Pack the explosive tightly in the tube with a wad of tissue paper and a pencil or other suitable ramrod. Be sure to leave enough space for more epoxy.
6. Fill the remainder of the tube with the epoxy and hardener, and allow it to dry.
7. For those who wish to make spectacular firecrackers, always use flash powder, mixed with a small amount of other material for colors. By crushing the material on a sparkler, and adding it to the flash powder, the explosion will be the same color as the sparkler. By adding small chunks of sparkler material, the device will throw out colored burning sparks, of the same color as the sparkler. By adding powdered iron, orange sparks will be produced. White sparks can be produced from magnesium shavings, or from small, LIGHTLY crumpled balls of aluminum foil. Example: Suppose I wish to make a firecracker that will explode with a red flash, and throw out white sparks. First, I would take a road flare, and finely powder the material inside it. Or, I could take a red sparkler, and finely powder it. Then, I would mix a small amount of this material with the flash powder. (NOTE: FLASH POWDER MAY REACT WITH SOME MATERIALS THAT IT IS MIXED WITH, AND EXPLODE SPONTANEOUSLY!) I would mix it in a ratio of 9 parts flash powder to 1 part of flare or sparkler material, and add about 15 small balls of aluminum foil I would store the material in a plastic bag overnight outside of the house, to make sure that the stuff doesn't react. Then, in the morning, I would

test a small amount of it, and if it was satisfactory, I would put it in the firecracker.

8. If this type of firecracker is mounted on a rocket engine, professional to semi-professional displays can be produced.

7.42 SKYROCKETS

An impressive home made skyrocket can easily be made in the home from model rocket engines. Estes engines are recommended.

1. Buy an Estes Model Rocket Engine of the desired size, remembering that the power doubles with each letter. (See sect. 6.1 for details)
2. Either buy a section of body tube for model rockets that exactly fits the engine, or make a tube from several thicknesses of paper and glue.
3. Scrape out the clay backing on the back of the engine, so that the powder is exposed. Glue the tube to the engine, so that the tube covers at least half the engine. Pour a small charge of flash powder in the tube, about 1/2 an inch.
4. By adding materials as detailed in the section on firecrackers, various types of effects can be produced.
5. By putting Jumping Jacks or bottle rockets without the stick in the tube, spectacular displays with moving fireballs or M.R.V.'s can be produced.
6. Finally, by mounting many home made firecrackers on the tube with the fuses in the tube, multiple colored bursts can be made.

7.43 ROMAN CANDLES

Roman candles are impressive to watch. They are relatively difficult to make, compared to the other types of home-made fireworks, but they are well worth the trouble.

1. Buy a 1/2 inch thick model rocket body tube, and reinforce it with several layers of paper and/or masking tape. This must be done to prevent the tube from exploding. Cut the tube into about 10 inch lengths.
2. Put the tube on a sheet of wax paper, and seal one end with epoxy and the drying agent. About 1/2 of an inch is sufficient.
3. Put a hole in the tube just above the bottom layer of epoxy, and insert a desired length of water proof fuse. Make sure that the fuse fits tightly.
4. Pour about 1 inch of pyrodex or gunpowder down the open end of the tube.
5. Make a ball by powdering about two 6 inch sparklers of the desired color. Mix this powder with a small amount of flash powder and a small amount of pyrodex, to have a final ratio (by volume) of 60% sparkler material / 20% flash powder / 20% pyrodex. After mixing the powders well, add water, one drop at a time, and mixing continuously, until a damp paste is formed. This paste should be moldable by

hand, and should retain its shape when left alone.

Make a ball out of the paste that just fits into the tube. Allow the ball to dry.

6. When it is dry, drop the ball down the tube. It should slide down fairly easily. Put a small wad of tissue paper in the tube, and pack it gently against the ball with a pencil.

7. When ready to use, put the candle in a hole in the ground, pointed in a safe direction, light the fuse, and run. If the device works, a colored fireball should shoot out of the tube to a height of about 30 feet. This height can be increased by adding a slightly larger powder charge in step 4, or by using a slightly longer tube.

8. If the ball does not ignite, add slightly more pyrodex in step 5.

9. The balls made for roman candles also function very well in rockets, producing an effect of falling colored fireballs.

[Index of Terrorists Handbook](#)

9.0 CHECKLIST FOR RAIDS ON LABS

In the end, the serious terrorist would probably realize that if he/she wishes to make a truly useful explosive, he or she will have to steal the chemicals to make the explosive from a lab. A list of such chemicals in order of priority would probably resemble the following:

Important liquids

- * Nitric Acid
- * Sulfuric Acid
- * 95% Ethanol
- * Toluene
- * Perchloric Acid
- * Hydrochloric Acid

Important Solids

- * Potassium Perchlorate
- * Potassium Chlorate
- * Picric Acid (usually a powder)
- * Ammonium Nitrate
- * Powdered Magnesium
- * Powdered Aluminum

Less important chemicals

- * Potassium Permanganate
- * Sulfur
- * Mercury
- * Potassium Nitrate
- * Potassium Hydroxide
- * Phosphorus
- * Sodium Azide
- * Lead Acetate
- * Barium Nitrate

10.0 USEFUL PYROCHEMISTRY

In general, it is possible to make many chemicals from just a few basic ones. A list of useful chemical reactions is presented. It assumes knowledge of general chemistry; any individual who does not understand the following reactions would merely have to read the first five chapters of a high school chemistry book.

* potassium perchlorate from perchloric acid and potassium hydroxide

4 4 2

* potassium nitrate from nitric acid and potassium hydroxide

3 3

* ammonium perchlorate from perchloric acid and ammonium hydroxide

3 4 3 4

* ammonium nitrate from nitric acid and ammonium hydroxide

3 3 3 3

* powdered aluminum from acids, aluminum foil, and magnesium

3 2

3 2

The Al will be a very fine silvery powder at the bottom of the container which must be filtered and dried. This same method works with nitric and sulfuric acids, but these acids are too valuable in the production of high explosives to use for such a purpose, unless they are available in great excess.

The Arts Of Lockpicking Part I

The Arts of Lockpicking I courtesy of The Jolly Roger

Lockpicking I: Cars and assorted other locks

While the basic themes of lockpicking and uninvited entry have not changed much in the last few years, some modern devices and techniques have appeared on the scene.

Automobiles:

Many older automobiles can still be opened with a Slim Jim type of opener (these and other auto locksmithing techniques are covered fully in the book "In the Still of the Night", by John Russell III); however, many car manufacturers have built cases over the lock mechanism, or have moved the lock mechanism so the Slim Jim will not work. So:

American Locksmith Service

P.O. Box 26

Culver City, CA 90230

ALS offers a new and improved Slim Jim that is 30 inches long and 3/4 inches wide, so it will both reach and slip through the new car lock covers (inside the door). Price is \$5.75 plus \$2.00 postage and handling.

Cars manufactured by General Motors have always been a bane to people who needed to open them, because the sidebar locking unit they employ is very difficult to pick. To further complicate matters, the new GM cars employ metal shields to make the use of a Slim Jim type instrument very difficult. So:

Lock Technology Corporation

685 Main St.

New Rochelle, NY 10801

LTC offers a cute little tool which will easily remove the lock cylinder without harm to the vehicle, and will allow you to enter and/or start the vehicle. The GMC-40 sells for \$56.00 plus \$2.00 for postage and handling.

The best general automobile opening kit is probably a set of lockout tools offered by:

Steck MFG Corporation

1319 W. Stewart St.

Dayton, OH 45408

For \$29.95 one can purchase a complete set of six carbon lockout tools that will open more than 95% of all the cars around.

Kwickset locks have become quite popular as one step security locks for many types of buildings. They are a bit harder to pick and offer a higher degree of security than a normal builder installed door lock. So:

A MFG

1151 Wallace St.

Massilon, OH 44646

Price is \$11.95. Kwickset locks can handily be disassembled and the door opened without harm to either the lock or the door by using the above mentioned Kwick Out tool.

If you are too lazy to pick auto locks:

Veehof Supply

Box 361

Storm Lake, IO 50588

VS sells tryout keys for most cars (tryout keys are used since there is no one master key for any one make of car, but there are group type masters (a.k.a. tryout keys). Prices average about \$20.00 a set.

Updated Lockpicking:

For years, there have been a number of pick attack procedures for most pin and tumbler lock systems. In reverse order of ease they are as follows:

Normal Picking: Using a pick set to align the pins, one by one, until the shear line is set and the lock opens.

Racking: This method uses picks that are constructed with a series of bumps, or diamond shape notches. These picks are "raked" (i.e. run over all the pins at one time). With luck, the pins will raise in the open position and stay there. Raking, if successful, can be much less of an effort than standard picking.

Lock Aid Gun: This gun shaped device was invented a number of years ago and has found application with many locksmiths and security personnel. Basically, a needle shaped pick is inserted in the snout of the "gun", and the "trigger" is pulled. This action snaps the pick up and down strongly. If the tip is slipped under the pins, they will also be snapped up and down strongly. With a bit of luck they will strike each other and separate at the shear line for a split second. When this happens the lock will open. The lock aid gun is not 100% successful, but when it does work, the results are very dramatic. You can sometimes open the lock with one snap of the trigger.

Vibrator: Some crafty people have mounted a needle pick into an electric toothbrush power unit. This vibrating effect will sometimes open pin tumbler locks -- instantly.

There is now another method to open pin and wafer locks in a very short time. Although it resembles a toothbrush pick in appearance, it is actually an electronic device. I am speaking of the Cobra pick that is designed and sold by:

Fed Corporation

P.O. Box 569

Scottsdale, AR 85252

The Cobra uses two nine volt batteries, teflon bearings (for less noise), and a cam roller. It comes with three picks (for different types of locks) and works both in America and overseas, on pin or wafer locks. The Cobra will open group one locks (common door locks) in three to seven seconds with no damage, in the hands of an experienced locksmith. It can take a few seconds more or up to a half a minute for someone with no experience at all. It will also open group two locks (including government, high security, and medecos), although this can take a short time longer. It will not open GM sidear locks, although a device is about to be introduced to fill that gap. How much for this toy that will open most locks in seven seconds?

\$235.00 plus \$4.00 shipping and handling.

For you hard core safe crackers, FC also sells the MI-6 that will open most safes at a cost of \$10,000 for the three wheel attack model, and \$10,500 for the four wheel model. It comes in a sturdy aluminum carrying case with monitor, disk drive and software.

If none of these safe and sane ideas appeal to you, you can always fall back on the magic thermal lance...

The thermal lance is a rather crude instrument constructed from 3/8 inch hollow magnesium rods. Each tube comes in a 10 foot length, but can be cut down if desired. Each one is threaded on one end. To use the lance, you screw the tube together with a matted regulator (like a welding outfit uses) and hook up an oxygen tank. Then oxygen is turned on and the rod is lit with a standard welding ignitor. The device produces an incredible amount of heat. It is used for cutting up concrete blocks or even rocks. An active lance will go through a foot of steel in a few seconds. The lance is also known as a burning bar, and is available from:

C.O.L. MFG

7748 W. Addison

Chicago, IL 60634

How to Cross-Examine a Psychological Witness

Forensic psychologists include experts who testify as witnesses in legal proceedings. The attorney who cross-examines any expert witness, psychologist or otherwise, must be prepared to ask the right questions.

Before I list the seven questions that can be used by an attorney when cross-examining an expert witness in psychology, let me briefly explain how these questions help to ensure justice.

Psychology is not yet a science in the modern sense of the word. Rather, it is a vast collection of studies of various aspects of human (and animal) behavior.

Until very recently, there has been no scientific framework upon which these studies could hang. In other words, they have taken place in a theoretical vacuum, despite--actually, because of--all the theorizing that characterizes orthodox psychology.

Even as we approach the Third Millennium, our traditional understanding of human behavior resembles astronomy prior to the 16th Century. Those pre-copernican astronomers certainly knew a great deal about the heavens. However, they lacked an integrated appreciation of what was going on up there above their heads.

Similarly, orthodox psychology today lacks an integrated appreciation of what is going on down here inside our heads and, consequently, of why we behave the way we do. Nor am I the first psychologist to have made this observation.

Professor Scott T. Meier, writing in the September 1987 issue of the American Psychologist had this to say: "The recent special issue of the American Psychologist on psychological science and education (October 1986) is illustrative of the current state of psychological theory in an important way: The articles seem largely unconnected."

"This lack of integration of psychological theory is the rule, not the exception. The diversity of theoretical approaches apparent in psychology journals...leads people within and outside the field to view psychology as chaotic...."

Only two months later, in the same journal, Professor Arthur Staats wrote: "It is becoming clear to a growing body of psychologists that psychology is a modern disunified science...so chaotically inconsistent that it loses its credibility to other scientists and to the public."

The questions I have prepared for cross-examination of the psychological expert reflect the thoughts of these respected professors.

The answers that an expert witness gives will reflect the extent to which that witness understands and respects the limitations of the field.

The seven questions and answers are as follows:

1. "Psychologists often speak of stimulus and response. Assuming that eating is a response of some kind, what would you say is the stimulus for that response?"

Answer: The stimulus for the eating response is normally the feeling of being hungry (or the pain of hunger). Despite what you may have read, the stimulus is not food, or any other physical object in the environment.

2. "Would you like to define the word stimulus?"

Answer: A stimulus is the distressful feeling responsible for the response. In the case of eating, this distressful feeling is normally a physiological feeling, or pain, namely, the pain of hunger.

3. "What might the stimulus be for someone to fire a gun (write a bad check, run a red light, harass a subordinate)?"

Answer: The likeliest stimulus for any of these particular responses is the feeling of being dependent, or controlled, which is a sorrow as opposed to a pain. Thus, one motorist might fire a gun at another motorist who had cut him off and made him feel 'controlled,' or, more specifically, less important than the motorist who had cut him off. On the other hand, a restaurant patron might write a bad check in response to the painful feeling of hunger rather than the sorrowful feeling of being controlled; or a manager might harass a subordinate entirely in response to the feeling of sexual distress, which--like hunger--is a type of pain.

4. "Bearing in mind the legal term motive, would you please tell the Court how someone might be motivated to fire a gun (write a bad check, run a red light, harass a subordinate)?"

Answer: Someone might be motivated to fire a gun by one or more motives, or distressful feelings.

Contributing to the shooter's motivation would be the opportunity to fire the gun, as well as the ability to do so.

5. "Is there a difference between the stimulus for a given response and the motive for that same behavior?"

Answer: No. The motive for a behavior is the same as the stimulus for that particular response. For example, if the stimulus for firing a gun was the feeling of being controlled, then the motive for firing the gun was also the feeling of being controlled.

And because the stimulus for the eating response is normally the pain of hunger, then the motive for the eating behavior is normally the pain of hunger as well.

6. "How is the stimulus for the eating response similar to (or different from) the stimulus for the gun-firing (bad-check-writing, red-light-running, subordinate-harassing) response?"

Answer: The stimulus for the eating response is similar to the stimulus for the gun-firing response in that they are both distressful feelings. In fact, if the person firing the gun did so in response to the feeling of hunger, then the two stimuli would be identical. More likely, however, the stimulus for the gun-firing response will be some psychological feeling of distress (a sorrow) rather than a physiologically distressful feeling like the pain of hunger.

7. "How is the motive for the behavior of eating similar to (or different from) the motive for the gun-firing (bad-check-writing, red-light-running, subordinate-harassing) behavior?"

Answer: Because the motive is always the same as the stimulus, the answer to this question is contained in the answer to Question 6.

Apples and Stimuli

Let's say that someone were to drop an apple on your head from an apple tree. You might well become provoked (stimulated) and even do something to that person!

Now, let's say that the next day you were to walk under another apple tree (you live in apple country) and an apple were simply to fall from the tree onto your head. The only distressful feeling you might experience would be a pain in your head from the impact of the apple. It's not likely you would be otherwise stimulated.

If, on the first day, you climbed the tree and spanked the kid who had dropped the apple on your head, the stimulus for your response would have been the feeling of being dependent, or controlled. Whether or not the falling apple had caused you pain would have been secondary (your response might have been the same had the kid spat on you).

A physical object (such as an apple) is a stimulus only in the case of a reflex, as when a doctor's mallet strikes your knee and the knee jerks. Otherwise, a physical object is only a thing--as opposed to a thought--in the environment.

The stimulus for a response is always a distressful feeling (painful--as in the pain of hunger, or sorrowful--as in the sorrow of feeling controlled). Incidentally, if you had taken a tylenol after being hit on the head with the apple, the pain from the apple would have been the stimulus for the tylenol response, and the motive for that behavior as well.

<http://www.tcfarm.com/~dwells/hottopic.html>

This article for youth professionals explains how to tell which youth may pose the highest risk for potential serious harm, and what you must do now to understand and work with them. To best ensure your safety, and the safety of your other students, and to effectively teach and counsel all youth in our violent times, be sure to upgrade your skills to become expert on all your "little match sticks waiting to be lit."

Youth Change is based in Woodburn, Oregon, about 90 miles from a place you had never heard of until May, 1998. So, when we heard on the radio one morning last May, that there had been a shooting in Springfield, Oregon, it was more than just another school shooting. It was something quite personal. The extreme violence had happened in our own backyard. What could never happen here, had happened here.

Spot and Stop Extreme Violence

What Every Youth Worker Must Know Now to Understand and Prevent Extreme Juvenile Violence

This article was published under a slightly different title, with slightly different text, in "The Child Welfare Report," Fall, 1998

There is no guaranteed way to prevent extreme violence. But many teachers and counselors may find it useful to at least understand which students may potentially offer the greatest threat. This information is not intended to alarm you, but to best equip you to organize and understand the children who have the potential for the most extreme danger. It is a brief thumbnail guideline so you can conceptualize who could pose danger, and why, plus, what you can do about it.

Teach Them Expected Behaviors: First, all children must be taught peaceful behavior. Years ago, kids arrived at their school or agency, prepared by their family to act peacefully. Now, the opposite is true. Kids arrive prepared to be aggressive, often unsure how to be peaceful because at home, on TV, in the movies, in the neighborhood, and on the computer, people act violently, rudely and aggressively. For some kids, that is all they know. Although it should not have to be your job to train kids to be peaceful, if you don't do it, and the family doesn't do it, who will? The corrections system. But that is a reactive, not pro-active response that doesn't help ensure safety, so start by teaching kids to do what they are expected to do.

The Kids at Highest Risk of Extreme Violence: Remember, this information is offered you so you can make sense out of the kids around you. We are condensing a lot of complicated mental health information, so please be sure to read more in this area, and not assume that this quick guide provides

you all the answers you need. When in doubt, always consult a mental health professional. If you are not a mental health professional, reading this guide does not sufficiently prepare you to diagnose kids, yet the information below refers to several mental health diagnostic categories. Remember, these categories are offered here only as guidelines, not so you can attempt to definitely diagnose children.

1. Conduct Disorders: The child who may potentially pose the greatest threat of extreme violence is called a conduct disorder. To understand this child, visualize the fictional character, J.R. from the TV show "Dallas" because the hallmark of being a conduct disorder (c.d.), is having no heart, no conscience, no remorse. Only a mental health professional can diagnose a conduct disorder for sure, but being aware that you may have a conduct disordered child in your class or group, is important to ensuring your safety, along with the safety of your kids, because you work with conduct disorders completely differently than other kids. Since the c.d. child has little relationship capacity, you should not use relationship-based approaches with a diagnosed conduct disorder.

It would be insensitive to call a conduct disorder, a "baby sociopath," but that is close to what the term means. It means that the child acts in ways that appear to be seriously anti-social, and the concern is that the child may grow up to be a sociopathic type of person. Since this child cares only about himself (c.d.'s are predominately male), there are little brakes on this child from serious or extreme violence. Not every conduct disordered child will engage in horrific behavior. Some c.d.'s are more like Eddie Haskell from "Leave it to Beaver," and are just the neighborhood bully. Others may shoplift, join a gang, or engage in hurtful manipulation. There is a range of misbehavior c.d.'s may get involved with, ranging from lying to setting fires or being a sexual predator. At the most serious end of the spectrum, lies the possibility of extreme violence, such as the school shooting in Oregon.

In our workshop, we spend at least an hour helping you understand how to work with conduct disorders. While c.d.s are only 3-5% perhaps of the population, having just one of them in your class or group can be tough. If you work in a specialized setting, like special ed, a group home, or at-risk program, you likely have a concentration of these kids. You can come to one of our classes, or get books that help teach you how to work with this most hard-to-manage kid. The main point we give in our classes is that these children operate on a cost-benefit system, and that to control your c.d. kids, you must keep the costs high, and benefits low. These children also especially need to pro-actively learn how to manage their fists, mouth, and actions. Your goal is to teach them that when they hurt others, it often hurts them too. All interventions must be in the context of "I-Me," because that is all this kid is capable of caring about.

2. Thought Disorders: The risk posed by thought disordered children is possibly far less than that of the conduct disordered youth. Although #2 on this list, it is a rather distant second choice, not an immediate one. Part of the explanation is that there are probably a lot more conduct disordered kids than thought disordered ones. The other reason that

explains the somewhat distant #2 status is that the thought disordered child may be well-intentioned, kind, and loving at times. The conduct disorder child really never is able to care about anyone else. Another reason to explain the distant #2 status is that often the thought disordered child will act in rather than act out. They often will pose a harm to self rather than others.

Unless you work in a treatment setting, just a very small fraction of the children you work with, may have what mental health professionals call thought disorder. In treatment settings, such as day treatment programs, state hospitals, residential treatment programs, and other such environments, there will be greater numbers of these children because they are part of the target population you serve. While the thinking of the conduct disorder is clear and lucid, that assumption is not always true for the thought disordered child. The child who has been diagnosed with this type of problem by a mental health worker, has very serious problems with their thinking. The child may hear voices or see visions that no one else can, for example. The child may believe they are being governed by demons or devils. Non-mental health professionals might view the child as crazy or insane, and that is sadly, fairly accurate. Mental health professionals might choose different adjectives but essentially they too are saying that the child is not always in touch with reality. If, as an adult, a thought-disordered person commits a serious crime, they could be judged not guilty by reason of insanity. The thinking problem that this child has, is just that enormously powerful, serious and potentially dangerous.

The thrust of working with a diagnosed thought disorder is often on proper medication, although things like skill building and structure are also very important. Trusting relationships can be a helping factor to reign in or influence the child. Perhaps the single most important concern will be that the child takes any prescribed medication regularly and properly, because when properly medicated, this child may function almost normally in many ways. When not correctly medicated, this child is at the mercy of any demons, visions, voices or upsetting thoughts that pop into their head.

To best visualize this disorder, spin around until dizzy, disoriented and confused. That is a little glimpse of what the disorder feels like, but for the child, only the correct medicine can help the dizziness, disorientation and confusion to eventually abate. The child is not actually dizzy, but just like when you are dizzy, their brain isn't working the way it should. As many children don't recognize the need for medication, helping a child become convinced that the medication is essential to living, must be a top priority.

3. Severe Agitated Depression: The occurrence of extreme violence by severely depressed, agitated children probably also lags behind the risk posed by conduct disorders. This term refers to a child who has experienced extremely severe problems with depression, and at least some of the time, also struggles mightily with agitation. Many kids, especially teens, struggle with depression, but this group endures some of the most prolonged, profound, deep depression; this should not be confused with typical adolescent

ups and downs. When the severely depressed and agitated child also abuses substances, the problem can be magnified greatly depending on the interplay of the substance and the existing emotional concerns. Crisis, sudden changes and the usual adolescent successes and failures can quickly de-stabilize this child who is already seriously struggling; these events can have the effect of the straw that broke the camel's back.

Any emotion that a child has trouble managing, may get acted out or acted in. Depression is generally acted in: the child withdraws, reduces their activities, may eat less, etc. But, depression can also be acted out. Feeling cornered, unable to endure any more pain, some children will act out, sometimes lashing out in very severe ways. All things in nature strive to come to a conclusion. Storms eventually dissipate, the rain ultimately gives way to sun, and even the snow will eventually end. Humans, as part of nature, also tend to move towards resolution. For some children, extreme violence can be the flash point that offers that resolution. When there appears to be no hope, perhaps the child believes that there is nothing left to lose. Depression can be tough on adults, but couple the depression with a child's lack of time concept, lack of perspective, their impulsiveness, immaturity and resistance to understanding the link of actions to final outcomes, extreme violence can be grabbed as perhaps a solution. If this vulnerable child becomes linked to a conduct disorder, you can see how under certain circumstances, that could become a deadly combination as the depressed, agitated child may join in the acting-out.

To help this child, alleviating some of the torment will be critical. Building a trusting relationship with the youth would probably help, but isn't essential, and is often difficult to accomplish anyway. More essential, is to help the child find ways to exist that they can control and are also socially acceptable. Tired of feeling helpless and powerlessness in every regard, this kid can become a volcano that could one day blow. Help to manage anger in socially acceptable ways, tempering the depression, and alleviating some of the agitation can keep this child from remaining at the level of extreme discomfort they currently experience. This child can remain a pressure cooker capable of hurting self and/or others in an explosion, or the child can be aided to gradually reduce the agitation and pressure they are experiencing. If this child receives useful aid to vent the agitation and give some light to the depression, any risk of extreme violence can be significantly impacted.

A site that is carefully attuned to detecting troubled children, and well-prepared to effectively assist them will not as likely face harm from such a child. Although this is the child who may originate from a troubled home, or have lived or live with victimization, this may be the most hopeful and more readily impacted of the three types of children discussed here. Medication can aid this child, but the depression and/or agitation can renew, sometimes with a vengeful vigor when the medicine is discontinued, which is often inevitable. Medication alone is seldom the best course of action, and should always be combined with other interventions such as anger management, depression management, coping skills training, and leisure time management training.

Appraising the Risk: Now you can look at your class or group and not just wonder where the where the potential, serious danger would come from. Now that you have more refined guesses about which youth potentially pose potential danger, here is a way to better rank that risk in your mind. A judge in Eugene, Oregon, the town next to Springfield, said after the shootings that so many kids are like "little match sticks waiting to be lit." To adapt that image a bit, here is how you can apply that thinking to the three at-risk groups listed here. You can imagine that the conduct disorder is already lit; a flame is burning. Whether that flame becomes smaller, flares larger, or creates an inferno, is anyone's guess, but the flame is burning always, the potential for disaster is always there. What happens to that flame, whether it is static, or grows smaller or larger, or someday rages, will vary from conduct disorder to conduct disorder, but sadly, the flame will never extinguish.

The thought-disordered child may be like a pilot light, a tiny flame that is always lit, but is fairly unlikely to inexplicably get massively bigger or out of control. Properly shepherded and assisted, this light may stay forever just a benign flicker. Unshepherded or inadequately assisted, however, this flame can get bigger, even flare out of control. The extremely agitated depressed child may be the unlit match stick that the judge visualized. Outside factors will likely come into play to incite any flare-up. Outside forces could include peer pressure, crises, substance abuse, family woes, or just mounting problems that fuel the agitation and create a profound, all-encompassing sense of desperation that leads the child to "spontaneously" combust. Like the thought-disordered child, the severely agitated depressed youth can often be so readily aided if the community can identify them, then consistently care and effectively intervene.

In Summary: If you work with kids, but you are not a mental health professional, maybe it's time to at least learn some of the basics about children's mental health. And, no matter what your role with children, please consider it your obligation to train your kids to be peaceful. That may be the most important contribution you could make in a world that so thoroughly ensures that every child knows so much about extreme violence, and so little about anything peaceful. Regardless of your role, your training from college may have little to do with contemporary youth. Get trained to work with that contemporary kid, who may still be able to reach the high expectations for conduct that you hold for them, but may need a lot more specific training from you to ever get there.

Extreme violence, said Oregon's governor, after the shootings in Springfield, is not a school problem, but a societal problem. As long as children are raised amid the extreme violence of TV, computer games, movies, neighborhoods, and school yards, and never planfully taught anything else, this societal problem will sadly also remain a school problem.

LESSON ONE INDIVIDUAL AND COMMUNAL RIGHTS

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Discuss the different perspectives of individual rights and public order advocates
2. Provide examples of policy issues supported by individual rights and public order advocates
3. Discuss past, present, and future trends of individual and community rights

DISCUSSION NOTES

Introduction

While crime is decreasing nationwide, there is an increase in violent juvenile crime that is causing a great concern to the citizenry and the criminal justice system. These crimes are far less predictable and considerably more violent than previous crimes committed by juveniles.

These increases, coupled with sporadic mass murders, (such as the Oklahoma City Bombing and the Trade Center Bombing), have forced Americans to rethink their stance on individual rights.

For example, throughout the 1960s and 1970s, there were substantial safeguards put into place to protect citizens from the obtrusive power of the government, namely the police. The right to due process under our system was brought to the forefront during the 1960s. As the political winds have changed, coupled with Americans thinking about public safety, these individual rights guaranteed by the Bill of Rights have been and are slowly being eroded, in the name of community safety.

Social Control

Many citizens are coming to the realization that valuing individual rights may at the same time be detrimental to social control mechanisms: **social control** is defined as the ability of a group to shape and influence the behavior of those within the group. This is usually done through the creation of sanctions and reward systems.

This creates an increasing struggle between those who value **individual rights** and those who place more value on **community rights**. A struggle, in fact, which is changing the policies and function of the criminal justice system.

Individual vs. Communal Rights

(Individual Rights Advocates)

They believe that it is most important to value individual rights within the criminal justice system. They believe that under no circumstances should the criminal justice system violate an individual's civil rights. A common example of these groups include, most notable, the [ACLU](#).

Individual rights advocates also contend that the basis of American values and culture are found in our individual rights. In other words, if we begin to erode our rights in favor of collective rights, we will undermine the structure of America. In fact, this group contends that the cultural values of a country are reflected by the manner in which we treat those accused of crimes. Therefore, taking rights away from them damages and minimizes the rights of the average citizen.

Importantly, it is argued that the protection of individual rights may be at the expense of public safety. Hence, it is better to let a guilty individual go than to incarcerate an innocent person.

Public Order Advocates

On the other hand, public order advocates contend that there are times at which individual rights must succumb to communal rights, especially in terms of public safety and criminal justice issues.

This argument is gaining popularity among politicians and citizens alike, but has long been advocated by a group of individuals known as communitarians. Essentially, communitarians contend that we are social beings, first and foremost, therefore, our collective rights come before the rights of the individual. This means that as individuals, we give up our rights to those that may benefit the community more.

Efforts by this group are put forth to reduce the rights of the accused in order to make the criminal justice system more efficient in making arrests and punishments swifter and harsher. For example, relax the rights concerning search and seizure and the appeal process. In essence, this group argues that the rights and safety of the group supercedes that of any individual. Therefore, sending an innocent person to prison is much better than letting a guilty one go free.

As the Pendulum Swings--Past, Present, Future?

It appears that many crime control policies in recent years have followed the philosophy of the public order advocates. For example, sex offender registration is in fact a reduction of individual rights for the safety of the community. The major welfare reform based a couple of years ago provides another example. It is no longer an individual's right to receive social services from the government, instead, individuals are told they must work and their communities must take care of them.

If this trend is occurring, one must question the impetus behind this movement. Well, if we look back over the last several decades, we can see that America has gone through substantial changes, which have left Americans more frustrated and a little more apprehensive. For example, there has been substantial inner city deterioration. They've also faced the economic roller coaster of the 80s and 90s, increasing proportions of the working poor, increasing levels of fear of crime, and until recently, increasing crime rates. All of which the media has spent considerable effort in exposing, highlighting, etc.

In all, this has led us to become frustrated with one another, and more importantly, government agencies. We no longer feel safe walking in our own neighborhoods, rarely know our neighbors, and are apprehensive about strangers and people different than us. So, given this, Americans, it seems, are attempting to gain some control over their own lives and are turning their attention to criminals. Stated differently, the predominate feeling is that criminals are responsible for our unhappiness, therefore, get them out of our communities at any cost.

QUESTIONS

1. Please discuss whether you identify yourself as a public order advocate or an individual rights advocate. In your description, please be sure to address why you believe this.
2. Another way to look at these two distinct positions is through certain criminal justice

policies. Please provide two criminal justice policies and discuss whether public order advocates and individual rights advocates favor or oppose the policies.

3. As discussed in the text, the criminal justice "pendulum" has been swinging between individual rights and community rights during the past several decades. Please discuss which direction this pendulum will swing in the near future. Be sure to provide support for your answer.

LESSON TWO JUSTICE IN AMERICA

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Discuss the definition of "justice"
2. Discuss the differences between the theoretical and pragmatic definitions of justice
3. Discuss the differences between the conflict and consensus models of criminal justice

LECTURE NOTES

Social Justice

The long standing question comes back once again, *What is justice?* This is a question that has been debated for some time. The book provides this definition: *The principle of fairness; the ideal of moral equity.*

From the discussion in the book, we see the concept of social justice begin to emerge, which embraces our cultural beliefs and ideas about fairness, right and wrong. Essentially, this is part of the foundation upon which our society is built. For example, it is wrong to murder someone in cold blood. It is wrong to engage in incest or have sexual relations with a child, if you are an adult. These are cultural beliefs of right and wrong, many of which are reflected in our laws. This brings us to another part of society's foundation, that is criminal justice, which, as we know, deals with violations of the criminal law. Now, it is very important to remember that social justice and criminal justice are not separate ideals. They are, in fact, deeply enmeshed.

There are two different realms in which we can debate "justice", *theoretical* and *pragmatic*. Theoretically, we can argue *what ought to be*, however, pragmatically, we must argue *what is*. Therefore, what ought to be does not necessarily translate into what is. This is an important distinction,

especially in criminal justice, because what ought to happen given a certain CJ policy, is not necessarily what does happen.

Secondly, within the pragmatic world that we live in, we are all influenced by our social conditioning. Stated differently, we all had very different life experiences, some of us come from urban areas, while others come from rural others. Some of us are part of disenfranchised groups (minorities) that feel a sense of powerlessness when dealing with the system, while others feel the system reflects their views and morals.

As we can see then, our views of what justice is, theoretically and pragmatically, may be very different. Regardless of our perspectives, the criminal justice system and its legal foundation are important for the operation of a safe and secure society.

The Conflict

These divergent views can and do come into conflict in our society. While many can agree on the purpose of our laws, conflict comes when we attempt to apply these laws.

I am sure that most individuals can think of an instance in which the line between right and wrong becomes blurred, making it difficult to come to consensus on the virtues of the act. For example: Is it "just" for a women to kill a man that molested her daughter?

The Criminal Justice System: Conflict or Consensus?

In discussing the criminal justice system, we are talking about several different agencies: police, courts, corrections, and each of their departments working together to achieve "societal justice." That is, they are systematic in their operations and compliment each other in this idealic and pragmatic pursuit.

This type of perspective of criminal justice has been called the [consensus model](#). Simply, there is consensus among the various agencies and sub-components on what needs to be achieved and how to achieve it.

Is this how the system operates? Most likely not. In fact, a downfall of viewing the system through this perspective is that we expect it to operate like an **efficient** machine. There are, however, numerous external and internal influences affecting the various criminal justice agencies. They push and pull the agencies in different directions, regardless of efficiency and the ultimate pursuit of justice.

Given this oversimplification of a system, many scholars contend that criminal justice is a non-system. This group argues that each agency and sub-components serve their own interests, without regard to systematic outcome. Hence, any justice that is achieved comes from the conflictual nature of these groups. Therefore, we call this perspective the **conflict model**.

A way to distinguish these two models is: in general, the goals of the system include responding to crime in society, fairness, and justice. One could argue that the sub-components are in consensus by including these goals as part of their mandate. However, the sub-components also approach these goals in very different ways, thus there is conflict. For example, police focus on putting people in prison, while a prosecutor may feel efficiency is more important, and plea bargain the individual out.

So, where do we stand? Is the system based on consensus or conflict? Well, it appears that the vastness of criminal justice agencies at the various levels of government make it impossible to achieve total consensus. On the other hand, it also seems these agencies are loosely connected to achieving justice. Thus, that commonality allows us to visualize them as a system of criminal justice.

QUESTIONS

1. Please provide three examples of common values you believe to be held by Americans.
2. Please provide a definition of justice. Be as specific as possible.
3. Using either the consensus or conflict model of criminal justice, please describe, in detail, how that model affects overall social justice.

[Top](#)

LESSON THREE

INTRODUCTION TO THE AMERICAN CJ SYSTEM

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- Discuss the process of the American criminal justice system
- Provide an example of a case going through the system

LECTURE NOTES

Introduction

To highlight the process, we will use an example of Ted being arrested for public drunkenness and assault at a university football game.

Investigation and Arrest

As we know, arrest does not always come at the scene of the crime, but usually after some kind of departmental investigation.

Criminal investigation is typically characterized by the likes of Columbo or other high profile television shows in which crimes are solved through putting the pieces together and intensive logic. Actually, most investigations are conducted by all those involved in police work, from the lowly patrol officer to the revered detective.

While detectives have built an image of being able to solve crimes through intuition and hard work, the majority of crimes, around 80%, are solved through the identification of the suspect by the victim during the preliminary investigation. In fact, detectives only solve about 3% of all cases through hard work, inspiration or science. Most importantly, it appears that success is based on the amount and types of evidence available. Obviously, those cases with strong evidence are more likely to be solved.

Researchers have also found that investigators spend about 45% of their time on activities other than cases, such as: slack time, administrative assignments, etc. Fifty-five percent is spent on case work, 40% on investigating crimes that are never solved, 12% on crimes that are eventually solved, and nearly 48% on cleared cases after they are solved. Overall, investigators spend about 93% of their time on activities that do not lead directly to solving previously reported crimes.

Once Ted is arrested, he is read his Miranda rights.

Booking

During booking, Ted's record is created, which consists of fingerprints, picture, etc. He is now officially in the system.

First Appearance

Soon after the arrest, Ted is brought before the court where he is read the charges against him and most of the time, either released on his own recognizance, bail, bond, or held in jail.

ROR- means that you are either put under the responsibility of yourself or someone else. This is usually done when the crime is minor and the individual has ties to the community, and does not usually have an extensive record.

Bail is a cash guarantee that you will show up for your assigned court date; if you do not show, you forfeit the cash.

Bond-can be either cash or property and is usually 10% of the total amount.

If Ted is poor and cannot afford representation, the court assigns an attorney at this time.

Preliminary Hearing

The primary objective of the preliminary hearing is to determine whether or not there is probable cause to keep Ted in the judicial system, without it, Ted is released.

Probable cause: this is a level of belief that requires a reasonable person, given the set of facts and circumstances, would believe that the particular individual committed the criminal act that he/she is accused.

The "level of belief" is a vital component of the criminal justice process. In fact, it is around this level that a case is built and the information that is available to the criminal justice process and presented. There are other "levels" of belief as well, which can be characterized in a scale: reasonable suspicion, probable cause, preponderance of evidence, clear and convincing proof and beyond a reasonable doubt. The criterion for belief increases with scale, thus necessitating more evidence, etc.

Information or Indictment

In order for a case to be brought to court, the prosecutor must get an indictment from a grand jury. Some states, however, allow the prosecutor to file for an information with the court.

A grand jury is composed of 10-12 individuals that are presented with the evidence of the case by the prosecutor and witnesses presented by the prosecutor. The jury members are allowed to ask questions of the prosecutor and the witnesses and are not bound by the strict rules of regular juries. Essentially, their role is to determine whether or not sufficient evidence exists to bring Ted to trial.

Arraignment

Assuming that an indictment or information is handed down, Ted must then attend his arraignment where the indictment is read. At this time, he is asked to enter a plea of not guilty, guilty, or nolo contendere (*"I will not contest it."* Plea which has same effect as pleading guilty, except that nolo contendere plea in a criminal case may not be used against the same person in a civil suit based on the same facts).

Interestingly, judges have the option of rejecting a plea if they feel the defendant does not fully understand the charges against him/her.

Trial

The next stage, unless a plea bargain occurs, is the trial stage, which is guaranteed by the 6th Amendment to the Constitution. The trial is set up to uncover the facts of the case as well as the adherence of the applicable laws. In theory, if the facts of the case do not support the applicable laws beyond a reasonable doubt, then the individual should be released. As we all know, trials are very expensive and time consuming. Most of the time, they are not the "battle" which we are led to believe. While everyone is working toward uncovering the facts, considerable amounts of cooperation exist between the judge, prosecution, and the defense attorney.

Under certain circumstances, individuals can waive their right to a jury trial and stand before the bench, or a bench trial, in which the judge is the sole decision maker.

Sentencing

If a determination of guilt is handed down by the jury, or judge, then the court must impose a sentence, which usually entails, probation, a fine, community service, or prison. More often than not, some kind of sentencing hearing is held in which both sides present information concerning the guilty party. Obviously, the prosecution places him in the worse light, while the defense attempts to make Ted look his best.

Given that most states now have [determinate sentencing](#) and some kind of sentencing structure, judges have very little discretion as to the type of punishment or length of sentence. However, judges still have the ability to decide whether or not, if there are multiple crimes, the sentences are to be served *consecutively or concurrently*. If sentences are served *consecutively*, that means that the individual serves one sentence, and then upon completion, serves the other. If sentences are served *concurrently*, the individual serves all sentences at the same time, hence, reducing the overall time she spends incarcerated.

Probation and Parole

Not everyone ends up going to jail. Ted may receive probation, or community service. Probation requires that an individual abide by certain rules and regulations, or his/her sentence will be imposed. Once in prison, there is substantial likelihood that the individual will be released on parole after a certain amount of the sentence is served. Once again, parole entails substantial rules and regulations that must be followed.

DUE PROCESS AND INDIVIDUAL RIGHTS

An aspect that unites these separate processes is due process, which is guaranteed by the 5th, 6th, and 14th Amendments. Specifically, the due process clause is found in the 5th amendment, which states that no person shall be deprived of life, liberty, or property, without due process of law.

In essence, due process requires that agencies recognize individual rights while enforcing the law. Any violation of due process may result in dismissal of the case.

Crime Control Through Due Process

There are several goals of the Criminal Justice process, two of which are to maintain social order and secondly, to protect individuals from injustices. Maintenance of social order can be linked to what has been termed the *crime control model* of justice. Basically, this model values efficiency at all stages,

such as: arrest, trial, and conviction. We can also link this to the public order advocates. The second goal is linked to the *due process model* of criminal justice, which emphasizes effectiveness, understanding the facts of each case and strong adherence to due process.

There is a tendency to abide by one model or the other, usually due to our political ideology. However, the book rightly suggests that we tend to think of the system as crime control through due process, thus balancing the rights of the collective with the rights of the individual.

QUESTIONS

1. A _____ is a body of persons sworn to hear the evidence against accused persons and determine whether, among other things, there is sufficient evidence to bring those persons to trial.
 - a. Grand jury
 - b. Preliminary hearing
 - c. Jury
 - d. Public forum
2. What decision(s) is (are) made at a suspect's arraignment?
 - a. The suspect is informed of the charges against him/her.
 - b. The suspect is informed his/her rights.
 - c. The suspect is required to enter a plea.
 - d. All of the above are decisions made at arraignment.
3. Please discuss the relationship between public order advocates, individual rights advocates and due process model and crime control model of criminal justice. Be sure to discuss which "advocates" support a particular model.

[Top](#)

LESSON FOUR PICTURE OF CRIME IN AMERICA: UCR

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Identify and describe major sources of crime data
2. Describe the characteristics of the eight index offenses
3. Discuss the limitations of the Uniform Crime Reports (UCR)

LECTURE NOTES

Crime and Social Policy

When used properly, statistics can provide a broad picture of crime in America as well as provide policy makers with a powerful decision making tool. Politicians rely on these statistics to formulate policy, change existing policy and develop new programs. Of course, like the use of any statistics, questions exist as to the collection of the data, etc. For example, Part 1 offenses, known as the major crimes, include eight offenses: murder, forcible rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft, and arson.

Questions we need to propose and answer is why only eight offenses? Why these offenses? Are these the crimes that most affect society and the ones that we are most concerned with? Are there other crimes that should be included/excluded?

Uniform Crime Reports

The most widely used source of crime data is the **UCR--Uniform Crime Report--**from the FBI. This source is based upon **crimes known, or reported to the police.**

Before getting too far into this discussion, one needs to be aware of some of the shortcomings with this measure. The **first** problem with this measure is that it does not account for all crimes because people do not report crimes for many reasons (because they are afraid, or don't think the police can do anything about it, etc). A **second** problem is that many types of crimes are rarely reported and some are extremely difficult to detect. For example, white collar crimes are difficult to detect. Prostitution, gambling, and rape tend to also be highly underreported. Another shortcoming of the UCR is that if an individual commits numerous crimes on an individual, only the most serious is recorded in the UCR. This is called the **hierarchy rule.**

Uniform Crime Reports: History

The UCR program is a nationwide, cooperative effort of over 16,000 city, county, and state law enforcement agencies voluntarily reporting data on crimes brought to their attention.

The program was started by J. Edgar Hoover and the FBI in 1930. While the program's primary objective is to generate a reliable set of criminal statistics for use in law enforcement administration, operation, and management, it has become a source for the general public as well.

An advantage of the UCR is that it standardizes the definitions for criminality, which allow us, to compare cities, states, etc.

Historical Trends of Crime and the UCR

Another advantage of the UCR is that we can look for *patterns and trends* across time. Since the development and use of the UCR, there have been two primary shifts in crime rates across the nation.

The first came in the 1940s when large numbers of men went to fight in WWII, thus causing a substantial decrease in crime. The second came in the 1960s, when the baby boom era reached the crime prone areas. These kids of course, were direct results of these young men coming home from WWII. We also need to take into consideration several other factors that added to the fluctuation, such as social disturbances during the 60s, changes in reporting habits by agencies, increased publicity of crime, implementation of 911, etc. All of these increased the number of crimes reported.

So, we need to remember that the use of statistics only provides a general picture of what is going on. We must use them as a starting point to developing a better understanding of criminality in America. An increase in the rate of crime, does not necessarily indicate an increase in crime.

UCR: Crimes

Generally speaking, Type I offenses can be divided into two distinct types: *violent and property* crimes. Violent crimes include murder, forcible rape, robbery and aggravated assault. While property crimes include burglary, larceny, and motor vehicle theft.

It is important to remember that some crimes are reported at higher rates than others. For example, murder, since you have a body, and auto theft, for insurance reasons. Other crimes, especially rape, tend to be greatly under reported.

Another important statistical measure used are [clearance rates](#): which report the number of crimes cleared compared to the number reported to the police. Please note that cleared only indicates an arrest, not a conviction.

Murder

Murder is the unlawful killing of one human by another. Included in this measure are all cases of nonnegligent homicide reported to the police. This measure does not account for suicides, justifiable homicides, deaths by accidents or attempts to murder. Murder consistently has the highest clearance rate, it was 64% in 1994.

A distinction exist between *mass murderers and serial killers*. [Mass murderers](#) need to kill a minimum of four people at one time; serial murders need to kill several individuals in three or more separate events.

Forcible Rape

This is the *least reported* of all violent crimes. Most research suggests that only 25% of all rapes are reported to the police. This is mainly due to the victim's embarrassment of the incident, the physical exam, etc. It is also important to realize that rape is not classified as a sex crime. It is in fact a crime of violence and dominance.

As with murder, most rapes are committed by acquaintances, and during the summer months.

Robbery

Robbery involves personal confrontation between a victim and a perpetrator. Most robberies are committed against an individual, while banks, gas stations and convenience stores are second most common.

Aggravated Assault

There are two types of assaults, aggravated, which indicates the use of a weapon or required medical attention, and simple, which requires neither. As with most other crimes, aggravated assaults increase in the warmer weather. These crimes have a high clearance rate due to the fact that the victim usually knows the perpetrator.

Most assaults (32%) are committed by a blunt object, while 26% by some body part and only 18% by firearms.

Overall, there have been substantial reductions in all the violent crimes over the past 20 years, thus, decreasing the violent crime index.

PROPERTY CRIMES

Burglary

Primarily a property crime occurring most often during the day, when we are at work or in school. In fact, only 10% of burglaries occur when someone is home.

If you happen to walk into a burglary in progress, your chances of being injured are greatly increased than if you were already home.

Larceny

Larceny consists of various types of thefts, (purse snatching, pocket picking, etc.) and has been called the catch all category of the UCR. It is important to remember that larceny typically deals with tangible items, making many high technology crimes unaccounted for.

As one might imagine, this category is the largest of the violent crimes. It is also considered by many to be the most underreported; due to the fact that many people may believe that it was not worth reporting.

Motor vehicle theft

The definition of this category is primarily limited to automobiles, snow machines, buses and motorcycles. Excluded, of course, are spacecraft, trains, planes, etc.

This category tends to have high levels of reporting, since insurance companies require a police report before any funds will be released. There were nearly 1.5 million vehicles reported stolen in 1994, with a clearance rate of 14%.

Arson

Includes the burning or attempted burning of property with or without intent to defraud. This category is usually not included in the crime index or rate because of the low level of reporting to policing agencies. It is estimated that just over 50% of departments report their arson cases.

Like the violent crimes, there have also been substantial reductions in property crimes reported in the past 20 years.

PART II OFFENSES

Part II offenses are for recorded arrests, crimes not reported and victimless or social order crimes including: vagrancy, runaways, vandalism, public drunkenness, etc.

Proposed Changes

As eluded to earlier, there are several shortcomings in using the UCR. Because of that, there are numerous proposed changes, which primarily focus on the clarification and broadening of the categories. For example, it is suggested that the rape category should include all forcible sex offenses. Also, that the hierarchy rule should be changed to the most serious offense for each individual victim. Efforts are also underway to implement a more complete reporting system that includes information about the crime, such as the weapon used, what was stolen, personal characteristics, etc.

QUESTIONS

1. As discussed in the book, reported incidences of rape have dramatically increased over the past 25-years. Please provide an explanation for this increase.
2. One major problem with the UCR is that many people do not report crimes committed against them. Why do you think people are hesitant to report crimes?
3. Below is a list of Part I offense examples. Please indicate which Part I offense category applies to each.
 - a. A college freshman visits a friend's residence hall and forces her to have sexual

intercourse.

b. A woman is caught after she puts a gun to an elderly man's head and takes his wallet and watch.

c. A man drives his car into a group of teenagers. Six teenagers had to be taken to the hospital for treatment of their injuries.

LESSON FIVE

A CLEARER PICTURE OF CRIME IN AMERICA: NCVS

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Discuss the strengths and limitations of the NCVS
2. Compare and contrast the UCR and NCVS

LECTURE NOTES

The National Crime Victimization Survey (NCVS)

Developed in 1972, the [NCVS](#) is based upon self reports, rather than police reports, and is administered to roughly 42,000 households twice a year and shows a higher prevalence of crime than the UCR.

The NCVS includes data on rape, robbery, assault, burglary, personal and household larceny, and motor vehicle theft. Of particular importance is that murder, kidnapping and victimless crimes are not included.

As with the UCR, the hierarchical mechanism is used and completed yet attempted offenses are counted. One limitation is that only those 12 years and older are included. The primary problem with the NCVS is that it is based upon self reports, which lend themselves to several problems, such as faulty memories, misinterpreting the events, etc.

What picture of crime does the NCVS provide? Well, here are some findings:

- Young males have the highest rates of violent victimizations, while elderly females have the lowest.
- Violent victimization rates are higher in low income areas
- Blacks are more likely than any racial group to be victimized
- City residents are more likely to be victimized than rural residents
- The chance of a young black male being murdered are 1 in 21, while 1 in 369 for a white female

As with the UCR, this measurement is also undergoing constant revisions, many of them aimed at gathering more information concerning a criminal event. For example, revision is taking place with interaction between the victim and offender, bystander behavior, and use of drug/alcohol by the offender. All of these are aimed at getting a more complete picture of crime.

QUESTIONS

1. Please describe the major differences between the UCR and the NCVS.
2. Many individuals state that the UCR and NCVS provide different "pictures" of crime in America. Do you agree or disagree with this statement? Please discuss your response.
3. The NCVS provides some interesting findings, please describe what these findings suggest about crime in America?

[Top](#)

LESSON SIX PATTERNS OF CRIME IN AMERICA

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Discuss emerging patterns of criminal activity
2. Discuss the economic costs of crime

LECTURE NOTES

Fear of Crime

Numerous public opinion surveys throughout the early 1990s have indicated that Americans, in general, hold high levels of [fear toward crime](#). Interestingly, those that have the highest levels of fear, generally have the least to worry about, while those that do not have high levels, are probably the ones that need to be concerned, (elderly females, and young males).

Women and Crime

In general, women become victims much less than men do in every category except rape. Ironically, however, women tend to hold higher levels of fear of crime than men. In fact, women will adjust their lives more around safety issues than men.

Most studies have also found that women are more likely than men to be a victim of a violent crime by

someone they know, usually a former intimate. Given this, separated or divorced women are six times more likely to be [victims of violent crimes](#) than widows, and four and half times more than married women.

Also, the most likely characteristics of a woman victim is that she comes from the central city area, low-income family, is black and between the ages of 18-24. It seems that a substantial amount of victimization can be reduced through increased emphasis in alleviating some of the social conditions, especially dealing with domestic assault.

Women Offenders

While we hear a lot about women as victims, we rarely hear about [women as offenders](#), although the prevalence is increasing. This area of study really came to the fore when Susan Smith admitted to strapping her kids in the car and drowning them.

Well, it seems that women commit far less crime than men. In fact, they are arrested for only 14% of violent crimes and 27% of property crimes, while making up 51% of the population. That is the good news. Here is the bad news. The prevalence of [women committing crimes](#) seems to be increasing at a faster rate than men. For example, violent crimes by men only increased 155% between 1970 and 1994, and 282% by women.

The Economic Cost of Crime

Attempting to estimate the total cost of criminal activity in America is an arduous task, one that is probably not all that reliable. However, numerous individuals/agencies have attempted such a feat. For example, BJS estimated that the personal cost of crime at around 17.6 billion dollars a year, which is a substantial amount. However, they do not include lost work time, medical care, and other indirect costs. Also, this is only based on dollar amounts, and therefore ignores the personal attributes and effects. To overcome this, a health journal took into account some of the medical bills included and upped the total to \$202 billion annually.

Of course, these are only the monetary concerns, a prevailing theme has been that personal characteristics affect the likelihood of becoming a victim. Hence, it also affects your average losses. For example, families that make less than \$7,500 suffered two times the rate of burglary than those in the \$50,000+ income categories.

In terms of system costs, the federal government spends about \$16.5 billion, only about 5% of its budget. On the other hand, states spend around \$80 billion, taking up a large proportion of criminal justice costs.

Drugs and Crime

Most studies conducted on all criminality find a direct association between the usage of drugs/alcohol and criminal activity. There are two dimensions to this, committing crimes while under the influence or committing crimes to support one's habit. The worse the habit, the more crime one commits. Drug abuse costs nearly \$60 billion a year, with most of that being attributed to lost job time.

The Elderly and Crime

While the elderly (65+) only account for 1% of crime, their behavior appears to be changing. For example, the number of serious crimes more than doubled between 1975 and 1994. Also, elderly are being sent to prison at higher proportions for violent crimes than others, over 50%. Should we panic at this increase? Is there a gerontological crime wave? Or is there another explanation? There are several possibilities, but one of the most likely is that since their proportion of the population is increasing, their prevalence for criminal activity may also be increasing.

Hate Crimes

Hate crimes are those in which there is evidence of prejudice based on race, religion, sexual orientation, or ethnicity.

Hate crimes have captured the nation's spotlight in the past few years. From the bombing that occurred in Oklahoma City, David Koresh, and stand-offs in Northern Idaho and Texas, there seem to be increased incidents in organizations with politically oriented radical agendas. Some of the most common groups include: the Ku Klux Klan, Neo-Nazis, Skin Heads, Tax Protestors, the Christian Conservative Church, Aryan Nation, etc.

Since the criminal justice system has been limited in their capacity to deal with them, we need to consider an important point. When we look at these types of groups, they highlight the dichotomy between individual rights and the need for social order. In fact, most courts have ruled that these groups have a right to march in parades, burn crosses, etc. So, it seems that legally, they have the support of the Constitution.

So, the criminal justice system must struggle with the following: how can we limit their behavior, while at the same time, protect their individual rights?

Organized Crime

Probably one of the most intriguing areas of criminality deals with organized crime, especially the mafia. Hollywood, as well as society in general, has always been fascinated by the operations of the Mafia. Since we are probably aware of the history and inner workings of the Mafia, we can focus on the amount of money that is generated, nearly 60 billion dollars a year!!!

Through a very rigid hierarchy and a willingness to do whatever it takes, the Mob has been able to establish a stronghold in America, although it appears to be weakening with the new Federal RICO laws used against these individuals.

Conclusion

Well, as we can tell from the previous material, it appears that the crime picture is a little clearer. We should have a better understanding of types of crime in America, the characteristics of offenders and victims, and the influx of specific crimes.

We find that victimization depends on numerous factors, of which location, gender, and age are a few.

QUESTIONS

- 1.The recent increases in criminal activity of women is somewhat unique in American history. Do you think that women are becoming as criminogenic as men? Or, is there another explanation for these increases?
- 2.In terms of criminal behavior, why do we tend to look at men and women differently in terms of their behavior? Why do you think that men and women have different criminal behavior patterns (i.e., is it biological or sociological)?
- 3.Given the recent focus on hate crimes, do you think that the number and intensity of hate crimes will increase or decrease in the near future? Please explain your answer.
- 4.Organized crime involves the supplying of illegal goods and services such as
 - a. gambling
 - b. prostitution
 - c. labor racketeering
 - d. all of the above
- 5.Elderly violent crime victims are more likely than younger victims to
 - a. face offenders armed with guns.
 - b. be victimized by total strangers.
 - c. be victimized in or near their homes.
 - d. all of the above.

[Top](#)

LESSON SEVEN CAUSES OF CRIME: PART I

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- Discuss the process that occurs in building theory
- Discuss the foundations of the Classical School of Criminology
- Discuss the foundations of the Positivist School of Criminology
- Identify the characteristics of biological and psychobiological explanations to criminal behavior

LECTURE NOTES

Up to this point, we have discussed the process of criminal justice and the ways in which we measure the level of criminality in our society. Now, we turn our attention to developing a better understanding of why crime exists in America. Essentially, we are going to discuss the different criminological theories that attempt to explain criminality.

First of all, we define *crime*, as an act that is in violation of the criminal law. This means that it is definitionally a crime--it is not a crime unless there are legal definitions stating that it is a crime. This differs from *deviant behavior* in that deviant behavior is a violation of social norms, not criminal law.

Criminological Theory

Theory is a model that specifies causal relationships between variables. More specifically, a theory consists of interrelated propositions that attempt to describe, explain, predict and control a class of events. An important element of a theory is the hypothesis, or the "if-then" statement. For example, it is a common assumption that if people take drugs then they are more likely to engage in criminal acts.

There are a number of competing theories. Is there a way in which we can distinguish between good and not-so-good theories? Well, a good theory tends to be logically consistent and provides a complete understanding of a particular phenomena. It tends to make sense and has empirical support.

THE CLASSICAL SCHOOL

Assumptions:

- Crime is caused by freewill
- We are rational individuals
- We seek pleasure and avoid pain
- Crime deteriorates the bond between the individual and society, thus it is immoral
- Punishment is essential and needs to be swift and certain

Ceasare Beccaria

In the late 1700s, Beccaria suggested that criminal law become more humanitarian, in fact, that punishments should be just strong enough to offset the tendency toward crime. Therefore, just enough to deter, but not excessive. He has been called the "Father of the Classical School."

Jeremy Bentham

A follower of Beccaria and developer of the hedonistic calculus, which is based on the idea of free will and rationality. In general, Bentham suggested that the punishment needs to outweigh the benefits of criminal behavior. This has been called the *utilitarian perspective*.

Biological Theories

Assumptions:

- Basic determinants to human behavior are genetically based
- Since they are genetically based, they can be inherited
- Some behavior may be more evolutionary deficient than others

Ultimately, biological theories argue that criminality is based in our genetic makeup, not in our social surroundings.

Phrenology:

Franz Joseph Gall developed what is known as phrenology, or the study of one's skull. Essentially, studying the shape of the skull revealed characteristics of the brain.

POSITIVIST SCHOOL

Cesare Lombroso

Also drawing upon genetic makeup, Lombroso, from one case study, considered criminals to be atavistic human beings. That is, they were genetic throwbacks. This included the traits of: long arms, large lips, crooked noses, etc. Hence, you could identify a criminal by simply looking at him or her.

Another major contribution made by Lombroso was his use of *observation and the development* of his theory. He was the first individual to undergo this process called science. Hence, he is known as the *father of modern criminology*.

Is there any evidence to this claim of atavism? Not much. Most of the research conducted does not show a link between body characteristics and criminality.

Criminal Families

The strongest evidence supporting inherited criminality would be a family of criminals. Is there such a

thing? Well, research in the area, conducted in the early 1900s has found such families.

The Juke family

Had six illegitimate girls, that over a 75 year period, produced 1,200 individuals, most of whom were criminals.

The Kallikak family

Another study, which is a little more extensive, found that the Kallikak family had two clear lines of decedents, legitimate and illegitimate. The legitimate line produced 496 offspring, of which only three were abnormal and none were criminal.

On the other hand, the other line produced 480 offspring, of which more than half were "feeble-minded" and criminal.

Psychobiological Theories

There is another strain of biological theories that blends biology and physiological perspectives. Essentially focusing on the interplay of DNA, nutrition, hormones, physical trauma and environmental contaminants.

Chromosome Theory

This theoretical perspective focuses on the chromosomal makeup of individuals as responsible for criminality. Early studies contended that males with XYY tended to be more aggressive than other males, called "super males." However, these findings have been repeatedly disputed.

Biochemical

Many researchers have also attempted to link our eating habits with our behavior, especially violent behavior. Most of this research has focused on vitamin deficiencies, allergic reactions, too much sugar or caffeine, etc. All of which do not have much empirical support.

However, more support is being found that suggests high levels of testosterone may be indicative of sexual aggressiveness in males.

Heredity and Environment

An interesting marrying of theories occurs when theorists combine biological factors with environmental factors.

For example, studies conducted on children adopted at birth, found them to reflect the criminality of the biological parent, regardless of the environment. Also, identical twins have greater similarities in personality than fraternal twins and are more alike in criminal patterns.

So there does seem to be some support for inheritance. Taking this a step further, Wilson and Hernstein (1990) contend that inherited traits such as maleness, aggressiveness and low intelligence, combined with influences from the environment, (bad schools and family) to produce crime. These researchers do note that early intervention may divert these future criminals away from a life of crime, and that family life is the most important indicator.

QUESTIONS

1. In terms of biological explanations to criminality, do you think that our perceptions of how criminals look affect our behavior towards some individuals? For example, O.J. Simpson and Ted Bundy?
2. Please describe how the Classical School of Criminology may affect social policy concerning criminal behavior.
3. Which school explains criminal behavior by looking at gene structure, hormones, and inheritance?
 - a. Biological school
 - b. psychological school
 - c. sociological school
 - d. social-psychological school

[Top](#)

LESSON EIGHT CAUSES OF CRIME: PART II

LEARNING OBJECTIVES Upon completion of this lesson, the student should be able to:

- Identify the assumptions of psychological theories of criminal behavior
- Discuss the various psychological theories of criminal behavior
- Identify the assumptions of sociological theories of criminal behavior
- Discuss the various sociological theories of criminal behavior
- Discuss the social-psychological theories of crime

LECTURE NOTES

PSYCHOLOGICAL THEORIES

Assumptions:

- The individual is the primary unit of analysis
- Personality is the major motivational element within individuals
- Crime results from inappropriately conditioned behavior, or from abnormal, dysfunctional or inappropriate mental processes within the personality
- Defective or abnormal mental processes may have a variety of causes, including a diseased mind and inappropriate learning or improper conditioning, often occurring in early childhood

Behavioral Conditioning

Behavioral conditioning is a psychological principle which holds that the frequency of any behavior, including criminal or deviant, can be increased or decreased through reward, punishment, and/or association with other stimuli. This also relates to the concepts of reward and punishment to the free will and hedonistic ideas of the classical school.

The most prominent example is that of Pavlov and his work with dogs. Ringing the bell before feeding, caused salivation, hence, he would ring the bell and the dogs would begin to salivate.

Freudian Psychoanalysis

According to this theoretical framework, we have an id, ego, and superego that make up our personality. According to Freud, crime could result from three conditions.

First, is a weak superego, which cannot control the drives which emanate from the id, which is where your sex drive lies.

Second, sublimation, where we substitute one thing for another. For example, we dislike our mother, repress this as a child, and boom, it escapes when we are older.

Third, based upon the Thanatos, or death wish that inhabits all of us. Essentially our self-destructive motives and actions.

Psychopathology and Crime

As mentioned earlier, crime may come from a diseased mind or personality, which can be referred to as psychopathy.

Within this area, there are some distinctions, primarily between [psychopath](#) and psychotic. A psychopath or sociopath, is often seen as very cruel, usually without regard to their victims. These types of individuals are characterized by their lack of affect, or their inability to imagine how other people feel or

think. Unfortunately, it is very difficult to pinpoint the causes of psychopathy, but it is believed that a lack of love at a very young age is largely responsible.

Psychotic individuals, on the other hand, are out of touch with reality. They experience hallucinations, delusions, etc. These are the people who think they have bugs crawling on them, or situations similar to this. These may result from organic causes or unknown reasons.

Psychological Profiling

This is an attempt to find the criminal by looking at the crime in question and developing a psychological picture of the individual. The prevailing assumption is that criminal behavior is a symptom or reflective of an individual's personality.

SOCIOLOGICAL THEORIES

This area has given the largest contribution to the study of crime in America and is based upon the following assumptions:

- Social groups, social roles, and institutions provide the focus for criminological study
- Group dynamics and relationships form the areas in which crime develops
- The structure of society. That is, its organization or disorganization, are important factors contributing to criminal behavior

Social Ecology Theory

This theory rose out of the University of Chicago in the late 1930s, led by Robert Park, Clifford Shaw, and Ernest Burgess. These individuals conducted their research on the city of Chicago and mapped it according to its characteristics, developing concentric zones around the city. They found the areas nearest the inner city had the highest rates of crime. Therefore, they came to the conclusion that structural elements and social characteristics such as poverty, illiteracy, lack of schooling, etc., lead to social disorganization, which produced crime.

Anomie

Anomie refers to normalness and is usually used in the context referring to the disjuncture between socially acceptable goals and means in our society. Robert Merton contended that while everyone desired the same goals, such as wealth, status, power, etc. and means in society, not everyone had the same access to them. Therefore, since these goals are common, and some individuals cannot reach them legitimately, they will go through illegitimate means to achieve them.

An important contribution of this theory is that it highlights the lack of equality that exists in terms of opportunity in America.

Subcultural theory

A subculture is composed of a group of individuals that share a common system of values and norms which are at odds with larger society.

Theorists utilizing this perspective contend that crime is a result of individual groups holding criminal behavior as a good thing. Work done by Wolfgang and Ferracuti suggests that subcultures of violence may exist in our country. That is, groups of individuals that value violence.

SOCIAL-PSYCHOLOGICAL THEORIES

Theorist's within this paradigm explain criminal behavior by relating such behavior to the cultural environment in which the individual is a part. Hence, many of these theories are oriented around the social learning of an individual.

Differential Theory

This perspective, led by Edwin Sutherland, viewed criminal behavior as a product of socialization, much like other behaviors. Therefore, this type of socialization, i.e. hanging around criminals, is viewed as normal behavior in ones' perspective. It was not seen as different nor bad.

Restraint Theories

Containment theory

This group of perspectives is a bit different than the previous ones discussed. For example, containment theory indicates all of us are subject to criminal inducement. However, some of us resist the push to commit crime while others do not. The differences are found in our behavior.

Walter Reckless suggested two types of containment. The first is inner, which involves things such as self image, aspirations, and tolerance for frustration. The second is outer, and depends on social roles, norms, etc.

Those of us who have strong inner containment are able to resist better than those who do not.

Social Control Theory

This theory was developed by Travis Hirschi, who contended that the bond between individuals is the primary operant mechanism in society. For example, emotional attachment to others, commitment to the appropriate lifestyle, involvement in conventional values and a belief in the correctness of social rules

and values. These are the social control mechanisms, and when they are weakened, then criminal behavior is more likely.

This theory, and restraint theorists in general, tend to focus on why we do not break the law, therefore, they have difficulty in identifying social structures that may promote criminal behavior.

Neutralization Techniques

Gresham Sykes and David Matza developed a theoretical perspective. Their prospective contends while most people drift in and out of criminal behavior, crime would not be committed unless individuals could neutralize the situation. That is, they could rationalize. For example, individuals that are able to deny responsibility, deny injury, deny the victim, or appeal to higher loyalties, are able to neutralize their criminal behavior.

The differences between restraint and neutralization are as follows: restraint theories tend to rely upon a general set of values, upon which individuals temporarily stray. Neutralization, on the other hand, is only needed when the individual has been socialized in middle class values, or when one has a well developed conscience.

QUESTIONS

1. Using the case of Jeffrey Dahmer or Ted Bundy, please discuss how his criminal behavior would be described by psychological and sociological theories to crime causation.
2. Please compare and contrast the theories of social control and behavior conditioning in terms of criminal behavior.
3. Of the theories described in this section, which do you believe provides the "best" explanation of criminal behavior? Why?

[Top](#)

LESSON NINE CAUSES OF CRIME: PART III

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- Discuss the assumptions of conflict theory and phenomenological school of criminology
- Identify and discuss the various theoretical perspectives within conflict theory and phenomenology

LECTURE NOTES

Conflict Theory

This perspective is organized around the understanding that society is based upon conflict, which most likely cannot be resolved.

Conflict theorists contend that the rule of law, formal agencies and those that have power and wealth in America, coerce the powerless into abiding by the established rules, which favor the rich and powerful.

Assumptions

- Diversity permeates society. That is, differences based upon gender, ethnicity, sexual orientation and social class
- Conflict is inevitable because of these diversities
- Group conflict centers around the attainment of political power, which is the key to success
- Law is a tool used by the powerful to gain more power and to legitimize their activities

Radical Criminology

With the tumultuous social order in the 1960s, a new theoretical perspective began to surface, known as [radical criminology](#).

Adherents to this perspective had a simple explanation for criminal behavior, it was caused by the cultural and economic arrangements of society. In essence, the argument was that the attainment of the "American Dream" was not possible for large groups of individuals, which lead to large degrees of frustration, which then expressed itself in rape, murder, theft, etc. The most recent strain of radical criminology has been advocated by individuals such as William Chambliss and Richard Quinney. Again, these scholars contend that the causes of crime are rooted in social inequities.

The New Criminology

This perspectives has its roots in Europe, especially in the social welfare countries, where theorists contended that social change was necessary in order to eliminate social injustice.

An underlying assumption of all the conflict theories is there is some kind of achievable utopia in which all crime will be eliminated through social arrangements.

Peacemaking Criminology

The third type of conflict theory is peacemaking theory, which advocates citizens and criminal justice

agencies to become partners in solving social problems such as crime. Underlying this particular perspective is compassion, wisdom and love for humanity. This has broader implications than just crime.

Phenomenological School

This perspective is based upon George Mead's development of symbolic interaction, which suggests that people give meaning to things around them and to their lives. Therefore, behavior in one area, which may be considered normal, may under different circumstances and times, be considered deviant or even criminal. Hence, crime is a social creation, a definition, not an inherently evil or bad act.

Assumptions

- Significance of behavior depends upon the social consensus about the meaning of that behavior
- Crime is a product of interpretation and social definition

One of the most complete studies in this area was conducted by Yochelson and [Samenow](#). The importance of their study, and this theoretical perspective, is to understand a phenomena, you almost have to experience it.

These two individuals conducted detailed data through interviews on 255 individuals and came up with 53 identifiable behavioral patterns that were common across these individuals. A very important finding was that criminals did not view themselves or their behavior in the same light as society did.

Labeling Theory

Labeling is fairly straightforward. Crime, or criminal behavior, results from a social definition of unacceptable behavior developed through legislative morality. Therefore, deviance is created by society. Thus, the cycle goes as follows: you behave in a manner that is against the morals of society, get labeled, cannot get a job, etc., and the label expands, etc.

NEWER THEORIES

A newer theoretical perspective is **feminist criminology** which is bringing to the fore a better understanding of the interaction of [women and the system](#) or as perpetrators. After all, much of society is structured along gender lines, hence, crime and criminal justice are not exceptions, thus it needs to be examined. Men and women hold different behaviors, and we need to understand these better.

QUESTIONS

1. Radical criminology is relatively new and has undergone numerous alterations since its inception. Please describe the historical development of this theory and discuss its impact

on society.

2. Is the study of criminal behavior through feminist criminology a worthwhile endeavor? Why or why not?

[Top](#)

LESSONS TEN & ELEVEN

MEDIA AND CRIME

This paper is intended to provide additional insight into important issues concerning crime and what is facing the criminal justice system. The topic of this paper is "Media and Crime." The lecture included in this lesson is provided to stimulate critical thought. After reading the lecture, the student is required to write a 3-5 page paper concerning "Media and Crime." The student can write on anything he/she believes is pertinent within this topic area. Suggestions include, watching television and recording the number of violent acts over a certain period of time, reading several news articles and describing the crime related articles, etc. The paper should be at least 3 pages long, margins no more than 1 1/2 inches on each side, top, and bottom. Cover page, end notes, and bibliography do not count as part of the 3-5 pages. Yes, it is necessary to provide a bibliography. Font should be no larger than 12 point.

MEDIA AND CRIME

INTRODUCTION

1994--A study was conducted that evaluated 18 hours of television in the Washington, D.C. market on a Thursday. They found 2,065 instances of violent acts, of which, 1,141 were classified as serious. The same study found that while network news coverage of murder had tripled, the crime rate had remained stable.

Other studies have indicated that an average child, by the time he/she graduates from elementary school, views 8,000 murders and 100,000 violent acts through the media.

Here are some familiar headlines in the news:

"You can still see the blood on the asphalt, and everyone remembers the screams . . ."

"The town will never be the same, we are not safe..."

"Another child a victim of a brutal murder..."

Also, considerable news time is spent on high speed chases, drive by shootings, murders, etc. In fact, weather, natural disasters, leisure topics, health and medicine are not the core for network news. A

nationwide study covering six cities found that an average of 29.3% of news stories were devoted to crime and criminal justice issues, while only 2% were devoted to education, and 1% devoted to social problems.

WHY STUDY THE MEDIA, CRIME AND JUSTICE?

The media are not neutral, unobtrusive social agents providing simple entertainment or news, they are extensive and persuasive. Research shows that Americans watched an average of four hours of television a day. If you include radio and newspapers, the influence is substantially increased.

It's a basic assumption that the media's changing coverage of and impact on crime and justice is found in its role in the *social construction of reality*:

- People create reality. The world as they believe it exists, based on their social interactions with other people. People then act in accordance with their views of reality and society.
- Essentially, we gain information from four main sources: personal experience, significant others, social groups and institutions, and lastly, the media. Through our socialization, information from these is mixed, allowing us to create our reality.
- This reality contains things we believe to be true, things we believe to be happening, our values, opinions, and beliefs.
- Now, the importance of the sources of information vary among people, but in general, research has indicated that the media is taking precedence over the other three. Thus providing us with powerful frames of reference in which to view the world, shape opinions, beliefs, and possibly, behaviors. In terms of criminal justice, research suggests that 95% of our information about crime comes from the media.

MEDIA'S INFLUENCE ON ATTITUDES AND BELIEVES ABOUT CRIME AND JUSTICE

To what extent does the [media actually influence people's attitudes](#), and how significant is this impact? What about advertising? The main emphasis of advertising is to influence us.

Does the media distort? A one year study conducted in Los Angeles found that 51% of news coverage was devoted to crime issues. Seventy-eight percent was violent, with 27% murders. Interestingly, only 2% of all felonies in this area are murders.

In this same area, 50% of crimes by blacks are violent, while 47% of crimes by whites are violent. However, media portrayal is such that 61% of news coverage was about black perpetrators, while 36% were about white perpetrators. This is a big difference.

In essence the media effects on attitudes are variable. They are more common for television than for newspapers, appear to increase with exposure, are more significant the less direct experience people have with an issue, and are more significant for newer issues but diminish quickly.

THE SHAPING OF PUBLIC ATTITUDES AND BELIEFS ABOUT CRIME AND JUSTICE

Numerous studies have substantiated the association between the media and mean-world attitudes. The "mean world" attitude developed from television, and is also influenced by the surrounding area where the individual lives. For example, those individuals that actually live in a "mean world," the effect of the media is less, and visa versa. So, it seems that less experienced people are more influenced by the media. However, as usual, the exact nature of the relationship, that is, how the media actually influences attitudes and beliefs about crime, is quite complex.

Research has also shown a strong correlation between heavy television viewing and factual misconceptions about criminality and violence, and increased support for higher levels of spending on crime control related issues.

Interestingly, research suggests that newspaper exposure tends to be associated with beliefs about the distribution and frequency of crime, whereas television exposure is associated with attitudes, such as fear of crime and victimization. So there does seem to be a difference depending upon the medium.

THE BIG ISSUE: PORNOGRAPHY

More consistency exists in this area. In fact, there are high levels of agreement on comparative studies between subjects exposed to sexually aggressive material and subjects exposed to nonviolent sexual material. This clearly indicated that nonviolent sexual material results in fewer antisocial attitudes and beliefs than sexually violent media. So, there is a strong distinction between *violent and nonviolent*.

Another important aspect is that virtually no research indicates a direct link between [violent pornography and crime](#). Instead, it is an interplay between individual predispositions and the material. Pornography does not cause crime, but is one important factor for certain individuals.

THE MEDIA AS A CAUSE OF CRIME

Psychological studies, mainly focusing on childhood development, have found that children are highly susceptible to media influence during these times. In fact, one longitudinal study showed that eight-year-old boys who viewed the most violent shows, were more likely to engage in aggressive and delinquent behaviors by age 18, and serious delinquent criminal behavior by age 30.

However, there is a consensus among researchers that televised or visual violence can elicit aggressive behavior in some viewers. Again there is a distinction between print and visual media, with print having little to no effect.

Of interest, of course, is the issue of [copy cat crimes](#). Research indicates that while this is a social

phenomena, it can be substantial. The movie "Natural Born Killers" is said to have caused fourteen copy cat murders. Most important is that research does not show that it causes crime, but may influence a criminal's choice of criminal techniques. Also, copy cat criminals are more likely to be career criminals engaged in property crime. Again, not criminogenic, but influential.

The more heavily the consumer relies on the media for information, and the greater his/her predisposition toward criminality, the more likely there will be a strong effect. Therefore, violence-prone children and the mentally unbalanced are especially at risk. What is not known, of course, is the size of this at risk population.

CONCLUSION

It appears we can come to several conclusions concerning the impact of media on our perceptions and behaviors.

- The difference between print and electronic media are that, television evokes emotional responses, such as fear of crime, while print provides more knowledge.
- In the end, the relationship depends upon three factors: the medium being discussed, the mediums' style of presentation and content, and the experiences, predispositions, and immediate community of the consumer.

So, it seems the media can indirectly affect the way we perceive, interpret, and behave toward the world by influencing the social construction of reality. Therefore, since we behave in accordance to our perceptions of reality, and the media are influential in that perception, it is logical that the media can influence our behaviors related to crime and justice.

LESSON TWELVE HISTORY AND PURPOSE OF THE LAW

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Describe the sources of modern law
2. Identify the purposes of law
3. Describe the historical development of law

LECTURE NOTES

History of Law

As with most social phenomena, the best understanding comes from a firm grasp of the philosophical foundations as well as the historical roots of that phenomena. Law is no different. Therefore, we will examine the foundations of law in terms of its historical roots, which has six major contributors.

Code of Hammurabi

The earliest written body of law, that we know of, comes from the [Code of Hammurabi](#), which was developed by King Hammurabi around 2000 BC in the city of Babylon. The importance of these laws is that they attempted to routinize the practice of justice, specifically in terms of punishments. The main focus of these laws was on property rights, sexual relationships and interpersonal violence.

Again, the Code of Hammurabi is important in that it was the first attempt to codify law and routinize punishments.

Early Roman Law

More closely related to our body of law is Roman law. This dates back to about 450 B.C. and [the twelve tables](#), which were a collection of rules governing family, religion, and economic life.

Further development came under the rule of Justinian I, around 527 A.D. Essentially, he took most of Roman law and wrote it down, developing the Justinian Code, clearly distinguishing between public and private laws. As might be expected, public laws dealt with governmental affairs, while private laws dealt with individuals.

Common Law

The major contributor to our legal foundation comes from common law, which refers to the traditional body of early unwritten legal precedents created from everyday English life, such as social customs and rules. These laws became part of a growing body of legal decisions which then became codified into rules and laws, taking the next step to becoming national law. Court decisions eventually were written down, allowing access to them, and influencing other decisions, while giving rise to the use of precedents.

So, the [evolution of common law](#), from community level norms and regulations, to national law, reflects the development of precedents, which are critical to our legal system here in America.

The Magna Carta

The fourth source contributing to the development of law is the Magna Carta. This was the document British Barons pressured King John of England into signing on June 12, 1215. It was a pledge or promise from the king to respect the rights of citizens.

In terms of American law, this document has been credited with contributing "due process of law" and the U.S. Supreme Court, and has been called the foundational stone of our present liberties.

The U.S. Constitution

Turning to more recent developments, the [Constitution](#) sticks out as the major contributor. A product of years of debate, the Constitution defines and outlines the rights that individuals possess, the power of the federal government to create and enforce laws, and the limits of punishments. As we know, in terms of criminal justice, the 5th, 6th and 14th Amendments contain the principles of due process.

We can also characterize the Constitution as a guide in which Courts draw upon in making their legal decisions.

Natural Law

The fundamental basis of the Constitution comes from what is called *natural law*. It can be defined as law that comes from outside the group and is knowable through revelation, intuition, reason, or prophecy. This has religious roots in the Bible as well as other religions. For example, the Ten Commandments.

In terms of the Constitution, we see the influences of natural law in statements such as "inalienable rights", and "truths held to be self-evident." These refer to the natural rights that men and women possess, before they are citizens of the country. In other words, we are born with these rights.

Mala in Se and Mala Prohibita

Emanating from natural law, is the belief that certain acts are inherently wrong, or evil, which are called *mala in se*. Which means *crimes against humanity*.

Many of these crimes include rape, murder, and other violent crimes. However, many states have developed broad "crimes against nature," which include things such as homosexuality, bestiality, oral copulation and other "perverse" sexual acts. The reasoning, again, draws from religious roots and morality that these crimes are inherently evil and wrong, as well as unnatural.

The other category, *mala prohibita*, refers to crimes that are wrong because they are prohibited by law.

We can see the parallels of these two distinctions to some criminological theories. *Mala in se* seems to parallel classical criminology, while *mala prohibita* relates to those theorists that believe crimes are social definitions.

PURPOSES OF THE LAW

Laws are created and implemented to provide protection and prevent victimization of individuals by those that tend to give in to individual desires. If you cannot conceptualize a society without laws, think

about countries that are involved in war and the atrocities that are committed.

Overall, laws are essential because they promote the social order, and promote stability in our lives. They maintain social values and morals, they also maintain the power structures in the country. They sustain our individual rights and they provide punishment for those that transgress the laws.

Laws are very difficult to change, primarily because they are rich with tradition and tend to support the predominate social order.

There are two primary theoretical schools on the purpose and role of law in terms of social change. The first is based upon the thinking and writings of [Roscoe Pound](#), who believed that law was a type of social engineering, and it must change with the times to reflect social needs. He is known for his development of a consensus theory about the origins of law, and that laws represent the majority of members shared social needs. As you might imagine, in our diverse society this would be very difficult. Therefore, he developed the *jurisprudence of interest*, which held that law should satisfy as many claims and demands of the various groups of people as possible.

Contrary to this theoretical school, is the school of thought led by *William Chambliss*, who contends that law is a tool of the powerful used to promote their own self interest, which is often in conflict with the needs of society. Whereas Pound's framework suggests a neutral role for the law, Chambliss argues that law is not neutral but used by the powerful in our society.

For example, our laws are based on written codes called **statutes**, which are a reflection of powerful interests in America pressing their moral beliefs upon others. Take for example, prohibition in the 1920's. This was advocated by a small minority and pressed by the Women's Christian Temperance Union, which along with other groups, were successful in having the constitutional amendment passed. So, it appears that our statutes and laws may not be a reflection of the majority, but instead, a reflection of those individuals that are better organized and able to press their moral beliefs upon others.

QUESTIONS

1. Please discuss the role that laws play in American society. In your discussion, address whether or not our society could continue without laws.
2. With the method in which our laws are made in America, are they simply a reflection of interest groups or a mirror image of all groups in society?
3. Please describe the differences between *mala prohibita* and *mala in se* offenses. Be sure to include examples in your discussion.

LESSON THIRTEEN

TYPES OF LAW AND CATEGORIES OF CRIME

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Identify the different types of law
2. Describe the elements of a criminal act

LECTURE NOTES:

There are five distinct types of law in our country: criminal, case law, procedural law, civil law and administrative law.

Criminal Law

Crimes in our country are seen as detrimental to society as a whole; that is, society and everyone in it, are effected by criminal acts. More recent scholars contend that any criminal act tears at our social and moral fabric.

This is the reason that in criminal trials, it is the state versus the defendant, because the state represents everyone else in society. This makes sense for several reasons, one of them being that dead people cannot bring charges against someone.

Furthermore, [criminal law](#) can either be substantive or procedural. Substantive deals with the criminal act and subsequent punishment, on the other hand, procedural law pertains to the actual procedure of the criminal trial. For example, when over-zealous police officers violate our rights.

Case Law

[Case law](#) is simply the accumulation of decisions at the trial and appellate court levels. It is also known as *precedent*.

There are two primary dimensions of precedent: horizontal and vertical, both of which attempt to provide consistency and accuracy in court decisions. Horizontal suggests that courts at the same level should have similar findings in their decisions. Vertical refers to the idea that decisions handed down by higher courts should be taken into consideration by lower courts. Both of which lend to the predictability of law.

Procedural Law

As stated earlier, [procedural law](#) deals with the procedural elements of the criminal process.

Civil Law

While criminal law deals with the criminal aspects, civil law is the method by which we regulate all other types of relationships. For example, divorce, child support, wills, libel, unfair hiring practices, contract, etc., all deal with elements not covered in criminal law. As all of us probably know, violation of civil law is not a crime, but usually called a *tort*, because it is more concerned with assigning blame than intent.

The largest suit was filed here in good ol' Nevada. A couple had some bonds issued by the state in the 1800s and wanted to the cash them in. The state refused, and they sued for \$657 trillion, (the estimated worth of the bonds).

[Examples](#) of more recent well-known civil suits include individuals that have sued their doctor for the removal of the wrong appendage, etc., and the woman who spilled hot coffee on herself and [sued McDonalds](#) and eventually won.

Administrative Law

The last type of law is [administrative](#), which contains regulations for the operations and controls of industry and businesses. Examples include: health codes, construction codes, building codes, codes on the use of water, land, etc. All are administrative in nature.

The big fuss over these is that the government has made it impossible for companies to do anything because of the number of strangling regulations in place. What do you think?

GENERAL CATEGORIES OF CRIME

Now that we have a grasp of the historical and philosophical foundations of law, as well as the different types of law in America, we can now begin looking at the general categories of crime.

Misdemeanors

These are the less serious crimes that usually do not cause physical harm to an individual, such as disturbing the peace, disorderly conduct, etc. Another feature is that the punishment does not usually exceed a year in jail. In fact, most of the time, the individual receives a fine or is assigned community service.

Felonies

These are the more serious crimes, in which the individual faces substantial time in prison. These crimes include murder, rape, aggravated assault, etc.

One thing to keep in mind is that felonies and misdemeanors differ across states. That is, what is a felony in the south may not be a felony elsewhere.

Offenses

The third category includes crimes that are seen as an infraction, or very minor. Punishments for these only include a fine of some sort. For example, it is an offense to urinate or spit in public, one will receive a fine for such behavior.

GENERAL FEATURES OF CRIME

In order for a criminal act to legally exist, several features must be present. In fact, all of them must be present.

The first is the act must violate the law, called *actus reas*, which means guilty act. An *omission to an act* can also be a crime. For example, if you neglect your child you can be held in violation of the law. Also, *threatening* an individual can be considered a criminal offense. For example, threatening the President is not looked to highly upon. An *attempted act* may also be a crime, such as attempted murder or attempted rape.

The second necessary element is *mens rea*, which refers to the intention of the act, or the guilty mind of the individual. In other words, can we hold the individual accountable for his/her acts? This applies the principle of whether a reasonable person should have known better, and their actions might result in harm to someone. This does not mean that you have to intend to commit harm, only that harm results.

Concurrence

This concept is the nexus of intent and action. That is, the two must come together. If you intend to kill someone by shooting them, and go through all the actions to prepare, and then, on your way to kill them, accidentally kill them in an auto accident, no crime has been committed, because there is not a nexus of act and intent.

Harm

Regardless of the nature of the crime, every crime produces some type of harm. Think about victimless crimes, what type of harm do they pose?

Causation

There needs to be a clear link between the act and the harm inflicted on the victim. That is, your kick to the head must have caused the brain damage, etc.

Legality

This is obvious. A crime can only be a crime if it is defined as such. Also, criminal statutes are not retroactive, they only apply to future acts.

Punishment

A feature of our system is every crime must be accompanied by a specified punishment.

QUESTIONS

1. American society is governed by four major types of law.

Please discuss the reasons underlying the necessity of these four types.

2. In order for an act to be considered "criminal" there are several elements that must be present. Please describe these elements within the framework of an actual criminal act.

3. Which of the following comes from outside the social group and is thought to be knowable through some form of revelation, intuition, reason, or prophecy?

1. criminal law

2. common law

3. natural law

4. case law

4. The principle of legality includes the notion that a law cannot be created tomorrow which will hold a person legally responsible for something he or she does today. This is known as

1. ex post facto law.

2. de hoc law.

3. ad hoc law.

4. de facto law.

[Top](#)

LESSON FOURTEEN DEFENSES TO CRIMINAL ACTS

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Identify personal, situational, procedural, and innovative defenses
2. Discuss the differences between the above defenses
3. Discuss the development and variations of the insanity defense

LECTURE NOTES

Defenses to criminal acts can be categorized into three areas: personal, situational, and procedural. One thing to remember as we discuss these various defenses, is that a [defense to a criminal charge](#) does not necessarily mean that a person denies committing the act in question. Only that some extenuating circumstance applies that may eliminate their culpability.

Personal Defenses

As the title of the category suggests, these defenses are based upon some kind of personal characteristic. For example, *age*, is a common defense for younger individuals. Essentially, the reasoning behind such a defense is that a child does not develop the ability to reason through logic until the age of seven. Currently, several states do not charge an individual under the age of 18 with a criminal offense. However, the tide is changing. Along with all the other get tough crime control policies, children of every age are being charged with criminal offenses.

A second defense, and one that most of us are familiar with, is the [insanity defense](#), which claims that the individual charged with the crime did not know what he/she was doing. In other words, they did not know right from wrong. There are many variations of the insanity defense, reflecting public outcry against the release of individuals claiming insanity.

The first variation is called the [McNaughten Rule](#), which states that an individual is not guilty of the crime, if at the time of the offense, he/she did not know the difference between right and wrong, due to a mental disability. This type of defense can be used in fifteen states. However, as more and more defendants used the McNaughten Rule, it became clear that this defense did not cover those individuals that were aware of the actions and the wrongness of them.

Hence, the *irresistible impulse* became a prominent defense. This suggests that the individual was overcome, unable to control their behavior even though they knew it was incorrect. The most famous case, at least recently, is that of Lorena Bobbitt. Her attorney was successful in claiming that Lorena was overcome by rage and oppression and took it out on his, well, his penis. She was found not guilty.

Another variation to the insanity defense is the *substantial capacity test*, which defines insanity as the lack of capacity to control one's behavior. This blends together the McNaughten Rule and irresistible impulse and is used in nineteen different states.

Guilty but insane is another type of defense that reflects society's movement toward the protection of

societal rights over the individual rights. This defense allows an individual to be held responsible for the criminal act, regardless of their mental condition. These individuals are sentenced as others, but must receive mandatory psychiatric counseling.

The last variation that we are going to discuss is the *temporary insanity defense*. While this defense has become very unpopular, it does still exist. Essentially, the individual using this defense claims that he is not guilty of the crime because he was insane at the time of the criminal act, but is no longer insane.

Moving on to other personal defenses, an individual can claim that they were *unconscious* at the time of the act, thus they cannot be held responsible. These individuals have usually suffered some kind of seizure, or may be sleep walking.

Other types of personal defenses include innovative defenses, such as the urban survival syndrome or black rage. The urban survival syndrome claims that these individuals have a "kill or be killed attitude," a product of the violent environment in which they live. Essentially, this defense contends that individuals have no other way to protect themselves from the violence around them, except to rid those that are threatening or harassing them. The black rage defense was provided by Colin Ferguson, who claimed that the societal mistreatment of blacks forced him to kill six people in New York.

Situational Defenses

Situational defenses claim that external pressures are the reasons crimes were committed. Therefore, personal responsibility is reduced due to these pressures.

The first and most well known is that of *self-defense*. This defense is used when individuals believe that their personal safety was threatened, therefore, they needed to protect themselves. It should be noted that limits exist. The first is that you must have tried to escape, secondly, you have to use reasonable self-defense, and cannot shoot someone who was punching you.

Another very common one is *entrapment*, which has been used in recent years by a number of well known individuals, such as John Delorean, and Mayor Marion Barry. Entrapment occurs when an individual was induced into the criminal act by a law enforcement officer. Stated differently, the officers create the opportunity for the act to occur. In the case of Delorean, he was successful in claiming FBI agents had set him up to buy drugs, and that he would not have done so not given the opportunity.

A third defense is known as *provocation*, which suggests that the individual was pushed to the point of committing the act.

The last situational defense that we are going to cover is *consent*. This is when the perpetrator claims he/she was given permission to commit the act. A very interesting case surrounds the use of consent as a defense. In 1993 a male claimed that the woman who he was charged with raping gave him consent by asking him to wear a condom. This was rejected and he was convicted.

Procedural Defenses

Procedural defenses include those defenses where upon an individual's due process rights have been violated, which can occur at the hands of the police, prosecution and the judges.

The first defense is *double jeopardy*, which means that under the 5th Amendment, you have the right not to be tried twice for the same offense. This means that once you are acquitted, or convicted, you cannot be tried again for that same offense. There are some caveats that you need to be aware of. First, this does not apply to a trial error or a hung jury. Secondly, since federal and state courts are different jurisdictions, you can be charged with the same crime at each different level.

The next procedural defense is *selective prosecution*, which protects individuals from discriminatory prosecutorial practices, such as being prosecuted because of ethnicity, gender, age, or religious preference, etc.

A third defense is *prosecutorial misconduct*, which can be used if the defendant believes that the prosecution knowingly permitted perjury, hid information or provided bias arguments.

QUESTIONS

1. Which of the following is a situational defense?

1. self defense
2. double jeopardy
3. urban survival syndrome
4. insanity

2. Which of the following is **not** a personal defense?

1. infancy
2. involuntary intoxication
3. unconsciousness
4. both a and b are not personal defenses

3. The use of the *insanity defense* has been somewhat controversial throughout American history. Please discuss your feelings on the use of the insanity defense. Be sure to address the concepts of individual responsibility in your response.

[Top](#)

LESSON FIFTEEN HISTORY OF POLICING

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Discuss the historical development of police in England and America
2. Discuss the four different era's in American Policing
3. Identify the differences between English and American Policing

LECTURE NOTES

Introduction

We are going to look at the history of policing in those countries that have influenced American policing, then work our way toward the history of the American policing establishment.

Europe

Numerous ideas concerning community policing, crime prevention, the posse, constables, and sheriffs that America adopted were developed by English law enforcement.

900 A.D.: The role of law enforcement was placed in the hands of the citizens, called Kin Police. Individuals were considered responsible for their relatives, hence the saying, "I am my brother's keeper." This model slowly developed into what is known as the community model.

1066: After the Norman conquest, a general centralization of government occurred, along with the development of a "sense of collective security." For example, a **frank pledge system** was established, which required every male above the age of 12 to form a group with nine of his neighbors, which was called a **tything**. If any member of the tything failed to perform his required duties, all members would be fined.

Ten tythings were grouped into a **hundred**, which was directed by a **constable**; the hundreds were grouped into **shires**, which are similar to the present day counties. The shires were supervised by a **shire reeve**, otherwise known as a sheriff. Traveling judges (circuit) were also created. This was the first time there was a separation of law enforcement from judiciary functions.

Due to inadequate supervision, the frank pledge system began to slowly disintegrate, and was replaced by the **constable system**, where one man from each parish served a one year term as a constable on a rotating basis.

1737: England began collecting taxes for the first time to fund a **paid watchman system** which operated 24 hours a day. Despite all these periodic attempts, England's crime problem remained stable and even increased, which led to an era of innovation in policing within England.

English Reformers

1750: The first reformer was [Henry Fielding](#) who was able to advocate change and spread awareness about social and criminal problems facing London and in 1750 organized the **Bow Street Runners**, which were responsible for patrol, investigation and arrest. This was the first group organized around crime prevention.

From 1750-1820 the population nearly doubled in London, which led to large increases in industrial growth and breakdowns in formal and informal social control. Crime, riots, disorder and public health problems plagued the cities, thus, the constable-watch system could no longer deal with social problems. Therefore, changes to the system were inevitable.

We see the rise of a preventive police force in early 1800s (1829) and the role of the **London Police** was primarily crime prevention, but also to enforce the laws and to exert its authority. To accomplish these tasks, it was very important that the police gain legitimacy in the public's eye, which was done through the talents of [Sir Robert Peel](#). Peel placed rigorous attention to professionalism and accountability in London's first major police force. In order to accomplish these lofty goals, Peel and his associates selected men who were even-tempered and reserved. They chose unassuming uniforms, and insisted officers be restrained and polite. They also meted out appropriate discipline, and did not allow officers to carry guns.

American Policing

The history of American police is generally described by researchers in **eras**. They are the **political entrenchment era, the reform era, the professional era and the public and community era**. The eras are directly influenced by external social events, therefore, an understanding of American policing is an understanding of the major American social and cultural movements as well.

As we have been alluding to, the American system closely resembled the English system, primarily with the sheriff becoming the most important law enforcement agent in the young colonies. He was responsible for apprehending criminals, collecting taxes and serving subpoenas. Law enforcement activities were the lowest of the priorities. Early on, American cities grew at rapid rates; civil disorder swept the nation, and crime was perceived to be increasing. For example, New York grew from about 33,000 in 1790 to 150,000 in 1830.

American police systems began to appear almost overnight from 1860 to 1890 and were a part of a growing range of services provided by urban administrations. For example, sanitation, fire, and health related services also increased in availability, therefore, the police were simply a part of the natural growth of governmental service. In the larger cities, such as New York and Boston, **night watch systems** were developed to keep watch for fires, maintain street lamps, and generally walk the rounds. Activities were primarily reactive in nature.

While the first American police departments modeled themselves after the London Metropolitan Police, they borrowed selectively rather than exactly. They adopted the preventive patrol concept, reasoning that a police presence would alter the behavior of individuals and would be available to maintain order in an efficient manner. Alternatively, there are numerous differences.

Differences

For example, the London Police were highly centralized, recruited individuals who fit a particular mold, and provided rigorous training. The Bobbies were encouraged to look upon police work as a career in professional civil service.

American departments on the other hand, were highly decentralized, and extremely political. Officers were recruited and selected by political leaders. More importantly, American police did not look for institutional legitimation, instead they drew it from the community. That is, the officer shaped his behavior according to community norms and standards, which led to many different types of policing across the cities, as well as considerable amounts of discretion.

American forces differed also in that the police officer owed his allegiance to the "ward" boss and police captain. Due to this, there were high rates of turnover even despite their fairly good wages. Other differences dealt with training. For example, new American officers were sent out on patrol with little or no training and few instructions beyond their rule books, basic arrest procedures and rules of law were generally unknown to the new officers.

From about 1860-90, the police were involved in assisting the poor, taking in overnight lodgers, and returning lost children to their parents or orphanages. In the period from 1890-1920, the police changed their role, structure, and behavior because of external demands upon them.

Political Era

The first policing era has been called the Political Era.

Political entrenchment: Around the turn of the century, most government agencies were transfixed under the iron fist of the politicians. Policing agencies were not only responsible for enforcing city laws, but were also the primary social service agency of the time. Therefore, they had a direct impact on the constituents way of life.

The lawlessness of the police, their systematic corruption and non-enforcement of the laws, was one of the paramount issues in municipal politics during the late 1800s. In fact, [police corruption](#) was part of broader social and political problems. Primarily during this period, political machines ran municipal governments. For example, police chiefs were selected according to their allegiance to the ranking political figures, not their experience or expertise in law enforcement. Since police officers worked alone or in small groups, there were ample opportunities for police indiscretions to take place, such as

shake downs of peddlers and small businesses. These types of problems led to inefficiency and inequality of police services. These behaviors were not endemic only to policing agencies, but were common throughout most governmental agencies.

Reform Era (1900-1919)

The second era, and the first attempt to reform government agencies, is known as the Reform Era. It entailed considerable changes to all governmental levels; local, state and federal.

Progressivism was a mood that embraced many separate but parallel movements during this time. For example, antitrust, railroad regulation, and the reform of municipal government were all movements of the Reform Era. It was a prevailing sense that American institutions had to be changed to adapt to the demands of a growing urban-industrial society. They sought improvements in government, and desired a change in American morality. They believed by separating politics and administration within government agencies that efficiency and effectiveness would follow. They also believed that agencies should be led by experts, not political hacks, and that an agency's staff should be selected on the basis of objective qualification, not political allegiance.

To improve conditions of government agencies, they recommended three primary changes: centralization of the departments, personnel should be upgraded, and the police function should be narrowed to law enforcement activities only.

Despite these attempts, police departments remained under political control. There were however, increases in training and discipline. Secondly, police officers resented the Progressive's interventions, and consequently, the reforms failed because the idea of policing could not be divorced from politics. This failure was felt in all government agencies.

1919 Year of Crisis: Defining Year in American Policing

During 1919, the news media was filled with scare stories about increasing crime and the overall breakdown of law and order in American society. This contributed toward the development of hard line public attitudes concerning criminal justice issues.

In addition, the "Red Scare," the fear of communism, swept the country. The FBI became heavily involved and perpetuated the "scare." This represented the most ominous aspect of the nationalization of crime control in America up to that time. In fact, this was the first time federal authorities became largely involved in criminal affairs. It resulted in political repression becoming part of the federal criminal justice machinery.

Further, riots based on racial violence swept the country during what has been called the "long hot summer of 1919." The police played a major role in facilitating the riots with their racist practices and behaviors. The violence can be seen as a response to the initial phase of a major social change.

Specifically, the riots of 1900-1919 were a result of the great migration of minorities to the cities. Whites tolerated the minority presence in the city as long as racial segregation confined them to certain jobs and neighborhoods, away from white neighborhoods.

Another factor adding to the disruption of 1919 came with the rise of police unionism and the Boston police strike of that same year. This movement was, however, firmly defeated by 1920. The defeat of police unionism led to and fostered the development of a distinct police subculture. The alienation and anger of police officers began to express itself in terms of suspicion and hostility toward the public and separation from the administration. Police executives, on the other hand, found that their hand strengthened. In fact, the management style of American policing became steadily more bureaucratic and authoritarian in the decades that immediately followed.

Overall, then, the year of 1919 especially exacerbated fears concerning communism and crime, riots in the major cities and the effort to promote police unionism. It marked a turning point in the way governmental institutions were operated.

Professional Era (1919-1967)

The second major effort to reform governmental agencies came on the heels of the Progressive movement and is known as the Professional Era. Unlike previous attempts, this reform began within policing and entailed adoption of a professional model with numerous characteristics. Reforms included the development of officers as trained experts, creating departments autonomous from external influences (such as political parties), and the commitment to the highest standards. Lastly, departments became oriented toward administrative efficiency.

Two competing definitions of the police mission emerged. The first was *efficient crime control* and *scientific crime detection* through the use of crime technology. The second was the *social work model*, which attempted to help the individual, often by diverting them out of the criminal justice system. By the 1930s, the crime control model prevailed and was clearly the dominant and preferred model of professional policing. It remained so until it was challenged again in the 1930s.

As previously stated, the progressive commitment to rehabilitation gave way to a get tough attitude toward crime and criminals. The crisis of 1919, gang violence and the sensationalized crimes in the 1930s, all reinforced the concept of a national crime wave and began the **Crime Control Decades (1920-1940)**.

It should be noted that despite the ongoing publicity about a national crime wave during the 1930s, the actual level of serious crime increased only slightly. Overall, Hoover, the director of the FBI, played a major role in creating the hysteria of the 1930s. He skillfully manipulated the media and transformed a group of otherwise ordinary criminals into national public enemies, especially Gangsters. So we move from the Red Scare (fear of the communists) to the fear of Gangsters (again, outsiders, this time Italians).

By the end of the decade, Hoover had carved out his role as the nation's top cop. Furthermore, FBI procedures were regarded as the very essence of police professionalism. Importantly, the UCR was created to keep track of the crime rate and subsequently, success in policing was defined by the fluctuations of the official crime rate and the percentage of crimes cleared. This drew attention even further away from the noncriminal, social-service aspects of policing and more toward the law enforcement duties.

The end result was a reorientation of the idea of policing, emphasizing tough and efficient crime fighting. Emphasis on scientific crime detection, the adoption of firearms and the development of a military mentality, known as the "war" mentality, faded the social service aspects of the police role into an eclipse.

As the 1940s and 1950s rolled around the social and economic dislocations wrought by the war effort produced renewed racial disorder. In 1943 several riots plagued American cities and were the result of numerous changes in American race relations brought on by WWII. The riots of 1943 were a foreshadowing of even worse racial conflicts in the mid-1960s. Urbanization and segregation increased at a more rapid pace. Police responded very differently to the migration of both blacks and whites to the industrial cities of the North, Midwest, and West Coast. This time, they attempted to improve community relations, instead of increasing the gap created by racial dislocation. Violent racial disturbances disappeared after 1943, just as they had after the 1919 outburst, but police-community-relations programs became an established part of American police administration.

This second movement of professionalism was more effective because it began within the policing establishment and was led by respected chiefs such as **August Vollmer** and **O.W. Wilson** during the 1950s. Vollmer is best known for his innovative work in developing college level police education programs, the development and implementation of bicycle and automobile patrols, and the implementation of scientific crime detection aids. O.W. Wilson, who was Vollmer's student, continued many of these endeavors, using scientific techniques to increase department efficiency. He wrote what many considered the major textbook in Policing called "Police Administration."

While both of these historic figures played a major role in advancing police professionalism, technological changes also aided in the pursuit and provided the most dramatic changes to the field of policing. For example, the development of the **two-way radio** allowed them constant contact between officers and their supervisors. **Telephones** provided the link between the community and the police, and the **patrol car** allowed for more efficient patrol methods. They all changed policing forever, and efficiency became the ultimate organizational goal.

This quest for professionalism and efficiency later became the primary cause for policing failures in the 1950s and 1960s, with crime nearly doubling in the 1960s. As crime increased, so did the social demands for its reduction. The police, in emphasizing their ability to fight crime effectively, had given the public a false expectation of their capabilities in reducing crime and violence. In the end, during the turmoil of the 60s, the police were unable to live up to their crime fighter image. Instead, the police

became a symbol of a society that denied racial minorities equal justice. Riots engulfed almost every major city between 1964 and 1968, including Los Angeles, Newark, and Detroit. There were 45 riots in all. The accomplishments and innovations of police reform up through the 1950s set the stage for the police-community-relations crisis of the 1960s.

This crisis coincided with two other important developments: a dramatic rise in serious crime and the intervention of the federal courts into law enforcement practices, which are independent phenomena. That is, the increases in crime are unrelated to the increases in individual and civil rights. The increase in crime during the 60s was in part attributable to the post-war baby boom when the population grew by over a million people every year.

In terms of the Federal Courts, we see them taking a more active role in issues concerning the police, especially with the Supreme Court cases of **Miranda v Arizona**, **Mapp v Ohio** and **Terry v Ohio**. The police began to feel restrictions tightening on their behavior.

The Professional Movement, while it may have led to more efficient recruitment and training, had two major unintended consequences. They were the development of the police subculture (isolation from the department and community), and the problem of police and community relations (automobile and impersonal style of policing). A half century of professionalization created police departments that were vast bureaucracies, inward-looking, isolated from the public, and defensive in the face of any criticism.

Community Era (1960s-present)

The pervasive sense that society no longer worked, and the basic social institutions were no longer capable of serving the needs of the American people. The crises of the 1960s were those of law, order, and justice. The polarization over law and order brought the issue of criminal justice to the forefront of national politics. This led to a national commission, called the **Kerner Commission**, which was formed to investigate the causes of social unrest. They identified unemployment, discrimination in jobs and housing, inadequate social services, and unequal justice for citizens. In terms of the police departments, they found police conduct was brutal, harassing and an abuse of power. Training was inadequate and police community relations were very poor. Finally, the employment of black officers was far behind the population.

This led to the creation of a federal crime commission, and considerable federal assistance to state and local policing agencies under the **Law Enforcement Assistance Administration**. For the first time, considerable research opportunities existed for academics. The research revolution that started during the 1960s produced some astonishing findings:

- 1) An American Bar Foundation study (1960s) identified the vast discretion held by policing officers, which led to the development of standard operating procedures. They also found the majority of police work did not involve criminal activity, but service

activity.

2) The Kansas City Preventive Patrol Experiment (1972) found that increased patrol did not reduce crime and had no appreciable effect on citizen awareness about police presence. At the same time, reduced patrol did not lead to increased crime or increased citizen fear of crime.

The police-community relations movement had a variety of effects on police organizational thought and operational practices, such as decentralization, focus on order maintenance, and the emphasis on citizen rights. This was also propelled by the reduction of federal funding for local departments, with the LEAA being terminated in 1977. This created many budgeting problems for agencies and forced them to find innovative ways to deal with their increasing workload, which has led to increases in citizen participation in law enforcement, especially COP and POP.

Conclusion

As can be seen, a number of present day issues have their roots in different epochs of American history. For example, the idea of community policing can be traced to the colonial period and to medieval England. Preventive patrol, legitimacy, authority and professionalism are 18th and 19th century concepts. Thus, by virtue of studying history, we can give contextual meaning to current police problems, ideas, and situations, helping us to better understand today's issues and problems.

QUESTIONS

1. Jonathon Wild, a Bow Street runner, broke up a fencing operation built around a group of robbers, thieves, and burglars in the early 1700s.

_____ True or False

2. Policing in early America has been described as decentralized, geographically dispersed and highly personalized.

_____ True or False

3. The Statute of Winchester

1. created the watch and ward

2. created the "hue and cry"

3. provided that citizens maintain weapons in their homes to answer the call to arms

4. all of the above

5. A and B only

4. Which of the following was NOT a characteristic of the "New Police"?

1. They believed that it was possible to deter crime by preventive patrol

- 2.They were uniformed
- 3.They resembled a military organization and adopted a military administrative style
- 4.They occupied fixed posts throughout the city

LESSON SIXTEEN

EXTERNAL INFLUENCES ON POLICE ORGANIZATIONS

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- 1.Discuss the external influences affecting policing organizations
- 2.Identify the different types of police departments
- 3.Discuss the diversity of policing in America

LECTURE NOTES:

Political/Legal Context

Primary shapers of the American police are society and government. The environment in which police operate is very unique, composed of political, economic and social forces. Policing systems operate within a governmental structure. This structure shapes the character of the nation's police. While government is but one institution that controls human behavior, it is by far the most formidable, and the most formal, in terms of formal social control systems.

Democratic systems of government are built upon a delicate balance between individual rights and the collective needs of members of society. Too much order or too much law threatens the principles of democracy. If individual rights are neglected in favor of societal rights, government ultimately would become totalitarian and repressive. Alternatively, if individual rights are favored over societal rights, a state of anarchy would ensue. The critical task of the police is to maintain effective social control while at the same time preserving democratic freedom. The police presence in society is also intended to preserve order by serving as a deterrent to misconduct.

In addition, the prevailing political party, either at the local, state or federal level can also affect policing agencies. For example, conservatives tend to be identified with a "crime control" get tough orientation, therefore primary emphasis is placed on increasing the ability to capture, detain and incarcerate criminals. On the other hand, liberals tend to be associated with "due process" reform orientation, hence, emphasis is placed on developing broad social programs that target the rehabilitation of criminals. An example would be the 100,000 COPS program that Clinton implemented. It is widely believed that a conservative President would not have initiated such a program.

Economic/Social Arena

The economy provides additional pressure on both society and policing organizations, mainly because of the correlations between poverty and crime. In fact, Aristotle noted that "*Poverty is the parent of revolution and crime.*"

One of the largest economic problems has been the rapid decay of our inner cities. Currie (1994) contends that the deterioration of the inner cities, which occurs through economic disinvestment, is one of the major problems confronting society, and leads to the deterioration of families, neighborhoods, communities and individual self-worth. All of which became problems the police must handle.

America has extremely high income polarization, with recent data suggesting that the gap between the "haves" and "have nots" is still growing. In fact, the rich are getting richer, the middle class is shrinking, and the poor are getting poorer. Similarly, there are numbers of what has been termed the working poor, those individuals that work full time, but just escape the federal poverty line. These increases create considerable tension among and between social classes. Furthermore, as companies downsize and move toward the use of non-permanent workers (nearly 60% of employees), more and more tension is created within social classes. For example, affirmative action becomes a major issue during times of economic uncertainty. Moreover, fewer individuals have benefits such as health care and retirement plans, which creates even more instability. Overall, economic downturns and uncertainty creates considerable apprehension among citizens, which is played out in the social arena calling for police attention.

Crime Rates

Although crime rates have been decreasing nationwide, citizens are still calling for tougher sanctions against criminals (three strikes and you're out; transferring juveniles to adult court, etc.) which have and will continue to cause dramatic increases in incarceration rates. Ironically, research has consistently found that the "get tough" approach has little deterrent or rehabilitative qualities. Against this background, **fear of crime** is still increasing and is now becoming a major focus of policing agencies.

Overall, the political, economic, and social arenas provide a very unstable environment for police agencies to operate. At the same time, variation across and within communities provides more pressure. Essentially there is continuous interaction between the economic, political and social spheres that affect the activities, goals and effectiveness of policing agencies.

Types of Departments

Adding further to the complexity created by external factors, internal factors also play a major role. In of the most classic studies on policing organizations, Wilson (1968) found three different styles of policing. Although a dated study, it has considerable relevance today:

Watchman style: is concerned with public order and serious crime. *High levels of discretion* are used with two criteria for enforcing the law. They are taking action against serious offenders and ensuring that domestic tranquility is maintained.

Legalistic style: is when authority is highly centralized or bureaucratic and requires officers to enforce one set of uniform standards on the public. It has *lower levels of discretion*, suggesting that no alternatives for resolution exist except for the CJ process.

Service-style: is found primarily in homogenous middle class communities that generally surround large cities, consider all calls to be serious. The main function is protecting the community from unruly teenagers or criminals from outside the community and performing services for the citizens. In comparison to the other two types, discretion does not play a major role.

It is important to remember that not all agencies ascribe to a single classification, but may utilize variations of all three types. Different sections within a department may ascribe to different styles of policing, which may cause them internal discrepancies.

Roles or Functions of Police

In looking at the roles or functions of the police, we find that most of our knowledge about the police comes from a variety of sources, not always the most complete, either. Our perceptions of the police seem to be formed by the media, direct and indirect observations and personal experiences. These perceptions, especially when aggregated, provide an important factor affecting policing agencies and community relationships, which in turn greatly affects the role and effectiveness of the agencies.

Besides enforcing the law, police, in many jurisdictions, have been called upon to perform many different tasks, from rescuing the proverbial cat from the tree to providing assistance to lost individuals. There are four primary areas of responsibility: **law enforcement** (investigate, arrest, interrogate), **order maintenance** (moving panhandlers, drunks, teenagers along), **miscellaneous service** (assisting motorists), and **convenience norms** (issuing parking tickets, direct traffic).

Obviously, the activities the police engage in are the results of complicated social and political processes. As we saw in the discussion on external factors, local government, city council, mayors, and city managers will attempt to appease citizen constituents by pressuring various governmental agencies to provide expected services. Similarly, different citizen requests may force policing agencies in the same cities to concentrate on different activities. Importantly, these very different tasks can lead to considerable role conflict within policing agencies and across policing agencies, especially between law enforcement orientation (real policing) and concentration on order maintenance activities (what has become known as soft policing).

As we have seen, police engage in more activities than merely law enforcement. In an attempt to better describe police activities, numerous studies have been undertaken to examine the percentage of time

devoted to various activities. A summary of the findings are as follows:

Cummings and his colleagues (1965) found that nearly 50% of calls to police were dealt with through problem solving.

Wilson (1968) found 10% of calls related to law enforcement, 30% to order maintenance, 22% to information gathering, and 38% for service.

Obviously the crime-fighter image of the police is an inaccurate description of their primary activities. In fact, the typical officer rarely makes a felony arrest, and it is not uncommon to find that few officers have ever fired their weapon in anger. Rather, the research indicates that most police work involves peace-keeping or order-maintenance, where there has been no violation of the criminal law.

QUESTIONS

1. James Q. Wilson's legalistic style of policing has also been referred to as "laissez faire" policing because officers avoid involvement in disputes which do not break the law.

_____ True or False

2. Which of Wilson's policing styles is becoming increasingly popular today?

1. watchman

2. legalistic

3. service

4. paternalistic

3. Utilizing Wilson's departmental typology's for police departments, please describe the policing organization in your city/town.

[Top](#)

LESSON SEVENTEEN

COMMUNITY POLICING AND TRADITIONAL POLICING

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- Discuss the differences between traditional and community policing
- Identify the critiques of community policing

LECTURE NOTES

Police Management

Refers to the administrative activities of controlling, directing, and coordinating police personnel, resources, and activities in the service of crime prevention. It also refers to the apprehension of criminals, recovery of stolen property, and the performance of a variety of regulatory and helping services.

This is a broad definition of the activities in which police engage. In the previous lesson, we discussed the three types of departments/policing:

1. *Watchman*--primarily concerned with order maintenance
2. *Legalistic*--adheres to "letter of the law" in law enforcement activities
3. *Service style*--a concern with helping rather than strict enforcement, more likely to use community resources, drug programs, etc.

In another previous lesson, we discussed the four different eras that policing agencies have been characterized as going through. The most recent one being the community era, in which the police have attempted to recouple themselves to citizens in the community in order to solve community problems.

The most recent development is [community policing](#), which is an effort to involve the community in solving the problems faced by the police and vice versa. This approach to policing envisions the police and members of the community as sharing responsibility for the solutions of problems which exist within the community.

Alternatively, **traditional policing** is characterized by rapid response, and a centralized organization geared to the reduction of major crimes. Internal looking with little outreach to the community.

Differences between the two:

| Function | Traditional Policing | Community Policing |
|---------------------------------|-----------------------------|--------------------------------|
| Role | solving crimes | problem-solving |
| Organizational structure | hierarchical | decentralized |
| Functions of the officer | administer the law | work with the community |
| Accountability | to the organization and law | to the community |
| Professionalism | swift response to crime | keeping close to the community |
| Effectiveness | response times | public cooperation |
| Discretion | none | considerable |
| Efficiency | detection and arrest rates | absence of crime and disorder |

| | | |
|------------|---------------|---|
| Priorities | Type I crimes | whatever problem disturbs the community |
|------------|---------------|---|

QUESTIONS

1. Discuss the critiques of community policing.
2. Which types of communities (in terms of socioeconomic characteristics) would most likely have a watchman style of policing?
3. Why do community characteristics contribute to the development of a particular kind of policing style?

[Top](#)

LESSON EIGHTEEN RECRUITMENT OF POLICE OFFICERS

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

1. Discuss those characteristics which identify a good police officer
2. Identify external constraints on policing organizations in terms of recruitment

LECTURE NOTES

Introduction

It is important to gain an understanding of those individuals hired to keep civil order in America. The best way to achieve this is to examine the selection and hiring process, and the socialization and promotion of individuals in policing agencies. This is extremely important because the police are first and foremost a public agency accountable to citizens and must also operate an efficient and effective organization. All of which can be undermined through inadequate personnel.

Factors Affecting Police Selection and Recruitment

Any organization, private and/or government, can only operate at high levels of effectiveness and efficiency if they have quality employees. Unlike private organizations, public organizations have a mandate to provide equitable services to citizens in an effective manner while remaining accountable to their citizenry. The first step, of course, is attempting to select those individuals that provide the best fit for the organization and its goals.

What are Policing Departments Attempting to Achieve? Pugh (1986) contends that a good police

officer, is something that all the selection and training programs are attempted to find/create. A good officer has the values, principles, and ability to appropriately select, blend, and fulfill the different roles of policing (law enforcement, maintaining order, public servant), according to the demands of the job situation.

In addition he/she must have *common sense, mature judgement and problem solving capabilities*. In a similar vein, the officer must develop the correct policing concepts, entail the concepts of police work as an effort to improve the welfare of the community and to prevent crime and disorder. Secondly, they should have the concept of high respect for individual rights.

External Constraints

Affirmative Action

One must consider the implications of equal opportunity laws and court decisions as they relate to police personnel policies. In fact, state and federal laws, along with court decisions, provide strict parameters in which police administrators must operate. Ultimately, police administrators must develop and adopt policies that balance the need to select the best qualified applicants with a need not to discriminate against females and minorities.

Affirmative action has its roots in Title VII of the 1964 Civil Rights Act, which was the first attempt through federal legislation to prohibit discrimination in employment. While a broad act, there are two areas that the text identifies as important to policing agencies:

- 1) It prohibited discrimination for persons falling into certain classifications, i.e., race, sex, color or religion.
- 2) Was interpreted to mean that employers could not discriminate against classes or groups of people that were protected by the Act. The difference between the two is that the former is discrimination based on an individual, while the later is based on a group that the individual belongs. Most suits have been filed under the former.

Court Decisions

Griggs v Duke Power Co (1971) found that:

- 1) it did not matter if discrimination was intentional or not;
- 2) that once a plaintiff established the existence of discrimination, the burden of proof fell upon the defendant agency to prove that its selection procedures were a business necessity.

While there are several methods in which to determine the existence of discrimination, policing agencies have relied primarily upon disparate rejection and population comparisons. In terms of disparate rejection, the courts have examined how well one group of individuals (females) succeeded in passing

the various selection requirements in regards to other groups (males). If the rate of acceptance for one group is 80% or less than the other group, the courts have determined that discrimination is taking place. The most known example is the old height requirement that many agencies had. However, it eliminated 95% of women and only 32% of the men, far below the 80% cut off.

This leads to another important point, Title VII required agencies to prove that their hiring requirements and procedures were necessary for the job and were not arbitrary and capricious.

For example, is it necessary that a police officer be taller than 5'7" or that he/she be able to run a mile and half under a certain time? This led many agencies to either conduct extensive research and develop new standards, or to fall under court order or establish their own self-imposed quota system, which was the route many took.

These "stringent" requirements for public agencies, however, have slowly been eroded away through changing social values and a dominant yet conservative Supreme Court.

Wards Cove Packing Co. v Antonio (1989):

This is important because it recognized the concept of reverse discrimination brought out in the Bakke decision (1978). In particular, the Court stated the use of statistical data based on whole populations was inadequate to determine discrimination. Instead, it should be based on individuals seeking employment. Ultimately, the only cases that could be brought to Court under Title VII were those with overt discrimination.

Equal Employment Act (1992):

An attempt to clarify the legal doctrine surrounding affirmative action. The Act stated two important adjustments. First, it prohibited the use of statistical or other adjustments that would give minorities an advantage over other candidates in the selection process. Secondly, the act reintroduced disparate impact (population comparisons) as a method. This act is very similar to the *Griggs* decision, but does not allow for any type of score manipulation, etc. for minorities.

Recruitment

As previously discussed, police agencies must make a concerted effort to ensure that hiring achieves some level of race and gender parity. In fact, studies show that organizational effectiveness and equity are increased when the department better reflects the diverse composition of their community.

In general, the larger organizations have begun to "**screen in**" their applicants rather than "**screen out**" the undesirables. It is argued that this method identifies the best qualified applicants and selections are then made from the quality pool. On the other hand, "screening out" applicants leaves a pool of mediocre applicants. As with any position, there are minimum standards required for individuals to be

able to become police officers. However, due to the numerous differences across agencies, there remains to be found any consistency, but some generalities can be made.

Residency

Departments have the option of hiring individuals from their area or engaging in a much broader search. While it is nice to have individuals with some type of communal roots working for the department, it is possible that this type of practice may not provide enough qualified individuals since there is such a limited pool of applicants. On the other hand, expanding your range increases the possibility of gaining a much more qualified pool of applicants.

Age

In looking at age, most departments have a minimum age requirement of 21. However, it is not unlikely to see departments hiring 18 year-olds in order to increase their chances of finding qualified individuals. Interestingly, many departments also have maximum age limits for hiring, somewhere between 30-40 years of age. For example, the FBI will not hire anyone over 37. The rationale is that the department cannot maximize that individual's potential when he or she is too old.

Vision

Because of the nature of police work, adequate vision is a necessity. Most departments have some type of low end policy, however, there is considerable variability across departments. It is not uncommon for departments to have a very strict policy of 20/20 uncorrected vision under the auspice that it is dangerous to wear contacts during regular duty and that poor vision may cause blurring that will endanger the officer. Research, however, has found that the likelihood of either case of occurring is extremely rare at best. This provides a good example of an arbitrary policy that has little to do with officer safety and that may keep many otherwise qualified individuals out of the applicant pool.

Educational Standards

This has been an area of constant debate and has generated considerable research. In fact, most criminal justice departments used to be based on educating individuals to become police officers. They believed higher education lead to better qualified officers in terms of problem solving ability and creating a better understanding of people and communication. Opponents, however, contend that higher education has little effect on the effectiveness of police officers and these educated recruits may instead create problems for the department.

Despite the controversy, most departments (86%) require a high school diploma, while a few (4%) require some college, 7% require a two year degree and 1% require a four year degree. Again, if departments require some sort of educational requirement, they are effectively limiting their pool of potential applicants unless they actively target college campuses for recruits. In terms of legal issues,

requiring some level of education beyond high school was found to be legal in a case in Dallas, Texas.

Physical Agility Standards

Due to the obvious physical nature of police work, many departments have long required individuals to have a minimum level of physical fitness, which has, at times been gauged by height and weight. Most prominent now are agility tests given to possible recruits. As you may imagine in our litigious society, many of these tests have been challenged in courts across the nation, with some courts invalidating the requirements while others have validated them. In addition, the outcomes of these cases require agility tests to be based on the job and what is required of the individual to perform his/her job. Agility, flexibility, fat composition, strength and cardiovascular capacity are areas in which most departments test.

Background and Work History

In order to assess an individual's "human" qualities, departments conduct background checks that can be very thorough. They contact old and new friends, teachers, former and present employers to find out information concerning driving records, criminal behavior, drug and alcohol usage. Patterns, types of drugs, involvement in sale or distribution and recency of usage, honesty, interpersonal relationships, work habits, etc. are also looked at.

In addition to the background check, most departments also require individuals to submit to a polygraph test. Since most behavior, especially drug usage, can be done in solitude, these tests provide an unbiased look into the individual. Because of the prevalence of minor drug usage, agencies are finding that they cannot have a "zero tolerance" attitude when it comes to hiring people; especially if someone smoked pot several years before and does not engage in it anymore.

Medical Screening

Since police agencies are accountable to the public, they must ensure that their employees are mentally and physically capable of the position. Therefore, most departments initiate some kind of psychological screening (MMPI, CPI). This helps to weed out those individuals with overt problems that may later prove harmful to the citizens they are supposed to protect and serve.

QUESTIONS

1. Discuss those characteristics, which you believe, make a good police officer.
2. Is it important that policing organizations abide by affirmative action laws? Why or why not?

[Top](#)

LESSON NINETEEN

ETHICS AND DEVIANCE

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- 1.Explain civil liability issues in policing
- 2.Describe efforts to professionalize the police
- 3.Describe different types of police corruption

LECTURE NOTES

Ethics

In a formal sense, the study of ethics is a specialized branch of philosophy and is an attempt to subjectively evaluate behavior in terms of ethical or moral principles. Morality can have many meanings. For some it means the capacity of an individual to make judgements about what is right or good, while for others it describes a person whose behavior is ethical. While some behaviors can easily be categorized as right or wrong, the increasing use of order maintenance policing places officers in circumstances where there is no clear delineation between right and wrong, but instead there are gray areas. Therefore, the situation forces officers to choose among competing values in order to base his/her judgements. Consequently, determination on whether or not an officers actions were ethical, requires an understanding of the context in which the decision was made.

Originally, considerable attention was paid to those areas in which there was consensus as to appropriate and inappropriate behavior, for example, bribery, extortion, etc. However, more recent concerns, and probably the most interesting in terms of ethics, are those gray areas of behavior where there is not consensus to the appropriateness of behavior, such as the use of discretion, appropriate use of force, and acceptable limits for undercover operations.

Sources of Ethics

Within this context, that is the "gray areas" of behavior, there is a foundation of values and ethical standards that drive the decisions of law enforcement personnel. Therefore, defining ethical behavior becomes contingent on the context as well as the source that the officer draws perceptions of right and wrong. This of course creates a situation that can be viewed as either ethical or unethical depending upon the source of evaluation. This foundation includes the concepts of **justice, laws, agencies policies, codes of ethics, social norms and personal values.**

Justice

This term is difficult to define. However, for many it implies fairness and equity (which of course is an ambiguous term itself). Most often, people are unable to actually define justice, but can point to examples of it. For example, people starving on the streets. Most important, is to understand that justice depends on an individual's perspective and the circumstances, that which appears to be just to a police officer, may be seen as unjust by the individual arrested.

Law

The role of law in a democratic society is best understood in terms of how and why the government was created and structured. The sole legitimate purpose of government, according to those that framed the Constitution, was to protect life, liberty, and property. While the most pronounced dangers were the factions of individuals that could unite and undermine the interests of others in communities.

Secondly, and often overlooked, is laws also control the behavior of those within government. This can be evidenced by the structure of government, especially the separation of the three branches of government. Separation makes it virtually impossible for one individual to obtain enough power to become oppressive. Therefore, we can see the law has two primary functions in a democratic society; to control the actions of individuals and to control the actions of the government.

Agency Policy

Every law enforcement agency operates under a set of policies or guidelines, usually under the guise of formal policies and standard operating procedures. The combination of these provide acceptable limits of officer behaviors and can provide a number of purposes. They include explicating an agency's philosophy of policing, the broad goals of the department and/or a reflection of the community's expectations of the department.

Professional Code of Ethics

The code of ethics both guides and restricts behavior of the members of a professional group, for example accountants and lawyers.

The first code of ethics developed for policing came in 1957 by the International Association of Police Chiefs and was called the Law Enforcement Code of Ethics. This document was replaced in 1989 with a new and improved Police Code of Conduct, which expands on the philosophy of the earlier code and better reflects modern concerns of policing. Primarily those that are in the "gray area" of behavior. It is important to remember, however, this code offers little control over police officer behavior. Why? Because there is not a governing body or professional committee to oversee officer's behavior, comparable to other professions.

Social Norms and Personal Values

As we have discussed before, values are developed through the formal and informal socialization processes of officers, and the life experiences before employment of the officer. In earlier discussions we focused on the development of subcultures. This is another example where that is influential. Importantly, personal values may reflect the subcultural values expressed in a policing agency.

A Conflict of Values

This discussion suggests that police obtain values from several sources, therefore creating the possibility of a conflict between them. In other words, when conflict occurs, the officer must prioritize and choose among his values to make the decision. Theoretically, this hierarchy represents the manner in which officers should prioritize their values.

Pragmatically, however, the priorities will be dictated by the context, especially the **individuals** involved and the **circumstances**. It is not unthinkable that agency policy will conflict with legal precedent, especially in terms of the use of force.

Illegal Behavior

Turning now to illegal behavior. There appears to be some distinction between criminal activity and corruption when discussing police behavior. Importantly, crime committed by police while on duty is not necessarily corrupt. In fact, crimes in this category are no different than crimes committed by citizens. On the other hand, corruption appears to be the misuse of authority by a public official. Most notably, those types of behaviors that have been generally recognized as corruption include bribery, extortion, narcotics violations and other criminal offenses.

Bribery

To constitute bribery, a citizen must initiate the offer to have an officer do or not do something. For example, traffic violations.

Extortion

Extortion is initiated by the officer, through the use of his/her position of authority. For example, the officer requires a person who has committed a crime to give them something of value to avoid arrest.

Narcotics Violations

Research appears to indicate substantial usage of narcotics by police officers. For example, drug screening by one agency found that 25% of those screened had illegal drugs present in their system at the time of the test. Further research indicates that a substantial portion of corruption centers around drugs.

Other problems arise when officers become involved with drug trafficking, especially when they are paid to ignore certain dealings, or steal drugs from crime scenes and sell them on the streets.

Investigating Corruption

The most typical response to corruption is to create a commission to investigate the corrupt activities, with the most famous being the [Knapp Commission](#). This commission was created in response to corruption in the New York Police Department in 1970. They drafted a report which suggested widespread corruption and two types of officers that were involved. The two types were: **grass eaters**, those officers only occasionally involved in illegal activities; and **meat eaters**, officers who aggressively pursued corrupt activities at any time.

Further classification of corrupt activities can be found at the departmental level as well. Three types of departments exist. Types are based on the level of corruption in the department, the progressive nature of corruption, as well as its level of tolerance by administrators. **Type I: *Rotten Apples*** and **Rotten Pockets**. No organized effort of corruption and usually only a few officers engaged in these types of activities. They receive no organizational support for their activities. **Type II: *Pervasive Unorganized Corruption***. If effective controls are not instituted in the first type, corruption may develop into pervasive unorganized corruption. The distinction is that more officers become involved. **Type III: *Pervasive Organized Corruption***. The most problematic type and results in officers becoming organized in their efforts. They receive general support from the administrators.

Deviant Behavior

This behavior occurs when an officer violates the norms or rules of conduct expected of a member of the police profession. It can be either legal or illegal behavior that is committed on or off duty.

Conclusion

Traditionally the study of ethics focused on activities that were clear in their delineation of right or wrong, like bribery, extortion, and perjury. However, current discussion is centered around those situations that involved value judgements by officers. Importantly, officers draw upon numerous sources for the establishment of their values, and at times these are in conflict. This suggests that determining whether or not a situation is ethical or not depends on the context of the situation.

QUESTIONS

1. Police professionalism is characterized by

1. specialized knowledge
2. extensive education
3. internal standards and ethical guidelines
4. all of the above

2. Which of the following is not a type of civil suit that can be levied against police officers?

1. Section 1983

2. Bivens suits

3. State suits

4. Johnson suits

3. Is corruption and deviant behavior more likely to occur in traditional police departments or community police departments? Be specific in your answer.

LESSON TWENTY POLICE AND THE CONSTITUTION

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- Discuss the key principles of the 4th Amendment
- Discuss key rulings relating to search and seizure
- Explain the changing legal environment and its effects on the police

LECTURE NOTES

Exclusionary Rule

The understanding, based on Supreme Court precedent, that incriminating information must be seized according to constitutional specifications of due process, or it will not be allowed as evidence in criminal trials.

The case this derives from is *Weeks v US (1914)*. This case involved an individual selling lottery tickets through the U.S. mail. His house was searched without a warrant, because at that time, it was common to search without them. They confiscated some material vital to their case and he was convicted.

Ultimately, his conviction was overturned by the U.S. Supreme Court, thus we have the [exclusionary rule](#).

The underlying notion of this rule is criminal justice officials must abide by the rules of the game. That is, they must abide the laws and rights of citizens.

Fruit of the Poisoned Tree Doctrine

The case this comes from is *Silverthorne Lumber Co. v US (1918)*, in which a company was under federal scrutiny for possible tax evasion. Records were seized without a warrant, and ordered to be

returned to the company. However, the federal agents had taken copies of them and produced them in court. As a result of this case, anything derived from illegally seized evidence cannot be used in a trial. Again, this case only applied to law enforcement agents at the federal level.

The next largest developments came during the reign of [Earl Warren](#) during the 1960s, commonly known as the Warren Court Era. During this time, we see an application of federal decisions to local and state law enforcement officers. The most known case, dealing with search and seizure, is *Mapp v Ohio (1961)*. Local police suspected a woman of harboring a fugitive, searched her house, found pornography, and arrested her. The conviction was overturned by the U.S. Supreme Court by applying the Weeks and Silverthorne decisions to the states.

Several other lesser known cases include *Chimel v California (1969)*. Mr. Chimel was a suspect in coin shop burglary. Officers came to his house with an arrest warrant, (not a search warrant), took him into custody and proceeded to search his house, workshop and garage, where they found the stolen coins. The court ruled that the search, beyond the immediate area of the arrest, was illegal.

Burger and Rehnquist Courts (1969-present)

We begin to see substantial change within the decisions handed down by the Supreme Court during the 1980s, primarily due to the reconfiguration of the political ideology. The underlying philosophy changed toward requiring criminal defendants to show their rights were violated, a change from assuming they were violated. This change opens the door for what has been called the "chipping away" of the strict application of the exclusionary rule.

The first strike or chip to the exclusionary rule came in 1983 in the case of: Chip #1: *Illinois v Leon*, in which the high Court adopted what is now referred to as the "good faith exception to the exclusionary rule." This case occurred during the "get tough on drug era" and entails a drug case. Apparently law enforcement officers received information from an informant and then began surveillance on Leon, upon which they applied for a warrant. His conviction was overturned by a federal district court stating there was not enough probable cause. However, upon review by the Supreme Court, they upheld the conviction stating the officers had acted in good faith in securing the warrant.

Chip #2: *Massachusetts v Sheppard (1984)*. Officers knowingly served a search warrant they knew was inaccurate in describing the property they were looking for, however, the magistrate informed them that it was all right. The Supreme Court upheld the conviction.

Chip #3: *Illinois v Krull (1987)*. In this case, officers conducted a warrantless search that did not violate state law. Later, the law was found to be unconstitutional. However, the Court upheld the conviction.

Chip #4: *Illinois v Rodriguez (1990)*. A woman went to the police stating that her boyfriend with whom she lived with had beaten her badly. She told officers where he was and took them to the apartment, and let them in. The officers found him asleep. They also found considerable amounts of drug paraphernalia. He was arrested and charged for assault and possession. The defendant showed the woman did not live with him, therefore, the search was illegal. However, the Court stated the police reasonably believed she was telling the truth, therefore, they upheld the conviction.

QUESTIONS

1. Given the advent of good faith exceptions to the exclusionary rule, the plain view doctrine, and the Supreme Court's recognized necessity of emergency searches, can one argue that the exclusionary rule is still effective in America? Or, has the exclusionary rule been so watered down by recent decisions as to be little more than a paper tiger? Please discuss.
2. It seems that the decisions (*Mapp v Ohio* and *Chimel v California*) limit the scope and in a way, hinder law enforcement officers from doing their jobs. Do you believe that it is necessary to be specific in search warrants, or should police be able to be more general? Secondly, do these procedural requirements hinder police effectiveness?

LESSON TWENTY-ONE POLICE INTERROGATION AND MIRANDA

LEARNING OBJECTIVES

Upon completion of this lesson, the student should be able to:

- Discuss the US Supreme Court rulings relating to interrogation
- Discuss the importance of the Miranda decision
- Identify the different interrogation techniques

LECTURE NOTES

Police Interrogation

Interrogation can be defined as follows: *behaviors by the police that the police should know are reasonably likely to elicit an incriminating response from the suspect*. They can include questioning, staged line-ups, etc.

The process of interrogation has begun only when the officer(s) are attempting to elicit information concerning the crime in question. They may talk to the suspect about other topics without the strictures

of interrogation applying. As we are all aware, physical abuse to elicit a confession is not legal, in fact, the Courts tend to frown upon it. However, less known are the issues of *inherent coercion and psychological manipulation*.

Inherent Coercion is that gray area between normal behavior and physical abuse. That is, where there is no physical abuse, but behaviors which place a substantial amount of pressure upon the individual. This comes from a case in the 1940s, *Ashcraft v Tennessee*, in which the defendant had been charged with the murder of his mother-in-law on a Friday. He was interrogated until Monday, when he confessed to the crime. Now, while no physical abuse was ever committed, the officers did use a blinding light in his eyes, which was considered inherent coercion.

Psychological Manipulation are other actions that the Court has ruled are illegal. These behaviors consist of tactics based on subtle forms of intimidation and control in order to elicit confessions. This ruling emanates from a case in which detectives used a psychiatrist to gain a confession from a suspect. In *Leyra v. Denno (1954)* the police sent in a psychiatrist telling the defendant the individual was a doctor to help him with his sinus problem. Throughout their discussions, the psychiatrist was able to get the individual to confess. The Court threw out the conviction stating the detectives had used psychological manipulation to get the confession.

Now, as we can see, the rulings up to this time have been fairly consistent, protecting the defendant from various and sometimes, creative tactics to gain confessions. Well, things changed a bit in 1991, with *Arizona v Fulminante*, in which the Court found the tactics by the police were illegal, but that did not mean that the conviction was reversed if other evidence was available. Instead, admission of the confession was deemed a "trial error."

The Right to a Lawyer at Interrogation

The case that set the precedent for the right to an attorney during interrogation was *Escobedo v Illinois* (1964). Escobedo was arrested for the murder of his brother-in-law. During his interrogation, he was denied the opportunity to see his lawyer, even though he requested him. In addition, officers told his lawyer he could not see his client until after the interrogation.

Miranda Decision

Perhaps the most famous of cases that occurred during the sixties and under the Warren Court was *Miranda v Arizona* (1965). Miranda was arrested for kidnapping, and after two hours of interrogation, confessed to the crime. Upon appeal, the Court spelled out certain rights the defendant must be informed of before questioning can be conducted. It is important to remember Miranda rights only apply to interrogations. Officers are allowed to question individuals at the crime scene or even other individuals without providing Miranda. The only time Miranda is required, is when an individual is arrested and is in custody. That is, situations involving both arrest and custodial interrogation require Miranda. Officers

can take you into custody and question you without Miranda, as long as you are not a suspect and not under arrest.

As with the exclusionary rule, the Miranda rights have come under considerable scrutiny and are seen as handcuffing the police. Similarly, there has also been a general "chipping away" at the foundations of the Miranda Rights.

The first came in 1984 in *Nix v Williams*. Essentially, the defendant was arrested for the murder of a young girl. On his ride to the station, the detectives, without reminding him of his rights, proceeded to "pressure" him into confessing and showing them where the body was. Upon appeal, the Court upheld the conviction stating the police would have found the body anyway, therefore, the confession was not a critical component. This case produced what is termed the "inevitable discovery exception."

Another "chip" to the foundation of the Miranda rights came in *New York v. Quarles (1984)* which established the public safety exceptions to Miranda. In this case, a woman stated that she was raped and told the officers that the suspect had run into a local grocery store. They found him and noticed that he was wearing an empty holster. Fearing that a child or someone else might come across the weapon, they asked where it was, and it was located.

QUESTIONS

1. A "knowing waiver" of rights requires that the defendant be able to understand the consequences of not invoking the Miranda rights.

_____ True/False

2. In your opinion, has the Miranda decision "handcuffed" police organizations? That is, has this particular decision provided obstacles to the police achieving effectiveness?

[Top](#)

LESSONS 22-28 TERM PAPER

The term paper for this course will be based on an interview with an individual in the criminal justice system. More specifically, the student will interview some type of law enforcement officer or court official. The format of this interview is entirely up to the student, but should include the individual's educational background, training, job responsibilities, and job description. The purpose of this interview is to familiarize the student with professionals in the system and possible career opportunities. The student will provide a name and phone number of the individual they interview.

The paper should be at least five (5) pages long, margins no more than 1 ½ inches on each side, top, and bottom. Cover page, end notes, and bibliography do not count as part of the five pages. Yes, it is necessary to provide a bibliography. Font should be no larger than

12 point. Be sure to proofread your paper to correct mistakes--do not rely solely on spell check.

LESSON 1 ADJUDICATION

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Discuss the dual court system, the hierarchy of courts and the fragmented nature the organization of courts in the United States
- Identify the central role of plea bargaining and prosecutor's discretion in determining the outcomes of 90 percent of criminal cases
- Identify the defense attorneys' use of pretrial motions
- Discuss the justifications for and criticisms of plea bargaining.

LECTURE NOTES:

The [dual court system](#) includes state and federal courts. Both have trial and appellate courts. American trial courts are decentralized, except for a few states with centralized court systems. Most courts operate under the state penal code but are staffed and funded by county or city government, which leads to local political influence and community values having influence on the court.

State Courts

The basic structure of the courts reflects its English roots. Efforts were made to make sure courts were responsive to the local community, so legislatures created court systems which were decentralized, linked to local politics, and dependent on the government for

resources.

During the 19th century, the growth in commerce and population generated new types of disputes which required attention from the courts. Consequently, local and state governments created courts with specific legal and geographical jurisdictions, such as small claims, juvenile, and family, to name a few. These creations, while helpful to the local jurisdictions, created a complex and confusing structure of overlapping jurisdictions and responsibilities. In terms of structure, the state court system is basically organized into three tiers, though variations may occur across states:

1. ***Trial courts of limited jurisdiction***: These are limited to hearing formal charges against individuals, holding preliminary hearings and in some cases, trials.
2. ***Trial courts of general jurisdiction***: Are responsible for trials in all cases, both criminal and civil.
3. ***Appellate courts***: Hears appeals from the lower courts.
4. ***State Supreme Court***: Have substantial discretion to choose the cases they want to hear. In these courts, the judges sit as a whole.

Federal Courts

In the United States, the federal court system is organized by districts, with 94 U.S. District Courts, 12 U.S. Courts of Appeals, and the U.S. Supreme Court. Each of these courts have specific duties within the federal system.

U.S. District Court: Have **original jurisdiction** over all cases involving alleged violations of federal law.

Courts of Appeals: Have jurisdiction over those cases that arise from district courts within their geographic area. There are actually 11 courts, and one with jurisdiction in the District of Columbia.

U.S. Supreme Court: Has the power of judicial review, which allows them to hear cases from both the state and federal level. The power of judicial review was first used in the 1803 case of [Marbury v Madison](#).

Pretrial Activities

Following arrest, the individual has his/her first appearance in court, which must occur within 48 hours. The individual is informed of the charges against him/her.

Also at this time, decisions are made as to whether or not bail will be set, or some other type of pretrial release.

Bail: This mechanism is used to avoid depriving a presumptively innocent person of their liberty. It is usually a sum of money or property that the defendant must provide the court to ensure their appearance in court at a later date.

In most cases, the individual may rely upon a [bail bondsmen](#) to help them post bail. Bail bondsmen provide cash for release for a certain fee. Interestingly, if the individual decides to skip bail, the bail bondsman can track them down without any restrictions of extradition, use of force, etc.

Alternatives of Bail

Release on Own Recognizance: In this case, there is not cash or property bond used to ensure the appearance of the individual. They are trusted to appear based on their promise to the court.

Conditional Release: Under this alternative, the individual is provided a number of guidelines by which he must abide by. If violation occurs, the defendant's release is revoked.

Third-Party Custody: This is an option in which an individual or business accepts the responsibility of making sure that the individual shows up for court.

Unsecured Bond: No money or property is required as a down, but the defendant signs a promissory note indicating that she/he will forfeit a set fee if she/he does not appear in court.

Signature Bond: These are used in minor cases where levels of dangerousness are not an issue. Basically, the defendant just signs paperwork stating that he/she will appear in court.

Overall, pretrial release accounts for 85% of state level defendants and 82% of federal defendants. There is growing concern over the release of defendants that may pose substantial risks to the community, hence, many states have enacted **danger laws**, which focus attention on limiting the release of violent criminals back into the community.

Preliminary Hearing

The purpose of this hearing is to assess whether probable cause exists that a crime has been committed, and the defendant is the one who committed the crime.

During this trial, witnesses may be presented and the defendant may testify. It is important to note that at this stage, the defendant's guilt does not need to be proved beyond a reasonable doubt, all that is needed is "sufficient evidence."

The Grand Jury

This mechanism can be characterized as another "filter" in the criminal justice system. Composed of citizens, this body hears evidence presented by the prosecuting attorney, and decides if sufficient evidence exists to continue the process. The defendant is not allowed to appear.

Arraignment and the Plea

Upon return of an indictment or information, the defendant will be arraigned. At this time, the formal charges are read and the defendant enters a plea of either *guilty*, *not guilty*, or *nolo contendere*. In order for the process to continue, a plea of not guilty must be entered. A plea of *nolo contendere* is not an admission of guilt but it relieves the individual of any civil liability.

Plea Bargaining

Plea bargaining is the defendant's agreement to plead guilty to a criminal charge with the reasonable expectation of receiving some consideration from the state for doing so.

Many see this as the most important stage in the criminal justice system, with approximately 90% of all felony cases disposed of at this stage.

Plea bargaining has been ruled legal by the Supreme Court. In *Blackledge v Allison (1976)*, they found there to be a number of advantages for both the defendant and the prosecution.

Entering into a plea bargain, the defendant seeks to avoid maximum sentence or charges with legislatively mandated sentence, or to avoid labels such as "rapist" or "child molester." At the same time, the prosecutor attempts to avoid a lengthy and costly trial. This also allows him/her to gain a conviction. It should be noted that the prosecutor determines the charges and has substantial influence over the sentencing.

Criticisms

As one might imagine, there are numerous criticisms regarding the use of plea bargaining:

1. **Due process considerations:** This method does not provide due process, since

defendants give up their constitutional rights.

2. **Sentencing Policy:** Since reduced sentences are given, many feel that society's interests are being neglected and that this tool is used under the worse circumstances (overcrowded courts, overworked attorney's).

3. **Low Visibility:** One of the most cited criticisms centers around the fact that most of the deals are low profile; that is, out of the purview of the "court's eyes." For example, it is difficult for the judge to assess the legitimacy of the whole process.

Effectiveness

Despite the number of criticisms levied against this tool, it does seem to be effective. For example, it does advance the interests of all individuals involved, does not seem to be a result of overcrowding. Those jurisdictions that have abolished plea bargaining still take into consideration the sentencing for a guilty plea.

QUESTIONS

1. If a student from another country asked how the American criminal court system operated, how would you explain the operations of the court? Be as specific as possible.
2. Plea bargaining is an integral part of the American criminal justice system. Do you agree with this practice? If this practice were eliminated, what do you think the effects on the system would be?

[Top](#)

LESSON 2 COURTROOM WORKGROUP

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Identify the professional courtroom actors included in the courtroom workgroup
- Discuss the impact of the media in the courtroom
- Be familiar with the role of the judge, prosecuting attorney and the defense attorney
- Have knowledge of the level of discretion held by the prosecuting attorney

LECTURE NOTES:

The Courtroom Work Group

When we think of the [criminal justice system](#), we tend to think of it as institutions. However, people are the decision makers within the institutions, therefore, their behavior seriously impacts the administration of justice.

Walker calls these decision makers [the courtroom work group](#) which suggests that these individuals, who work closely with one another, day after day, develop some kind of understanding to get their jobs done, and create as little conflict as needed.

However, this does not sound like two sides battling for the truth--what is going on here? Is Walker correct? Well, most research seems to indicate that a high degree of consensus exists between the prosecution, defense and the judge. In fact, most characterize the system as *administrative rather than adversarial!!*

Think about it, most decisions are made, for better or for worse, behind closed doors. Why would you want to cause conflict for people that you will be working with for several years?

Taking this a step further, think about the courtroom work group as implementing policies. That is, anything that is passed by the legislature concerning crime and the criminal justice system, will eventually need to be implemented by this powerful group.

This means that if they can *influence policy depending on whether or not they like or dislike the possible outcomes*. Overall, grand changes are taken as well as modest slow change. Basically, if it upsets the rhythm too much, the group will likely evade it as much as possible. For example, Feeley found that "speedy trial laws" had little impact on the system. The group did not like this change, so they simply worked together to find exceptions, etc.

Given this, we must consider what impact these new and more punitive laws have on the group. Initially, we must concede that the group will most likely do their best to circumscribe them, find exceptions etc. These types of laws *upset the balance within the system*. As we know, organizations need to survive, therefore, actors within the organizations will take those measures necessary to ensure survival.

For example, [three-strikes you're out policies](#) are advocated by politicians, supported by the public and implemented in a number of states. However, we find that in most states, prosecutors refuse to utilize the law. **How does this effect our administration of justice?**

This balance is necessary to handle the extremely high number of cases that are brought to court. Walker suggests that any substantial change threatens this stability with what he calls *criminal justice thermodynamics*.

Essentially, this means that every action in the criminal justice system has a counter action. By definition, "*an increase in the severity of the penalty will result in less frequent application of the penalty.*"

The corollary to this is "*the less often a severe penalty is applied, the more arbitrary will be the occasions when it is applied.*"

For example: Death penalty (as the number of deaths increased, the number of those sent to death row decreased); similar examples include: three strikes you're out; New York gun laws, etc.

These type of punitive policies also effect other parts of the system. The more people arrested for drugs, the more will be prosecuted (creating a backlog) and more will be incarcerated (creating substantial overcrowding). So in terms of systematic effects, our crime control policies may be more detrimental than helpful.

Judges

In the American criminal justice system, the judge has the primary duty of ensuring justice in the courtroom. He/she undertakes numerous responsibilities including signing warrants, setting bail, scheduling cases, and overseeing that the trial is operating in a "judicial" manner. Generally, judges have three primary functions: *adjudicators, negotiators and administrators.*

The role of *adjudicator* requires the judge to be an unbiased figure in trials, while the role of *negotiator* requires the judge to negotiate between the prosecution and the defense in terms of evidence, etc. Lastly, judges are responsible for the *administration* of their courtroom as well as the individuals in their office.

While there are numerous variations of methods in which an individual can be selected to become a judge, they all fall under two primary categories: judicial election and judicial appointment. In terms of election, most judges run unopposed and the process is not usually controversial, as are regular political figures. Turning to appointment, in several states, judges are appointed by the governor of the state. As one may imagine, both of these general methods bring politics into the selection and retention of judges, which is very much the case. In an effort to remedy this situation, many states have turned to a combination of judicial selection committees as well as some type of non-partisan election.

Prosecuting Attorney

Within the criminal justice system, the prosecuting attorney represents the state and the people in all criminal matters in which charges are brought against an individual. The primary roles of the prosecutor include presenting the state's case and to work with police to ensure that their actions are within legal boundaries.

One of the most powerful duties, lies in the ability of the of the prosecutor to file charges.

Essentially, prosecutors retain a substantial amount of *discretion* throughout the entire process. First and foremost, a prosecutor decides on whether or not to file charges and which charges to file. Secondly, the prosecutor is the one to determine if a plea bargain is going to be offered, and if so, how low the charges are going to be dropped. Lastly, the prosecutor also has influence over sentencing, since they can recommend certain sentences. Overall, the prosecutor is one of the most powerful individuals in the criminal justice system.

Defense Attorney

The role of the defense attorney is essential in protecting the constitutional rights of the accused, as well as providing support for the defendant and his/her's family.

While many of us hold an idealized image of defense attorneys, that is, that they are highly trained and have an adversarial relationship with the prosecuting attorney, this is not generally the case. Most often, defense attorneys hold a friendly working relationship with the prosecutor and judge, some are better trained than others, and lastly, defense attorneys may act more as negotiators in attempting to get the best outcome for their client, not necessarily a "not guilty" verdict.

More specifically, there are several types of defense attorneys, which are either public defenders or private attorneys. *Public defenders* are provided by the state to represent those individuals that cannot afford an attorney on their own. These individuals are employed by all levels of government (city, county, and state) and exist to assist indigent clients. The other types of defense counsel are *private* attorneys. In terms of counsel for indigent clients, the court can assign private counsel to represent an individual. This is the most common method utilized. The third type used is the *contract system*, in which the government enters into a contract with a local firm or attorney to represent all indigent clients.

Although there is considerable disparity in the amount of resources available to indigent defense when compared to prosecutors, the most recent studies seem to indicate that little difference exists in the number of plea bargains, sentence length or case disposition when comparing private to assigned counsel.

The Victim

Perhaps the most forgotten individual in the whole process is the [victim](#). Since the system is established to assess the guilt of the accused, the role of the victim is primarily limited to their testimony concerning matters surrounding the case. Many times, the victims themselves are put under a microscope concerning their previous behaviors and actions. We only need to think of rape victims for a primary example.

The Press

Recently, due to the O.J. Simpson trial, the issue of the press in the courtroom has come to the forefront. Press are, by virtue of the 6th Amendment, allowed to be present in the courtroom during a trial. They do, however, pose numerous problems for the criminal justice system. First, before the trial begins, extensive case coverage may make it difficult to find individuals that have not already formed an opinion concerning the guilt or innocence of the defendant. Secondly, once the trial begins, the press, through their coverage, may sway and introduce other evidence that jurors may hear.

Despite these problems, it seems likely the press will remain in the courtroom, and they may even become more extensive.

QUESTIONS

- 1. The chapter describes three-systems of judicial selection. Which of the three do you think is most effective. Please explain your answer.
- 2. Do you agree or disagree with Walker's description of the courtroom workgroup? Be as specific as possible.
- 3. How do the prosecutor's authority and power illustrate the importance of discretion in the criminal justice system?

LESSON 3 JURIES

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Discuss the process of jury selection
- Discuss the role in which the jury plays in the criminal trial
- Identify the major issues surrounding jury selection.

LECTURE NOTES:

In the United States, the purpose of the trial is to determine whether or not the individual accused is **legally guilty**. That is, does enough evidence exist to prove beyond a reasonable doubt that the defendant committed the crime in which he/she is accused? This is substantially different from factual guilt, which is whether or not the defendant actually committed the criminal act.

As discussed in previous lessons, the trial, in theory, is an adversarial process, in which the laws of

criminal procedure will uncover the truth.

The Right to a Speedy Trial

Under the 6th Amendment to the United States Constitution, citizens are guaranteed the right to a speedy trial. However, due to the overwhelming number of cases in the courts today, this "right" is not always upheld. This can lead to dismissal of the case. It should be noted not all delays in a trial will result in dismissal. For example, delays initiated by the defendant do not violate that individual's rights. In general, speedy refers to 90-120 days after indictment.

Jury Selection

The first stage of the trial process is to select a jury. The jury has several different functions, including the determination of guilt or innocence of the defendant. This represents the diversities of values and morals in the community and provides a safeguard between the people and the possible oppression of the government. Most important is membership on the jury is a civic duty of citizens and also the jury represents the people during the trial.

Most juries throughout the U.S. consist of 12 individuals that are supposed to be representative of the community. It should be noted that "representative" or "peers" does not mean that every culture, ethnic, religion or gender has to be on the jury. Instead, the courts have defined the above as "individuals from the community at large". As long as prospective jurors are not excluded because of ethnicity, etc., then the jury is thought to be representative.

In terms of selection, prospective jurors are randomly selected from a "pool," which usually consists of property owners, individuals registered to vote, etc. Once called to serve on a jury, there are several methods by which the prosecution and defense can excuse a juror. The first is *challenged for cause*, in which the juror indicates that she/he may not, for whatever reason, be able to make a fair decision. There is not usually a limit on the number of these challenges the prosecution and defense can use. The second is *peremptory challenge*, where the attorneys may excuse a juror without providing a reason. A limit usually exists as to the number of these that can be utilized.

An interesting development is the use of psychologists or other professional jury consultants to aide the attorneys in their selection. These individuals look for subtle cues, psychological characteristics, etc. that may be influential in the decision making process.

Given the above processes, there are certain types of individuals who are seen as "better" jurors than others. For example, individuals familiar with the criminal justice system or law are usually dismissed. Also, individuals with strong personalities are also dismissed when possible. Hence, juries usually consist of the unemployed, undereducated, retired people and/or housewives. This is not necessarily representative of society.

One of the most important issues, if not the most important, concerns race and ethnicity in the jury selection phase. As in other aspects of our lives, race plays an important role. If an individual is intentionally excluded from a jury because of her race, then we are excluding certain morals and values. As stated above, representativeness is not defined by proportionality, but by the intentional exclusion of certain individuals from the jury. Hence, case law indicates that if the prosecutor intentionally excludes certain individuals, then he has violated the defendant's 6th Amendment right. However, if intention does not exist, the Court cannot find a violation.

Assessing the behavior of juries has been difficult, since researchers are not allowed inside the jury room. However, those studies that have been conducted have found juries behave much like other groups. Men are more active than women, better educated are more active than lesser educated, and whites are more active than minorities.

Other studies have found that opinions of the witnesses, court procedures and personal experiences are more influential in decision making than the evidence or testimony.

Overall, jury selection is probably one of the most important parts of the process. Not only does it allow the community, or the "people" to be part of the process, it allows the diversity of the community to be represented in the courtroom. While some critics contend that "scientists" or "professional jurors" would do a more effective job, it does not appear that our current system is going to fade away anytime soon.

QUESTIONS

1. What constitutes a jury of peers? Please be specific in your discussion.

2. Which of the following is not a type of juror challenge?
 - a. Challenges to the array
 - b. Challenges for cause
 - c. Challenges for knowledge
 - d. Peremptory challenges

3. In jury selection, challenges for cause
 - a. are only made by the defense.
 - b. are not required to be justified.
 - c. deal with sound legal reasons for removing potential jurors.
 - d. are ruled upon by the prosecuting attorney.

[Top](#)

LESSON 4 THE TRIAL

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Discuss the different stages of the trial
- Become familiar with the appeals process
- Identify some of the criticisms of the jury system

LECTURE NOTES:

Once jury selection is completed, the trial begins. The first stage in the trial is the *opening statements*, provided by both the defense and the prosecution. During the opening statements, the attorneys are not presenting evidence, but outlining to the jury where they are going with their case and what the jury may expect throughout the trial. This is also a time in which the attorneys establish a relationship with the members of the jury.

Upon completion of the opening statements, the prosecution presents its case. As we already know, in the American system, an individual is *innocent until proven guilty* in a court of law. Therefore, it is the prosecution's responsibility to prove beyond a reasonable doubt that the defendant did commit the crime with which she/he has been charged. This is attempted through the presentation of different types of *evidence*. There are numerous types of evidence which the prosecution may draw upon in developing their case. For example, the prosecution can utilize the *testimony* of an individual, *direct evidence*, such as an eyewitness account, *circumstantial evidence*, which requires the jury to interpret and then develop a conclusion, *real evidence*, for instance, fingerprints, weapons etc., and lastly, *demonstrable evidence*, which include maps, diagrams, etc. Overall, the goal is to paint a very clear picture for the jury, so, the combination of all types of evidence make for a stronger case.

After the prosecution has completed or rested their case, the defense has an opportunity to present their version of events. Using their evidence, one of the primary goals of the defense is to refute, or to blur the picture painted by the prosecution. This is usually done through an alibi or some type of affirmative defense (e.g., self-defense). In presenting their case, one of the more difficult decisions the defense must make concerns the testimony of the defendant; that is, should they allow the defendant to testify in court?

As indicated above, one of the more effective types of evidence includes the use of witnesses. Each side has the opportunity to question their own witnesses and to cross-examine their opponent's witnesses. When cross-examining a witness, the attorney is usually required to stay within the testimony that the individual offered under examination. One thing not allowed to be entered into evidence is *hearsay testimony*, which refers to second hand testimony offered by an individual. There are, however, exceptions to this rule. They include spontaneous declarations or statements made as an individual is dying.

A topic becoming more of an issue for courts is the testimony offered by children. Because of the nature of the trial and the cross-examination process, it is very difficult for children to testify in open court. Hence, the court has made several accommodations, including the use of video-taped testimony, closed-circuit television, and even the testimony of a primary care giver in some cases.

After the presentation of the evidence, both the prosecution and the defense provide closing arguments. During this stage in the process, the attorneys attempt to tie-up any loose ends that may still exist, attempt to provide a summation of their case, and point to weaknesses in their opponents case.

Before the jury begins their deliberations, they are issued a set of instructions by the judge. The primary role of the judge at this stage is to determine which laws apply to the case. Then he/she instructs the jury on the manner in which the law bears on their decision. Within the instructions, the judge usually reminds the jury of their duty to consider all the evidence, to remain unbiased, the definitions of beyond a reasonable doubt, and the elements necessary for an act to be considered a crime. Upon completion of the instructions, the judge excuses the jury to their deliberations.

Overall, the time spent on deliberations varies substantially, usually depending upon the strength of evidence presented. During their deliberations, the jury can request parts of transcripts, testimonies, etc. In most states, a unanimous decision is required. However, a handful of states allow a simple majority to determine a verdict. Several outcomes are possible. First, the jury may become deadlocked, which means the jurors were unable to reach any kind of consensus about the case. If this is the situation, the prosecution has the option to retry the case. Secondly, the jury can return a not guilty verdict, at which point the trial ends. However, the prosecution may appeal the case. Third, the jury can return a *guilty* verdict, at which time the judge may incarcerate the offender or release him/her on bail until sentencing. All of these decisions are read in open court and the judge usually asks each member their vote, therefore, ensuring validity of the system.

As might be expected in any type of system in which "lay" individuals are involved, the jury system is not without its critics. One of the primary criticisms is that jurors, due to their relative naivety concerning the law and legal process, are unable to understand all that is required. An example of this was witnessed in the O.J. Simpson trial and the use of DNA evidence. Due to the complexities involved in DNA analysis, it was very difficult to relate to the jurors the exact nature and implications of the evidence. In fact, many people, because of our lack of understanding of these complex scientific procedures, tend to become critical of them. In addition, many contend that individual emotion may provide more motivation for a decision than the weight of the evidence. Another problem is that jury deliberations are probably dominated by the more aggressive, strong-willed individuals which can influence the overall outcome.

Along with these criticisms come several suggestions for solutions. The most common is the present jury system be replaced by a system based on professionals. More specifically, individuals would be trained in the appropriate areas (i.e., decision making skills, listening skills) to make them "better" jurors. Furthermore, they would be paid by the government to hear cases and hand down decisions. The

advantages, claim the proponents, is this type of system would create a very dependable, knowledgeable and equitable pool of individuals. Opponents, on the other hand, suggest such a system not only violates the civility of a juror, but creates the possibility that these individuals would become complacent, stereotyping offenders based on other offenders, etc. Overall, then, while somewhat appealing, it appears the American jury system will not undergo major changes in the near future.

QUESTIONS

1. How would you improve the adjudication process in criminal cases? What suggestions do you have for streamlining the system, reducing delays, and increasing the overall quality of justice? (This question assumes that you would change the system.)
2. Identify some of the shortcomings of the present jury system in America. How can we improve this system? Please be specific.
3. Many claim that the trial process is adversarial. What do you think? More specifically, do you think that the system is adversarial or that the actors within the system are more likely to cooperate during the process?

LESSON 5 GOALS OF PUNISHMENT

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Explain punishment rationales and the philosophy behind criminal sentencing today
- Identify the strengths and shortcomings of each goal
- Compare and contrast the various goals.

LECTURE NOTES:

The concept and implementation of punishment has been defined by social values, morals and religious ideals. Different eras throughout history have witnessed various justifications for the use of punishment as a response to the breakdown of social order throughout the United States. For example, at one time or another, most countries have utilized some kind of physical pain as a method of retribution for a criminal act. Over time, there has been a general movement away from this form of punishment, toward those oriented toward limiting the offender's future behavior. Consequently, there are five primary goals of punishment: *retribution, incapacitation, deterrence, rehabilitation, and restoration*.

Retribution

This form of punishment is driven by the emotional response of revenge. It is based upon the idea that those individuals who commit a wrongful act should receive a punishment in proportion to their crime (e. g., "[eye for an eye](#)"). Due to the biblical underpinnings of this justification, this is the earliest known rationale for the use of punishment. Recently attention has been paid to this concept by individuals whom support the "just desserts" model. This model claims that those who commit criminal acts are punished for two primary reasons: they deserve it, and it is required for societal justice. It is important to note the primary goal of retribution differs from the other rationales. It is meant to satisfy the populace, not deter future behavior, which opponents claim is a fundamental shortcoming of this punishment rationale.

Incapacitation

The primary rationale for the use of incapacitation is to protect society through the detainment and separation of individuals from law-abiding citizens. The use of incapacitation has been realized, in modern society, through the use of prisons. Differences in this goal lie in the fact that it is not directed toward punishment, nor reformation of an individual's behavior, but tends to be future oriented in [the protection of society](#). A closely related variant lies in the use of selected incapacitation. This is based upon the idea that most of the crimes are committed by a selected number of individuals, hence, they are targeted for incarceration. Though a widely popular perspective, the value is undermined by two fundamental problems. First, actors in the criminal justice system are woefully unable to predict future behavior. That is, we are unable to predict, with any sense of accuracy, the level of dangerousness any individual represents in the future. Second, there is no theoretical relationship between the severity of the criminal act and the sentence received. Stated differently, the goal is simply to restrain. Therefore, an individual may be restrained until deemed "safe" to return to society.

Deterrence

Deterrence is based on the work of Jeremy Bentham and other utilitarians. Their work suggested individuals are rational beings who are driven by balancing the costs and benefits of their behavior. Since rational individuals seek to avoid pain, they will always gravitate toward more pleasure. Applied to criminal justice, individual behavior can be deterred through increasing punishments (i.e., pain) to outweigh the benefits of the criminal act.

There are two types of [deterrence](#), *general* and *specific*. *General deterrence*, is based upon the presumption that individuals in larger society will be discouraged from future criminal behavior through the observation that the punishment they will receive, outweighs the benefit of the possible act. On the other hand, *specific deterrence* is only concerned with altering the behavior of the individual who committed the criminal act. Therefore, the goal is to reduce the proclivity of future criminal behavior.

As with the other goals, deterrence has been criticized as being ineffective. First, considerable research

suggests that increasing the level of punishment does not necessarily result in a decrease of criminal behavior. For example, increasing the costs of drunk driving does not provide a followed decrease in that type of behavior. Secondly, the process of deterrence is extremely complex. It includes factors such as the likelihood an individual is arrested for their act, the speed in which they are brought to trial, and lastly, the certainty in which they will receive punishments. Not only is this a substantial amount of information that must be processed before the criminal act is committed, but it also illustrates the effect the criminal justice system has on this goal.

Rehabilitation

Rehabilitation is similar to deterrence because it attempts to alter an individual's behavior. The underlying assumption of [rehabilitation](#) is that the likelihood of future criminality can be reduced through treatment of the individual. This goal is oriented toward the individual; that is, identification of the underlying problems of the individual and the development of appropriate techniques to "cure" this behavior.

It is important to note that punishment is not the goal, it is treatment of the individual. Therefore, an individual may be restrained within the system until he is "cured". Similar to incapacitation, the type and length of treatment is not related to the severity of the crime, but to personal characteristics. This goal received substantial support from the early 1930s through the early 1970s, but was derailed by research which suggested that "nothing works" when it comes to rehabilitation. Since then, this goal has been reduced in its influence. At this point, it is important to note that a large body of research indicates that rehabilitation does work under certain circumstances, with the primary indicator being the correct matching of the offender to the proper treatment.

Restoration

More recent attention has been paid to the idea of returning the victim to the original state, or "making them whole" again. Hence, the idea of restoration is to facilitate the healing of the victim through a variety of services. For example, victim services, community service, [reimbursement to the victim](#). In a sense, this goal is directed more toward the victim of the crime(s) than the goals listed above. Moreover, advocates contend that this goal benefits both the victim and the offender. More specifically, through reparation, the offender may learn responsibility, empathy and other socially desired values and morals.

In general, restructuring attempts, through a variety of victim oriented services, to help bring the victim back to the way he was before the criminal act.

QUESTIONS

1. Which of the goals of criminal sentencing do you most agree with? Please explain why?
2. Please identify the weaknesses of the different philosophies of punishment described in

this lesson.

[Top](#)

LESSON 6

SENTENCING STRUCTURE

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Understand and discuss the difference between indeterminate and determinate sentencing
- Discuss the federal sentencing guidelines and their importance
- Identify the development of truth in sentencing

LECTURE NOTES:

In the previous lesson, the different philosophies of sentencing in the United States were outlined. In this lesson, the pragmatic application of these policies will be discussed in terms of the primary sentencing strategies.

The first sentencing practice, and one of the oldest is *indeterminate sentencing*. This practice is premised on the belief that individuals are more likely to participate in their own treatment if they know that it may reduce their overall sentence. This practice is the pragmatic application of rehabilitation, and gives the court and correctional authorities substantial discretion over the individual's sentence. The use of this sentencing strategy allows judges to impose lower and upper limits to a sentence, within the given range. The inmate could be released depending on his/her overall behavior and movement toward rehabilitation. Release is determined by a parole board. As indicated, this model is the oldest, but not necessarily the most popular. Critics contend that there are a number of flaws, most notably, the inequity in sentencing and the possibility of racial and ethnic biases playing a role.

Growing dissatisfaction with indeterminate sentencing led to the development of *determinate sentencing*, which is based on the idea that punishment is deserved. Based on this, defined penalties are linked to certain criminal behaviors. The crime itself receives the penalty, not the individual. Release is predicated upon completion of the sentence, usually minus some type of "good time" which does not require a parole board.

Although popular, this sentencing practice has numerous critics. Most contend the major shortcoming is that no attempt is made to change or rehabilitate behavior. Another criticism is that all individuals are treated alike, their individual characteristics are not accounted for.

More recently, there has been concern convicted felons, especially violent ones, were not serving all of their sentence. That is, after accounting for "good time" and other sentence reducing strategies, many inmates were serving only a fraction of their original sentence. Given this situation, many have called for *truth in sentencing* which is also referred to as *mandatory sentencing*. Regardless of the term, the end result is the convicted felon serves all of the original sentence, that no time off be given for good behavior, etc. Under these types of practices, all individuals who commit a certain crime, will receive the same sentence. This reduces the discretion of the judge during sentencing.

Federal Sentencing Guidelines

Sentences in federal court underwent substantial revision with the Sentencing Reform Act of 1984. This Act created the U.S. Sentencing Commission which was given the authority and responsibility to rewrite federal sentences to better reflect the philosophies of deterrence, incarceration and retribution. The Commission developed federal sentencing guidelines which substantially reduced the discretion of the judge and established a hierarchy of punishments based on the severity of the criminal act. Due to the importance of plea bargaining in the administration of justice, this practice is still allowed in federal courts. However, efforts have been undertaken to reduce the level of secrecy usually involved.

Because of federal influence of state affairs, these changes at the federal level have prompted many states to follow suit and to develop sentencing guidelines similar to the Federal government's.

QUESTIONS

1. Do you believe that indeterminate or determinate is most appropriate for American society? Please explain your answer.
2. Which of the following is not a criticism of indeterminate sentencing?
 - a. Divergent judicial personalities often produce a wide range of sentencing practices.
 - b. Allows for the possibility that offenders might be sentenced on the basis of social characteristics.
 - c. Defense attorneys use delaying tactics to manipulate the selection of judges.
 - d. It produces dishonesty in sentencing.
 - e. All of the above.
 - f. None of the above.
3. Which sentencing practice relies on well-defined hierarchy of penalties, specifying terms of imprisonment with each criminal offense category?
 - a. Indeterminate
 - b. Determinate
 - c. Mandatory
 - d. Sentencing guidelines

LESSON 7

SENTENCING OPTIONS

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Explain the importance of the pre-sentence investigation report
- Discuss the development, current status, and future of the role the victim has in the system
- Identify and discuss the various available sentencing options

LECTURE NOTES:

Pre-sentence Reports

In the jurisdictions where judges still retain some type of discretion in the sentencing process, *pre-sentence reports* are an important element for determination. While the actual structure of the report differs across jurisdictions, the role and function remain quite similar. The purpose of the pre-sentence report is to relay information to the judge regarding the defendant. Usually prepared by probation or parole officers, the report sets out to provide a more detailed picture of the defendant, including former education, jobs, family life, etc. Since this is a written report, it is possible to use various types of language. The probation officer has the option of writing the report in a positive, neutral, or negative manner. Based upon the report, many jurisdictions allow the probation or parole officer to make a recommendation as to the appropriate sentence. Another important aspect of this report is it aides the judge in the decision making process.

Victims

Substantial amounts of attention have recently been devoted to victims of criminal acts. While victims have, for a long time, received attention from private organizations, the current interest from those within the field of criminal justice is relatively new. Motivated by the development of a presidential task force focusing on victims in the early 1980s, many have called for the passage of a constitutional amendment guaranteeing rights to victims of crime. Interestingly, there are no specific rights granted to victims in our system of criminal justice. Rights are granted to the defendants who must protect themselves from the power and authority of the government.

Despite the failure of such an endeavor, numerous states have revised their state constitutions to include rights for victims. Up to this point, the Federal Government has devoted nearly 200 million dollars to the development of victim services throughout the country. These funds can be used for a variety of purposes, including (but not limited to) helping the victim get back on track through a loan, money for

medical care, etc.

The foremost method in which victims are becoming involved in the process is during the sentencing phase, at which time the defense can provide a victim impact statement, or the victim (or victim's family) can testify in open court. Currently, victim impact statements can be used, according to the U.S. Supreme Court, in most types of cases, including death penalty cases.

Sentencing Options

Having discussed the philosophies of sentencing as well as the pragmatic application of these philosophies through different sentencing practices, we can now take a look at some of the more common sentencing options available to the courts. The imposition of these options depends upon several factors, with the most influential being severity of the crime and the perceived likelihood of future offenses.

The least severe imposition is that of a *fine*. Of course, this option may be more severe for those individuals that are considered poor, and less severe for those individuals that are wealthy. Primarily used for relatively minor offenses and for those individuals that have had little previous involvement in the system, fines are another tool that the system can utilize to keep offenders out of jail.

The second option is probation, where upon the individual is given numerous restrictions to abide by and a suspended sentence. If the individual violates any of the stipulations, he can be incarcerated for the remaining portion of the sentence. This is another method that is useful for keeping low risk offenders out of jail.

The third option, and one that is rapidly becoming more popular, is that of *incarceration*. Recent data indicates that approximately 78% of all convicted felons are sentenced to either jail or prison, a substantial portion by any measure. It is not unusual for judges to combine several of these sanctions, or to utilize variations of them. The overall goal, of course, is to provide a sanction that best fits the situation and provides adequate security for the community.

QUESTIONS

1. Discuss the historical development of victims rights in the United States.
2. Whose individual rights might be helped or harmed by allowing victim statements during criminal sentencing?
3. What are the four sentencing options? Please provide examples of crimes that these options would be most appropriate.

LESSON 8

DEATH PENALTY

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Discuss the development of the death penalty in the United States
- Discuss the arguments for and against the imposition of the death penalty

LECTURE NOTES:

The most controversial sanction and one that polarizes arguments, is the [death penalty](#). Currently, the United States is the only Western democratic country that uses the death penalty, all others have abolished it. Also, the United States is one of the few countries willing to put a juvenile to death.

The history of the death penalty is one that is best understood in eras. Most legal executions occurred before the 1900s. In fact, of the 18,800 documented executions, only about 4,500 of them have occurred during this century. Most of the [executions](#) in the 1900s have occurred between 1930 and 1967 (3,800). Between 1967 and 1977, no executions occurred. However, after 1977, many states have actively continued using the death penalty. Currently, there are nearly 3,000 individuals under the sentence of death, with about 250 added each year in the 38 states that have the death penalty. Southern states hold approximately 2/3 of all those on death row.

In terms of ethnic and racial percentages, whites represent 51%, blacks 42%, Hispanic 5%, and other ethnic groups the other 5%. Careful analyses of these figures suggest blacks are over-represented on death row, acceding their percentage in society as well as their percentage tried for capital crimes.

Historical Development

There are three major "modern" cases dealing with issues surrounding the death penalty.

The first case, *Furman v Georgia (1972)*, was a landmark case. The Court decided the administration of the death penalty represented cruel and unusual punishment, consequently voiding the laws in those states that had the death penalty. It is important to note the death penalty itself was not ruled cruel and unusual, but the administration of the sanction.

In the second case, *Gregg v Georgia (1976)*, the Court ruled that steps taken to alleviate the concerns outlined in *Furman* were successful. So administration of the death penalty was ruled constitutional.

Two key points were that the judge must consider mitigating and aggravating circumstances and secondly, capital cases require two steps, an actual trial and a second hearing for sentencing.

The final case, *McKlesky v Kemp*, concerned the issue of racial disparity in death sentences. More specifically, the defense argued that, depending upon the race of the victim, an individual was more likely to receive the death penalty. The Court denied the appeal stating that the issue was on discretion and in order to show disparity, an individual would have to prove that actors in the criminal justice system acted with a discriminatory purpose in a specific case, not utilizing generalized statistical evidence.

While there are numerous other cases of importance dealing with various aspects of the death penalty, these three are generally considered the most important in shaping constitutional law in this area.

Support and Opposition

Generally, support for the death penalty lies with the concepts of revenge, just desserts and protection of society. Many argue that once an individual takes a life, he/she deserves to have their life taken, and the state has the authority to do so. Others argue it is purely revenge, regardless of the "deterrent" effect. Lastly, most argue that putting the individual to death is the only sure way of providing safety for the rest of society.

There is considerable opposition, primarily based on four factors; the likelihood that an individual will be put to death, the death penalty has no deterrent value, the administration is arbitrary and discriminatory, and the government does not have the right to put someone to death.

Here are some statistics concerning the death penalty:

- The majority of death penalty states show murder rates higher than non-death penalty states
- Over 80% of the victims of death penalty cases are white, even though only 50% of murder victims are white
- Since 1976, 85 black defendants have been executed for the murder of a white victim, but only 4 white defendants have been executed for the murder of a black victim
- About 90% of those facing capital charges cannot afford their own attorney
- Since 1900, there have been 350 miscarriages of justice in potential capital cases. The defendant was erroneously convicted of a capital crime. Of this number 139 were given the death penalty and 23 were executed
- Since 1973, 59 death row inmates have been released after evidence of their innocence emerged. It took an average of seven years from conviction until these people were released.

The majority of research indicates that the death penalty does not have a general deterrent effect. That is, it does not deter individuals in larger society from committing a capital crime.

Future Trends

There are three primary legal areas of concern relating to the death penalty that must be dealt with in the near future. The first is applying the death penalty to juveniles. Currently, the Court has indicated that execution of individuals 16 years or older at the time the crime was committed is constitutional. There is movement throughout the nation to push the age even lower. The second concern relates to those individuals classified as retarded. Currently 250 people on death row fit the classification. Again, the Court has supported the execution of the retarded, indicating that it is not cruel and unusual punishment. Lastly is the issue of appeals. The average length of time an individual spends on death row ranges from seven to eight years, much of which is spent in the appeal process. Prior to 1991, individuals on death row had an unlimited number of appeals. However, the Court ruled only under exceptional circumstances should an inmate get more than one *habeas corpus* appeal. More recently, President Clinton signed a law in 1996 limiting the number of *habeas corpus* reviews. While the appeal process is time consuming, over a 22 year period (1973-1995) 2,133 people were removed from death row by a governor, which represents almost half of the 5,280 sentenced to death during that same time period.

Overall, the death penalty represents one of the most polarizing criminal justice issues, one that is laden with [strong emotion](#). The United States is unique in that it is the only Western democratic country to still use the death penalty. This situation does not appear threatened in the near future. In fact, in 1994 the Federal Government added nearly 60 crimes that can be punishable by death.

QUESTIONS

1. Evidence suggests that the death penalty may be administered in a discriminatory manner. Please provide an argument that refutes this assertion. More specifically, construct an argument that suggests the administration of the death penalty is not administered in a discriminatory manner.
2. Does the state in which you live in have the death penalty? If so, how many people are on death row and how many have been executed since 1985? If not, do you think that it should? Please explain your answer.

LESSONS 9 & 10 SEX OFFENDERS

This paper is intended to provide additional insight into important issues concerning crime and facing the criminal justice system. The topic of this paper is "sex offenders." The lecture included in this lesson is provided to stimulate critical thought. After reading the lecture, the student is required to write a 3-5 page paper concerning [sex offenders](#). The student can write on anything he/she believes is pertinent within this topic area. The paper should have margins no more than 1 ½ inches on each side, top, and

bottom. Cover page, end notes, and bibliography do not count as part of the 3-5 pages. Yes, it is necessary to provide a bibliography. Font should be no larger than 12 point.

SEX OFFENDERS

Introduction

Longstanding beliefs about the nature of crime, and the appropriate responses to criminal acts are held by most everyone in contemporary American society. This belief system has powerful punitive overtones and deep roots in the American political culture.

At the core of the myth of crime and punishment is a simple morality that dramatizes the conflict between good and evil. *Because of bad people, this can be a dangerous and violent world.* Consequently, criminal law exists to protect us from these bad people. We learn how to identify criminals who are most often portrayed as predatory strangers.

We are socialized to think of criminals as people fundamentally different in character and appearance from the rest of us. Many also believe that criminals are generally unknown predators awaiting their opportunity to attack. These fundamental beliefs are the basis of **registration and community notification laws** of sex offenders around the United States.

Registration requires sex offenders to [register](#) with the county, usually the sheriff's office, upon their arrival. They must provide pictures, residence, etc. **Notification** authorizes government entities to release relevant and necessary information regarding sex offenders to the public when it is necessary for public protection. They are immune from any lawsuits resulting from the notification.

There are three levels of sex offenders, with the level depending upon the perceived risk the offender represents to the community:

- Level I -- information maintained by the department, and to disseminate the information to other agencies
- Level II -- also notify schools and neighborhood groups, can include photograph
- Level III -- above two and also a press release

The basic premise behind registration appears simple enough. Protect society. Essentially, what these laws have attempted to do is to take responsibility for the insufficient existing laws addressing repeat sex offenders. They establish a means for ensuring swift and severe punishment for the offenders.

Policy

In today's society, there are many precursors to successful policy implementation.

The need for revenge alone, however, is not sufficient. Contemporary criminal justice policies cannot be based upon high emotion, vigilantism, and the assurance of swift and severe punishment. Instead, policies need to be based on theoretical premises supported by empirical data, and should be measured by their ability to effect a certain state of affairs. In this case, to reduce re-offending of sex offenders and protect potential victims. Whether the public labeling of sex offenders is socially effective, morally right, or even constitutional, there is no denying its popularity. It sells newspapers. It gets votes.

Major Policy Questions

Are notification and community notification the only ways to deal with sex offenders, as opposed to every other class of criminal? Do they reduce or increase the risk of reoffense? Do these policies protect society?

A Picture of Sex Offenders

Who is the sex offender? Briefly close your eyes and develop an image of the "typical" sex offender. Where does this image come from? Now, what do you believe are the most common sexually related crimes, and who commits them? Most sex crimes tend to be private, often involving possession of child pornography or soliciting prostitution. The most troubling sex crimes occur behind closed doors, with family members or friends, usually children, who are manipulated or intimidated into silence.

Most of these crimes involve fondling or undressing, rarely rising to the level of sexual intercourse. The perpetrators are family members, who hold jobs, play sports and maintain friendships.

In general there are three major types of offenders: exhibitionists, child molesters, and incest offenders (which suggests different types of treatments).

Exhibitionists: have misplaced a normal aspect of foreplay. This results in the exposing of his genitals as the sexual act, rather than the precursor to the act. It is considered a developmental distortion.

Extra familial molesters: the individual has some type of arrested sociosexual development that leads the individual to identify with children. He is more comfortable around children than adults. He replaces ineffectual adult relationships with a child. They have never been married, lives alone or with a protective mother, and has rarely or never engaged in sex with an adult.

Incest offenders: have more family boundary issues. They have developed relationships with adults, married, spend most of their time with the family and tend to socially isolate the family. The family relations with the girl victims effectively made them "second wives."

Exhibitionists and child molesters appear to have more issues of trust and shame, have few long term goals, and focus on short term gratification. Exhibitionists also appear to be more developmentally immature than the incest perpetrator.

Recidivism

There has been considerable research exploring the recidivism rates of sex offenders. Most research suggests with or without treatment, the vast majority of once caught sex offenders, 87%, do not go on to be rearrested for a subsequent new sex offense. Yet, according to the FBI, 74% of all those released from prison for all types of crimes are back in prison within four years.

About 250,000 sex offenders are in the United States. Over 217,000 of them will never reoffend again. Therefore, to paint with such a broad brush a permanent label, is not only unfair but a major injustice that will only compound the problem. Further, most rearrests tend to be for other criminal acts, not sexual offending. Successful treatment means safety for the offender and most importantly, for potential victims.

Treatment

Does treatment work? Most research shows that treatment is effective, depending upon the type of offender. Treatment cuts in half the recidivism rate among exhibitionists and child molesters, yet cuts recidivism among rapists by just a few percent. While there is no cure for sex offenders, a successful treatment includes relapse prevention, which helps the offender focus on controlling the cycle of troubling emotions, distorted thinking, and deviant sexual fantasies that lead to their crimes. The first step is helping for them to develop empathy for their victims.

The most effective types of treatment are not confrontational. Motivational approaches to treatment are better suited for sex offenders. The reduced risk of offending is based on developing an interactive relationship with the offender and then attempting to develop the motivation in the offender to want to change.

Once the offender understands the nature of the triggers to his behavior, and his vulnerability to them, then it is possible to begin treatment to assist the offender to develop ego-compatible relapse prevention programs. The most effective method of ensuring the offender is going to survive in the community, is to place the locus of control within the offender.

Most offenders come from seriously maladaptive social and family backgrounds, and are significantly damaged individuals. In a study of sexual abusive youth, they found physical and sexual abuse, neglect, and loss of parental figures were common among these youths histories.

Impact of These Innovative Policies

Assumptions of community notification:

First, presumptive purpose of notification is for safety, protecting the neighbors. Does this occur?

Second, possibility that some offenders will re-offend because of the stress and pressure put on them by the community.

Third, notification does not prevent offenders from reoffending, instead, they may go to another neighborhood to commit their crimes.

Between 75-85% of child abuse is committed by relatives or friends. Can registration and community notification stop this behavior? Most likely not. In fact, registration and notification appears to be a short term political popular band-aid policy.

How about other avenues of protection? How about educating and providing supervision for our children?

So the question is not whether or not we would like to know if an offender is living next to us, but whether or not the current policies will in fact reduce the likelihood of reoffense.

LESSON 11

PROBATION AND PAROLE

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Explain the differences between probation and parole
- Discuss the advantages and disadvantages of probation and parole

LECTURE NOTES:

There are numerous myths surrounding probation and parole. So extensive, in fact, that several states have discontinued the use of parole. The dominant belief is a substantial amount of crime is committed by individuals on probation and parole.

It is also thought they pose a substantial risk to communities, and they are "soft" punishments. Before accepting these myths as facts, we need to become more familiar with probation and parole.

Probation

Probation is a sentence where the offender is conditionally released into the community under supervision. The most common conditions concern drug and alcohol testing, curfews, and who the offender cannot "hang-out" with. An important element of probation is that the court still retains authority over the individual. If the individual violates any of the conditions of his/her release, he/she can be re-sentenced to prison. In terms of usage, this sentencing option is one of the most popular, and is steadily increasing as prisons continue to become overcrowded.

Historically, [probation has its roots](#) in Boston, where John Augustus convinced the courts to place convicted felons in his custody, and he would then attempt to rehabilitate them. The successes that followed led to the development of a statewide probation system in Massachusetts in 1880. The popularity of this sentencing option quickly spread across the United States, with 44 states utilizing it by World War II.

Several distinct shifts have occurred in the area of probation. First, the role of the probation officer. In the early 1920s, the probation officer became more of a social worker, and less of a supervisor. With the rise of psychology and the rehabilitation model, probation officers were given the discretion to tailor their efforts toward healing their clients.

Another era is found during the 1960s, where probation officers were seen as advocates for their clients. The rapid social change during the 60s, the increasing emphasis on equality, and other social forces put probation officers in a unique position where they became the provider of social services. They were aiding their clients in obtaining the necessary services.

More recently, however, probation officers have become responsible for controlling their clients, attempting to reduce or eliminate the risk they pose to communities. Hence, supervision becomes the primary goal. Currently, approximately 60% of all individuals found guilty are sentenced to probation, with nearly three million people actively on parole.

Probation Officers

As with any criminal justice program, those implementing the program are critical to its success or failure. Probation officers are given the dual and conflicting roles of social worker and police officer. They are expected to help the individual find a job, get established in the community, etc. On the other hand, they are charged with reducing the risk the offender poses to society. Therefore, [probation officers](#) must act as law enforcement officers as well.

One of the most often asked questions is whether or not probation is successful. Well, that depends. There are numerous factors which must be considered. The first is caseload. The average caseload, across the United States is 115, and in some areas, as high as 300 individuals. Closely related is the level of supervision provided to the offender, which depends upon agency and officer characteristics, and available services.

When the offender violates the conditions of his probation, the officer has the discretion to revoke his probation, which usually results in the offender being placed in prison. In total, only about 7.5% of offenders have their probation revoked. Depending upon the jurisdiction, revocation can occur for minor transgressions or more serious violations. It depends upon the supervising officer, the courts, and the judges. In terms of revocation, offenders have been provided certain safeguards. For example, they have been provided procedural safeguards (*Gagon v Scarpelli 1973*). These safeguards include the right to a

preliminary and final hearing concerning revocation, written notice of the violation, disclosure of evidence, etc.

Is probation effective? It appears most individuals granted probation do not become career criminals, and have lower recidivism rates than those individuals who are incarcerated. In addition, there are numerous advantages to probation. For example, lower cost, increased likelihood of rehabilitation, and use of available services in the community. Despite the relative success and advantages, there are those who suggest that probation is ineffective. They say it increases the level of risk posed to the community and represents a lack of punishment.

Parole

Closely related to probation, is *parole*, which is the supervised release of convicted offenders from prison. The release of individuals can occur through several types of mechanisms. The first is *parole boards*, which retain the discretion to grant or deny an individual parole. Parole boards usually take many factors into consideration, such as the offender's history, the nature of the offense, behavior in prison, and participation in rehabilitative type programs. Parole boards are used in states that still rely upon indeterminate sentencing. A second method utilized is *mandatory release*, which is set by statute and usually removes any discretionary decisions. Primarily, offenders are released when they have completed their sentence, minus good time.

As with probation, offenders released on parole must abide by certain conditions or their parole can be revoked. Most individuals are released from prison with some kind of conditions (75%). However, the nature in which they have been released has changed due to the increasing popularity of mandatory sentencing. This major change has affected the amount of time an individual spends on parole, but not necessarily the number of individuals released on parole. Currently there are approximately 690,000 individuals on parole, with about 49% remaining out of prison. Most are returned to prison for violating the conditions of their parole (26%), while only 12% are arrested for new crimes.

Parolees have also been granted a number of procedural rights very similar to those of probationers (*Morrissey v Brewer 1972, see above*).

QUESTIONS

1. Please outline the benefits and shortcomings of probation and parole. Be as specific as possible in your answer.
2. Do you believe that parolees should be provided the same rights as other individuals in society, or should their rights be curtailed due to their criminal history?

LESSON 12

INTERMEDIATE SANCTIONS

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Identify the role of intermediate sanctions
- Provide examples of different intermediate sanctions

LECTURE NOTES:

Intermediate sanctions can be defined as a range of punishments which utilize the community to aide in the punishment of the offender. The most notable include home confinement, electronic monitoring, boot camps, and community service. These sanctions have resulted from the desire to improve the effectiveness of rehabilitative efforts. However, prison overcrowding, has in recent years, lead to a potentially wider acceptance of these options.

Basically, these sentencing options are seen as an [alternative to prison](#), therefore saving money and other resources while offering a more viable means of rehabilitation and monitoring.

Home Confinement and Electronic Monitoring

This alternative has gained the attention of criminal justice policy makers in the past few years. In fact, there are nearly 70,000 individuals under this type of sentence. The offender is required to serve all or part of their "sentence" in their own residence.

One of the benefits of [electronic monitoring](#) is it can be tailored to the individual. More specifically, if the individual works or goes to school, conditions can be set to allow him/her to pursue those endeavors. The key is they are in their home at specified times.

Through our expanding technologies, two primary methods of surveillance have been developed. The first type is a signaling device that continuously transmits a signal from the offender to a device attached to the telephone in the individual's home. If the signal is "broken," the probation agency is notified and someone is usually sent to the home. It should be noted that most jurisdictions hire a private agency to monitor the individual.

The second type is simply a computer that randomly dials the offender's phone number. This requires the individual to answer the phone and verify that he/she is home, and the individual under supervision.

The main problem is the reliability of the equipment. Specifically, the equipment does not always work

correctly. Another problem is the failure rate, it tends to run fairly high. Research suggests that jurisdictions who utilize this type of sentence do not necessarily utilize face-to-face contacts, relying on the willpower of the offender to succeed.

Intensive Supervision

This is a variant of probation, a more strict form of probation. Primarily, this type of supervision decreases the probation officer's caseload and increases the number of contacts between the probation officer and the probationer. This alternative usually uses low risk offenders that do not pose a substantial risk to the community, but are too risky for traditional probation.

In terms of effectiveness, intensive probation has high rates of failure. Because of the intensive supervision, the probation officer is able to identify more technical violations. Therefore, many individuals prefer prison over intensive probation.

Shock Probation and Parole

These two alternatives require that the individual spend a short period of time in prison and then is released on probation. The idea is that the short stay or the "shock" of prison will set the offender on the right track. Requirements vary across the states, but in most states, the offender must apply to be able to be on [shock probation](#). Though used throughout the country, it does not seem that this method is any more effective than traditional incarceration.

Boot Camps

Resembling boot camps used in the military, these programs have been extremely popular among the general public, politicians and practitioners. The public tends to see these programs as a quick, inexpensive, a humanitarian way to deal with delinquents. Public agencies tend to see these programs as a method to rehabilitate through the use of punishment.

Despite the popularity, [boot camp programs](#), in general do not appear to be any more effective than traditional probation in terms of recidivism. Success does seem to occur, however, in those individuals that would probably have succeeded without the program.

Boot camps are usually designed for first time, non-violent offenders who spend a relatively short period of time (90-120 days), in a program modeled after military boot camps. While they vary in design and operations, a common core of strict discipline, physical training, manual labor, drill, ceremony, and educational and counseling programs exist in some degree across these programs.

The underlying assumption is through these components, the individual's attitudes and behavior can be modified to develop the necessary life skills that better reflect societal norms. These include high self-esteem, and better physical conditioning.

Though not driven by any type of criminological theory, adherents still support this alternative, in fact, we have one here in Washoe county. The question becomes, why the support? Why do we believe that there is a relationship between exercise and reformation?

What does the research suggest? Well it seems these types of programs do in fact increase levels of self-esteem, and pro-social attitudes. However, there have not been significant differences in recidivism rates between those who have attended boot camp and those who have not. There may be no relationship between high-levels of self-esteem and lower rates of delinquency.

Another problem is that unlike the military, there is no established support group upon completion. In the military, once boot camp is completed, the individual enters an environment supportive and reflective of the values, etc, that were just learned. However, this is not the case with prison boot camps. You are put back in the community with little support.

Some programs have been more successful than others. However, they emphasize exercise less and counseling more, and are not necessarily resembling boot camps.

Criticism of Community-Based Programs

One of the primary criticisms is these programs "widen the net." That is, they include individuals into their programs who would not be under any type of correctional supervision if the programs were not in effect.

Another problem has been termed "creaming the crop." This occurs when the program administrators select only those individuals that will be successful, therefore leaving the individuals with the most problems for traditional incarceration.

QUESTIONS

1. Contrast the alternative sentencing options described in this lesson with the goals of sentencing identified in Chapter 10. Which option is most likely to achieve which goal?
2. Discuss the value of each of the alternative sentencing options. Which of these options are, in your opinion, the most "fair"? Please explain your answer.

LESSON 13

HISTORY OF PRISONS

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Generally discuss the history of early punishments and show how it impacts modern corrections
- Identify the specific eras of prisons

LECTURE NOTES:

Introduction

As with most institutions in the American criminal justice system, the prison has a rich history marked by numerous changes that mirror larger social changes. In terms of historical analysis, the prison is a relatively new concept in America, dating back about 200 years to the late 1790s.

Before that time, we relied upon the use of physical punishment of offenders. These punishments were by no means pleasant, in fact, they were tortuous by any standards. For example, flogging was commonly used and at times, became deadly. This idea of whipping did not dissipate until the early 1950s. Another type of physical punishment was mutilation. Many have heard of removing hands from burglars, but less common were the removal of tongues, castration, cutting off ears, etc. Branding was also another method of physical punishment. Used primarily in early American history, individuals were branded on their hands as well as their foreheads for easy identification purposes. Americans also relied, as did many European nations, on public humiliation, which was achieved through the use of stocks or the pillory. This was an effective punishment in that it allowed the public to seek its revenge as well as humiliated the individual. Although several other techniques were used, these appear to be the most commonly discussed in the literature. Most important is to remember the social backing of these punishments. Citizens readily supported these types of physical pain mechanisms.

The Birth

During the late 1700s, Americans began to undergo a substantial shift concerning the underlying causes of criminality, and thus, appropriate punishments. This shift was part of the larger "Enlightenment Era" occurring throughout Europe. Though many changes came out of this philosophical era, the most important in terms of corrections was the elimination of the use of torture and the incorporation of the penitentiary as a mechanism of reform.

On American soil, thought shifted from assuming criminal behavior lies within the individual, to forces outside the individual. Relying upon physical torture was no longer seen as effective, instead some kind of mechanism needed to be developed to encourage and facilitate reformation. It is important to note two competing philosophies emerged concerning the reformation of individuals.

Penitentiary Era (1790-1825)

The launch of the Penitentiary Era (1790-1825) was a result of these larger social changes. Fueled by the Quakers in Pennsylvania, a system was developed that drew upon religious and humanitarian methods, and utilized solitary confinement. Termed the *Pennsylvania System*, the Quakers believed the best and most effective way to reform an individual was to place them in [solitary confinement](#), where they could repent their sins and consider their deviant acts. Interestingly, this system incorporated punishment and rehabilitation, which is still the underlying basis of our modern system.

The first institution under this system was the Walnut Street Jail in Pennsylvania. The jail and other similar prisons, were constructed so the individual inmates could not interact with each other, or with anyone on the outside. Accommodations in the cells were very minimal, a Bible, toilet, bed, and table were usually all that were provided. The underlying theory was these individuals would come to be reformed through reading the Bible and individual labor. Three institutions within the state were developed under this philosophy. By the early 1830s, they became severely overcrowded (sound familiar?), which prompted change.

The Auburn York System (1825-1876)

Operating on a different philosophy than the Quakers, advocates of this system relied upon allowing the inmates to congregate. This relieved pressures caused by solitary confinement and overcrowding. The individuals worked together and ate together, but were not allowed to look at each other or talk to each other. If they broke these rules they were physically punished or given hard labor. This system proved to be less expensive and was adopted by many states on the Eastern seaboard. It was seen as an advance over the Pennsylvania system.

Interestingly, although tension continued as to which was the best system, neither produced results that showed deterrence or rehabilitation. However, the concept of using incarceration as a reform method was not abandoned. Instead, the administration of the systems was seen as faulty, therefore, it was the focus of the next set of changes.

The Reformatory Movement (1876-1890)

Again, high levels of overcrowding, inadequate discipline and brutality, as well as corruption pervaded the prison systems. These problems in American penitentiaries, coupled with successes in other countries, brought on substantial changes, the main being that the inmate was in control of his destiny. Through the development of the National Prison Association and their Declaration of Principles, indeterminate sentences were seen as the most effective way to reform an individual. More specifically, it was believed release of the individual was placed in his own hands, therefore, motivation existed for reformation.

The first institution under this system was Elmira Reformatory, which was under the supervision of Zebulon Brockway. His philosophy was education and vocational training were mandatory for

reformation. He also relied upon the "mark" system adopted from reformers in Europe. This system allowed the individual to move closer toward release, if behavior was good, or further from release, if behavior was unacceptable.

As with the previous penological philosophies, this one was no more effective. In fact, research by historians suggests failure can be attributed to the implementation or lack of implementation of the philosophy. Instead of emphasizing education, most institutions relied on punishment.

It is important to note that even though these philosophies encountered failure and substantial change, much of our current thinking about the use of incarceration is drawn from them. For example, the idea of indeterminate sentencing and parole are a result of the reformation era. These institutions encountered many of the same problems we are encountering today, and consequently underwent many changes (many of which we have undergone as well).

The Industrial Prison Era (1890-1935)

On the heels of the failure of the reformation philosophy, institutions were faced with rising costs, increasing populations, and security problems. In an effort to alleviate these problems, states began to utilize prisons for industrial purposes. During this time, inmates manufactured a variety of goods that were used by both private and public organizations.

Although these proved profitable, and in many cases supported the institution, labor unions and private businesses opposed their operations. They were in direct competition with them. Therefore, in 1935 Congress passed legislation that prohibited the interstate transportation and sale of products made in prisons, which pretty much nullified the industry.

There has been, however, a resurgence of interest in this area. Throughout the 1980s, many states began to allow their institutions to engage in producing goods, primarily for consumption with the prison, but also for sale to the general public. These industries take on many forms, from purely public, to ones that are part private and part public.

As far as trends go, this will most likely not become a major one. Due to the emphasis on a competitive market and using inmate labor, which many have called slave labor, most academics and practitioners do not feel the industry will become a major emphasis of prisons in the future.

The Punitive Era (1935-1945)

Following the decline in prison industry, prison officials began to view prisons as institutions developed for providing custody of convicted felons in a safe manner. Consequently, punitiveness reentered the picture. It was believed the only way for inmates to repay their debt to society was to serve long periods of confinement. Therefore, inmates were not required to do anything but sit around, locked up. During this period, many inmates were seen as going crazy from the isolation and boredom that existed in the

institutions.

The Era of Treatment (1945-1967)

Coming out of an era in which not much was done, the environment was ripe for dramatic change. This occurred in the form of adopting the rehabilitation model of corrections. After World War II, correctional institutions began drawing upon different methods of psychological treatment to "cure" the individual of the underlying problems. For example, group therapy, behavior modification, and [counseling](#) were all incorporated into treating the client. This required correctional agencies to hire individuals that had the training to diagnose and classify the inmates according to their behavior problems, and then to develop a treatment program.

Because of the nature of these treatments and the philosophical orientation, this model has been termed the *medical model*. Unfortunately, this model, though popular, did not generate the positive results that were expected. Again the failure has been credited to the implementation of the program and not the underlying philosophy. For example, though rehabilitation was a stated goal, many of the institutions were underfunded and could not afford the expense of the innovative programs. Secondly, most of the individuals working in corrections were trained to provide custody, not treatment. Overall, it appears the treatment, as others prior to it, was not fully implemented as planned. Consequently, it was never allowed to reach its full potential.

As we can see, the history of corrections in the United States is marked by a number of different eras, each with an underlying philosophy that was never fully achieved. Despite these "failures," we find modern correctional philosophy has drawn upon these earlier philosophies in fashioning current practices.

Something to think about. With the number of philosophies that have been tried over a period of 200 years, and the recurring problems of overcrowding, abuse, and corruption, is it possible to develop a correctional philosophy that would be effective? That is, are there more effective methods, or have we tried everything? If that is the case, what should the goal of corrections be?

QUESTIONS

1. Prior to the development of prisons, physical punishments were commonly used on criminal offenders. In your opinion, might corporal punishments again serve a purpose in dealing with some of today's offenders? Why or why not?
2. The Auburn system of imprisonment became popular during which prison era?
 - a. Mass prison
 - b. Punitive
 - c. Penitentiary
 - d. Reformatory

3. The eras describing the development of the use of prisons are closely linked to larger social fluctuations and changes.

True or False

[Top](#)

LESSON 14 HISTORY OF PRISONS AND JAILS

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Outline the characteristics of modern prisons
- Identify the characteristics of jails and their purposes in the correctional system
- Discuss the use of private prisons
- Discuss future trends of incarceration in America

LECTURE NOTES:

The previous lesson focused on the "early" history of prisons in America. This lesson will continue the historical emphasis on more recent developments.

Community Model (1967-1980)

Following the turbulence of the 1960s, many professionals felt the correctional system should focus on reintegrating the individual back into society. Such an effort, however, could not be achieved through current mechanisms. Therefore, conscious efforts were made to divert individuals away from incarceration into programs based in the community.

The underlying philosophy was treatment of the individual came from within the community. Not necessarily psychological counseling, but contact and programmatic efforts based in the community. Examples of such programs included [work release](#), half-way houses, etc., which allowed the inmate an opportunity to interact in the community and the criminal justice system to monitor his/her movements.

Changing social sentiment concerning the treatment of convicted offenders and high recidivism rates, coupled with academic research put an end to the height of community model. While it still exists, it is not as commonly implemented.

Crime Control Model (1980 to present)

During the "get tough" era of criminal justice, the philosophical perspective of the use of prisons dramatically changed. No longer was emphasis placed on reintegrating the offender back into the community. More emphasis was given to "warehousing" or simply incarcerating the individual for their entire sentence.

Many jurisdictions moved in the direction of changing their sentencing to better reflect the new philosophy, and to move away from rehabilitation. More specifically, determinate sentencing was being implemented, discretion of judges reduced, and treatment programs cut back. The return of the [chain gang](#) in the South has also been witnessed. Also during this time, we see many "extras" being eliminated. For example, weight lifting, cable television and other activities seen as privileges to the general public.

This get tough movement has had numerous impacts on the system, but none more problematic than overcrowding. Currently, there are more than one million individuals incarcerated, the largest number of any country. This number represents a 110% increase since 1984. Interestingly, even though reported crime has dropped during this same time period, the incarceration rate still increases. The largest contributor to the overcrowding has been, and continues to be, drug offenders.

The most often cited reasons for overcrowding include: public sentiment, increased effectiveness of the police, harsher sentences and of course, the war on drugs.

With most prisons throughout the country operating above capacity, numerous methods have been implemented in attempts to reduce overcrowding. Several jurisdictions have relied on temporary housing, such as tents, while others have focused more on selecting the most dangerous individuals to incarcerate. This technique is known as selective incarceration and requires authorities to identify those offenders who appear to represent the highest level of danger. As one might imagine, this technique has not been very successful.

In terms of the demographics of those incarcerated:

- Rate of 387 per 100,000 individuals are incarcerated;
- Rate of 207 whites for every 100,000 are incarcerated;
- Rate of 1,471 blacks for every 100,000 are incarcerated.

These demographics represent a system that appears to be discriminatory in its operations. More disturbing is the rate of blacks being incarcerated has grown more quickly than the rate of whites being incarcerated over the past ten years.

It should be noted substantial variation exists across the country. The highest rate of incarceration tends to occur in the South and the West--with California, Nevada, and Arizona having rates above 361 or higher.

Federal Prison Systems

The federal prison system was created in 1930 and has jurisdiction over those individuals who violate federal law. Within this system, there are five security levels (1-5) and a total of 82 facilities throughout the country. The population of these prisons primarily consists of white collar criminals and drug offenders.

Due to the increase in federal crimes, many of these institutions are overcrowded, prompting the government to build many more facilities by the end of this year.

State Prison Systems

While most people hold some conception as to the characteristics of a prison, these conceptions tend to be somewhat narrow, not covering the wide variety of institutions available for men. For example, along with prisons, there are prison farms, reformatories, forestry camps, etc. Focusing specifically on state prisons, 35% were built more than 50 years ago, suggesting that many inmates are housed in outdated institutions.

Along with the variety discussed above, there are three primary classifications used for security throughout state prisons: minimum, medium, and maximum. The minimum security prisons house approximately 1/4 of all inmates and place greater emphasis on education and work-related training programs. Characteristically, the prisoners in these institutions tend to be the least violent and have the most freedom than other classifications. The institutions themselves appear to represent dormitories more than prisons.

The second classification, medium, holds the largest majority of inmates (49%) and represents a more secure design, towers, walls, etc. Inmates in these prisons are afforded less freedom and programs than in minimum, but more so than the highest level of classification.

Maximum security prisons are in place to prevent escape, hence, the gun towers and high walls. Inmates in these prisons have very little freedom and programs available to them. Overall, these prisons hold 26% of the inmates.

Jails

Jails are short-term institutions in which individuals awaiting trial or have been sentenced to short terms are housed. Nationally, there are approximately 3,400 jails, ranging in sizes from an average of 50 persons to the L.A. County jail which has 8,000 inmates. Overall, these institutions house about 600,000 inmates in a given day, with 50% of them awaiting trial.

The primary function of the jail is to house those individuals convicted of misdemeanors with a sentence

of no more than a year, and to hold individuals awaiting their trial. Recently, however, jails are becoming an overflow valve for state prisons. Many jails house individuals that should be in prison, but cannot due to lack of space.

As with most state prisons, the majority of jails are severely overcrowded. On any given day the Washoe County jail has about 900 inmates, and was designed for 600. The overcrowding in jails is a result of many factors, most of them similar to the reasons prisons are overcrowded.

Because of the high turnover rate of inmates, most jails do not offer many educational or job-training programs. An interesting issue, and one that is becoming more so, is that of women in prison. Though they make-up a small percentage, their needs are substantially different than men. For example, most of them have been convicted of drug related crimes, have children or are pregnant and require gynecological care. With the dramatic increases in this particular population, more will have to be done to address these issues (which will be discussed more in depth in later lessons).

Private Prisons

With overcrowding becoming a major issue and the inability of states to build bed space fast enough, an alternative has been to contract out services to private corporations. This practice began in the mid-1980s. There are now approximately 95 privately run prisons in the United States, holding about 55,000 inmates. It should be noted that only 18 states allow these type of institutions to exist. The primary advantage of these institutions is they can be operated at lower costs than publicly operated institutions.

However, many issues still remain unclear. For example, who holds the accountability, and the ability of guards to strike? There is also the ethical question of relegating the state function of social control to private business, who operate for a profit. This needs to be settled before any wide acceptance occurs.

Future Trends

Prisons and jails are an integral part of the criminal justice system and will continue to be so into the future. Despite the demographics which show the majority of individuals incarcerated are poor and a minority, the public attitude of "[get tough on crime](#)" will propel more individuals into the hands of the state. Though many jurisdictions have experimented with different types of incarceration techniques, most will continue to build more jails and prisons.

QUESTIONS

1. What unique opportunities do jails have, due to the shorter sentences, different types of inmates, etc., that prisons do not?
2. If you were appointed director of a state prison system and was asked to alleviate the problems of overcrowding, how would you do this? Be as specific as necessary.

3. Do you think that private prisons are a viable alternative to publicly operated institutions? In your answer, please discuss the benefits and shortcomings of private prisons.

LESSON 15 PRISON LIFE

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Discuss prison subcultures
- Describe the functions of a prison society
- Identify the various types of inmates
- Identify the various types of correctional officers
- Describe the different stages and causes of prison riots

LECTURE NOTES:

A large number of movies and books have been produced depicting the life of inmates, the conditions of prisons and the harsh realities of prison life. In addition, substantial bodies of research have examined various aspects of life inside prison. In an attempt to dispel some of the misconceptions which have surfaced from these sources, as well as to provide a clearer picture, this lesson begins a discussion on [prison life](#).

Subcultures

Some of the earliest research on prisons focused on the treatment and behavior of inmates. From this research, numerous typologies of inmates and explanations of [inmate behavior](#) were developed. One of the most important, was the **total institution** concept, which suggested prisons may be small societies. Since inmates live, eat, work and engage in recreation in the same place, they develop certain behaviors, values, and morals and ascribe to certain roles. As such, they develop cultures, or subcultures, that are very different from law abiding society.

A **prison subculture** entails a different set of values, language, roles etc. that inmates must abide by in order to survive. The purpose of such a culture is to allow inmates to survive the rigors of prison life and to cope with the realities of being incarcerated. An interesting phenomena that occurs is called **prisonization**, where inmates actually learn the values, culture, etc. of prison. It is thought once

prisonization occurs, inmates become more criminal, therefore making it more difficult to adopt behaviors and attitudes that represent larger society.

The prison subculture is not static; it constantly changes with the types of inmates and the correctional atmosphere. Therefore, depending upon the types of offenses which society is focusing on (e.g., drug offenses) and the types of individuals incarcerated for these offenses, the prison subculture will change accordingly.

Functions of Prison Society

There are two different perspectives on the development of [prison subcultures](#). Both allow the inmate to adapt to prison life. Numerous researchers have suggested the subculture develops from within the institution as a method to alleviate the pains of imprisonment. This perspective, termed the **deprivation model**, arose out of research conducted by Gresham Sykes. His research suggested certain "pains" are a part of prison life, which include the deprivation of liberty, heterosexual relationships, personal security, and autonomy. In order to deal with these pains, inmates have developed their own methods and techniques. The second perspective, the **importation model**, suggests the culture is part of the overall criminal culture brought into prison with the inmates. Therefore, the inmate culture is an extension of the criminal culture found in free society. It is important to note that a single subculture may not exist in a prison, instead, several may be present.

Regardless of the method of development, inmates can choose to either integrate into the subculture(s) or resist adaptation. From this, numerous types of inmates have been identified by researchers. Though expansive, many of these categories can be classified into four areas: *doing time*, *gleaning*, *disorganized criminal*, and *jailing*. Individuals under the category of *doing time* attempt to keep relationships going with those on the outside and avoid deep integration into prison subculture. Those that *glean* take advantage of the many programs offered by the prison. The *disorganized criminal* tends to represent those with behavioral and/or psychological problems. Those individuals who have adopted *jailing* as a lifestyle, are those who become deeply ingrained in prison life, cut themselves off from the outside and attempt to make prison their life.

An interesting phenomena in male prisons is homosexuality. As with other issues, this has been one of considerable focus in movies and popular literature. The majority of research indicates homosexuality plays a role in prison society, with two types of behavior being practiced. The first tends to represent adaptation to prison life. The individuals are not considered homosexual and would not engage in this sort of behavior outside of prison. The second type of homosexuality revolves around those individuals who consider themselves homosexual and have engaged in such behavior before entering prison and will continue such behavior upon release.

Prison Staff

The other major category of individuals in prisons is the staff, who have also been the focus of

substantial bodies of research. Similar to inmates, the staff must also adapt to life inside prison. Although many are required to attend some type of training, the realities of prison tend to be very different than training indicates. Since the number of inmates far exceeds the number of staff, the constant threat of reprisal and potential harm exists.

The adaptation of officers to the prison setting results in them taking on certain characteristics, all of which result in different behavior and attitudes toward the inmates. For example, an individual characterized as a dictator is more likely to abide strictly to the rules and be somewhat authoritarian in his/her demeanor. On the other hand, individuals seen as a friend tend to "buddy" up to the inmates, treating them with respect and developing relationships with them.

Overall, prison staff play an integral role in the security and management of the prison, as well as the inmate subculture. Unfortunately, many states do not adequately prepare future staff for their jobs. Training focuses on the professional aspect of the job and not the realities of inmate subcultures, etc.

Prison Riots

When the delicate balance of order and chaos is disrupted in a prison, a riot can ensue. Throughout American history, there have been a large number of riots causing millions of dollars of damage, as well as serious injuries and death. The majority of riots occurred during the 1970s, however, many experts contend that current prison conditions and atmosphere are "ripe" for riots.

After each riot, academics and practitioners attempt to assess the underlying causes, in hopes of alleviating the probability of future riots. While each riot may have ensued for individual reasons, there tend to be several general causes. These include overcrowding, inmate dissatisfaction with prison services and conditions, power struggles, and changes in administration.

QUESTIONS

1. If you were a correctional officer, what difficulties and pressures would you face in your duties? Be sure to include a discussion concerning formal and informal rules and values.
2. Can prison administrators do anything to alleviate the dangers of inmate subcultures? Why or why not?

[Top](#)

LESSON 16

WOMEN IN JAIL AND PRISON

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Understand and discuss the special problems which female inmates face

LECTURE NOTES:

Though women represent only 6% of all inmates in correctional institutions, their rate of incarceration, over the past ten years has been greater than their male counterparts. The primary reason for the explosive growth, 289% from 1986-1994, has been [drug offenses](#).

Characteristically, women behind bars tend to be poorly educated, young, minorities (60%), single, have children, and be afflicted with drug and alcohol dependence. These characteristics, especially those with children or are pregnant, present many complications for correctional authorities.

Women Social Structure and Subculture

As with male inmates, women tend to find different methods to adapt to life inside prison. However, these methods of adaptation are very different. For example, research indicates women tend to form pseudofamilies, where individuals take on the different roles of mother, father, daughter and sister.

In addition to the overall social structure, there are three different terms ascribed to women and their method of adaptation. The first, **square**, are those women who tend to be noncriminal in nature. They hold ties, values and morals of those in free society. **Cool**, the second classification, tend to be career criminals who have adapted well to their current setting and attempt to gain amenities through manipulation. The final classification, **in the life**, refers to those women who are antisocial, habitual offenders, deeply involved in drugs and prostitution. These women have served time in prison before, and represent nearly 50% of the population.

One of the major concerns facing the incarceration of women is that of children. More specifically, a majority of incarcerated women have children, and most of the time, have very little interaction with them. When a family structure is not available, most children are placed in the custody of the state until the mother is released from prison. Research conducted in this area indicates forcing the separation of child and mother is detrimental to the development of the child as well as the mother. Several states have attempted to alleviate this problem through programs allowing substantial amounts of interaction between mother and child.

A similar situation is when the mother enters the prison pregnant or becomes pregnant while incarcerated. As one might imagine, these two situations create substantial hardships for traditional institutions and require innovative programs to alleviate the situations.

Overall, while women represent a very small proportion of all inmates incarcerated in the United States, their numbers are rapidly increasing. With these increases, administrators face many situations that differ greatly from traditional male inmates and prisons.

QUESTIONS

1. Please describe the differences between the socialization and adaptation of men and women to the prison environment.
2. Are the roles that women have in prison similar to their roles in society? Please explain your answer.

LESSON 17

PRISONER'S RIGHTS AND FUTURE ISSUES

LEARNING OBJECTIVES:

Upon completion of this lesson, the student should be able to:

- Outline the legal aspects of correctional issues and how they impact prisoner's rights
- Discuss the major problems and issues facing corrections today

LECTURE NOTES:

As with the rest of the criminal justice system and society at large, prisons underwent a fundamental change during the 1960s. Before this time, the internal administration of prisons was left to those within the prison. This was known as the [hands-off doctrine](#). This perspective rests upon the belief that the convicted felon forfeited many of his rights upon conviction. Therefore, there was no compelling reason for the courts to interfere with the administration of the prisons.

This doctrine of non-interference came to an end in 1964, when the Supreme Court ruled inmates may sue officials over the conditions of their imprisonment. This case, and future cases, were brought to court under Title 42, Section 1983 of the US Code, otherwise known as "Section 1983 cases." The majority of cases concern the 8th and the 14th Amendments, while others concern issues relating to the 1st and 4th Amendments. While the list of cases decided by the Supreme Court regarding inmate rights is extensive, it is obvious that the overall impact of the cases has been to improve administrative techniques and overall living conditions within prisons. There does, however, appear to be movement back toward the hands-off policy which dominated much of correctional history.

Recent court cases indicate the Court's reluctance to interfere, once again, with prison officials administrative techniques. An important case signifying this shift was the 1991 case of [Wilson v Seiter](#), where the Court ruled the conditions of a prisoner's confinement were not unconstitutional unless it could be shown that prison officials had acted in a manner of "deliberate indifference." In general this ruling sets the standard that any future inmate grievances must show administrators willingly created or ignored the conditions under scrutiny.

It appears the Courts are returning to the hands-off policy regarding issues within prisons. This shift represents, to some degree, the ideological focus of the Supreme Court. More specifically, the Court is dominated by judges with conservative perspectives, therefore, their decisions tend to reflect those perspectives. Consequently, future decisions will most likely continue in the direction of allowing prison officials to operate without the threat of the Court's interference.

Current Issues

Larger social changes as well as changes in the sentencing structures of many states, have created many new challenges for correctional administrators. For example, administrators must now deal with exploding rates of inmates who have the AIDS virus. It has been estimated there are currently 80,000 inmates with AIDS, and 3,500 deaths can be attributed to this deadly disease. More disturbing is the rate of [inmates with HIV](#) infection is about 518 per 100,000 which is considerably higher than the 41 per 100,000 in general society. The problem is administrators must deal with those who have tested positive very differently than those who have not, to prevent the spread of the disease and to provide adequate medical care.

Another challenge is the increased numbers of elderly behind bars, called the "graying of corrections." Increases in sentence length and the number of life sentences have increased the average age of offenders, and the percentage of those offenders considered elderly. Currently, only about 20% of all inmates are over the age of 50, however, that percentage will increase to about 40% by the year 2000. These [older inmates](#) have special needs which increase the average cost of incarceration. For example, elderly inmates have a higher need for medical care, higher likelihood of physical impairments, and are more vulnerable to attacks. In all, these inmates may need 24-hour care, which prisons are not equipped to provide.

In general, prisons are faced with many challenges beyond overcrowding. Unfortunately, they do not appear to be prepared for these challenges.

QUESTIONS

1. Describe the development of prisoner's rights in America. Do you believe that rights granted to prisoners are "just and fair" or should we take away most of their rights?
2. If you were warden of a prison, how would you prepare your institution for the future

wave of aging criminals? What types of programs and care would you provide?

[Top](#)

LESSONS 18 through 24 TERM PAPER

The term paper for this course, lessons 18-24, will be based on the following topic:

You have recently been appointed to a state commission which is examining the future of corrections in the State of Nevada. The primary goal of this commission is to develop a long range plan to deal with the increasing number of resources to build new jails and prisons.

In your paper, please develop a long range correctional operations plan for the State of Nevada. Be sure to take into account population growth, crime rates, as well as age distribution. Another factor that one has to consider is that of resources. Assume, for this paper, that Nevada is not willing to increase the percentage of its budget devoted to corrections. In other words, you are limited in the amount of money that you may put toward corrections.

Philosophical Issues and Criminological Theory

Before we directly address the various models that attempt to explain the roots of criminal behavior, we must first deal with some even more basic questions. These have to do with the beliefs about human behavior that all of us carry around as part of our everyday commonsense understanding about reality. Among them are beliefs about "human nature" and free will. Our thoughts on these basic questions shape our responses to those who would challenge our understandings and even more importantly often shape the direction of research a social scientist will pursue.

Human Nature:

There are several components to this issue that need to be discussed. (1) Is there any such thing as an innate universal [human nature](#)? Some would say yes, because we as human beings do share a common biological heritage.

However, if we accept such a presupposition, another problem immediately ensues: (2) What is the content of human nature? There is no agreement on this point. Some would say that human beings are naturally predisposed toward the "dark side", that evil and even violent behavior are part of our legacy as humans. A religious argument has often been made, particularly among religious fundamentalists, that we are all born with the taint of original sin and thus predisposed toward evil. Another version takes a more [sociobiological](#) approach, claiming that we are still much closer to other animal species than we would like to think. Aggressive defense of territory and violent means to obtain food, water, etc. typify many animal species. How could millions of years of [evolutionary development](#) mysteriously disappear? Haven't war and [violence](#) been an unchangeable aspects of the history of the human race? [G. Gordon Liddyshow](#), the former Watergate conspirator, says as much every time he appears on TV or lectures at a college.

That a universally acquired human nature may pre-equip people to do good seems to be a minority position, but such a starting position is accepted in some cultures. Anthropologists have pointed out that such beliefs arise most frequently in groups that depend greatly on mutual co-operation for survival, such as hunting and gathering societies. For example, among the [Tasaday](#) of the Philippines there are no words in their language to express such feeling or actions as hate, fighting, violence, etc. Are these phenomena unknown among them? The Tasaday assumed their view of human nature was universal.

In the Western tradition positive views of human nature are less common, but not unthinkable. If each infant were born with a spark of the divine as the Genesis account infers, wouldn't that be a potential for good? Some theologians have argued that to be the case. For example, the 19th Century Protestant theologian [Horace Bushnell](#) in his book [Christian Nurture](#) pointed out that older Calvinist ideas of human depravity were no longer adequate. The potential for good existed in all of us. Unfortunately that potential was often extinguished before it had the chance to reach moral maturity.

Sociologists and anthropologists often argue that there is no such thing as a common universal human nature. Instead they hold that culture shapes human nature[s], which is (are) quite plastic or malleable. [Margaret Mead](#) famous [research](#) in New Guinea on the Arapesh, Mundugamor, and Tchambuli peoples is frequently cited. If human nature is a learned phenomenon then it is possibly subject to the type of resocialization that those who favor classical or operant conditioning advocate. However, while sociologists may theoretically hold the position that there is no such thing as human nature, they frequently implicitly acknowledge one in their research.

Whether people are different in kind or only in degree from the rest of the animal kingdom is another important pretheoretical choice researchers make. Those who believe we are much closer to the animal kingdom are going to produce explanations of criminal behavior quite different from those who assert that we are quite unique from other animals. Do human beings respond much the same way rats and pigeons do? Or does the human brain and its use of language allow us to reason in a way that fundamentally separates us from all other animal forms?

Free Will v. Determinism:

Is our behavior, including criminal actions, something we freely choose to do by an act of our will or is our behavior largely determined by forces beyond our immediate self control such as our biological make-up, family environment, or socio-economic condition [i.e. growing up in a ghetto high rise]. There are 3 major positions on determinism that can be labeled hard determinism, soft determinism, and non-determinism [or free will].

The latter has a long history, and is particularly important to the American criminal justice system. Our system is not interested solely in evil actions, but ultimately in the motivation for such actions. For example, killing another human being is not a crime if it is done in self-defense or of an enemy during wartime. The act must be motivated out of a guilty mind that has freely chosen to do evil.

The free will position also has religious roots (like the natural depravity position), and is strongly held among evangelical groups who view freely-made choices as being the major determinants of both our earthly and eternal conditions. The free will position has been reasserted very strongly in our criminal justice system over the last 30 years. Examples include the introduction of adult sentences for juveniles ["they already know better"] and mandatory sentences for drunk driving. (They may suffer from the disease of alcoholism but they made a free will choice to get into their car drunk.) Even the insanity plea has come under attack by those who would seek to eliminate it altogether or replace it with a "guilty, but insane" verdict.

Within criminology, the earliest example of free will theory has become known as the [Classical School](#) [of Beccaria and Bentham]. However, if one argues that pleasure and pain are the only motivations in all situations the Classical school is really somewhat determinist.

At the other end of the spectrum is [hard determinism](#), or the belief that our actions are actually controlled or impelled by forces beyond the immediate decision making process of the individual. Hard determinism takes a number of forms, particularly biological, psychological, and sociological determinism. We are fated by either our biological inheritance, early childhood effects on our psychological being, or the particular social environment we were unfortunately born into. Hard determinists hope to be able, after extensive research, to predict events and ultimately control behavior, particularly criminal behavior. Their models also serve as "salvation devices" by removing blame from the criminal and therefore the necessity of punishment. To punish individuals who cannot control their behavior would be the ultimate cruelty. Instead it is society's obligation to humanely offer treatment or assistance to those trapped in their untoward behavior.

Soft determinism takes a moderate position between the two extremes. Soft determinists believe that human beings do control a significant portion of their behavior, while they are limited in the choices they can make by lack of knowledge, quality of parenting, biological predispositions, economic circumstances, etc. A ghetto child, raised by an inadequate parent, attending an underfunded urban school, in a neighborhood with few job opportunities, etc. has many fewer choices than does a child born into the upper class with all the benefits and privileges such standing accords. However, many kids in ghetto neighborhoods will choose not to join gangs or become involved in delinquent behavior. Many will create better lives for themselves and their children.

Soft determinists also point out that we can not predict or control human behavior. Each person responds to the situations in which they find themselves uniquely. While trends or patterns may be noticed, predictions are always precarious. This is the reason that future violent or dangerous behavior is so difficult to predict, even when a team of psychologists has a prison inmate under continual monitoring.

Within criminology, the Neoclassical school first argued that free will could be diminished by mental disorders, mental incompetence, etc. Some have much more free will than others do.

Michael Katz, in [Seductions of Evil](#), takes a position that on the free will/determinism continuum would

fall somewhere between total free will and soft determinism. He questions whether either biological, psychological, or socio-economic/environmental models really explain criminal motivation. Do these conditions really motivate people to shoplift, rape, rob, and murder? Katz doesn't think so. Instead he asks what is so appealing about each of these types of crimes.

Most criminologists have begun with the assumption that crime is morally repellent and therefore no one would choose freely to act in such a manner. Katz hopes to turn the criminal event into the topic of investigation itself rather than a resource for locating deviant personalities. His goal is shared by a group of sociologists known as ethnomethodologists. They have previously questioned other aspects of our taken-for-granted reality. Katz raises the possibility that certain crimes have seductive potentialities, but even these are not the ultimate determinants of criminal behavior. Criminals allow themselves to be seduced and in the process adopt the often upside down or reversed moral perspectives required to commit the criminal act. Katz's example in his book's introduction demonstrates how interrogators come to feel that those being questioned are under a "moral imperative" to answer their questions. Such a reversed moral logic has led to the beating of non-compliant captured enemy soldiers in wartime and the "compelled" testimony of many within our criminal justice system. Criminals used reversed forms of moral reasoning all the time as [Sykes and Matza](#) best illustrated.

[Top](#)

Demonic Perspectives

The phrase "demonic perspective" conjures up images of Wes Craven-type movies. Teens possessed by Satan run amuck in your hometown! If I had to chose a title, I'd chose a more neutral one such as religious explanations of deviant behavior.

I. Theodicy

It is not surprising that any discussion of the existence of evil behavior in the world would begin with religious explanations. One of the major functions of religion has been to explain the existence of evil, suffering, and death. This particular aspect of religion is known as [theodicy](#). The sociologist [Max Webe](#) identified three major forms of theodicy within the major world religions: (1) karma (2) divine providence and (3) dualism. Taken together these explanations appear better suited to explain victimization than criminal motivation, but both are encapsulated within each model.

1.Karma: This idea comes from Eastern religions, particularly Hinduism and Bhuddism. Karma is closely tied to belief in reincarnation. One's present condition and behavior is explained by the stored up negative or positive karma accumulated from past incarnations of the soul in previous bodies. If you are victimized or suffering in this life, bad karma is to blame. Similarly, evil persons may have inherited the negative traits of past carriers of the soul. (In the movie *Fallen* police officer Denzell Washington tries to track down an evil presence that jumps from one individual to another at the moment of death.)

However, it would be misleading to state that the doctrine of karma is deterministic, invalidates free will, or removes responsibility for actions from individuals. It is possible, for a person with bad karma to struggle against their inherited essence and live a righteous life. Similarly, a person with good karma might squander their noble inheritance by living a life of sin and debauchery. Inevitably, one will have to pay for their misdeeds or be rewarded for their good ones, but not in this lifetime. The next time the soul is reborn the fate of the new inhabited one will be determined by the new karma, now altered by the past incarnation. This process goes on repeatedly, with all rights and wrongs being worked out by the universe. The ultimate escape comes as over time the soul recognizes its higher goal of looking beyond temporal existence and toward oneness with the giant one world soul.

However, it would be misleading to state that the doctrine of karma is deterministic, invalidates free will, or removes responsibility for actions from individuals. It is possible, for a person with bad karma to struggle against their inherited essence and live a righteous life. Similarly, a person with good karma might squander their noble inheritance by living a life of sin and debauchery. Inevitably, one will have to pay for their misdeeds or be rewarded for their good ones, but not in this lifetime. The next time the soul is reborn the fate of the new inhabited one will be determined by the new karma, now altered by the past incarnation.

This process goes on repeatedly, with all rights and wrongs being worked out by the universe. The ultimate escape comes as over time the soul recognizes its higher goal of looking beyond temporal existence and toward oneness with the giant one world soul.

2. Divine providence (predestination): We are born good or evil (bad seed). Criminals are part of all communities, as saints and sinners are forced to live together. Ultimately it is all part of God's plan, established before the first human ever appeared on earth. If this sounds like [Calvinism](#), as we discussed the first night of class, you're right. A Calvinistic God is all powerful, all knowing, and ultimately inscrutable.

The idea of divine providence leads to many questions. Is God the author of evil as well as good? Why would God choose certain persons for divine bliss while others are destined for eternal damnation? Is there nothing human beings can do about their fate? However, Calvin forbade even asking these questions. Questioning God is the ultimate blasphemy.

What would the followers of Calvin do? Would they follow Calvin's admonition not to question providence? Of course not! Max Weber has described the results of the quest to know one's fate in one of the most famous history texts ever written [The Protestant Ethic and the Spirit of Capitalism](#). Calvin's followers quickly realized that to live in a world in which one's life decisions had no impact on one's ultimate outcome was to live in an absurd world. One could lie, cheat, and steal and still end up in heaven. On the other hand, God might reject even a virtuous person because they were not "chosen" Calvinists believed that God was not a trickster (unlike Woody Allen's view of God in *Love and Death*), and would not fool believers into thinking they were saved. The sign of God's election chosen by

Calvinists was success in a worldly occupation. The idea of "work as a calling" was borrowed from [Martin Luther](#), who exhorted believers not to leave their current jobs for religious occupations (becoming a priest or nun). The inadvertent result of the Calvinist creation of the Protestant work ethic was the establishment of capitalism. With renewed devotion to work, the self-fulfilling prophecy was success in business.

One unfortunate consequence of the Protestant ethic was a flip-flop in Western attitudes toward the poor. Some would argue that our criminal justice system is still trying to overcome the built-in bias against behavior among the poor now dominant in our culture. Prior to Calvinism, the predominant perspective toward poverty was that it had special spiritual significance. Jesus was poor, priests often took vows of poverty, and the poor were to be helped by the church community through the giving of alms. After the emergence of capitalism, the poor were considered disreputable. Images of the poor as lazy, drug and alcohol abusers, petty criminals, are commonplace. Attempts to control the behavior of the poor have abounded, while business-related crimes seemed to be ignored. It has not been difficult for critical theorists to make this point.

3. Dualism: The final major religious explanation for evil is the existence of a malevolent power wrestling for control of the universe with the forces of good. In most versions of dualism the evil force is destined to lose the struggle with God.

In a series of books by Jeffrey Burton Russell, the history of Satan is detailed.

- Lucifer : The Devil in the Middle Ages
- Satan : The Early Christian Tradition
- The Devil : Perceptions of Evil from Antiquity to Primitive Christianity
- Mephistopheles : The Devil in the Modern World

Ironically, early Judaism had no devil, but a dual-sided Yahweh with both a good and evil nature. Later, the Hebrews subtracted the evil personage from God and ascribed it to a different spiritual power, the devil. Christianity would adopt the idea that the devil and his demonic legions would have reign over the earth until Christ's return at the end of time.

Within the larger frame of dualism a number of possible explanations for evil behavior by human beings existed. Could human beings resist the devil? Do human beings have free will? Can saints be possessed by the devil?

II. Temptation or Possession?

Both free will and deterministic views of human nature appear in the Bible. As all are descendants of Adam and Eve, the legacy of original sin taints all human souls. However, the idea that people freely chose to do evil is repeatedly made within Judaism and Christianity.

Judeo-Christian theories of criminal behavior can be categorized as either (1) "temptation" or (2) "possession" models. The first is a "free will" model while the latter is not.

(1) Temptation Model: No matter how tempting the devil's offers might be, the individual always retains the ability to refuse to sin. Of course, the "good force" offers rewards as well for obedience to compete with the devil's, and frequently promises spiritual aid to help the beleaguered individual resist the devil's temptations. Therefore, those who give in to the temptations are by nature "weak-willed."

This commonsense idea that those who turn to crime (or overeat, over drink, etc.) are constitutionally inferior remains quite popular. If only the individual had enough willpower or truly wanted to stop they certainly could. Of course, this model frequently has a deterrent component as well; e.g., the threat of hellfire or other eternal punishment for those who chose to do evil. Classical criminology's emphasis on the threat of punishment is very much part of the legacy of this religious model.

(2) Possession: The second major demonological model--possession--is much more deterministic, and as such may be viewed as the progenitor of later positivistic theories. Once possessed by an evil spirit the person is no longer responsible for their actions. The devil now has taken control of the individual's mind and body resulting in evil behavior. One way of "curing" the individual is through exorcism; a religious ritual aimed at jettisoning the unclean spirit from the body. Usually the more a group believes in the existence of a literal devil, the greater they find a need for exorcisms.

One question that is frequently raised concerning the possession model is whether good or moral persons can be possessed. If not, then the possession model has a free will component built into it. Only those who are not vigilant or turn to the dark side risk possession. Individuals would be held accountable for "allowing" themselves to become contaminated. However, all behavior enacted while possessed would be forgivable. But, not all possession models exempt the righteous from possible takeover by dark forces. The possession of innocents, such as children, is believed possible within some traditions.

What was to be done with the demonic individual? This was a very important question among peoples who believed firmly in the idea that evil, if allowed to continue "untreated," would destroy their societies. The Hebrew prophets told the people of Israel for generations that God would punish them as a people if they persisted in sin. This meant something drastic had to be done to the unrepentant sinners in their midst. One of the advantages of the use of exorcism would be that it allowed individuals to be restored as fully functional community members. Other methods would be perceived by modern observers as much less humane. Public humiliation, execution, and banishment were frequently used by religious societies as ways of controlling their deviant populations, and even more importantly, as a means of restoring the broken people's relationship to their deity. For serious deviants, capital punishment would be a final solution.

On the other hand, religious cultures frequently developed alternative methods to avoid societal breakdown from the deviant actions of one toward others. Modern practices such as restitution, community service, and victim-offender reconciliation had their origin in tribal societies and their

attempts to keep minor offenses from leading to family or clan feuds.

III. Sociodicy: The Rejection of Demonic Perspectives

While religious explanations of deviant and criminal behavior have predominated in history, in the West these were gradually rejected during and following the Enlightenment. The rest of this course will focus on the alternative explanations that have emerged over the last 200 plus years. What unites all modern explanations is their rejection of theodicy (religious explanations for evil) for what Stanford Lyman first labeled **sociodicy** (naturalistic efforts to explain the ways of man to man). Evil and suffering now are explained as the result of worldly rather than otherworldly forces. Both free will and positivistic explanations would fall under sociodicy. For example, the movement to medicalize deviance (explain evil as the result of biological or psychological disease, addiction to substances, etc.) has been influential over the last 100 years. The extent of influence has decreased and increased during certain eras, but medical explanations have remained an important part of criminology.

Another outcome of the decline in belief in an afterlife in which this worldly injustices will be settled, is a new emphasis on ameliorating the conditions producing crime. Positivism's emphasis on prediction and control of behavior is one example. Another is Marxism's attempt to replace the oppressive conditions associated with capitalism with a more socialistic crime-free utopia.

IV. Is There a Place for a Demonic Perspective in Contemporary Criminology?

While scientific explanations have replaced religious ones in geology, biology, etc., when it comes to theories of human behavior religious models are adhered to by many. This allows for the periodic revival of demonic explanations for crime. This was the case in the 1980s and 1990s as a satanic panic swept the US and the world.

SATANIC CRIME TODAY

While satanic forces have been frequently blamed in Western history for the misfortunes of humankind, criminal justice officials in the U.S. have paid satanism little mind until the mid-1980s. At that point the country was swept by an epidemic of allegations that murders, sexual or ritual abuse of children, and ritual sacrifice of animals were commonplace activities among satanists. *Satan's Silence* is an investigation, co-authored by a journalist and an attorney, into a panic which swept the country regarding ritualistic abuse at daycare centers. However, as the authors suggest, fears of contemporary childhood victimization were part of a much larger satanic panic which swept the nation in the 1980s. In this section, we will look at who spread these beliefs, what was claimed, why they were believed, the problems with these accounts, and the continuing legacy of such beliefs. It is my opinion that the satanic panic represents the greatest crime hoax of this century, but one that continues to impact negatively on many people's lives.

Media Involvement

The media helped to create a climate favorable to the belief that satanism had become a real life menace. Gothic literature spawned horror comic books (banned in the 1950s), while Hollywood films featuring satanic themes have long been popular. Early on sympathetic news reports spread belief in satanic crime, but as skepticism increased the news media turned on those who claimed satanism was rampant in the country and asked for proof.

For this type of crime it was not newspapers or TV news, but TV talk shows which were the major media provider of information. TV talk shows like *Geraldo* and *Sally* featured this topic for a number of years and almost always uncritically presented the claims of widespread satanic abuse. Talk shows became the new medium for retelling "urban legends." Those like Nathan who have done a systematic investigation of the backgrounds of major writers and speakers on satanism, have found that many had questionable backgrounds or histories of mental illness. Such facts ought to have been discussed before anyone accepted at face value what these satanic story tellers were saying. However, *Geraldo* and other talk show hosts who had such speakers on their shows rarely if ever mentioned their backgrounds. Anti-satanists went unchallenged for the most part. This was not responsible journalism. On *Geraldo*, *Geraldo* ceased being a journalist, despite his claim that many of shows represented "special investigative reports." The opposition point of view, when presented at all, was typically given to leaders of established Satanic churches like Acquino or LeVay rather than to nay-saying journalists or scholars. The "organized satanists," who claimed they had never murdered or tortured anyone, often were dismissed by audiences and opposition guests alike as obvious liars. Of course, everyone knows "satanists are liars." Talk shows do not present facts and validates information. They represent a new breed of TV, "info-tainment," presenting information as entertainment. They never should be assumed to have the same credibility as nightly news casts or newspaper reports.

Those claiming to have been victimized or victimizers (and sometimes both) in satanic groups included the following:

1. *Children at daycare centers.* Children told hundreds of horrific tales; e.g. of being forced to commit sexual acts with robed, chanting adults; of being made to drink blood or eat feces; and to witness animal and human sacrifices. *Satan's Silence* does an excellent job of discussing how these accounts were produced, so I will not cover the same ground.

2. *Teens who said they were satanists.* There is evidence that some teens spray paint satanic graffiti on walls and even sadistically kill small animals in haphazardly concocted satanic rituals. But, even reports of these incidents far outnumber their reality. A "self-styled satanist" is typically an isolated adolescent male who turns to the black arts. Some teenagers (particularly boys) are attracted to satanism. It offers an easy way to get the things teens want (power, money, sex). For this same reason boys form rock bands. Teens who feel alienated from their classmates may dabble in Satanism, but most leave it rather quickly. However, a few do take the "theological" messages of Satanism seriously. 17-year-old Sean Sellers claimed he was a satanist when he committed two murders in Oklahoma, but had a number of personal and family problems which might better explain his actions. Sellers acted on his own and was not doing the bidding of an organized satanic group.

3. *Middle aged women who in therapy (and often under hypnosis) stated they had recovered repressed memories of childhood satanic abuse.* They told stories of being "breeders" of babies born without official birth certificates so they could be ritually sacrificed to Satan; of how bodies were disposed of in such a way that no trace of their existence could ever be uncovered (corpses were burned and the bones ground into powder); and gruesome tales of cannibalism and blood drinking. Even though they had allegedly witnessed crimes, victims rarely reported them to the police after having recovered their memories. There has been considerable discussion of repressed memories since these reports surfaced and psychological experts on memory have found no evidence to support the phenomenon described by therapists. Also, those who study hypnosis warn of the dangers of trying to reintegrate victims diagnosed as suffering from multiple personality disorder or disassociative disorder. The newly integrated personality may end up believing that they experienced many things which never happened in all likelihood.

4. *Ex-members of satanic covens who since had been converted to evangelical Christianity.* The most notable of these was Mike Warnke, who made an excellent living off telling already convinced Christian audiences that he was an ex-satanic high priest and participated in ritual victimizations. He was later exposed as a fraud. The only thing people who knew him as a teen agreed upon was that he had always had the ability to tell stories and make others believe them.

5. *Members of organized satanic churches like The Church of Satan or Temple of Set.* These organizations are small in numbers and claim never to have murdered or tortured anyone. In terms of their life philosophy they are probably most similar to EST or any other self-awareness group which advocates putting ones own needs and desires first.

Those claiming to have uncovered satanic crimes included:

1. *Cult cops.* Cops and ex-police officers charge fees to lecture audiences of other cops on what they "know" of satanic crime. In Pursuit of Satan by Robert Hicks debunks the cult cop phenomenon.

2. *Child interviewers, social workers and psychologists.* Treatment personnel lectured other child welfare workers on the dangers of Satanic involvement. In November 1992, I attended a workshop sponsored by the Pinellas County Juvenile Welfare Board on "Treatment Approaches: Adolescents and Cults." The workshop featured all the satanic hysteria one could ever want to endure.

3. *Psychiatrists interviewing middle-aged women.* A 1996 episode of *Frontline* documented how deeply psychiatry has been involved in the satanic panic. Women suffering from disassociative disorders who were referred to psychiatrists who believed in satanism were placed in very expensive treatment centers. They were informed they had been abused by satanic cults and had "secret codes" embedded in their memories which if activated would cause them to kill their husbands and children. Needless to say, husbands who believed this left their wives. Children were also alleged to be already initiated into a satanic cult and placed in therapy as well. To date none of the doctors involved has been sued or had

their licenses revoked.

4. Parents of allegedly abused children. This is discussed in *Satan's Silence* as well.

The Claims

Claims that were made stretched from tales of the use of the mass media (including [computer games](#)) to convert kids to satanism, to wholesale torture and murder, a massive cover-up, and a universal conspiracy. Rock music (particularly Heavy Metal), children's cartoons, and role-playing games were identified as gateways to satanism (similar to the way marijuana is singled out as a "gateway drug"). Music such as Ozzy Osbourne's contained lyrics that overtly paid homage to the devil. An even more serious problem was "back masking." Alleged satanic messages were recorded backwards onto a record. The album didn't even have to be played backwards for the message to have its subliminal effect. It sunk into the subconscious and later resulted in negative behavior. The band Judas Priest was unsuccessfully sued by a parent who claimed the phrase "Do it" back masked onto an album had led her son to attempt suicide. No evidence for subliminal suggestion has been uncovered by psychologists. Children's cartoon's such as "He- Man" and "Thundercats" tapped into supernatural forces that detractors of the shows label satanic. Children who watched a steady diet of these cartoons were being set up to accept occult practices later as teens. The Internet may soon be recognized as the latest "doorway to hell"

If satanism were as prevalent as anti-Satan experts claimed it was, bodies would have been unearthed everywhere. Cult experts claimed there are anywhere from 50,000 to 2 million children ritually sacrificed to the devil each year. In comparison, only around 25,000 murders are reported in the U.S. each year. Almost all the alleged "missing" children can be accounted for as "kidnap" victims of one of the parents in a custody dispute. The FBI documents only about 100 stranger kidnappings of children each year.

Anti-satanists claimed that there was a vast organized network of devil worshippers in the U.S. that has infiltrated all levels of local, state, and federal government (including the criminal justice system.) Police officers refused to arrest and hid evidence; prosecutors would not indict; while judges who were part of the conspiracy refused to convict. Conspiracy theories of this nature are rarely if ever true. Other examples include the belief that gun control was a communist plot to have the American citizenry disarmed when the Russians would invade and house to house combat ensued; air pollution laws were generated by socialists who hope to speed up America's economic collapse, or that drugs are being used systematically by white elites to destroy black communities in America.

Why do people believe conspiracy theories? Hans Toch in *The Social Psychology of Social Movements* analyzed the psychological gratifications that conspiracy theories offer, whether of the left-wing or right-wing variety. They allow individuals who believe in them to have one all-encompassing answer to a myriad of social problems. A conspiracy theory also allows those who believe it to "know" the future before it happens. Such knowledge allows them to feel secure while others struggle to understand what is going on around them. Critics have argued that the satanism phenomenon was largely the result of

ultra-right-wing fundamentalist and evangelical Christians spreading their ideas concerning the "end times." If Satan's power is growing, the Judgement Day is near. But, as we have seen it was also supported by the welfare establishment and some branches of psychiatry.

While at first law enforcement agencies took the reports of murdered infants seriously, they gradually realized there was no evidence of these events. [Kenneth Lanning](#) of the FBI wrote a series of articles concluding that no such murders had occurred. However, true believers still exist. A TV program on Satan broadcast on a religious channel in January 1996, repeated many of the same accusations that law enforcement investigators and scholars have been unable to validate for 10 years. These claims put investigators in the unenviable position of trying to disprove a negative. How would one prove earth has never been visited by UFOs?

While satanic crime may be largely mythical, the consequences of the satanic panic have been all too real. As [Nathan and Snedeker](#) documented hundreds of adults were falsely convicted, many children suffered months of excruciating interviews in which they were "forced" to confess to things which never occurred and then put into unnecessary treatment programs, and the lives of thousands of families were needlessly disrupted.

If, however, we eliminate completely discussion of evil from criminological discourse our ability to comprehend contemporary wrongdoing may be lessened. It was in the attempt to revitalize criminological discussion of evil that Stanford Lyman wrote *The Seven Deadly Sins: Society and Evil*. This was the first criminology text with the word "sin" in the title since E.A. Ross' 1907 *Sin and Society*. Ross referred to evils committed by "criminaloids", industrial capitalists whose actions were not yet legally considered crimes. Forty years later Edwin Sutherland would author *White-Collar Crime*, detailing the same evils. Lyman's work delineates the evils of greed, lust, sloth, envy, etc., discussing both motivation and consequences. Other contemporary criminologists such as Richard Quinney have attempted to combine religious perspectives and Marxism. More traditional criminal justice theorists such as Charles Colson also rely on a religious framework.

[Top](#)

The Classical School

These notes refer to the classical school [Cesare Beccaria and Jeremy Bentham], subsequent revisions of this model [frequently referred to as the neo-classical school], and contemporary versions of classical thought [rational choice models].

Before preceding to discuss Beccaria it may be important to discuss the state of criminal justice in Europe to which the classical school was responding. Europe was leaving behind its long history of feudalism and absolute monarchy and turning toward the development of modern nation states that ruled based on rational decision-making powers. However, criminal justice was one of the areas that needed to be updated. Throughout Europe [except in England] the use of torture to secure confessions and force

self-incriminating testimony had been widespread. Michel Foucault's description of the execution of Damiens for attempted regicide shows just how brutal traditional justice could be in France. In England, the standard penalty for conviction of a felony was death. In addition, capital punishment had been combined with [estate forfeiture](#), leaving the felon's widow and children penniless. The "corruption of blood" made it legally impossible for the convict's parents to pass on their wealth to their own grandchildren. Many accused Englishmen allowed themselves to be crushed to death (*piene forte et dure*) rather than risk a trial and leave their families destitute.

It was with knowledge of such history that Beccaria developed his ideas concerning criminal behavior and how best to control it. However, Beccaria and other utilitarians did not develop their ideas in a vacuum. There were other Enlightenment thinkers such as [Hobbes](#), [Locke](#), and [Rousseau](#) who helped to create the intellectual climate in which Beccaria worked. There were a number of beliefs about human behavior that most "reasoned" intellectuals shared. These included:

- (1.) The belief that pain and suffering were a natural part of the human condition.
- (2.) Humankind is a rational species.
- (3.) What controls behavior is the human will.
- (4.) Although supernatural [and natural] forces might influence the will, in regard to specific actions the will was free to choose.
- (5.) The principal means of controlling behavior is fear, particularly fear of pain or punishment. In this way the will could be directed to make correct choices.
- (6.) Since the state had the right to punish behavior, it ought to do so in an organized manner which included the centralized administration of law enforcement, courts, and correctional practices.

Other important points to be made about Beccaria.

1. Beccaria did not develop a new explanation for criminal behavior. He merely accepted the taken-for-granted beliefs of his era. He sought solely to rationalize punishments.
2. Beccaria opposed allowing judges the type of broad discretion they then enjoyed.
3. The ultimate source of law must be the legislature, not the judiciary. Beccaria is here attacking the common law tradition. Today's conservatives attack judicial activism, i.e., in the recent U.S. Supreme Court.
4. The principal role of the judiciary is in determining guilt, not deciding on punishments.

5. A truly rational system of criminal justice would be based on a scale of crimes and punishments: e.g. first, second, and third degree felonies. Each would be assigned a specific punishment that included ascending severity based on the level of seriousness of the offense.

6. The severity of the crime for which one is ultimately punished must be based upon the actual act committed, not the level of intent involved. If you only intended to maim someone but they died as a result of the injuries inflicted, the perpetrator must be charged with murder.

The Neo-classical School

A number of criminal justice historians have noticed the pendulum like nature of criminological theory. Once a particular model becomes "dominant" its antithesis is argued by "reformers". The neo-classical approach to criminology is not a true anti-thesis but a form of revisionism. Neo-classical criminologists recognized that the free will approach had a number of shortcomings. Among them was the English jurist [William Blackstone](#)

Neo-classical criminologists considered the types of criminal behavior best explained by the classical model and what types of criminal behavior the model is inadequate to explain. Some of the objections pointed out by neo-classical thinkers included exceptions long accepted by criminal justice systems. These included classic criminal defenses such as self-defense or mistake of fact. Also, long recognized was the fact that not all persons were completely responsible for their own actions. For example, should children be expected to behave with the same level of responsibility as adults? When does a child become fully responsible for their own actions?

Also noted was the fact that some people appeared to be compelled by forces beyond their rational control. While a supernatural "possession" model had previously accounted for some of this behavior, the decline in belief in supernatural forces was matched by an increasingly positive treatment toward "mental illness" type explanations. There were some who behaved "irrationally." Separating the rational from the irrational has become a continuing problem for modern criminal justice systems.

Another area of long legal concern was whether individuals can be influenced by others to do things they would not normally do, and whether they should be exonerated by the courts in such instances. Duress and entrapment are criminal defenses based on this premise.

Modern Versions of the Classical School

Within criminology the classical school's importance diminished as positivist explanations of criminal behavior emerged and became dominant. However, most modern criminal justice systems have never rejected free will explanations of criminal behavior. In the United States and some other constitutional democracies, the classical model has been thwarted more by the system in which it is implanted (one requiring an adversarial procedure and due process) than by positivism. (See the Packer article in the reader)

The classical model has re-emerged in criminology and American jurisprudence as the "justice model" and rational choice explanations. These approaches are advocated by theorists such as David Fogel, Ernest van den Haag, James Q. Wilson, and Ronald Clarke. Collectively they would favor the following:

1. Doing away with indeterminate sentencing and its replacement with various forms of determinate sentencing, including sentencing guidelines, mandatory sentences, habitual offender statutes, etc.
2. Truth in sentencing. One should serve one's full sentence and not receive an early release through parole or prison overflow control policies.
3. The use of the death penalty. Most favor decreasing the amount of time between sentencing and execution by limiting the appeals process. (Bentham and Beccaria both opposed the death penalty as a punishment so severe it would have no deterrent effect.)
4. Doing away with the exclusionary rule altogether or the allowing of additional "good faith" exceptions for law enforcement infringements and defendants' due process rights.
5. Continued research on criminal behavior predicated on the idea of free will. It examines phenomenon such as criminal career choices. For example, why would an offender choose to shoplift rather than commit robberies? Why do some career criminals finally decide to stop and become honest productive citizens?

The Positive School: Biological and Psychological Factors

The theories we will be discussing in the next few weeks differ significantly from the classical model.

All presume that scientific study of criminal behavior will uncover the "causes" of such behavior, causes that are beyond the control of the individual. As such, these explanations are deterministic. [Positivist criminologists](#) shared a hope that criminal behavior could be controlled if it first could be understood. While some have argued that positivistic theories offered a humanitarian alternative to the punishment regime mandated by free will explanations, the former have been openly accepted by Fascists as well as libertarians.

For positivist criminologists [Darwin](#) was thought to be a good starting point for a valid scientific theory of criminal behavior. Darwin made the point that humans and other animal species were fundamentally related rather than uniquely different. While humankind was more highly evolved than any other animal species, differences were "of degree" rather than "of kind." It was in such an intellectual environment that Lombroso developed his theories. In addition, earlier biological explanations of criminal behavior such as phrenology had made inroads among educated populations in America and Europe.

BIOLOGICAL FACTORS AND CRIME: Early Theories of Heredity

Many criminologists start their discussion of biological criminology by pointing out how unpopular such views tend to be. Not many want to believe there is any such thing as a "bad seed"; that heredity can make criminal behavior unavoidable and inevitable for some individuals. Environment as a major determining factor in criminality is a much more palatable theory for many. Of course, biopsychologists do not believe that genetic or physiological components are the sole causal agents in behavior.

Theories Related to Physical Appearance

[Lombroso](#) was not alone in thinking that [external physical appearance](#) demonstrated that criminals were biologically inferior to the law abiding. Only gradually did biological criminology shift from searching for external signs of biological abnormality to looking for internal clues of biological dysfunction. Inferior heredity or intelligence is not something one can spot from a cursory exterior examination.

Two of the forerunners of Lombrosian criminology were [physiognomy](#) and [phrenology](#). Both can be traced back to the late 18th century. Physiognomy was developed by Johan Lavater who published his 4 volume *Physiognomical Fragments* in 1775. Bearded women and unbearded men were looked upon with suspicion. Unusual physical traits were thought to be related to strange behavior, such as [tattooing](#) the body. Such facial features as "shifty" eyes, "weak" chins, or "arrogant" noses were also thought to be suspect. Lombroso incorporated many of these ideas.

[Franz Gall](#) beginning in 1791 expounded the theory of phrenology. Gall was an anatomist who believed that [each section of the brain was responsible for a different aspect of human functioning](#). Gall believed that the brain had 26 departments of faculties; a later popularizer of phrenology, [John Spurzheim](#), increased that number to 35. Unfortunately, the categories were not only too numerous, they were also

inaccurate. Specifically, they felt that each section of the brain controlled a unique form of behavior. Included in Gall and Spurzheim's functionally controlled areas of the brain were friendliness, destructiveness, benevolence, and acquisitiveness. Within the brain itself these functions were grouped together into regions. Each of the brain's three regions controlled a major aspect of human behavior:

- (1) **activity** or the "lower" functions were controlled by one section,
- (2) another controlled **moral sentiments**,
- (3) the third housed the **intellectual faculties**.

In order to determine whether an individual suffered from brain dysfunction it was not necessary to do an internal examination of brain tissue, although phrenologists certainly performed brain dissections when given the opportunity. However, external examinations were believed to be an accurate predictor of internal brain development. In particular it was thought that enlarged or unusually undersized brain sections produced bumps or depressions in the skull respectively. This belief made it possible for nearly any "doctor" to perform phrenological examinations and describe the origins of a person's problematic behavior.

Phrenology became quite popular in America and was used for classification purposes in 19th century American prisons. For example, at Eastern Penitentiary in PA phrenology was employed until 1904. In an 1856 phrenological examination of the prison's population, over 70% of the inmates were diagnosed as suffering from an overabundance of "acquisitiveness" while another 17% showed unusual development of the brain area responsible for "destructiveness."

The decline of phrenology had both to do with the fact that it was unprovable and that it was unpopular with the general public and lawmakers who continued to press for a free will explanation of behavior. While Gall argued that phrenology was not deterministic, most critics believed that it was.

The earliest biological explanations of crime to enjoy widespread popularity come from the late 19th Century and the writings of the Italian Cesare Lombroso. Lombroso borrowed from both physiognomy and phrenology as he developed his own descriptors of atavistic criminals. While biological, criminal characteristics were not always directly passed on from parents to children.

Later in his career Lombroso modified his beliefs and admitted that other factors than biology could be involved in producing criminality. Atavism accounted for only about 1/3 of the criminal population. Environmental factors played a role in a number of types of criminality.

Lombroso cited 6 categories of criminality that were not necessarily biologically determined. Among these were the following:

Habitual [or career] criminals had chosen crime as their occupational niche (i.e. Mafia

soldiers). Lombroso believed prisons acted as breeding grounds of crime for many.

Juridicial criminals were those who acted impulsively.

Criminals of passion acted criminally for noble reasons [Jack Katz's righteous slaughter fits this category].

Criminaloids were weak natured and too easily followed the, bad example of others [Sutherland's differential association fits here].

Morally insane criminals did not know the difference between right and wrong.

Hysteric criminals displayed psychological abnormalities.

In America, Lombroso's ideas met with an eager response. The late 19th Century witnessed the birth of American sociology and one of its major concerns was criminal behavior. Lombroso's ideas seemed to mesh well with those who shared his social evolutionary outlook. There were, however, some differences. A number of American scholars favored a non-Darwinian form of evolutionism first exposed by [Lamarck](#). He believed that traits learned by one generation could be passed on through heredity to the next. American criminologists such as [Charles Loring Brace](#) and Charles Henderson applied the theory to such behaviors as criminality, drunkenness, and laziness. If the parents were involved in these behaviors their children would most likely be as well. Proof that criminality ran in families was stated in such books as Dugdale's *The Jukes* and Goddard's *The Kallikak Family*. Inherited feeble-mindedness (mental retardation) was a major culprit.

Lombroso's findings did not go unchallenged by other scientists and such criticisms probably go a long way toward explaining why, over time, he found less and less "born criminals." Lombroso's most severe critic was the Englishman, Charles Goring. Goring wrote *The English Convict*, a study in which he analyzed the physical characteristics of 3000 inmates.

However, unlike Lombroso, Goring included a control sample in his study by comparing the convicts to an equal number of noncriminal British citizens. Included in the comparison group were college students, army members, and hospital patients. Goring was able to disprove that criminals showed physical anomalies when compared to the general population. He also found no significant differences in such traits as eye or hair color or left-handedness. The only differences Goring could document had to do with stature and body weight. He found criminals were on average 2" shorter than noncriminals and weighed 3 to 7 pounds less. [short, but not short and stocky]. Goring believed these differences demonstrated hereditary inferiority. However, Goring continued to assert that criminals were primarily selected from the class of normal men, but may demonstrate "extreme degrees from the normal average." In other words, criminals were simply not that different from the rest of us. While Goring felt he had successfully defeated the Lombrosian claim of biological inferiority, in the 1930s, [E. A. Hooton](#) of Harvard University attempted to repopularize the external biological model.

Biological criminology was closely related to the [Eugenics movement](#) in America. Also, the emphasis of Lombrosian and other forms of biological criminality had a significant effect on American penology. Ultimately it led to a nationwide moral crusade in favor of sterilization as the ultimate solution to the problem of hereditary criminality. In 1914, one such moral entrepreneur came up with the following model law regarding sterilization:

Harry Laughlin's model law called for the sterilization of all those who were potential parents of socially inadequate offspring. The socially inadequate, by his definition, consisted of the feebleminded, insane, criminalistic ("including the delinquent and way-ward"), epileptic, inebriate, diseased, blind, deaf, deformed, and dependent ("including orphans, ne'er-do-wells, the homeless, tramps and paupers") . The potential parents of such offspring would be subject to sterilization - whether inside or outside an institution-, so that the law would not be discriminatory class legislation and so that the greatest eugenic good would result. In order to assure due process of law, the state eugenicist, whose duty it would be to study the heredity of the state's socially inadequate, would be required to secure a court order for sterilization. While administrative features of his model law were unexceptionable, the choice of candidates for sterilization went far beyond what anyone except the most extreme hereditarian (like Laughlin) would consider justified.

From Mark Haller's Eugenics: **Hereditarian Attitudes in American Thought**

Of course, he was an extremist. However, a number of states did pass sterilization statutes [IN, CT, WA, CA, NJ, 10, NV, NY, ND, MI, KS, WI, NB, OR, SD, NH] in the 1910's. Most limited these statutes to sex offenders and habitual criminals within the prison population. Applying the statutes, to rapists was obviously partially punitive, as are recent calls to castrate rapists. Sterilization was also claimed to have a calming effect on violent criminal personalities.

One of the major factors leading to the popularity [and ultimately the demise] of eugenic sterilization was its racist tendencies. Not only were such ideas applied frequently to black Americans, but to the massive numbers of eastern and southern European and Asian immigrants who were considered to be of inferior genetic stock. Sociologist E.A. Ross argued that the original American settlers (Anglo-Saxons and later Nordics) had as a result of their struggles to survive in the wilderness formed a biologically unique "species" of American he referred to as the "pioneering breed". The massive influx of inferior immigrants if allowed to inbreed with Americans would only weaken our society's biological superiority. [Franz Boas](#), the leading American anthropologist of the early 20th Century took the lead in opposing the racist thought that accompanied the eugenics movement. Eventually all states repealed their sterilization statutes as the eugenics movement lost interest in the 1930's. The Nazi slaughter of millions of European Jews, Gypsies, homosexuals, and mentally and physically defective hospital patients convinced the remaining advocates of eugenics of the possible horrific consequences of a state determined to carry out such a policy.

My own research on this topic has analyzed why late 19th- and early 20th-century American criminologists and sociologists so willingly accepted positivistic models such as Lombroso's. In **The Religious Roots of American Sociology** I argued that the particular religious beliefs espoused by men such as Charles Henderson (author of **An Introduction to the Study of Dependent, Defective, and Delinquent Classes**) and Albion Small (head of the world's first sociology department at the University of Chicago) were related to their beliefs concerning the future religious mission of the American nation. The [Social Gospel](#) had five major components:

- 1) a strong allegiance to evolutionism, which the social gospelers explained theistically
- 2) faith in inevitable progress,
- 3) an optimistic view of human nature that replaced a more pessimistic Calvinist perspective,
- 4) belief that the Kingdom of God was to be an earthly utopia rather than a realm existing only in the afterlife, thus necessitating a program of "social salvation" to either augment or in some cases entirely replace the evangelical concern for individual salvation, and
- 5) the belief that America was to be the place where the earthly Kingdom would be first established, and then serve as a model to the rest of the world.

The role criminology played was to separate out the salvageable from the unsavable portions of the population as an earthly kingdom could not permit "sinners".

Other Italian Positivists

The two most famous of Lombroso's contemporaries were Enrico Ferri and Raffaele Garafolo. Ferri was one of the first researchers interested in the study of crime statistics. While quite interested in Lombroso's biological determinism, Ferri consistently argued for a broader explanation of criminality. In particular, Ferri believed that social, economic, and political factors were important in attempting to develop a comprehensive theory of crime. Included among the factors were:

physical (race, climate, geographic location, seasonal effects, temperature

anthropological (age, sex, organic and psychological conditions)

social (density of population, customs, religion, organization of government, economic and industrial conditions).

From these factors Ferri developed a fourfold typology of criminal types (insane, born, occasional, and

criminal by passion) in his work, [Criminal Sociology](#)

Ferri was also one of the first criminologists to emphasize "crime prevention." By this he meant more than making sure to install deadbolt locks, however, some of his suggestions were quite practical such as increased use of street lighting and state control of weapons manufacture (and distribution). Some of his preventive proposals have since been advocated by others but he was one of the first to advocate massive government involvement and government restructuring as ways to lower crime rates. The study of crime statistics would show which programs were effective and which were not. Among the major changes Ferri proposed were: free trade, abolishing monopolies, public savings banks, foundling homes, and public recreation. In the United States, Progressives such as Teddy Roosevelt and [Jane Addams](#) advocated many of these suggestions. Ferri also suggested public housing for the poor, a welfare state idea. He also felt that birth control, particularly for the most criminogenic classes, might help. Politically, Ferri was a socialist during the middle part of his career, but later became a Fascist. This demonstrates the plasticity of positivist models. Social control of deviant populations is a concern of all authoritarian regimes.

Garafolo started his career as a judge and later became a professor of criminal law. Like other positivists, he fundamentally rejected the idea that criminal behavior was the result of free will and sought to understand crime by adopting the scientific method.

One of Garafolo's goals was developing a universal definition of crime. He claimed to have accomplished this with his concept of "natural crime." By natural crime Garafolo included offenses violated the two basic altruistic sentiments common to all people in all ages: "probity" [morality, virtue] and "pity" [feeling for others, remorse]. If Garafolo had been a better anthropologist he might have recognized the problem inherent in this statement. Anthropologists have been hard pressed to find a universal content to morality although all cultures employ the concept. The American sociologist [William Graham Sumner](#) pointed this out in *Folkways*, much to the disdain of American positivists who were seeking universal values (in keeping with Christianity).

Garafolo rejected the physical type theories of Lombroso and Ferri. Instead he advocated a "psychological" approach. In fact, his favorable position toward punishment places Garafolo closer to the classical school than most other positivists. However, his theory of punishment is ultimately Darwinian. Based on the survival of the fittest tenet, Garafolo argued for the "elimination" of certain criminal types. He advocated death for those with permanent psychological abnormalities (i.e. psychopaths), "partial elimination" (permanent imprisonment) for those fit only for "the life of nomadic hordes or primitive tribes," and "enforced reparation" (restitution) for those lacking altruistic sentiments but unlikely to repeat their crimes. By these methods Garafolo believed we could gradually eliminate our criminal populations.

PHYSIQUE and CRIME: Body Type Theories

The two most famous body type theorists were Ernst Kretschmer and [William Sheldon](#). They believed

that there was a correlation between body type and overall behavioral patterns or temperament. Kretschmer analyzed over 4,000 criminal cases using his 3 body type model: (1) **leptosomic or asthenic** [tall and thin], (2) **athletic** [well developed muscles], and (3) **pyknic** [short and fat]. His conclusion was that there is a greater number of violent criminals who correspond to the athletic type, while the asthenic are more likely to be involved in petty theft and fraud. Finally, Kretschmer found that the pyknic tended toward crimes involving deception and fraud but were also sometimes involved in violent crimes.

One of the frequently employed studies of physique was done by William Sheldon and referred to as somatotyping. He argued that there were 3 basic body builds: 1) endomorphic (fat & soft) 2) ectomorphic (thin & fragile) and 3) mesomorphic (muscular & hard). In order to rate a particular individual Sheldon used a 7-point scale for each body type, thus each individual had 3 ratings. [Example: 1-7-1 = a pure mesomorph.] Sheldon linked certain personality traits to each of the body types.

endomorphs love comfort, food, affection, and being around people; even tempered, easy to get along with [non-deviant]

mesomorphs seek vigorous physical activity, risk-taking, adventure; more likely to be indifferent to pain and aggressive, callous, even ruthless in relationships with others

ectomorphs are usually inhibited, reserved, self-conscious and afraid of people.

Mesomorphs, therefore, pose the greatest threat of becoming delinquents and later criminals. However, he found some relationship between endomorphy and delinquency.

Sheldon did his study by comparing 400 boys in a residential rehabilitation home. He gathered extensive family backgrounds on each and also monitored their growth for 8 years. In criminology, the Gluecks used Sheldon's typology extensively [as did Herrnstein in his book with Wilson]. They found 60% of the delinquent population to be mesomorphs and 30% endomorphs.

In a similar vein others have studied physical attractiveness and crime (a la Corsini) and found a correlation. However, they could not detect whether physical unattractiveness played a part in the initial choice to become deviant or whether the juvenile court system singled out unattractive children from others by adjudicating them delinquent more frequently.

In the 1970's several experimental programs were started that offered facial reconstruction surgery to unattractive inmates at some prisons, the thinking being that a new face might be a good rehabilitative tool. A study was done of over 400 that compared men who received the surgery, counseling, both, or neither. Some positive results were found with certain kinds of offenders who received the surgeries.

Wilson, James Q. and Richard Herrnstein's Crime and Human Nature

While supposedly more skeptical concerning hereditary influences on criminal behavior, Wilson and Herrnstein argue that "constitutional" factors may help account for the fact that criminal behavior is primarily committed by young males. Constitutional factors are not necessarily genetic but they may be, i.e. intelligence and temperament. These factors affect to some extent the likelihood that individuals will engage in criminal activities. An example of a nongenetic constitutional factor would be Fetal Alcohol Syndrome; it is caused by excessive drinking by the pregnant mother.

Wilson and Herrnstein believed that anatomical configurations are correlated with crime. These do not cause crime. But, the fact of their correlation indicates that there is some psychological trait, having a biological origin, that predisposes an individual to criminality--intelligence, personality, and psychopathology are discussed as possible examples. While disposing of physiognomy and phrenology as prescientific, the authors nevertheless assert that modern evidence argues strongly for physical and genetic correlates of crime. The authors reject Goring's outright dismissal of Lombroso and praise Hooton for studying 12% of the male prison population of his time. Hooton's conclusions came close to confirming Lombroso's. However, Wilson and Herrnstein do not agree with Hooton's claim that such criminals are "inferiors." For this fact Hooton has no proof, except for the fact that they were criminals. Wilson and Herrnstein see the outright rejection of Hooton's findings by sociologically oriented criminologists as turf protection and as a response to Fascism and its reliance on race-oriented theories, and the takeover of criminology by sociology-backed theories from physical anthropology as well as psychology and biology.

Wilson and Herrnstein believe Hooton was on the right track but should have concentrated on general physique. The theorist who did this was Sheldon. They argue that while Sheldon's original sample of 200 was small, his findings have been confirmed wherever they have been tested. The author's use of twin studies to back up their suggestion that crime has a constitutional component.

Theories of Mental Deficiency and Feeble-mindedness

Next to physical inferiority, mental deficiency is one of the most frequently cited biological explanations of constitutional criminality. Even after phrenology and Lombrosian criminology were largely disproved the theory that criminals could be characterized as low intelligence human beings persisted.

Historically, those of low intelligence were frequently lumped together with the insane. The insane included the feeble-minded, morons, idiots, imbeciles, simpletons, and fools.

It was not until the early 1800s that doctors such as Esquirol and Ray made a clear distinction between those who were functioning normally and then suddenly started acting crazy [mania and dementia] and those who had never developed properly in the first place or were born defective [idiocy and imbecility]. Today the distinction is made between mental retardation and mental illness.

While there are a number of explanations for both mental retardation and various forms of mental illness

today, in the 19th and early 20th centuries the principle explanation was heredity. Among the most famous researchers of that era were Dugdale and Goddard.

H. H. Goddard was a New Jersey psychologist who firmly believed that lack of intelligence was related to criminality. Such individuals Goddard did not believe were responsible for their actions. Like Dugdale, Goddard traced the family tree of a particularly notorious clan known as the Kallikaks.

The family of Deborah Kallikak, a little moron girl brought to Goddard's Vineland facility in 1897 at the age of eight, became important to both the eugenics movement and intelligence testing.

The story, as finally pieced it together, was as follows. Deborah's great-great-great grandfather had been one Martin Kallikak, a young man of good family, who at the outbreak of the American Revolution, sprang to his country's defense by joining the local militia. At one of the taverns frequented by the militia he met a feeble-minded girl (name unknown), by whom he had an illegitimate son. The son, who bore his father's name, though in later years known more commonly as Old Horror, spawned a family as degenerate as the Jukes. No matter where Goddard traced the descendants Old Horror, whether in the city tenements or rural hovels, the story was always the same: feeble-mindedness, poverty and immorality. Old Horror had 480 descendants, of whom 143 were feeble-minded, forty-six normal, and the rest of doubtful or unknown mentality. The descendants included twenty-six illegitimate children, thirty-three sexually immoral persons (chiefly prostitutes), twenty-four alcoholics, three epileptics, three criminals, and eighty-two who died in infancy. What made the Kallikak family still more interesting was that Martin Kallikak, upon leaving the Revolutionary army, married a Quaker girl of good family, and from this marriage came a line of doctors, lawyers, judges, educators-in short, respectable and honorable citizens all. Both families lived in New Jersey, sharing the same surname but unaware that they were related.

In 1912 Goddard published *The Kallikak Family*, written in a popular vein, with many lurid details concerning the degraded poverty and immorality of the degenerate branch of the family. He considered the family a perfect demonstration of the working of the laws of heredity; for "the biologist could hardly plan and carry out a more rigid experiment and one from which the conclusions would follow more inevitably."

From: Mark Haller's **Eugenics: Hereditarian Attitudes in American Thought**

Goddard defined the mentally incompetent as those born w/o, sufficient intelligence either to know right from wrong, or if they know have not sufficient willpower and judgement to make themselves do what is right. Goddard believed that anywhere from 25 to 50% of those in our prisons were there as a result of feeble-mindedness. "It is hereditary feeble-mindedness and not hereditary criminality that accounts for" our prison populations. Goddard claimed he had uncovered defective rates within individual prisons ranging from 28 to 89% with most over 50%.

Although the idea that the levels of intelligence varied greatly among the human population has long been recognized, it was not until the late 19th century that attempts were made to quantify "Intelligence." Of course, the first question that had to be answered was, "What exactly are we measuring?" (For example, although I was a straight "A" student in elementary school, etc., my father always said I had no common sense. When I got to college I found a major that claimed to be studying "common sense"--that discipline was sociology.) Scientists finally came to the conclusion that "intelligence" could be measured by creating mathematical rankings for a variety of "mental operations" [logic, reasoning, creative thought, etc.] and the combined score quantified. Alfred Binet and Theodore Simon developed IQ testing. Binet hoped to measure "native intelligence" rather than learned or acquired knowledge. In 1908 Binet-Simon added the concept of mental age to their testing by comparing individuals to average intelligence test scores for their age group. With 100 being normal, those above were above average while those who scored less than 100 were below average. Today's Stanford-Binet test has 90 test modules, arranged in order of difficulty from the 3-year-old level to that of the superior adult.

Once a standardized intelligence test was accepted the problem remained of determining what constituted feeble-mindedness. Goddard, who worked at the New Jersey Training School for the Feeble-minded in Vineland, NJ found that none of his clients had a mental age higher than that of a 13-year-old. Therefore, he set 12 or an IQ of 75 as the upper limit of retardation.

Studies done of the W.W.I draft army found that upwards of 1/3 of the soldiers were feeble-minded according to such criteria. Some studies actually found the mental age of inmates slightly higher than the draft army. Such findings ultimately convinced criminologists that the notion that most criminals were feeble-minded was mistaken. This did not dissuade Goddard.

Contemporary Intelligence Testing

Travis Hirschi switched the direction of contemporary research on this question by focusing on the relationship between academic competence, school performance, and delinquency rather than IQ scores. He examined the police records of over 3600 boys in CA. Hirschi used DAT scores (Verbal Achievement Scores on the Differential Aptitude Test) rather than IQ. Hirschi believed that the difference in school performance rates might explain why there were differing delinquency rates for white and black youths. Hirschi and others have concluded that delinquents tend to have lower DAT scores than their non-delinquent counterparts. This is true even when variables such as race and class are accounted for. i.e., white middle-class delinquents have lower DAT score averages than their non-delinquent peers.

Hirschi's research has not spelled the end for IQ-delinquency studies. In 1976, Robert Gordon published a major study concluding that IQ was definitely related to delinquency. His conclusions about race, IQ, and delinquency were quite similar to Arthur Jensen's. Jensen found the average difference in IQ scores between whites and Blacks to be 15 points. Jensen attempted to explain these differences by genetics rather than environment. The IQ debate continues on.

From: Herrnstein and Murray's **The Bell Curve** 1994

Among the most firmly established facts about criminal offenders is that their distribution of IQ scores differs from that of the population at large. Taking the scientific literature as a whole, criminal offenders have average IQs of about 92, eight points below the mean. More serious or chronic offenders generally have lower scores than more casual offenders. The relationship of IQ to criminality is especially pronounced in the small fraction of the population, primarily young men, who constitute the chronic criminals that account for a disproportionate amount of crime. Offenders who have been caught do not score much lower, if at all, than those who are getting away with their crimes. Holding socioeconomic status constant does little to explain away the relationship between crime and cognitive ability.

High intelligence also provides some protection against lapsing into criminality for people who otherwise are at risk. Those who have grown up in turbulent homes, have parents who were themselves criminal, or who have exhibited the childhood traits that presage crime are less likely to become criminals as adults if they have high IQ.

These findings from an extensive research literature are supported by the evidence from white males in the NLSY. Low IQ was a risk factor for criminal behavior, whether criminality was measured by incarceration or by self-acknowledged crimes. The socioeconomic background of the NLSY's white males was a negligible risk factor once their cognitive ability was taken into account.

The XYY Chromosome and Criminal Behavior

Once the idea was accepted that inherited genetic traits might be related to criminality, researchers hoped to isolate the specific genes involved. The chemical packages that comprise genes are known as chromosomes. Every human cell contains 23 pairs of chromosomes that contain DNA. Each person has two sex chromosomes, males XY and females XX.

The first finding made by scientists of an abnormal chromosome pattern that was believed might be related to crime was the XYY chromosome, characterized by the extra male Y chromosome. A significantly greater prevalence of institutionalized men with the XYY pattern than in the general population convinced researchers the phenomenon might be related to criminal behavior, particularly violent behavior. It was hypothesized that the extra Y chromosome resulted in a "supermale," one who was therefore more predisposed to aggressive and violent behavior. No researcher suggested that all XYY boys would become delinquent. Other purported consequences of the XYY trait were degeneration of the testes, breast enlargement, partial mental retardation, alcoholism, and homosexuality. Physically, XYY males tended to be quite tall.

However, contrary to expectation, studies of XYY populations within prisons found them considerably less violent than their non-XYY counterparts. Studies were done comparing the overall offense histories of the two groups, as well as their violent criminal histories.

Explanations for the relatively high institutionalization rates for XYY males include: fear of their physical height, and the possibility that lower-class families are producing chromosomal abnormalities because of the difficult living conditions they are exposed to.

Psychological Models

Authors such as Pfohl tend to lump together biological and psychological models under pathological perspectives. Included in our on-line papers are essays on Freud and Jung, focusing on their views of the dark side of human nature and the damage to personality development that inadequate nurturing can produce.

The Ecological Approach and Social Disorganization

The ecological approach within criminology was popular in the 1920s through the 1940s. The model is often compared to Durkheim's because of its similarity to [anomie theory](#). Both can be labelled as [social disorganization](#) models.

The ecological approach was developed during the 1920s and 1930s at the University of Chicago. The model was developed by the [sociology department](#) and used to explain urban social change; of which changing crime patterns was one phenomenon under study.

[Robert Park](#) and [Ernest Burges](#) pioneered the ecological approach. The model was borrowed from the study of plant ecosystems. In nature, plants and animals seem to live together in mutual harmony and are ultimately interdependent. [Bees pollinate flowers producing seeds, etc.] Such mutual interdependence is called "symbiosis." Park believed that cities might be [symbiotic environments](#).

Park believed that the city was a super-organism [Durkheim's](#) concept of the [division of labor](#) typical of organic solidarity was similar) that contained **natural areas**. Natural areas took many different forms, including [1] ethnic enclaves [2] activity related areas (e.g. business districts, shopping districts, manufacturing districts, residential areas, etc.), [3] income groupings (e.g. The Gold Coast [Zorbaugh](#) middle class neighborhoods, ghettos, etc.), and [4] physically separated areas (areas cut off from each other by rivers, lakes, railroad tracks, airports, etc.).

While the concepts of symbiosis and natural areas might explain city life at any one point in time (a snapshot), alone they could not explain urban change, in particular, the patterns of growth, decay, and renewal which all cities appeared to follow. To explain this phenomenon Park borrowed another concept from plant ecology, **invasion**. While an ecosystem might remain in balance for a sustained period of time, the introduction of a new species might upset the old balance. E.g. In the early 20th century, English settlers introduced a breed of cactus into Australia that proceeded to grow everywhere and killed off a significant amount of the native vegetation. Park believed that a similar pattern occurred in cities. As the "new" invaded an established natural area a struggle for dominance was precipitated. If the invasion was successful, the new became **dominant** and the process of **succession** was complete. The "new" might be a group of people [e.g. Polish immigrants replacing Irish] or urban development.

In order to explain how the process of invasion and succession worked on a large scale, Park and Burgess developed their concentric zone theory.

There were 5 zones:

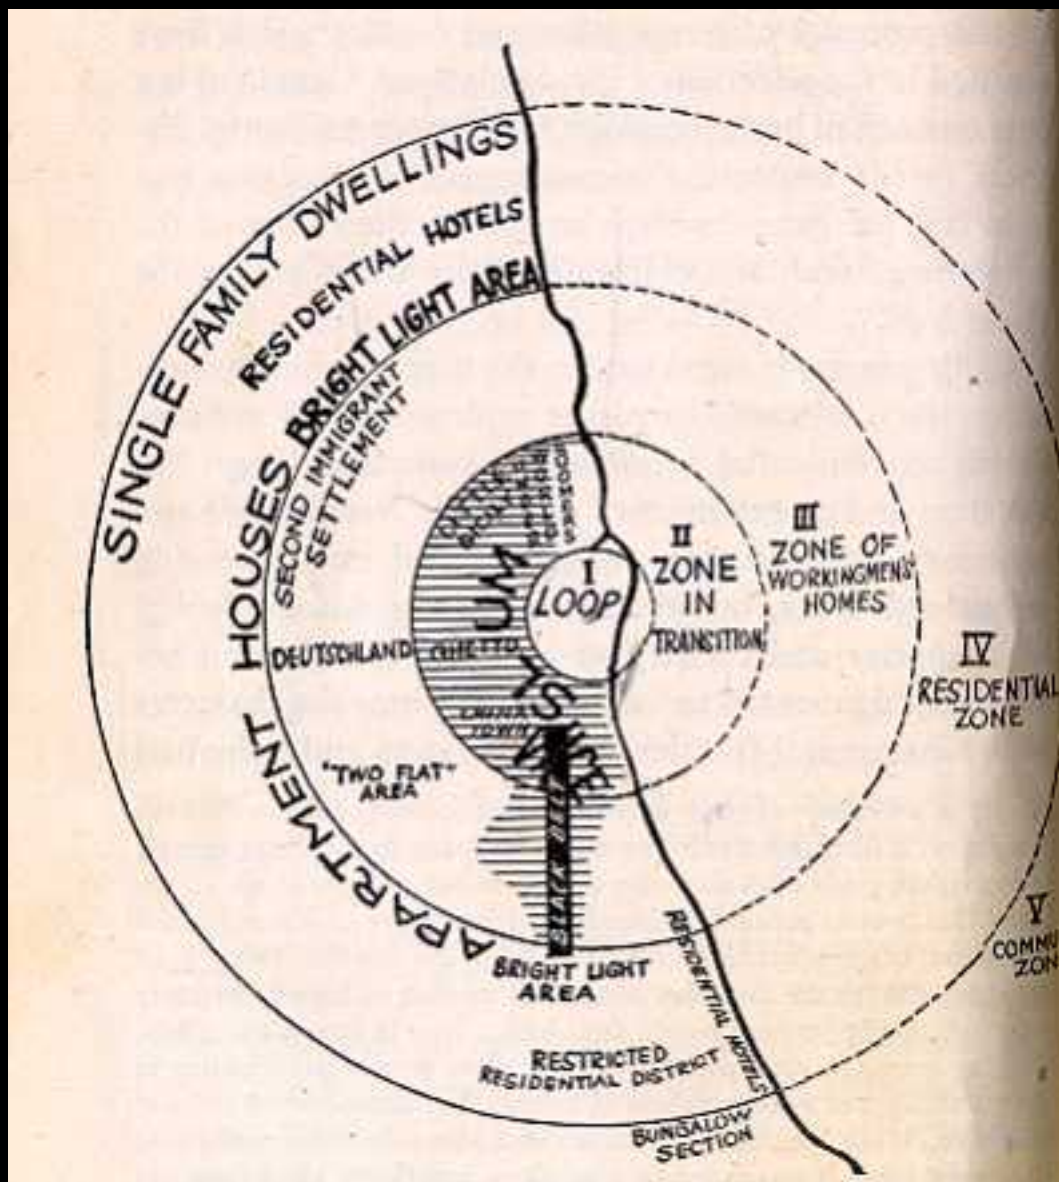

- Zone I - Central business
- Zone II - Zone of Transition
- Zone III - Working Class Homes
- Zone IV - Middle Class Homes
- Zone V - Commuters

Zone II was marked by a high level of transition, people moving in and out of the area. It was hypothesized that this "zone of transition" led to social disorganization.

From such an analysis it becomes quite evident that the problems of our urban slums can not be blamed on the people who live in them, but are the result of much greater social and economic forces, which those who reside in the ghettos are largely powerless to control. When critics attack Shaw and McKay's Chicago Area Project as a fundamentally inadequate response to the forces generating high rates of juvenile delinquency in low-income areas, it is to this fact that they are pointing. While the ecological theory rightly recognized the importance of socioeconomic power [making it a conflict or radical model], none of the ecological theorists were willing to openly express the obvious policy implications of their analysis. The city, state, and federal government would have to intervene on the side of the powerless against the socio-economic forces arrayed against them.

Shaw and McKay's use of the ecological model

Clifford Shaw and Henry McKay applied Park and Burgess's ecological approach and the concentric zone theory to the study of [juvenile delinquency in Chicago](#). The period in which they were doing their research--the 1920s and 1930s--was an interesting period criminologically because of such factors as Prohibition and the Great Depression. In Chicago, a number of criminal gangs had emerged in order to supply the underground economy with a contraband product--alcohol. The depression allowed criminologists to test whether criminality and economic downturns were related.

Concentric Zone Map of Chicago

Shaw and McKay used two different methods in order to test their theory that delinquency and patterns of urban growth and decay might be related. The first was statistical, the second qualitative. They used a large map of the city of Chicago and used pins to mark the home address of each and every juvenile either arrested by the Chicago police or reported to the Cook County Juvenile Court. Through this method they discovered that delinquency rates were highest in areas characterized as: [1] being located within or immediately adjacent to areas of heavy industry and commerce (e.g. condemned buildings, decreasing population), [2] areas having residents of the lowest economic status (e.g. these neighborhoods had the highest percentage of families on welfare, highest rates of infant mortality, tuberculosis, and insanity), [3] areas which had the highest concentration of foreign-born and black heads of families. Factors [2] and [3] were shown by Shaw and McKay to be statistically related. They proved this by following over time the succession patterns of the city's poorest neighborhoods. As new immigrant groups replaced older ones, the delinquency rates within these neighborhoods remained remarkably stable over time. The other piece of evidence for their conclusion was their discovery that ethnicity did not prove to be a significant factor related to delinquency citywide. Each ethnic group

produced delinquency rates that ranged from the highest to the lowest in the city depending on the type of neighborhood in which they resided. Frederick Thrasher used a similar approach in his study of juvenile gangs.

<p>There have been a number of criticisms of Shaw and McKay's statistical approach. They depended solely on "official delinquency statistics," had no access to self-report studies, and missed entirely the existence of middle-class delinquency. (Cicourel, Chambliss)

The other aspect of Shaw and McKay's methodology was qualitative, their use of [oral histories](#). Shaw produced 3 books based on this approach, *The Jack-Roller*, *Brothers in Crime*, and *The Natural History of a Delinquent Career*. Shaw's use of the life history approach is discussed in James Bennett's *Oral History and Delinquency*. Shaw realized that those he interviewed might embellish their pasts or lie but felt that was not a problem if one recognized the importance of understanding the offenders' attitudes. That people choose to lie about or embellish is significant. How people rationalize their deviancy is an important criminological topic [e.g. Sykes and Matza's discovery of the neutralization techniques used by delinquents to excuse or justify their crimes].

Shaw used the oral histories to document both the delinquents' immediate surroundings [homelife, neighborhood, friends, schools, encounters with police, etc.] and the evolution of delinquent careers. Shaw believed that delinquents were essentially normal kids [not biological, intellectual, or psychological misfits] whose illegal activities were related to the environments in which they were living. He discovered that delinquency began in high delinquency areas at an early age as part of the children's play activities on the streets. This was the reason his Chicago Area Project was aimed at finding alternative recreational and time-filling activities so as to prevent the early turn to delinquency. Shaw found that the neighborhoods with high rates of delinquency offered many opportunities for delinquency [junkies needed drugs, residents would purchase stolen goods, dilapidated buildings provided "club houses" where kids could avoid adult supervision, etc.] but few opportunities for successful entry into the world of work [poor schools, few successful role models, lack of jobs, etc.]. Criminal techniques such as how to hot wire cars were taught by older kids to younger ones. While such children may have been long involved in delinquent activities, it was only late in their delinquent careers that they came to identify themselves as part of the criminal world. Shaw here employs an early version of labeling theory, arguing that only after extensive contact with juvenile and adult criminals on the street and in detention centers, jails, and reform schools, plus rejection and stigmatization by the community did the youths come to identify themselves as criminals.

Crime, Poverty, and Economic Inequality

The idea that poverty is related to a whole series of other misfortunes such as illness, despair, and crime is not a new one. The Bible contains many references to poverty, for example. God judged the kings of Israel by their treatment of the poor. Jesus seemed to favor the poor and their company over that of the rich and powerful. The Catholic Church has always held the position that the poor "deserved" alms or charity and did not treat the poor unkindly.

The idea that the poor are somehow disreputable can be traced back in European society to the birth of Calvinism and the Protestant work ethic. As pointed out by [Max Weber](#), as [Calvin's followers](#) sought a sign from God that they were indeed among God's predestined elite, they hit upon the notion that God's blessing might be demonstrated through success in a worldly calling or profession. Thus, business success was the sign of God's blessing. On the other hand, the poor could certainly not be considered members of the elect. The idea that the poor were lazy and refused to "pick themselves up by their own bootstraps" became predominant over the older perspective that the poor were "closer to God".

Based on the premise that the poor are lazy and refuse to work hard, it is not too far of a stretch to argue that they will "choose" crime because it is the easy way out. This is similar to the argument frequently made about welfare. Many believe that if offered handouts such as welfare the lower classes will never go to work. Contemporary conservative authors such as [George Gilder](#) and [Charles Murray](#) advocate the elimination of welfare as an "incentive" for the poor to return to work. Welfare, which has its origins in Elizabethan poor laws [England], was always based on the concept that subsidies to the able-bodied must be kept lower than the lowest paid wage earners, Otherwise, those at the bottom of society would never work since they had no incentive.

Of course, there are a number of other explanations for why poverty and criminal behavior might be related other than those based on the utilitarian rational calculus approach advocated by classical free will theorists. It is possible, for example, that poverty is related to other factors such as resentment, malnutrition, or low intelligence, and that it is these factors which ultimately produce crime. If severe malnutrition (or eating lead-based paint) produces lifelong brain damage, then the long-term effect may be increased rates of crime among these at-risk populations.

However, besides these indirect models, a number of direct correlations between crime and poverty have been expounded upon. For example, if poverty and crime are related, then those societies with higher rates of poverty should have higher crime rates. Similarly, crime should rise during periods of economic depression and decrease whenever economic conditions and opportunities improve. Crime rates should also be higher in poor communities v. middle- and upper-class neighborhoods.

Attempts to statistically study these questions can be traced back to early 19th century France and the work of Guerry and [Quetelet](#). Since the time of Guerry and Quetelet many criminologists have studied the relationship between poverty and crime. However, the findings of such studies depend significantly on how the measure of what constitutes poverty is operationalized.

Differences between (1) poverty, (2) social inequality, and (3) relative deprivation have been operationalized

(1) Poverty has often been defined according to an economic standard. A "poverty line" is drawn based upon income considered necessary to meet basic living standards. While all such standards are arbitrary, the percent of the population living below the poverty line is often used as a measure of social stability.

(2) **Social Inequality (def):** a comparison between the material level of those who have the least in society and the material level of other groups. Sociologists, political scientists, and economists often divide the population up into 5ths and compare them on income, wealth, etc. Historical comparisons are also done to determine long-term changes in the percentages of wealth or income each fifth has access to. Overall the long-term trend was an upward one for the bottom fifths through 1980 when the trend reversed itself; some say as a result of the introduction of "trickle-down economics" and the concurrent attack on welfare.

Economic inequality models are also used for cross-cultural comparisons. Nations in which everyone is relatively poor such as many third world countries have little social inequality. Communist or socialist societies attempted to minimize economic inequality but still allowed a rather substantial gap between party leaders and officials [the new class] and the rest of the population.

(3) **Relative deprivation** has a psychological component to it. It is based on the perception that there is a large distinction between the quality of life available to the poor and the middle classes and the wealthy. Feelings of resentment and injustice must be present for relative deprivation to be a significant factor. This phenomenon is thought to be particularly acute in large cities where the wide gap between the wealthy and the poor is readily apparent everyday. The image is one of poor people looking into the store windows of Bloomingdales or Neiman Marcus and finding themselves unable to afford to purchase anything.

Are unemployment (and other measures of poverty) and crime statistically linkable? (2) Social inequality and crime? (3) Relative deprivation and crime?

(1) Unemployment has been used as a way to measure the relationship between poverty and crime because unemployment goes up or down with periods of economic depression or prosperity respectively. The study of the relationship between unemployment and crime has produced considerable controversy. What are some of the specific findings of research in this area? Within criminology, the conclusion is that there is either no relationship between unemployment and crime or that the relationship (which correlations show is sometimes positive and sometimes negative) is ultimately insignificant. Other measures of poverty have been employed as well. Many studies of this phenomenon measure poverty by analyzing factors such as the number of poor people who live in specific neighborhoods or by operationalizing structural poverty [measures of infant mortality, low educational achievement, the number of one-parent families, etc.]

Results of these studies have also proved inconsistent and in some cases contradictory. For example, Cho studied the relationship between the number of people living below the poverty line in major cities and the commission of the FBI's seven index crimes. He found no relationship, meaning that those cities that had a higher percentage of their population living below the poverty line could not be correlated with higher crime rates. On the other hand, Ehrlich found a positive correlation when he used a different method of operationalizing poverty. Ehrlich found that as the percentage of households receiving less than half of the median family income increased or decreased in 1940, 1950, and 1960 the number of

property crimes similarly responded. Since these were periods of overall decrease in the percentage of families falling below the 1/2 median income figure he found that property crimes decreased proportionally. Structural poverty and homicide [particularly acquaintance homicides] were found to be correlated by Loftin and Hill, Messner, and Smith and Parker. It appears that in bad economic times acquaintance homicides go up, possibly as a result of being unable to cope with such stressful situations and then lashing out as those closest around them.

2) Social inequality and crime:

Cross-cultural studies have similarly found higher homicide rates in nations characterized by a greater degree of economic inequality. However, the correlation did not hold true for property crimes. American studies of economic inequality have found it to be a more significant variable than poverty. These studies often use cities or historical eras for comparison purposes. Cities with higher rates of economic inequality are compared to those with less differentiation. Cities like New York and Los Angeles have much wider gaps between the rich and poor than cities in less prosperous parts of the country like Appalachia or the Deep South (Alabama, Mississippi).

(3) Relative deprivation:

It has proved extremely difficult to study the relationship between relative deprivation and crime because the former is so difficult to operationalize. It would require interview-type data collection that is not typically used in this subfield of criminology. Economic studies typically use already existent databases that can be easily manipulated with computer statistical programs such as SPSS. How does one measure feelings that economic inequalities are unjust? While very few Americans are truly wealthy, the overwhelming majority do not feel that the current system is fundamentally unjust if we gage it by programs such as Lifestyles of the Rich and Famous. Those at the bottom appear to more frequently complain that American society is racially unjust rather than blame social class differences for their plight.

Righteous Slaughter -- Katz Chapter 1

In this chapter, Katz offers an explanation for some types of murder (in another he discusses senseless killings). In many murders, particularly those between persons who know each other, people kill defending what they believe to be the "good" thus justifying the crime in their own minds (at least at the moment they are committing it). In some cases, the public and juries have agreed with the defendant's claim that the killing was justified. Francine Hughes (Burning Bed case) couldn't very well argue self-defense, but did have a jury uphold her temporary insanity plea. She was then shortly released without receiving treatment. In the movie she is pictured as killing to protect her children from further harm, and as the only way to free herself from an otherwise unchangeable situation. Every time she moved away, he followed her. Another example is a husband who murders his adulterous wife or their wife's lover, particularly when the husband catches them in the act. He often receives sympathy from a jury. The husband is killing to defend the sacred institution of marriage from an outside attack.

Killings may also be justified in the eyes of the murderer if property rights have been violated, i.e. breaking into one's home, blocking a driveway with a car.

Overall these types of murders tend to emerge quickly, are fiercely impassioned, and are conducted with an indifference to the legal consequences. They are therefore immune to the [Classical model's](#) insistence that swift, certain, and severe punishment will act as a general deterrence. The person usually makes no attempt to escape and is quickly apprehended.

Why do such murders occur? Katz offers the following explanation:

1. The would-be murdered must come to understand the situation as one in which the victim is attacking what he regards as an eternal human truth. The situation requires a last stand in defense of a value that is associated with the individual's basic worth as a human being. The person feels they can not simply walk away from the situation without suffering a tremendous loss of face.

Katz tries to explain why the overwhelming majority of such murders [occur at home or at a recreational activity](#) (i.e., drinking at a bar). You can walk away from conflicts at work, because after 9 to 5 you are free to leave. The home is a much more difficult scene to relieve oneself from. Also, there is a much greater emotional investment in hearth and home. Recreational facilities are places people often come to as a last resort escape from other spheres of life. If one can not escape serious personal challenges there, where can one turn?

2. The particular emotion the killer is feeling (humiliation) must be transformed into rage. It is on this point that Katz's theory is most problematic? He does not assert simplistically that people are impelled by their emotions. He, in fact, states that persons who become enraged must create their own

emotions first, and then allow themselves to be seduced by their emotions in order to act out violently.

On this point Katz is in agreement with the direction being taken in the newly emerging subdiscipline of the [sociology of emotions](#). This field is much more interested in studying verbal "account" rather than internal emotional states. Neither humiliation nor rage would be universal responses to the situations that righteous killers have found themselves. In both humiliation and rage the individual experiences himself as an object compelled by forces beyond his control. "I got carried away" or "I wasn't myself" are frequently heard statements to express the compulsion. However, humiliation only becomes rage when a person senses that the way to resolve the problem of humiliation is to turn on the source of the humiliation. The goal may not be so much to kill, but to obliterate or annihilate the source of the frustration. In fact, sometimes, if the person dies too quickly the sense of vengeance is not satiated. (i.e. TV soap operas have to revive characters like [Roger Thorpe](#) so they be killed again.)

KATZ Chapter 2- "SNEAKY TRILLS"

When one looks at the entire history of criminological theory, there have been few attempts to explain female criminality. However, the models that have been developed frequently are crime specific. The highest number of property crimes committed by women are shoplifting offenses. Women do not steal cars or commit home break-ins. Female shoplifters fall into 2 subcategories:

Boosters [professional shoplifters](#) likely to use booster boxes, or other shoplifting tools of the trade. They steal for the money, frequently "[fencing](#)" the items quickly.

Snitches -- amateurs or occasional shoplifters. They will steal on impulse or if the opportunity presents itself. The reasons they steal are obscure. There is little proof for kleptomania, a neurotic compulsion to steal.

Turning to Katz's explanation of shoplifting, he seems to best fit the category of occasional shoplifters who steal on a dare or for excitement. College students who described their shoplifting experiences produced his accounts. However, it is possible that all shoplifters experience the kind of emotional "trills" Katz describes

There are 3 phases to the shoplifting experience described by Katz:

- 1) Generating the experience of being seduced to shoplift**
- 2) Reconquering ones fears in an effort to produce normal appearances**
- 3) The euphoric thrill of accomplishment**

While many potential shoplifters go into the store with the idea they will take something, they often do not know what they will end up stealing. They assume that something will catch their eye and pull them toward it. Department stores are modern-day cornucopias overflowing with the goods of our mass-produced economy. Objects in the store have an almost mystical attraction; the right object must almost beg to be stolen. The motivation for deviance is perceived to be shared by shoplifter and object. Of course, this is much like the way many people approach shopping trips to the mall. Bruce Johnson argues in **Kids, Drugs, and Crime** that shoplifting is merely shopping without money, and would agree with Katz's first stage explanation. Another aspect of the seduction process is contemplating how easy it would be to steal the item. "It would be so easy".

2) However, all shoplifters come to recognize stealing is not that easy. The potential thief recognizes that he or she is in the store to steal rather than to shop. They know that the store has detectives whose job it is to catch shoplifters. The shoplifter must be constantly on guard that they are not being watched or followed. Detectives are on the lookout for those who are behaving suspiciously.

The shoplifter is therefore put in the odd position of having to feign that they are shopping while engaged in stealing. All kinds of questions and doubts enter their mind about whether real shoppers would act the way they are. (i.e. returning to the item several times before deciding to buy it; looking up to see if there are any cameras peering on them, etc). Shoplifters must feign shopping if they hope to arouse no suspicions. By not looking around to see if they are being followed, or up to search for cameras, etc, the shoplifter doesn't know if they have been spotted by store security forces. Will they make it out of the store safely?

3) Once safely out of the store, the euphoria of having succeeded in fooling the clerks and detectives emerges. The person has proven to himself or herself that they have the ability to overcome their stagefright and successfully pulled off a deviant act while pretending to be "normal". What has in the end been stolen may be of less importance than the psychological boost the accomplishment brings. Often the object is discarded or given away. Such shoplifters do not develop a deviant identity, and will stop if arrested or caught by store employees.

On the other hand, career shoplifters (boosters) consider being caught the price one must pay. Penalties for shoplifting, even for multiple offenses, are slight.

[Top](#)

Ways of the Badass: Katz Chapter 3

In this chapter, Katz describes the process of becoming a badass or adolescent tough guy willing to use violence to harm others. Katz breaks it down into three aspects, all of which must be present for the youth to be recognized as a badass.

1. He must appear tough and unwilling to be changed or dominated by the opinions of others. He must appear in command of situations and unwilling to back down from a chosen course of action.
- 2) He must make himself appear alien and not part of civilized society. His dress, demeanor, and behavior must reflect this. He wants his very presence to be unnerving for others
- 3) He must appear mean. He must be willing to back up his meanness with violence if the situation requires. However, he can't simply fly off the handle and explode or he risks being labeled a "punk" (and in need of psychiatric care).

The first is accomplished in a number of ways, one of the most important being dress. Leather clothing, black clothing, heavy boots, metal adornments, dark sunglasses are preferred. He can stare at you with impunity, but you dare not stare back at him. Also important is the use of language or lack of it.

Silence is a trademark of the tough guy. He is unwilling to communicate what he thinks or feels. When he does speak he mumbles, doesn't make eye contact, or is chewing gum. Rather than saying hello the first greeting may be a punch or hand slap. Verbal exchanges that resonate in guttural sounds may mark the beginning and ending of an encounter. He doesn't follow the proscribed greetings and closings that are considered the hallmark of civilized conversation. The first word to start a turn of conversation may be "shit" or some other profanity. (Katz is the only author I know of who analyzes the meaning of "shit" in the context of an ongoing conversation--see page 87).

Being Alien:

Being tough is not enough to be considered deviant. Football players, cops, ruthless businessmen or politicians can all appear tough. Katz goes on to identify further elements of style that serve to set the badass off as alien. These include body language, especially walking postures. He moves more of his body, arms, etc, thus taking up more space than the natural walker does. Others may have to back off to give him room to pass by. You dare not invade his space. (Katz is using a great deal of [Irving Goffman](#) in this chapter.) Touching one's own genitals in public, an act ethnic comedians have made much of, is another alien posture. [Tattoos or body piercings](#) set off the individual as having embraced a deviant identity. Cross-cultural evidence supports this. To have gotten a tattoo demonstrates that he has suffered and survived pain. Deviant forms of talking are also frequently employed. Sometimes toughs develop an idiomatic way of speaking that only they can decipher. The use of [argot](#) allows them to understand the larger society, but be unfathomable by it. [Gangster rap](#) uses such language liberally.

Graffiti writing in ways that the letters are unreadable by outsiders also demonstrates an alien presence. Its like trying to decipher hieroglyphics or the writings of extraterrestrials.

Being Mean:

It's still not enough just to be tough and alien. The final ingredient is that one must appear mean. You must show that you mean it. The person must do so in such a way that their actions are never misinterpreted as childish antics. This does not necessarily mean that the individual must be continuously involved in violence. Others must simply believe that physical violence is imminent. They may appear to others as being irrational in their commitment to violence, but they are not. They develop their own rationales to explain their commitment to violence. Katz labels these 1) "soulful chaos". 2) "paraphernalia of purposiveness, and 3)"mind fucking".

By the first Katz refers to the attempt made to convince others that their violent presence represents chaos. They take a sadistic hedonistic pleasure in violence. Obviously, if the intended audience is convinced, no one will mess with him. The badass can convince himself that a victim needs or is seeking a beating.

Weapons are what Katz refers to as the paraphernalia of purposiveness.

Knives, guns, etc., become matters of sacred ritual for the badass. He will spend long hours practicing its use, cleaning it, etc. Others obviously must take seriously one who lavishes so much attention on an object of destruction.

Weapon/No Weapon

- Between 1979 and 1991, almost 400,000 youth aged 15-19 died as the result of firearms.
- In 1991, the offender was armed in 67% of serious violent crimes (i.e., crimes of violence excluding simple assault) involving juvenile victims. In 19% of serious violent incidents the offender had a handgun, in 18% a knife, and in 25% a blunt object was used.
- In 1994, 65% of juvenile murder victims were killed with a firearm -- 72% of males and 42% of females.
- While juvenile homicide victimizations not involving firearms remained constant, those involving firearms nearly tripled from 1984 to 1994.
- Nearly 50,000 children and teenagers were killed by guns between 1979 and 1991 in the U.S.
- 4 times as many juveniles were killed with a gun in 1994 than in 1984. Guns now account for 82% of homicides by juveniles.

Source: Juvenile Violence: [A Guide to Research](#)

Under "mind fucking" the author discusses why the phrase "fuck you" expresses so perfectly the badass's attitude toward others.

The reversed moral logic of the tough is revealed in "the bump" and "whatyoulookingat?" The bump is often the only excuse necessary for a threatening response from the tough. It may be as simple as accidentally entering into his space or touching him. While in civil society both parties assume such collisions are accidental, and both sides apologize and go on their way, the badass uses the bump to justify retaliation. In many cases bumps are simply staged or manufactured by the tough to justify his own actions. One wonders why he even bothers, given he knows what he intends to do anyway.

"What you looking at?" demonstrates that even an unobtrusive invasion of space as eye contact may be considered legitimate grounds for reprisal by the tough guy. Immediately the other is stuck in a Catch 22 type situation. To respond "nothing" is to deny the existence of the badass and require response. To admit that you were looking at him leads to further questioning of why and what right you had to invade his space.

Katz Chapter 4: On Street Gangs

Actually in chapter 3, Katz had been talking about [street gangs](#), because being a tough guy is one of the ways gang members have of demonstrating they are "bad" both to themselves and to outsiders.

The major problem that teen gangs face is being taken seriously. It is very easy to write off their behavior, dress, etc., as childish antics. - This is not that difficult to do given that at home the youth may have a quite different role. A quite serious Cripps gang member while out on the streets (in the documentary "LA Gangs") was a good boy at home, hoping to win a college scholarship to play football. At home he took off his "shades" and bandana and looked as innocent as any normal high school youth.

Katz also compares lower-class gang behavior to middle class delinquents, and finds them quite different. Punks tend to come from middle-class homes, but tend to deny those roots. Punks may adopt lower-class dress and behavior, but deny the ties to neighborhood and territory that are at the basis of true lower-class gang banging. Fights over turf and invasion of turf take up a great deal of time and energy. The turf battles have, of course, been dramatically escalated with the turning of gangs toward organized crime in the form of crack dealing. The weapons are also more deadly, adding to the

problem.

Lower- and middle-class gang behaviors are also distinct in that middle-class kids deny their higher status and adopt lower-class street behavior. (They move down). On the other hand, lower-class gangs consider themselves to be elites and often take names like the Knights, Kings. Etc. (they aspire to move up) Middle-class delinquent groups are also much more likely to include [girls](#) while the male posturing of lower class adolescent gangs virtually keeps females out, except as annexes to the male gang. (See Anne Campbell's books)

Ghetto gangs are actually one of the major reasons that such neighborhoods are so dangerous. Kids don't join them to protect themselves from the muggers and robbers in the neighborhood, but from rival gangs who create most of the problems. The environment does not generate the violence they engage in. The kids use violence because it demonstrates to everyone in the neighborhood their elite status. Without it their antics would appear like the fantasy war games that most children play. Gang behavior is childlike in a number of ways; they stick to their own neighborhoods just like children are told to do. For gangs this becomes a matter of some pride. Turf wars suggest childlike king-of-the-hill games. Being able to control the streets means the gang can collect tribute. Graffiti, like flags in children's war games mark territorial boundaries.

KATZ'S THEORY OF ROBBERY AS LEARNED

In actuality Katz takes up 3 chapters with this issue. He attempts to explain persistence in robbery (stick-up) as a learned behavior. The form of learning theory Katz would subscribe to is not classical conditioning or even Bandura's or Akers more sociological approach. Those that persist in robbery are making a choice to continue involvement in a form of behavior they have found to be both instrumentally and expressively useful in the past. Katz also tries to take into account demographic or environmental factors that limit choices but don't prescribe choosing a deviant lifestyle. In particular, he seeks to offer clues as to why robbery is an almost exclusively male crime, and why there are a disproportionate number of black robbers. In chapter 7, Katz specifically takes up the latter points.

The first question Katz raises is whether persistent robbers can be called professional criminals. Obviously they can not. Most of their robberies result in little money. They run anywhere from a one in 5 to one in 10 chance of being caught each time they commit the crime. They don't improve their technique or sophistication with age or experience.

Katz questions those theorists who simplistically equate robbery with extreme poverty and lack of opportunity to get money in any other way. He also discounts drug addiction models. There are other ways to get money illegitimately that have much lower risk of detection or physical injury than robbery (i.e. selling drugs, numbers running, burglary, etc.). It is true that most robbers also do other types of crime, often the entire above list. However, for some robbery holds a certain fascination that makes it difficult for them to drop it from their criminal repertoire. One man persisted even when bound to a wheelchair as a result of a police shooting. Many robbers have reported that there is something about the thrill of confrontation with a victim that motivates them to commit the crime.

Robbery and mugging are quite different types of crime, the former requiring more "skill" and guts. A mugger wants to grab the person's valuables (purse, wallet, etc.) quickly and run away, while the victim is still too stunned to respond. He may knock the person over or hit them, but this is largely to insure his momentary advantage.

Robbers must declare their intentions and bring their victim's progress to a halt. They must appear threatening (not like Woody Allen in the bank robbery scene of "Take the Money and Run") and quite serious in their request for your valuables. The victim can not be allowed to think they can simply walk or run away or that in a fight they might be able to defeat the robber or scare him away. The assailant must appear to be committed to the use of violence if necessary even if it means getting into a fight in which the robber may be injured. This is, according to Katz, the moral philosophy of the "Hardman" his commitment is that his will, once communicated to the victim, must prevail, regardless of practical calculations of personal danger to himself (or to the victim). Victims do frequently resist (24% of those who face a robber with a gun) and thus the robber's concern is justified (within his moral universe).

There are a number of demographic factors that many persistent robbers share. These include being unmarried with few family obligations, being unemployed either steadily or for long periods of time, the use of [hard drugs](#) (often in combination). Rather than causal factors to explain persistent robbery, Katz sees them as part of an overall pattern of acceptance of a learned "transcendent" way of life (the person will succeed outside of the norms laid down by society). Other evidence to support this conclusion is marshaled by discussing attitudes towards sex, gambling, and money. Robbery is part of a larger commitment to a hedonistic life style that has a particular appeal to some. (Not only those living at the margins of our society, such as [Mafia "wise guy" Henry Hill](#).)

Katz sees the issues, of chaos and control as being very important to understanding the career robber. Chaos is a force that threatens to overwhelm him at any moment. Things can go wrong during the robbery; an informant could always turn him in, etc.

"Seen in the form of snapshots taken from the outside, the hardman seems to be a collection of impulsive outpourings of hostile feelings --- anger, aggressive instincts, and sadistic inclinations. But after series of frustrated robberies, lost fights, betrayals by intimates, arrests, and prison sentences, he has a multitude of reasons for not responding with emotion or trust."

The only way to deal with chaos is through control. He sticks up for himself (literally and figuratively). He attempts to control situations: robberies, his sexual relationships, his criminal associates, etc. (Katz comes to these conclusions not by asking **Why** but **How** the stick-up man goes about creating the universe in which he lives.

In chapter 7, Katz tries to explain why stick-up is largely a male activity. He rejects as too simplistic that females would be found incompetent or that they have a programmed distaste for violence. However, he does rely on the fact that male and female adolescents have separate spheres of activities. Teenage girls are much less likely to be involved in gang banging, gambling, hanging out, e than adolescent males. Thus, they are not learning how to do violent street crimes like their male counterparts are. Also, taking risks with life and limb is simply not a major female preoccupation as it is for males who must demonstrate their approaching manhood.

Katz offers an explanation for the disproportionate numbers of black males involved in robbery.

Five blacks to one white are arrested for robbery. Even other poor minority groups don't have the numbers of robbery arrestees.

One study in Chicago found 90% black v. 6% Hispanic.

Table 4.10

Arrests

By offense charged, age group, and race, United States, 1996

(9,661 agencies; 1996 estimated population 189,885,000)

Source: [Sourcebook of Criminal Justice Statistics](#)

Katz's explanation is largely sociological rather than phenomenological (chapter 6). He shows that other ethnic groups have been able to become entrepreneurs, thus allowing racketeering to develop alongside them to exploit their own groups. Robbery is not required to make money criminally through racketeering. The racketeers did offer some positive services to shop owners, especially in regard to city bureaucracies. Thus, white ethnics may be equally criminal, but their crimes will not show up in the robbery statistics. However, the black community lacks its own businesses, (first whites and, now Asians control most ghetto establishments) Most of black robberies of non-whites occur in these establishments of taxi drivers, drug purchasers, etc. Most black robbers victimize other blacks trapped in the ghetto with them.

The other part of Katz's explanation of black robbery is more phenomenological. It has to do with the use of the terms "nigger" and "bad nigger" within the black community itself. This is quite different from when whites use the term. Katz argues that when blacks use the term among themselves it is a special form of insult. Insults and responding to insults are ways that young black ghetto males talk to each other. "Nigger" is meant to represent a non-person status. To call a person a "nigger" is to say he is nothing and therefore invisible.

However, the adjective "bad" has a very specific connotation in Black English. Placed in front of "Nigger" it serves to negate the non-person status and

replace it with "being" Being bad is a form of being and thus proves ones existence. (See Katz p. 271) Robbery is certainly a way of expressing that one is a "bad nigger" one who is willing to risk his life for small gain and unafraid to make good on his threats of violence.

[Top](#)

Katz Chapter 8: Cold-Blooded Senseless Murder

Katz's final chapter covers the type of murders that cause the public the greatest concern and puzzlement, the cold-blooded, senseless killing of total strangers. Often these killings occur in the midst of a robbery or kidnapping, but they can not be explained as an attempt to eliminate witnesses, because often times other witnesses are spared.

This is probably Katz's most complex chapter. His comparison of the fear associated with the supernatural in primitive religions and type of fear/respect that cold-blooded killers try to create in their victims uses considerable poetic license.

Katz limits his discussion by eliminating the following type murders from the senseless murder category:

- 1) righteous slaughters
- 2) berserk killers who enter a building and shoot randomly at everyone inside (no robbery objective)
- 3) serial murders which exhibit sexual or sadistic motives
- 4) killing a robbery victim while they are in the act of resisting the assailant

Murders Katz includes under his senseless category are the "[Onion Field](#)" murders, [Gary Gilmore's](#) murderous rampage that lead to his execution in Utah, etc. The killing is part of an abduction or robbery, the individuals offer no resistance, often witnesses are allowed to escape, and the murder actually makes it more certain the individual(s) will be caught because a tremendous amount of police manpower will be employed to solve the case and caught the killer(s).

Katz offers a 3-part explanation of such killings:

- 1) such individuals hope to have others fear them, to react to them with a sense of primordial fear or dread
- 2) cold-blooded killers are frequently those who have spent a major portion of their lives in reform schools and prisons and have a great deal of difficulty accepting conventional morality
- 3) there must be a proper "killing scene" or opportunity for the potential killer to actualize his fantasies

1) Creating dread:

Cold-blooded killers are the modern equivalent of ancient deities including the God of the Old Testament who were to be feared and approached only with the greatest caution and proper respect (sacrifices, purification rituals, etc.) The wrath of God was greatly feared. God's law was his warning to the people that if they failed to obey him they could expect punishment. Katz sees a modern parallel in the dress and demeanor of the badass. Their

clothing, tattoos, and use of language automatically conveys a message that one must avoid this individual. Destruction may follow without any deliberation if you stray into their path.

2) The dizziness of deviance:

All of the individuals Katz discusses had had long histories of institutionalization in juvenile and adult correctional facilities. This severely impacted upon their ability to live in the community successfully and abide by the law. Obviously, they were lacking in social skills, work-related skills, etc. This meant they felt they were outcasts or individuals with pariah status. While they had been in prison they had remained steadfast in their conviction not to give in to the authorities there, and thus they disobeyed the rules there. To give in would have shown themselves to be weak. Once released a new problem emerges. The parolee's behavior is now viewed by society in a very unique way. When ordinary citizens obey the law not much is said or thought about it. However, when an ex-con upholds the law its seen as an example of "keeping his nose clean". It's like people are waiting for him to fail to prove that he hasn't really reformed.

Some ex-cons react in what most would consider a strange way to these pressures. They come to feel trapped by the constant societal pressure to do good and come to see being good as too easy or an act of cowardice. They want to be bad just to prove to everyone that they can't be so easily controlled. At that point they are under the "spell of deviance" searching for a way of out this dizzying situation. Choosing deviant behavior at that point gives the individual an edge, meaning that it is one way of regaining self-esteem in this situation. It helps the individual to think he is putting one over on those who are stifling his life. Some of these criminals, even returned to the scene of their crimes, (car thief) to see if even then they could get away with it.

Killing is the ultimate act of transcending the morality of the community and thus creating a transcendent identity. One of the [alleged killers](#) of Dr. MacDonald's family (in False Witness) went around the entire next day with blood stains on her white boots [she smelled of blood, too], but no one reported her to the police. She mentioned the murder to people before the press had become aware of it. The other killers were with her and they made no attempt to clean up her clothing or keep her from talking.

3) The importance of the scene:

The goal of creating a sense of dread and the dizziness of deviance are not enough to explain senseless killings, because it still doesn't explain when and where cold-blooded murderers have chosen to kill. It also appears that the scene must be right. Of course, just what is the right scene is in the killer's imagination. Many while in prison had frequently fantasized what they would do when they got out. These "escape" dreams often include criminal activities or capers. While a senseless murder during one of these capers may appear to the public to occur randomly, the killer seems to know that the scene or situation is right. Most of these murders occur at night, and frequently very late at night. Some occur in specific locations such as the basement or the bathroom. One set of killers only murdered after having driven long distances in a car with the victim. The "Onion Field" murderers drove the captured police officers hundreds of miles from LA before killing them. This killing transformed the individual (Powell) from a small time crook into a fearless cop killer. There would be no doubt about his deviant identity from then on.

Katz argues it would be quite easy to try and explain such killers in traditional psychological or sociological terms. Most were isolated individuals before they killed (although most didn't act alone) making it easy to label them as suffering from [antisocial personality disorder](#) or sociologically

attribute their actions to lack of social ties. Katz rejects such models as too simplistic and frequently the result of the way these cases tend to be written up by the press and crime non-fiction writers. Katz has used their accounts, but found things in the writings that could be used to construct his very different causal descriptions.

RULES OF COURT

Adopted on 14 April 1978

Preamble

PART I: THE COURT

Section A. Judges and Assessors

Subsection 1. The Members of the Court (Article 1- Article 6)

Subsection 2. Judges ad hoc (Article 7, Article 8)

Subsection 3. Assessors (Article 9)

Section B. The Presidency (Article 10 - Article 14)

Section C. The Chambers (Article 15 - Article 18)

Section D. Internal Functioning of the Court (Article 19 - Article 21)

PART II: THE REGISTRY (Article 22 - Article 29)

PART III: PROCEEDINGS IN CONTENTIOUS CASES

Section A. Communications to the Court and Consultations (Article 30, Article 31)

Section B. The Composition of the Court for Particular Cases (Article 32 - Article 37)

Section C. Proceedings before the Court

Subsection 1. Institution of Proceedings (Article 38 - Article 43)

Subsection 2. The Written Proceedings (Article 44 - Article 53)

Subsection 3. The Oral Proceedings (Article 54 - Article 72)

Section D. Incidental Proceedings

Subsection 1. Interim Protection (Article 73 - Article 78)

Subsection 2. Preliminary Objections (Article 79)

Subsection 3. Counter-Claims (Article 80)

Subsection 4. Intervention (Article 81 - Article 86)

Subsection 5. Special Reference to the Court (Article 87)

Subsection 6. Discontinuance (Article 88, Article 89)

Section E. Proceedings before the Chambers (Article 90 - Article 93)

Section F. Judgments, Interpretation and Revision

Subsection 1. Judgments (Article 94 - Article 97)

*Subsection 2. Requests for the Interpretation or Revision of a Judgment
(Article 98 - Article 100)*

Section G. Modifications proposed by both Parties (Article 101)

PART IV. ADVISORY PROCEEDINGS *(Article 102 - Article 109)*

Preamble

The Court,

Having regard to Chapter XIV of the Charter of the United Nations;

Having regard to the Statute of the Court annexed thereto:

Acting in pursuance of Article 30 of the Statute;

Adopts the following revised Rules of Court, approved on 14 April 1978, which shall come into force on 1 July 1978, and shall as from that date replace the Rules adopted by the Court on 6 May 1946 and amended on 10 May 1972, save in respect of any case submitted to the Court before 1 July 1978, or any phase of such a case, which shall continue to be governed by the Rules in force before that date.

[Table of Contents](#)

Part I

THE COURT

Section A. Judges and Assessors

Subsection 1. The Members of the Court

Article 1

1. The Members of the Court are the judges elected in accordance with Articles 2 to 15 of the Statute.
2. For the purposes of a particular case, the Court may also include upon the Bench one or more persons chosen under Article 31 of the Statute to sit as judges *ad hoc*.
3. In the following Rules, the term "Member of the Court" denotes any elected judge; the term "judge" denotes any Member of the Court, and any judge *ad hoc*.

Article 2

1. The term of office of Members of the Court elected at a triennial election shall begin to run from the sixth of February [This is the date on which the terms of office of the Members of the Court elected at the first election began in 1946.] in the year in which the vacancies to which they are elected occur.

2. The term of office of a Member of the Court elected to replace a Member whose term of office has not expired shall begin to run from the date of the election.

Article 3

1. The Members of the Court, in the exercise of their functions, are of equal status, irrespective of age, priority of election or length of service.

2. The Members of the Court shall, except as provided in paragraphs 4 and 5 of this Article, take precedence according to the date on which their terms of office respectively began, as provided for by Article 2 of these Rules.

3. Members of the Court whose terms of office began on the same date shall take precedence in relation to one another according to seniority of age.

4. A Member of the Court who is re-elected to a new term of office which is continuous with his previous term shall retain his precedence.

5. The President and the Vice-President of the Court, while holding these offices, shall take precedence before all other Members of the Court.

6. The Member of the Court who, in accordance with the foregoing paragraphs, takes precedence next after the President and the Vice-President is in these Rules designated the "senior judge". If that Member is unable to act, the Member of the Court who is next after him in precedence and able to act is considered as senior judge.

Article 4

1. The declaration to be made by every Member of the Court in accordance with Article 20 of the Statute shall be as follows:

"I solemnly declare that I will perform my duties and exercise my powers as judge honourably, faithfully, impartially and conscientiously."

2. This declaration shall be made at the first public sitting at which the Member of the Court is present. Such sitting shall be held as soon as practicable after his term of office begins and, if necessary, a special sitting shall be held for the purpose.

3. A Member of the Court who is re-elected shall make a new declaration only if his new term is not continuous with his previous one.

Article 5

1. A Member of the Court deciding to resign shall communicate his decision to the President, and the resignation shall take effect as provided in Article 13, paragraph 4, of the Statute.

2. If the Member of the Court deciding to resign from the Court is the President, he shall communicate his decision to the Court, and the resignation shall take effect as provided in Article 13, paragraph 4, of the Statute.

Article 6

In any case in which the application of Article 18 of the Statute is under consideration, the Member of the Court concerned shall be so informed by the President or, if the circumstances so require, by the Vice-President, in a written statement which shall include the grounds therefor and any relevant evidence. He shall subsequently, at a private meeting of the Court specially convened for the purpose, be afforded an opportunity of making a statement, of furnishing any information or explanations he wishes to give, and of supplying answers, orally or in writing, to any questions put to him. At a further private meeting, at which the Member of the Court concerned shall not be present, the matter shall be discussed; each Member of the Court shall state his opinion, and if requested a vote shall be taken.

[Table of Contents](#)

Subsection 2. Judges ad hoc

Article 7

1. Judges *ad hoc*, chosen under Article 31 of the Statute for the purposes of particular cases, shall be admitted to sit on the Bench of the Court in the circumstances and according to the procedure indicated in Article 17, paragraph 2, Articles 35, 36, 37, Article 91, paragraph 2 and Article 102, paragraph 3, of these Rules.

2. They shall participate in the case in which they sit on terms of complete equality with the other judges on the Bench.
3. Judges *ad hoc* shall take precedence after the Members of the Court and in order of seniority of age.

Article 8

1. The solemn declaration to be made by every judge *ad hoc* in accordance with Articles 20 and 31, paragraph 6, of the Statute shall be as set out in Article 4, paragraph 1, of these Rules.
2. This declaration shall be made at a public sitting in the case in which the judge *ad hoc* is participating. If the case is being dealt with by a chamber of the Court, the declaration shall be made in the same manner in that chamber.
3. Judges *ad hoc* shall make the declaration in relation to any case in which they are participating, even if they have already done so in a previous case, but shall not make a new declaration for a later phase of the same case.

Table of Contents

Subsection 3. Assessors

Article 9

1. The Court may, either *proprio motu* or upon a request made not later than the closure of the written proceedings, decide, for the purpose of a contentious case or request for advisory opinion, to appoint assessors to sit with it without the right to vote.
2. When the Court so decides, the President shall take steps to obtain all the information relevant to the choice of the assessors.
3. The assessors shall be appointed by secret ballot and by a majority of the votes of the judges composing the Court for the case.
4. The same powers shall belong to the chambers provided for by Articles 26 and 29 of the Statute and

to the presidents thereof, and may be exercised in the same manner.

5. Before entering upon their duties, assessors shall make the following declaration at a public sitting:

"I solemnly declare that I will perform my duties as an assessor honourably, impartially and conscientiously, and that I will faithfully observe all the provisions of the Statute and of the Rules of the Court."

Table of Contents

Section B. The Presidency

Article 10

1. The term of office of the President and that of the Vice-President shall begin to run from the date on which the terms of office of the Members of the Court elected at a triennial election begin in accordance with Article 2 of these Rules.
2. The elections to the presidency and vice-presidency shall be held on that date or shortly thereafter. The former President, if still a Member of the Court, shall continue to exercise his functions until the election to the presidency has taken place.

Article 11

1. If, on the date of the election to the presidency, the former President is still a Member of the Court, he shall conduct the election. If he has ceased to be a Member of the Court, or is unable to act, the election shall be conducted by the Member of the Court exercising the functions of the presidency by virtue of Article 13, paragraph 1, of these Rules.
2. The election shall take place by secret ballot, after the presiding Member of the Court has declared the number of affirmative votes necessary for election; there shall be no nominations. The Member of the Court obtaining the votes of a majority of the Members composing it at the time of the election shall be declared elected, and shall enter forthwith upon his functions.
3. The new President shall conduct the election of the Vice-President either at the same or at the following meeting. The provisions of paragraph 2 of this Article shall apply equally to this election.

Article 12

The President shall preside at all meetings of the Court; he shall direct the work and supervise the administration of the Court.

Article 13

1. In the event of a vacancy in the presidency or of the inability of the President to exercise the functions of the presidency, these shall be exercised by the Vice-President, or failing him, by the senior judge.

2. When the President is precluded by a provision of the Statute or of these Rules either from sitting or from presiding in a particular case, he shall continue to exercise the functions of the presidency for all purposes save in respect of that case.

3. The President shall take the measures necessary in order to ensure the continuous exercise of the functions of the presidency at the seat of the Court. In the event of his absence, he may, so far as is compatible with the Statute and these Rules, arrange for these functions to be exercised by the Vice-President, or failing him, by the senior judge.

4. If the President decides to resign the presidency, he shall communicate his decision in writing to the Court through the Vice-President, or failing him, the senior judge. If the Vice-President decides to resign his office, he shall communicate his decision to the President.

Article 14

If a vacancy in the presidency or the vice-presidency occurs before the date when the current term is due to expire under Article 21, paragraph 1, of the Statute and Article 10, paragraph 1, of these Rules, the Court shall decide whether or not the vacancy shall be filled during the remainder of the term.

[Table of Contents](#)

Section C. The Chambers

Article 15

1. The Chamber of Summary Procedure to be formed annually under Article 29 of the Statute shall be composed of five Members of the Court, comprising the President and Vice-President of the Court, acting *ex officio*, and three other members elected in accordance with Article 18, paragraph 1, of these Rules. In addition, two Members of the Court shall be elected annually to act as substitutes.
2. The election referred to in paragraph 1 of this Article shall be held as soon as possible after the sixth of February in each year. The members of the Chamber shall enter upon their functions on election and continue to serve until the next election; they may be re-elected.
3. If a member of the Chamber is unable, for whatever reason, to sit in a given case, he shall be replaced for the purposes of that case by the senior in precedence of the two substitutes.
4. If a member of the Chamber resigns or otherwise ceases to be a member, his place shall be taken by the senior in precedence of the two substitutes, who shall thereupon become a full member of the Chamber and be replaced by the election of another substitute. Should vacancies exceed the number of available substitutes, elections shall be held as soon as possible in respect of the vacancies still existing after the substitutes have assumed full membership and in respect of the vacancies in the substitutes.

Article 16

1. When the Court decides to form one or more of the chambers provided for in Article 26, paragraph 1, of the Statute, it shall determine the particular category of cases for which each chamber is formed, the number of its members, the period for which they will serve, and the date at which they will enter upon their duties.
2. The members of the chamber shall be elected in accordance with Article 18, paragraph 1, of these Rules from among the Members of the Court, having regard to any special knowledge, expertise or previous experience which any of the Members of the Court may have in relation to the category of case the chamber is being formed to deal with.
3. The Court may decide upon the dissolution of a chamber, but without prejudice to the duty of the chamber concerned to finish any cases pending before it.

Article 17

1. A request for the formation of a chamber to deal with a particular case, as provided for in Article 26, paragraph 2, of the Statute, may be filed at any time until the closure of the written proceedings. Upon receipt of a request made by one party, the President shall ascertain whether the other party assents.
2. When the parties have agreed, the President shall ascertain their views regarding the composition of the chamber, and shall report to the Court accordingly. He shall also take such steps as may be necessary to give effect to the provisions of Article 31, paragraph 4, of the Statute.
3. When the Court has determined, with the approval of the parties, the number of its Members who are to constitute the chamber, it shall proceed to their election, in accordance with the provisions of Article 18, paragraph 1, of these Rules. The same procedure shall be followed as regards the filling of any vacancy that may occur on the chamber.
4. Members of a chamber formed under this Article who have been replaced, in accordance with Article 13 of the Statute following the expiration of their terms of office, shall continue to sit in all phases of the case, whatever the stage it has then reached.

Article 18

1. Elections to all chambers shall take place by secret ballot. The Members of the Court obtaining the largest number of votes constituting a majority of the Members of the Court composing it at the time of the election shall be declared elected. If necessary to fill vacancies, more than one ballot shall take place, such ballot being limited to the number of vacancies that remain to be filled.
2. If a chamber when formed includes the President or Vice-President of the Court, or both of them, the President or Vice-President, as the case may be, shall preside over that chamber. In any other event, the chamber shall elect its own president by secret ballot and by a majority of votes of its members. The Member of the Court who, under this paragraph, presides over the chamber at the time of its formation shall continue to preside so long as he remains a member of that chamber.
3. The president of a chamber shall exercise, in relation to cases being dealt with by that chamber, all the functions of the President of the Court in relation to cases before the Court.
4. If the president of a chamber is prevented from sitting or from acting as president, the functions of the presidency shall be assumed by the member of the chamber who is the senior in precedence and able to act.

Section D. Internal Functioning of the Court

Article 19

The internal judicial practice of the Court shall, subject to the provisions of the Statute and these Rules, be governed by any resolutions on the subject adopted by the Court [The resolution now in force was adopted on 12 April 1976 (see pp. 165-173, below)].

Article 20

1. The quorum specified by Article 25, paragraph 3, of the Statute applies to all meetings of the Court.
2. The obligation of Members of the Court under Article 23, paragraph 3, of the Statute, to hold themselves permanently at the disposal of the Court, entails attendance at all such meetings, unless they are prevented from attending by illness or for other serious reasons duly explained to the President, who shall inform the Court.
3. Judges *ad hoc* are likewise bound to hold themselves at the disposal of the Court and to attend all meetings held in the case in which they are participating. They shall not be taken into account for the calculation of the quorum.
4. The Court shall fix the dates and duration of the judicial vacations and the periods and conditions of leave to be accorded to individual Members of the Court under Article 23, paragraph 2, of the Statute, having regard in both cases to the state of its General List and to the requirements of its current work.
5. Subject to the same considerations, the Court shall observe the public holidays customary at the place where the Court is sitting.
6. In case of urgency the President may convene the Court at any time.

Article 21

1. The deliberations of the Court shall take place in private and remain secret. The Court may however at any time decide in respect of its deliberations on other than judicial matters to publish or allow publication of any part of them.

2. Only judges, and the assessors, if any, take part in the Court's judicial deliberations. The Registrar, or his deputy, and other members of the staff of the Registry as may be required shall be present. No other person shall be present except by permission of the Court.
3. The minutes of the Court's judicial deliberations shall record only the title or nature of the subjects or matters discussed, and the results of any vote taken. They shall not record any details of the discussions nor the views expressed, provided however that any judge is entitled to require that a statement made by him be inserted in the minutes.

[Table of Contents](#)

Part II

THE REGISTRY

Article 22

1. The Court shall elect its Registrar by secret ballot from amongst candidates proposed by Members of the Court. The Registrar shall be elected for a term of seven years. He may be re-elected.
2. The President shall give notice of a vacancy or impending vacancy to Members of the Court, either forthwith upon the vacancy arising, or, where the vacancy will arise on the expiration of the term of office of the Registrar, not less than three months prior thereto. The President shall fix a date for the closure of the list of candidates so as to enable nominations and information concerning the candidates to be received in sufficient time.
3. Nominations shall indicate the relevant information concerning the candidate, and in particular information as to his age, nationality, and present occupation, university qualifications, knowledge of languages, and any previous experience in law, diplomacy or the work of international organizations.
4. The candidate obtaining the votes of the majority of the Members of the Court composing it at the time of the election shall be declared elected.

Article 23

The Court shall elect a Deputy-Registrar: the provisions of Article 22 of these Rules shall apply to his election and term of office.

Article 24

1. Before taking up his duties, the Registrar shall make the following declaration at a meeting of the Court:

"I solemnly declare that I will perform the duties incumbent upon me as Registrar of the International Court of Justice in all loyalty, discretion and good conscience, and that I will faithfully observe all the provisions of the Statute and of the Rules of the Court."

2. The Deputy-Registrar shall make a similar declaration at a meeting of the Court before taking up his duties.

Article 25

1. The staff members of the Registry shall be appointed by the Court on proposals submitted by the Registrar. Appointments to such posts as the Court shall determine may however be made by the Registrar with the approval of the President.

2. Before taking up his duties, every staff member shall make the following declaration before the President, the Registrar being present:

"I solemnly declare that I will perform the duties incumbent upon me as an official of the International Court of Justice in all loyalty, discretion and good conscience, and that I will faithfully observe all the provisions of the Statute and of the Rules of the Court."

Article 26

1. The Registrar, in the discharge of his function, shall:

(a) be the regular channel of communications to and from the Court, and in particular shall effect all communications, notifications and transmission of documents required by the Statute or by these Rules and ensure that the date of despatch and receipt thereof may be readily verified;

(b) keep, under the supervision of the President, and in such form as may be laid down by the Court, a General List of all cases, entered and numbered in the order in which the documents instituting proceedings or requesting an advisory opinion are received in the Registry;

(c) have the custody of the declarations accepting the jurisdiction of the Court made by States not parties to the Statute in accordance with any resolution adopted by the Security Council under Article 35, paragraph 2, of the Statute [See pp. 183-185, below], and transmit certified copies thereof to all States parties to the Statute, to such other States as shall have deposited declarations, and to the Secretary-General of the United Nations;

(d) transmit to the parties copies of all pleadings and documents annexed upon receipt thereof in the Registry;

(e) communicate to the government of the country in which the Court or a chamber is sitting, and any other governments which may be concerned, the necessary information as to the persons from time to time entitled, under the Statute and relevant agreements, to privileges, immunities, or facilities;

(f) be present, in person or by his deputy, at meetings of the Court, and of the chambers, and be responsible for the preparation of minutes of such meetings;

(g) make arrangements for such provision or verification of translations and interpretations into the Court's official languages as the Court may require;

(h) sign all judgments, advisory opinions and orders of the Court, and the minutes referred to in subparagraph (f);

(i) be responsible for the printing and publication of the Court's judgments, advisory opinions and orders, the pleadings and statements, and minutes of public sittings in cases, and of such other documents as the Court may direct to be published;

(j) be responsible for all administrative work and in particular for the accounts and financial administration in accordance with the financial procedures of the United Nations;

(k) deal with enquiries concerning the Court and its work;

(l) assist in maintaining relations between the Court and other organs of the United Nations, the specialized agencies, and international bodies and conferences concerned with the codification and progressive development of international law;

(m) ensure that information concerning the Court and its activities is made accessible to governments, the highest national courts of justice, professional and learned societies, legal faculties and schools of law, and public information media;

(n) have custody of the seals and stamps of the Court, of the archives of the Court, and of such

other archives as may be entrusted to the Court [The Registrar also keeps the Archives of the Permanent Court of International Justice, entrusted to the present Court by decision of the Permanent Court of October 1945 (*I.C.J. Yearbook 1946-1947*, p. 26), and the Archives of the Trial of the Major War Criminals before the International Military Tribunal at Nuremberg (1945-1946), entrusted to the Court by decision of that Tribunal of 1 October 1946; the Court authorized the Registrar to accept the latter Archives by decision of 19 November 1949].

2. The Court may at any time entrust additional functions to the Registrar.
3. In the discharge of his functions the Registrar shall be responsible to the Court.

Article 27

1. The Deputy-Registrar shall assist the Registrar, act as Registrar in the latter's absence and, in the event of the office becoming vacant, exercise the functions of Registrar until the office has been filled.
2. If both the Registrar and the Deputy-Registrar are unable to carry out the duties of Registrar, the President shall appoint an official of the Registry to discharge those duties for such time as may be necessary. If both offices are vacant at the same time, the President, after consulting the Members of the Court, shall appoint an official of the Registry to discharge the duties of Registrar pending an election to that office.

Article 28

1. The Registry shall comprise the Registrar, the Deputy-Registrar, and such other staff as the Registrar shall require for the efficient discharge of his functions.
2. The Court shall prescribe the organization of the Registry, and shall for this purpose request the Registrar to make proposals.
3. Instructions for the Registry shall be drawn up by the Registrar and approved by the Court.
4. The staff of the Registry shall be subject to Staff Regulations drawn up by the Registrar, so far as possible in conformity with the United Nations Staff Regulations and Staff Rules, and approved by the Court.

Article 29

1. The Registrar may be removed from office only if, in the opinion of two-thirds of the Members of the Court, he has either become permanently incapacitated from exercising his functions, or has committed a serious breach of his duties.
2. Before a decision is taken under this Article, the Registrar shall be informed by the President of the action contemplated, in a written statement which shall include the grounds therefor and any relevant evidence. He shall subsequently, at a private meeting of the Court, be afforded an opportunity of making a statement, of furnishing any information or explanations he wishes to give, and of supplying answers, orally or in writing, to any questions put to him.
3. The Deputy-Registrar may be removed from office only on the same grounds and by the same procedure.

[Table of Contents](#)

Part III

PROCEEDINGS IN CONTENTIOUS CASES

Section A. Communications to the Court and Consultations

Article 30

All communications to the Court under these Rules shall be addressed to the Registrar unless otherwise stated. Any request made by a party shall likewise be addressed to the Registrar unless made in open Court in the course of the oral proceedings.

Article 31

In every case submitted to the Court, the President shall ascertain the views of the parties with regard to questions of procedure. For this purpose he shall summon the agents of the parties to meet him as soon as possible after their appointment, and whenever necessary thereafter.

Table of Contents

Section B. The Composition of the Court for particular cases

Article 32

1. If the President of the Court is a national of one of the parties in a case he shall not exercise the functions of the presidency in respect of that case. The same rule applies to the Vice-President, or to the senior judge, when called on to act as President.
2. The Member of the Court who is presiding in a case on the date on which the Court convenes for the oral proceedings shall continue to preside in that case until completion of the current phase of the case, notwithstanding the election in the meantime of a new President or Vice-President. If he should become unable to act, the presidency for the case shall be determined in accordance with Article 13 of these Rules, and on the basis of the composition of the Court on the date on which it convened for the oral proceedings.

Article 33

Except as provided in Article 17 of these Rules, Members of the Court who have been replaced, in accordance with Article 13, paragraph 3, of the Statute following the expiration of their terms of office, shall discharge the duty imposed upon them by that paragraph by continuing to sit until the completion of any phase of a case in respect of which the Court convenes for the oral proceedings prior to the date of such replacement.

Article 34

1. In case of any doubt arising as to the application of Article 17, paragraph 2, of the Statute or in case of disagreement as to the application of Article 24 of the Statute, the President shall inform the Members of the Court, with whom the decision lies.
2. If a party desires to bring to the attention of the Court facts which it considers to be of possible relevance to the application of the provisions of the Statute mentioned in the previous paragraph, but which it believes may not be known to the Court, that party shall communicate confidentially such facts to the President in writing.

Article 35

1. If a party proposes to exercise the power conferred by Article 31 of the Statute to choose a judge *ad hoc* in a case, it shall notify the Court of its intention as soon as possible. If the name and nationality of the judge selected are not indicated at the same time, the party shall, not later than two months before the time-limit fixed for the filing of the Counter-Memorial, inform the Court of the name and nationality of the person chosen and supply brief biographical details. The judge *ad hoc* may be of a nationality other than that of the party which chooses him.
2. If a party proposes to abstain from choosing a judge *ad hoc*, on condition of a like abstention by the other party, it shall so notify the Court which shall inform the other party. If the other party thereafter gives notice of its intention to choose, or chooses, a judge *ad hoc*, the time-limit for the party which has previously abstained from choosing a judge may be extended by the President.
3. A copy of any notification relating to the choice of a judge *ad hoc* shall be communicated by the Registrar to the other party, which shall be requested to furnish, within a time-limit to be fixed by the President, such observations as it may wish to make. If within the said time-limit no objection is raised by the other party, and if none appears to the Court itself, the parties shall be so informed.
4. In the event of any objection or doubt, the matter shall be decided by the Court, if necessary after hearing the parties.
5. A judge *ad hoc* who has accepted appointment but who becomes unable to sit may be replaced.
6. If and when the reasons for the participation of a judge *ad hoc* are found no longer to exist, he shall cease to sit on the Bench.

Article 36

1. If the Court finds that two or more parties are in the same interest, and therefore are to be reckoned as one party only, and that there is no Member of the Court of the nationality of any one of those parties upon the Bench, the Court shall fix a time-limit within which they may jointly choose a judge *ad hoc*.
2. Should any party amongst those found by the Court to be in the same interest allege the existence of a separate interest of its own, or put forward any other objection, the matter shall be decided by the Court, if necessary after hearing the parties.

Article 37

1. If a Member of the Court having the nationality of one of the parties is or becomes unable to sit in any phase of a case, that party shall therefore upon become entitled to choose a judge *ad hoc* within a time-limit to be fixed by the Court, or by the President if the Court is not sitting.
2. Parties in the same interest shall be deemed not to have a judge of one of their nationalities upon the Bench if the Member of the Court having one of their nationalities is or becomes unable to sit in any phase of the case.
3. If the Member of the Court having the nationality of a party becomes able to sit not later than the closure of the written proceedings in that phase of the case, that Member of the Court shall resume his seat on the Bench in the case.

Table of Contents

Section C. Proceedings before the Court

Subsection 1. Institution of Proceedings

Article 38

1. When proceedings before the Court are instituted by means of an application addressed as specified in Article 40, paragraph 1, of the Statute, the application shall indicate the party making it, the State against which the claim is brought, and the subject of the dispute.
2. The application shall specify as far as possible the legal grounds upon which the jurisdiction of the Court is said to be based; it shall also specify the precise nature of the claim, together with a succinct statement of the facts and grounds on which the claim is based.
3. The original of the application shall be signed either by the agent of the party submitting it, or by the diplomatic representative of that party in the country in which the Court has its seat, or by some other duly authorized person. If the application bears the signature of someone other than such diplomatic representative, the signature must be authenticated by the latter or by the competent authority of the applicant's foreign ministry.
4. The Registrar shall forthwith transmit to the respondent a certified copy of the application.

5. When the applicant State proposes to found the jurisdiction of the Court upon a consent thereto yet to be given or manifested by the State against which such application is made, the application shall be transmitted to that State. It shall not however be entered in the General List, nor any action be taken in the proceedings, unless and until the State against which such application is made consents to the Court's jurisdiction for the purposes of the case.

Article 39

1. When proceedings are brought before the Court by the notification of a special agreement, in conformity with Article 40, paragraph 1, of the Statute, the notification may be effected by the parties jointly or by any one or more of them. If the notification is not a joint one, a certified copy of it shall forthwith be communicated by the Registrar to the other party.
2. In each case the notification shall be accompanied by an original or certified copy of the special agreement. The notification shall also, in so far as this is not already apparent from the agreement, indicate the precise subject of the dispute and identify the parties to it.

Article 40

1. Except in the circumstances contemplated by Article 38, paragraph 5, of these Rules, all steps on behalf of the parties after proceedings have been instituted shall be taken by agents. Agents shall have an address for service at the seat of the Court to which all communications concerning the cases are to be sent. Communications addressed to the agents of the parties shall be considered as having been addressed to the parties themselves.
2. When proceedings are instituted by means of an application, the name of the agent for the applicant shall be stated. The respondent, upon receipt of the certified copy of the application, or as soon as possible thereafter, shall inform the Court of the name of its agent.
3. When proceedings are brought by notification of a special agreement, the party making the notification shall state the name of its agent. Any other party to the special agreement, upon receiving from the Registrar a certified copy of such notification, or as soon as possible thereafter, shall inform the Court of the name of its agent if it has not already done so.

Article 41

The institution of proceedings by a State which is not a party to the Statute but which, under Article 35, paragraph 2, thereof, has accepted the jurisdiction of the Court by a declaration made in accordance with any resolution adopted by the Security Council under that Article [The resolution now in force was adopted on 15 October 1946 (see pp. 183-185, below)], shall be accompanied by a deposit of the declaration in question, unless the latter has previously been deposited with the Registrar. If any question of the validity or effect of such declaration arises, the Court shall decide.

Article 42

The Registrar shall transmit copies of any application or notification of a special agreement instituting proceedings before the Court: (a) the Secretary-General of the United Nations; (b) the Members of the United Nations; (c) other States entitled to appear before the Court.

Article 43

Whenever the construction of a convention to which States other than those concerned in the case are parties may be in question within the meaning of Article 63, paragraph 1, of the Statute, the Court shall consider what directions shall be given to the Registrar in the matter.

Table of Contents

Subsection 2. The Written Proceedings

Article 44

1. In the light of the information obtained by the President under Article 31 of these Rules, the Court shall make the necessary orders to determine, *inter alia*, the number and the order of filing of the pleadings and the time-limits within which they must be filed.
2. In making an order under paragraph 1 of this Article, any agreement between the parties which does not cause unjustified delay shall be taken into account.
3. The Court may, at the request of the party concerned, extend any time-limit, or decide that any step

taken after the expiration of the time-limit fixed therefor shall be considered as valid, if it is satisfied that there is adequate justification for the request. In either case the other party shall be given an opportunity to state its views.

4. If the Court is not sitting, its powers under this Article shall be exercised by the President, but without prejudice to any subsequent decision of the Court. If the consultation referred to in Article 31 reveals persistent disagreement between the parties as to the application of Article 45, paragraph 2, or Article 46, paragraph 2, of these Rules, the Court shall be convened to decide the matter.

Article 45

1. The pleadings in a case begun by means of an application shall consist, in the following order, of: a Memorial by the applicant; a Counter-Memorial by the respondent.
2. The Court may authorize or direct that there shall be a Reply by the applicant and a Rejoinder by the respondent if the parties are so agreed, or if the Court decides, *proprio motu* or at the request of one of the parties, that these pleadings are necessary.

Article 46

1. In a case begun by the notification of a special agreement, the number and order of the pleadings shall be governed by the provisions of the agreement, unless the Court, after ascertaining the views of the parties, decide otherwise.
2. If the special agreement contains no such provision, and if the parties have not subsequently agreed on the number and order of pleadings, they shall each file a Memorial and Counter-Memorial, within the same time-limits. The Court shall not authorize the presentation of Replies unless it finds them to be necessary.

Article 47

The Court may at any time direct that the proceedings in two or more cases be joined. It may also direct that the written or oral proceedings, including the calling of witnesses, be in common; or the Court may, without effecting any formal joinder, direct common action in any of these respects.

Article 48

Time-limits for the completion of steps in the proceedings may be fixed by assigning a specified period but shall always indicate definite dates. Such time-limits shall be as short as the character of the case permits.

Article 49

1. A Memorial shall contain a statement of the relevant facts, a statement of law, and the submissions.
2. A Counter-Memorial shall contain: an admission or denial of the facts stated in the Memorial; any additional facts, if necessary; observations concerning the statement of law in the Memorial; a statement of law in answer thereto; and the submissions.
3. The Reply and Rejoinder, whenever authorized by the Court, shall not merely repeat the parties' contentions, but shall be directed to bringing out the issues that still divide them.
4. Every pleading shall set out the party's submissions at the relevant stage of the case, distinctly from the arguments presented, or shall confirm the submissions previously made.

Article 50

1. There shall be annexed to the original of every pleading certified copies of any relevant documents adduced in support of the contentions contained in the pleading.
2. If only parts of a document are relevant, only such extracts as are necessary for the purpose of the pleading in question need be annexed. A copy of the whole document shall be deposited in the Registry, unless it has been published and is readily available.
3. A list of all documents annexed to a pleading shall be furnished at the time the pleading is filed.

Article 51

1. If the parties are agreed that the written proceedings shall be conducted wholly in one of the two official languages of the Court, the pleadings shall be submitted only in that language. If the parties are

not so agreed, any pleading or any part of a pleading shall be submitted in one or other of the official languages.

2. If in pursuance of Article 39, paragraph 3, of the Statute a language other than French or English is used, a translation into French or English certified as accurate by the party submitting it, shall be attached to the original of each pleading.

3. When a document annexed to a pleading is not in one of the official languages of the Court, it shall be accompanied by a translation into one of these languages certified by the party submitting it as accurate. The translation may be confined to part of an annex, or to extracts therefrom, but in this case it must be accompanied by an explanatory note indicating what passages are translated. The Court may however require a more extensive or a complete translation to be furnished.

Article 52

[The agents of the parties are requested to ascertain from the Registry the usual format of the pleadings, and the conditions on which the Court may bear part of the cost of printing]

1. The original of every pleading shall be signed by the agent and filed in the Registry. It shall be accompanied by a certified copy of the pleading, documents annexed, and any translation, for communication to the other party in accordance with Article 43, paragraph 4, of the Statute, and by the number of additional copies required by the Registry, but without prejudice to an increase in that number should the need arise later.

2. All pleadings shall be dated. When a pleading has to be filed by a certain date, it is the date of the receipt of the pleading in the Registry which will be regarded by the Court as the material date.

3. If the Registrar arranges for the printing of a pleading at the request of a party, the text must be supplied in sufficient time to enable the printed pleading to be filed in the Registry before the expiration of any time-limit which may apply to it. The printing is done under the responsibility of the party in question.

4. The correction of a slip or error in any document which has been filed may be made at any time with the consent of the other party or by leave of the President. Any correction so effected shall be notified to the other party in the same manner as the pleading to which it relates.

Article 53

1. The Court, or the President if the Court is not sitting, may at any time decide, after ascertaining the views of the parties, that copies of the pleadings and documents annexed shall be made available to a State entitled to appear before it which has asked to be furnished with such copies.
2. The Court may, after ascertaining the views of the parties, decide that copies of the pleadings and documents annexed shall be made accessible to the public on or after the opening of the oral proceedings.

[continue...](#)

[*Return to Home*](#)

[Back..](#)[Return to Home](#)

[Table of Contents](#)*Subsection 3. The Oral Proceedings**Article 54*

1. Upon the closure of the written proceedings, the case is ready for hearing. The date for the opening of the oral proceedings shall be fixed by the Court, which may also decide, if occasion should arise, that the opening or the continuance of the oral proceedings be postponed.
2. When fixing the date for, or postponing, the opening of the oral proceedings the Court shall have regard to the priority required by Article 74 of these Rules and to any other special circumstances, including the urgency of a particular case.
3. When the Court is not sitting, its powers under this Article shall be exercised by the President.

Article 55

The Court may, if it considers it desirable, decide pursuant to Article 22, paragraph 1, of the Statute that all or part of the further proceedings in a case shall be held at a place other than the seat of the Court. Before so deciding, it shall ascertain the views of the parties.

Article 56

1. After the closure of the written proceedings, no further documents may be submitted to the Court by either party except with the consent of the other part or as provided in paragraph 2 of this Article. The party desiring to produce a new document shall file the original or a certified copy thereof, together with the number of copies required by the Registry, which shall be responsible for communicating it to the other party and shall inform the Court. The other party shall be held to have given its consent if it does not lodge an objection to the production of the document.
2. In the absence of consent, the Court, after hearing the parties, may, if it considers the document

necessary, authorize its production.

3. If a new document is produced under paragraph 1 or paragraph 2 of this Article, the other party shall have an opportunity of commenting upon it and of submitting documents in support of its comments.
4. No reference may be made during the oral proceedings to the contents of any document which has not been produced in accordance with Article 43 of the Statute or this Article, unless the document is part of a publication readily available.
5. The application of the provisions of this Article shall not in itself constitute a ground for delaying the opening or the course of the oral proceedings.

Article 57

Without prejudice to the provisions of the Rules concerning the production of documents, each party shall communicate to the Registrar, in sufficient time before the opening of the oral proceedings, information regarding any evidence which it intends to produce or which it intends to request the Court to obtain. This communication shall contain a list of the surnames, first names, nationalities, descriptions and places of residence of the witnesses and experts whom the party intends to call, with indications in general terms of the point or points to which their evidence will be directed. A copy of the communication shall also be furnished for transmission to the other party.

Article 58

1. The Court shall determine whether the parties should present their arguments before or after the production of the evidence; the parties shall, however, retain the right to comment on the evidence given.
2. The order in which the parties will be heard, the method of handling the evidence and of examining any witnesses and experts, and the number of counsel and advocates to be heard on behalf of each party, shall be settled by the Court after the views of the parties have been ascertained in accordance with Article 31 of these Rules.

Article 59

The hearing in Court shall be public, unless the Court shall decide otherwise, or unless the parties

demand that the public be not admitted. Such a decision or demand may concern either the whole or part of the hearing, and may be made at any time.

Article 60

1. The oral statements made on behalf of each party shall be as succinct as possible within the limits of what is requisite for the adequate presentation of that party's contentions at the hearing. Accordingly, they shall be directed to the issues that still divide the parties, and shall not go over the whole ground covered by the pleadings, or merely repeat the facts and arguments these contain.
2. At the conclusion of the last statement made by a party at the hearing, its agent, without recapitulation of the arguments, shall read that party's final submissions. A copy of the written text of these, signed by the agent, shall be communicated to the Court and transmitted to the other party.

Article 61

1. The Court may at any time prior to or during the hearing indicate any points or issues to which it would like the parties specially to address themselves, or on which it considers that there has been sufficient argument.
2. The Court may, during the hearing, put questions to the agents, counsel and advocates, and may ask them for explanations.
3. Each judge has a similar right to put questions, but before exercising it he should make his intention known to the President, who is made responsible by Article 45 of the Statute for the control of the hearing.
4. The agents, counsel and advocates may answer either immediately or within a time-limit fixed by the President.

Article 62

1. The Court may at any time call upon the parties to produce such evidence or to give such explanations as the Court may consider to be necessary for the elucidation of any aspect of the matters in issue, or may itself seek other information for this purpose.

2. The Court may, if necessary, arrange for the attendance of a witness or expert to give evidence in the proceedings.

Article 63

1. The parties may call any witnesses or experts appearing on the list communicated to the Court pursuant to Article 57 of these Rules. If at any time during the hearing a party wishes to call a witness or expert whose name was not included in that list, it shall so inform the Court and the other party, and shall supply the information required by Article 57. The witness or expert may be called either if the other party makes no objection or if the Court is satisfied that his evidence seems likely to prove relevant.

2. The Court, or the President if the Court is not sitting, shall, at the request of one of the parties or *proprio motu*, take the necessary steps for the examination of witnesses otherwise than before the Court itself.

Article 64

Unless on account of special circumstances the Court decides on a different form of words,

(a) every witness shall make the following declaration before giving any evidence:

"I solemnly declare upon my honour and conscience that I will speak the truth, the whole truth and nothing but the truth";

(b) every expert shall make the following declaration before making any statement:

"I solemnly declare upon my honour and conscience that I will speak the truth, the whole truth and nothing but the truth and that my statement will be in accordance with my sincere belief".

Article 65

Witnesses and experts shall be examined by the agents, counsel or advocates of the parties under the control of the President. Questions may be put to them by the President and by the judges. Before testifying, witnesses shall remain out of court.

Article 66

The Court may at any time decide, either *proprio motu* or at the request of a party, to exercise its functions with regard to the obtaining of evidence at a place or locality to which the case relates, subject to such conditions as the Court may decide upon after ascertaining the views of the parties. The necessary arrangements shall be made in accordance with Article 44 of the Statute.

Article 67

1. If the Court considers it necessary to arrange for an enquiry or an expert opinion, it shall, after hearing the parties, issue an order to this effect, defining the subject of the enquiry or expert opinion, stating the number and mode of appointment of the persons to hold the enquiry or of the experts, and laying down the procedure to be followed. Where appropriate, the Court shall require persons appointed to carry out an enquiry, or to give an expert opinion, to make a solemn declaration.

2. Every report or record of an enquiry and every expert opinion shall be communicated to the parties, which shall be given the opportunity of commenting upon it.

Article 68

Witnesses and experts who appear at the instance of the Court under Article 62, paragraph 2, and persons appointed under Article 67, paragraph 1, of these Rules, to carry out an enquiry or to give an expert opinion, shall, where appropriate, be paid out of the funds of the Court.

Article 69

1. The Court may, at any time prior to the closure of the oral proceedings, either *proprio motu* or at the request of one of the parties communicated as provided in Article 57 of these Rules, request a public international organization, pursuant to Article 34 of the Statute, to furnish information relevant to a case before it. The Court, after consulting the chief administrative officer of the organization concerned, shall decide whether such information shall be presented to it orally or in writing, and the time-limits for its presentation.

2. When a public international organization sees fit to furnish, on its own initiative, information relevant to a case before the Court, it shall do so in the form of a Memorial to be filed in the Registry before the

closure of the written proceedings. The Court shall retain the right to require such information to be supplemented, either orally or in writing, in the form of answers to any questions which it may see fit to formulate, and also to authorize the parties to comment, either orally or in writing, on the information thus furnished.

3. In the circumstances contemplated by Article 34, paragraph 3, of the Statute, the Registrar, on the instructions of the Court, or of the President if the Court is not sitting, shall proceed as prescribed in that paragraph. The Court, or the President if the Court is not sitting, may, as from the date on which the Registrar has communicated copies of the written proceedings and after consulting the chief administrative officer of the public international organization concerned, fix a time-limit within which the organization may submit to the Court its observations in writing. These observations shall be communicated to the parties and may be discussed by them and by the representative of the said organization during the oral proceedings.

4. In the foregoing paragraph, the term "public international organization" denotes an international organization of States.

Article 70

1. In the absence of any decision to the contrary by the Court, all speeches and statements made and evidence given at the hearing in one of the official languages of the Court shall be interpreted into the other official language. If they are made or given in any other language, they shall be interpreted into the two official languages of the Court.

2. Whenever, in accordance with Article 39, paragraph 3, of the Statute, a language other than French or English is used, the necessary arrangements for interpretation into one of the two official languages shall be made by the party concerned; however, the Registrar shall make arrangements for the verification of the interpretation provided by a party of evidence given on the party's behalf. In the case of witnesses or experts who appear at the instance of the Court, arrangements for interpretation shall be made by the Registry.

3. A party on behalf of which speeches or statements are to be made, or evidence given, in a language which is not one of the official languages of the Court, shall so notify the Registrar in sufficient time for him to make the necessary arrangements.

4. Before first interpreting in the case, interpreters provided by a party shall make the following declaration in open court:

"I solemnly declare upon my honour and conscience that my interpretation will be faithful and complete."

Article 71

1. A verbatim record shall be made by the Registrar of every hearing, in the official language of the Court which has been used. When the language used is not one of the two official languages of the Court, the verbatim record shall be prepared in one of the Court's official languages.
2. When speeches or statements are made in a language which is not one of the official languages of the Court, the party on behalf of which they are made shall supply to the Registry in advance a text thereof in one of the official languages, and this text shall constitute the relevant part of the verbatim record.
3. The transcript of the verbatim record shall be preceded by the names of the judges present, and those of the agents, counsel and advocates of the parties.
4. Copies of the transcript shall be circulated to the judges sitting in the case, and to the parties. The latter may, under the supervision of the Court, correct the transcripts of speeches and statements made on their behalf, but in no case may such corrections affect the sense and bearing thereof. The judges may likewise make corrections in the transcript of anything they may have said.
5. Witnesses and experts shall be shown that part of the transcript which relates to the evidence given, or the statements made by them, and may correct it in like manner as the parties.
6. One certified true copy of the eventual corrected transcript, signed by the President and the Registrar, shall constitute the authentic minutes of the sitting for the purpose of Article 47 of the Statute. The minutes of public hearings shall be printed and published by the Court.

Article 72

Any written reply by a party to a question put under Article 61, or any evidence or explanation supplied by a party under Article 62 of these Rules, received by the Court after the closure of the oral proceedings, shall be communicated to the other party, which shall be given the opportunity of commenting upon it. If necessary the oral proceedings may be reopened for that purpose.

[Table of Contents](#)

Section D. Incidental Proceedings

Subsection 1. Interim Protection

Article 73

1. A written request for the indication of provisional measures may be made by a party at any time during the course of the proceedings in the case in connection with which the request is made.
2. The request shall specify the reasons therefor, the possible consequences if it is not granted, and the measures requested. A certified copy shall forthwith be transmitted by the Registrar to the other party.

Article 74

1. A request for the indication of provisional measures shall have priority over all other cases.
2. The Court, if it is not sitting when the request is made, shall be convened forthwith for the purpose of proceeding to a decision on the request as a matter of urgency.
3. The Court, or the President if the Court is not sitting, shall fix a date for a hearing which will afford the parties an opportunity of being represented at it. The Court shall receive and take into account any observations that may be presented to it before the closure of the oral proceedings.
4. Pending the meeting of the Court, the President may call upon the parties to act in such a way as will enable any order the Court may make on the request for provisional measures to have its appropriate effects.

Article 75

1. The Court may at any time decide to examine *proprio motu* whether the circumstances of the case require the indication of provisional measures which ought to be taken or complied with by any or all of the parties.
2. When a request for provisional measures has been made, the Court may indicate measures that are in whole or in part other than those requested, or that ought to be taken or complied with by the party which has itself made the request.
3. The rejection of a request for the indication of provisional measures shall not prevent the party which made it from making a fresh request in the same case based on new facts.

Article 76

1. At the request of a party the Court may, at any time before the final judgment in the case, revoke or modify any decision concerning provisional measures if, in its opinion, some change in the situation justifies such revocation or modification.
2. Any application by a party proposing such a revocation or modification shall specify the change in the situation considered to be relevant.
3. Before taking any decision under paragraph 1 of this Article the Court shall afford the parties an opportunity of presenting their observations on the subject.

Article 77

Any measures indicated by the Court under Articles 73 and 75 of these Rules, and any decision taken by the Court under Article 76, paragraph 1, of these Rules, shall forthwith be communicated to the Secretary-General of the United Nations for transmission to the Security Council in pursuance of Article 41, paragraph 2, of the Statute.

Article 78

The Court may request information from the parties on any matter connected with the implementation of any provisional measures it has indicated.

[Table of Contents](#)*Subsection 2. Preliminary Objections**Article 79*

1. Any objection by the respondent to the jurisdiction of the Court or to the admissibility of the application, or other objection the decision upon which is requested before any further proceedings on the merits, shall be made in writing within the time-limit fixed for the delivery of the Counter-Memorial. Any such objection made by a party other than the respondent shall be filed within the time-limit fixed

for the delivery of that party's first pleading.

2. The preliminary objection shall set out the facts and the law on which the objection is based, the submissions and a list of the documents in support; it shall mention any evidence which the party may desire to produce. Copies of the supporting documents shall be attached.
3. Upon receipt by the Registry of a preliminary objection, the proceedings on the merits shall be suspended and the Court, or the President if the Court is not sitting, shall fix the time-limit within which the other party may present a written statement of its observations and submissions; documents in support shall be attached and evidence which it is proposed to produce shall be mentioned.
4. Unless otherwise decided by the Court, the further proceedings shall be oral.
5. The statements of facts and law in the pleadings referred to in paragraphs 2 and 3 of this Article, and the statements and evidence presented at the hearings contemplated by paragraph 4, shall be confined to those matters that are relevant to the objection.
6. In order to enable the Court to determine its jurisdiction at the preliminary stage of the proceedings, the Court, whenever necessary, may request the parties to argue all questions of law and fact, and to adduce all evidence, which bear on the issue.
7. After hearing the parties, the Court shall give its decision in the form of a judgment, by which it shall either uphold the objection, reject it, or declare that the objection does not possess, in the circumstances of the case, an exclusively preliminary character. If the Court rejects the objection or declares that it does not possess an exclusively preliminary character, it shall fix time-limits for the further proceedings.
8. Any agreement between the parties that an objection submitted under paragraph 1 of this Article be heard and determined within the framework of the merits shall be given effect by the Court.

[Table of Contents](#)

Subsection 3. Counter-Claims

Article 80

1. A counter-claim may be presented provided that it is directly connected with the subject-matter of the claim of the other party and that it comes within the jurisdiction of the Court.

2. A counter-claim shall be made in the Counter-Memorial of the party presenting it, and shall appear as part of the submissions of that party.

3. In the event of doubt as to the connection between the question presented by way of counter-claim and the subject-matter of the claim of the other party the Court shall, after hearing the parties, decide whether or not the question thus presented shall be joined to the original proceedings.

Table of Contents

Subsection 4. Intervention

Article 81

1. An application for permission to intervene under the terms of Article 62 of the Statute, signed in the manner provided for in Article 38, paragraph 3, of these Rules, shall be filed as soon as possible, and not later than the closure of the written proceedings. In exceptional circumstances, an application submitted at a later stage may however be admitted.

2. The application shall state the name of an agent. It shall specify the case to which it relates, and shall set out:

(a) the interest of a legal nature which the State applying to intervene considers may be affected by the decision in that case;

(b) the precise object of the intervention;

(c) any basis of jurisdiction which is claimed to exist as between the State applying to intervene and the parties to the case.

3. The application shall contain a list of the documents in support, which documents shall be attached.

Article 82

1. A State which desires to avail itself of the right of intervention conferred upon it by Article 63 of the Statute shall file a declaration to that effect, signed in the manner provided for in Article 38, paragraph 3, of these Rules. Such a declaration shall be filed as soon as possible, and not later than the date fixed

for the opening of the oral proceedings. In exceptional circumstances a declaration submitted at a later stage may however be admitted.

2. The declaration shall state the name of an agent. It shall specify the case and the convention to which it relates and shall contain:

(a) particulars of the basis on which the declarant State considers itself a party to the convention;

(b) identification of the particular provisions of the convention the construction of which it considers to be in question;

(c) a statement of the construction of those provisions for which it contends;

(d) a list of the documents in support, which documents shall be attached.

3. Such a declaration may be filed by a State that considers itself a party to the convention the construction of which is in question but has not received the notification referred to in Article 63 of the Statute.

Article 83

1. Certified copies of the application for permission to intervene under Article 62 of the Statute, or of the declaration of intervention under Article 63 of the Statute, shall be communicated forthwith to the parties to the case, which shall be invited to furnish their written observations within a time-limit to be fixed by the Court or by the President if the Court is not sitting.

2. The Registrar shall also transmit copies to: (a) the Secretary-General of the United Nations; (b) the Members of the United Nations; (c) other States entitled to appear before the Court; (d) any other States which have been notified under Article 63 of the Statute.

Article 84

1. The Court shall decide whether an application for permission to intervene under Article 62 of the Statute should be granted, and whether an intervention under Article 63 of the Statute is admissible, as a matter of priority unless in view of the circumstances of the case the Court shall otherwise determine.

2. If, within the time-limit fixed under Article 83 of these Rules, an objection is filed to an application for permission to intervene, or to the admissibility of a declaration of intervention, the Court shall hear

the State seeking to intervene and the parties before deciding.

Article 85

1. If an application for permission to intervene under Article 62 of the Statute is granted, the intervening State shall be supplied with copies of the pleadings and documents annexed and shall be entitled to submit a written statement within a time-limit to be fixed by the Court. A further time-limit shall be fixed within which the parties may, if they so desire, furnish their written observations on that statement prior to the oral proceedings. If the Court is not sitting, these time-limits shall be fixed by the President.
2. The time-limits fixed according to the preceding paragraph shall, so far as possible, coincide with those already fixed for the pleadings in the case.
3. The intervening State shall be entitled, in the course of the oral proceedings, to submit its observations with respect to the subject-matter of the intervention.

Article 86

1. If an intervention under Article 63 of the Statute is admitted, the intervening State shall be furnished with copies of the pleadings and documents annexed, and shall be entitled, within a time-limit to be fixed by the Court, or by the President if the Court is not sitting, to submit its written observations on the subject-matter of the intervention.
2. These observations shall be communicated to the parties and to any other State admitted to intervene. The intervening State shall be entitled, in the course of the oral proceedings, to submit its observations with respect to the subject-matter of the intervention.

[Table of Contents](#)

Subsection 5. Special Reference to the Court

Article 87

1. When in accordance with a treaty or convention in force a contentious case is brought before the

Court concerning a matter which has been the subject of proceedings before some other international body, the provisions of the Statute and of the Rules governing contentious cases shall apply.

2. The application instituting proceedings shall identify the decision or other act of the international body concerned and a copy thereof shall be annexed; it shall contain a precise statement of the questions raised in regard to that decision or act, which constitute the subject of the dispute referred to the Court.

Table of Contents

Subsection 6. Discontinuance

Article 88

1. If at any time before the final judgment on the merits has been delivered the parties, either jointly or separately, notify the Court in writing that they have agreed to discontinue the proceedings, the Court shall make an order recording the discontinuance and directing that the case be removed from the list.
2. If the parties have agreed to discontinue the proceedings in consequence of having reached a settlement of the dispute and if they so desire, the Court may record this fact in the order for the removal of the case from the list, or indicate in, or annex to, the order, the terms of the settlement.
3. If the Court is not sitting, any order under this Article may be made by the President.

Article 89

1. If in the course of proceedings instituted by means of an application, the applicant informs the Court in writing that it is not going on with the proceedings, and if, at the date on which this communication is received by the Registry, the respondent has not yet taken any step in the proceedings, the Court shall make an order officially recording the discontinuance of the proceedings and directing the removal of the case from the list. A copy of this order shall be sent by the Registrar to the respondent.
2. If, at the time when the notice of discontinuance is received, the respondent has already taken some step in the proceedings, the Court shall fix a time-limit within which the respondent may state whether it opposes the discontinuance of the proceedings. If no objection is made to the discontinuance before the expiration of the time-limit, acquiescence will be presumed and the Court shall make an order officially recording the discontinuance of the proceedings and directing the removal of the case from the list. If objection is made, the proceedings shall continue.
3. If the Court is not sitting, its powers under this Article may be exercised by the President.

[Table of Contents](#)

Section E. Proceedings Before The Chambers

Article 90

Proceedings before the chambers mentioned in Articles 26 and 29 of the Statute shall, subject to the provisions of the Statute and of these Rules relating specifically to the chambers, be governed by the provisions of Parts I to III of these Rules applicable in contentious cases before the Court.

Article 91

1. When it is desired that a case should be dealt with by one of the chambers which has been formed in pursuance of Article 26, paragraph 1, or Article 29 of the Statute, a request to this effect shall either be made in the document instituting the proceedings or accompany it. Effect will be given to the request if the parties are in agreement.
2. Upon receipt by the Registry of this request, the President of the Court shall communicate it to the members of the chamber concerned. He shall take such steps as may be necessary to give effect to the provisions of Article 31, paragraph 4, of the Statute.
3. The President of the Court shall convene the chamber at the earliest date compatible with the requirements of the procedure.

Article 92

1. Written proceedings in a case before a chamber shall consist of a single pleading by each side. In proceedings begun by means of an application, the pleadings shall be delivered within successive time-limits. In proceedings begun by the notification of a special agreement, the pleadings shall be delivered within the same time-limits, unless the parties have agreed on successive delivery of their pleadings. The time-limits referred to in this paragraph shall be fixed by the Court, or by the President if the Court is not sitting, in consultation with the chamber concerned if it is already constituted.
2. The chamber may authorize or direct that further pleadings be filed if the parties are so agreed, or if

the chamber decides, *proprio motu* or at the request of one of the parties, that such pleadings are necessary.

3. Oral proceedings shall take place unless the parties agree to dispense with them, and the chamber consents. Even when no oral proceedings take place, the chamber may call upon the parties to supply information or furnish explanations orally.

Article 93

Judgments given by a chamber shall be read at a public sitting of that chamber.

Table of Contents

Section F. Judgments, Interpretation and Revision

Subsection 1. Judgments

Article 94

1. When the Court has completed its deliberations and adopted its judgment, the parties shall be notified of the date on which it will be read.

2. The judgment shall be read at a public sitting of the Court and shall become binding on the parties on the day of the reading.

Article 95

1. The judgment, which shall state whether it is given by the Court or by a chamber, shall contain:

the date on which it is read;

the names of the judges participating in it;

the names of the parties;

the names of the agents, counsel and advocates of the parties;

a summary of the proceedings;

the submissions of the parties;

a statement of the facts;

the reasons in point of law;

the operative provisions of the judgment;

the decision, if any, in regard to costs;

the number and names of the judges constituting the majority;

a statement as to the text of the judgment which is authoritative.

2. Any judge may, if he so desires, attach his individual opinion to the judgment, whether he dissents from the majority or not; a judge who wishes to record his concurrence or dissent without stating his reasons may do so in the form of a declaration. The same shall also apply to orders made by the Court.

3. One copy of the judgment duly signed and sealed, shall be placed in the archives of the Court and another shall be transmitted to each of the parties. Copies shall be sent by the Registrar to: (a) the Secretary-General of the United Nations; (b) the Members of the United Nations; (c) other States entitled to appear before the Court.

Article 96

When by reason of an agreement reached between the parties, the written and oral proceedings have been conducted in one of the Court's two official languages, and pursuant to Article 39, paragraph 1, of the Statute the judgment is to be delivered in that language, the text of the judgment in that language shall be the authoritative text.

Article 97

If the Court, under Article 64 of the Statute, decides that all or part of a party's costs shall be paid by the other party, it may make an order for the purpose of giving effect to that decision.

Table of Contents

Subsection 2. Requests for the Interpretation or Revision of a Judgment

Article 98

1. In the event of dispute as to the meaning or scope of a judgment any party may make a request for its interpretation, whether the original proceedings were begun by an application or by the notification of a special agreement.
2. A request for the interpretation of a judgment may be made either by an application or by the notification of a special agreement to that effect between the parties; the precise point or points in dispute as to the meaning or scope of the judgment shall be indicated.
3. If the request for interpretation is made by an application, the requesting party's contentions shall be set out therein, and the other party shall be entitled to file written observations thereon within a time-limit fixed by the Court, or by the President if the Court is not sitting.
4. Whether the request is made by an application or by notification of a special agreement, the Court may, if necessary, afford the parties the opportunity of furnishing further written or oral explanations.

Article 99

1. A request for the revision of a judgment shall be made by an application containing the particulars necessary to show that the conditions specified in Article 61 of the Statute are fulfilled. Any documents in support of the application shall be annexed to it.
2. The other party shall be entitled to file written observations on the admissibility of the application within a time-limit fixed by the Court, or by the President if the Court is not sitting. These observations shall be communicated to the party making the application.
3. The Court, before giving its judgment on the admissibility of the application may afford the parties a further opportunity of presenting their views thereon.

4. If the Court finds that the application is admissible it shall fix time-limits for such further proceedings on the merits of the application as, after ascertaining the views of the parties, it considers necessary.
5. If the Court decides to make the admission of the proceedings in revision conditional on previous compliance with the judgment, it shall make an order accordingly.

Article 100

1. If the judgment to be revised or to be interpreted was given by the Court, the request for its revision or interpretation shall be dealt with by the Court. If the judgment was given by a chamber, the request for its revision or interpretation shall be dealt with by that chamber.
2. The decision of the Court, or of the chamber, on a request for interpretation or revision of a judgment shall itself be given in the form of a judgment.

[Table of Contents](#)

Section G. Modifications Proposed by The Parties

Article 101

The parties to a case may jointly propose particular modifications or additions to the rules contained in the present Part (with the exception of Articles 93 to 97 inclusive), which may be applied by the Court or by a chamber if the Court or the chamber considers them appropriate in the circumstances of the case.

[Table of Contents](#)

Part IV

ADVISORY PROCEEDINGS

Article 102

1. In the exercise of its advisory functions under Article 65 of the Statute, the Court shall apply, in addition to the provisions of Article 96 of the Charter and Chapter IV of the Statute, the provisions of the present Part of the Rules.
2. The Court shall also be guided by the provisions of the Statute and of these Rules which apply in contentious cases to the extent to which it recognizes them to be applicable. For this purpose, it shall above all consider whether the request for the advisory opinion relates to a legal question actually pending between two or more States.
3. When an advisory opinion is requested upon a legal question actually pending between two or more States, Article 31 of the Statute shall apply, as also the provisions of these Rules concerning the application of that Article.

Article 103

When the body authorized by or in accordance with the Charter of the United Nations to request an advisory opinion informs the Court that its request necessitates an urgent answer, or the Court finds that an early answer would be desirable, the Court shall take all necessary steps to accelerate the procedure, and it shall convene as early as possible for the purpose of proceeding to a hearing and deliberation on the request.

Article 104

All requests for advisory opinions shall be transmitted to the Court by the Secretary-General of the United Nations or, as the case may be, the chief administrative officer of the body authorized to make the request. The documents referred to in Article 65, paragraph 2, of the Statute shall be transmitted to the Court at the same time as the request or as soon as possible thereafter, in the number of copies required by the Registry.

Article 105

1. Written statements submitted to the Court shall be communicated by the Registrar to any States and organizations which have submitted such statements.
2. The Court, or the President if the Court is not sitting, shall:

(a) determine the form in which, and the extent to which, comments permitted under Article 66, paragraph 4, of the Statute shall be received, and fix the time-limit for the submission of any such comments in writing;

(b) decide whether oral proceedings shall take place at which statements and comments may be submitted to the Court under the provisions of Article 66 of the Statute, and fix the date for the opening of such oral proceedings.

Article 106

The Court, or the President if the Court is not sitting, may decide that the written statements and annexed documents shall be made accessible to the public on or after the opening of the oral proceedings. If the request for advisory opinion relates to a legal question actually pending between two or more States, the views of those States shall first be ascertained.

Article 107

1. When the Court has completed its deliberations and adopted its advisory opinion, the opinion shall be read at a public sitting of the Court.

2. The advisory opinion shall contain:

the date on which it is delivered;

the names of the judges participating;

a summary of the proceedings;

a statement of the facts;

the reasons in point of law;

the reply to the question put to the Court;

the number and names of the judges constituting the majority;

a statement as to the text of the opinion which is authoritative.

3. Any judge may, if he so desires, attach his individual opinion to the advisory opinion of the Court,

whether he dissents from the majority or not; a judge who wishes to record his concurrence or dissent without stating his reasons may do so in the form of a declaration.

Article 108

The Registrar shall inform the Secretary-General of the United Nations, and, where appropriate, the chief administrative officer of the body which requested the advisory opinion, as to the date and the hour fixed for the public sitting to be held for the reading of the opinion. He shall also inform the representatives of the Members of the United Nations and other States, specialized agencies and public international organizations immediately concerned.

Article 109

One copy of the advisory opinion, duly signed and sealed, shall be placed in the archives of the Court, another shall be sent to the Secretary-General of the United Nations and, where appropriate, a third to the chief administrative officer of the body which requested the opinion of the Court. Copies shall be sent by the Registrar to the Members of the United Nations and to any other States, specialized agencies and public international organizations immediately concerned.

Dramatic changes since 1989 have required the North Atlantic Treaty Organization to rethink its force structure as well as to reconsider how to maintain the peace and security of Europe. In the strategic vacuum created by the dissolution of the Warsaw Pact, NATO sought to establish cooperative relations with the nations of Central and Eastern Europe. Organizing that cooperation rapidly led to the Partnership for Peace program and the enlargement of the alliance to include new democratic states in the region.

✓ [Strategic Assessment 1997; Flashpoints en Force Structure](#) new

The Strategic Assessment applies the research expertise of the National Defense University, under the leadership of its interdisciplinary research arm, the Institute for National Strategic Studies, with the generous assistance of analysts from elsewhere in the U.S. government and from the private sector. Offering such analyses, in both general and

more specialized areas of interest to the national security community, is one part of NDU's educational mission. That mission, as defined by the Joint Chiefs of Staff, is to educate senior military and government officials on issues related to national strategy, security policy, resources management, and warfare in the information age.

✓ [Strategic Assessment 1998; Engaging Power for Peace](#) new

This is the fourth volume in the annual Strategic Assessment series produced by the Institute for National Strategic Studies at the National Defense University, and undertaken to contribute to the national effort to understand more clearly the nature of, and the U.S. role in, the new international system. This volume complements the Strategic Forum series (issue papers on key national security topics), Joint Force Quarterly (a professional military journal published for the Chairman of the Joint Chiefs), and other titles issued by INSS. While Strategic Assessment is not an official government publication, we trust that it will inform and influence policymakers and academics alike.

Georganiseerde criminaliteit in Nederland; rapportage op basis van de WODC-monitor

E.R. Kleemans, E.A.I.M. van den Berg, H.G. van de Bunt, m.m.v. M. Brouwers, R.F. Kouwenberg, G. Paulides

Onderzoek en beleid, nr. 173

Samenvatting deel I & II

Aanleiding tot het onderzoek

In 1996 concludeerde de Parlementaire Enquêtecommissie Opsporingsmethoden in haar eindrapport dat aan het beleid ter bestrijding van georganiseerde criminaliteit in de afgelopen jaren een beter onderbouwd inzicht ten grondslag had moeten liggen. De studie, die de onderzoeksgroep Fijnaut ten behoeve van de Enquêtecommissie had verricht, voorzag dan ook duidelijk in een behoefte. Naar aanleiding van de conclusies van de Enquêtecommissie heeft de minister van Justitie de Tweede Kamer toegezegd om - in navolging van de studie van de onderzoeksgroep Fijnaut - tweejaarlijks te rapporteren over de aard van de georganiseerde criminaliteit in Nederland en te signaleren ontwikkelingen. Daartoe is door het WODC de 'Monitor georganiseerde criminaliteit' opgezet, op basis waarvan regelmatig publicaties over georganiseerde criminaliteit zullen verschijnen. Het monitor-onderzoek houdt - kort gezegd - in dat er tweejaarlijks gestructureerde gegevensverzameling plaatsvindt met betrekking tot recent afgesloten opsporingsonderzoeken op het terrein van de georganiseerde criminaliteit. Dit rapport is de eerste rapportage die op deze monitor is gebaseerd.

Doelstelling, probleemstelling en onderzoeksvragen

Hoewel er een grote behoefte bestaat aan betrouwbaar en actueel onderzoek naar georganiseerde criminaliteit, moet tegelijkertijd worden geconstateerd dat tot voor kort veel van de kennis die tijdens opsporingsonderzoeken werd opgedaan, verloren ging. Er vond namelijk geen systematische beschrijving en ontsluiting plaats van de belangrijkste gegevens en opgedane inzichten uit opsporingsonderzoeken. Het vermogen van politie en justitie om lering te trekken uit de eigen ervaringskennis was daardoor zwak ontwikkeld. Het doel van de WODC-monitor is om dit leervermogen te vergroten door de inzichten die aan de concrete zaken kunnen worden ontleend, terug te koppelen naar degenen die zijn belast met het ontwikkelen en uitvoeren van preventief en repressief beleid inzake georganiseerde criminaliteit. De WODC-monitor betreft een periodiek onderzoek naar georganiseerde criminaliteit met als centrale probleemstelling: *Wat is de aard van de georganiseerde criminaliteit in Nederland en welke ontwikkelingen zijn op dit gebied te onderkennen?* In deze eerste rapportage ligt het zwaartepunt op de analyse van de aard van de georganiseerde criminaliteit. In volgende rapportages zullen ook de ontwikkelingen meer aan bod komen.

Bij de gegevensverzameling en de analyse zijn twee belangrijke beleidsvragen de leidraad geweest: hoe werken (de leden van) criminele samenwerkingsverbanden met elkaar samen en hoe verlopen de interacties tussen deze criminele samenwerkingsverbanden en de (wettige en onwettige) omgeving? De beantwoording van deze vragen is beleidsmatig van groot belang voor de bepaling van de grenzen en de mogelijkheden van preventieve en repressieve maatregelen tegen georganiseerde criminaliteit. De centrale probleemstelling van de monitor is in deze rapportage geconcretiseerd in de volgende vier onderzoeksvragen:

Wat is de aard van de criminele samenwerkingsverbanden die zich in Nederland schuldig maken aan georganiseerde criminaliteit? (hoofdstuk 2).

Welke mogelijkheden worden aan criminele samenwerkingsverbanden geboden door de omgeving en hoe gaan criminele samenwerkingsverbanden met deze mogelijkheden om? (hoofdstuk 3).

Met welke risico's worden criminele samenwerkingsverbanden vanuit hun omgeving geconfronteerd en hoe gaan zij met deze risico's om? (hoofdstuk 4).

Welke implicaties hebben de onderzoeksresultaten voor de preventie en de bestrijding van de georganiseerde criminaliteit in Nederland? (hoofdstuk 5).

Onderzoekopzet en onderzoeksmethoden

De WODC-monitor is er op gericht om de politieke kennis van georganiseerde criminaliteit zo goed mogelijk vast te leggen en te analyseren. Dit is enerzijds de kracht, maar anderzijds ook de potentiële zwakte van de monitor. Aan de ene kant zijn opsporingsinstanties de belangrijkste bron van kennis over georganiseerde criminaliteit. Het systematisch exploreren van deze bron is ontegenzeggelijk de waarde van de monitor. Maar aan de andere kant is de monitor hiermee ook de gevangene van de politieke prioriteitenstelling: er ontstaat alleen kennis op die gebieden waaraan opsporingsinstanties aandacht besteden. Daarom bestaat het onderzoek uit twee fasen, waarbij in de tweede fase ook gebruik is gemaakt van gegevens uit andere bronnen dan afgesloten opsporingsonderzoeken.

In de eerste fase hebben analyses plaatsgevonden van afgeronde opsporingsonderzoeken op het terrein van de georganiseerde criminaliteit in de periode 1996-1997. Hiertoe is in het voorjaar van 1997 een brede inventarisatie uitgevoerd bij alle arrondissementsparketten, Kernteams en FIOD-vestigingen. Op basis van ingevulde inventarisatieformulieren en aanvullende interviews is een groslijst samengesteld van ongeveer vierhonderd zaken, die volgens de betrokkenen mogelijk zouden kunnen vallen onder de begripsbepaling van de onderzoeksgroep Fijnaut (*er is sprake van georganiseerde criminaliteit indien groepen die primair gericht zijn op illegaal gewin systematisch misdrijven plegen met ernstige gevolgen voor de samenleving, en in staat zijn deze misdaden op betrekkelijk effectieve wijze af te schermen*). Aan de respondenten is gevraagd om bij de inventarisatie het begrip afscherming breed op te vatten (naast geweld en corruptie bijvoorbeeld ook het gebruik van dekmantelfirma's, contra-observatie, et cetera) en naast de handel in verdovende middelen ook aandacht te schenken aan bijvoorbeeld fraude, wapenhandel, milieucriminaliteit, mensensmokkel en vrouwenhandel.

Vervolgens is op basis van deze zeer brede inventarisatie een selectie gemaakt van veertig zaken die gedetailleerd beschreven en geanalyseerd zouden gaan worden. Deze selectie kwam tot stand door na te

gaan of de genoemde gevallen onder de zojuist weergegeven begripsbepaling van georganiseerde criminaliteit vielen. Daarnaast moest het gaan om recente en 'harde' zaken: alleen die opsporingsonderzoeken kwamen in aanmerking waarvan het gerechtelijk vooronderzoek was afgesloten in de periode 1996-1997 en waarbij, gelet op de beslissing van de officier van justitie (om vervolging in te stellen), kennelijk voldoende bewijs was vergaard om de verdachten te kunnen vervolgen. Ten slotte zijn van de ongeveer honderd overgebleven zaken de veertig zaken geselecteerd met de meeste toegevoegde waarde. Sommige zaken voegen immers meer toe aan onze kennis van georganiseerde criminaliteit dan andere. Zo bestaat er reeds vrij veel kennis over de handel in de traditionele verdovende middelen. Veel recenter is de aandacht van politie en justitie voor bijvoorbeeld mensensmokkel, vrouwenhandel en synthetische drugs. Aangezien opsporingsonderzoeken op deze gebieden veel meer toevoegen aan onze kennis dan het zoveelste traditionele drugsonderzoek is in het kader van dit onderzoek extra aandacht besteed aan opsporingsonderzoeken op deze gebieden. De selectie van uitgebreid geanalyseerde zaken is dus niet willekeurig maar bewust selectief. Op deze manier kan enig tegenwicht worden geboden tegen de prioriteitenstelling van politie en justitie, die in de praktijk blijkt uit te monden in een grote hoeveelheid drugsonderzoeken. De selectie van de veertig zaken ziet er als volgt uit (zie ook bijlage 3). Naast de traditionele drugsonderzoeken (zestien zaken) zijn zaken bestudeerd die betrekking hebben op synthetische drugs (zeven zaken), mensensmokkel (vier zaken) en vrouwenhandel (zeven zaken). De resterende zes zaken hebben betrekking op fraude, witwassen en andere delicten. De uitgebreide analyses van de zaken zijn telkens gestart met interviews met betrokken rechercheurs, officieren van justitie en parketsecretarissen, waarbij gebruik is gemaakt van een uitgebreide aandachtspuntenlijst (zie bijlage 2). Vervolgens is op basis van de interviews al het achterliggende bronnenmateriaal bestudeerd, dat relevant was om de verzamelde gegevens in hun context te plaatsen en deze op hun betrouwbaarheid te toetsen: processen-verbaal, tapverslagen, observatieverslagen, verhoren, CID-rapporten, op schrift gestelde misdaadanalyses, et cetera.

Indien uitsluitend gebruik zou worden gemaakt van de analyses van de veertig zaken, bestaat het gevaar dat de overige kennis bij opsporingsinstanties onvoldoende wordt benut. Daarom is ook gebruik gemaakt van vertrouwelijke rapportages, fenomeenonderzoeken, landelijke en regionale misdaadanalyses en (wetenschappelijke) literatuur. In het voorjaar van 1998 is gepoogd deze schriftelijke bronnen systematisch in kaart te brengen. Daarnaast zijn in het voorjaar en in de zomer van 1998 interviews gehouden met verschillende medewerkers van de Kernteams, de divisie Centrale Recherche Informatie, het Meldpunt Ongebruikelijke transacties, de bijzondere opsporingsdiensten FIOD, AID en ECD en de Binnenlandse Veiligheidsdienst. Deze fase van het onderzoek heeft naast de interviewverslagen meer dan negentig schriftelijke rapportages opgeleverd en meer dan honderd beknopte casusbeschrijvingen van afgesloten en lopende opsporingsonderzoeken.

Op basis van dit materiaal kunnen uiteraard geen uitspraken worden gedaan over de omvang van 'de' georganiseerde criminaliteit in Nederland. Wel kunnen op verantwoorde wijze kwalitatieve uitspraken worden gedaan over bepaalde verschijnselen. Zo is ons onderzoeksmateriaal zeer geschikt voor de beantwoording van vragen zoals: hoe werken daders samen?; op welke wijze trekken criminele samenwerkingsverbanden profijt uit de mogelijkheden die de omgeving hen biedt?; en welke soorten afschermingsmaatregelen treffen criminele samenwerkingsverbanden tegen de risico's waarmee zij

worden geconfronteerd? Een beperking van dit onderzoek is dat de reikwijdte van onze uitspraken in principe moet worden beperkt tot de door ons onderzochte zaken; de antwoorden op de onderzoeksvragen kunnen niet worden gegeneraliseerd naar het totale verschijnsel georganiseerde criminaliteit. Dit probleem zou overigens niet principieel anders liggen wanneer wij alle opsporingsonderzoeken zouden hebben onderzocht: ook in dat geval is er immers sprake van een 'selectieve steekproef' (bepaald door de capaciteit en de prioriteitenstelling van opsporingsinstanties), waardoor onmogelijk kan worden gegeneraliseerd naar het totale verschijnsel georganiseerde criminaliteit.

Opzet van het rapport

Na de probleemstelling en verantwoording (hoofdstuk 1) wordt in hoofdstuk 2 nader ingegaan op de aard van de criminele samenwerkingsverbanden. Tevens bevat dit hoofdstuk een uiteenzetting over het theoretisch perspectief van deze rapportage. Dit perspectief belicht vooral de onderlinge wisselwerking tussen criminele samenwerkingsverbanden en hun omgeving. De omgeving kent voor een crimineel samenwerkingsverband twee gezichten. Aan de ene kant kan georganiseerde criminaliteit slechts bestaan bij de gratie van haar sociale en maatschappelijke omgeving: de omgeving als bondgenoot (hoofdstuk 3). Aan de andere kant noodzaakt de illegaliteit van de gedragingen criminele samenwerkingsverbanden tot geheimhouding en afscherming, niet alleen ten aanzien van de wettige omgeving maar ook ten aanzien van het eigen criminele milieu: de omgeving als risicofactor (hoofdstuk 4). Tenslotte worden in hoofdstuk 5 de belangrijkste onderzoeksresultaten weergegeven en wordt nagegaan welke implicaties deze resultaten kunnen hebben voor de preventie en de bestrijding van de georganiseerde criminaliteit in Nederland.

Conclusies en beleidsimplicaties

De twee gezichten van de omgeving

Er bestaan vele raakvlakken tussen vormen van georganiseerde criminaliteit en hun sociale omgeving. Aan de ene kant is de omgeving bedreigend voor criminele samenwerkingsverbanden. Deze kunnen immers schade ondervinden van de wettige omgeving door bijvoorbeeld controle- of opsporingsactiviteiten. Ook in het criminele milieu zijn risico's aanwezig, bijvoorbeeld in de vorm van bedrog (ripdeals) of buitensporig geweld als reactie op zakelijke meningsverschillen. Wij zien dat samenwerkingsverbanden anticiperen op dergelijke bedreigingen, onder meer door gebruik te maken van codetaal in hun onderlinge communicatie en door hun activiteiten geheim te houden, ook tegenover het criminele milieu. Deze geheimhouding beperkt zowel de mogelijkheden tot samenwerking als de mogelijkheden van open competitie. Het is als gevolg van deze geheimhouding voor daders bovendien moeilijk om uit te maken of verkeerd lopende zaken in de samenwerking met anderen te wijten zijn aan moedwil, misverstand of onvermogen van de veroorzaker van de problemen. Daarnaast beschikken daders over minder mogelijkheden om problemen te voorkomen of op te lossen dan het geval is in de 'legale' wereld. Als gevolg hiervan kunnen alledaagse fouten of 'gewone' zakelijke meningsverschillen uitgroeien tot gewelddadige conflicten. Daders van georganiseerde criminaliteit worden wel eens

vergeleken met gewone ondernemers, die zich door winstbejag laten leiden. Deze vergelijking miskent evenwel dat het illegale karakter van de bedrijfsvoering sterk van invloed is op de aard van de samenwerkingsverbanden en op de relatie van de samenwerkingsverbanden met hun omgeving. Aan de andere kant is de omgeving niet alleen een risicofactor maar ook een bondgenoot. De bewuste of onbewuste medewerking van de omgeving is onmisbaar voor de productie van illegale goederen of voor de afname ervan. Soms toont de omgeving zich zelfs bereid om steun te geven aan de uitvoering of de afscherming van misdrijven. Slechts weinig vormen van georganiseerde criminaliteit brengen louter nadeel toe aan anderen; vaak is er naast het toebrengen van schade ook sprake van het ontstaan van symbiotische relaties met onderdelen van de maatschappelijke omgeving. Op deze kant van de omgeving spelen de samenwerkingsverbanden ook in, namelijk door in plaats van zich af te zonderen te kiezen voor het aanknopen van contacten met de omgeving. Criminele samenwerkingsverbanden blijken elkaar in de onderzochte zaken niet in felle concurrentieslagen te bestrijden; voorzover er sprake is van contacten zijn deze er vooral op gericht om door samenwerking wederzijds voordeel te behalen of gemeenschappelijke problemen op te lossen. Of de omgeving meer risicofactor is of bondgenoot hangt niet alleen af van de wijze waarop de samenwerkingsverbanden met de gevaren en mogelijkheden van de omgeving omgaan. Van belang is ook in hoeverre de gepleegde misdrijven schade toebrengen aan of voordeel opleveren voor de omgeving. Groepen die zich met ripdeals of flessentrekkerij bezighouden zullen eerder tegen de risico's van hun bedrijvigheid oplopen dan mensensmokkelaars, EU-fraudeurs, geldwisselaars of vrouwenhandelaren.

Criminele netwerken

Eén van de in het oog springende conclusies van ons onderzoek is dat de wereld van de georganiseerde criminaliteit wordt gekenmerkt door samenwerkingsverbanden die geregeld van samenstelling veranderen en waarin dus ook de taakverdeling tussen de leden niet duurzaam van karakter is. Deze kenmerken wijken af van het beeld van criminele samenwerkingsverbanden, die piramidaal van opbouw zijn en waarbij taakverdeling en taakuitvoering volgens vaste patronen verlopen die door gedragscodes en interne sancties worden gehandhaafd. Hiermee is uiteraard niet gezegd dat er geen groepen zijn die hiërarchisch georganiseerd zijn en die steeds in dezelfde samenstelling opereren. Dergelijke groepen zijn evenwel in de door ons onderzochte zaken eerder uitzondering dan regel. Evenmin wordt door ons beweerd dat er geen taakverdeling zou zijn. Wij hebben in de door ons bestudeerde zaken juist waargenomen dat in wisselende samenwerkingsverbanden vaak dezelfde individuen als hoofdpersonen opduiken, en dat er wel degelijk sprake kan zijn van hiërarchische verhoudingen. Ook is geconcludeerd dat verschillende samenwerkingsverbanden steeds een beroep doen op dezelfde illegale dienstverleners, zoals ondergrondse bankiers, geldwisselaars en paspoortvervalsers. Maar de aanwezigheid van dergelijke 'knooppunten' staat de zojuist geformuleerde conclusie niet in de weg. Overheersend blijft de constatering van het 'fluïde' karakter van de samenwerkingsverbanden.

Dit beweeglijke karakter vormt ook de basis voor de ontwikkeling en de groei van criminele samenwerkingsverbanden en criminele netwerken. Personen die betrokken raken bij criminele samenwerkingsverbanden worden na enige tijd minder afhankelijk van andermans hulpbronnen, zoals geld, kennis en contacten, en zoeken vervolgens hun eigen weg. Bij deze nieuwe samenwerkingsverbanden betrekken zij weer personen uit hun eigen sociale omgeving en het verhaal

begint opnieuw.

De bestrijding van georganiseerde criminaliteit is in het recente verleden sterk beïnvloed door het beeld van piramidale organisaties. Een expliciet geformuleerde doelstelling van menig grootschalig rechercheonderzoek was om 'de top' van de criminele organisatie aan te pakken. Mede hierdoor zijn diverse onderzoeken groot van opzet en wordt met een lange doorlooptijd rekening gehouden. Maar de vraag die op basis van ons onderzoek gesteld kan worden is of men wel kan vinden waarnaar men zoekt. Bovendien kan men zich afvragen of bij de inzet van bijzondere opsporingsmethoden in het recente verleden, zoals infiltratie en het gecontroleerd doorvoeren van drugs, wel voldoende rekening is gehouden met de wisselende samenstellingen waarin samenwerkingsverbanden opereren. Overwogen zou moeten worden om de doeleinden van rechercheonderzoeken bij te stellen. Naast langdurig onderzoek met verregaande opsporingsmethoden, dat nodig blijft om hoofdpersonen uit de georganiseerde criminaliteit aan te kunnen pakken, zou de strategie van de 'korte klappen' veelvuldiger gebruikt kunnen worden. Deze strategie, die ten onrechte wel eens als noodscenario (als het terugschroeven van ambities) wordt beschouwd, sluit misschien beter aan bij de aard en het door ons geconstateerde 'groeiprincipe' van georganiseerde criminaliteit. Korte klappen impliceert de mogelijkheid om sneller in te grijpen. Bij dit ingrijpen zou de strategie gericht kunnen zijn op het opsporen van de 'knooppunten' in de netwerken. Zoals zojuist gesteld, zijn in de wisselende samenwerkingsverbanden enkele constanten te ontwaren. Het draait veelal om dezelfde hoofdpersonen en in een aantal gevallen duiken bij verschillende samenwerkingsverbanden steeds weer de namen van dezelfde illegale dienstverleners op, zoals van documentenvervalsers en geldwisselaars. Dergelijke dienstverleners staan in de regel ver af van de gepleegde 'gronddelicten' en staan daardoor in het onderzoek niet op de voorgrond. Gezien de belangrijke rol die deze dienstverleners vervullen in het verschaffen of verspreiden van kennis aan meerdere samenwerkingsverbanden, is deze marginale positie onterecht. Voor het ontwaren van deze knooppunten is de inzet van misdaadanalisten onontbeerlijk. De korte klappen-strategie zou, tenslotte, ook gericht kunnen zijn op het verwijderen van een schakel in een samenwerkingsketen. Het logistieke proces van mensensmokkel en van de productie van en de handel in drugs vergt de inzet van personen op verschillende plaatsen in de wereld, die de verantwoordelijkheid dragen voor een specifiek deelproject in een lange keten van activiteiten. De aanpak van enkele schakels kan de samenwerking in de keten op de korte termijn sterk ontwrichten. Een dergelijke ontwrichting vindt ook plaats bij het inbeslagnemen van illegale goederen. Binnen opsporingsinstanties valt de gedachte te beluisteren dat het jagen op kilo's drugs of op koeriers geen enkel soelaas biedt, omdat de criminele organisatie er niet door zou worden geraakt: koeriers en drugs zijn gemakkelijk vervangbaar, het verlies ervan zou slechts een financieel bedrijfsrisico zijn dat in het licht van de grote winsten van gering belang is. Deze gedachte wordt niet door onze bevindingen gestaafd. Dergelijke inbeslagnames raken een gevoelige snaar binnen samenwerkingsverbanden omdat zij het onderling wantrouwen versterken en daardoor niet bevorderlijk zijn voor de stabiliteit van de samenwerkingsverbanden.

Het moge evenwel duidelijk zijn dat de strategie van de korte klappen alleen niet afdoende is. De korte klappen hebben immers dezelfde beperkingen die ook aan het 'snellen van koppen' kleven: het rendement is van korte duur. Maar dit neemt uiteraard niet weg dat de strategie een belangrijk onderdeel kan vormen binnen het groter geheel van overige preventieve en repressieve activiteiten.

Sociale relaties

Sociale relaties ontstaan niet willekeurig, maar volgen veelal de wetten van sociale en geografische afstand. Dit zien wij ook terug in de samenstelling en werkwijze van criminele samenwerkingsverbanden. Zo zien wij in enkele onderzochte casussen vrijwel alleen maar daders die geboren en getogen zijn in dezelfde stad of in dezelfde buurt. Zij leggen zich voornamelijk toe op het bedienen van lokale illegale markten. Ook in andere casussen zien wij dat de voornaamste criminele activiteiten bestaan uit het bevoorraden van markten in landen of plaatsen waar men vandaan komt of waarmee men rechtstreekse contacten heeft.

In het rapport wordt uiteengezet hoe sociale relaties de brug slaan tussen criminele netwerken in verschillende landen. De sociale bindingen die bijvoorbeeld door migratie zijn ontstaan tussen Nederland en de moederlanden bieden een vruchtbare voedingsbodem voor internationale drugshandel, omdat deze moederlanden tevens belangrijke bronlanden of doorvoerlanden zijn van drugs. Niet etniciteit vormt in deze voorbeelden de basis van de criminele samenwerkingsverbanden, maar de sociale relaties die tussen de verschillende personen bestaan.

Blijkens de literatuur over georganiseerde criminaliteit wordt vaak het bestaan verondersteld van etnische scheidslijnen tussen criminele groepen. Ook door de onderzoeksgroep Fijnaut wordt geconcludeerd dat er sprake is van geslotenheid van etnische circuits. Dit zou met name bij Chinezen en Turken het geval zijn (PEO, Bijlage VII, 1996, p. 209). Wij concluderen dat etniciteit een belangrijke rol speelt in het leven van mensen en om die reden, langs de weg van de sociale relaties, van invloed is op de samenstelling van criminele samenwerkingsverbanden. Een zekere etnische homogeniteit valt dan ook te verwachten, maar van etnische geslotenheid is beslist geen sprake. In verschillende van de door ons bestudeerde zaken treffen wij juist een bonte mengeling van etniciteiten aan. Mogelijk is dit een aanwijzing voor een belangrijke trend en is er sprake van een toenemende etnische heterogeniteit van criminele samenwerkingsverbanden. Toenemende integratie van etnische minderheden in de Nederlandse samenleving zal zich naar onze verwachting ook weerspiegelen in een meer heterogene samenstelling van criminele samenwerkingsverbanden. Politie en justitie zouden hiermee in de toekomst meer rekening moeten houden.

Ook het scala van illegale activiteiten dat gepleegd wordt door samenwerkingsverbanden is heterogener dan door de onderzoeksgroep Fijnaut is geconstateerd. Mogelijk is ook hier sprake van een recente ontwikkeling, waarin vooral de criminele samenwerkingsverbanden in de drugshandel zich toeleggen op de handel in meerdere soorten drugs: synthetische en niet-synthetische drugs, hard- en softdrugs. De stelling dat etnische groepen zich specifiek met de handel in één type drugs bezighouden (bijvoorbeeld Turken: heroïne; Colombianen: cocaïne) wordt door ons casusmateriaal weerlegd. De werkelijkheid van de Nederlandse georganiseerde criminaliteit blijkt er veelkleuriger uit te zien dan de stelling van 'etnische specialisatie' doet voorkomen. Ook de stelling dat er op het niveau van de groothandel in drugs sprake zou zijn van een scheiding van markten, wordt door ons onderzoeksmateriaal weerlegd.

De consequenties van deze heterogeniteit zijn van velerlei aard. Wij volstaan hier met twee voorbeelden. Ten eerste worden de mogelijkheden van politieke infiltratie groter. Het is bijvoorbeeld niet meer per definitie nodig om Turkse infiltranten in te zetten tegen Turkse samenwerkingsverbanden. Ten tweede kan dit consequenties hebben voor de huidige indeling van de aandachtsgebieden van de Kernteams. De huidige indeling berust immers grotendeels op de verdeling van etnische groepen. Een dergelijke 'specialisatie' heeft onmiskenbaar voordelen voorzover het bijvoorbeeld gaat om kennis van etnische

groepen en de situatie in het moederland of om de samenwerking met het buitenland. Anderzijds wordt door de geconstateerde etnische heterogeniteit de noodzaak sterker om te komen tot onderlinge samenwerking en informatie-uitwisseling, zowel tussen Kernteams onderling als tussen Kernteams, regiokorpsen en andere opsporingsinstanties.

Wat betreft het belang van sociale relaties verdient de positie van vrouwen specifieke vermelding. Vrouwen blijken een belangrijke rol te spelen in het leggen van contacten en het verstevigen van de onderlinge banden. Afgaande op onze casusbeschrijvingen kan het belang hiervan niet worden overschat. In de meerderheid van onze casussen behoren een of meer vrouwen tot de groep van verdachten. Opmerkelijk is dat vrouwen ook in zaken waarin zij niet door de politie als verdachten zijn aangemerkt, functies hebben vervuld in de communicatie (berichten doorgeven; leggen van contacten). Het verdient, gelet op de sterke 'informatiepositie' van vrouwen, aanbeveling om meer aandacht aan hen te besteden bij opsporingsonderzoeken.

Hoe zeer sociale relaties ook een rol spelen in de vorming van criminele samenwerkingsverbanden, het zou een misvatting zijn om te stellen dat deze samenwerkingsvormen louter vriendenclubs zijn. Juist doordat de leden bepaalde banden met elkaar hebben, worden individuele gedragingen die indruisen tegen het belang van de groep gemakkelijk als deloyaal uitgelegd. Dit kan tot escalatie van geweld leiden. Sociale relaties blijken niet altijd voldoende bindingskracht te geven om in de 'jungle' van de illegaliteit te kunnen overleven. Dreiging of toepassing van geweld is naast sociale relaties en het economisch voordeel dat mensen aan de deelname aan een groep ontnemen, dan ook één van de 'bindingsmechanismen' die criminele samenwerkingsverbanden bijeen houden. Geweld en intimidatie treffen wij overigens niet alleen in de wereld van de verdoovende middelen aan. Ook in verschillende vrouwenhandelzaken en fraudezaken vinden wij sporen van intimidatie en geweld.

Sociale relaties onttrekken zich aan het analytisch onderscheid tussen de wettige omgeving en het illegale milieu. Volgens een recent onderzoek ontstaan er problemen wanneer beide werelden worden verbonden door sociale relaties. Uit het onderzoek komt naar voren dat 'lekken' (onoorbare informatie-uitwisseling) vooral wordt veroorzaakt doordat de betrokkenen uit het criminele milieu en politiefunctionarissen elkaar uit andere hoefde kennen (Van Ruth en Gunther Moor, 1997, p. 251). Maar het is evenzeer een probleem voor de criminele samenwerkingsverbanden; leden van deze verbanden zijn graag bereid om elkaar of hun relaties daarbuiten meer informatie te verstrekken dan strikt noodzakelijk is. Het 'need to know' beginsel gaat nu eenmaal ten koste van de kwaliteit van de sociale relaties, ook van de relaties binnen criminele samenwerkingsverbanden. Ondanks de noodzaak om niet te veel met elkaar te praten, wordt er dan ook veel gepraat en weten de leden van samenwerkingsverbanden in de regel veel over de illegale activiteiten die hebben plaatsgevonden. Veel praten is het onvermijdelijke gevolg van het hebben van hechte sociale relaties. Uit onze inventarisatie van wat de aanleiding is geweest tot het doen instellen van opsporingsonderzoek in de veertig casussen is naar voren gekomen dat de aanleiding vaak door het criminele milieu zelf is gegeven. Informatie van RCID'en, die de informatie grotendeels hebben betrokken uit het criminele milieu, alsook verklaringen die verdachten in andere onderzoeken hebben afgelegd, staan meestal aan de basis van de onderzoeken. Tijdens de onderzoeken zelf (tappen, verhoren) blijkt ook de loslippigheid van de verdachten. Ook dit gegeven biedt mogelijkheden voor de opsporende overheid. Bij wijze van discussiepunt werpen wij hier

op dat de overheid zijn mogelijkheden verder zou kunnen vergroten door de bereidheid om te praten te stimuleren. In de eerste plaats kan hierbij worden gedacht aan het stimuleren van slachtoffers (vrouwenhandel, flessentrekkerij) om aangifte te doen en zo veel mogelijk mededelingen over de criminele groep te verstrekken. In de tweede plaats zou de justitiële overheid ervoor kunnen kiezen om deloyaliteit aan het samenwerkingsverband te belonen met onder meer vermindering van straf. Momenteel is een wetswijziging in voorbereiding om getuigen die tevens verdachten zijn, strafvermindering te geven wanneer zij relevante gegevens over andere verdachten verstrekken.

Kamerstukken, 1998-1999, 26 294. In dit wetsontwerp wordt ook geregeld dat deze getuigen in aanmerking kunnen komen voor een protectieprogramma.

Wij gaan hier verder niet in op de voors en tegens van een dergelijke regeling, maar volstaan met de constatering dat dergelijke regelingen gelet op de 'loslippigheid' van verdachten, vermoedelijk effectief zullen zijn.

Tot slot constateren wij dat daders veel ontmoetingen hebben met hun mededaders. Dikwijls fungeren gewone uitgaansgelegenheden (restaurant, café) daarvoor als vaste ontmoetingspunten. In aansluiting op de constatering dat er veel met elkaar wordt gesproken, is het positief te noemen dat de minister van Justitie recentelijk op verzoek van de Tweede Kamer in het wetsvoorstel over direct afluisteren, de mogelijkheden van direct afluisteren heeft verruimd. Oorspronkelijk zou afluisteren alleen in openbare ruimten zijn toegestaan, nu wordt ook direct afluisteren in woningen onder voorwaarden toegestaan (Kamerstukken, 1996-1997, 25 403, nr. 7, p. 6).

Raakvlakken met de wettige omgeving

Er bestaan vele raakvlakken tussen georganiseerde criminaliteit en de wettige omgeving. De aanwezigheid en de steun van de wettige omgeving zijn een levensvoorwaarde voor veel vormen van georganiseerde criminaliteit. Dit geldt bijvoorbeeld voor de noodzakelijke medewerking van de wettige omgeving bij de productie van illegale goederen (bijvoorbeeld grondstoffen voor synthetische drugs) en de afzet van goederen. Voor veel vormen van georganiseerde criminaliteit geldt dat deze geen overlevingskansen hebben als de wettige omgeving geen afnemer zou zijn van hun diensten of producten. Vrouwenhandel en de verkoop van illegale goederen zoals drugs en illegale cd's, zijn hiervan de meest duidelijke voorbeelden.

Ook blijkt dat de wettige omgeving een faciliterende bijdrage levert aan georganiseerde criminaliteit. De voordelen van de gewone maatschappelijke infrastructuur (vervoer, huisvesting, dienstverlening) worden ook door criminele samenwerkingsverbanden benut. Wij concluderen dat deze benutting plaats kan vinden zonder enige bewuste medewerking van de wettige omgeving. Maar er zijn ook situaties aangetroffen (in het vervoer en in de dienstverlening) die wijzen op een verwijtbare betrokkenheid van personen of organisaties bij georganiseerde criminaliteit.

De vele raakvlakken met de wettige omgeving vormen de achilleshiel van criminele samenwerkingsverbanden. Zij bieden derhalve goede aanknopingspunten voor de preventie en de bestrijding van deze criminaliteit. De maatregelen zouden vooral betrekking moeten hebben op het verminderen van de mogelijkheden die de wettige omgeving momenteel verschaft aan de georganiseerde criminaliteit. In de eerste plaats kan hierbij gedacht worden aan het versterken van toezicht en controle.

Diverse, zeer uiteenlopende gevallen (oliefraude, mensensmokkel, XTC-productie, creditcardfraude) maken duidelijk dat georganiseerde criminaliteit kansen krijgt voor illegale activiteiten, wanneer degenen die toezicht moeten houden tekort schieten. In enkele gevallen schiet het toezicht tekort omdat de toezichthouder geen belang heeft bij scherpe controle: de luchtvaartmaatschappij oefent uit concurrentieoverwegingen geen scherp toezicht uit op reisdocumenten en creditcardmaatschappijen nemen uit bedrijfseconomische overwegingen een bepaald niveau van fraude met creditcards voor lief. Via aanscherping van wetgeving zou hierin verbetering kunnen worden gebracht.

Daarnaast kan het toezicht tekort schieten doordat samenwerkingsverbanden zich er gemakkelijk aan kunnen onttrekken door internationaal te gaan opereren. Sluitende(r) controle op het financiële verkeer in Nederland heeft geleid tot verplaatsingsgedrag van personen die misdaadgeld in het girale verkeer willen brengen; zij storten bijvoorbeeld geldbedragen op bankrekeningen in Zwitserland of Luxemburg. Een vergelijkbaar voorbeeld uit een geheel ander misdaadveld: toezicht van de Economische Controle Dienst (ECD) op de vervaardiging en verkoop van grondstoffen voor XTC in Nederland wordt illusoir, wanneer de grondstoffen vrij gemakkelijk uit het (verre) buitenland kunnen worden betrokken. Betere, internationale samenwerking is onontbeerlijk voor een effectief toezicht in eigen land. Tenslotte kan gebrekkig toezicht het gevolg zijn van het impliciet of expliciet stellen van posterioriteiten. In de afgelopen jaren heeft de controle op bordelen slechts beperkt aandacht ondervonden van opsporingsinstanties/vreemdelingendiensten. Door deze diensten is vooral onvoldoende onderkend dat achter prostitutie vrouwenhandel schuil kan gaan. Dit blijkt onder meer uit het gedrag van de uitbaters van bordelen of clubs. Zij treffen maatregelen om te voorkomen dat vrouwen worden uitgezet omdat zij geen geldige werk- en verblijfsvergunning hebben. Zij houden er geen rekening mee dat de controle aan het licht zou kunnen brengen dat de vrouwen onder dwang moeten werken.

Het huidige gedoogbeleid inzake de exploitatie van bordelen heeft er kennelijk toe bijgedragen dat de mening heeft post gevat onder exploitanten dat er op het gebied van prostitutie veel is toegestaan. In elk geval blijkt het gedoogbeleid onvoldoende onderscheidend te zijn geweest; de vrouwenhandelaren uit onze dossiers zijn in sommige gevallen 'gewone' exploitanten van bordelen of seksclubs. De opheffing van het bordeelverbod licht de exploitatie van bordelen uit de huidige schemerzone tussen legaliteit en illegaliteit. Dit kan aan de ene kant betekenen dat gedwongen prostitutie eerder ontdekt en voorkomen wordt dan onder het huidige gedoogbeleid het geval is. Maar het effect kan ook zijn dat er ontwijkingsstrategieën worden ontwikkeld (bijvoorbeeld: escortservice), waardoor verhandelde vrouwen verder aan het oog van de overheidscontrole worden onttrokken dan nu reeds het geval is. Het verdient aanbeveling om bij de invoering van de nieuwe wet bedacht te zijn op het optreden van dergelijke negatieve neveneffecten.

Ook door het gedoogbeleid inzake softdrugs wordt een raakvlak gecreëerd tussen de wettige omgeving en de illegaliteit. Hierdoor wordt niet alleen een illegale markt in stand gehouden, maar wordt ook onduidelijkheid geschapen over het illegale karakter van de handel. In de luwte van het gedoogbeleid hebben enkele Nederlandse groepen zich tot groothandelaren in softdrugs kunnen ontwikkelen (PEO, Bijlage VIII, 1996, p. 19). Slechts ten koste van grote inspanningen van politie en justitie is het vervolgens gelukt deze grote criminele samenwerkingsverbanden op te sporen en te vervolgen. Uit oogpunt van bestrijding van georganiseerde criminaliteit

Overigens kan het gedoogbeleid uit volksgezondheidsperspectief misschien veel positiever worden beoordeeld. Wij oordelen slechts vanuit het perspectief van de

bestrijding van georganiseerde criminaliteit.

verdient het aanbeveling om de nadelen van de inherente tegenstelling van het gedoogbeleid (gedogen aan de voordeur, vervolgen aan de achterdeur) zo goed mogelijk te ondervangen. Dit kan gebeuren door verder te gaan dan thans in het toestaan van de productie en toelevering van softdrugs aan gedoogde verkooppunten, dan wel door de strafrechtelijke repressie van de aanbodzijde wat verder door te trekken naar de consumentenkant (strikttere reglementering). Vooral criminele samenwerkingsverbanden lijken baat te hebben bij het schemergebied dat wordt gecreëerd door toe te staan wat verboden is.

Professionele beroepsgroepen en dienstverleners komen allen in aanraking met georganiseerde criminaliteit. Advocaten komen er qualitate qua mee in aanraking, maar ook van auto-leasemaatschappijen en bankinstellingen zullen diensten worden gevraagd. Veel van deze contacten zijn onvermijdelijk: de dienstverleners behoeven zich er niet altijd van bewust te zijn dat de geleasde auto wordt gebruikt als vluchtauto of dat door de girale overboeking van geld naar het buitenland misdaadgeld naar elders wordt verplaatst. In toenemende mate wordt van de dienstverleners evenwel verwacht dat zij alert zijn op het mogelijke misbruik dat van hun dienstverlening wordt gemaakt. Een aantal beroepsgroepen heeft richtlijnen geformuleerd waarin gespecificeerd wordt onder welke omstandigheden de dienstverlener argwaan moet krijgen, en nader moet doorvragen naar de bonafiditeit van het verzoek of de verzoeker, dan wel zijn medewerking aan de gevraagde dienstverlening moet weigeren. De bekendste wetgeving op dit terrein is de wet Melding Ongebruikelijke Transacties, die financiële dienstverleners verplicht om ongebruikelijke transacties aan te melden bij een centraal meldpunt. Daarnaast hebben enkele professionele beroepsgroepen, zoals de advocatuur en het notariaat, vertrouwenspersonen aangesteld die door de beroepsbeoefenaar kunnen worden geconsulteerd, indien hij twijfels heeft over de bonafiditeit van het verzoek van de cliënt. Over de ervaringen die tot nu toe met de richtlijnen en de vertrouwenspersonen zijn opgedaan, is nu nog weinig bekend. Het verdient aanbeveling om nader onderzoek hiernaar te verrichten. Dit geldt ook voor de effecten van de bestuurlijke aanpak van de georganiseerde criminaliteit in Amsterdam. Naar aanleiding van de resultaten van de onderzoeksgroep Fijnaut heeft het openbaar bestuur in samenwerking met politie en justitie een uitgebreid en veelbelovend actieprogramma geformuleerd waarbij de georganiseerde criminaliteit geïntegreerd, zowel met inzet van vele bestuurlijke middelen als met strafrechtelijke middelen, wordt bestreden. Het is van groot belang de resultaten van deze aanpak nauwlettend te volgen.

Confrontaties met de overheid

Criminele samenwerkingsverbanden zijn uit op het verdienen van geld, niet op het vestigen van de hegemonie in een bepaald territorium. Zo moeten ook de door ons geconstateerde contrastrategieën tegen de overheid worden begrepen. Zij zijn waarschijnlijk bedoeld als afweer en niet als aanval. De gevallen zijn ernstig van karakter, maar wij betwijfelen of deze gebeurtenissen een nieuwe, gevaarlijke ontwikkeling in de georganiseerde criminaliteit inluiden. Er zou evenwel meer aandacht gegeven moeten worden aan een verschijnsel dat veel minder ruchtbaarheid verkrijgt, namelijk dat criminele samenwerkingsverbanden met succes de confrontatie met de overheid uit de weg gaan. Vanuit het perspectief van deze groepen bezien, is het mijden van de confrontatie met de overheid verstandiger dan het trotseren van de overheidsmacht. Het ontwijkingsgedrag van de groepen wijst erop dat strafrechtelijk

optreden zijn schaduw vooruit werpt en invloed heeft. Het zou een aanmoediging kunnen vormen voor de Nederlandse politie en justitie om verder te gaan, dat wil zeggen om zelf eerder de confrontatie aan te gaan, bijvoorbeeld door het aanpakken van illegale dienstverleners of de strategie van 'korte klappen'. Hiermee kan ook een wig worden gedreven in het precaire onderlinge vertrouwen tussen daders, waardoor de onderlinge samenwerking onder druk wordt gezet.

Hierbij is gelet op het ontwijkingsgedrag van criminele samenwerkingsverbanden meer internationale samenwerking noodzakelijk. Want in één opzicht troeven criminele samenwerkingsverbanden de nationale overheden duidelijk af, namelijk in hun vermogen om internationaal te opereren.

Jong en gewelddadig; ontwikkeling en achtergronden van de geweldscriminaliteit onder jeugdigen

M.W. Bol, G.J. Terlouw, L.W. Bles, C. Verwers

Onderzoek en beleid, nr. 174

Samenvatting

In dit onderzoek met betrekking tot de geweldscriminaliteit van jeugdigen staan de volgende drie vragen centraal.

Hoe heeft zich de geweldscriminaliteit van jeugdigen sinds 1985 ontwikkeld? Welke factoren hebben mogelijk de officiële cijfers vertekend?

Wat is er uit de wetenschappelijke literatuur bekend over de achtergronden van agressie en geweld onder jongeren?

Hoe is in het licht van die kennis een (eventuele) toename van het geweld van jeugdigen te verklaren?

Het dient vooropgesteld te worden dat de doelstelling van dit onderzoek niet zozeer geweest is om - al dan niet schokkende - nieuwsfeiten boven tafel te krijgen, als wel om bestaande inzichten met betrekking tot de ontwikkeling en achtergronden van geweldscriminaliteit onder jeugdigen nader te analyseren en te verdiepen.

Onder agressie wordt verstaan: *iedere vorm van gedrag die erop gericht is iemand lichamelijk of geestelijk te schaden*. Neemt de agressie een extreme vorm aan, namelijk van *een opzettelijke poging om ernstig lichamelijk letsel toe te brengen*, dan spreken we van geweld. Het onderzoek beperkt zich dus tot de persoonsgerichte vormen van agressie en geweld. Dit houdt in dat bij de analyse van cijfermateriaal delicten als vernieling, vandalisme en bekladding buiten beschouwing zijn gebleven.

Om de bovengenoemde onderzoeksvragen te beantwoorden, zijn in totaal vier deelonderzoeken verricht. Het *eerste* deelonderzoek, een trendstudie, bestaat uit een beschrijving en een analyse van aard en omvang van geweldscriminaliteit onder jeugdigen, gebaseerd op onder meer CBS-gegevens en self-reportcijfers, en heeft betrekking op de periode 1985 tot en met 1996.

Door middel van het *tweede* deelonderzoek is getracht meer inzicht te krijgen in de achtergronden van geweldscriminaliteit onder jeugdigen. Dit deel bestaat uit een uitgebreide literatuurstudie waarbij is uitgegaan van een *levensloopmodel*. In dit model wordt ervan uitgegaan dat alles wat een kind meemaakt in de opeenvolgende leefomgevingen waarin het zich bevindt (te beginnen met de baarmoeder), doorwerkt in elk van de volgende, steeds groter wordende omgevingen, c.q. de volgende

levensfasen. In het kader van dit model is de aandacht gericht op risico- en protectieve factoren waarmee kinderen in de opeenvolgende fasen van hun leven te maken kunnen krijgen. De keuze voor deze theoretische invalshoek, met een zwaar accent op de ontogenese (de individuele ontwikkeling van geboorte tot volwassenheid), heeft ertoe geleid dat vooral veel ontwikkelingspsychologische en -criminologische literatuur is bestudeerd. Via deze weg is gezocht naar een antwoord op de tweede onderzoeksvraag. Het levensloopmodel blijkt in principe een zeer vruchtbare weg om het inzicht in de achtergronden van geweldscriminaliteit te verdiepen.

Het *derde* deelonderzoek betreft interviews die gehouden werden met (acht) jeugdige plegers van fysiek geweld. Om de eigen verhalen van de jeugdigen verder aan te vullen, zijn tevens hun strafdossiers gelicht respectievelijk geanalyseerd. Bij deze interviews met ouders was het de opzet, nadere bevestiging (of ontkenning) te zoeken voor wat reeds uit ander deelonderzoek naar voren is gekomen; in dit geval bij de uitkomsten van de literatuurstudie. Daarnaast hebben we aandacht besteed aan overeenkomsten (en verschillen) tussen de achtergronden van de jongeren. De uitkomsten van dit deelonderzoek kunnen niet gegeneraliseerd worden; de interviews zijn veeleer bedoeld als een illustratie bij hetgeen uit de cijfermatige analyses en de literatuurstudie al naar voren is gekomen, als ondersteuning derhalve bij de eerste twee deelonderzoeken.

Hetzelfde geldt voor het *vierde* deelonderzoek. Dit bestaat uit interviews die zijn gehouden met (negen) - sleutelfiguren -, personen die vooral gezien moeten worden als ervaringsdeskundigen op het gebied van agressie en geweld onder jongeren.

Een antwoord op de vraag hoe in het licht van de op basis van deze deelonderzoeken verworven kennis de "eventuele" toename te verklaren valt (de derde onderzoeksvraag), kan slechts gegeven worden door in speculatieve termen voort te borduren op de resultaten van de vier deelonderzoeken. Alvorens een samenvatting van deze speculaties prijs te geven, worden nu eerst de vier deelonderzoeken nader besproken. Reeds hier zij opgemerkt dat de bevindingen van het eerste deelonderzoek (de trendstudie) en meer nog die van het tweede (de literatuurstudie) inderdaad royaal worden gesteund door de uitkomsten van het derde en vierde deelonderzoek.

Eerste onderzoeksvraag - trendstudie

Om een zo compleet en betrouwbaar mogelijk beeld te krijgen van de ontwikkeling (sinds 1985) en omvang van de geweldscriminaliteit van jeugdigen, zijn drie verschillende gegevensbronnen geraadpleegd.

Uit de zogeheten HKS-gegevens van de politieregio Haaglanden komt naar voren dat het aantal door minderjarige ouders gepleegde geweldsdelicten tot 1995 voortdurend toeneemt. In 1996 treedt een lichte daling op. Het meest voorkomende geweldsmisdrijf is diefstal met geweld/afpersing. Dit vormt circa 45% van de geweldsdelicten gepleegd door minderjarigen. Op de tweede plaats komt mishandeling (rond de 30%). Het percentage meervoudige ouders is tot 1995 behoorlijk stabiel en schommelt rond de 13%; in 1996 vermindert dit percentage tot 8%. Binnen de groep minderjarige ouders verdubbelt het percentage zeer jeugdigen (12 tot 14 jaar) van 1992 op 1993 van 8% naar 16%, om daarna nog maar in geringe mate te fluctueren.

Uit een andere bron, de CBS-politiegegevens, blijkt tussen 1985 en 1996 het aantal inzake geweldsdelicten gehoorde minderjarige verdachten te zijn toegenomen met een factor 3,4. De stijging zit

hem vooral in de delicten mishandeling, diefstal met geweld/afpersing en bedreiging. Met uitzondering van diefstal met geweld/afpersing groeit volgens de CBS-cijfers het aantal van geweldsmisdrijven verdachte meisjes sneller dan dat van jongens; niettemin blijven de meisjes een marginale groep wanneer het gaat om geweldscriminaliteit.

Een derde bron wordt gevormd door self-reportgegevens. Ook deze laten zien dat het aantal jongeren dat toegeeft zich schuldig te hebben gemaakt aan gewelddadig gedrag, in de loop der jaren is toegenomen. Dit geldt niet voor alle vormen van geweld in even sterke mate. De continue toename van het percentage jongeren dat betrokken is bij vechtpartijen, de stijging van het aantal jongeren dat toegeeft anderen te hebben lastiggevalen, en de groei van het percentage jongeren dat een wapen zegt te dragen, lijken te corresponderen met het beeld dat uit de CBS-gegevens naar voren komt.

Het beeld dat de verschillende gegevensbronnen schetsen, is dat van een toename van geweldscriminaliteit onder jongeren. Aangezien de gebruikte bronnen vergelijkbare tendensen vertonen, achten wij de waargenomen ontwikkelingen reeel. Er zijn naar onze mening echter wel redenen om aan te nemen dat de feitelijke toename geringer is dan de cijfers op het eerste gericht suggereren. Er zijn meer dan tien factoren te noemen die een effect kunnen hebben gehad op de uiteindelijke cijfers, maar het is niet of nauwelijks mogelijk om aan te geven in welke mate deze factoren een inflatoir of juist een deflatoir effect hebben gehad. Bovendien achten wij het waarschijnlijk dat er tussen de effecten van de verschillende factoren interacties zijn opgetreden die de invloeden van een unieke factor mogelijk weer hebben versterkt of verzwakt. Omdat het effect van de individuele factoren niet stabiel is, zijn ook interacties aan wijzigingen onderhevig en daarmee eveneens de sterkte van de vertekening der cijfers. Ondanks deze onzekerheden stellen wij ons per saldo op het standpunt, dat van een reële stijging inderdaad sprake is.

Tweede onderzoeksvraag

Literatuurstudie

Met het oog op het verklaren van antisociaal en agressief gedrag lijken de verschillende wetenschappelijke disciplines zich ieder op een bepaald moment of op een bepaalde periode in de levensloop van de opgroeiende mens te fixeren: biologie, persoonlijkheidspsychologie, ontwikkelingspsychologie, (ortho)pedagogiek, sociale psychologie, sociologie, antropologie. Verklaringsmodellen met betrekking tot crimineel gedrag waren de laatste decennia overwegend sociologisch getint. Er zijn echter steeds meer aanwijzingen dat de basis voor antisociaal gedrag, zeker indien dit gewelddadig van aard is, bij velen (indien niet reeds in aanleg aanwezig) vooral wordt gelegd in de vroege levensjaren door middel van conditioneringsprocessen. Dit heeft ons aanleiding gegeven om te kiezen voor een *levensloopmodel*, waarin (gedeelten van) diverse bestaande criminologische theorieën kunnen worden ingepast.

Het model houdt in dat hoe eerder in het leven er iets misgaat, hoe verontrustender dit is voor de verdere ontwikkeling van het kind. Het 'ontwikkelingsdenken' is overigens niet echt nieuw. De laatste jaren zijn steeds meer psychologen en sociologen voor het verklaren van antisociaal en gewelddadig gedrag vanuit een tijdsperspectief gaan denken.

Ontwikkelingsdenkers kijken voor het verklaren van crimineel gedrag bij voorkeur niet naar losse elementen uit iemands verleden of huidige omgeving. Liever vragen zij zich af hoe vanuit de ene

ontwikkeling de volgende heeft kunnen voortvloeien, of nog kan voortvloeien. In dat kader richt de aandacht zich veelal op *risico- (en protectieve) factoren*, waarmee kinderen in de opeenvolgende fasen van hun leven te maken kunnen krijgen. Dat de meeste jeugdigen niet crimineel worden, laat zien dat 1 risicofactor niet genoeg is. Uit recent onderzoek blijkt dat risicofactoren alleen een negatief effect hebben als ze cumuleren.

In vier opeenvolgende levensfasen c.q. niveaus van ontwikkeling kunnen kinderen bloot komen te staan aan tal van risicofactoren: op individueel niveau, gezinsniveau, niveau van school en leeftijdgenoten, maatschappelijk en cultureel niveau. Zo kan een beeld geschetst worden van wat er in elke levensfase zoal goed of fout kan gaan. De 'uitkomsten' van de ene fase werken mogelijk progressief door naar en in de volgende fase.

We zijn uitgegaan van de veronderstelling dat bepaalde combinaties en/of een bepaalde volgorde van blootstelling aan risicofactoren zouden kunnen leiden tot verschillende *soorten van geweld of typen van geweldplegers*. Er is daarom gericht gezocht naar literatuur waarin juist die clustering van factoren aan de orde kwam. De resultaten zijn wat dit laatste betreft enigszins teleurstellend te noemen, want duidelijke patronen komen uit de onderzoeksliteratuur niet naar voren. Wel is door middel van onderzoek aangetoond dat 'vroeg starters' vaak jarenlang crimineel (i.c. gewelddadig) blijven, terwijl het criminele gedrag van 'late starters' meestal van voorbijgaande aard lijkt te zijn. Vroege starters hebben al vroeg in hun jeugd te maken gehad met diverse risicofactoren. Bij late starters is het vooral de factor 'invloed van leeftijdgenoten', die hen op het slechte pad brengt. Verder hebben degenen die vroeg beginnen, meer moeite om weer te stoppen dan degenen die relatief laat beginnen.

Wij besluiten de literatuurstudie met een aantal concrete *suggesties voor nader onderzoek* om de aangetroffen lacunes in kennis over agressie en geweld onder jongeren op te vullen.

Op het niveau van de individuele factoren lijkt de familiegebonden genafwijking *MAOA* interessant. Wat verder opvalt, is dat de stof *serotonine* een belangrijke functie heeft bij het reguleren van de (impulsieve) agressie. Nader onderzoek op dit gebied zou zich tevens kunnen uitstrekken tot vroegtijdig en/of overmatig alcoholgebruik, en misschien ook tot de aandachtstekortstoornis *ADHD*. In de vakliteratuur worden verschillende soorten agressieve persoonlijkheden en vormen van agressie onderscheiden. Het onderscheid tussen bewust gecontroleerde agressie en impulsieve agressie biedt naar onze mening goede perspectieven voor nader onderzoek.

Op het niveau van de gezinsfactoren kan sociaal-wetenschappelijk onderzoek wellicht nader inzicht bieden in de werking van risico- en beschermende factoren. Door middel van zorgvuldige evaluaties van opvoedingsondersteunende programma's zouden onderzoekers kunnen nagaan of deze op den duur tot het uitblijven dan wel tot een afname van de (gewelds)criminaliteit leiden.

Ook schoolfactoren lenen zich voor nader onderzoek, bijvoorbeeld met betrekking tot spijbel- en pestgedrag van kinderen op basisscholen. Op middelbare scholen zouden experimenten met zogeheten 'schoolassistenten' geëvalueerd kunnen worden; dit zijn een soort toezichthouders, tevens vertrouwenspersonen, die als bemiddelaar tussen leraar en leerling optreden.

Op het niveau van de maatschappelijke en culturele factoren ten slotte is en wordt al veel - vooral sociologisch - onderzoek gedaan. Vaak gaat het daarbij om de kwetsbare positie

van minderheidsgroepen in de samenleving.

Behalve dat we meer zouden moeten weten over de invloed van 'losse' risicofactoren, zijn we geïnteresseerd in de verschillende manieren waarop deze factoren zich mogelijk opeenstapelen, en wat daarvan de effecten zijn: leiden bepaalde patronen van cumulatie van factoren tot bepaalde soorten van crimineel gedrag of typen delinquenten respectievelijk geweldplegers? Daarover is nog (te) weinig bekend.

Daders aan het woord

In het begin van 1998 zijn acht jeugdige daders van geweldsdelicten geïnterviewd. Vijf van hen waren ten tijde van het vraaggesprek gedetineerd in een rijksinrichting voor jeugdigen, twee waren bezig met de uitvoering van een taakstraf, een bevond zich in voorlopige hechtenis.

Het waren allen jongens; zij varieerden in leeftijd van 14 tot 20 jaar en hadden zich schuldig gemaakt aan mishandeling, bedreiging, diefstal met geweld en afpersing, poging tot doodslag en/of openlijke geweldpleging.

De interviews werden gehouden aan de hand van beknopte lijsten met aandachtspunten. Het was de bedoeling de jongens tijdens het onderhoud zoveel mogelijk zelf aan het woord te laten. De aldus verzamelde subjectieve informatie werd verder aangevuld met meer objectieve gegevens uit de strafdossiers, die voor alle jongeren - met hun toestemming - werden opgevraagd en ingezien. Op basis van dit gecombineerde materiaal zijn acht casusbeschrijvingen gemaakt.

Kijken we naar de levensloop van de jongeren, dan blijken ze aan een grote hoeveelheid risicofactoren blootgesteld te zijn geweest, zowel op individueel, gezins-, school-, als maatschappelijk en cultureel niveau. Dit ondanks het feit dat door de interviewers tijdens de gesprekken naar de meeste van deze risicofactoren niet rechtstreeks werd gevraagd.

Voor het verklaren van hun gedrag verwijzen de jongeren zelf slechts in geringe mate naar deze factoren. Opvallend is dat enkelen geneigd zijn, de verantwoordelijkheid voor hun (mis)dadens buiten zichzelf te leggen. Drie van de jongens meenden een vriend of familielid te moeten verdedigen. Twee anderen, die zeiden te hebben gehandeld uit een behoefte aan spanning en sensatie, merkten op dat het vooral groepsdruk was geweest waardoor de zaak uit de hand was gelopen.

Sleutelfiguren aan het woord

In het voorjaar van 1998 zijn gesprekken gevoerd met negen zogeheten sleutelfiguren: mensen die in hun werk veel te maken hebben met (soms gewelddadige) jongeren. Deze sleutelfiguren moeten vooral worden gezien als *ervaringsdeskundigen*, hoewel enkelen van hen ook professioneel deskundig zijn op het gebied van agressie en geweld. Met de volgende personen werd gesproken: een directeur van een middelbare school (kort middelbaar beroepsonderwijs), een gedragsdeskundige, een inspecteur van politie, een jongerenwerker, een kinderrechtter, een kinder- en jeugdpsychiater, een officier van justitie, een rector van een middelbare school (college voor mavo, havo en vwo) en een straathoekwerker. Evenals bij de jongeren werden de interviews gehouden aan de hand van beknopte lijsten met aandachtspunten.

Jongeren hebben volgens de sleutelfiguren uiteenlopende motieven voor het gebruiken van geweld. Bij het verwijzen naar mogelijke risicofactoren die aanleiding kunnen geven tot (later) geweldsgebruik, benadrukken twee van de ondervraagden dat geweld altijd *multicausaal* verklaard moet worden. De algemene indruk onder de sleutelfiguren is, dat er de laatste jaren inderdaad sprake is van een toename van geweld onder jongeren. Zij zijn vrijwel unaniem van mening dat de toename van geweld voor een deel is toe te schrijven aan een toename van *groeps*geweld.

Als mogelijke verklaringen voor de toename worden vooral maatschappelijke en culturele factoren aangedragen. Afgaande op de door de sleutelfiguren genoemde kenmerken van individuele daders lijken er enige aanwijzingen voor te zijn dat verschillende typen van delinquenten aan verschillende (combinaties van) risicofactoren zijn blootgesteld geweest.

Met de sleutelfiguren werd ook gesproken over mogelijkheden van preventie. Bij hen overheerst de opvatting dat vroegtijdig ingrijpen veel geweld kan voorkomen. De beide in het middelbaar onderwijs werkzame sleutelfiguren voelen zich niet verantwoordelijk voor het gedrag van leerlingen buiten de school. Zij willen zich wel inzetten voor de preventie van geweld, maar dan moeten daar de nodige financiële middelen tegenover staan. Verschillende ondervraagden benadrukken dat de samenleving als geheel meer moet investeren in het voorkomen van geweld. Het is daarbij volgens hen van groot belang dat de diverse instanties die met jeugdigen te maken hebben, nauwer met elkaar gaan samenwerken en dat ook ouders daarbij betrokken worden.

Derde onderzoeksvraag - mogelijke verklaringen voor de toename van jeugdgeweld

Over mogelijke oorzaken van de geconstateerde toename kan - zoals gezegd - slechts in speculatieve termen worden gesproken. De invloed van genetische of biologische factoren op de ontwikkeling van de totale geweldscriminaliteit zal vermoedelijk marginaal zijn. Anders is het wellicht gesteld met risicofactoren die zich op het gezinsniveau doen gelden. Vooral de factoren die samenhangen met een 'instabiele of conflictueuze thuissituatie' geven te denken. Steeds meer kinderen lijken te moeten opgroeien in een dergelijke situatie.

Belangrijke veroorzaker van geweld op scholen is misschien een gebrek aan orde en discipline. Overigens vrezen wij dat risicofactoren die zich voordoen *buiten* de school voor het verklaren van het toenemend jeugdgeweld minstens zoveel gewicht in de schaal leggen. We denken dan vooral aan het uitgaansgedrag van jongeren en de daarmee gepaard gaande alcoholconsumptie. Ook de invloed van veelvuldige blootstelling aan mediageweld en het (veelvuldig) spelen van gewelddadige spellen op de computer moet naar onze mening niet worden onderschat.

Waar we ten slotte op wijzen, is de situatie waarin allochtone jongeren verkeren. Maar al te vaak zal een problematische thuissituatie leiden tot slechte schoolprestaties, werkloosheid, een geringe integratie in de Nederlandse samenleving, met uiteindelijk een bewuste keus voor een criminele, en daarmee een gewelddadige, levenswandel. Aangezien uit onderzoek blijkt dat allochtonen meer dan Nederlanders te maken hebben (gehad) met *vroeg*e risicofactoren, kunnen we ervan uitgaan dat juist voor geweldplegers van allochtone herkomst de prognose met betrekking tot een terugkeer naar het rechte pad relatief ongunstig is.

Al met al lijkt veel 'risico' te zijn gelegen in de afwezigheid van vertrouwenwekkende en gerespecteerde gezagsfiguren in de respectievelijke omgevingen waarin het opgroeiende kind verkeert. Niet alleen in gezinnen en op scholen maar ook in het publieke domein is er in de loop der tijd op diverse plaatsen een

gezagsvacuüm ontstaan. Juist opgroeiende jeugdigen echter hebben behoefte aan volwassen rolmodellen, en naarmate aan die behoefte eerder in het leven van een jongere minder was voldaan, zal het ontbreken daarvan des te meer als een gemis worden ervaren.

Beleidsaanbevelingen

Een beleidsaanbeveling die vooraf dient te gaan aan alle andere, betreft de registratie van (gewelds) delicten door de politie. Het minste dat men doen kan, is te streven naar volledigheid en uniformiteit in de registratie van verdachten en delicten. Pas wanneer de door de politie gehanteerde registratiesystemen meer aan deze eigenschappen voldoen, zullen op basis daarvan ook betrouwbare landelijke overzichten kunnen worden gegenereerd.

Voor de repressie van geweldscriminaliteit zijn politie en justitie de eerst aangewezen instanties. Hun invloed op daders zal echter vaak slechts marginaal kunnen zijn omdat er in veel gevallen al een te lange voorgeschiedenis van blootstelling aan risicofactoren is. Veel meer dan van repressie valt er te verwachten van preventie.

Preventie van geweld op een strikt individueel (genetisch, biologisch) niveau is moeilijk en vaak ook ethisch ongewenst. Het manipuleren van biosociale factoren vergt eveneens een ethische toets, maar zal maatschappelijk gezien op minder weerstanden stuiten.

Ook op het gezinsniveau heeft men nog te maken met een ethisch aspect, met de vraag namelijk in hoeverre men van overheidswege mag interveniëren in gezinnen waar in strafrechtelijke zin (nog) niets aan de hand is. Onze onderzoeksresultaten doen vermoeden dat het geven van opvoedingsondersteuning veel kan bijdragen aan het voorkomen van geweldscriminaliteit. In het zogeheten CRIEM-rapport (waarbij CRIEM staat voor 'riminaliteit in relatie tot de integratie van etnische minderheden') stelt het kabinet ten aanzien van allochtone jongeren drie beleidssporen voor. 1 daarvan is gericht op de voorschoolse jeugd; ook in dit verband wordt gewezen op het grote belang van opvoedingsondersteuning.

De beste kansen voor preventie via het onderwijs lijken te zijn gelegen in het basisonderwijs. Het aanpakken van spijbelen en pestgedrag juist op dit niveau zal ontsporingen op latere leeftijd kunnen helpen voorkomen. Mocht het aanstellen van 'schoolassistenten' op middelbare scholen effectief blijken te zijn, dan kan permanente invoering worden overwogen. Daarnaast kan worden gedacht aan een actiever mentorschap van leraren. Het tweede beleidsspoor dat in het CRIEM-rapport wordt voorgesteld, richt zich op de ongewenstheid van een voortijdig (ongediplomeerd) schoolverlaten in het voortgezet onderwijs.

Ook op een breed maatschappelijk niveau is het zaak, de blootstelling aan risicofactoren terug te dringen. Belangrijk is onder meer het ontmoedigen van overmatig alcoholgebruik, het opzetten van activiteiten waardoor de behoefte van jongeren om zichzelf te bewijzen in positieve banen wordt geleid, het bieden van meer perspectieven aan allochtone jongeren, enzovoort.

Optimaal lijkt een aanpak waarin diverse preventie-activiteiten op elk van de reeds beschreven niveaus tegelijkertijd en in samenhang met elkaar worden ontplooid. In diverse publicaties is al voor een dergelijke integrale aanpak gepleit. In het CRIEM-rapport wordt benadrukt dat (juist) ten aanzien van allochtone jongeren de afstemming van repressief en preventief beleid van groot belang is (het eerste beleidsspoor). Volgens ons zouden de samenwerkende instanties moeten proberen de risicojongeren

telkens een slag voor te zijn, door hen op tijd de nodige
- aanvullende of vervangende - gezagsfiguren te bieden die niet alleen hun gezag doen gelden, maar die tevens respect afdwingen. In verschillende steden worden inmiddels initiatieven in de richting van een integrale aanpak ontplooid, en ook van overheidswege zijn diverse integrale 'plannen van aanpak' gelanceerd.

Op grond van de resultaten van dit onderzoek is de veronderstelling gerechtvaardigd dat al deze acties en plannen meer effect zullen sorteren indien prioriteit wordt gegeven aan het wegnemen van risicofactoren die zich voordoen vroeg in het leven van opgroeiende kinderen.

[Return to Home](#)

Anti-Semitism Worldwide 1997/8

NETHERLANDS

Holland's extreme right parties suffered a major defeat in the March 1998 local elections, gaining only two seats. The number of anti-Semitic incidents in 1997 rose in comparison with the previous year. Most were manifested in threats and abusive behavior. Many more incidents were reported in the workplace than in previous years. An important watershed in the struggle against Holocaust denial in 1997 was the Supreme Court's confirmation of the May 1996 conviction by a lower court of the Belgian Holocaust denier Siegfried Verbeke.

THE JEWISH COMMUNITY

An estimated 30,000 Jews live in the Netherlands today out of some 15.5 million inhabitants. The great majority live in the Amsterdam area. There are two other major communities in the environs of the Hague and in Rotterdam. Dutch Jewry is represented by three councils, based on affiliation: the Netherlands Israelitish Kergenootta, the Verbond van Liberal Religieuze Joden and the Portugees-Israelitisch Kergenootschap. The community publishes a weekly, Nieuw Israelitisch Weekblad.

EXTREMIST ORGANIZATIONS AND HATE GROUPS

Extreme Right Political Parties Holland's extreme right parties were practically wiped off the political map when they gained only two seats in the March 1998 local elections: one seat went to the Centrum Democrates (CD) in Schiedam (near Rotterdam) and one to the Dutch Bloc in Utrecht. The CD lost 76 of the 77 seats it won in the 1994 elections. These seats were not always occupied and some of the seats were lost when members switched parties or started their own faction. The Centrum Party (CP'86) contested the election unsuccessfully, after gaining nine seats in 1994. CP'86, whose motto is "One people, one fatherland," is considered the most radical party of the extreme right. A study conducted by Willem Poppe of the Institute for Criminology, Utrecht University, showed that most support for CP'86 came from young people who regularly went to rave-ups. The hard core wore bomber jackets emblazoned with Dutch flags, screamed slogans such as "White Power" and gave the Hitler salute. According to CP'86 official sources, the party was planning to set up a branch in Belgium. Other small ultra-right parties that failed to win seats in the election were the Netherlands Bloc, and the Dutch People's Party, led by Joop Glimmerveen, which ran under the name List Glimmerveen.. In 1997 a new extreme right party appeared in the Netherlands -- the People's Nationalist Party of the Netherlands (VNN). This party resulted from the split which occurred the previous year within CP'86. The party, which is led by chairman Willem Jan Beaux and deputy chairman Marc de Boer, seeks unification between the Netherlands and Flanders (Belgium). The VNN first came to public notice when in October twenty members forced their way into a tent site for unprocessed asylum seekers. They shouted slogans such as "Illegals out" and nailed leaflets to trees urging illegal immigrants to leave the Netherlands. The VNN participated in the municipal elections in six municipalities. Meetings and Rallies of the Extreme Right As in previous years, the most important event for the extreme right was the

commemoration of Hitler's unsuccessful coup d'état on November 9, 1923, which also coincides with the anniversary of Kristallnacht (November 9-10, 1938). A closed meeting was organized, in order to avoid clashes with the police, but the media were invited. Practically all Holland's leading neo-Nazis were present, among them, Jan Teijn and Martin Freling, the CP'86 local council members from Rotterdam, Joop Glimmerveen. Constant Kusters from Arnhem and Eite Homan from Groningen, as well as some German neo-Nazis. The speeches of Glimmerveen and Kusters were regularly interrupted with cries of "Sieg Heil." Visitors also gave the Hitler salute and some wore swastika armbands. Similarly, Dutch neo-Nazis commemorated the tenth anniversary of the death of the Nazi leader Rudolph Hess on August 17. CP'86 leaders Stewart Mordaunt and Freling attended a ceremony in Denmark. Freling called Hess "the greatest man in history," while Mordaunt warned that "blacks will try to destroy us." In Alphen aan den Rijn and Woubrugge (two small towns in the province of South Holland) leaflets were found with a picture of Hess.

ANTI-SEMITIC ACTIVITIES

The number of reported anti-Semitic incidents in 1997 rose in comparison with the previous year. It is noteworthy that the number of incidents at the workplace also increased. Violence, Vandalism, Threats and Abuse Anti-Semitism was manifested mainly in threats and abusive behavior. However, there were also a number of cases of vandalism at memorial sites and Jewish institutions. The text "Never again Auschwitz" at the Auschwitz memorial in Amsterdam was rendered illegible, while, for the second time in three years, on the night of May 4 (May 5 is the Dutch remembrance day for World War II) the war monument in Vught was defaced with eight swastikas, an upside down crucifix and an unfinished text relating to the Klu Klux Klan. Threats and abuse either by mail or phone were received by both Jewish organizations and individuals. The Jewish National Fund of Amsterdam, for example, which regularly places ads in newspapers, was sent a number of these ads daubed with anti-Semitic remarks. The Internet site of this organization was also infiltrated with extremely anti-Semitic remarks, including allusions to the gas chambers. A fax sent to the Jewish weekly Nieuw Israelitische Weekblad claimed that by exploiting the guilt complex of non-Jews, Jews have obtained over 65 billion dollars in aid from Germany. One example of the many cases of abusive behavior toward Jewish individuals was the message left on the answering machine of an elderly Jewish woman: "Dirty Jew. Hitler forgot a few." She also received an anonymous letter daubed with swastikas. In addition, anti-discrimination registration centers as well as the Commission on Equal Treatment (a government commission which fights discrimination) received complaints about anti-Semitic insults. An anti-Semitic remark made by Cardinal Simonis on a TV program of the Evangelic Broadcasting Corporation (a public broadcasting network) evoked outrage in the Netherlands. Simonis spoke of the "little Jew who comes to Jesus and has to choose between eternal life and a thousand guilders and chooses the money." In a letter to the Jewish community newspaper, he offered his apologies, denying that he had meant to denigrate the Jews.

Propaganda and Holocaust Denial Several anti-Semitic brochures and pamphlets were disseminated during the year in various places in the Netherlands. Some were distributed anonymously and others by well-known anti-Semites. In Kootwijkerbroek (a small town in the middle of the Netherlands), P. Van der Meer and W. Oostrum published a brochure full of anti-Semitic allegations against the Jewish people and Israel. F.G. Meulemans from Amsterdam distributed pamphlets containing details of a worldwide conspiracy theory which made Jews responsible for society's ills. The anti-discrimination center in Maastricht received racist and anti-Semitic pamphlets including a registration form for the neo-Nazi organization NSDAP/AO, as well as other pamphlets including one with the symbol of "White Power" and the text "How the Jews invented Hollywood," together with Nazi symbols. In the southern regional daily De Gelderlander an article appeared with the headline "Jew Cash," which shocked many readers. The paper printed a lengthy apology. The phrase

"Jew cash" also appeared in a seamen's paper. In spite of many letters of protest, the editors refused to dissociate themselves from these words. Christian allegations against the Jewish people continued to be distributed by Holocaust denier Lucas Goeree in the province of Drenthe. A typical example was: "Jesus says to the Jews, you cannot hear my word. Your father is the devil and you want to satisfy his desires." There were few reports of Holocaust denial, probably due to strict enforcement of the law against such acts. Consequently, Holocaust denial on the Internet is disseminated via foreign websites. Over the last few years the main distributor of material denying the Holocaust in the Netherlands was Siegfried Verbeke, head of the Antwerp-based Foundation for Free Historical Research. (VHO). However, in 1997 he curtailed his activities in the country due to legal proceedings against him (see below). There was only one complaint of Holocaust denial in 1997, concerning the tract "Jewish Losses and Missing Persons during World War II," sent by the VHO to a journalist working for the largest circulation daily De Telegraaf. Another distributor of Holocaust denial is the widow of Rost van Tonningen, a former leader of the NSB (Dutch National Socialists). On several occasions, Nazi propaganda has been seized from her house, including Holocaust denial brochures such as *Die Auschwitz-l?ge*, written by her friend, the deceased Nazi Thies Christophersen. The judicial authorities and the mayor of Velp say they will act if van Tonningen proceeds with a planned exhibition of Nazi symbols.

ATTITUDES TOWARD THE HOLOCAUST AND THE NAZI ERA

Demonstrations and meetings to commemorate World War II were held once again in 1997, the most important taking place on May 4 and 5 (Dutch Liberation Day). There was also an Auschwitz commemoration ceremony at the end of January. The fact that *Mein Kampf* is being offered for sale in second-hand bookshops, book fairs and book retailers was raised in the parliament. Members of parliament claimed that the book was relatively easy to obtain and estimated that about half of the purchasers were supporters of the extreme right. Justice Minister W. Sorgdrager stated that, in principle, *Mein Kampf* should not be sold and that the police must report such cases. However, certain editions were permitted for sale provided the publisher distanced himself from the contents in the foreword. As in many European countries, the media devoted considerable attention to the subjects of Nazi gold and the Swiss bank deposits of Holocaust victims. In the Netherlands, too, insurance companies and banks were faced with demands to pay out life insurance and deposits. The Dutch government has revived its claim for the return of Dutch gold looted by the Nazis. At the end of 1997, the government decided to hand over to the Jewish community fl 20 million, the equivalent of looted deposits remaining in the Allied countries. A further fl 20 million was granted to people living in Eastern Europe.

RESPONSES TO RACISM AND ANTI-SEMITISM

Court Cases and Legal Proceedings An important step in the fight against Holocaust denial was made on November 25, 1997, when the Supreme Court upheld the May 1996 verdict delivered by a Hague court in the case of Belgian Holocaust denier Siegfried Verbeke. The Hague court had fined Verbeke fl 5,000 and given him a six month suspended sentence. Thus, the Supreme Court laid down a legal precedent in the Netherlands for cases of deliberate denial or minimization of the Holocaust. The Supreme Court judgment is the final step in a process which began in 1992 when the Anne Frank Foundation, the National Bureau for the Struggle Against Racism and CIDI (Israel Information and Documentation Center) initiated legal proceedings against Verbeke (see previous reports). It should be noted, however, that the verdict in the Netherlands has not interrupted Verbeke's activities (see Belgium, Germany). In addition, several other

racists and anti-Semites were prosecuted and convicted. On May 7, for example, a magistrate's court in Dordrecht fined the CD representative on the Dordrecht municipal council, Chiel Koning, fl 2,000 and gave him a two-week suspended jail sentence for distributing racist propaganda. In December, three leading activists, the CD leader in parliament, Hans Janmaat, and former CP'86 members Martin Freling and T. Mudde, were fined and received suspended jail sentences for deliberate incitement to discrimination during a demonstration held on February 24, 1996, in Zwolle. Another important verdict was given by a magistrate's court in Assen (capital of the northern province of Drenthe) in October. The court fined a football supporter for repeatedly yelling "Disgusting Jew" during a football match. A number of cases are still pending against Constant Kusters, including one for discriminatory views expressed in the August and December 1995 issues of JFN'94, News, which he edits. Questions in this connection were raised in the Lower House of parliament, and the justice minister admitted that the charge had been "inadequately dealt with." Public Activity The European Year Against Racism, 1997, attracted more public attention to the struggle than in previous years. The discussion was highlighted in October, when the Supreme Court convicted the CP'86 leadership on charges of membership in a criminal organization. The issue was debated both inside and outside political circles. Following the court verdict, the justice minister stated in parliament that she was investigating the possibility of banning certain political parties. She stated that extreme right violence against local politicians was on the increase. In addition to receiving threatening letters, council members and aldermen had suffered arson and physical and verbal abuse. The governing party, D'66, proposed a bill denying the right to be elected to public office to supporters of extreme right parties who were found guilty of acts of violence. A parliamentary discussion took place concerning the meeting of Dutch neo-Nazis to commemorate Kristallnacht, and the participation of members of the Dutch extreme right in Denmark in ceremonies marking the death of Rudolph Hess. The justice minister announced that the public prosecutor's office in Rotterdam had been asked to open an investigation into possible punishable offenses committed during the meeting in the Netherlands. In regard to the Danish meeting, the public prosecutor is awaiting steps by the Danish authorities before taking any further action. A report entitled Monitor Racism and the Extreme Right appeared for the first time in 1997, published by the Institute for Social Scientific Investigation of Leiden. The report outlines the development of the extreme right in the Netherlands, its method of operation, and governmental measures to prohibit its activities. Public anti-racist activities included the annual anti-racism demonstration on March 21, and a pop festival "Racism - Beat It." A pilot project launched in the Hague in the context of the European Year against Racism sought to award ten schools in this municipality the title of "School without racism." The project was the initiative of young people of the Hague in cooperation with CIDI in the Netherlands and CEJI (European Jewish Information Center), which introduced the World of Difference program, developed in the US by the Anti-Defamation League. At the end of December, a study day was held on Holocaust denial, organized by the Anne Frank Foundation, the Christian-Jewish consultative body and CIDI. The day was officially opened by Justice Minister Sorgdrager. Speakers dealt with various aspects of Holocaust denial and discussed whether a special clause prohibiting Holocaust denial should be included in legislation.

AN OVERVIEW OF DUTCH FOREIGN POLICY 2000

(taken from Chapter 1 of the Foreign Affairs Explanatory Memorandum 2000)

Investing in the international community

It pays to invest in the international community. Dutch foreign policy is idealistic without harbouring illusions. Foreign policy cannot be a blueprint to adhere to rigidly. It is a mix of goals, resources and instruments for exerting a positive influence on national and international processes. This chapter provides an overview of the Dutch government's foreign policy objectives and priorities. The chapters that follow will examine individual issues in depth.

The interconnections in our world are growing ever closer and more complex. This increases the influence of multilateral bodies. Dutch policy must respond to growing multilateralism by strengthening its bilateral connections to match. After all, forging winning coalitions means maintaining good relations with many countries. But Dutch support cannot be taken for granted. The Netherlands will not allow itself to be locked into one particular coalition. This government will tackle individual themes or issues together with like-minded countries. That is the best way for the Netherlands to promote its own interests and effectively disseminate its views. In the Latin American and Caribbean region, we will work with the Antilles and Aruba in a mature, forward-looking spirit.

As a medium-sized power, the Netherlands significantly influences the international scene. This influence is amplified by our economic strength, clear mission and reputation as a trustworthy partner. One goal of the second Kok government is to bring new élan to Dutch foreign policy. This strategy is just beginning to bear fruit. The Netherlands has secured the non-permanent seat in the Security Council, where it has initiated debates on both topical issues and more general matters. EU funding is now more fairly distributed as a direct result of the Netherlands' efforts. The implementation of new policy on bilateral aid will sharply increase the effectiveness of Dutch development aid. With this turnaround in its national policy, the Dutch government, partly in cooperation with the United Kingdom, is taking the lead in fundamentally improving development policy throughout Europe.

As globalisation continues, domestic and foreign policy are becoming ever more deeply interwoven. The Ministry of Foreign Affairs is at the heart of Dutch society. It is a priority and a necessity to take into consideration the many links between topics such as poverty reduction, environmental degradation, human rights, trade, and migration. Development cooperation is not separate from foreign policy, but an integral part of it. A coherent, effective foreign policy requires interdepartmental assessment of foreign policy objectives, resources, and instruments.

This has been made possible in part by bringing together all funding for international policy in a single budget, the Homogeneous Budget for International Cooperation. And this approach has proved its effectiveness in practice. It prevents fragmentation. Policy documents, policy memorandums, and budgets for international policy are discussed and agreed on in advance by officials and political leaders from several ministries. Foreign visits by the various Dutch ministers and state secretaries are carefully

harmonised with each other. The Minister of Foreign Affairs coordinates the entire process.

However, an integrated, cohesive, and effective foreign policy cannot be based on good intentions alone. It requires the ongoing efforts of all the ministries involved. After all, working together on one shared foreign policy is what it is all about.

Foreign policy objectives and priorities of the second Kok government

The second Kok government has the following foreign policy objectives: promoting the international legal order and international security, furthering economic and other national interests, and reducing poverty internationally through sustainable development. In pursuing these objectives, the government's priorities include promoting international order, European integration, security, poverty reduction, human rights, the transatlantic relationship, Southeastern Europe, Africa, the Middle East, and consular services.

International order

The Dutch government believes that a balanced international political and economic order helps safeguard international justice and solidarity. The Netherlands believes the UN has an important role to play in helping prevent crises and, when necessary, managing and resolving them. Other global problems also require a focused, integrated approach with the United Nations as forum. However, the poor cohesiveness of some aspects of the United Nations' organisation must be addressed. Chapter 2 will discuss the Netherlands' goals in the Security Council. Undesirable behaviour by states is tempered by international law. International problems often require international solutions. In this connection, the government worked hard to ensure that the International Criminal Court would be located in The Hague, where it will strengthen that city's position as legal capital of the world.

More and more often, the market is one step ahead of politics. An international free market needs good, effective rules. In 2000 the next round of WTO trade negotiations will begin. This round is crucial to the Netherlands' economic interests. The Dutch government will set out to promote the accessibility and transparency of the global free trade system, based on the premise that the poorest developing countries should also be able to reap its rewards.

International order also relates to the free movement of persons. "People and borders" is an increasingly important theme in foreign policy. The Netherlands would like to address asylum and migration on an international level. When people can be accommodated in their own country or region, the Netherlands can use the limited means available to keep its doors open for those truly in need. The government will also invest in a European asylum policy based on mutual solidarity. The Dutch contribution to international order will be discussed in Chapter 2.

European integration

The European Union is in a state of flux. As one of its "founding fathers", the Netherlands is actively involved in the Union's further development. At the same time, the Union magnifies the authority and influence of the Netherlands on the international scene. A strong, revitalised Union is of primary importance to the Netherlands. The government therefore has three ambitions for the Union in the 21st century. First of all, the stimulation of European integration. Second, the swift enlargement of the Union to include a number of Central and Eastern European countries. And third, the development of a coherent and effective policy on Southeastern Europe. Chapter 3 will discuss European integration in greater depth. A detailed position statement will be included in the State of the European Union to be presented to Parliament with this budget on the third Tuesday in September.

Security

Security cannot be taken for granted. A solid defence architecture remains necessary, in Europe as elsewhere. The government sees NATO as the cornerstone of European - and therefore Dutch - security. The European Union needs a credible Common Foreign and Security Policy. A truly European Foreign and Security Policy can only be effective if military intervention is possible when crises arise. Furthermore, it can no longer be assumed that the United States will want to take part in crisis management operations, military or otherwise. For these reasons, it is time the European Union began taking more responsibility for its own security. Within the Atlantic context there is room for a European Security and Defence Identity (ESDI). The time is ripe and the viewpoints of the European partners are swiftly adapting. Chapter 4 will discuss Dutch security policy.

Poverty reduction

1999 saw the fiftieth anniversary of the government's decision to take part in the United Nations' Expanded Program of Technical Assistance with a contribution of NLG 1.5 million. Fifty years later, Dutch commitment to development cooperation has grown into a policy that is helping to set new international standards. Standards not only for underlying principles and implementation, but also for the extent of aid in both relative and absolute terms. The Dutch contribution to development cooperation, as measured using the official criteria of the Development Assistance Committee, is among the highest in the world, putting the Netherlands in a class with only the Scandinavian countries. The United Nations has praised the Netherlands for being one of the few countries willing to provide extra support to aid programmes in Africa. In the next few years, the Netherlands will also make a substantial contribution of approximately NLG 500 million a year. The widespread support that international solidarity enjoys among the people of the Netherlands is the driving force behind this considerable Dutch commitment.

Still, the second Kok government sees no reason for complacency. Development cooperation has reached a crucial point. The belief that it can achieve concrete results if properly implemented is gaining ground internationally. The public support and the momentum are present. Development cooperation does make a difference. It works, but it must be tailored to a constantly changing reality. To that end, the government is developing a cogent policy to increase the efficiency and effectiveness of development cooperation still further. A large part of this policy turnaround will be carried out in 2000. The quality of

socioeconomic policy and of governance in the recipient country is crucial to sustainable development and effective poverty reduction. These two criteria, as well as the extent of poverty, were used in 1999 to select a number of countries with which the Netherlands will maintain structural bilateral aid relations.

Human rights

In the area of human rights, there is still a great deal of work to be done. This does not necessarily involve drawing up still more declarations on more rights. Paper can wait. In fact, this government will do its best to defend and perpetuate fundamental human rights in practice. This policy too must focus on results. The Netherlands, in both bilateral and multilateral contexts, will call upon countries to fulfil their responsibilities. Combating religious persecution will be a particular focus. Chapter 5 will take a closer look at human rights, good governance and democratisation.

The transatlantic relationship

The contrast between Atlanticists and Europeanists has outlived its usefulness. The two sides of the Atlantic Ocean share common roots and convictions. We are related to one another by our history and wedded to one another by conscious choice. Our security remains as ever inextricably tied to the United States. In the past, Europe was merely a security "consumer". Now it is becoming more and more a security partner. On the other hand, the immense volume of commerce between the US and the EU can sometimes lead to contrasting viewpoints. However, the transatlantic relationship has matured and can take a little rough weather.

Southeastern Europe

The consequences of the conflict in Kosovo extend beyond Serbia's borders. The entire region of Southeastern Europe will take years to recover. An integrated approach will also be necessary to procure the economic and political stability the region cannot do without if it is to avoid conflict in the future. The recently signed stability pact, which is supported ideologically and financially by the Dutch government, will buttress and stimulate the process of reconstruction in Southeastern Europe. The Netherlands finds the term "process" more useful than "pact" and is committed to a stabilising process with a major contribution by the region concerned. What Southeastern European countries themselves initiate, the international community will support and facilitate. During the conference on the stability pact in Sarajevo, the Netherlands promised approximately NLG 500 million for the reconstruction of the region over the next few years.

In the light of the stabilising process and the relationship of the Southeastern European region to the European Union, the Netherlands favours a quick start to negotiations on accession to the EU with Romania and Bulgaria. In the strategy laid out in the stability pact, these two countries function as "anchors" for the region. In early 2000 the way should be clear for accession negotiations, which will be carried out at an adjusted pace; this will send out a clear political signal that Europe is indivisible.

Africa

As far as the Dutch government is concerned, Africa continues to occupy an important place on the international agenda. It is a continent where violent conflicts are fought every day, poverty is widespread, entire harvests are destroyed and human rights are trampled. But Africa must not become a lost continent. There are also encouraging developments that deserve our whole-hearted support. The second Kok government sees opportunities to help the people of Africa draw nearer to the ideals of peace, prosperity, and democracy. It is clear that development cooperation alone is not enough. Problems and challenges in Africa as elsewhere demand an integrated foreign policy. It is a continent where development issues, humanitarian crises, the resolution and prevention of conflicts, Dutch economic interests and multilateral cooperation meet. Recently a policy memorandum on Africa was presented to Parliament.

The Middle East

The Middle East is a crucial region in the eyes of the Dutch government for several reasons. For one thing, security and economic interests would be served by a long-term resolution of the serious disputes between the parties involved. True to tradition, the United States plays a leading role in the Middle East peace process. The Dutch government acknowledges this role, but believes Europe too has a part to play. The Oslo and Wye Accords provide a strong framework in which to create opportunities for a comprehensive peace settlement in the Middle East. The election of a new government in Israel holds out new prospects of breaking the deadlock in the peace process. The Netherlands will take full advantage of these opportunities.

Consular services

When the Dutch public comes into contact with the Ministry of Foreign Affairs, it is generally through the Ministry's consular services. The government believes it is important to enhance both the quality and extent of these services, the demand for which increases yearly. This will make it possible to serve the Dutch people better. The government also considers it its duty, in combination with the relevant civil-society organisations, to assist Dutch detainees abroad, who are often held in abominable conditions. The Netherlands supports these people, not their crimes. In addition, the number of asylum seekers is increasing sharply. This has increased the workload of the public servants involved with them. It has been decided to expand the department's capacity. An effective review of the consular services is part of this.

In addition to the priorities listed above, the government will continue its work unabated in other areas of international policy.

The Advisory Council on International Affairs is still in the process of preparing a number of recommendations on the interaction between financial and trade issues, institutional reform as a result of the enlargement of the European Union, and foreign policy on Africa. Recommendations already issued

are included in the Council's annual report. Parliament will receive the Council's programme of the activities along with this explanatory memorandum.

WET PERSOONSREGISTRATIES (tekst per 1 januari 1997)

Wet van 28 december 1988, houdende regels ter bescherming van de persoonlijke levenssfeer in verband met persoonsregistraties, Staatsblad 1988, nr. 665

Wij Beatrix, bij de gratie Gods, Koningin der Nederlanden, Prinses van Oranje-Nassau, enz. enz. enz.

Allen, die deze zullen zien of horen lezen, saluut! doen te weten:

Alzo Wij in overweging genomen hebben, dat ter bescherming van de persoonlijke levenssfeer met betrekking tot persoonsregistraties uitvoering dient te worden gegeven aan artikel 10, tweede en derde lid, van de Grondwet;

Zo is het, dat Wij, de Raad van State gehoord, en met gemeen overleg der Staten-Generaal, hebben goedgevonden en verstaan, gelijk Wij goedvinden en verstaan bij deze:

Paragraaf 1. Inleidende bepalingen

Artikel 1.

In deze wet en de daarop berustende bepalingen wordt verstaan onder:

persoonsgegevens: een gegeven dat herleidbaar is tot een individuele natuurlijke persoon;

persoonsregistratie: een samenhangende verzameling van op verschilden personen betrekking hebbende persoonsgegevens, die langs geautomatiseerde weg wordt gevoerd of met het oog op een doeltreffende raadpleging van die gegevens systematisch is aangelegd;

houder: degene die de zeggenschap heeft over een persoonsregistratie;

bewerker: degene die het geheel of een gedeelte van de apparatuur onder zich heeft, waarmee een persoonsregistratie waarvan hij niet de houder is, wordt gevoerd;

verstrekken van gegevens uit een persoonsregistratie: het bekend maken of ter beschikking stellen van persoonsgegevens, voor zover zulks geheel of grotendeels steunt op gegevens die in die persoonsregistratie zijn opgenomen, of die door verwerking daarvan, al dan niet in verband met andere gegevens, zijn verkregen;

verstrekken van gegevens aan een derde: verstrekken van gegevens uit een persoonsregistratie aan een persoon of instantie buiten de organisatie van de houder, met uitzondering van het verstrekken aan de bewerker of de

geregistreerde;

gedragscode: een besluit van een of meer organisaties, representatief voor de sector waarop het besluit betrekking heeft, houdende in het belang van de bescherming van de persoonlijke levenssfeer gestelde regels of gedane aanbevelingen ten aanzien van persoonsregistraties;

Onze Minister: Onze Minister van Justitie;

Registratiekamer: de Registratiekamer, ingesteld bij artikel 37.

Artikel 2.

1. Deze wet is niet van toepassing op:

a. persoonsregistraties die naar hun aard voor persoonlijk of huiselijk gebruik bestemd zijn;

b. persoonsregistraties die uitsluitend ten dienste staan van de openbare informatievoorziening door pers, radio of televisie;

c. boeken en andere schriftelijke publikaties, alsmede catalogisegen daarvan;

d. persoonsregistraties die berusten in een archiefbewaarplaats als bedoeld in de Archiefwet 1995 (Stb. 276).

2. Deze wet is niet van toepassing op openbare registers die bij de wet zijn ingesteld.

3. Deze wet is niet van toepassing op:

a. persoonsregistraties, gehouden bij of ten behoeve van de inlichtingen- en veiligheidsdiensten, bedoeld in de Wet op de inlichtingen- en veiligheidsdiensten;

b. persoonsregistraties, aangelegd ten dienste van de uitvoering van de politietaak, omschreven in artikel 2 van de Politiewet 1993;

c. persoonsregistraties, gehouden ter uitvoering van de Kieswet.

c. [d.] persoonsregistraties, gehouden ingevolge de Wet gemeentelijke basisadministratie persoonsgegevens (Stb. 1994, 494).

Artikel 3.

Voordrachten tot een algemene maatregel van bestuur krachtens deze wet worden gedaan door Onze Minister. Indien de maatregel mede een van Onze andere ministers aangaat, wordt de voordracht gedaan door Onze Minister en deze andere minister gezamenlijk.

Paragraaf 2. Algemene bepalingen

Artikel 4.

1. Een persoonsregistratie wordt slechts aangelegd voor een bepaald doel waartoe het belang van de houder redelijkerwijs aanleiding geeft.

2. Het doel van een persoonsregistratie mag niet in strijd zijn met de wet, de openbare orde of de goede zeden.

Artikel 5.

1. Een persoonsregistratie bevat slechts persoonsgegevens die rechtmatig zijn verkregen en in overeenstemming zijn met het doel waarvoor de registratie is aangelegd.
2. De houder treft de nodige voorzieningen ter bevordering van de juistheid en de volledigheid van de opgenomen persoonsgegevens.

Artikel 6.

1. De opgenomen persoonsgegevens worden slechts gebruikt voor doeleinden die met het doel van de persoonsregistratie verenigbaar zijn.
2. Binnen de organisatie van de houder worden uit een persoonsregistratie slechts gegevens verstrekt aan personen die ingevolge hun taak die gegevens mogen ontvangen.

Artikel 6a.

1. Een nummer dat ter identificatie van een persoon wettelijk is voorgeschreven, wordt in een persoonsregistratie of bij het verstrekken van gegevens daaruit, slechts gebruikt ter uitvoering van de betrokken wettelijke regeling dan wel ten behoeve van de richtige uitvoering van wettelijke voorschriften waarbij eveneens van dat nummer gebruik kan worden gemaakt. Het nummer kan tevens worden gebruikt in andere gevallen bij of krachtens de wet bepaald.
2. Bij algemene maatregel van bestuur kunnen gevallen worden aangewezen waarin een daarbij aan te wijzen nummer als bedoeld in het eerste lid, kan worden gebruikt. Daarbij kunnen nadere voorschriften worden gegeven over het gebruik van een zodanig nummer.

Artikel 7.

1. Bij algemene maatregel van bestuur worden regels gesteld inzake het opnemen in een persoonsregistratie van persoonsgegevens betreffende iemands godsdienst of levensovertuiging, ras, politieke gezindheid, seksualiteit of intiem levensgedrag, alsmede persoonsgegevens van medische, psychologische, strafrechtelijke of tuchtrechtelijke aard.
2. De regels, bedoeld in het eerste lid, kunnen verschillen naar de soorten van registraties.
3. Uiterlijk op 1 juni 1997 wordt een voorstel van wet tot regeling van het in het eerste lid omschreven onderwerp aan de Staten-Generaal gedaan.
4. Indien de Registratiekamer om advies wordt gevraagd over het ontwerp van een algemene maatregel van bestuur of van een voorstel van wet als bedoeld in dit artikel, geeft de Registratiekamer bij de voorbereiding van dit advies toepassing aan de in de afdeling 3.4 van Algemene wet

bestuursrecht geregelde procedure.

Artikel 8.

De houder draagt zorg voor de nodige voorzieningen van technische en organisatorische aard ter beveiliging van een persoonsregistratie tegen verlies of aantasting van de gegevens en tegen onbevoegde kennisneming, wijziging of verstrekking daarvan. Gelijke plicht rust op de bewerker voor het geheel of het gedeelte van de apparatuur die hij onder zich heeft.

Artikel 9.

1. Indien iemand schade lijdt doordat ten opzichte van hem in strijd wordt gehandeld met de bij of krachtens deze wet gegeven voorschriften ter bescherming van de belangen van geregistreerde of te registreren personen, zijn de volgende leden van toepassing, onverminderd de aanspraken op grond van andere wettelijke regels.

2. Voor nadeel dat niet in vermogensschade bestaat, heeft de benadeelde recht op een naar billijkheid vast te stellen schadevergoeding.

3. De houder van een persoonsregistratie is aansprakelijk voor de schade of het nadeel, voortvloeiende uit het niet-nakomen van de in het eerste lid bedoelde voorschriften in verband met die persoonsregistratie. De bewerker is aansprakelijk voor die schade of dat nadeel, voor zover ontstaan door zijn werkzaamheid.

Artikel 10.

1. Indien de houder of de bewerker van een persoonsregistratie handelt in strijd met het bij of krachtens deze wet bepaalde en een ander daardoor schade lijdt of dreigt te lijden, kan de rechter hem op vordering van die ander zodanig gedrag verbieden en hem bevelen maatregelen te treffen tot herstel van de gevolgen van dat gedrag.

2. Vervallen

Paragraaf 3. Verstrekken van gegevens aan een derde

Artikel 11.

1. Uit een persoonsregistratie worden slechts gegevens aan een derde verstrekt voor zover zulks voortvloeit uit het doel van de registratie, wordt vereist ingevolge een wettelijk voorschrift of geschiedt met toestemming van de geregistreerde.

2. Ten behoeve van wetenschappelijk onderzoek of statistiek dan wel op grond van een dringende en gewichtige reden, kunnen desgevraagd gegevens aan een derde worden verstrekt voor zover de persoonlijke levenssfeer van

de geregistreerden daardoor niet onevenredig wordt geschaad.

3. De verstrekking van gegevens blijft achterwege voor zover uit hoofde van ambt, beroep of wettelijk voorschrift geheimhouding geboden is.

4. Indien de geregistreerde minderjarig is en de leeftijd van zestien jaren nog niet heeft bereikt, of onder curatele is gesteld, is in plaats van de toestemming van de geregistreerde die van zijn wettelijke vertegenwoordiger vereist.

Artikel 12.

1. Indien voor de verstrekking van gegevens uit een persoonsregistratie toestemming van de geregistreerde of van zijn wettelijke vertegenwoordiger is vereist, kan deze slechts schriftelijk worden gegeven.

2. De toestemming kan betrekking hebben op één geval of op een beperkte categorie van gevallen en moet in het geschrift nauwkeurig zijn omschreven.

3. De toestemming kan steeds schriftelijk worden ingetrokken.

Artikel 13.

1. Dit artikel is van toepassing op persoonsregistraties, gehouden of mede gehouden met het oog op deze werkzaamheid door een natuurlijke of rechtspersoon, die bedrijfsmatig persoonsgegevens, anders dan met toestemming van degenen op wie die gegevens betrekking hebben of, in de gevallen bedoeld in artikel 11, vierde lid, van hun wettelijke vertegenwoordigers, verzamelt en aan derden verstrekt.

2. In een persoonsregistratie als bedoeld in het eerste lid, worden slechts persoonsgegevens opgenomen, die op hun juistheid zijn onderzocht.

3. Uit een persoonsregistratie als bedoeld in het eerste lid, worden aan een derde slechts op diens verzoek gegevens verstrekt. Het verzoek vermeldt het doel waarvoor de gevraagde gegevens zullen worden gebruikt.

4. De verstrekking vindt niet plaats, indien:

a. het doel waarvoor de verstrekking is verzocht, in strijd is met de wet, de openbare orde of de goede zeden;

b. de verstrekking redelijkerwijs niet in overeenstemming is met dat doel;

c. door de verstrekking de persoonlijke levenssfeer van de geregistreerde onevenredig zou worden geschaad.

5. De houder van een persoonsregistratie als bedoeld in het eerste lid, is verplicht elke verstrekking van gegevens aan een derde ten minste een jaar nadat de verstrekking geschiedde, vastgelegd te houden, tenzij hij redelijkerwijs kan aannemen dat de geregistreerde daarbij geen belang heeft.

Artikel 14.

1. Uit een persoonsregistratie, niet begrepen onder artikel 13, eerste lid, kunnen ook in andere gevallen dan omschreven in artikel 11, eerste en tweede lid, bestanden persoonsgegevens, alleen bestaande uit naam, adres, woonplaats, postcode en soortgelijke voor communicatie benodigde gegevens, aan een derde worden verstrekt. De artikelen 11, derde lid, en 13, derde en vierde lid, zijn van overeenkomstige toepassing.
2. De houder laat op verzoek van de geregistreerde of, in de gevallen bedoeld in artikel 11, vierde lid, van zijn wettelijke vertegenwoordiger zodanige verstrekking ten aanzien van diens gegevens achterwege.

Paragraaf 4. Gedragscodes en bijzondere voorschriften

Artikel 15.

1. De organisatie of organisaties, die een gedragscode vaststelden, kunnen de Registratiekamer verzoeken te verklaren dat deze code naar haar oordeel in overeenstemming is met het bepaalde bij of krachtens deze wet en voldoet aan redelijkerwijs ter bescherming van de persoonlijke levenssfeer van geregistreerden te stellen eisen.
2. De Kamer neemt het verzoek slechts in behandeling, indien naar haar oordeel de verzoeker of verzoekers representatief zijn voor de betrokken sector, deze sector in de code nauwkeurig is omschreven en de code zorgvuldig, in het bijzonder in genoegzaam overleg met organisaties van belanghebbenden, is voorbereid.
3. Alvorens te beslissen op een verzoek dat zij in behandeling heeft genomen, stelt de Kamer een ieder in de gelegenheid schriftelijk bedenkingen of opmerkingen in te brengen.
4. De verklaring wordt, tezamen met de gedragscode waarop zij betrekking heeft, door de zorg van de Kamer in de Staatscourant geplaatst.
5. De verklaring geldt voor de termijn waarvoor de gedragscode is vastgesteld, doch ten hoogste voor vijf jaar na het tijdstip van de verklaring.
6. De verklaring bindt de rechter niet.
7. Een beslissing op het verzoek is met redenen omkleed. Tegen de beslissing staat geen voorziening van administratieve rechtspraak open.

Artikel 16.

1. Na verloop van drie jaren na de inwerkingtreding van artikel 15 kunnen bij algemene maatregel van bestuur voor een bepaalde sector nadere regels worden gesteld inzake de in de artikelen 4 tot en met 6, 8 en 11 tot en met 14 geregelde onderwerpen.
2. De Registratiekamer geeft in haar jaarverslag aan in hoeverre naar

haar oordeel toepassing van het eerste lid wenselijk is.

3. Indien de Registratiekamer om advies wordt gevraagd over het ontwerp van een algemene maatregel van bestuur als bedoeld in het eerste lid, geeft de Registratiekamer bij de voorbereiding van dit advies toepassing aan de in de afdeling 3.4 van Algemene wet bestuursrecht geregelde procedure.

Paragraaf 5. Persoonsregistraties op het gebied van de overheid en het onderwijs, de gezondheidszorg en de maatschappelijke dienstverlening

Artikel 17.

Deze paragraaf is van toepassing op persoonsregistraties van:

- a. het Rijk, provincies, gemeenten en andere openbare lichamen met inbegrip van de daaronder ressorterende diensten, instellingen en bedrijven;
- b. bij algemene maatregel van bestuur aangewezen instellingen die met de uitvoering van publiekrechtelijke taken zijn belast;
- c. bij algemene maatregel van bestuur aangewezen instellingen en voorzieningen voor onderwijs, gezondheidszorg en maatschappelijke dienstverlening.

Artikel 18.

1. Een persoonsregistratie als bedoeld in artikel 17, wordt slechts aangelegd indien dit noodzakelijk is voor een goede vervulling van de taak van de houder.
2. Zodanige persoonsregistraties bevatten slechts persoonsgegevens die voor het doel van de registratie noodzakelijk zijn.
3. Uit deze persoonsregistraties kunnen desgevraagd gegevens worden verstrekt aan personen of instanties met een publiekrechtelijke taak, voor zover zij die gegevens behoeven voor de uitvoering van hun taak en de persoonlijke levenssfeer van de geregistreerden daardoor niet onevenredig wordt geschaad. Artikel 11, derde lid, is van overeenkomstige toepassing.

Artikel 19.

1. Voor een persoonsregistratie als bedoeld in artikel 17, wordt een reglement vastgesteld.
2. Het reglement alsmede de wijziging en intrekking daarvan, wordt openbaar gemaakt en voor een ieder ter inzage gelegd overeenkomstig regels bij algemene maatregel van bestuur te stellen.
3. De houder doet van het feit van de terinzagelegging en de aard van de persoonsregistratie schriftelijk mededeling aan de Registratiekamer onder opgave van zijn naam, adres en woonplaats.

4. De houder geeft binnen vier weken schriftelijk kennis aan de Registratiekamer van iedere wijziging in zijn naam, adres of woonplaats.

Artikel 20.

1. In het reglement moet de werking van de persoonsregistratie zijn beschreven.

2. Het reglement bevat in elk geval een duidelijke regeling van de volgende onderwerpen:

- a. het doel van de registratie;
- b. de categorieën van personen over wie gegevens in de registratie worden opgenomen;
- c. de soorten van gegevens die in de registratie worden opgenomen, en de wijze waarop deze worden verkregen;
- d. de gevallen waarin opgenomen gegevens worden verwijderd;
- e. de categorieën van personen of instanties, waaraan gegevens uit de registratie worden verstrekt;
- f. de soorten van gegevens die aan de onder e bedoelde personen of instanties worden verstrekt;
- g. de rechtstreekse toegang tot de registratie;
- h. eventuele verbanden tussen de registratie en enige andere gegevensverzameling;
- i. de wijze waarop geregistreerde personen of hun wettelijke vertegenwoordigers kennisneming en verbetering van de over hen opgenomen gegevens kunnen verkrijgen;
- j. de wijze waarop geregistreerde personen of hun wettelijke vertegenwoordigers mededeling van verstrekking van hen betreffende gegevens kunnen verkrijgen;
- k. de hoofdlijnen van het beheer van de registratie.

Artikel 21.

De houder, de bewerker en al degenen die verder bij de werking van de persoonsregistratie zijn betrokken, zijn verplicht het overeenkomstig artikel 19, tweede lid, bekendgemaakte reglement na te leven.

Artikel 22.

1. Bij algemene maatregel van bestuur kan worden bepaald dat artikel 19 niet van toepassing is op daarbij aan te geven persoonsregistraties die aan daarbij aan te geven eisen voldoen.

2. Bepalingen als bedoeld in het eerste lid, worden in elk geval gesteld met betrekking tot:

- a. boekhoudingen en financiële administraties;
- b. personeels- en salarisadministraties;
- c. andere administraties dan bedoeld onder a en b, ten dienste van het

- intern beheer van de betrokken organisatie;
- d. administraties van abonnementen;
- e. administraties van leden en begunstigers;
- f. andere persoonsregistraties, voor zover daarin geen andere gegevens zijn opgenomen dan naam, adres, woonplaats, postcode en soortgelijke voor communicatie benodigde gegevens.

Paragraaf 6. Persoonsregistraties op het gebied van bedrijf en beroep en op overige gebieden

Artikel 23.

Deze paragraaf is van toepassing op persoonsregistraties niet begrepen onder artikel 17.

Artikel 24.

1. Een persoonsregistratie waarop deze paragraaf van toepassing is, moet worden aangemeld bij de Registratiekamer.
2. De aanmelding geschiedt door inzending van het formulier dat voor het verrichten van de aanmelding is bestemd. Onze Minister stelt het model van het formulier vast.
3. Bij het formulier worden de bij algemene maatregel van bestuur te bepalen gegevens verstrekt. Deze kunnen slechts betrekking hebben op de onderwerpen als bedoeld in artikel 20, tweede lid. Tevens wordt opgave gedaan van de naam, het adres en de woonplaats van de houder.
4. De aanmelding wordt bekendgemaakt en een afschrift van het formulier wordt voor een ieder ter inzage gelegd overeenkomstig regels bij algemene maatregel van bestuur te stellen.

Artikel 25.

1. De houder van een aangemelde persoonsregistratie geeft binnen vier weken schriftelijk kennis aan de Registratiekamer van iedere wijziging in zijn naam, adres of woonplaats.
2. Bij wijziging of aanvulling van de overige verstrekte gegevens en bij opheffing van de registratie is artikel 24 van overeenkomstige toepassing, met dien verstande dat alleen de wijziging of aanvulling onderscheidenlijk de opheffing behoeft te worden aangemeld.

Artikel 26.

De houder, de bewerker en al degenen die verder bij de werking van de persoonsregistratie zijn betrokken, zijn verplicht ten aanzien daarvan te handelen overeenkomstig de bij de aanmelding verstrekte gegevens.

Artikel 27.

Bij algemene maatregel van bestuur kan worden bepaald dat de artikelen 24 en 25 niet van toepassing zijn op daarbij aan te geven persoonsregistraties die aan daarbij aan te geven eisen voldoen. Artikel 22, tweede lid, is van overeenkomstige toepassing.

Paragraaf 7. Rechten van de belanghebbende op kennisneming en verbetering

Artikel 28.

1. De houder van een persoonsregistratie deelt een ieder over wie voor de eerste keer persoonsgegevens in de registratie worden opgenomen binnen vier weken schriftelijk mede dat dit het geval is. De mededeling bevat een aanduiding van het doel van de registratie, alsmede de naam, het adres en de woonplaats van de houder.
2. De verplichting, bedoeld in het eerste lid, geldt niet:
 - a. indien de betrokkene weet of redelijkerwijs kan weten dat een dergelijke opname heeft plaatsgevonden;
 - b. indien een gewichtig belang van de betrokkene zich tegen het doen van een schriftelijke mededeling verzet;
 - c. voor zover het achterwege laten van de mededeling noodzakelijk is met het oog op de belangen, genoemd in artikel 30.

Artikel 29.

1. De houder deelt een ieder op diens verzoek schriftelijk binnen vier weken mede of hem betreffende persoonsgegevens in de registratie zijn opgenomen.
2. Indien zodanige gegevens in de registratie zijn opgenomen, stelt de houder de verzoeker desverlangd binnen vier weken na ontvangst van het verzoek schriftelijk een volledig overzicht daarvan met inlichtingen over de herkomst ter beschikking.
3. Indien een gewichtig belang van de verzoeker dit eist, voldoet de houder aan een verzoek als bedoeld in dit artikel, in een andere dan schriftelijke vorm, die aan dat belang is aangepast.
4. De houder draagt zorg voor een deugdelijke vaststelling van de identiteit van de verzoeker.
5. De verzoeken, bedoeld in het eerste en tweede lid, worden ten aanzien van minderjarigen die de leeftijd van zestien jaren nog niet hebben bereikt, en ten aanzien van onder curatele gestelden gedaan door hun wettelijke vertegenwoordigers. De betrokken mededeling geschiedt eveneens aan de wettelijke vertegenwoordigers.

Artikel 30.

De houder kan weigeren aan een in artikel 29 bedoeld verzoek te voldoen, voor zover dit noodzakelijk is in het belang van:

- a. de veiligheid van de staat;
- b. de opsporing en vervolging van strafbare feiten;
- c. economische en financiële belangen van de staat en andere openbare lichamen;
- d. inspectie, controle en toezicht door of vanwege overheidsorganen of andere organen met een publiekrechtelijke taak;
- e. gewichtige belangen van anderen dan de verzoeker, de houder daaronder begrepen.

Artikel 31.

1. Degene aan wie overeenkomstig artikel 29 kennis is gegeven van hem betreffende persoonsgegevens, kan de houder schriftelijk verzoeken deze te verbeteren, aan te vullen of te verwijderen, indien deze feitelijk onjuist, voor het doel van de registratie onvolledig of niet ter zake dienend zijn dan wel in strijd met een wettelijk voorschrift in de registratie voorkomen. Het verzoek behelst de aan te brengen wijzigingen.

2. De houder bericht de verzoeker binnen acht weken na ontvangst van het verzoek schriftelijk of dan wel in hoeverre hij daaraan voldoet. Artikel 29, derde, vierde en vijfde lid, is van overeenkomstige toepassing. Een weigering is met redenen omkleed.

3. De houder draagt zorg dat een beslissing tot verbetering, aanvulling of verwijdering zo spoedig mogelijk wordt uitgevoerd.

Artikel 32.

1. De houder deelt een ieder op diens verzoek schriftelijk binnen vier weken mede of hem betreffende gegevens in het jaar voorafgaande aan het verzoek uit de persoonsregistratie aan derden zijn verstrekt.

2. Indien zodanige verstrekking is geschied, doet de houder daarvan desverlangd binnen vier weken na ontvangst van het verzoek in schriftelijke vorm mededeling aan de verzoeker. De houder kan volstaan met een in algemene termen vervatte mededeling betreffende de aard van de verstrekte gegevens en degenen aan wie deze zijn verstrekt, indien de vastlegging daarvan achterwege is gebleven en hij redelijkerwijs mocht aannemen dat het belang van de geregistreerde daardoor niet onevenredig zou worden geschaad.

3. De artikelen 29, derde, vierde en vijfde lid, en 30 zijn van overeenkomstige toepassing.

Artikel 33.

Met betrekking tot persoonsregistraties, uitsluitend voor

wetenschappelijk onderzoek of statistiek aangelegd:

- a. zijn de artikelen 28 tot en met 31 niet van toepassing, indien de uitkomsten waarvoor de persoonsgegevens worden gebruikt, niet meer herleidbaar zijn tot individuele natuurlijke personen;
- b. is artikel 32 niet van toepassing met betrekking tot verstrekking van gegevens aan een derde die deze uitsluitend voor wetenschappelijk onderzoek of statistiek verzamelt, mits de uitkomsten waarvoor deze gegevens worden gebruikt, niet meer herleidbaar zijn tot individuele natuurlijke personen.

Artikel 34.

1. Indien de houder niet aan een verzoek als bedoeld in de artikelen 29, 31 of 32, voldoet dan wel niet in schriftelijke vorm daaraan voldoet, kan de betrokkene zich tot de arrondissementsbank wenden met het schriftelijk verzoek, de houder te bevelen alsnog aan dat verzoek te voldoen dan wel in schriftelijke vorm daaraan te voldoen. Gelijke bevoegdheid heeft de betrokkene, indien hij zich door een mededeling als bedoeld in artikel 32, tweede lid, tweede volzin, in zijn belangen geschaad acht.
2. Het verzoekschrift moet worden ingediend binnen acht weken na ontvangst van het antwoord van de houder. Indien de houder niet binnen de gestelde termijn heeft geantwoord, moet het verzoekschrift worden ingediend binnen acht weken na afloop van die termijn.
3. De betrokkene kan zich ook binnen de in het tweede lid gestelde termijn tot de Registratiekamer wenden met het verzoek te bemiddelen of te adviseren in zijn geschil met de houder. In dat geval kan het verzoekschrift als bedoeld in het eerste lid, nog worden ingediend nadat de betrokkene van de Registratiekamer bericht heeft ontvangen dat zij de behandeling van de zaak heeft gestaakt, doch uiterlijk tot acht weken na dat tijdstip.
4. Over een verzoekschrift kan de rechtbank het advies van de Registratiekamer inwinnen.
5. De rechtbank wijst het verzoek toe, voor zover zij dit gegrond oordeelt.
6. De twaalfde titel van het Eerste Boek van het Wetboek van Burgerlijke Rechtsvordering met uitzondering van artikel 429d, derde lid, treedt voor procedures als bedoeld in het eerste tot en met het vijfde lid, in werking op hetzelfde tijdstip als dit artikel. Artikel 345 van dat wetboek is niet van toepassing.
7. De derde afdeling van de vijfde titel van het Tweede Boek van het Wetboek van Burgerlijke Rechtsvordering is van overeenkomstige toepassing.
8. De griffier zendt afschrift van de uitspraak aan de Registratiekamer.

Artikel 35.

1. De houder, die aan een overeenkomstig artikel 31 gedaan verzoek voldoet of wie dit door de rechter ingevolge artikel 34, vijfde lid, is bevolen, is verplicht om aan degenen aan wie hij naar zijn weten in het jaar voorafgaand aan het verzoek en in de sinds dat verzoek verstreken periode de betrokken gegevens heeft verstrekt, mededeling te doen van de verbetering, aanvulling of verwijdering.
2. De houder doet aan de verzoeker opgave van degenen aan wie hij de mededeling heeft gedaan.
3. Dit artikel geldt niet, indien de verzoeker te kennen heeft gegeven op de mededeling als bedoeld in het eerste lid, geen prijs te stellen.

Artikel 36.

De houder kan voor een bericht als bedoeld in de artikelen 29 en 32, een vergoeding van kosten verlangen, die niet hoger mag zijn dan een bij of krachtens algemene maatregel van bestuur vast te stellen bedrag. De vergoeding wordt teruggegeven in geval van een weigering van een verzoek als bedoeld in die artikelen, dan wel nadat de houder op verlangen van de verzoeker of op bevel van de rechter tot verbetering, aanvulling of verwijdering is overgegaan.

Paragraaf 8. De Registratiekamer

Artikel 37.

1. Er is een Registratiekamer.
2. De Kamer ziet toe op de werking van persoonsregistraties overeenkomstig het bij en krachtens deze wet bepaalde en in het belang van de bescherming van de persoonlijke levenssfeer in het algemeen.
3. De Kamer dient Onze Minister, dan wel in daarvoor in aanmerking komende gevallen Onze Minister en Onze andere ministers die het mede aangaat, gezamenlijk, desgevraagd of uit eigen beweging van advies over de uitvoering van deze wet en andere onderwerpen die daarmee samen hangen.
4. De Kamer vervult overigens de taken, haar bij de wet opgedragen.
5. De Kamer brengt jaarlijks aan Onze Minister een openbaar verslag uit van haar werkzaamheden en bevindingen.

Artikel 38.

1. De Kamer heeft een voorzitter, twee andere leden en een bij koninklijk besluit, op voordracht van Onze Minister, te bepalen aantal plaatsvervangende leden en buitengewone leden.
2. De voorzitter wordt bij koninklijk besluit, op voordracht van Onze Minister, benoemd voor een tijdvak van zes jaar en kan steeds worden

herbenoemd. De andere leden en de plaatsvervangende en buitengewone leden worden bij koninklijk besluit, op voordracht van Onze Minister, benoemd voor een tijdvak van vier jaar. Zij kunnen worden herbenoemd

3. Bij de benoeming van de buitengewone leden wordt spreiding over de onderscheidene sectoren van de maatschappij nagestreefd.

Artikel 39.

1. Aan een lid, plaatsvervangend lid en buitengewoon lid wordt bij koninklijk besluit, op voordracht van Onze Minister, ontslag verleend met ingang van de eerste maand volgend op die waarin hij de leeftijd van vijfenzestig jaar bereikt.

2. Artikel 11 met uitzondering van het bepaalde onder d, 3o, en de artikelen 12 tot en met 13, 13a met uitzondering van het vijfde lid, 13b en 14a tot en met 14c, 14d, eerste en tweede lid, en 14e van de Wet op de rechterlijke organisatie (Stb. 1972, 463) zijn van overeenkomstige toepassing.

3. Bij toepassing van artikel 14d, tweede lid, van de Wet op de rechterlijke organisatie stelt de Hoge Raad de voorzitter van de Kamer in de gelegenheid omtrent een aanhangige klacht schriftelijk of mondeling inlichtingen te verstrekken en van zijn gevoelen daaromtrent blijk te geven.

Artikel 40.

1. De voorzitter en de andere leden genieten een bezolging voor hun werkzaamheden. De plaatsvervangende en buitengewone leden genieten een zittingsgeld. Hun rechtspositie wordt nader geregeld bij algemene maatregel van bestuur. Artikel 3, tweede lid, is niet van toepassing.

2. Tevens genieten zij vergoeding van reis- en verblijfkosten overeenkomstig de bepalingen welke te dien aanzien voor de burgerlijke rijksambtenaren gelden.

3. De voorzitter mag zonder toestemming van Onze Minister geen andere werkzaamheden verrichten waarvoor een beloning wordt genoten.

Artikel 41.

De Kamer heeft een secretariaat, waarvan de ambtenaren door Onze Minister, op voordracht van de voorzitter, worden benoemd, geschorst en ontslagen.

Artikel 42.

1. De voorzitter geeft leiding aan de werkzaamheden van de Kamer en van het secretariaat.

2. Bij koninklijk besluit, op voordracht van Onze Minister, wordt uit de leden een eerste en een tweede plaatsvervangend voorzitter aangewezen.

Artikel 43.

1. De Kamer heeft een Centrale Afdeling, bestaande uit de voorzitter en de twee andere leden. Ieder lid kan worden vervangen door een plaatsvervangend lid.
2. De Centrale Afdeling kan meervoudige en enkelvoudige afdelingen instellen voor de behandeling en afdoening van door haar omschreven aangelegenheden.
3. Een meervoudige afdeling bestaat uit een lid of plaatsvervangend lid als voorzitter en twee buitengewone leden als leden. Een enkelvoudige afdeling bestaat uit een lid of een plaatsvervangend lid.
4. De Centrale Afdeling wijst de leden van de overige afdelingen aan. Zij kan ter vervanging in een afdeling van een lid of plaatsvervangend lid van de Kamer een ander lid of plaatsvervangend lid van de Kamer en ter vervanging in een afdeling van een buitengewoon lid een ander buitengewoon lid aanwijzen.

Artikel 44.

De Centrale Afdeling stelt de in artikel 37, derde lid, bedoelde adviezen en het jaarverslag vast. Zij behandelt voorts de aangelegenheden die zij niet op andere afdelingen heeft ingedeeld.

Artikel 45.

1. Aan de Kamer worden op haar verzoek gegevens uit een persoonsregistratie verstrekt.
2. De houder van een persoonsregistratie en de personen die bij de werking van een persoonsregistratie zijn betrokken, verstrekken desgevorderd de Kamer, de ambtenaren van het secretariaat en andere, door de Kamer daartoe aangewezen personen alle inlichtingen en verlenen hun alle overige medewerking die deze voor de uitoefening van hun taak behoeven.
3. De leden, plaatsvervangende leden en buitengewone leden van de Kamer, de ambtenaren van het secretariaat en andere, door de Kamer daartoe aangewezen personen, hebben toegang tot elke plaats waar zich een persoonsregistratie of een deel daarvan bevindt of waar de registratie toegankelijk is, voor zover dit redelijkerwijs voor de vervulling van hun taak nodig is. Zij zijn bevoegd apparatuur, programtuur, boeken en bescheiden te onderzoeken en zich de werking van apparatuur en programmatuur te doen tonen, voor zover dit redelijkerwijs voor de uitoefening van hun taak nodig is.
4. De ambtenaren van het secretariaat en de andere personen, bedoeld in het derde lid, behoeven voor de uitoefening van de in dat lid omschreven bevoegdheden de uitdrukkelijke en bijzondere volmacht van de Kamer,

onverminderd het bepaalde in artikel 2 van de Algemene wet op het binnentreden (Stb. 1994, 572).

5. Indien naar het redelijk oordeel van de Kamer de in dit artikel bedoelde medewerking in onvoldoende mate wordt verleend, kunnen op kosten van de nalatige de nodige maatregelen worden getroffen.

6. Geen beroep is mogelijk op een geheimhoudingsplicht, voor zover inlichtingen of medewerking wordt verlangd in verband met de eigen betrokkenheid bij de werking van een persoonsregistratie.

Artikel 46.

1. De Kamer kan ambtshalve of op verzoek van een belanghebbende of van een rechtspersoon die ingevolge zijn statuten de belangen behartigt van de personen die door het gedrag van de houder of de bewerker schade lijden of dreigen te lijden een onderzoek instellen naar de wijze waarop ten aanzien van een persoonsregistratie toepassing wordt gegeven aan het bij en krachtens deze wet bepaalde.

2. In geval van een onderzoek, ingesteld op verzoek van een belanghebbende, doet de Kamer aan deze mededeling van haar bevindingen, tenzij zodanige mededeling onverenigbaar is met het doel van de registratie of de aard van de persoonsgegevens, dan wel gewichtige belangen van anderen dan de verzoeker, de houder daaronder begrepen, daardoor onevenredig zouden worden geschaad. Indien zij mededeling van haar bevindingen achterwege laat, zendt zij de belanghebbende zodanig bericht als haar geraden voorkomt.

3. De Kamer kan, indien haar bevindingen daartoe aanleiding geven, aan de houder van de persoonsregistratie een aanbeveling doen. Zij gaat daartoe niet over dan na de houder in de gelegenheid te hebben gesteld te worden gehoord.

4. Tegen een afwijzing van een verzoek als bedoeld in het eerste lid, een mededeling of bericht, als bedoeld in het tweede lid, en een aanbeveling als bedoeld in het derde lid, staat geen voorziening van administratieve rechtspraak open.

Paragraaf 9. Internationale aspecten

Artikel 47.

1. Deze wet is mede van toepassing op zich niet in Nederland bevindende persoonsregistraties van een in Nederland gevestigde houder, voor zover deze persoonsgegevens bevatten van in Nederland gevestigde personen.

2. Onze Minister kan, de Registratiekamer gehoord, ontheffing verlenen van bij of krachtens deze wet gestelde bepalingen voor een persoonsregistratie als bedoeld in het eerste lid, indien de voor die registratie geldende wetgeving van het land waar de registratie zich

bevindt een gelijkwaardige bescherming biedt voor de persoonlijke levenssfeer van de geregistreerden.

Artikel 48.

Onze Minister kan, de Registratiekamer gehoord, voor persoonsregistraties waarvan de houder niet in Nederland is gevestigd, ontheffing verlenen van bij of krachtens deze wet gestelde bepalingen, indien de bescherming van de persoonlijke levenssfeer van de geregistreerden met betrekking tot die registratie voldoende is gewaarborgd.

Artikel 49.

1. Degene die vanuit Nederland toegang heeft tot een zich buiten Nederland bevindende persoonsregistratie waarop deze wet niet van toepassing is, is verplicht de nodige voorzieningen te treffen voor de beveiliging van die toegang en van de daardoor verkregen persoonsgegevens.

2. Het is verboden vanuit Nederland gegevens te verstrekken aan of te betrekken van een zich elders bevindende persoonsregistratie waarop deze wet niet van toepassing is, voor zover bij algemene maatregel van bestuur is verklaard dat door zodanig verstrekken of betrekken de persoonlijke levenssfeer van de betrokken personen ernstig kan worden benadeeld.

Paragraaf 10. Strafbepalingen

Artikel 50.

1. Met geldboete van de tweede categorie wordt gestraft:

- a. degene die een persoonsregistratie in werking heeft ten aanzien waarvan het bij of krachtens de artikelen 19, 24 of 25 bepaalde niet is nageleefd;
- b. degene die als bewerker optreedt van een persoonsregistratie als bedoeld onder a;
- c. degene die handelt in strijd met het bij en krachtens artikel 49, tweede lid, bepaalde.

2. Degene die een feit als omschreven in het eerste lid, opzettelijk begaat, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

3. De in het eerste lid strafbaar gestelde feiten zijn overtredingen. De in het tweede lid strafbaar gestelde feiten zijn misdrijven.

4. Met de opsporing van de in dit artikel omschreven strafbare feiten zijn behalve de bij of krachtens artikel 141 van het Wetboek van Strafvordering aangewezen ambtenaren belast de door Onze Minister daartoe aangewezen ambtenaren van het secretariaat van de Registratiekamer.

Paragraaf 11. Overgangs- en slotbepalingen

Artikel 51. Vervallen

Artikel 52. Wijziging andere regelgeving

Artikel 53. Wijziging andere regelgeving.

Artikel 54.

1. Deze wet treedt, met uitzondering van de paragrafen 5, 6 en 10 in werking op een bij koninklijk besluit te bepalen tijdstip, dat niet later kan worden gesteld dan zes maanden na de afkondiging van deze wet.
2. De paragrafen 5, 6 en 10 treden in werking op een bij koninklijk besluit te bepalen tijdstip, dat niet later kan worden gesteld dan een jaar na de afkondiging van deze wet.
3. Ten aanzien van een persoonsregistratie, bestaande op het in het vorig lid omschreven tijdstip, blijven de paragrafen 5, 6 en 10 gedurende zes maanden na dat tijdstip buiten toepassing.
4. Bij algemene maatregel van bestuur kan worden bepaald dat deze wet niet van toepassing is op bij die maatregel aangewezen persoonsretraties die bij of krachtens de wet zijn ingesteld en bestaan op het in het eerste lid omschreven tijdstip. Zodanige maatregel wordt slechts vastgesteld, indien naar Ons oordeel met het oog op de invoering van deze wet een nadere voorziening bij de wet ten aanzien van die persoonsregistraties is vereist. Behoudens eerdere intrekking vervalt de maatregel drie jaren na zijn inwerkingtreding, tenzij voordien een voorstel van wet tot een voorziening als in de vorige volzin bedoeld, aan de Staten-Generaal is gedaan.
5. Ten aanzien van de algemene maatregel van bestuur, bedoeld in het vorige lid, en, voor zover deze wordt vastgesteld voor het in het eerste lid omschreven tijdstip, de algemene maatregel van bestuur, bedoeld in artikel 36, is artikel 3, tweede lid, niet van toepassing.
6. Artikel 28 is van overeenkomstige toepassing op persoonsgegevens die op het in het eerste lid omschreven tijdstip reeds in een persoonsregistratie zijn opgenomen, met dien verstande dat de houder ten aanzien van die gegevens de vereiste mededeling doet binnen zes maanden na dat tijdstip.

Artikel 55.

Deze wet kan worden aangehaald als: Wet persoonsregistraties.

Lasten en bevelen dat deze in het Staatsblad zal worden geplaatst en dat

alle ministeries, autoriteiten, colleges en ambtenaren wie zulks aangaat, aan de nauwkeurige uitvoering de hand zullen houden.

Gegeven te 's-Gravenhage, 28 december 1988

Uitgegeven de vijfde januari 1989
De Minister van Justitie,
F. Korthals Altes

Bijzonderheden

Op grond van de Europese richtlijn zal de Wet persoonsregistraties in oktober 1998 vervangen worden door de Wet bescherming persoonsgegevens.

Wet politieregisters

Wet van 21 juni 1990, houdende regels ter bescherming van de persoonlijke levenssfeer in verband met politieregisters (Wet politieregisters),
Stb. 1990, 414 (tekst van de wet per 1 januari 1998)
inwerkingtreding en wijzigingen

Paragraaf 1. Inleidende bepalingen

Artikel 1

In deze wet en de daarop berustende bepalingen wordt verstaan onder:

- a. Onze Ministers: Onze Ministers van Justitie en van Binnenlandse Zaken gezamenlijk;
- b. politietaak: de taak van de politie, omschreven in artikel 2 van de Politiewet 1993;
- c. politieregisters of register: een persoonsregistratie als bedoeld in de Wet persoonsregistraties (Stb. 1988, 665), aangelegd ten dienste van de uitvoering van de politietaak;
- d. koppeling: het treffen van technische of organisatorische voorzieningen, waardoor verschillende

verzamelingen van persoonsgegevens

systematisch met elkaar kunnen worden vergeleken;

e. antecedenten: bij algemene maatregel van bestuur te omschrijven persoonsgegevens betreffende de toepassing van het strafrecht of de

strafvordering;

f. beheerder met betrekking tot een register:

1e. bij een regionaal politiekorps: de ingevolge de Politiewet als korpsbeheerder aangewezen burgemeester;

2e. bij het Korps landelijke politiediensten: Onze Minister van Justitie;

3e. bij de bijzondere ambtenaren van politie, bedoeld in artikel 43 van de Politiewet 1993: Onze Minister van Justitie;

4e. bij de Koninklijke marechaussee: Onze Minister van Defensie;

5e. gemeenschappelijk aan twee of meer politiekorpsen:

de beheerder van het politiekorps die is belast met de feitelijke zorg voor het goed functioneren van dat register;

6e. mede gemeenschappelijk aan de Koninklijke marechaussee: het door Onze Ministers in overeenstemming met Onze Minister van Defensie

aan te wijzen gezag;

g. reglement: het reglement, bedoeld in artikel 9;

h. verstrekken van gegevens uit een politieregister: het bekend maken of ter beschikking stellen van persoonsgegevens, voor zover zulks

geheel of grotendeels steunt op gegevens die in dat politieregister zijn opgenomen, of die door verwerking daarvan, al dan niet in verband met

andere gegevens, zijn verkregen;

i. persoonsgegeven en Registratiekamer of Kamer: hetgeen daaronder wordt verstaan in de Wet persoonsregistraties.

Artikel 2

Deze wet is niet van toepassing op verzamelingen van persoonsgegevens

a. die zijn aangelegd voor de uitvoering van de taken ten dienste van de justitie, bedoeld in artikel 1, eerste lid, onder g, onderdelen 1 en 2, van

de Politiewet 1993;

b. die naar hun aard voor persoonlijk gebruik zijn bestemd.

Artikel 3

Voordrachten tot een algemene maatregel van bestuur krachtens deze wet worden gedaan door Onze Ministers.

Paragraaf 2. Algemene bepalingen

Artikel 4

1. Het aanleggen van een politieregister vindt slechts plaats voor een bepaald doel en voor zover dit noodzakelijk is voor een goede uitvoering

van de politietaak.

2. Het bevat slechts persoonsgegevens die rechtmatig zijn verkregen en die noodzakelijk zijn voor het doel waarvoor het is aangelegd.

3. De beheerder treft de nodige voorzieningen ter bevordering van de juistheid en de volledigheid van de opgenomen persoonsgegevens.

Artikel 5

1. Registratie van personen wegens hun godsdienst of levensovertuiging, ras, politieke gezindheid, seksualiteit, intiem levensgedrag, of op

grond van medische of psychologische kenmerken, vindt niet plaats.

2. Opneming in een register van persoonsgegevens die betrekking hebben op de in het eerste lid genoemde kenmerken, vindt slechts plaats in

aanvulling op andere persoonsgegevens en voor zover dit voor het doel van het register onvermijdelijk is. Bij algemene maatregel van bestuur

kunnen daaromtrent nadere regels worden gesteld.

3. Over bepalingen in een reglement omtrent de opneming van persoonsgegevens bedoeld in het tweede lid, wordt de Registratiekamer vooraf gehoord.

Artikel 6

1. Een politieregister kan slechts worden gekoppeld met een ander politieregister of met een andere verzameling van persoonsgegevens indien

dit noodzakelijk is voor een goede uitvoering van de politietaak.

2. Een koppeling als bedoeld in het eerste lid, vindt slechts plaats overeenkomstig het voor het register geldende reglement. Over bepalingen

in een reglement omtrent koppeling wordt de Registratiekamer vooraf gehoord.

3. Bij algemene maatregel van bestuur worden omtrent koppeling nadere regels gesteld ter bescherming van de persoonlijke levenssfeer.

4. Onze Minister van Justitie kan in bijzondere gevallen toestemming geven tot een koppeling, in afwijking van het bepaalde krachtens het

tweede en derde lid, indien dit noodzakelijk is voor de opsporing van een misdrijf waardoor de rechtsorde ernstig is geschokt. Aan de

toestemming kunnen beperkingen en voorschriften worden verbonden. De Registratiekamer wordt hierover zo mogelijk vooraf gehoord. De

toestemming wordt in ieder geval zo spoedig mogelijk aan de Registratiekamer medegedeeld.

Artikel 7

1. De beheerder draagt zorg voor de juiste werking van het register. Aan hem worden alle inlichtingen verstrekt die hij voor dit doel nodig heeft.

2. Hij draagt zorg voor de nodige voorzieningen van technische en organisatorische aard ter beveiliging van het register tegen verlies of

aantasting van de gegevens en tegen onbevoegde kennisneming, wijziging of verstrekking daarvan.

Bij algemene maatregel van bestuur

worden regels gesteld omtrent gevallen waarin het in het kader van technische werkzaamheden noodzakelijk is van gegevens kennis te nemen.

Artikel 8

De artikelen 9 en 10 van de Wet persoonsregistraties zijn van overeenkomstige toepassing met dien verstande dat de beheerder voor de toepassing van deze artikelen wordt aangemerkt als de houder.

Paragraaf 3. Het reglement

Artikel 9

1. De beheerder van een politieregister stelt voor het register een reglement vast.
2. De vaststelling geschiedt na overleg met het gezag dat verantwoordelijk is voor de uitvoering van de politietaak ten dienste waarvan het register wordt aangelegd.
3. Het reglement wordt bekendgemaakt en voor een ieder ter inzage gelegd overeenkomstig regels bij algemene maatregel van bestuur te stellen.
4. De beheerder zendt een exemplaar van het reglement aan de Registratiekamer.
5. Het register wordt niet in werking gesteld dan nadat aan het eerste tot en met vierde lid is voldaan.
6. Het tweede tot en met vijfde lid is van overeenkomstige toepassing bij wijziging of intrekking van het reglement.

Artikel 10

1. In het reglement moet de werking van het register zijn beschreven.
2. Het reglement bevat ten minste een duidelijke regeling van de volgende onderwerpen:
 - a. het doel van het register;
 - b. de categorieën van personen over wie gegevens worden opgenomen, en de soorten van de over hen op te nemen gegevens;
 - c. de gevallen waarin opgenomen gegevens worden verwijderd;
 - d. de vernietiging, zodra dit mogelijk is, van verwijderde gegevens;
 - e. eventuele verbanden tussen het register en enige andere gegevensverzameling;
 - f. de wijze waarop geregistreerde personen of hun wettelijke vertegenwoordigers kennisneming en verbetering van de over hen opgenomen gegevens kunnen verkrijgen;
 - g. de bevoegdheid tot het invoeren en wijzigen van gegevens in, alsmede het verwijderen van gegevens uit het register;
 - h. de aanwijzing van degene, onder verantwoordelijkheid van de beheerder belast met de zeggenschap over het register, en de omschrijving van de daaruit voortvloeiende bevoegdheden;

i. de aanwijzing van degene of degenen, belast met de dagelijkse leiding van het register.

3. Indien het reglement een politieregister betreft als bedoeld in artikel 1, onder f, sub 4 of sub 5, wordt in het reglement tevens vermeld wie beheerder van dat register is.

4. Het reglement regelt de verstrekking van gegevens uit het register, daaronder begrepen de rechtstreekse toegang met het oog op raadpleging van persoonsgegevens, met inachtneming van het bij of krachtens de artikelen 14 tot en met 19 en 27 bepaalde.

Artikel 11

De beheerder en al degenen die verder bij de werking van het register zijn betrokken, zijn verplicht het reglement dat voor het register geldt, na te leven.

Artikel 12

1. Degene die een model van een reglement heeft vastgesteld, kan de Registratiekamer verzoeken te verklaren dat het model naar haar oordeel in overeenstemming is met het bepaalde bij of krachtens deze wet. Indien de Kamer een zodanige verklaring afgeeft, wordt het model in de Staatscourant geplaatst.

2. Bij vaststelling van een reglement overeenkomstig een model ten aanzien waarvan is voldaan aan het gestelde in het eerste lid, zijn de artikelen 5, derde lid, 6, tweede lid, tweede volzin, 9, vierde lid, en 21, derde lid, tweede volzin, niet van toepassing. De beheerder deelt aan de Kamer mede overeenkomstig welk model het reglement is vastgesteld.

Artikel 13

1. Op registers van tijdelijke aard die zijn aangelegd met het oog op de uitvoering van de politietaak in een bepaald geval, zijn de artikelen 6, tweede lid, en 9, eerste lid, niet van toepassing gedurende een bij algemene maatregel van bestuur te bepalen termijn.

2. Na afloop van deze termijn is artikel 9, vijfde lid, van overeenkomstige toepassing.

3. De beheerder stelt binnen een week nadat is begonnen met het aanleggen van een register als bedoeld in het eerste lid, de Registratiekamer daarvan in kennis, tenzij dit inmiddels is vernietigd.

4. Bij algemene maatregel van bestuur worden nadere regels gesteld ter bescherming van de persoonlijke levenssfeer met betrekking tot registers als bedoeld in het eerste lid.

Paragraaf 4. Het verstrekken van gegevens uit een politieregister

Artikel 14

Uit een politieregister worden gegevens verstrekt aan:

- a. ambtenaren van politie, voor zover zij deze behoeven voor de vervulling van de politietaak en zij niet zijn aangesteld voor de uitvoering van technische, administratieve en andere taken ten dienste van de politie;
- b. krachtens artikel 141, onder c, van het Wetboek van Strafvordering aangewezen ambtenaren van de Koninklijke marechaussee, voor zover zij deze behoeven voor de vervulling van de hun opgedragen politietaak;
- c. andere opsporingsambtenaren in dienst van een publiekrechtelijk lichaam, voor zover zij deze behoeven ter opsporing van strafbare feiten bij het onderzoek waarvan zij zijn betrokken;
- d. andere opsporingsambtenaren dan begrepen onder a, b en c, voor zover zij deze behoeven ter opsporing van strafbare feiten bij het onderzoek waarvan zij zijn betrokken, en mits daartoe in afzonderlijke gevallen door de officier van justitie of in het algemeen door Onze Minister van Justitie voorafgaand toestemming is verleend;
- e. bij of krachtens algemene maatregel van bestuur aan te wijzen andere ambtenaren dan die begrepen onder a en b, voor zover zij deze behoeven ter uitvoering van opdrachten voortvloeiende uit de signalering van personen.

Artikel 15

1. Uit een politieregister worden op hun verzoek gegevens verstrekt aan:

- a. leden van het openbaar ministerie, voor zover zij deze behoeven
 1. in verband met hun gezag en zeggenschap over de politie, dan wel over andere personen of instanties die met de opsporing van strafbare feiten zijn belast, of
 2. voor de uitvoering van andere bij of krachtens wet opgedragen taken;
 - b. de burgemeesters, voor zover zij deze behoeven
 1. voor de afgifte omtrent de verklaringen omtrent het gedrag,
 2. in verband met hun gezag en zeggenschap over de politie, of
 3. in het kader van de handhaving van de openbare orde.
 - c. korpschefs van een regionaal politiekorps, voor zover zij deze behoeven voor de uitoefening van bevoegdheden hun bij of krachtens de Wet wapens en munitie (Stb. 1986, 41) of de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties verleend.
 - d. vervallen.
2. Voorts kunnen uit een politieregister gegevens worden verstrekt voor zover dit voortvloeit uit de Wet op de inlichtingen- en veiligheidsdiensten (Stb. 1987, 635).

Artikel 16

1. Uit een politieregister worden op hun verzoek antecedenten verstrekt aan:

- a. Onze Minister van Justitie;
- b. Nederlandse rechterlijke ambtenaren, met rechtspraak belast, voor zover zij deze behoeven voor de

uitoefening van hun taak;

c. bij algemene maatregel van bestuur aan te wijzen reclasseringswerkers en ambtenaren van de kinderscherming, voor zover zij deze

behoeven voor de uitoefening van hun taak;

d. korpschefs van een regionaal politiekorps, voor zover zij deze behoeven voor de uitoefening van bevoegdheden hun bij of krachtens de

Vreemdelingenwet (Stb. 1965, 40) en de Jachtwet (Stb. 1954, 523) toegekend.

2. Uit een politieregister kunnen op hun verzoek antecedenten worden verstrekt aan benadeelden van strafbare feiten voor zover zij deze

behoeven om in rechte voor hun belangen op te kunnen komen.

Artikel 17

Bij algemene maatregel van bestuur kan ten aanzien van bepaalde categorieën van gegevens de verplichting ingevolge de artikelen 14, 15,

eerste lid, en 16, eerste lid, om deze gegevens te verstrekken, worden beperkt. Daarbij kan verder de bevoegdheid worden beperkt om

ingevolge deze bepalingen uit een politieregister:

a. bepaalde gegevens te verstrekken of

b. aan bepaalde personen gegevens te verstrekken.

Artikel 18

1. Bij algemene maatregel van bestuur worden regels gesteld omtrent de verstrekking van gegevens uit een politieregister - hetzij door

tussenkoms van Interpol, hetzij anderszins - aan politieautoriteiten in andere landen, alsmede omtrent de daarbij te stellen voorwaarden aan

het gebruik daarvan door die politieautoriteiten.

2. Bij algemene maatregel van bestuur worden regels gesteld omtrent de verstrekking van gegevens uit het register van het meldpunt bedoeld

in artikel 2 van de Wet melding ongebruikelijke transacties aan van overheidswege aangewezen niet-politiële instanties in het buitenland die een

vergelijkbare taak hebben als het meldpunt, alsmede omtrent de daarbij te stellen voorwaarden aan het gebruik daarvan door die autoriteiten.

3. Bij algemene maatregel van bestuur kunnen personen of instanties met een publieke taak belast, indien het openbaar belang dit vordert,

worden aangewezen aan wie in bij die algemene maatregel aan te geven gevallen gegevens uit een politieregister mogen worden of dienen te

worden verstrekt. Daarbij kunnen nadere regels omtrent de verstrekking worden gesteld.

4. Bij algemene maatregel van bestuur worden regels gesteld omtrent het verstrekken van gegevens uit een politieregister ten behoeve van

wetenschappelijk onderzoek en statistiek, met dien verstande dat de resultaten daarvan geen persoonsgegevens mogen bevatten.

5. Onze Minister van Justitie of Onze Minister van Binnenlandse Zaken kan in bijzondere gevallen toestemming of opdracht geven tot het

verstrekken van daartoe omschreven gegevens uit een politieregister. Hij doet van de desbetreffende beschikking mededeling aan de Registratiekamer.

Artikel 19

Bij of krachtens algemene maatregel van bestuur worden regels gesteld omtrent de voor verzoeken tot verstrekking van gegevens uit een politieregister en de verstrekking daarvan in acht te nemen procedure en de vastlegging van verstrekkingen uit het register.

Paragraaf 5. Rechten van de belanghebbende op kennisneming en verbetering

Artikel 20

1. De beheerder deelt een ieder op diens verzoek binnen vier weken mede of en zo ja welke deze persoon betreffende persoonsgegevens in een register zijn opgenomen. Hij verstrekt daarbij tevens desgevraagd inlichtingen over de herkomst van de gegevens en over degenen aan wie deze zijn verstrekt. Hij doet daarbij geen mededelingen in schriftelijke vorm.
2. De beheerder draagt zorg voor een deugdelijke vaststelling van de identiteit van de verzoeker.
3. Het verzoek, bedoeld in het eerste lid, wordt ten aanzien van minderjarigen die de leeftijd van zestien jaren nog niet hebben bereikt, en ten aanzien van onder curatele gestelden gedaan door hun wettelijke vertegenwoordigers. De betrokken mededeling geschiedt eveneens aan de wettelijke vertegenwoordigers.
4. vervallen.

Artikel 21

1. Een mededeling als bedoeld in artikel 20, eerste lid, blijft achterwege voor zover dit noodzakelijk is voor de goede uitvoering van de politietaak dan wel indien gewichtige belangen van derden daartoe noodzaken.
2. Het eerste lid is niet van toepassing op antecedenten of op persoonsgegevens die op verzoek van de geregistreerde zijn opgenomen.
3. In het reglement wordt bepaald in hoeverre toepassing wordt gegeven aan het bepaalde bij het eerste lid. Omtrent dergelijke bepalingen wordt de Registratiekamer vooraf gehoord.

Artikel 22

1. Degene aan wie overeenkomstig artikel 20 mededeling is gedaan van hem betreffende persoonsgegevens, kan de beheerder schriftelijk verzoeken deze te verbeteren, aan te vullen of te verwijderen.
2. Artikel 31 van de Wet persoonsregistraties is verder van overeenkomstige toepassing.

Artikel 23

1. Indien de beheerder niet aan een verzoek als bedoeld in de artikelen 20 of 22 voldoet, kan de betrokkene zich tot de arrondissementsrechtbank wenden met het schriftelijk verzoek, de beheerder te bevelen alsnog aan dat verzoek te voldoen.
2. Artikel 34, tweede tot en met achtste lid, van de Wet persoonsregistraties is van overeenkomstige toepassing.

Artikel 24

- De beheerder die in een register persoonsgegevens heeft verbeterd, aangevuld of daaruit heeft verwijderd naar aanleiding van een verzoek van een belanghebbende ingevolge artikel 22, een bevel van de rechter ingevolge artikel 23 of een daartoe strekkende aanbeveling van de Registratiekamer, is verplicht om aan hen aan wie hij naar zijn weten in het jaar voorafgaand aan het verzoek en in de sinds dat verzoek verstreken periode de betrokken gegevens heeft verstrekt, mededeling te doen van deze wijziging.

Artikel 25

1. Een verzoek ingevolge artikel 20, is slechts ontvankelijk na betaling van een kostenvergoeding. Het bedrag van de vergoeding en de wijze van betaling worden geregeld bij algemene maatregel van bestuur.
2. De vergoeding wordt teruggegeven wanneer het verzoek leidt tot verbetering, aanvulling of verwijdering van de persoonsgegevens van de betrokkene, of wanneer het verzoek moet worden geweigerd ingevolge artikel 21, eerste lid.

Paragraaf 6. Bepalingen betreffende het toezicht

Artikel 26

1. De Registratiekamer ziet toe op de werking van de politieregisters overeenkomstig het bij en krachtens deze wet bepaalde en in het belang van de bescherming van de persoonlijke levenssfeer in het algemeen.
2. Voor de behandeling en afdoening van de aangelegenheden voortvloeiend uit het eerste lid, wordt bij de Kamer een meervoudige afdeling ingesteld.
3. Met het toezicht op de naleving van het bij enig wettelijk voorschrift ten aanzien van de werking van politieregisters bepaalde, zijn belast de leden, plaatsvervangende leden en buitengewone leden van de Kamer en de ambtenaren van het secretariaat van de Kamer.

Artikel 27

- De artikelen 37, vijfde lid, 44, 45 en 46 van de Wet persoonsregistraties zijn van overeenkomstige toepassing.

Artikel 28

De korpsbeheerders van een regionaal politiekorps, de korpschef van het Korps landelijke politiediensten en de commandant van de Koninklijke marechaussee, verstrekken de Kamer desgevraagd inlichtingen omtrent bij hun korps of wapen aangelegde andere verzamelingen van persoonsgegevens dan een politieregister. Met betrekking tot deze verzamelingen is artikel 45 van de Wet persoonsregistraties van overeenkomstige toepassing.

Paragraaf 7. Overgangs- en slotbepalingen

Artikel 29

Aan de artikelen 5, derde lid, 7, eerste lid, onder c, 23, eerste lid, onder c, en 30 van de Politiewet wordt de volzin toegevoegd: Regels betreffende een politieregister als bedoeld in artikel 1 van de Wet politieregisters (Stb. 1990, 414), worden niet gegeven dan nadat de Registratiekamer, bedoeld in artikel 37 van de Wet persoonsregistraties (Stb. 1988, 665), is gehoord.

Artikel 30

1. Een ieder die krachtens deze wet de beschikking krijgt over gegevens met betrekking tot een derde, is verplicht tot geheimhouding daarvan, behoudens voor zover een bij of krachtens deze wet gegeven voorschrift mededelingen toelaat, dan wel de uitvoering van de taak met het oog waarop de gegevens zijn verstrekt tot het ter kennis brengen daarvan noodzaakt.

2. Artikel 272, tweede lid, van het Wetboek van Strafrecht is niet van toepassing.

Artikel 31

1. De artikelen 1 tot en met 3 en 26 tot en met 30 van deze wet treden in werking met ingang van de dag na de datum van uitgifte van het Staatsblad waarin zij wordt geplaatst.

2. De overige artikelen van deze wet treden zes maanden later in werking.

Artikel 32

1. Het reglement voor een politieregister bestaande op het in artikel 31, tweede lid, bedoelde tijdstip, wordt binnen zes maanden na dat tijdstip vastgesteld.

2. Binnen dezelfde termijn wordt de inhoud van het register met het reglement en het bij of krachtens deze wet bepaalde in overeenstemming gebracht. Onze Ministers, de Registratiekamer gehoord, kunnen ten aanzien van het register deze termijn eenmaal met dezelfde termijn verlengen.

Artikel 33

Deze wet kan worden aangehaald als: Wet politieregisters.

Besluit politieregisters

Besluit van 14 februari 1991, houdende bepalingen ter uitvoering van de Wet politieregisters (Besluit politieregisters), Stb. 1991, 56. (tekst van het besluit per 1 januari 1998) inwerkingtreding en wijzigingen

Wij Beatrix, bij de gratie Gods, Koningin der Nederlanden, Prinses van Oranje-Nassau, enz. enz. enz. Op de voordracht van Onze Ministers van Justitie, van Binnenlandse Zaken en van Defensie, van 7 januari 1991, Stafafdeling Wetgeving Publiekrecht, nr. 41162/91/6;

Gelet op de artikelen 1, onder e, 3, 5, tweede lid, 6, derde lid, 7, tweede lid, 9, derde lid, 13, eerste en vierde lid, 14, onder e, 16, eerste lid, onder c, 17, 18,

eerste tot en met derde lid, 19 en 25, eerste lid, van de Wet politieregisters (Stb. 1990, 414);

Gehoord de Registratiekamer (advies van 30 november 1990, nr. WGAG/1990/2);

De Raad van State gehoord (advies van 8 februari 1991, nr. WO 3.91.0017);

Gezien het nader rapport van Onze Minister van Justitie, mede namens Onze Ministers van Binnenlandse Zaken en van Defensie a.i., van 12 februari 1991,

Stafafdeling Wetgeving Publiekrecht, nr. 44995/91/6;

Hebben goedgevonden en verstaan:

Paragraaf 1. Inleidende bepalingen

Artikel 1

In dit besluit wordt verstaan onder

a. de wet: de Wet politieregisters;

b. een register van de criminele inlichtingendienst of CID-register: een register dat is aangelegd met het oog op de voorkoming of opsporing van misdrijven die, gezien hun ernst of frequentie dan wel het georganiseerd verband waarin zij worden gepleegd, een ernstige inbreuk op de rechtsorde opleveren;

c. CID-subject: een persoon die als verdachte betrokken is of naar redelijkerwijs kan worden vermoed als verdachte betrokken zal worden bij misdrijven met het oog waarop een CID-register is aangelegd;

d. een grijze veld-register: een register dat is aangelegd met het oog op de vaststelling of de geregistreerde in samenhang met andere gegevens kan worden aangemerkt als CID-subject;

e. het bevoegd gezag:

1E. bij de handhaving van de openbare orde en bij de hulpverlening: de burgemeester;

2E. bij de strafrechtelijke handhaving van de rechtsorde: de officier van justitie;

f. het Meldpunt Ongebruikelijke Transacties: het meldpunt, bedoeld in artikel 2 van de Wet melding ongebruikelijke transacties.(1)

Artikel 2

De volgende persoonsgegevens zijn antecedenten:

a. het feit dat een proces-verbaal is opgemaakt van het verhoor van een bepaald persoon ter zake van een strafbaar feit waarvoor deze als verdachte is gehoord, daaronder begrepen de aanduiding van de aard van dat strafbare feit;(2)

b. het feit of al dan niet een proces-verbaal als bedoeld onder a, is verzonden aan het openbaar ministerie, en zo ja, de datum van verzending en het nummer waarmee het proces-verbaal aldaar kan worden geïdentificeerd en

c. de beslissing van het openbaar ministerie of de rechter over de aangelegenheid waarop het proces-verbaal betrekking heeft.

Paragraaf 2. Algemene bepalingen

Artikel 3

1. Persoonsgegevens die betrekking hebben op de in artikel 5, eerste lid, van de wet genoemde kenmerken, worden slechts in een register opgenomen indien het reglement dit uitdrukkelijk toelaat.

2. Persoonsgegevens met betrekking tot iemands ras, worden slechts opgenomen indien dit onvermijdelijk is

a. met het oog op diens identificatie;

b. voor de juiste beoordeling van een strafbaar feit en zulk een gegeven het slachtoffer of de motieven van de dader van dat feit betreft;

c. met het oog op de verlening van hulp door de politie.

3. Bij de opneming van een gegeven als bedoeld in het eerste lid, wordt tevens een aanduiding omtrent de betrouwbaarheid van het gegeven opgenomen. De aanduiding wordt gegeven door personen die daartoe door de beheerder zijn aangewezen.

Artikel 4

1. Koppeling is slechts toegestaan van een politieregister met een ander politieregister of met een persoonsregistratie als bedoeld in artikel 17, aanhef en onder a, van de Wet persoonsregistraties (Stb.1988, 665).

2. Koppeling van een register als bedoeld in artikel 13, eerste lid, van de wet, met een ander register vindt slechts plaats voor zover dit noodzakelijk is voor het doel waarvoor het eerstbedoelde register is aangelegd.

Artikel 5

1. Van een koppeling wordt een proces-verbaal opgemaakt dat zo nauwkeurig mogelijk vermeldt:

a. het doel van de koppeling;

b. de datum van de koppeling;

c. degen in wiens opdracht de koppeling plaatsvond;

d. de registraties die zijn gekoppeld, alsmede de naam van de beheerder of de houder van die registraties;

e. of de koppeling heeft geleid tot nieuwe persoonsgegevens en zo ja, welke;

f. of de gegevens, bedoeld onder e, zijn opgenomen in een register en zo ja, in welk;

g. eventuele bijzonderheden.

2. De beheerder bewaart het proces-verbaal gedurende twee jaren op zodanige wijze dat dit desgevraagd onmiddellijk aan de daartoe bevoegde organen ter inzage kan worden gegeven.

3. Bij reglement kan van het eerste lid worden afgeweken voor zover dat onvermijdelijk is met het oog op een goede uitvoering van de politietaak.

Artikel 6

1. De personen die technische werkzaamheden verrichten als bedoeld in artikel 7, tweede lid, tweede volzin, van de wet, komen niet als geregistreerde voor in de registers waarvan zij in dat kader kunnen kennisnemen.
2. De beheerder bepaalt vooraf schriftelijk welke personen onder welke voorwaarden de werkzaamheden, bedoeld in het eerste lid, kunnen verrichten.
3. Indien de werkzaamheden langs geautomatiseerde weg worden verricht, worden deze vastgelegd.
4. De gegevens die zijn vastgelegd krachtens het tweede en derde lid, worden gedurende twee jaren bewaard.

Paragraaf 3. Het reglement

Artikel 7(3)

1. Een reglement wordt voor een ieder ter inzage gelegd wanneer het betreft een register bij:
 - a. het regionale politiekorps: op het hoofdbureau van politie en op de bureaus waar het desbetreffende register wordt gevoerd of rechtstreeks toegankelijk is;
 - b. het Korps landelijke politiediensten en de bijzondere ambtenaren van politie: bij de voorlichtingsdienst van het Ministerie van Justitie en het betrokken onderdeel(4);
 - c. de Koninklijke marechaussee: bij de voorlichtingsdienst van het Ministerie van Defensie, bij de Commandant van de Koninklijke marechaussee, bij het Hoofd van de Centrale Recherche Koninklijke marechaussee en op de bureaus van de districts-commandanten;
 - d. het Meldpunt Ongebruikelijke Transacties: bij de voorlichtingsdienst van het Ministerie van Justitie en ter plaatse van de vestiging van het Meldpunt.(5)
2. Indien de beheerder behoort tot het Rijk, maakt hij het reglement bekend in de Staatscourant en doet hij van het reglement of het feit van terinzagelegging mededeling in het Algemeen Politieblad.(6)

3. De beheerder van een regionaal politiekorps maakt het reglement of het feit van de terinzagelegging bekend op een in de gemeente waarvan de korpsbeheerder burgemeester is gebruikelijke wijze.(7)
4. Het reglement met betrekking tot een register mede gemeenschappelijk aan de Koninklijke marechaussee wordt bekendgemaakt en ter inzage gelegd op een bij de beslissing krachtens artikel 1, onder f, onder b, onderdeel 6, van de wet te bepalen wijze.(8)
5. De bekendmaking van het feit van de terinzagelegging van een reglement vermeldt de aard van het register, de datum waarop het reglement is vastgesteld en de beheerder, alsmede de plaatsen waar het reglement voor een ieder ter inzage is gelegd.
6. Ten aanzien van een bekendmaking van een wijziging of de intrekking van een reglement zijn het eerste tot en met vijfde lid van overeenkomstige toepassing.

Paragraaf 4. De tijdelijke registers

Artikel 8

1. Indien wordt besloten tot het aanleggen van een register als bedoeld in artikel 13, eerste lid, van de wet, wordt daarbij vooraf schriftelijk vastgelegd:
 - a. het doel van het register met inbegrip van een nauwkeurige omschrijving van het bepaalde geval, zo mogelijk aangeduid naar tijd en plaats;
 - b. de datum waarop met het aanleggen van het register wordt begonnen.
2. De beheerder stelt binnen een week nadat is begonnen met het aanleggen van dit register, het gezag dat verantwoordelijk is voor de uitvoering van de politietaak ten dienste waarvan het is aangelegd, daarvan in kennis, tenzij het inmiddels is vernietigd.
3. De artikelen 6, tweede lid, en 9, eerste lid, van de wet, alsmede artikel 3, eerste lid, van dit besluit zijn op dit register niet van toepassing gedurende zes maanden na de datum, bedoeld in het eerste lid, onder b. Het bevoegd gezag kan deze termijn één of meer malen verlengen voor de duur van ten hoogste zes maanden, indien het doel waarvoor het register is aangelegd door de bekendmaking en de terinzagelegging van een reglement ernstig in gevaar zou worden gebracht en de beheerder een regeling heeft getroffen met betrekking tot de onderwerpen, bedoeld in artikel 10 van de wet. Van elke beslissing tot verlenging wordt melding gemaakt aan de Registratiekamer.

4. Indien dit uit het doel waarvoor het register is aangelegd, voortvloeit, kan het register worden overgedragen aan een andere beheerder of worden samengevoegd met een ander register als bedoeld in het eerste lid. Het tweede lid is alsdan van overeenkomstige toepassing met betrekking tot het nieuwe gezag.

5. Indien het register wordt overgedragen of samengevoegd, wordt de termijn, bedoeld in het derde lid, niet geschorst. Bestaat er voor het register een reglement, dan wordt dit dienovereenkomstig aangepast. Indien het register wordt overgedragen kan het doel niet worden gewijzigd. Indien het register wordt samengevoegd met een ander register kan het doel slechts worden verruimd met toestemming van

a. de officier van justitie, indien het betreft een register dat is aangelegd met het oog op de uitvoering van een taak onder diens gezag of

b. de burgemeester, indien het betreft een register dat is aangelegd met het oog op de uitvoering van een taak onder diens gezag.

6. Bij dringende noodzakelijkheid kan in plaats van de officier van justitie de hulpofficier van justitie en in plaats van de burgemeester een door hem schriftelijk aangewezen politie-ambtenaar de toestemming als bedoeld in het vijfde lid, geven, onder de verplichting om van de ondernomen handeling onverwijld schriftelijk kennis te geven aan de officier van justitie onderscheidenlijk de burgemeester.

7. De Registratiekamer wordt van een samenvoeging of een overdracht zo spoedig mogelijk in kennis gesteld, onder vermelding van de datum daarvan.

8. Indien het doel met het oog waarop het register is aangelegd, is bereikt, worden de daarin opgenomen persoonsgegevens zo spoedig mogelijk vernietigd voor zover deze geen betekenis hebben voor een eventueel verder strafrechtelijk onderzoek in het bepaalde geval als omschreven krachtens het eerste lid, onder a, dan wel het vijfde of zesde lid.

9. Van de vernietiging als bedoeld in het achtste lid, wordt een proces-verbaal opgemaakt, dat gedurende twee jaren wordt bewaard op zodanige wijze dat dit desgevraagd onmiddellijk aan de daartoe bevoegde organen ter inzage kan worden gegeven.

Paragraaf 5. Het verstrekken van gegevens uit een politieregister

Artikel 9

Aan de volgende ambtenaren worden, in aanvulling op de ambtenaren, bedoeld in artikel 14, onder a en b, van de wet, gegevens uit een register verstrekt voor zover zij deze behoeven ter uitvoering van opdrachten voortvloeiende uit de signalering van personen:

- a. ambtenaren van de dienst van de invoerrechten en accijnzen;
- b. buitengewoon opsporingsambtenaren(9) die als werknemer zijn tewerkgesteld bij de Nederlandse Spoorwegen N.V., voor zover zij deel uitmaken van de Spoorwegpolitie;
- c. ambtenaren van het Ministerie van Buitenlandse Zaken voor zover dit noodzakelijk is met het oog op de uitvoering van opdrachten in het buitenland.(10)

Artikel 10

Antecedenten worden op hun verzoek, voor zover zij deze behoeven voor de uitvoering van hun taak, verstrekt aan:

- a. reclasseringswerkers als bedoeld in artikel 17, eerste lid, van de Reclasseringsregeling 1986 (Stb.1);
- b. ambtenaren die zijn verbonden aan het bureau van een Raad voor de kindbescherming en zijn benoemd krachtens artikel 21, eerste lid, van het Organisatiebesluit raden voor de Kinderbescherming 1982 (Stb. 16).

Artikel 11

1. Een beheerder is bevoegd verstrekking van gegevens uit een politieregister ingevolge de artikelen 14 en 15, eerste lid, onder b tot en met d, van de wet te weigeren indien:

- a. het gegevens betreft omtrent personen die aan de politie informatie hebben verstrekt omtrent door anderen gepleegde of te plegen strafbare feiten;
- b. het gegevens uit een CID-register betreft, tenzij het een verstrekking betreft als bedoeld in artikel 14, tweede lid, van gegevens die noodzakelijk zijn om te kunnen vaststellen of een persoon CID-subject is; of
- c. het gegevens uit een register betreft waarbij, mede gelet op de bijzondere aard van het register, in

geval van verstrekking direct gevaar voor de geregistreerde of voor derden zou zijn te duchten.(11)

2. Verstrekking van gegevens uit een politieregister ingevolge de artikelen 14 en 15, eerste lid, van de wet kan achterwege worden gelaten indien de desbetreffende gegevens slechts konden worden verkregen onder de voorwaarde dat deze alleen voor een bepaald doel zou worden gebruikt en de verstrekking een ander doel zou betreffen. Het bestaan van een dergelijke voorwaarde kan slechts worden aangenomen indien van de voorwaarde blijkt uit een proces-verbaal en van het bestaan van een dergelijke voorwaarde aantekening is gehouden in datzelfde register.

3. Het eerste en tweede lid vinden slechts toepassing indien dit noodzakelijk is voor de goede uitvoering van de politietaak. Bij de verstrekking van de daar bedoelde gegevens kunnen beperkingen aan het gebruik van de gegevens worden opgelegd.(12)

Artikel 12

1. Er worden geen gegevens uit een politieregister verstrekt ingevolge de artikelen 14 en 15, eerste lid, van de wet, indien de verstrekking een ander doel zou betreffen dan waarvoor het register is aangelegd:

a. wanneer het een register betreft als bedoeld in artikel 13, eerste lid, van de wet, tenzij

1E. de verstrekking plaatsvindt ten behoeve van de opsporing van een misdrijf dat een ernstige inbreuk op de rechtsorde oplevert,

2E. de verstrekking plaatsvindt ten behoeve van de opname in een CID-register of in een 'grijze veld'-register of

3E. uit de gegevens zelf een redelijk vermoeden voortvloeit dat een bepaalde persoon een strafbaar feit heeft begaan;

b. wanneer het een 'grijze veld'-register betreft, tenzij de gegevensverstrekking plaatsvindt op grond van het bepaalde in artikel 14, tweede lid, en het slechts gegevens betreft die noodzakelijk zijn om te kunnen vaststellen of een persoon in dat register is opgenomen;(13)

c. wanneer het register uitsluitend is aangelegd met het oog op de uitvoering van de hulpverleningstaak van de politie, tenzij met uitdrukkelijke instemming van de geregistreerde;

d. wanneer het een register bij het Meldpunt Ongebruikelijke Transacties betreft, tenzij:

1E. de verstrekking plaatsvindt ten behoeve van de opneming in een CID-register of in een 'grijze veld'-register;

2E. uit de gegevens zelf een redelijk vermoeden voortvloeit dat een bepaalde persoon een misdrijf heeft begaan;

3E. de gegevensverstrekking plaatsvindt op grond van artikel 15, eerste lid, onder a, van de wet, en deze gegevens redelijkerwijs van belang kunnen zijn ter voorkoming of opsporing van misdrijven als bedoeld in artikel 1, onder b;

4E. de verstrekking plaatsvindt op grond van artikel 13, derde lid, en het gegevens betreft die noodzakelijk zijn ter opsporing van een misdrijf waardoor de rechtsorde in het verzoekende land ernstig is geschokt.(14)

2. Er worden geen gegevens uit een politieregister verstrekt ingevolge de artikelen 14 en 15, eerste lid, van de wet omtrent de uitoefening door de geregistreerde van het recht op kennisneming of verbetering ingevolge de artikelen 20, eerste lid, onderscheidenlijk 22, eerste lid, van de wet.

3. Gegevens die betrekking hebben op de in artikel 5, eerste lid, van de wet genoemde kenmerken, worden slechts verstrekt

a. ingevolge artikel 14 van de wet voor zover dit noodzakelijk is voor de goede uitvoering van de politietaak;

b. ingevolge artikel 15, eerste lid, 16, eerste lid, en krachtens artikel 18 van de wet voor zover dit onvermijdelijk is voor de goede uitvoering van de taak met het oog waarop wordt verstrekt.

4. Bij een verstrekking van gegevens als bedoeld in het derde lid, wordt de daarbij ingevolge artikel 3, derde lid, opgenomen aanduiding omtrent de betrouwbaarheid vermeld.

Artikel 13

1. Uit een politieregister kunnen gegevens worden verstrekt aan politie-autoriteiten in een ander land indien dit noodzakelijk is:

- a. voor de goede uitvoering van de politietaak in Nederland of voor de uitvoering van opdrachten voortvloeiende uit de signalering van personen door Nederlandse autoriteiten;
 - b. ter voorkoming van een ernstig en dreigend gevaar of ter opsporing van een misdrijf waardoor de rechtsorde in dat land ernstig is geschokt of
 - c. voor de goede uitvoering van de politietaak in dat land, op grond van een verzoek met betrekking tot een bepaalde persoon of een bepaald geval.
2. In de grensgebieden kunnen gegevens als bedoeld in het eerste lid, aanhef en onder c, ook zonder een daartoe strekkend verzoek worden verstrekt.
 3. Uit een politieregister bij het Meldpunt Ongebruikelijke Transacties kunnen gegevens worden verstrekt aan van overheidswege aangewezen administratieve of politieke meldpunten in het buitenland die een vergelijkbare taak hebben als het meldpunt. Het zevende lid vindt geen toepassing.
 4. Bij de beoordeling van de vraag of gegevens ingevolge het eerste of derde lid zullen worden verstrekt, wordt rekening gehouden met de mate waarin waarborgen in het andere land aanwezig zijn met betrekking tot een juist gebruik van de verstrekte gegevens en met betrekking tot de bescherming van de persoonlijke levenssfeer.
 5. De gegevens worden steeds verstrekt onder de algemene voorwaarde dat deze slechts zullen worden gebruikt voor het doel waarvoor zij zijn verstrekt. De beheerder kan in bijzondere gevallen op verzoek van de buitenlandse politie-autoriteiten toestemmen in gebruik voor een ander doel voor zover dit noodzakelijk is voor goede uitvoering van de politietaak in dat land.
 6. Gegevens die betrekking hebben op de in artikel 5, eerste lid, van de wet genoemde kenmerken, worden slechts verstrekt indien dit met het oog op een juiste beantwoording van een door een buitenlandse politie-autoriteit gestelde vraag onvermijdelijk is. Daarbij wordt een aanduiding omtrent de betrouwbaarheid van het gegeven vermeld.
 7. De verstrekking vindt plaats door tussenkomst van het Korps landelijke politiediensten.(17) De verstrekking kan echter rechtstreeks plaatsvinden overeenkomstig afspraken met politie-autoriteiten in het buitenland, voor zover met deze afspraken is ingestemd door (18)
 - a. Onze Minister van Justitie, indien het gegevens betreft uit een register dat is aangelegd met het oog op

de uitvoering van een taak onder het gezag van de officier van justitie of

b. Onze Minister van Binnenlandse Zaken, indien het gegevens betreft uit een register dat is aangelegd met het oog op de uitvoering van een taak onder het gezag van de burgemeester.

8. Onverminderd het bepaalde in artikel 552 h van het Wetboek van Strafvordering worden geen gegevens verstrekt:

a. wanneer een vermoeden bestaat dat de gegevens zullen worden gebruikt voor een onderzoek, ingesteld met het oogmerk een verdachte te vervolgen, te straffen, of op andere wijze te treffen in verband met zijn godsdienstige of staatkundige overtuiging, zijn nationaliteit, zijn ras of de groep van de bevolking waartoe hij behoort;

b. voor zover het verstrekken van gegevens zou strekken tot het verlenen van medewerking aan een vervolging of een berechting welke onverenigbaar is met het aan artikel 68 van het Wetboek van Strafrecht en artikel 255, eerste lid, van het Wetboek van Strafvordering ten grondslag liggende beginsel;

c. ten behoeve van een onderzoek naar feiten terzake waarvan de verdachte in Nederland wordt vervolgd;

d. ten behoeve van een onderzoek naar feiten als bedoeld in artikel

552m van het Wetboek van Strafvordering, dan krachtens een overeenkomstig die bepaling verleende machtiging van Onze Minister van Justitie.(19)

9. Indien grond bestaat voor het vermoeden, bedoeld in het achtste lid, onder a, wordt het verzoek aan Onze Minister van Justitie voorgelegd.(20)

10. Het eerste, tweede en vierde tot en met zevende lid(21) is niet van toepassing op de politie-ambtenaar uit een ander land die als contactambtenaar is geplaatst [bij(22),] bij enig politiekorps of bij het Wapen der Koninklijke marechaussee, voor zover met het land door welke hij is gezonden, daarvan afwijkende afspraken zijn gemaakt waarmee Onze Minister van Justitie heeft ingestemd.(23) Aan hem kunnen gegevens worden verstrekt op gelijke voet als aan Nederlandse politie-ambtenaren voor zover in overeenstemming met deze afspraken.

11. Het eerste, tweede en vierde tot en met zevende lid(24) is evenmin van toepassing op de Nederlandse politie-ambtenaar of de ambtenaar van de Koninklijke

marechaussee die als contactambtenaar of anderszins is gezonden naar het buitenland. Aan hem kunnen gegevens worden verstrekt als ware hij in Nederland.

Het eerste, tweede, vierde tot en met zesde alsmede het achtste, negende en twaalfde lid zijn van toepassing bij de verstrekking van de door hen ontvangen gegevens aan politie-autoriteiten in het land waar zij werkzaam zijn.(25)

12. De artikelen 11 en 12 zijn van overeenkomstige toepassing.

Artikel 14(26)

1. Gegevens worden desgevraagd uit een politieregister verstrekt, voorzover zij deze behoeven voor een goede uitvoering van hun taak, aan

a. de personen, anders dan die bedoeld in artikel 14, onder a, van de wet, die bij de politie(27), het Meldpunt Ongebruikelijke Transacties of bij de Centrale Recherche Koninklijke marechaussee werkzaam zijn ten dienste van de uitvoering van de politietaak, voor zover zij daartoe door de desbetreffende beheerder schriftelijk zijn geautoriseerd;(28)

b. de Commissie schadefonds geweldsmisdrijven als bedoeld in artikel 2 van de Wet voorlopige regeling schadefonds geweldsmisdrijven (Stb.1975, 382);

c. de Directeur van de Stichting Centraal Bureau Rijvaardigheidsbewijzen voor zover dit noodzakelijk is met het oog op het onderzoek, bedoeld in de artikelen 101 en 142 van het Reglement rijbewijzen, en het betreft overtreding van artikel 6 of artikel 8 van de Wegenverkeerswet 1994;(29)

d. personen, werkzaam bij het bureau vertrouwensartsen als bedoeld in de Bijlage onder I, onder 4, behorende bij de Wet op de jeugdhulpverlening (Stb. 1989, 360);

e. personen, belast met de uitvoering van de Vreemdelingenwet (Stb. 1965, 40), voor zover het betreft gegevens die noodzakelijk zijn voor de vaststelling van de identiteit van personen;

f. personen die de beheerder heeft benoemd in een commissie die toezicht houdt op de naleving van de gestelde regels bij of krachtens de wet met betrekking tot het register, voor zover het reglement dat bepaalt en Onze Ministers, de Registratiekamer gehoord, met dit reglement hebben ingestemd;

g. de directeurs van de inrichtingen, bedoeld in artikel 6 van de Beginselenwet gevangeniswezen, de

directeuren van de inrichtingen, bedoeld in artikel 37d van het Wetboek van Strafrecht, en de directeuren van de voorzieningen, bedoeld in artikel 65 van de Wet op de jeugdhulpverlening, voor zover zij deze behoeven voor het nemen van beslissingen inzake hetzij de aanstelling of het ontslag van personeel, hetzij voor de toelating tot de inrichting van personen die niet worden ingesloten in de inrichting voor zover dat noodzakelijk is voor de orde of de veiligheid van de inrichting respectievelijk de voorziening;

h. personen die optreden namens een rechtspersoon met volledige rechtsbevoegdheid op ideële grondslag die krachtens zijn doelstelling en blijkens zijn feitelijke werkzaamheden in het bijzonder de belangen van slachtoffers van strafbare feiten of van verkeersongevallen behartigt, voor zover de gegevens betrekking hebben op deze slachtoffers en die rechtspersoon tot het ontvangen van dergelijke gegevens is gemachtigd door de Minister van Justitie, de Registratiekamer gehoord;(30)

i. de Nederlandse Vereniging van Automobiellasseuradeuren, gevestigd te 's Gravenhage, voor zover het betreft gegevens inzake aanrijdingen en

j. personen en instanties met een publieke taak belast, voor zover het betreft gegevens die op hun verzoek met het oog op de signalering van personen zijn opgenomen;

k. Onze Minister van Justitie, voor zover dit noodzakelijk is met het oog op:

1E. de afgifte van een verklaring van geen bezwaar in verband met de oprichting van een naamloze of besloten vennootschap dan wel de wijziging van de statuten daarvan;

2E. de uitoefening van de bevoegdheden krachtens de Wet wapens en munitie of de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties;

l. Onze Minister van Verkeer en Waterstaat, voor zover hij deze behoeft in verband met de hem bij de artikelen 131 tot en met 134 van de Wegenverkeerswet 1994(31) opgedragen taak;

m. de Directeur van de Dienst wegverkeer, voor zover hij deze behoeft in verband met de uitvoering van de taken van de Dienst Wegverkeer;(32)

n. medewerkers van Halt-bureaus, voor zover deze bureaus zijn aangesloten bij de Stichting Halt Nederland, en het gegevens betreft die voor de alternatieve afdoening van strafbare feiten, gepleegd door minderjarigen, noodzakelijk zijn;

- o. Onze Minister van Justitie, voor zover dit in het kader van de beoordeling van een verzoek tot het verkrijgen van het Nederlanderschap op grond van artikel 9, eerste lid, van de Rijkswet op het Nederlanderschap, noodzakelijk is teneinde na te gaan of tegen de betrokkene een uitleveringsverzoek is gedaan;
- p. de burgemeester, voor zover dit in het kader van de beoordeling van een verzoek tot het verkrijgen van het Nederlanderschap op grond van de Rijkswet op het Nederlanderschap, noodzakelijk is;
- q. de burgemeester en de commissaris van de Koning, voor zover dit in het kader van hun adviserende taak, bedoeld in het Reglement op de Orde van de Nederlandse Leeuw en de Orde van Oranje-Nassau noodzakelijk is;
- r. ambtenaren aan wie bevoegdheden zijn toegekend met het oog op het toezicht op de naleving van de regels die zijn gesteld bij of krachtens de Wet milieubeheer, de Wet milieugevaarlijke stoffen, de Bestrijdingsmiddelenwet 1962, de Wet Gevaarlijke Stoffen, de Wet verontreiniging oppervlaktewateren, de Wet inzake de luchtverontreiniging, de Wet chemische afvalstoffen, de Afvalstoffenwet, de Wet bodembescherming en de Meststoffenwet, voor zover het gegevens over overtredingen van deze wetten betreft en zij deze behoeven voor de goede uitoefening hun toezichthoudende bevoegdheden;
- s. de raad voor de kindbescherming, voor zover het de strafrechtelijke uitoefening van zijn taak betreft, alsmede zijn bevoegdheden ter uitvoering van de ondertoezichtstelling van minderjarigen, bedoeld in de artikelen 254 en volgende van Boek I van het Burgerlijk Wetboek en de in het kader daarvan te treffen voorlopige voorzieningen en voor zover het gegevens betreft die uitsluitend zijn vastgelegd met het oog op de hulpverleningstaak van de politie;
- t. het bevoegd gezag, bedoeld in artikel 1, eerste lid, onder k, van het Besluit algemene rechtspositie politie en artikel 1, eerste lid, onder e, van het Besluit rechtspositie vrijwillige politie, voor zover zij deze behoeven voor het verrichten van een antecedentenonderzoek als bedoeld in artikel 8a, eerste en tweede lid, en artikel 8b, eerste lid, van het Besluit algemene rechtspositie politie en artikel 4a, eerste lid, en artikel 4b, eerste lid, van het Besluit rechtspositie vrijwillige politie, of voor het verrichten van een antecedentenonderzoek ten aanzien van personen die op basis van een arbeidsovereenkomst of anderszins werkzaamheden verrichten voor een politiekorps of het Landelijk selectie- en opleidingsinstituut politie. (toegevoegd bij *)

2. Uit een politieregister worden gegevens verstrekt aan het Meldpunt Ongebruikelijke Transacties, voor

zover het die behoeft voor een goede uitvoering van zijn taak.

3. Aan de machtiging, bedoeld in het eerste lid, onder k, kunnen voorschriften en beperkingen worden verbonden.(33)

4. De artikelen 11 en 12 zijn van overeenkomstige toepassing.

Artikel 14a(34)

1. Uit een politieregister kunnen desgevraagd gegevens worden verstrekt, voorzover zij deze behoeven voor een goede uitvoering van hun taak, aan:

a. Onze Minister van Financiën op grond van:

1?. de artikelen 23, tweede lid, onder d, 24, tweede lid, onder d, 26, zesde en zevende lid, 41 en 82 van de Wet toezicht kredietwezen 1992,

2?. artikel 22, eerste en tweede lid, van de Wet toezicht effectenverkeer 1995,

3?. de artikelen 174, vierde lid, onder c, 175, tweede lid, onder d, en 176, zesde lid, onder b, en zevende lid, onder c, van de Wet toezicht verzekeringsbedrijf 1993,

4?. de artikelen 82, tweede lid, onder d, en 84, zesde lid, onder b, en zevende lid, onder c, van de Wet toezicht natura-uitvaartverzekeringsbedrijf,

b. Onze Minister van Financiën, dan wel de rechtspersoon of rechtspersonen waaraan op grond van artikel 40 van de Wet toezicht effectenverkeer 1995 taken en bevoegdheden zijn overgedragen, op grond van de artikelen 7, vierde lid, 11, eerste lid, aanhef en onder a, en zevende lid, 16,

vierde lid, 19, eerste lid, en 20 van die wet,

c. Onze Minister van Financiën, dan wel de rechtspersoon of rechtspersonen waaraan op grond van artikel 29 van de Wet toezicht beleggingsinstellingen taken en bevoegdheden zijn overgedragen, op grond van de artikelen 5, eerste lid, aanhef en onder a, 12, eerste lid, en 15, aanhef en onder e, van die wet,

d. De Nederlandsche Bank N.V. op grond van:

1?. de artikelen 9, eerste lid, onder c en e, 14, onder b, en slot, 15, eerste lid, onder d, 23, tweede lid, onder c, 24, tweede lid, onder c, 26, zesde en zevende lid, 39, 41, 45, eerste lid, en 47, aanhef en onder d, van de Wet toezicht kredietwezen 1992,

2?. de artikelen 3, tweede lid, aanhef en onder a en b, en 6, tweede lid, onder c, aanhef en onder 1e en 2e, van de Wet inzake de wisselkantoren,

e. De Verzekeringskamer op grond van:

1?. de artikelen 29, tweede en vierde lid, 30, 45, zevende lid, 82, derde lid, 148, aanhef en onder b, 174, vierde lid, onder a en b, 175, tweede lid, onder a tot en met c, 176, zesde lid, onder b, en zevende lid, onder a tot en met c, van de Wet toezicht verzekeringsbedrijf 1993,

2?. de artikelen 18, tweede en vierde lid, 19, 23, zevende lid, 60, aanhef en onder b, 82, tweede lid, onder a tot en met c, en 84, zesde lid onder b, en zevende lid, onder a tot en met c, van de Wet toezicht natura-uitvaartverzekeringsbedrijf, voor zover verstrekking van deze gegevens

verenigbaar is met een doeltreffende opsporing en vervolging van strafbare feiten. Verstrekking vindt niet plaats, indien de gegevens onvoldoende betrouwbaar moeten worden geacht als grondslag voor de uitoefening van vorenbedoelde taken.

2. Verstrekking van gegevens als bedoeld in het eerste lid, of van inlichtingen daarover, vindt alleen plaats door, dan wel met bijzondere toestemming van het openbaar ministerie en onder daaraan door het openbaar ministerie te stellen voorwaarden. Die voorwaarden kunnen onder meer betreffen het ter beschikking stellen of doorgeven van die gegevens of inlichtingen daarover aan derden.

3. Ingevolge dit artikel verstrekte gegevens worden niet langer dan gedurende een termijn van zes maanden na datum van verkrijgen bewaard, tenzij met bijzondere toestemming van het openbaar ministerie. Daarbij kunnen nadere voorwaarden worden gesteld.

4. Onze Ministers kunnen nadere regels vaststellen met betrekking tot de verstrekking en bewaring van gegevens als bedoeld in het eerste tot en met het derde lid.

Artikel 15

1. Verstrekking van gegevens uit een politieregister ten behoeve van wetenschappelijk onderzoek en statistiek vindt slechts plaats nadat aan de betrokken onderzoeker daartoe een machtiging is verleend door:
 - a. Onze Minister van Justitie, indien het gegevens betreft uit een register dat is aangelegd met het oog op de uitvoering van een taak onder het gezag van de officier van justitie of
 - b. de burgemeester, indien het gegevens betreft uit een register dat is aangelegd met het oog op de uitvoering van een taak onder het gezag van de burgemeester.
2. De machtiging als bedoeld in het eerste lid, wordt slechts gegeven indien
 - a. het onderzoek een algemeen belang dient;
 - b. de organisatie van de politie niet onnodig wordt belast;
 - c. het onderzoek niet zonder de betrokken gegevens kan worden uitgevoerd en
 - d. de persoonlijke levenssfeer van de geregistreerden niet onevenredig wordt geschaad.
3. Rechtstreekse benadering van geregistreerden door de onderzoeker vindt niet plaats, tenzij dit uitdrukkelijk is toegestaan in de machtiging ingevolge het eerste lid. Deze toestemming kan slechts worden verleend indien rechtstreekse benadering voor het doel van het onderzoek onvermijdelijk is.
4. De beheerder kan een machtiging verlenen tot verstrekking van gegevens uit een politieregister ten behoeve van de interne bedrijfsstatistiek aan personen werkzaam binnen de politie-organisatie, indien de persoonlijke levenssfeer van de geregistreerden daardoor niet onevenredig wordt geschaad.
5. Aan de machtiging als bedoeld in het eerste en vierde lid, kunnen beperkingen worden gesteld en voorschriften worden verbonden.

Paragraaf 6. Het vastleggen van verstrekkingen

Artikel 16

1. In gevallen waarin een verzoek tot verstrekking van gegevens uit een politieregister wordt gedaan en niet aanstonds duidelijk is wie de verzoeker is en of deze gerechtigd is tot de verstrekking, wordt de verstrekking eerst gedaan nadat dit is vastgesteld.
2. Indien niet rechtstreeks langs geautomatiseerde weg gegevens uit een politieregister worden verstrekt, wordt daarvan aantekening gehouden, tenzij overeenkomstig het doel van het register is verstrekt aan personen die blijkens het reglement behoren tot de vaste gebruikers van het register.
3. Van een verstrekking behoeft geen aantekening te worden gehouden ingevolge het tweede lid, indien de verstrekking het resultaat is van een koppeling en ingevolge artikel 5, eerste lid, van de koppeling een proces-verbaal is opgemaakt.
4. Van een verstrekking behoeft geen aantekening te worden gehouden indien dit zich niet verdraagt met het belang van de veiligheid van de staat.

Artikel 17

1. Een gegeven kan rechtstreeks langs geautomatiseerde weg uit een politieregister worden verstrekt aan de personen die daartoe een schriftelijke autorisatie voor een daarbij bepaald omschreven doel van de beheerder hebben gekregen. De autorisatie kan slechts worden verleend aan de ambtenaren, bedoeld in artikel 14, onder a en b, van de wet, alsmede aan de personen, bedoeld in artikel 14, eerste lid, onder a, van dit besluit.
2. De autorisatie kan tijdelijk of voor onbepaalde tijd worden verleend. Daaraan kunnen beperkingen worden gesteld en voorschriften verbonden.
3. Een gegeven kan rechtstreeks langs geautomatiseerde weg uit een politieregister worden verstrekt aan degenen die daartoe gerechtigd zijn met het oog op de uitvoering van opdrachten voortvloeiende uit de signalering van personen.
4. De beheerder treft de nodige voorzieningen van technische en organisatorische aard die er toe strekken te waarborgen dat geen verstrekkingen ingevolge het eerste lid worden gedaan anders dan in overeenstemming met een verleende autorisatie.
5. Van een verstrekking ingevolge het eerste lid wordt in alle gevallen langs geautomatiseerde weg aantekening gehouden.
6. Indien de handhaving van het verstrekkingenregime anderszins afdoende is gewaarborgd, kan, de Registratiekamer gehoord, van de verplichting, bedoeld in

het vijfde lid, vrijstelling of ontheffing worden verleend door

- a. Onze Minister van Justitie, indien het verstrekkingen betreft uit een register dat is aangelegd met het oog op de uitvoering van een taak onder het gezag van de officier van justitie of
- b. Onze Minister van Binnenlandse Zaken, indien het verstrekkingen betreft uit een register dat is aangelegd met het oog op de uitvoering van een taak onder het gezag van de burgemeester.(35)

7. Aan een vrijstelling of ontheffing als bedoeld in het zesde lid, kunnen voorschriften worden verbonden.

Artikel 18

1. Indien van de verstrekking aantekening wordt gehouden, wordt daarbij de identiteit van de verzoeker, de datum van de verstrekking en een omschrijving van de verstrekte gegevens vastgelegd.
2. In het geval aantekening wordt gehouden van een verstrekking ingevolge artikel 16, tweede lid, wordt tevens het doel van de verstrekking vastgesteld.
3. Indien van de verstrekking aantekening wordt gehouden en ten tijde van de verstrekking vaststaat dat het doel waartoe is verstrekt, noodzaakt tot bekendmaking aan bepaalde derden, wordt hiervan apart aantekening gehouden.
4. De ingevolge artikel 16, tweede en derde lid, en 17, vijfde lid, vastgelegde gegevens worden gedurende twee jaren bewaard. Deze gegevens kunnen slechts met toepassing van de artikelen 6, vierde lid, of 18, vierde lid, van de wet voor een ander doel worden gebruikt dan de toezicht(36) op de naleving van het verstrekkingenregime.
5. Onze Ministers kunnen nadere regels stellen omtrent de uitvoering van dit artikel, de Registratiekamer gehoord.

Paragraaf 7. Kostenvergoeding bij verzoeken tot kennisneming

Artikel 19

Een verzoek om kennisneming door een geregistreerde van de hem betreffende gegevens, is ontvankelijk na betaling van een door de beheerder te bepalen bedrag van ten hoogste tien gulden. De beheerder bepaalt de wijze van betaling.

Paragraaf 8. Slotbepalingen

Artikel 20

1. Dit besluit treedt in werking op het tijdstip, bedoeld in artikel 31, tweede lid, van de wet. De artikelen 16, tweede lid, en 17, vijfde lid, treden zes maanden later in werking. Onze Ministers kunnen deze termijn met betrekking tot bepaalde registers eenmaal met dezelfde termijn verlengen.(37)

2. Aan de personen, bedoeld in artikel 14, eerste lid, onder k, kunnen gedurende zes maanden na inwerkingtreding van dit besluit, desgevraagd gegevens worden verstrekt, indien zij naar het oordeel van de beheerder voldoen aan de in dat onderdeel vermelde criteria, ook zonder dat de daar bedoelde machtiging is verstrekt.

Artikel 21

Dit besluit kan worden aangehaald als: Besluit politieregisters.

Lasten en bevelen dat dit besluit met de daarbij behorende nota van toelichting in het Staatsblad zal worden geplaatst en dat daarvan afschrift zal worden gezonden aan de Raad van State.

Zürs, 14 februari 1991

Beatrix

De Minister van Justitie,

E.M.H. Hirsch Ballin

De Minister van Binnenlandse Zaken,

C.I. Dales

De Minister van Defensie a.i.,

CID-regeling 1995

Regeling van 31 maart 1995, Regelingnummer: 488050/595/GBJD/EA88/N368/C93/320, Stcrt. 1995,

74

Inwerkingtreding: 15 april 1995 met terugwerkende kracht vanaf 1 april 1994

De Ministers van Justitie, van Binnenlandse Zaken en van Defensie,

Gezien de adviezen van de korpsbeheerders,

Gezien het advies van de Raad voor het Korps landelijke politiediensten,

Gezien het advies van de Registratiekamer van 29 december 1994 (nr. 94.A.07.01)

Gelet op de artikelen 46 en 48 van de Politiewet 1993 en op de artikelen 2 en 4 van het Besluit beheer regionale politiekorpsen;

Besluiten:

Artikel 1

In deze regeling wordt verstaan onder:

- a. criminele inlichtingendiensten: de organisatorische eenheden bij het Korps landelijke politiediensten en de Koninklijke marechaussee, belast met de taak, bedoeld in artikel 2, alsmede de regionale criminele inlichtingendiensten, bedoeld in artikel 4, eerste lid, van het Besluit beheer regionale politiekorpsen;
- b. nationale criminele inlichtingendienst: de organisatorische eenheid bij de divisie Centrale Recherche Informatie van het Korps landelijke politiediensten, bedoeld in artikel 6;

- c. CID-subject: een natuurlijke persoon of rechtspersoon, die als verdachte betrokken is, of naar redelijkerwijs kan worden vermoed als verdachte betrokken zal worden bij enig misdrijf met het oog waarop een CID-register is aangelegd;
- d. "grijze veld"-subject: een natuurlijke persoon of rechtspersoon, die als verdachte betrokken is, of naar redelijkerwijs kan worden vermoed betrokken zal worden, bij enig misdrijf en van wie nog niet vaststaat of hij als CID-subject kan worden aangemerkt;
- e. CID-register: het register van gegevens omtrent CID-subjecten dat gehouden wordt bij criminele inlichtingendiensten met het oog op de uitvoering van de taak, bedoeld in artikel 2;
- f. nationaal CID-register: het register van gegevens omtrent CID-subjecten dat gehouden wordt bij de nationale criminele inlichtingendienst;
- g. "grijze veld"-register: het register van gegevens omtrent "grijze veld"-subjecten dat gehouden wordt bij criminele inlichtingendiensten met het oog op de vaststelling of de geregistreerde in samenhang met andere gegevens kan worden aangemerkt als CID-subject;
- h. nationaal "grijze veld"-register: het register van gegevens omtrent "grijze veld"-subjecten dat gehouden wordt bij de nationale criminele inlichtingendienst met het oog op de vaststelling of de geregistreerde in samenhang met andere gegevens kan worden aangemerkt als CID-subject;
- i. CID-informatie: gegevens omtrent CID-subjecten en "grijze veld"-subjecten;
- j. CID-actie: het systematisch en gericht inwinnen van gegevens over CID-subjecten;
- k. registerbeheerder: de functionaris die onder verantwoordelijkheid van de beheerder, bedoeld in artikel 1, onder f, van de Wet politieregisters, belast is met het daadwerkelijk beheer over het CID-register en het "grijze veld"-register;
- l. CID-officier: de als zodanig door de betrokken hoofdofficier van justitie in ieder arrondissement aangewezen officier van justitie;
- m. nationale CID-officier: de als zodanig door de college-vergadering van procureurs-generaal aangewezen officier van justitie.

Artikel 2

1. Criminele inlichtingendiensten hebben tot taak het bevorderen van:

- a. de opsporing van misdrijven, die gezien hun ernst of frequentie danwel het georganiseerd verband waarin ze worden gepleegd een ernstige inbreuk op de rechtsorde maken;
- b. de opsporing van natuurlijke en rechtspersonen die zich aan de misdrijven, bedoeld in onderdeel a, schuldig maken of hebben gemaakt;
- c. het voorkomen van misdrijven, bedoeld in onderdeel a;
- d. het inwinnen van gegevens omtrent de financieel le situatie van de natuurlijke en rechtspersonen, bedoeld in onderdeel b.

2. De taakuitvoering, bedoeld in het eerste lid, vindt plaats binnen de door de betrokken CID-officier aangegeven kaders en met inachtneming van de door de betrokken CID-officier gegeven aanwijzingen.

Artikel 3

- 1. Criminele inlichtingendiensten werken overeenkomstig deze regeling met elkaar samen.
- 2. De samenwerking, bedoeld in het eerste lid, strekt tot een zo doelmatig en doeltreffend

mogelijke taakvervulling en bestaat in ieder geval uit:

- a. een uniforme onderlinge informatievoorziening als bedoeld in artikel 5;
 - b. een uniforme en structurele informatievoorziening aan de nationale criminele inlichtingendienst als bedoeld in artikel 6;
 - c. een uniforme wijze van omgaan met CID-informatie als bedoeld in de artikelen 7 tot en met 22.
3. Ten behoeve van de samenwerking, bedoeld in het eerste lid, registreren en bewerken criminele inlichtingendiensten CID-informatie op de wijze, bedoeld in artikel 4.

Artikel 4

1. Criminele inlichtingendiensten verrichten ter uitvoering van de taak, bedoeld in artikel 2, in ieder geval de volgende werkzaamheden:

- a. het inwinnen, verzamelen en verifiëren van gegevens omtrent CID-subjecten alsmede het stimuleren daartoe;
- b. het registreren van:
 - 1e. gegevens omtrent CID-subjecten in een CID-register;
 - 2e. gegevens omtrent "grijze veld"-subjecten in een "grijze veld"-register;
 - 3e. de aanvang en beëindiging van CID-acties;
 - 4e. de codes van de personalia van informanten;
- c. het verwerken van de onder b, sub 1e en 2e, bedoelde gegevens;
- d. het naar aanleiding van de onder c bedoelde verwerking van de onder b, sub 1e en 2e, bedoelde gegevens bevorderen van gerichte inwinning en aanvulling van de informatie;
- e. het analyseren van de onder b, sub 1e en 2e, bedoelde gegevens en het aan de hand van de uitkomsten daarvan signaleren van gevallen van criminaliteit die van meer bovenlokale omvang of betekenis zijn;
- f. het bevorderen van de instelling van opsporingsonderzoeken door het beschikbaar stellen van daartoe relevante gegevens aan hen die daarop bij of krachtens de Wet politieregisters aanspraak kunnen maken;
- g. het leggen van verbanden tussen de onder b, sub 1e en 2e, bedoelde gegevens en lopende opsporingsonderzoeken en het op basis daarvan gericht verschaffen van informatie aan hen die daarop bij of krachtens de Wet politieregisters aanspraak kunnen maken.

2. Ten behoeve van de werkzaamheden, bedoeld in het eerste lid, onder a, c, d, e, f en g maken criminele inlichtingendiensten onder meer gebruik van het geautomatiseerd systeem CID-Subjectenindex (CIDS), bedoeld in artikel 6, eerste lid, onder c.

Artikel 5

1. Onverminderd artikel 4, eerste lid, onder f, wisselen criminele inlichtingendiensten onderling, gevraagd en ongevraagd, gegevens uit indien dit van belang kan zijn voor de opsporing en voorkoming van misdrijven, die gezien hun ernst of frequentie danwel het georganiseerd verband waarin ze worden gepleegd een ernstige inbreuk op de rechtsorde maken.

2. De informatie, bedoeld in het eerste lid, bestaat in ieder geval uit de gegevens zoals vermeld in het in bijlage I opgenomen modelformulier.

3. Criminele inlichtingendiensten stellen de nationale criminele inlichtingendienst te allen

tijde ongevraagd in kennis van de gegevens, bedoeld in artikel 6, derde lid.

Artikel 6

1. Ter coordinatie van de samenwerking, bedoeld in artikel 3, registreert de nationale criminele inlichtingendienst:

- a. gegevens omtrent CID-subjecten in het nationaal CID-register, voor zover de gegevens van nationale of internationale betekenis zijn;
- b. gegevens omtrent "grijze veld"-subjecten in het nationaal "grijze veld"-register, voor zover de gegevens van nationale of internationale betekenis zijn;
- c. de personalia of bedrijfsgegevens van de bij de criminele inlichtingendiensten geregistreerde CID-subjecten in het geautomatiseerd systeem CID-subjectindex (CIDSI);
- d. CID-acties;
- e. de codes van de personalia van informanten.

2. Ter ondersteuning van de opsporing van misdrijven, die gezien hun ernst of frequentie danwel het georganiseerd verband waarin ze worden gepleegd een ernstige inbreuk op de rechtsorde maken, bewerkt en analyseert de nationale criminele inlichtingendienst de in het eerste lid, onder a en c, genoemde gegevens en verstrekt aan de hand van de uitkomsten daarvan informatie aan hen die daarop bij of krachtens de Wet politieregisters aanspraak kunnen maken.

3. Ten behoeve van de landelijke registraties, genoemd in het eerste lid, stellen criminele inlichtingendiensten de nationale criminele inlichtingendienst in kennis van:

- a. CID-informatie die van nationale of internationale betekenis is;
 - b. de personalia danwel bedrijfsgegevens van CID-subjecten die in het CID-register zijn opgenomen;
 - c. CID-acties;
 - d. de codes van de personalia van informanten;
 - e. criminaliteitsontwikkelingen;
 - f. overige informatie die van belang kan zijn voor de landelijke coördinatie en ondersteuning.
4. De informatie, bedoeld in het derde lid, onder c, bestaat in ieder geval uit de gegevens zoals vermeld in het in bijlage II opgenomen modelformulier.
5. De taakuitvoering, bedoeld in dit artikel, vindt plaats binnen de door de betrokken NCID-officier aangegeven kaders en met inachtneming van de door hem gegeven aanwijzingen.

Artikel 7

1. In het CID-register worden met het oog op de voorkoming of opsporing van misdrijven, die gezien hun ernst of frequentie danwel het georganiseerd verband waarin zij worden gepleegd een ernstige inbreuk maken op de rechtsorde uitsluitend gegevens opgenomen omtrent:

- a. CID-subjecten;
- b. natuurlijke en rechtspersonen die met de in het register opgenomen CID-subjecten in contact staan;
- c. ambtenaren van politie danwel ambtenaren van de Koninklijke marechaussee, voor zover dit van belang is bij de behandeling van de gegevens, bedoeld onder a en b.

2. Omtrent CID-subjecten kunnen ten hoogste de volgende soorten van gegevens worden opgenomen:

- a. de personalia danwel gegevens ter identificatie van de rechtspersoon;
- b. financie le gegevens;
- c. gegevens over het staatsburgerschap;
- d. gegevens over de identiteitspapieren;
- e. gegevens over het uiterlijk;
- f. gegevens over de karaktereigenschappen;
- g. gegevens over de persoonlijke omstandigheden;
- h. gegevens over de opleiding en uitgeoefende beroepen;
- i. gegevens over de levenswijze;
- j. gegevens over de contacten en contactadressen;
- k. gegevens over de plaatsen van geregeld verblijf;
- l. gegevens over de bewegingen;
- m. gegevens over de communicatiemiddelen;
- n. gegevens over de vervoermiddelen;
- o. gegevens over de (voorgenomen) criminele activiteiten;
- p. gegevens over de modus operandi;
- q. verwijzingen naar andere gegevensverzamelingen;
- r. persoonsafbeeldingen;
- s. mededelingen van gegevensverstrekking buiten het werkkterrein waarbinnen de criminele inlichtingendienst zijn werkzaamheden verricht;
- t. gegevens over de periode en de plaats waar een CIDsubject rechtens van zijn vrijheid is beroofd of beroofd is geweest.

3. Omtrent de personen die contact hebben met de in het register opgenomen CID-subjecten, en die niet zelf CID-subject zijn, kunnen ten hoogste de in het tweede lid, onder a tot en met e, h, j tot en met o, q, r en s genoemde soorten van gegevens worden opgenomen, voor zover deze verband houden met de contacten van de desbetreffende personen met de in het register opgenomen CID-subjecten.

4. Omtrent ambtenaren van politie danwel ambtenaren van de Koninklijke marechaussee kunnen ten hoogste de volgende soorten van gegevens worden opgenomen:

- a. naam, voornaam;
- b. gebruikelijke organisatie-aanduiding, rang en functie.

Artikel 8

1. Bij de gegevens omtrent personen als bedoeld in artikel 7, derde lid, wordt een aanduiding opgenomen van de aard van de contacten en de reden waarom gegevens omtrent deze personen noodzakelijk zijn voor het doel van het register.

2. In aanvulling op de in artikel 7, tweede lid, genoemde gegevens kunnen omtrent CID-subjecten, voorzover het betreft natuurlijke personen, gegevens worden opgenomen omtrent hun ras, medische en psychologische kenmerken voor zover dit onvermijdelijk is:

- a. met het oog op hun identificatie;
- b. voor de juiste beoordeling van een strafbaar feit en zulk een gegeven het slachtoffer of de motieven van de dader betreft.

3. In aanvulling op de in artikel 7, tweede lid, genoemde gegevens kunnen omtrent

CID-subjecten, voorzover het betreft natuurlijke personen, gegevens worden opgenomen omtrent hun godsdienst of levensovertuiging, politieke gezindheid, seksualiteit en intiem levensgedrag, voor zover dit onvermijdelijk is voor de juiste beoordeling van een strafbaar feit en zulk een gegeven het slachtoffer of de motieven van de dader betreft.

4. In aanvulling op de in artikel 7, derde lid, genoemde gegevens kunnen omtrent contacten van CID-subjecten, voor zover het betreft natuurlijke personen, gegevens worden opgenomen betreffende hun ras, medische en psychologische kenmerken voor zover dit onvermijdelijk is met het oog op hun identificatie.

5. Een opgenomen gegeven als bedoeld in het tweede, derde of vierde lid, wordt voorzien van een indicatie van de betrouwbaarheid en de vermelding van de ambtelijke bron.

6. Een gegeven kan worden voorzien van een "embargo"-aanduiding, wanneer dit gegeven naar het oordeel van de persoon die het gegeven heeft aangeleverd, niet dan met toestemming van de registerbeheerder mag worden verstrekt en gebruikt.

7. Indien een gegeven slechts kon worden verkregen onder voorwaarde dat dit alleen voor een bepaald doel zou worden gebruikt, wordt van het bestaan van een dergelijke voorwaarde aantekening gehouden in het register, met een verwijzing naar het proces-verbaal waaruit de voorwaarde blijkt.

Artikel 9

1. Indien blijkt dat bepaalde gegevens onjuist of onvolledig zijn, draagt de registerbeheerder zorg voor zo spoedig mogelijke verbetering of aanvulling van die gegevens.

2. De gegevens, bedoeld in de artikelen 7 en 8, worden uit het CID-register verwijderd en terstond vernietigd indien de gegevens niet langer noodzakelijk zijn voor het doel van het register danwel na verloop van vijf jaar na datum van laatste opname. Hiertoe wordt het register minstens eenmaal per jaar gecontroleerd.

3. De termijn, genoemd in het tweede lid, wordt geschorst gedurende de tijd dat het CID-subject rechtens van zijn vrijheid is beroofd.

4. Van de gevallen, bedoeld in het eerste en tweede lid, stelt de registerbeheerder diegenen in kennis waaraan naar zijn weten gegevens omtrent de geregistreerde zijn verstrekt.

Artikel 10

1. Tot het CID-register hebben uitsluitend rechtstreekse toegang:

- a. personen werkzaam bij de criminele inlichtingendienst waar het register wordt gehouden danwel bij een andere criminele inlichtingendienst, voor zover zij daartoe schriftelijk door de registerbeheerder waar het register wordt gehouden zijn aangewezen;
- b. door de registerbeheerder schriftelijk aangewezen misdaadanalisten;
- c. personen, door de registerbeheerder schriftelijk belast met het uitvoeren van technische werkzaamheden aan het CID-register.

2. Bij de schriftelijke aanwijzing legt de registerbeheerder het doel vast waartoe de autorisatie wordt verstrekt.

3. Indien de werkzaamheden van de personen, bedoeld in het eerste lid, onder c, langs geautomatiseerde weg worden verricht, worden deze schriftelijk vastgelegd. De vastgelegde gegevens worden gedurende twee jaren bewaard.

Artikel 11

1. Uit het CID-register worden slechts gegevens verstrekt aan die personen die daarop bij of krachtens de Wet politieregisters aanspraak kunnen maken.
2. De verstrekking van gegevens ingevolge de artikelen 14 en 15, eerste lid, onder b tot en met d van de Wet politieregisters kan worden geweigerd op grond van artikel 11 van het Besluit politieregisters.
3. Bij de verstrekking kunnen beperkingen aan het gebruik van de gegevens worden opgelegd.

Artikel 12

1. Schriftelijke verstrekking aan ambtenaren van politie danwel ambtenaren van de Koninklijke marechaussee buiten het werkerrein van de criminele inlichtingendienst waar het CID-register wordt gehouden, vindt slechts plaats via de criminele inlichtingendienst van het onderdeel waar de desbetreffende ambtenaren van politie danwel ambtenaren van de Koninklijke marechaussee werkzaam zijn.
2. Mondelinge verstrekking geschiedt uitsluitend wanneer bij de verstrekking de ambtenaar zekerheid bestaat omtrent de identiteit en de informatiegerechtigdheid van de aanvrager. Een mondelinge verstrekking van gegevens wordt schriftelijk bevestigd.
3. Van een verstrekking buiten het werkerrein van de criminele inlichtingendienst wordt afschrift gezonden aan de nationale criminele inlichtingendienst.

Artikel 13

1. Verstrekking van gegevens aan buitenlandse politie instanties vindt slechts plaats door tussenkomst van de nationale criminele inlichtingendienst danwel in overeenstemming met afspraken gemaakt met politie autoriteiten in het buitenland, voor zover deze overeenkomstig artikel 13 van het Besluit politieregisters zijn goedgekeurd door de Minister van Justitie.
2. Onverminderd het eerste lid van dit artikel vindt verstrekking van gegevens aan buitenlandse politie autoriteiten slechts plaats in overleg met de CID-officier.
3. Indien de verstrekking niet door tussenkomst van de nationale criminele inlichtingendienst geschiedt, wordt van de verstrekking afschrift gezonden aan de nationale criminele inlichtingendienst.

Artikel 14

1. Van iedere verstrekking die niet rechtstreeks langs geautomatiseerde weg geschiedt, wordt aantekening gehouden, tenzij overeenkomstig het doel van het register is verstrekt aan personen die blijkens het tweede lid behoren tot de vaste gebruikers.
2. Vaste gebruikers van het register zijn die personen die door de registerbeheerder krachtens artikel 10, eerste lid, onder a en b, zijn aangewezen als personen die rechtstreekse toegang tot het register hebben.
3. Van iedere verstrekking die rechtstreeks langs geautomatiseerde weg geschiedt wordt aantekening gehouden, voor zover deze verstrekkingen niet zijn vrijgesteld bij besluit van de Minister van Justitie.
4. Indien van een verstrekking aantekening wordt gehouden, wordt daarbij de identiteit van

degene aan wie is verstrekt, de datum en het doel van de verstrekking en een omschrijving van de verstrekte gegevens vastgelegd. De vastgelegde gegevens worden gedurende twee jaren bewaard.

5. Van een verstrekking behoeft geen aantekening te worden gehouden ingevolge het eerste lid indien deze het resultaat is van een koppeling en van die koppeling een proces-verbaal is opgemaakt.

Artikel 15

1. Koppeling van het CID-register met een ander politieregister of een register als bedoeld in artikel 17, aanhef en onder a, van de Wet persoonsregistraties, kan plaatsvinden voor zover deze koppeling noodzakelijk is voor het voorkomen en opsporen van misdrijven die gezien hun ernst of frequentie danwel het georganiseerd verband waarin ze worden gepleegd een ernstige inbreuk op de rechtsorde opleveren en het betreft:

- a. andere CID-registers, "grijze veld"-registers danwel gegevensverzamelingen waarvan de doelstelling nauw bij die van het CID-register aansluit;
- b. andere gegevensverzamelingen.

2. Van koppelingen als bedoeld in het eerste lid, onder b, wordt de Registratiekamer in kennis gesteld.

3. Voor zover een koppeling niet plaatsvindt in het kader van misdaadanalyse, wordt daarvan overeenkomstig artikel 5 van het Besluit politieregisters proces-verbaal opgemaakt, hetwelk gedurende twee jaren wordt bewaard.

Artikel 16

1. De gegevens, opgenomen in het CID-register, kunnen afkomstig zijn uit andere CID-registers of "grijze veld"-registers. Tevens kan in een herkenningdienregister de aantekening worden opgenomen waaruit blijkt dat omtrent betrokkene tevens gegevens in een CID-register zijn opgenomen.

2. De gegevens, opgenomen in het CID-register, kunnen worden verstrekt ter opneming in een register van gesignaleerde personen.

Artikel 17

1. In het "grijze veld"-register worden met het oog op de vaststelling of de geregistreerde in samenhang met andere gegevens kan worden aangemerkt als CID-subject uitsluitend gegevens opgenomen omtrent:

- a. "grijze veld"-subjecten;
- b. ambtenaren van politie danwel ambtenaren van de Koninklijke marechaussee, voor zover dit van belang is bij de behandeling van de gegevens omtrent de personen, bedoeld onder a.

2. Omtrent de personen, bedoeld in het eerste lid, onder a, kunnen ten hoogste de volgende soorten van gegevens worden opgenomen:

- a. de personalia danwel gegevens ter identificatie van de rechtspersoon;
- b. gegevens over het uiterlijk;
- c. de reden van opneming in het register;
- d. de datum van opneming in het register;

- e. verwijzingen naar andere gegevensverzamelingen;
 - f. de wijze van verkrijging van de gegevens;
 - g. de activiteiten ten behoeve van het doel van het register.
3. Omtrent de personen, bedoeld in het eerste lid, onder b, kunnen ten hoogste de volgende soorten van gegevens worden opgenomen:
- a. naam, voornaam;
 - b. de gebruikelijke organisatie-aanduiding, rang en functie.
4. De volgende bepalingen zijn van overeenkomstige toepassing op het "grijze veld"-register: artikel 8, tweede, derde, vijfde, zesde en zevende lid, artikel 9, eerste en vierde lid, artikel 10 en de artikelen 12 tot en met 14.
5. Gegevens omtrent "grijze veld"-subjecten worden niet anders opgenomen dan in het "grijze veld"-register.

Artikel 18

1. De in het "grijze veld"-register opgenomen gegevens worden binnen zes maanden na datum van eerste opname uit het register verwijderd. Hiertoe wordt het register minstens eenmaal per zes maanden gecontroleerd.
2. De uit het "grijze veld"-register verwijderde gegevens worden direct vernietigd, tenzij deze, in samenhang met andere gegevens, voldoende grond vormen om betrokkene als CID-subject aan te merken. In dat geval kunnen de gegevens in het CID-register worden opgenomen.
3. Van de verwijdering van gegevens omtrent een geregistreerde stelt de registerbeheerder diegenen in kennis waaraan naar zijn weten gegevens omtrent deze geregistreerde zijn verstrekt. Indien de betreffende gegevens in het CID-register zijn opgenomen wordt daarvan tevens mededeling gedaan.

Artikel 19

Uit het "grijze veld"-register worden slechts gegevens verstrekt aan die personen die daarop aanspraak kunnen maken ingevolge het bij of krachtens de Wet politieregisters bepaalde, voor zover deze verstrekking in overeenstemming is met het doel van het register.

Artikel 20

1. Koppeling van het "grijze veld"-register met een ander politieregister of een register als bedoeld in artikel 17, aanhef en onder a, van de Wet persoonsregistraties, kan plaatsvinden voor zover deze koppeling noodzakelijk is voor het doel van het register en het betreft:
- a. andere "grijze veld"-registers, CID-registers danwel gegevensverzamelingen waarvan de doelstelling nauw bij die van een CID-register aansluit;
 - b. andere gegevensverzamelingen.
2. Gegevens uit het register kunnen in andere "grijze veld"-registers worden opgenomen, alsmede in een CID-register, overeenkomstig artikel 18, tweede lid.
3. Artikel 15, tweede lid, is van overeenkomstige toepassing.

Artikel 21

1. De bij de criminele inlichtingendiensten in gebruik zijnde vertrekken zijn afsluitbaar en

beveiligd. Tot deze vertrekken hebben slechts toegang de personen, bedoeld in artikel 10, eerste lid, en zij die worden begeleid door de personen, bedoeld artikel 10, eerste lid, onder a.

2. Bij afwezigheid van de personen, bedoeld in artikel 10, eerste lid, zijn de vertrekken deugdelijk afgesloten.

Artikel 22

De registerbeheerder draagt ervoor zorg dat onbevoegde kennisneming van CID-informatie niet kan plaatsvinden. In dat kader ziet de registerbeheerder erop toe dat:

- a. CID-informatie niet door onbevoegden waarneembaar is;
- b. CID-informatie niet zonder toestemming wordt vermenigvuldigd;
- c. CID-informatie niet zonder toestemming uit de vertrekken, bedoeld in artikel 21, wordt meegenomen;
- d. de informatiedragers van CID-informatie op afdoende wijze vernietigd kunnen worden;
- e. de toegang tot geautomatiseerde CID- en "grijze veld"-registers wordt beveiligd met een gebruikersnaam en periodiek wisselende wachtwoorden;
- f. bij geautomatiseerd transport van CID-informatie voldoende beveiligingsmaatregelen zijn getroffen;
- g. bij gebruik van een netwerkstelsel voldoende beveiligingsmaatregelen zijn getroffen ter voorkoming van onbevoegde bevraging van het geautomatiseerd CID- en "grijze veld"-register.
- h. "back-ups" van het geautomatiseerd CID- en het "grijze veld"-register, of in voorkomend geval de handmatige CID- en "grijze veld"-registers worden bewaard in een kluis in de vertrekken, bedoeld in artikel 21.

Artikel 23

Voor de doeleinden, genoemd in artikel 2, worden gegevens omtrent CID-subjecten en "grijze veld"-subjecten slechts systematisch en gericht ingewonnen, en geregistreerd door de criminele inlichtingendiensten overeenkomstig deze regeling.

Artikel 24

De Ministers van Justitie en van Binnenlandse Zaken kunnen besluiten andere organisatorische eenheden die zijn belast met de strafrechtelijke handhaving van de rechtsorde aan te merken als criminele inlichtingendienst, bedoeld in artikel 1, onder a. In dat geval is deze regeling van overeenkomstige toepassing.

Artikel 25

Deze regeling treedt in werking met ingang van de tweede dag na de datum van uitgifte van de Staatscourant waarin zij wordt geplaatst, en werkt terug tot en met 1 april 1994.

Artikel 26

Deze regeling wordt aangehaald als: CID-regeling 1995.

Deze regeling zal met toelichting in de Staatscourant en in het Algemeen Politieblad worden geplaatst.

's-Gravenhage, 31 maart 1995.

De Minister van Justitie,

W. Sorgdrager.

De Minister van Binnenlandse Zaken,

H.F. Dijkstal.

De Minister van Defensie,

J.J.C. Voorhoeve.

BEGRIPPEN WET WAPENS EN MUNITIE

Besluit Wapens en Munitie

Vervallen na de inwerkingtreding van Staatsblad 579/1995, per 1 januari 1997, wet van 16 november 1995 tot herziening van de Wet wapens en munitie.

Regeling wapens en munitie

1. Begripsbepalingen

Artikel 1

1. In deze regeling wordt verstaan onder:

a. de wet:

de Wet wapens en munitie;

b. de Minister:

de minister van Justitie;

c. de korpschef:

de korpschef, bedoeld in artikel 24 van de Politiewet 1993;

d. jachtakte:

een jachtakte bedoeld in titel III van de Jachtwet, tenzij uitdrukkelijk anders is

aangegeven;

e. de bedrijfsruimte van de erkende:

de ruimte waarin de erkende de handelingen, waarop zijn erkenning betrekking heeft, verricht of doet verrichten;

f. buitengewoon opsporingsambtenaar:

de buitengewoon opsporingsambtenaar, bedoeld in artikel 142, eerste lid, van het Wetboek van Strafvordering;

g. schietvereniging:

de vereniging die blijkens de in een notariële akte opgenomen statuten tot doel heeft haar leden in de gelegenheid te stellen de schietsport te beoefenen.

2. Overige in deze regeling voorkomende begrippen hebben dezelfde betekenis als in de wet.

2. Nadere omschrijving van wapens

Artikel 2

1. In de wet en de daarop berustende bepalingen wordt verstaan onder:

a. stiletto:

een opvouwbaar mes waarvan het lemmet door een druk-, of vergelijkbaar ontgrendelingsmechanisme zijdelings scharnierend uit het heft wordt gebracht;

b. valmes:

een mes waarvan het lemmet door een druk- of vergelijkbaar ontgrendelingsmechanisme, dan wel door een zwaaibeweging rechtstandig uit het heft wordt gebracht;

c. vlindermes:

een mes waarvan het heft in de lengterichting in tweeën is gedeeld en waarvan het lemmet naar buiten wordt gebracht door elk van de delen van het heft in tegenovergestelde richting zijdelings op te vouwen;

d. vilmes:

een niet-opvouwbaar mes waarvan het heft zeer kort is, haaks op het lemmet staat, en dat is bestemd om bij gebruik in de palm van de hand te worden gehouden, terwijl het lemmet tussen de vingers door naar buiten steekt;

e. ballistisch mes:

een mes waarvan het lemmet, al dan niet tezamen met het heft, door middel van lucht-, gas- of veerdruk rechtstandig uit een geleidingscilinder wordt gedreven;

f. geluiddemper:

een niet in het vuurwapen geïntegreerd, doorgaans aan de loopmond daarvan bevestigd voorwerp dat bestemd of geschikt is om te bewerkstelligen dat het geluid van het afgaan van het schot wordt gedempt;

g. ploertendoder:

een verende of uitschuifbare staaf met een verzwaard uiteinde.

2. Geen wurgstokken in de zin van de wet en de daarop berustende bepalingen zijn voorwerpen die bestemd zijn voor de serieuze beoefening van vechtsporten in verenigingsverband en die gelet op hun constructie of het materiaal waaruit zij zijn vervaardigd niet bestemd zijn om ernstig letsel aan personen toe te brengen.

3. Aanwijzing voor bedreiging of afdreiging geschikte voorwerpen

Artikel 3

Als voorwerpen van categorie I, onder 7°, die een ernstige bedreiging van personen kunnen vormen of die zodanig op een wapen gelijken dat zij voor bedreiging of afdreiging geschikt zijn, worden aangewezen:

- a. voorwerpen vermeld op lijst a of lijst b van de bij deze regeling behorende bijlage I, alsmede niet in die bijlage genoemde voorwerpen die voor wat betreft hun vorm, afmetingen of kleur daarmee een sprekende gelijkenis vertonen;
- b. voorwerpen die voor wat betreft hun vorm, afmetingen en kleur een sprekende gelijkenis vertonen met vuurwapens of met voor ontploffing bestemde voorwerpen;
- c. lucht-, gas- en veerdrukwapens die zodanig zijn gewijzigd dat het dragen niet of minder zichtbaar is;
- d. stiletto's, valmessen en vlindermessen waarvan het heft van een stootplaat is voorzien.

4. Buitengewoon opsporingsambtenaren

Artikel 4

1. Het bepaalde in artikel 22, eerste lid, 26 eerste lid en 27, eerste lid, van de wet is niet van toepassing op buitengewoon opsporingsambtenaren, voorzover hen het voorschrift is gegeven om gedurende hun dienstuitoefening een wapen en munitie voorhanden te hebben.

2. Het in het eerste lid bedoelde voorschrift wordt verleend:

- a. door de minister indien de opsporingsbevoegdheid in het gehele land wordt uitgeoefend;
- b. in de overige gevallen: door de procureur-generaal in het ressort waar de opsporingsbevoegdheid wordt uitgeoefend.

3. Het eerste lid geldt uitsluitend gedurende de periode dat de buitengewoon opsporingsambtenaar beschikt over een titel van opsporingsbevoegdheid.

Artikel 5

1. Een voorschrift, bedoeld in artikel 4, eerste lid, wordt slechts gegeven indien en voorzolang de noodzaak tot bewapening aannemelijk is en de bekwaamheid van de buitengewoon opsporingsambtenaar in de omgang met het wapen en de munitie is aangetoond.
2. Aan een voorschrift kunnen voorwaarden en beperkingen worden verbonden die betrekking hebben op de veiligheid, de bekwaamheid in de omgang met wapens en munitie, alsmede op de opslag en het vervoer daarvan.
3. Indien aan het voorschrift een beperking is verbonden, geldt de vrijstelling in artikel 4, eerste lid, slechts voorzover het voorschrift reikt.

Artikel 6

1. Het voorschrift, bedoeld in artikel 4, eerste lid, kan uitsluitend betrekking hebben op:
 - a. een korte wapenstok, van een door de minister en de Minister van Binnenlandse Zaken goedgekeurd merk en type;
 - b. een half-automatisch pistool van het merk Walther, type P5, kaliber 9 x 19 millimeter;
 - c. munitie van het merk Dynamit Nobel A.G., type Action, model 3, kaliber 9 x 19 millimeter; of
 - d. andere wapens en munitie dan genoemd onder a tot en met c.
2. Een voorschrift dat betrekking heeft op de in het eerste lid, onder d, bedoelde wapens of munitie wordt door de procureur-generaal slechts verleend nadat daarvoor door de minister voorafgaande schriftelijke toestemming is verleend.

5. Overige openbare dienst

Artikel 7

Van het verbod van artikel 14, eerste lid, 22, eerste lid, en artikel 26, eerste lid, van de wet wordt vrijstelling verleend aan personen die werkzaam zijn bij het Gerechtelijk Laboratorium of de Divisie Logistiek van het Korps Landelijke Politiediensten, voorzover het doen binnenkomen of uitgaan, het vervoeren of het voorhanden hebben geschiedt uit hoofde van de dienstuitoefening.

6. Erkenningen; leeftijd, zedelijk gedrag en vakbekwaamheid

Artikel 8

1. De aanvrager of de beheerder, bedoeld in artikel 10, eerste lid, onder a, van de wet is niet jonger dan achttien jaar.
2. De aanvrager of de beheerder, bedoeld in artikel 10, eerste lid onder a, van de wet mag niet met toepassing van artikel 37 van het Wetboek van Strafrecht in een psychiatrisch ziekenhuis zijn geplaatst, dan wel met toepassing van artikel 37a van het Wetboek van Strafrecht ter beschikking zijn gesteld.
3. De aanvrager of de beheerder, bedoeld in artikel 10, eerste lid onder a, van de wet mag niet binnen de laatste acht jaren bij onherroepelijk geworden rechterlijke uitspraak zijn veroordeeld wegens overtreding van één of meer bepalingen gesteld bij of krachtens:
 - a. de Wet van 9 mei 1890 (Stb. 81), houdende verbodsbepalingen tegen het dragen van wapenen;
 - b. de Vuurwapenwet 1919;
 - c. de Wet tot wering van ongewenste handwapenen;
 - d. de Wet wapens en munitie;
 - e. de artikelen 92 tot en met 110, 115, 116, 121 tot en met 125, 131, 141, 181, 182, 191, 208, 209, 225, 226, 242, 246, 250ter, 282, 282a, 285, 287 tot en met 289, 300, tweede, derde en vierde lid, 301, tweede en derde lid 302, 303, 310, 311, 312, 317, 322, 326, 328, 336, 341, 343 tot en met 345, 350, 359, 360, 357, 381, 385a, 385b, 416, 417, 417bis en 437 tot en met 437quater, van het Wetboek van Strafrecht, alsmede de artikelen van Titel VII van het Tweede Boek, van het Wetboek van Strafrecht;
 - f. de artikelen 77, 78, 81, 82, 98, tot en met 100, 116, 117, 119 en 120 van het Wetboek van Militair Strafrecht;
 - g. de Opiumwet.
4. De aanvrager of beheerder, bedoeld in artikel 10, eerste lid, onder a, van de wet mag niet binnen de laatste acht jaren in het buitenland bij onherroepelijk geworden rechterlijke uitspraak zijn veroordeeld wegens overtreding van één of meer aldaar geldende strafbepalingen, vergelijkbaar met de bepalingen genoemd in het vorige lid.
5. Op de termijnen genoemd in het derde en vierde lid zijn de bepalingen van de Wet op de justitiële documentatie en op de verklaring omtrent het gedrag van overeenkomstige toepassing.
6. Vrijwillige betaling van een geldsom, als bedoeld in artikel 74 van het Wetboek van Strafrecht, wordt voor de toepassing van het derde lid gelijk gesteld met een onherroepelijk geworden uitspraak.
7. Van het bepaalde in het tweede tot en met vierde lid kan de korpschef op verzoek ontheffing verlenen indien de toepassing daarvan kennelijk onredelijk is.

Artikel 9

1. De aanvrager of de beheerder, bedoeld in artikel 10, eerste lid, onder a, van de wet dient met gunstig gevolg een examen te hebben afgelegd waarvan de exameneisen en het examenreglement door de minister zijn goedgekeurd.
2. Goedkeuring als bedoeld in het eerste lid wordt in ieder geval verleend aan:
 - a. het Vakexamen voor de handel in wapens en munitie van de Leidsche Onderwijs Instellingen;
 - b. het Examen inzake vakbekwaamheid voor de detailhandel in vuurwapens en munitie van de Nederlandse Vereniging voor de Wapenhandel, voor zover dat examen voor 1 januari 1989 is afgelegd.
3. De minister kan, al dan niet tijdelijk, gehele of gedeeltelijke ontheffing verlenen van het bepaalde in het eerste lid. Aan de ontheffing kunnen voorwaarden en beperkingen worden verbonden.

Artikel 10

Artikel 9, eerste lid, van deze regeling is niet van toepassing, indien de aangevraagde erkenning, bedoeld in artikel 10 van de wet, bedrijven betreft waarin:

- a. geen andere onder de wet vallende voorwerpen dan noodsignaalmiddelen worden hersteld of verhandeld, hieronder mede verstaan het verhandelen van bijbehorende munitie;
- b. uitsluitend wapens worden gegraveerd of geblauwd, dan wel aan een andere oppervlaktebehandeling worden onderworpen;
- c. slechts lucht-, gas- of veerdrukwapens, uitsluitend bestemd en geschikt voor de paintballsport, worden verhandeld; of
- d. uitsluitend munitie van categorie III wordt verhandeld, en die op 26 september 1996 in het bezit waren van een daartoe strekkende erkenning.

7. Erkenningen; beveiliging bedrijfsruimte

Artikel 11

1. De bedrijfsruimte van de erkende:
 - a. is niet in gebruik als woonruimte;
 - b. is deugdelijk afsluitbaar en is voorzien van een alarminstallatie;
 - c. bevat een deugdelijk afsluitbare bergruimte; en
 - d. is niet toegankelijk voor publiek, tenzij daar tevens toezichthoudend personeel aanwezig is.

2. Het bepaalde in het eerste lid, onder a en b, is niet van toepassing op de bedrijfsruimte van de erkende, bedoeld in artikel 10, eerste lid, onder a en b.
3. In de bedrijfsruimte van de erkende worden vuistvuurwapens niet uitgesteld op een plaats die vanaf de openbare weg zichtbaar is.
4. Indien in de bedrijfsruimte van de erkende geen toezichthoudend personeel aanwezig is, worden vuistvuurwapens opgeslagen in de bergruimte, bedoeld in het eerste lid onder c.
5. Onverminderd het bepaalde in de voorgaande leden voldoet de bedrijfsruimte van de erkende die wapens van categorie II vervaardigt, transformeert, in de uitoefening van zijn bedrijf uitwisselt, verhuurt of anderszins ter beschikking stelt, herstelt of verhandelt, aan de veiligheidseisen die zijn gesteld in bijlage IV bij deze regeling.

8. Erkenningen; registers

Artikel 12

1. De erkenninghouder of de in het bewijs van erkenning genoemde beheerder houdt een doorlopend register bij waarin alle door deze onder enige titel verkregen of overgedragen wapens en munitie, onderdelen en hulpstukken als bedoeld in artikel 3 van de wet daaronder mede begrepen, worden aangetekend, met uitzondering van patroonhouders en magazijnen, lucht-, gas- en veerdrukwapens van categorie IV en van die wapens of munitie waarvoor ingevolge één van de artikelen 18, 19, 20, 21, en 22 een vrijstelling geldt.
2. Het in het eerste lid genoemde register bestaat uit de volgende afzonderlijke registraties:
 - a. een registratie betreffende het inkomen van voor de handel bestemde wapens;
 - b. een registratie het inkomen van voor de handel bestemde munitie;
 - c. een registratie betreffende het uitgaan van voor de handel bestemde wapens;
 - d. een registratie betreffende het uitgaan van voor de handel bestemde munitie;
 - e. een registratie betreffende in bewaring of ter reparatie gegeven wapens en munitie.
3. De in het tweede lid onder a genoemde registratie bevat kolomsgewijs en achtereenvolgens: het volgnummer, de datum van ontvangst, het aantal, een omschrijving van het wapen met vermelding van fabrikaat, type, kaliber en nummer, de naam en het adres van degene die heeft geleverd, alsmede de soort, het nummer en de afgevende instantie van het document waaruit de bevoegdheid blijkt van degene die heeft geleverd.
4. De in het tweede lid onder b genoemde registratie bevat kolomsgewijs en achtereenvolgens: het

volgnummer, de datum van ontvangst, de hoeveelheid, een omschrijving van de munitie met vermelding van fabrikaat, type en kaliber, de naam en het adres van degene die heeft geleverd, alsmede de soort, het nummer en de afgevende instantie van het document waaruit de bevoegdheid blijkt van degene die heeft geleverd.

5. De in het tweede lid onder c genoemde registratie bevat kolomsgewijs en achtereenvolgens: het volgnummer, een verwijzing naar het volgnummer waaronder het wapen in de in het tweede lid onder a bedoelde registratie staat vermeld, de datum van overdracht, het aantal, een omschrijving van het wapen met vermelding van fabrikaat, type, kaliber en nummer, de naam en het adres van degene aan wie het wapen wordt overgedragen, de soort, het nummer en de afgevende instantie van het document waaruit de bevoegdheid blijkt van degene aan wie het wapen wordt overgedragen, alsmede, in gevallen waarin een verlof tot verkrijging vereist is, het nummer van dit verlof en de instantie die het heeft afgegeven.

6. De in het tweede lid onder d genoemde registratie bevat kolomsgewijs en achtereenvolgens: het volgnummer, de hoeveelheid, een omschrijving van de munitie met vermelding van fabrikaat, type en kaliber, de naam en het adres van degene aan wie de munitie wordt overgedragen, alsmede de soort, het nummer en de afgevende instantie van het document waaruit de bevoegdheid blijkt van degene aan wie wordt overgedragen.

7. De in het tweede lid onder e genoemde registratie bevat kolomsgewijs en achtereenvolgens: het volgnummer, de datum van ontvangst, het aantal, een omschrijving van het wapen met vermelding van fabrikaat, type, kaliber en nummer, een omschrijving van de munitie met vermelding van fabrikaat, type en kaliber, de naam en het adres van degene die in bewaring of in reparatie heeft gegeven, de soort, het nummer en de afgevende instantie van het document waaruit de bevoegdheid blijkt van degene die in bewaring of in reparatie heeft gegeven, gegevens betreffende de doorgifte van het wapen aan degene die het wapen in reparatie of bewaring heeft gegeven.

8. De erkenninghouder of de in het bewijs van erkenning genoemde beheerder verstrekt voor de zevende dag van elke kalendermaand aan de korpschef een door hem per bladzijde ondertekende en gedateerde kopie dan wel, voorzover het een geautomatiseerd te verwerken registratie betreft, een uitdraai van het gedeelte van elk van de in het tweede lid onder a t/m d genoemde registraties, dat betrekking heeft op de voorgaande kalendermaand, onder gelijktijdige afgifte van de door hem in die periode ingenomen verloven tot verkrijging. Op verzoek van de korpschef overlegt hij tevens maandelijks een kopie dan wel, voorzover het een geautomatiseerd te verwerken registratie betreft, een uitdraai van het desbetreffende gedeelte van de in het tweede lid onder e genoemde registratie.

9. De erkenninghouder of de in het bewijs van erkenning genoemde beheerder die handelt in lucht-, gas-, of veerdrukwapens van categorie IV, patroonhouders of -magazijnen bedoeld in artikel 18, onder g, van deze regeling, stroomstootwapens bedoeld in artikel 21, van deze regeling, of in noodsignaalmiddelen een register waarin kolomsgewijs en achtereenvolgens wordt aangetekend: de datum van overdracht, het aantal, het fabrikaat en type van de overgedragen voorwerpen, de naam en het adres van degene aan wie wordt overgedragen, alsmede het soort en nummer van diens

legitimatiebewijs. De in dit register opgenomen gegevens blijven tenminste gedurende vijf jaren bewaard.

Artikel 13

Bij verkrijging van wapens van categorie III van personen die een verlof tot het voorhanden hebben als bedoeld in artikel 28 van de wet bezitten, dan wel op grond van artikel 26, tweede lid, van de wet voor de jacht bestemde wapens voorhanden mogen hebben, verstrekt de erkende, dan wel de beheerder, bedoeld in artikel 9, derde lid, van de wet, een ontvangstbewijs overeenkomstig het in bijlage 3 bij deze wet opgenomen model.

9. Vrijstelling van de erkenningsplicht

Artikel 14

Van het verbod in artikel 9, eerste lid, van de wet wordt vrijstelling verleend voor het vervaardigen, transformeren of in de uitoefening van een bedrijf uitwisselen, verhuren of anderszins ter beschikking stellen, herstellen, beproeven of verhandelen van wapens van categorie IV onder 1°, 2°, 3° en 5°.

Artikel 15

1. Van het verbod in artikel 9, eerste lid, van de wet wordt vrijstelling verleend voor het in de uitoefening van een bedrijf ter beschikking stellen van lucht-, gas- en veerdrukwapens van categorie IV, onder 4°, aan bezoekers van erkende kermissen.
2. De vrijstelling in het eerste lid geldt slechts voor:
 - a. kermisexploitanten die tijdens de erkende kermis een toegestane attractie exploiteren;
 - b. gedurende de openingstijden van die kermis; en
 - c. op het terrein van de kermis in de onmiddellijke nabijheid van de attractie.

Artikel 16

1. Van het verbod in artikel 9, eerste lid, van de wet wordt vrijstelling verleend voor het ter beschikking stellen van lucht-, gas- en veerdrukwapens van categorie IV, onder 4°, aan bezoekers van braderieën, rommelmarkten, jaarmarkten, fancy-fairs en soortgelijke evenementen.
2. De vrijstelling in het eerste lid geldt slechts:

- a. voor personen die voorafgaande schriftelijke toestemming van de korpschef hebben om de attractie te exploiteren, welke toestemming wordt onthouden of ingetrokken indien geen redelijke maatregelen ter voorkoming van letsel en schade zijn getroffen, dan wel indien misbruik is te vrezen,
- b. gedurende de openingstijden van het in het eerste lid bedoelde evenement,
- c. op het terrein van het evenement in de onmiddellijke nabijheid van de attractie.

Artikel 17

Van het verbod in artikel 9, eerste lid, van de wet wordt vrijstelling verleend voor het vervaardigen en transformeren van munitie, voor zover het gaat om herladen:

- a. voor eigen gebruik
 - 1° door personen die houder zijn van een jachtakte; of
 - 2° door personen die houder zijn van een verlof tot het voorhanden hebben van wapens en munitie, voor zover het betreft munitie die kan worden afgeschoten door middel van een vuurwapen, tot het voorhanden hebben waarvan die personen gerechtigd zijn;
- b. zonder winst oogmerk door een lid van een schietvereniging ten behoeve van andere leden van die vereniging, voor zover:
 - 1° dit lid daartoe door het bestuur van de vereniging schriftelijk is aangewezen, terwijl van die aanwijzing door het bestuur schriftelijk kennis is gegeven aan de korpschef binnen wiens regio het vervaardigen of transformeren plaatsvindt; en
 - 2° dit lid geen andere munitie vervaardigt of transformeert dan die, welke kan worden afgeschoten door middel van een vuurwapen, tot het voorhanden hebben waarvan hij is gerechtigd, behoudens de gevallen waarin door de korpschef voor dit doeleinde op verzoek van het bestuur van de vereniging een afzonderlijk verlof tot het voorhanden hebben van munitie aan het lid is verleend.

10. Vrijstelling voor vuurwapens en munitie

Artikel 18

Onverminderd het bepaalde in artikel 3 van deze regeling wordt van het verbod in artikel 14, eerste lid, 22, eerste lid, 26, eerste lid, en 31, eerste lid van de wet vrijstelling verleend voor het doen binnenkomen of uitgaan, vervoeren, voorhanden hebben en overdragen van:

- a. vuurwapens die voor gebruik als zodanig ongeschikt zijn gemaakt op de wijze, beschreven in bijlage II bij deze regeling;
- b. vuurwapens in de vorm van geweren, revolvers, pistolen en combinatiewapens die zijn vervaardigd vóór 1 januari 1945 en die ontworpen zijn om te worden geladen:
 - 1° door de loopmond, voorzover het revolvers betreft de voorzijde van de cilinder daaronder mede begrepen, met losse kogels en los buskruit; of
 - 2° met eenheidspatronen, met uitzondering van die welke tot ontbranding worden gebracht

door middel van een centraalvuursysteem of door middel van een randvuursysteem en die van het kaliber .22 zijn;

- c. vuurwapens in de vorm van geweren, hetzij enkelschots, hetzij meerschots, die:
 - 1° vóór 1 januari 1870 zijn vervaardigd of getransformeerd, en die
 - 2° zijn ingericht voor het verschieten van eenheidspatronen waarvan de voortdrijvende lading bestaat uit zwart buskruit;
- d. kennelijk gebruikte lege patroon- en granaathulzen bestemd voor dan wel deel uitmakend van een verzameling;
- e. munitie en onderdelen van munitie van categorie II, uitsluitend voor de houders van een verlot tot het voorhanden hebben van munitie van categorie III en vermeld op dit verlot, voorzover de munitie of onderdelen van munitie passen binnen de op dit verlot omschreven specialisatie en voorzover munitie met een kaliber boven de 12.7 mm (.50) niet voorzien is van brisante ladingen en munitie met een kaliber boven de 19 mm bovendien geen voortdrijvende ladingen bevat;
- f. voorlaadkanonnen, gegoten vóór 1 januari 1870 en voorzien van een zundgat voor lontontsteking.
- g. patroonmagazijnen en patroonhouders voorzover het personen betreft die bevoegd zijn de wapens of de munitie waarvoor deze voorwerpen bestemd zijn voorhanden te hebben.

Artikel 19

1. Van het verbod van artikel 14, eerste lid, het verbod van artikel 22, eerste lid, en het verbod van artikel 26, eerste lid, van de wet, wordt vrijstelling verleend voor bij schiethamers behorende munitie.
2. De vrijstelling ingevolge het eerste lid geldt slechts voor de munitie die behoort bij schiethamers waarvoor een certificaat van goedkeuring als bedoeld in artikel 4 van de Wet op de gevaarlijke werktuigen (Stb. 1952, 104) is afgegeven.

Artikel 20

1. Van het verbod van artikel 14, eerste lid, artikel 22, eerste lid, en artikel 26, eerste lid, van de wet, wordt vrijstelling verleend voor het doen binnenkomen of uitgaan, vervoeren en voorhanden hebben van munitie, bestemd voor wapens die het karakter dragen van oudheden of replica's daarvan, voorzover deze munitie bestaat uit ronden loden kogels.
2. Van het verbod van artikel 14, eerste lid, artikel 22, eerste lid, en artikel 26, eerste lid, van de wet wordt vrijstelling verleend aan houders van een jachtakte voor het doen binnenkomen en uitgaan, voorhanden hebben en vervoeren van metallisch lood bevattende hagelpatronen buiten het veld zoals bedoeld in artikel 1 van de Jachtwet.

11. Vrijstelling voor stroomstootwapens en noodsignaalmiddelen

Artikel 21

1. Van het verbod van artikel 14, eerste lid, artikel 22, eerste lid, artikel 26, eerste lid en artikel 27 eerste lid, van de wet, wordt vrijstelling verleend voor het doen binnenkomen of uitgaan, vervoeren, voorhanden hebben en dragen van voorwerpen waarmee door een elektrische stroomstoot personen weerloos kunnen worden gemaakt of pijn kan worden toegebracht, aan personen die zich bezighouden met de beroepsmatige uitoefening van de veehouderij, het transport van vee, of de medische behandeling daarvan.

2. De vrijstelling in het eerste lid geldt voorzover het dragen betreft uitsluitend op het moment dat de in het eerste lid genoemde activiteiten daadwerkelijk plaatsvinden.

Artikel 22

1. Van het verbod van artikel 14, eerste lid, 22, eerste lid, 26, eerste lid en 27, eerste lid, van de wet wordt vrijstelling verleend voor het doen binnenkomen of uitgaan, vervoeren, voorhanden hebben dragen van noodsignaalmiddelen en de daarbij behorende lichtsignaal- of rooksignaalpatronen door personen van 18 jaar of ouder.

2. De vrijstelling ingevolge het eerste lid geldt slechts indien:

1° de noodsignaalmiddelen

- a. van een kleiner kaliber zijn dan kaliber 12 (18,2 mm);
- b. uitsluitend geschikt zijn voor het verschieten van noodsignaalmunitie;
- c. zijn vervaardigd van kunststof of lichtmetaal;
- d. niet de vorm hebben van een geweer, pistool of revolver;
- e. door middel van gravering zijn voorzien van de postcode en het huisnummer van de

eigenaar; en

2° de in het eerste lid genoemde handelingen in directe relatie staan tot het vergroten van de veiligheid aan boord van een vaartuig.

Artikel 23

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend aan in het buitenland wonende personen van 18 jaar en ouder die met hun vaartuig een vaste ligplaats in Nederland hebben, voor het doen binnenkomen of uitgaan van andere noodsignaalmiddelen dan bedoeld in het eerste lid.

2. De vrijstelling ingevolge het eerste lid geldt slechts voor personen die de meegevoerde

noodsignaalmiddelen in Nederland krachtens een verlof voorhanden mogen hebben.

Artikel 24

Van het verbod in artikel 22, eerste lid, van de wet, wordt vrijstelling verleend voor het vervoeren van andere noodsignaalmiddelen dan bedoeld in artikel 22, tweede lid, aan de door de minister van Verkeer en Waterstaat aangewezen ambtenaren van de Vaarwegmarkeringsdienst van het Directoraat-Generaal Scheepvaart en Maritieme Zaken van het ministerie van Verkeer en Waterstaat.

Artikel 25

Van het verbod in artikel 26, eerste lid, van de wet, wordt vrijstelling verleend voor het voorhanden hebben van andere noodsignaalmiddelen dan bedoeld in artikel 22, tweede lid, aan zeeverkeersambtenaren van het Directoraat-Generaal Scheepvaart en Maritieme Zaken van het ministerie van Verkeer en Waterstaat, in de daartoe door de minister van Verkeer en Waterstaat aangewezen zeeverkeersposten.

12. Vrijstelling voor wapens van categorie IV

Artikel 26

1. Van het verbod in artikel 26, vijfde lid, van de wet wordt vrijstelling verleend voor het voorhanden hebben van degens, lucht-, gas-, en veerdrukwapens van categorie IV, alsmede van kruisbogen, aan personen die de leeftijd van 18 jaar nog niet hebben bereikt, voor de beoefening van sporten in verenigingsverband.

2. De vrijstelling ingevolge het eerste lid geldt slechts voor personen die door middel van een bewijs van lidmaatschap kunnen aantonen lid te zijn van een vereniging waarbinnen de sportbeoefening met behulp van een of meer van de in het eerste lid bedoelde voorwerpen plaatsvindt.

3. Voorzover het lucht-, gas- of veerdrukwapens betreft geldt, in afwijking van het tweede lid, de vrijstelling in het eerste slechts voor:

- a. personen die door middel van een bewijs van lidmaatschap kunnen aantonen ten minste drie maanden lid te zijn van een schietvereniging, zoals bedoeld in artikel 1, eerste lid, onder g, van deze regeling;
- b. lucht-, gas- en veerdrukwapens die zijn toegelaten in het Schiet- en wedstrijdreglement van de Koninklijke Nederlandse Schutters Associatie.

Artikel 27

1. Van het verbod van artikel 31, vierde lid, van de wet wordt vrijstelling verleend voor het overdragen aan personen die de leeftijd van 18 jaar nog niet hebben bereikt van degens, lucht-, gas-, en veerdrukwapens van categorie IV, en van kruisbogen, een en ander met het oog op in verenigingsverband beoefende sporten.
2. De vrijstelling ingevolge het eerste lid geldt voorzover het lucht-, gas-, of veerdrukwapens betreft uitsluitend indien:
 - a. de persoon aan wie de in het eerste lid bedoelde voorwerpen worden overgedragen een verklaring, die niet ouder is dan veertien dagen, van het bestuur van de vereniging overlegt, waaruit blijkt dat hij tenminste 3 maanden lid is van een schietvereniging, zoals bedoeld in artikel 1, eerste lid, onder g, van deze regeling;
 - b. het betreft lucht-, gas- en veerdrukwapens die zijn toegelaten in het Schiet- en wedstrijdreglement van de Koninklijke Nederlandse Schutters Associatie; en
 - c. de onder a bedoelde verklaring door degene die het wapen overdraagt in ontvangst wordt genomen, welke verklaring, nadat de datum van overdracht daarop door hem is aangetekend, tenminste vijf jaar na de overdracht van het wapen wordt bewaard.
3. Buiten het geval bedoeld in het tweede lid geldt de vrijstelling in het eerste lid slechts indien:
 - a. de persoon aan wie de in het eerste lid bedoelde voorwerpen worden overgedragen een verklaring, die niet ouder is dan veertien dagen, van het bestuur van de vereniging overlegt waaruit blijkt dat:
 - 1° die vereniging de serieuze sportbeoefening met een of meer van het over te dragen voorwerp tot doel heeft; en
 - 2° de in het eerste lid bedoelde persoon lid is van die vereniging; en
 - b. de onder a bedoelde verklaring door degene die het wapen overdraagt in ontvangst wordt genomen, welke verklaring, nadat de datum van overdracht daarop door hem is aangetekend, tenminste vijf jaar na de overdracht van het wapen wordt bewaard.

Artikel 28

1. Van het verbod in artikel 27, eerste lid, van de wet wordt vrijstelling verleend voor het dragen van degens, lucht-, gas-, en veerdrukwapens van categorie IV, alsmede van kruisbogen op voor het publiek toegankelijke plaatsen, met uitzondering van de openbare weg.
2. De vrijstelling ingevolge het eerste lid geldt uitsluitend:
 - a. voor personen die bevoegd zijn de wapens voorhanden te hebben;
 - b. voor de beoefening van sporten in verenigingsverband ten behoeve waarvan voorafgaande schriftelijke toestemming door de korpschef is verleend, welke toestemming wordt onthouden of

ingetrokken indien geen redelijke maatregelen ter voorkoming van letsel en schade zijn getroffen, dan wel indien misbruik is te vrezen;

- c. gedurende de tijden waarop het sportevenement plaatsvindt;
- d. op het terrein van het evenement in de onmiddellijke nabijheid van de plaats waar de sport daadwerkelijk wordt beoefend.

Artikel 29

Van het verbod van artikel 27, eerste lid, van de wet wordt vrijstelling verleend voor het dragen lucht-, gas- en veerdrukwapens van categorie IV aan personen aan wie deze overeenkomstig artikel 15 of artikel 16 van deze regeling ter beschikking worden gesteld. Artikel 15, tweede lid, onder b en c, en artikel 16, tweede lid, onder b en c, van deze regeling zijn van overeenkomstige toepassing.

13. Vrijstelling voor ceremoniële wapens, optochten en studentenweerbaarheidsverenigingen

Artikel 30

1. Van het verbod van artikel 27, eerste lid, van de wet, wordt vrijstelling verleend voor het dragen van een wapen van categorie IV, aan personen ten aanzien van wie het wapen deel uitmaakt van hun officiële ceremonieel tenue.
2. De vrijstelling in het eerste lid geldt uitsluitend op de tijdstippen dat de ambtskleding of het officiële ceremonieel tenue daadwerkelijk wordt gedragen.

Artikel 31

1. Van het verbod van artikel 27, eerste lid, van de wet, wordt vrijstelling verleend voor het in een optocht meevoeren van wapens van categorie III of IV.
2. De vrijstelling ingevolge het eerste lid geldt slechts indien:
 - a. de wapens worden meegevoerd door personen die op grond van de wet bevoegd zijn die wapens voorhanden te hebben, en
 - b. de burgemeester in de gemeente waar de optocht wordt gehouden schriftelijk heeft verklaard tegen het meevoeren van de in de verklaring omschreven wapens geen bedenkingen te hebben.

Artikel 32

1. Van het verbod van artikel 27, eerste lid, van de wet, wordt vrijstelling verleend aan door de Minister van Defensie erkende studentenweerbaarheidsverenigingen voor het dragen van wapens van categorie III, welke door de krijgsmacht ter beschikking zijn gesteld en van wapens van categorie IV, onder 2°.
2. De vrijstelling ingevolge het eerste lid geldt slechts indien:
 - a. in uniform gekleed en in onderling verband wordt opgetreden tot het verrichten van eerbetoon, het deelnemen aan een optocht of een afstandsmars dan wel het oefenen voor een van deze gelegenheden;
 - b. voorzover vuurwapens worden gedragen, de vereniging op grond van een verlof bevoegd is die vuurwapens voorhanden te hebben; en
 - c. de Minister van Defensie voor het dragen van de ter beschikking gestelde wapens tijdens het onder a bedoelde optreden toestemming heeft verleend, en de burgemeester in de gemeente waar wordt opgetreden daartegen geen bedenkingen heeft.

14. Vrijstelling voor schepen en luchtvaartuigen

Artikel 33

Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend voor het aan boord van een Nederlands schip of luchtvaartuig doen uitgaan en binnenkomen van wapens van categorie III en de bijbehorende munitie die behoren tot de uitrusting van dat schip of luchtvaartuig en die krachtens een verlof aan boord voorhanden gehouden mogen worden.

Artikel 34

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend voor de doorvoer van wapens en munitie die behoren tot de uitrusting van een buitenlands schip dan wel tot de persoonlijke bezittingen van de gezagvoerder of de andere bemanningsleden.
2. De vrijstelling ingevolge het eerste lid geldt slechts voor:
 - a. wapens en munitie die aan boord van het schip blijven en die onder douaneverzegeling worden gehouden; en
 - b. wapens van categorie III en de bijbehorende munitie die aan boord van het schip blijven en die buiten douaneverzegeling worden gelaten, voor zover zulks noodzakelijk is voor de beveiliging van het schip, de opvarenden of de lading, dan wel voor de handhaving van de orde aan boord van het schip.

Artikel 35

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend voor de doorvoer van wapens en munitie die als vrachtgoederen aan boord van een zeeschip worden aangevoerd en die zonder lossing of overlading, binnen veertien dagen na de aankomst van het schip in de haven van bestemming weer over zee worden weggevoerd.
2. De vrijstelling ingevolge het eerste lid geldt slechts indien:
 - a. de gezagvoerder onmiddellijk na de aankomst van het schip in elke Nederlandse haven, waar ligplaats gekozen wordt, van de aanwezigheid aan boord van de wapens en munitie schriftelijk kennis geeft aan de korpschef; en
 - b. de wapens en munitie onder douaneverzegeling worden gehouden.

Artikel 36

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend voor de doorvoer van wapens en munitie die behoren tot de uitrusting van een buitenlands burgerlijk lijn- of charter vliegtuig of tot de uitrusting dan wel persoonlijke bezittingen van de gezagvoerder of de andere bemanningsleden.
2. De vrijstelling ingevolge het eerste lid geldt slechts in geval van een landing op de luchthaven Schiphol, Rotterdam, Eelde of Maastricht en indien de gezagvoerder de wapens en munitie:
 - a. bij een oponthoud van drie dagen of korter, in een afgesloten bergplaats aan boord van het vliegtuig houdt, of
 - b. bij een oponthoud langer dan drie dagen, in bewaring geeft aan de Commandant van de op de luchthaven gestationeerde afdeling of onderafdeling van het District Koninklijke marechaussee Luchtvaart.

Artikel 37

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend voor de doorvoer van wapens en munitie die als vrachtgoederen aan boord van een burgerlijk lijn- of chartervliegtuig uit het buitenland worden aangevoerd op een internationale luchthaven en vandaar binnen zeven dagen na de landing per vliegtuig naar het buitenland worden weggevoerd.
2. De vrijstelling ingevolge het eerste lid geldt slechts indien:
 - a. de gezagvoerder onmiddellijk na de landing van het vliegtuig van de aanwezigheid aan boord van de wapens en munitie schriftelijk kennis geeft aan de Commandant van de op de luchthaven gestationeerde afdeling of onderafdeling van het District Koninklijke marechaussee Luchtvaart, indien aanwezig, of anders aan de korpschef, zo nodig door tussenkomst van de douane; en
 - b. de wapens en munitie, in het geval dat die tijdens het oponthoud worden gelost of

overgeladen en niet onmiddellijk naar het buitenland worden weggevoerd, op de luchthaven in een inrichting voor douaneopslag worden opgeslagen.

3. In het geval dat de wapens of munitie na de landing van het vliegtuig worden gelost of overgeladen, geldt de vrijstelling ingevolge het eerste lid bovendien slechts indien ten genoegen van degene aan wie ingevolge het tweede lid, onder a, schriftelijk kennis is gegeven, is aangetoond dat de overheid van het land van bestemming geen bedenkingen heeft tegen de invoer van die wapens en munitie.

Artikel 38

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend voor de doorvoer van vuurwapens van categorie III, die zodanig zijn verpakt dat zij niet voor onmiddellijk gebruik kunnen worden aangewend, alsmede voor doorvoer van de daarbij behorende munitie door passagiers van burgerlijke lijn- of chartervliegtuigen, die voor een kort oponthoud landen op een Nederlandse internationale luchthaven.

2. De vrijstelling ingevolge het eerste lid geldt slechts indien

- a. de gezagvoerder onmiddellijk na de landing van het vliegtuig van de aanwezigheid aan boord van de wapens en munitie schriftelijk kennis geeft aan de Commandant van de op de luchthaven gestationeerde afdeling of onderafdeling van het District Koninklijke marechaussee Luchtvaart, indien aanwezig, of anders aan de korpschef, zo nodig door tussenkomst van de douane; en
- b. de wapens en munitie tijdens het oponthoud op de luchthaven in een afgesloten en voor de passagiers niet toegankelijke bergplaats aan boord van het vliegtuig worden gehouden, tenzij zij moeten worden overgebracht naar een ander vliegtuig, waarmee de luchtreis wordt voortgezet.

15. Vrijstellingen sportschutters en jagers voor buitenlandse activiteiten

Artikel 39

1. Van het verbod van artikel 14, eerste lid en 22, eerste lid van de wet, wordt vrijstelling verleend aan de houder van een geldige jachtakte, voor zover het betreft het ter beoefening door hem van de jacht doen uitgaan of binnenkomen, alsmede vervoeren, van de in die jachtakte omschreven jachtgeweren, die zodanig zijn verpakt dat zij niet voor onmiddellijk gebruik kunnen worden aangewend, alsmede voor ten hoogste 1000 patronen voor die geweren tezamen.

2. De vrijstelling ingevolge het eerste lid geldt voor de houder van een jachtakte als bedoeld in artikel 16a van de Jachtwet vanaf de zevende dag vóór tot en met de zevende dag ná het tijdvak waarvoor die jachtakte geldig is.

3. Voor ingezetenen van één van de bij de Europese Unie aangesloten lidstaten geldt de vrijstelling slechts indien zij beschikken over een door de autoriteiten in die lidstaat afgegeven Europese vuurwapenpas waarop de wapens zijn vermeld.

Artikel 40

1. Van het verbod van artikel 14, eerste lid en artikel 22, eerste lid, van de wet wordt vrijstelling verleend ten behoeve van doorvoer, anders dan per vliegtuig, van jachtgeweren en daarbij behorende munitie, die zodanig zijn verpakt dat zij niet voor onmiddellijk gebruik kunnen worden aangewend.

2. Voor ingezetenen van één van de bij de Europese Unie aangesloten lidstaten geldt de vrijstelling ingevolge het eerste en tweede lid slechts indien zij beschikken over een door de autoriteiten in die lidstaat afgegeven Europese vuurwapenpas waarop de wapens zijn vermeld.

Artikel 41

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend aan in het buitenland wonende sportschutters, voor het doen binnenkomen of uitgaan van vuurwapens van categorie III, die zodanig zijn verpakt dat zij niet voor onmiddellijk gebruik kunnen worden aangewend, alsmede van ten hoogste 1000 patronen voor die vuurwapens tezamen.

2. Van het verbod van artikel 22, eerste lid en artikel 26 eerste lid, van de wet wordt vrijstelling verleend aan in het buitenland wonende sportschutters voor het vervoer en het voorhanden hebben van vuurwapens en munitie van categorie III.

3. De vrijstelling ingevolge het eerste en tweede lid geldt slechts

a. voor sportschutters die blijkens een schriftelijke uitnodiging of verklaring van een Nederlandse schietvereniging gedurende een daarin vermeld tijdvak in Nederland de schietsport gaan beoefenen of hebben beoefend en die in het land van herkomst bevoegd zijn de meegebrachte vuurwapens of munitie voorhanden te hebben;

b. vanaf de tweede dag voor tot en met de tweede dag na de in het tweede lid bedoelde uitnodiging of verklaring vermelde tijdvak.

4. Voor ingezetenen van één van de bij de Europese Unie aangesloten lidstaten geldt de vrijstelling ingevolge het eerste en tweede lid slechts indien zij beschikken over een door de autoriteiten in die lidstaat afgegeven Europese vuurwapenpas waarop de wapens zijn vermeld.

Artikel 42

1. Van het verbod van artikel 14, eerste lid, van de wet, wordt vrijstelling verleend aan in Nederland wonende sportschutters voor het doen binnenkomen of uitgaan van vuurwapens van categorie III die zodanig zijn verpakt dat zij niet voor onmiddellijk gebruik kunnen worden aangewend, alsmede van ten hoogste 1000 patronen voor die vuurwapens tezamen.
2. De vrijstelling ingevolge het eerste lid geldt slechts voor de sportschutters die:
 - a. blijktens een schriftelijke uitnodiging of verklaring van een schietvereniging in het buitenland de schietsport gaan beoefenen dan wel hebben beoefend, en
 - b. de meegevoerde vuurwapens en munitie in Nederland krachtens een verlof voorhanden mogen hebben.

16. Maximum aantal wapens op verlof of jachtakte

Artikel 43

1. Houders van een verlof tot het voorhanden hebben, zoals bedoeld in artikel 28, eerste lid, van de wet, mogen ten hoogste vijf wapens voorhanden hebben.
2. Houders van een jachtakte, mogen ten hoogste zes wapens voorhanden hebben.
3. Het eerste lid en tweede lid is niet van toepassing op houders van een verlof tot het voorhanden hebben onderscheidenlijk een jachtakte die aantonen dat zes, respectievelijk zeven, of meer wapens voor hen onontbeerlijk zijn voor de beoefening van de schietsport, onderscheidenlijk de jacht.

17. Vrijstellingen voor vervoer

Artikel 44

1. Van het verbod van artikel 22, eerste lid, van de wet wordt vrijstelling verleend aan sportschutters en jagers voor het vervoeren van wapens en munitie die zij gerechtigd zijn voorhanden te hebben.
2. De vrijstelling in het eerste lid geldt uitsluitend:
 - a. voor het vervoeren tussen de woning en de schietbaan, de erkende wapenhandelaar en, na daaraan voorafgaande toestemming van de politie, het bureau van politie, alsmede, voorzover het jagers betreft, het jachtveld; en
 - b. langs de weg en binnen het tijdsbestek welke redelijkerwijs voor het vervoer geboden zijn.

Artikel 45

1. Van het verbod van artikel 22, eerste lid van de wet wordt voor het vervoeren van wapens en munitie vrijstelling verleend aan personen die in de uitoefening van een beroep of bedrijf zaken vervoeren.
2. De vrijstelling in het eerste lid geldt slechts:
 - a. indien en voorzover het vervoer plaats vindt in opdracht van degene die bevoegd is de wapens en de munitie voorhanden te hebben en te vervoeren;
 - b. indien de ontvanger bevoegd is de wapens en de munitie voorhanden te hebben; en
 - c. voorzover uit tijdens het vervoer aanwezige documenten blijkt dat aan de in het eerste lid, alsmede aan de in dit lid onder a en b genoemde voorwaarden is voldaan.

Artikel 46

1. Van het verbod van artikel 22, eerste lid van de wet wordt voor het vervoeren van wapens en munitie vrijstelling verleend aan personen in dienst van houders van een erkenning, zoals bedoeld in artikel 9 van de wet.
2. De vrijstelling in het eerste lid geldt slechts indien:
 - a. het wapens of munitie betreft waarop de erkenning betrekking heeft;
 - b. het vervoer plaatsvindt in opdracht van de erkenninghouder, dan wel de beheerder in het bedrijf waaraan de erkenning is verleend;
 - c. het vervoer noodzakelijk is voor de goede uitvoering van de handelingen waarop de erkenning betrekking heeft;
 - d. de erkenninghouder, onderscheidenlijk de beheerder bevoegd is de wapens en de munitie te vervoeren; en
 - e. uit tijdens het vervoer aanwezige documenten blijkt dat aan de in het eerste lid, alsmede aan de in dit lid onder a tot en met d genoemde voorwaarden is voldaan.

18. Administratie door de korpschef

Artikel 47

1. De korpschef bewaart in afzonderlijke door hem te voeren administraties kopieën van:
 - a. de door hem uitgereikte verlopen tot het voorhanden hebben van wapens en munitie van categorie III, jachtakten, erkenning en consenten; en
 - b. alle documenten betreffende de door andere autoriteiten verleende bevoegdheid tot het

voorhanden hebben van wapens of munitie aan in zijn ambtsgebied wonende personen.

2. De korpschef registreert de naam, het adres en de woonplaats van de in zijn ambtsgebied wonende personen die bevoegd zijn een vuurwapen voorhanden te hebben in een bestand.

3. De korpschef zendt, in geval van verhuizing binnen Nederland van in zijn ambtsgebied wonende personen die bevoegd zijn wapens of munitie voorhanden te hebben, de op hen betrekking hebbende kopieën, bedoeld in het eerste lid, onverwijld aan de korpschef in de politieregio waarbinnen de nieuwe woonplaats is gelegen.

4. De korpschef zendt van iedere erkenning die hij verleent, verlengt, wijzigt of intrekt gelijktijdig een kopie naar de minister.

5. Van de wapens of de munitie die overeenkomstig artikel 8 van de wet in bewaring worden gegeven houdt de korpschef een register bij, waarin wordt vermeld:

- a. de naam en het adres van degene die de voorwerpen in bewaring geeft;
- b. de datum van bewaargeving;
- c. een omschrijving van de in bewaring gegeven voorwerpen, waarbij zoveel mogelijk wordt aangegeven het aantal, de soort, het merk, het type, het kaliber, het nummer, de toebehoren, alsmede andere bijzonderheden, daaronder mede verstaan beschadigingen;
- d. het nummer van het eventueel afgegeven document waaruit blijkt dat de voorwerpen bevoegd voorhanden werden gehouden;
- e. de plaats waar de voorwerpen worden opgeborgen;
- f. de datum waarop de bewaring is geëindigd;
- g. de naam en het adres van degene aan wie na afloop van de bewaring de voorwerpen ter hand zijn gesteld.

6. De bewaargever is de korpschef bewaarloon verschuldigd van f 5,- per wapen per kalendermaand, daaronder begrepen een gedeelte van de kalendermaand, te rekenen vanaf de eerste dag van de derde kalendermaand nadat het wapen in bewaring is gegeven.

7. Aan de bewaargever wordt door de korpschef een ontvangstbewijs verstrekt waarop de gegevens, genoemd in het vijfde lid, onder a tot en met d, worden vermeld. Op het ontvangstbewijs wordt tevens vermeld hetgeen in het zesde lid, alsmede hetgeen in artikel 8, zesde en zevende lid, van de wet is bepaald.

19. Aanvraag- en bevoegdheidsdocumenten

Artikel 48

Voor het indienen van een verzoek om een erkenning, een consent, een vergunning of een verlof wordt gebruik gemaakt van een formulier overeenkomstig het daarvoor in bijlage III bij deze beschikking vastgestelde model.

Artikel 49

1. Bij inwilliging van een verzoek om een erkenning, een consent, een vergunning, een Europese vuurwapenpas of een verlof wordt aan de verzoeker een document uitgereikt overeenkomstig het daarvoor in bijlage III bij deze regeling vastgestelde model.

2. Bij inwilliging van een verzoek om verlenging van de geldigheidsduur van een erkenning wordt daarvan aantekening gemaakt in het aan de verzoeker overeenkomstig het eerste lid uitgereikte document of wordt hem tegen afgifte van het oude document een nieuw document uitgereikt.

20. Onkostenvergoeding

Artikel 50

1. De onkostenvergoeding, bedoeld in artikel 41 van de wet, bedraagt voor:
 - a. een ontheffing of de wijziging of verlenging daarvan: f 100,-
 - b. een erkenning of verlenging daarvan:
 - 1° indien het betreft erkenningen, bedoeld in artikel 10 van deze regeling, dan wel erkenningen waarop artikel 52, eerste lid, van deze regeling van toepassing is: f 100,- voor ieder jaar waarvoor de erkenning geldt;
 - 2° indien het overige erkenning betreft: f 1000,- voor ieder jaar waarvoor de erkenning geldt;
 - c. een consent:
 - 1° voor erkenninghouders f 50,-;
 - 2° voor particulieren f 35,-;
 - d. een vergunning tot vervoer f 5,-;
 - e. een verlof tot vervoer f 2,50,-;
 - f. een verlof tot het voorhanden hebben of het verlengen van de geldigheidsduur daarvan
 - 1° van vuurwapens f 15,- vermeerderd met f 5,- per vuurwapen waarvoor het verlof geldt, met een maximum van f 50,- totaal;
 - 2° van overige wapens of van uitsluitend munitie f 15,-;
 - g. een verlof tot dragen f 20,-;
 - h. een verlof tot verkrijging f 5,-;
 - i. een Europese vuurwapenpas:
 - 1° voor de afgifte daarvan, daarbij inbegrepen de aantekening van ten hoogste drie

vuurwapens, f 60,- vermeerderd met f 5,- per volgend vuurwapen dat op de pas wordt aangetekend, met een maximum van f 95,- totaal;

2° voor de verlenging van de geldigheidsduur daarvan ongeacht het aantal daarop aangetekende vuurwapens f 10,-;

j. het afgeven van een nieuw document, met uitzondering van een document, bedoeld in het eerste lid, onder a, uitsluitend ten gevolge van een redactionele wijziging daarin: f 5,-.

2. Voorzover ter uitvoering van artikel 40 van de wet regels zijn gegeven over combinatie van de daarin genoemde bescheiden bedraagt de onkostenvergoeding voor een dergelijke combinatie niet meer dan het bedrag dat verschuldigd zou zijn voor dat deel van de combinatie waarvoor de hoogste vergoeding geldt.

21. Toezicht.

Artikel 51

Ingevolge artikel 45, eerste lid, onder 2°, van de wet worden als ambtenaren belast met het toezicht op de naleving van het bij en krachtens de wet bepaalde, aangewezen de ambtenaren van de Rijksverkeersinspectie.

22. Overgangs- en slotbepalingen

Artikel 52

1. Artikel 9, eerste lid, van deze regeling is niet van toepassing indien het betreft erkenningen die betrekking hebben op lucht-, gas- of veerdrukwapens met een kinetische mondingsenergie van ten hoogste 7,5 joule en die zijn verleend vóór 26 september 1996.

2. Dit artikel vervalt op 1 januari 2002.

Artikel 53

1. Artikel 11, vijfde lid, van deze regeling is niet van toepassing indien de erkenning voor wapens van categorie II vóór 1 januari 1994 is verleend.

2. Dit artikel vervalt op 1 januari 2000.

Artikel 54

1. In afwijking van het bepaalde in artikel 18, onder c, sub 1^o, wordt in die bepaling in plaats van 'voor 1 januari 1870' gelezen: voor omstreeks 1888.
2. Dit artikel vervalt op 1 januari 2000.

Artikel 55

Artikel 20, tweede lid, alsmede de aanduiding 1. voor het eerste lid, vervalt op 1 januari 1998.

Artikel 56

1. Artikel 43, eerste lid, van deze regeling is niet van toepassing op personen die op 31 december 1996 in het bezit waren van een jachtakte waarop zeven of meer wapens waren vermeld.
2. Dit artikel vervalt op 1 januari 2000.

Artikel 57

Artikel 47, vierde lid, van deze regeling vervalt op 1 januari 1999.

Artikel 58

De regeling van de Minister van Justitie van 27 juni 1989 nr. 1036/589 Directie Politie Stcrt. 1989, 128) wordt ingetrokken.

Artikel 59

Deze regeling treedt in werking op 1 januari 1997, met uitzondering van artikel 13 dat in werking treedt op 1 juli 1997.

Artikel 60

Deze regeling kan worden aangehaald als Regeling wapens en munitie. Deze regeling zal met de toelichting in de Staatscourant worden geplaatst met uitzondering van de in bijlage 2 opgenomen tekeningen en van bijlage 3 die ter inzage worden gelegd in de bibliotheek van het ministerie van Justitie, Schedeldoekshaven 100 te Den Haag.

Bijlage I

De op de lijsten a en b vermelde wapens zijn verboden in (een combinatie van) de voor wapens gebruikelijke kleuren en in (een combinatie van) de voor de krijgsmacht gebruikelijke kleuren.

Indien op lijst a of b een andere dan de voor wapens gebruikelijke of voor de krijgsmacht gebruikelijke kleur wordt vermeld, is het desbetreffende voorwerp tevens in die kleur verboden.

Bijlage II

Eisen ten aanzien van het voor gebruik ongeschikt maken van vuurwapens (zie artikel 18, onder a, RWM).

Vuurwapens vallen onder de vrijstelling van artikel 18, onder a, van de RWM, indien ze voor gebruik ongeschikt zijn gemaakt op de navolgende wijze:

- a. basculerende hagelgeweren (enkel- of meerloops) met uitwendige hanen: zie beschrijving 1, alsmede tekening 1a en 1b;
- b. basculerende hagelgeweren (enkel- of meerloops) met inwendige hanen: zie beschrijving 2, alsmede tekening 2a en 2b);
- c. enkelschots grendelgeweren: zie beschrijving 3, alsmede tekening 3.
- d. meerschots grendelgeweren (repeterende vuurwapens): zie beschrijving 4, alsmede tekening 4;
- e. overige vuurwapens dienen overlangs te zijn doorgezaagd of afgeslepen.

Aanwijzingen met betrekking tot het voor gebruik ongeschikt maken van de onder a tot en met d genoemde wapens:

- de daarvoor in aanmerking komende onderdelen dienen eerst onbruikbaar te worden gemaakt en vervolgens gemonteerd en elektrisch vastgelast te worden; een en ander is afhankelijk van type wapen en toegepast afvuursysteem;
- de elektrische lassen diene op schone en vetvrije oppervlakken te worden gelegd en van deugdelijke kwaliteit te zijn;
- de bewerkingen dienen cumulatief te worden uitgevoerd.

Beschrijving 1

Basculerende hagelgeweren met uitwendige hanen

1. Twee gaten boren in elke loop met een diameter van ten minste 8 mm, waarvan één gat uitmondt in de kamer van de loop en één gat op maximaal 150 mm van de achterkant van de loop.

2. De kamer van elke loop ten dele versperren met een elektrische las.
3. De onderdelen van de sloten vastlassen op de slotplaten.
4. Zowel de slagpinnen als de schroeven die de slagpinnen borgen in de bascule, elektrisch vastlassen.
5. De voorste of achterste loophaak en de grendelstift inkorten.
6. Na het grendelen het restant loophaak en het restant grendelstift elektrisch vastlassen aan de bascule.
7. In de loopmondningen nauw passende stalen pennen (cilinders) ter lengte van minste 30 mm elektrisch vastlassen.

Beschrijving 2

Basculerende hagelgeweren met inwendige hanen

1. Twee gaten boren in elke loop met een diameter van ten minste 8 mm, waarvan één gat uitmondt in de kamer van de loop en één gat op maximaal 150 mm van de achterkant van de loop.
2. De kamer van elke loop ten dele versperren met een elektrische las.
3. De slagpingaten in de bascule vergroten tot een diameter van ten minste 10 mm.
4. De slagpinpunt verwijderen.
5. De spanhefboom, de loophaak en de grendelstift inkorten.
6. De lopen en de diverse onderdelen van het grendel-, span- en afvuurmechanisme elektrisch vastlassen aan de bascule.
7. In de loopmondningen nauw passende stalen pennen (cilinders) ter lengte van minste 30 mm elektrisch vastlassen.

Beschrijving 3

Enkelschots grendelgeweren

1. Een nagenoeg kamervullende stalen pen elektrisch vastlassen in de kamer van de loop. Eventueel de voorkant van de grendel inkorten om deze te sluiten.
2. Een nauw passende stalen pen, ter lengte van tenminste 30 mm, elektrisch vastlassen in de loopmondning.
3. Twee gaten met een diameter van ten minste 10 mm boren in de onderkant van de loop, waarvan één omstreeks 50 mm voor de kamer en één halverwege de loop.
4. Een gat van ten minste 10 mm boren in de onderkant van het huis en de loop ter hoogte van de schroefdraadverbinding huis/loop.
5. Twee gaten met een diameter van ten minste 10 mm boren in de onderkant van het huis, doorlopend tot in de grendel.
6. De trekkerspannok verwijderen.
7. De opening in het huis voor het doorlaten van de trekker-spannok, de twee geboorde gaten in het huis/grendel en het geboorde gat in het huis/loop met elektrische lassen geheel opvullen.

Beschrijving 4

Meerschots grendelgeweren (repeterende vuurwapens)

1. Een nagenoeg kamervullende, stalen pen elektrisch vastlassen in de kamer van de loop.
 2. Een nauw passende stalen pen, ter lengte van tenminste 30 mm, elektrisch vastlassen in de loopmond.
 3. Twee gaten met een diameter van ten minste 10 mm boren in de onderkant van de loop, waarvan één omstreeks 50 mm voor de kamer en één halverwege de loop.
 4. de loop elektrisch vastlassen aan het huis, hetzij ter plaatse van de achterkant van de loop en het inwendige van het huis, hetzij door middel van een te boren gat met een diameter van minimaal 10 mm in het huis en de loop ter plaatse van de schroefdraad. In het eerstgenoemde geval de voorkant van de grendel inkorten om deze te kunnen sluiten.
 5. De grendel/afsluiter elektrisch vastlassen aan het huis over de gehele lengte, aan beide langszijden van de magazijnopening.
-

Wet wapens en munitie

Paragraaf 1 Algemene bepalingen

Artikel 1

In deze wet wordt verstaan onder:

1° Onze Minister:

Onze Minister van Justitie;

2° de korpschef:

de korpschef, bedoeld in artikel 24 van de Politiewet 1993;

3° vuurwapen:

een voorwerp bestemd of geschikt om projectielen of stoffen door een loop af te schieten, waarvan de werking berust op het teweegbrengen van een scheikundige ontploffing of een andere scheikundige reactie;

4° munitie:

patronen en andere voorwerpen, bestemd of geschikt om een projectiel of een giftige, verstikkende, weerloosmakende, traanverwekkende of soortgelijke stof door middel van een vuurwapen af te schieten of te verspreiden, alsmede projectielen, bestemd om afgeschoten te worden door middel van een vuurwapen;

5° beheerder:

degene die onmiddellijk leiding geeft aan de uitoefening van een bedrijf, waarin wapens en munitie worden vervaardigd, getransformeerd, uitgewisseld, verhuurd of anderszins ter beschikking

gesteld, hersteld, beproefd of verhandeld;

6° bestemming:

de onmiddellijke bestemming van de in een consentaanvraag omschreven wapens en munitie, aangevuld met de eindbestemming daarvan indien ten tijde van de consentaanvraag bekend is dat de wapens en munitie vanuit de onmiddellijke bestemming zullen worden doorgevoerd;

7° binnenkomen en uitgaan:

het binnen het grondgebied van Nederland komen, respectievelijk het verlaten van het grondgebied van Nederland;

8° doorvoer:

binnenkomen gevolgd door uitgaan;

9° vervoer van een wapen:

het op de openbare weg of andere voor het publiek toegankelijke plaatsen bij zich hebben van een wapen dat zodanig is verpakt, dat het niet voor onmiddellijk gebruik kan worden aangewend;

vervoer van munitie:

het op de openbare weg of andere voor het publiek toegankelijke plaatsen bij zich hebben van munitie;

10° dragen van een wapen:

het op de openbare weg of andere voor het publiek toegankelijke plaatsen bij zich hebben van een wapen anders dan voor vervoer in de onder 9° bedoelde zin;

11° overdragen:

het aan een ander doen overgaan van de feitelijke macht.

12° Europese vuurwapenpas:

het document dat wordt afgegeven door de autoriteiten van de lid-staten van de Europese Gemeenschappen aan de wettige houder en gebruiker van een vuurwapen.

Artikel 2

1. Wapens in de zin van deze wet zijn de hieronder vermelde of overeenkomstig dit artikellid aangewezen voorwerpen, onderverdeeld in de volgende categorieën.

Categorie I

1°. stiletto's, valmessen en vlindermessen, een en ander indien het lemmet:

- a. meer dan een snijkant heeft;
- b. 7 cm of langer en 14 mm of smaller is;
- c. 9 cm of langer is; of
- d. van een stootplaat is voorzien;

2°. andere opvouwbare messen, indien:

- a. het lemmet meer dan een snijkant heeft; of
- b. de lengte in opgevouwen toestand langer dan 28 cm is;

3°. boksbeugels, ploertendoders, wurgstokken, werpsterren, villessen, ballistische messen en geluiddempers voor vuurwapens;

4°. blanke wapens die uiterlijk gelijken op een ander voorwerp dan een wapen;

- 5°. pijlen en pijlpunten bestemd om door middel van een boog te worden afgeschoten, die zijn voorzien van snijdende delen met de kennelijke bedoeling daarmee ernstig letsel te kunnen veroorzaken;
- 6°. katapulten;
- 7°. andere door Onze Minister aangewezen voorwerpen die een ernstige bedreiging van personen kunnen vormen of die zodanig op een wapen gelijken, dat zij voor bedreiging of afdreiging geschikt zijn.

Categorie II

- 1°. vuurwapens die niet onder een van de andere categorieën vallen;
- 2°. vuurwapens, geschikt om automatisch te vuren;
- 3°. vuurwapens die zodanig zijn vervaardigd of gewijzigd dat het dragen niet of minder zichtbaar is dan wel dat de aanvalskracht wordt verhoogd;
- 4°. vuurwapens die uiterlijk gelijken op een ander voorwerp dan een wapen;
- 5°. voorwerpen waarmee door een elektrische stroomstoot personen weerloos kunnen worden gemaakt of pijn kan worden toegebracht, met uitzondering van medische hulpmiddelen;
- 6°. voorwerpen, bestemd voor het treffen van personen met giftige, verstikkende, weerloosmakende, traanverwekkende en soortgelijke stoffen, met uitzondering van medische hulpmiddelen en van vuurwapens in de vorm van geweren, revolvers en pistolen, bestemd voor het afschieten van munitie met weerloosmakende of traanverwekkende stof;
- 7°. voorwerpen bestemd voor het treffen van personen of zaken door vuur of door middel van ontploffing, met uitzondering van explosieven voor civiel gebruik indien met betrekking tot deze explosieven erkenning is verleend overeenkomstig de Wet explosieven voor civiel gebruik.

Categorie III

- 1°. vuurwapens in de vorm van geweren, revolvers en pistolen voor zover zij niet vallen onder categorie II sub 2°, 3° of 6°;
- 2°. toestellen voor beroepsdoeleinden die geschikt zijn om projectielen af te schieten;
- 3°. werpmessen;
- 4°. alarm- en startpistolen en -revolvers, met uitzondering van alarm- en startpistolen die:
 - a. geen loop of een kennelijk verkorte, geheel gevulde loop hebben;
 - b. zodanig zijn ingericht dat zij uitsluitend knalpatronen van een kaliber niet groter dan 6 mm kunnen bevatten; en
 - c. waarvan de ligplaats van de patronen en de gasuitlaat loodrecht staan op de loop of op de lengterichting van het wapen.

Categorie IV

- 1°. blanke wapens waarvan het lemmet meer dan een snijkant heeft, voor zover zij niet vallen onder categorie I;
- 2°. degens, zwaarden, sabels en bajonetten;
- 3°. wapenstokken;
- 4°. lucht-, gas- en veerdrukwapens, behoudens zulke door Onze Minister overeenkomstig categorie I, sub 7°, aangewezen die zodanig gelijken op een vuurwapen dat zij voor bedreiging of afdreiging geschikt zijn;

5°. kruisbogen en harpoenen;

6°. bij regeling van Onze Minister aangewezen voorwerpen die geschikt zijn om daarmee personen ernstig lichamelijk letsel toe te brengen;

7°. Voorwerpen waarvan, gelet op hun aard of de omstandigheden waaronder zij worden aangetroffen, redelijkerwijs kan worden aangenomen dat zij voor geen ander doel zijn bestemd dan om letsel aan personen toe te brengen of te dreigen en die niet onder een van de andere categorieën vallen.

2. Munitie in de zin van deze wet is, onderverdeeld in de volgende categorieën:

Categorie I

vervallen

Categorie II

1°. munitie die uitsluitend geschikt voor vuurwapens van categorie II is;

2°. munitie die een giftige, verstikkende, weerloosmakende, traanverwekkende of soortgelijke stof verspreidt, met uitzondering van munitie met weerloosmakende of traanverwekkende stof, bestemd voor vuurwapens in de vorm van geweren, revolvers en pistolen;

3°. munitie voorzien van een projectiel waarmee een pantserplaat kan worden doorboord, munitie voorzien van een projectiel met brandsas of met een explosieve lading, alsmede de voor deze munitie bestemde projectielen;

4°. munitie voor geweren, revolvers en pistolen voorzien van expanderende projectielen, alsmede de voor deze munitie bestemde projectielen, behalve wanneer het voor de jacht of de schietsport bestemde munitie of projectielen betreft.

Categorie III

Alle overige munitie.

3. Aanwijzingen door Onze Minister, als bedoeld in het eerste lid, geschieden bij regeling.

4. Onverminderd het bepaalde in het eerste lid, onder categorie I, sub 7°, zijn geen wapens in de zin van deze wet voorwerpen die klaarblijkelijk zijn bestemd om als speelgoed te worden gebruikt en die redelijkerwijze niet geschikt kunnen worden geacht om daarmee personen ernstig lichamelijk letsel toe te brengen.

Artikel 3

1. De bepalingen betreffende wapens zijn mede van toepassing op onderdelen en hulpstukken die specifiek bestemd zijn voor die wapens en van wezenlijke aard zijn.

2. De bepalingen betreffende munitie zijn mede van toepassing op onderdelen van die munitie, voorzover geschikt om munitie van te maken.

Artikel 3a

1. De artikelen 9, eerste lid, 13, eerste lid, 14, eerste lid, 22, eerste lid, 26, eerste lid, en 27, eerste lid, zijn niet van toepassing op de krijgsmacht. Zij zijn evenmin van toepassing op personen die daarvan deel uitmaken of daarvoor werkzaam zijn, voor zover Onze Minister van Defensie dit bij regeling heeft bepaald.
2. De artikelen 9, eerste lid, 14 eerste lid, 22, eerste lid, 26, eerste lid, en 27, eerste lid, zijn niet van toepassing op de politie. Zij zijn evenmin van toepassing op personen die daarvan deel uitmaken of daarvoor werkzaam zijn, voor zover Onze Minister en Onze Minister van Binnenlandse Zaken dit bij regeling hebben bepaald.
3. De artikelen 14, eerste lid, 22, eerste lid, 26, eerste lid, en 27, eerste lid, zijn niet van toepassing op de overige openbare dienst en op personen die daarvan deel uitmaken of daarvoor werkzaam zijn, daaronder begrepen buitengewone opsporingsambtenaren, voor zover Onze Minister dit bij regeling heeft bepaald.
4. Voor de toepassing van dit artikel wordt onder krijgsmacht, politie en overige openbare dienst mede verstaan niet-Nederlandse krijgsmacht, politie of openbare dienst.

Artikel 4

Onze Minister kan van bij of krachtens deze wet vastgestelde voorschriften of verboden vrijstelling of, op daartoe strekkend verzoek, ontheffing verlenen voor daarbij te omschrijven wapens of munitie, behorend tot een van de volgende groepen:

- a. wapens die niet voor gebruik als zodanig geschikt te maken zijn;
- b. wapens die het karakter dragen van oudheden;
- c. andere wapens, voor zover deze bestemd zijn voor dan wel deel uitmaken van een verzameling of een wandversiering;
- d. munitie, voor zover deze bestemd is voor dan wel deel uitmaakt van een verzameling;
- e. toestellen en voorwerpen voor beroepsdoeleinden;
- f. monster-, demonstratie- of testmateriaal en rekwisieten;
- g. noodsignaalmiddelen en de daarvoor bestemde munitie.

Artikel 5

Onze Minister kan bij regeling nadere omschrijvingen geven van de in artikel 2, eerste lid, vermelde en de overeenkomstig dat artikel aangewezen wapens, alsmede van de in artikel 4 bedoelde wapens.

Artikel 6

De in deze wet genoemde erkenningen, consenten, vergunningen, verloven, vrijstellingen en ontheffingen kunnen onder beperkingen worden verleend. Voorts kunnen er voorschriften aan worden verbonden.

Artikel 7

1. De in deze wet genoemde consenten, vergunningen, verloven en ontheffingen kunnen, onverminderd de bijzondere gronden tot weigering daarvan, geweigerd indien:
 - a. de aanvrager niet de door Onze Minister bij regeling vastgestelde gegevens en bescheiden heeft overgelegd;
 - b. er reden is om te vrezen dat aan de aanvrager het onder zich hebben van wapens of munitie niet kan worden toevertrouwd;
 - c. er reden is om te vrezen dat daarvan dan wel van wapens of munitie misbruik zal worden gemaakt; of
 - d. wanneer daartoe dringende, aan het algemeen belang ontleende, redenen bestaan.
2. De in deze wet genoemde erkenningen, consenten, vergunningen, verloven en ontheffingen kunnen, onverminderd de bijzondere gronden tot wijziging of intrekking daarvan, door het bestuursorgaan dat deze heeft verleend of door Onze Minister worden gewijzigd of ingetrokken:
 - a. indien onjuiste gegevens zijn verstrekt die hebben geleid tot de verlening daarvan;
 - b. indien er aanwijzingen zijn dat aan de houder daarvan het onder zich hebben van wapens of munitie niet langer kan worden toevertrouwd;
 - c. in geval van misbruik daarvan dan wel van wapens of munitie;
 - d. indien niet meer wordt voldaan aan de vereisten voor de verlening daarvan;
 - e. bij niet inachtneming van een daaraan verbonden beperking of voorschrift; of
 - f. wanneer daartoe dringende, aan het algemeen belang ontleende, redenen bestaan.

Artikel 8

1. Hij die een wapen of munitie voorhanden heeft, zonder daartoe gerechtigd te zijn, is verplicht deze terstond bij de korpschef in bewaring te geven.
2. Indien dringende, aan het algemeen belang ontleende, gronden daartoe aanleiding geven is de korpschef bevoegd bij schriftelijk bevel, gericht tot degene die een wapen of munitie voorhanden heeft, te gelasten deze binnen een in dat bevel gestelde termijn bij hem in bewaring te geven.
3. Indien dringende, aan het algemeen belang ontleende, gronden daartoe aanleiding geven, kan Onze Minister bij algemene bekendmaking gelasten dat personen die een wapen of munitie voorhanden hebben, deze binnen een bepaalde termijn bij de korpschef in bewaring geven.

4. Bij toepassing van het tweede of derde lid wordt aangegeven welke gronden daartoe aanleiding hebben gegeven, tenzij zwaarwegende belangen zich daartegen verzetten.
5. Het in bewaring gegeven wapen en de munitie worden, voor zover de korpschef dat nodig acht, voor onmiddellijk gebruik ongeschikt gemaakt.
6. Over het in bewaring gegeven wapen en de munitie kan de rechthebbende beschikken met goedvinden van de korpschef.
7. De eigendom van het in bewaring gegeven wapen en de munitie gaat nadat de bewaring vijf jaren heeft geduurd over op de Staat, tenzij de rechthebbende binnen drie maanden voor het verstrijken van die termijn heeft verklaard daartegen bezwaar te hebben. Door een verklaring als hiervoor bedoeld vangt een nieuwe termijn van vijf jaren aan.
8. Voor in bewaring gegeven wapens of munitie is een bewaarloon verschuldigd aan de korpschef, overeenkomstig bij regeling van Onze Minister gestelde regels.
9. Bij regeling van Onze Minister worden regels gegeven over een door de korpschef te verstrekken ontvangstbewijs en een door hem bij te houden register met betrekking tot in bewaring gegeven wapens of munitie.

Paragraaf 2 Erkenning

Artikel 9

1. Het is verboden zonder erkenning een wapen of munitie te vervaardigen, te transformeren of in de uitoefening van een bedrijf uit te wisselen, te verhuren of anderszins ter beschikking te stellen, te herstellen, te beproeven of te verhandelen.
2. Bevoegd tot het verlenen en intrekken van een erkenning, alsmede het verlengen van de geldigheidsduur daarvan, is de korpschef in de plaats waar de aanvrager is gevestigd. Een erkenning heeft een geldigheidsduur van ten hoogste vijf jaren en kan telkens met ten hoogste vijf jaren worden verlengd.
3. Een erkenning heeft uitsluitend betrekking op de daarin genoemde handelingen, soorten wapens en munitie en bedrijfseenheden. Indien de handelingen worden verricht in de uitoefening van een bedrijf, strekt de werking van de erkenning zich mede uit tot de beheerder.
4. Indien een redelijk belang dit vordert, kan de korpschef die de erkenning verleent of heeft verleend bepalen dat de erkenning tevens inhoudt vergunning tot vervoer van wapens en munitie van de

categorieën II en III.

5. Onze Minister kan bij regeling vrijstelling van het verbod van het eerste lid verlenen met betrekking tot:

- a. wapens van categorie IV;
- b. het vervaardigen of transformeren van munitie door personen die bevoegd zijn een wapen of munitie voorhanden te hebben.

Artikel 10

1. Een erkenning wordt geweigerd indien:

- a. de aanvrager of, indien deze een bedrijf uitoefent, de beheerder, niet voldoet aan de door Onze Minister vastgestelde eisen met betrekking tot leeftijd, zedelijk gedrag en vakbekwaamheid;
- b. de ruimte waarin de handelingen worden verricht niet voldoet aan de door Onze Minister vastgestelde eisen van beveiliging; of
- c. er reden is om te vrezen dat aan de beheerder het onder zich hebben van wapens of munitie niet kan worden toevertrouwd.

2. Voor de bij regeling van Onze Minister te onderscheiden categorieën van erkenningen kunnen verschillende eisen worden vastgesteld.

Artikel 11

Vervallen.

Artikel 12

Een erkenning kan worden ingetrokken:

- a. bij niet inachtneming van de op grond van artikel 42 vastgestelde regels;
- b. indien er aanwijzingen zijn dat aan de beheerder het onder zich hebben van wapens of munitie niet langer kan worden toevertrouwd; of
- c. indien de houder van de erkenning gedurende ten minste een jaar de handelingen waarop de erkenning betrekking heeft, niet heeft verricht.

Paragraaf 3 Bepalingen voor wapens van categorie I

Artikel 13

1. Het is verboden een wapen of munitie van categorie I te vervaardigen, te transformeren, voor derden te herstellen, over te dragen, voorhanden te hebben, te dragen, te vervoeren, te doen binnenkomen of te doen uitgaan.
2. Onze Minister kan, onverminderd artikel 9, ontheffing verlenen van een of meer verboden genoemd in het eerste lid, met het oog op:
 - a. gebruik door de krijgsmacht;
 - b. ondewijs ten behoeve van de politie en de overige openbare dienst;
 - c. doorvoer van wapens of munitie;
3. Op een ontheffing met het oog op doorvoer is artikel 20, tweede en derde lid, van overeenkomstige toepassing.

Paragraaf 4 Binnenkomen en uitgaan van wapens en munitie van de categorieën II en III

Artikel 14

1. Het is verboden zonder consent een wapen of munitie van de categorieën II en III te doen binnenkomen of te doen uitgaan, alsmede om de bij binnenkomst aangegeven bestemming van zulke wapens of munitie zonder consent te wijzigen.
2. Een consent tot wijziging van de bij binnenkomst aangegeven bestemming staat gelijk aan een consent tot binnenkomen voor de gewijzigde bestemming.
3. Een consent is uitsluitend geldig voor wapens en munitie die zodanig zijn verpakt dat zij niet voor onmiddellijk gebruik kunnen worden aangewend.
4. Onze Minister kan bij regeling vrijstelling van het verbod van het eerste lid verlenen met betrekking tot:
 - a. sportschutters en jagers;
 - b. doorvoer van wapens of munitie;
 - c. de uitrusting van vaartuigen en luchtvaartuigen, alsmede van de bemanning daarvan.Geen vrijstelling kan worden verleend ten aanzien van het, anders dan tijdelijk, doen uitgaan van wapens en munitie naar een lid-staat van de Europese Gemeenschappen.
5. De houder van een in Nederland afgegeven consent of van een in een andere lid-staat van de Europese Gemeenschappen afgegeven vergunning voor het doen binnenkomen, doorvoeren of doen uitgaan van wapens of munitie, is verplicht de wapens en munitie tot aan de bestemming, respectievelijk het verlaten van het grondgebied van Nederland, te doen vergezellen van het consent of de vergunning.

Artikel 15

Onze Minister kan, na overleg met Onze Minister van Economische Zaken, bepalen dat op grond van de In- en uitvoerwet afgegeven vergunningen tevens gelden als consent in de zin van artikel 14.

Artikel 16

1. Voor zover het krachtens artikel 15 bepaalde niet van toepassing is, verleent Onze Minister van Defensie het consent tot binnen-komen ten behoeve van de krijgsmacht en Onze Minister dat ten behoeve van de overige openbare dienst.
2. In alle overige gevallen wordt een consent verleend door de korpschef in de vestigingsplaats van de aanvrager dan wel, wanneer de aanvrager geen vestigingsplaats in Nederland heeft, door de korpschef van het regionaal politiekorps Utrecht.

Artikel 17 - 19

Vervallen.

Artikel 20

1. Een consent tot binnenkomen wordt geweigerd indien de aanvrager niet gerechtigd is de wapens of de munitie in Nederland voorhanden te hebben, tenzij deze zijn bestemd voor overbrenging en opslag onder douaneverband.
2. Een consent tot doorvoer of tot uitgaan wordt geweigerd indien:
 - a. de wapens of de munitie geen door Onze Minister van Buitenlandse Zaken goedgekeurde bestemming hebben; of
 - b. niet uit een door de aanvrager over te leggen bewijsstuk blijkt of niet uit anderen hoofde bekend is dat de bevoegde autoriteiten van het land van bestemming geen bezwaar hebben tegen de aanwezigheid van de wapens of munitie op hun grondgebied.
3. Wanneer een lidstaat van de Europese Gemeenschappen het land van bestemming of van doorvoer is van de wapens of munitie waarop de aanvraag betrekking heeft, wordt door Onze Minister van het verlenen van het consent mededeling gedaan aan die lidstaat.

Artikel 21

Vervallen.

Paragraaf 5 Vervoer van wapens en munitie van de categorieën II en III

Artikel 22

1. Het is verboden een wapen of munitie van de categorieën II en III te vervoeren zonder vergunning tot vervoer, als bedoeld in artikel 9, vierde lid, dan wel verlof tot vervoer, als bedoeld in artikel 24.
2. Onze Minister kan bij regeling vrijstelling van het verbod van het eerste lid verlenen met betrekking tot sportschutters en jagers, die gerechtigd zijn tot het voorhanden hebben van wapens of munitie.

Artikel 23

Vervallen.

Artikel 24

- Een verlof tot vervoer wordt, uitsluitend voor wapens en munitie van categorie III, verleend door de korpschef in de plaats waar het vervoer een aanvang neemt of waar de aanvrager is gevestigd indien:
- a. de aanvrager gerechtigd is het wapen of de munitie voorhanden te hebben;
 - b. een redelijk belang de verlening van het verlof vordert.

Artikel 25

Vervallen.

Paragraaf 6 Voorhanden hebben en dragen van wapens en munitie van de categorieën II, III en IV

Artikel 26

1. Het is verboden een wapen of munitie van de categorieën II en III voorhanden te hebben.
2. Het eerste lid is niet van toepassing op personen die houder zijn van:
 - a. een verlof als bedoeld in artikel 28, eerste lid, van de wet, voor zover dit verlof reikt; of
 - b. een jachtakte als bedoeld in de Jachtwet, voor wat betreft voor de jacht bestemde wapens en munitie van categorie III, die in de jachtakte zijn omschreven.
3. Onze Minister kan bij regeling vrijstelling van het verbod van het eerste lid voor wapens of munitie van categorie III verlenen met betrekking tot jagers en sportschutters, die hun vaste woon- of verblijf- plaats buiten Nederland hebben.
4. Onze Minister kan ten aanzien van de personen bedoeld in het tweede lid regels vaststellen met betrekking tot:
 - a. de medische geschiktheid en vaardigheid in het omgaan met wapens;
 - b. de vereiste kennis op het terrein van wapens; en
 - c. het aantal wapens dat zij ten hoogste voorhanden mogen hebben.
5. Het is personen die de leeftijd van achttien jaren nog niet hebben bereikt verboden een wapen van categorie IV voorhanden te hebben.
6. Onze Minister kan bij regeling vrijstelling van het verbod van het vijfde lid verlenen in het kader van in verenigings-ver-band beoefende sporten.

Artikel 27

1. Het is verboden een wapen van de categorieën II, III en IV te dragen.
2. Het eerste lid is niet van toepassing op personen die:
 - a. houder zijn van een verlof als bedoeld in artikel 29, voor zover dit verlof reikt; of
 - b. op grond van artikel 26, tweede lid, voor de jacht bestemde wapens voorhanden mogen hebben, voor wat betreft het terrein waar zij tot de jacht gerechtigd zijn.
3. Onze Minister kan bij regeling vrijstelling van het verbod van het eerste lid voor wapens van de categorieën III en IV verlenen met betrekking tot:
 - a. optochten; en
 - b. studenten-weerbaarheidsverenigingen.
4. Onze Minister kan bij regeling vrijstelling van het verbod van het eerste lid voor wapens van categorie IV verlenen met betrekking tot:
 - a. ceremoniële wapens;
 - b. kermissen; en

- c. sportbeoefening.

Artikel 28

1. Verlof tot het voorhanden hebben van een wapen en munitie wordt, uitsluitend voor wapens en munitie behorend tot categorie III, verleend door de korpschef in de woon- of verblijfplaats van de aanvrager.
2. Een verlof wordt verleend indien:
 - a. een redelijk belang de verlening van het verlof vordert;
 - b. de aanvrager geen gevaar voor zichzelf, de openbare orde of veiligheid kan vormen;
 - c. de aanvrager tenminste de leeftijd van achttien jaren heeft bereikt, behoudens afwijking voor leden van een schietvereniging.
3. Het belang met het oog waarop het verlof is verleend, wordt in het verlof omschreven.
4. Een verlof heeft een geldigheid van ten hoogste een jaar en kan worden verlengd, indien aan de vereisten voor de verlening daarvan nog wordt voldaan.
5. Indien de aanvrager die geen vaste woon- of verblijfplaats in Nederland heeft, ingezetene is van een van de andere lid--st-at-en van de Europese Gemeenschappen, doet Onze Minister mededeling aan die lid-staat van de verlening van een verlof als bedoeld in het eerste lid, wanneer het verlof betrekking heeft op wapens of munitie ten aanzien waarvan het voorhanden hebben in die lid-staat aan een vergunning is onderworpen.

Artikel 28a

1. Aan personen die gerechtigd zijn tot het voorhanden hebben van een vuurwapen wordt desverzocht een Europese vuurwapen-pas uitge-reikt.
2. Op de Europese vuurwapenpas worden aangetekend de vuurwa-pens die de houder gerechtigd is voorhanden te hebben, alsmede andere bij regeling van Onze Minister vast te stel-len gegevens.
3. De Europese vuurwapenpas wordt afgegeven door de korpschef in de woon- of verblijfplaats van de aanvrager en heeft een geldigheidsduur van ten hoogste een jaar.

Artikel 29

1. Indien een redelijk belang dit vordert, kan de instantie die een verlof tot het voorhanden hebben

van een wapen van categorie III verleent of heeft verleend, bepalen dat dit verlov ook betrekking heeft op het dragen van dit wapen.

2. Wanneer aan het eerste lid toepassing is gegeven, wordt dit in het verlov vermeld.
3. Indien een redelijk belang dit vordert, kan de in artikel 28, eerste lid, bedoelde instantie verlov verlenen tot het dragen van een wapen van categorie IV.

Artikel 30

Vervallen.

Paragraaf 7 Overdracht en verkrijging van wapens en munitie van de categorieën II, III en IV

Artikel 31

1. Het is verboden een wapen of munitie van de categorieën II en III over te dragen.
2. Het eerste lid is niet van toepassing op het overdragen aan personen die gerechtigd zijn het wapen of de munitie voorhanden te hebben.
3. Onverminderd het bepaalde in het eerste lid is het verboden een wapen van categorie III over te dragen zonder inontvangstneming van het in artikel 32 bedoelde verlov tot verkrijging.
4. Het is verboden een wapen van categorie IV over te dragen aan een persoon die de leeftijd van achttien jaren nog niet heeft bereikt.
5. Bij regeling van Onze Minister kan vrijstelling van het verbod van het vierde lid worden verleend in het kader van in verenigingsverband beoefende sporten.

Artikel 32

1. Verlov tot verkrijging van wapens van categorie III wordt verleend aan personen die een verlov tot voorhanden hebben als bedoeld in artikel 28 bezitten, dan wel op grond van artikel 26, tweede lid, voor de jacht bestemde wapens voorhanden mogen hebben, door de korpschef van hun woon- of verblijfplaats.

2. Indien de aanvrager die geen vaste woon- of verblijfplaats in Nederland heeft, ingezetene is van een van de andere lid-staten van de Europese Gemeenschappen, wordt:
 - a. geen verlof als bedoeld in het eerste lid verleend zonder voorafgaande toestemming van die lid-staat, wanneer het verlof betrekking heeft op wapens ten aanzien waarvan het voorhanden hebben in die lid-staat aan een vergunning is onderworpen;
 - b. door Onze Minister mededeling gedaan aan die lid-staat van een verlof als bedoeld in het eerste lid, wanneer het verlof betrekking heeft op wapens ten aanzien waarvan het voorhanden hebben in die lid-staat aan een aangifte is onderworpen.

Paragraaf 8 Veiligheidseisen

Artikel 33

1. Onverminderd artikel 10, eerste lid, aanhef en onder b, kan Onze Minister, ten behoeve van de beveiliging, eisen vaststellen, waaraan ruimten en vervoermiddelen, waarin wapens of munitie van de categorieën II en III worden bewaard of vervoerd, moeten voldoen. Worden zulke eisen vastgesteld voor ruimten en vervoermiddelen, in gebruik bij de krijgsmacht, dan geschiedt dit door Onze Minister van Defensie.
2. Onze Minister kan, ten behoeve van de veiligheid, technische eisen vaststellen, waaraan wapens en munitie van categorie III bij overdracht aan personen die een verlof tot verkrijging als bedoeld in artikel 32 hebben, moeten voldoen.

Paragraaf 9 Beroep

Artikel 34

1. Tegen beschikkingen van de korpschef genomen krachtens deze wet staat administratief beroep open bij Onze Minister.
2. Het beroep kan worden ingesteld:
 - a. tegen beschikkingen op grond van artikel 8: door de bewaargever en door de rechthebbende;
 - b. in de overige gevallen door de aanvrager, dan wel de houder van de erkenning, het consent, de vergunning of het verlof.

Artikel 35 - 37

Vervallen.

Paragraaf 10 Bepalingen over de uitvoering van de wet

Artikel 38

1. Onze Minister kan regels vaststellen over de door de korpschefs bij de uitvoering van deze wet te voeren administratie.
2. Bij de uitvoering van deze wet volgen de korpschefs de aanwijzingen van Onze Minister. Algemene aanwijzingen aan de korpschefs worden verstrekt door tussenkomst van de korpsbeheerder.

Artikel 39

Onze Minister kan modellen vaststellen van het bewijs van erkenning, de consenten, de vergunningen, de verloven, alsmede van andere ter uitvoering van de wet te gebruiken bescheiden. Deze modellen worden bekendgemaakt in de Nederlandse Staatscourant.

Artikel 40

Onze Minister kan regels geven over combinatie van verschillende krachtens deze wet vereiste consenten, vergunningen en verloven, alsmede van andere ter uitvoering van de wet te gebruiken bescheiden.

Artikel 41

Onze Minister geeft regels met betrekking tot het bedrag dat is verschuldigd bij de aanvraag op grond van deze wet van een erkenning, een ontheffing, een consent, een vergunning, een verlof en een Europese vuurwapenpas. Het bedrag is verschuldigd aan het Rijk indien de aanvraag wordt ingediend bij Onze Minister of Onze Minister van Defensie, of aan de betrokken politieregio indien de aanvraag bij de korpschef wordt ingediend.

Artikel 42

1. Onze Minister geeft regels betreffende een door de erkende te houden register waarin alle door deze onder enige titel verkregen of overgedragen wapens en munitie worden aangetekend.

2. Onze Minister geeft regels betreffende een door de erkende te verstrekken ontvangstbewijs bij verkrijging van wapens van categorie III van personen die een verlof tot het voorhanden hebben als bedoeld in artikel 28 bezitten, dan wel op grond van artikel 26, tweede lid, voor de jacht bestemde wapens voorhanden mogen hebben.

Artikel 43 - 44

Vervallen

Paragraaf 11 Toezicht en opsporing

Artikel 45

1. Met het toezicht op de naleving van het bij en krachtens deze wet bepaalde zijn belast:
 - 1°. de bij of krachtens artikel 141 van het Wetboek van Strafvordering aangewezen ambtenaren;
 - 2°. de door Onze Minister, in overeenstemming met Onze Minister van Verkeer en Waterstaat, aangewezen ambtenaren van de Rijksverkeersinspectie;
 - 3°. de ambtenaren van de rijksbelastingdienst, bevoegd inzake douane.
2. Van een aanwijzing als bedoeld in het eerste lid, onderdeel 2, wordt mededeling gedaan door plaatsing in de Staatscourant.

Artikel 46

De in artikel 45 bedoelde ambtenaren zijn bevoegd ladingen waarvan zij redelijkerwijs kunnen vermoeden dat wapens of munitie daarvan deel uitmaken, aan onderzoeken te onderwerpen voor zover dit redelijkerwijs voor de vervulling van hun taak met betrekking tot deze wet nodig is. Daartoe kunnen zij vorderen dat de verpakking van goederen wordt geopend en dat ook overigens de medewerking wordt verleend die voor die onderzoeken is vereist.

Artikel 47

1. De in artikel 45 bedoelde ambtenaren zijn bevoegd van personen die gerechtigd zijn wapens of munitie voorhanden te hebben, alle inlichtingen te verlangen die redelijkerwijs voor de vervulling van hun taak met betrekking tot deze wet nodig zijn.

2. Zij zijn bevoegd van de in het eerste lid bedoelde personen inzage te verlangen van boeken en andere zakelijke bescheiden en daarvan afschrift te nemen, een en ander voor zover dit redelijkerwijs voor de vervulling van hun taak met betrekking tot deze wet nodig is.
3. De personen van wie inlichtingen of inzage van bescheiden worden verlangd zijn verplicht die onverwijld te verstrekken.
4. Zij die uit hoofde van hun stand, beroep of ambt tot geheimhouding verplicht zijn, kunnen zich verschonen van het verschaffen van inlichtingen, doch uitsluitend voor zover het betreft hetgeen hun in hun hoedanigheid is toevertrouwd. Zij kunnen voorts het verlenen van medewerking weigeren, voor zover hun plicht tot geheimhouding zich daartoe uitstrekt.

Artikel 48

De in artikel 45 bedoelde ambtenaren zijn bevoegd elke plaats met uitzondering van een woning zonder toestemming van de bewoner, waar, naar zij redelijkerwijs kunnen vermoeden, in verband met de uitoefening van een bedrijf, wapens of munitie aanwezig zijn, te betreden, voor zover dit redelijkerwijs voor de vervulling van hun taak met betrekking tot deze wet nodig is. Zonodig verschaffen zij zich toegang met behulp van de sterke arm.

Artikel 49

De in artikel 45, onder 1^o, bedoelde ambtenaren kunnen te allen tijde op plaatsen waar zij redelijkerwijs kunnen vermoeden dat wapens of munitie aanwezig zijn, ter inbeslagname huiszoeking doen.

Artikel 50

1. De in artikel 45, onder 1^o, bedoelde ambtenaren zijn bevoegd te vorderen dat de verpakking van goederen, met inbegrip van reisbagage, wordt geopend, indien daartoe redelijkerwijs aanleiding bestaat op grond van een gepleegd strafbaar feit waarbij wapens zijn gebruikt of op grond van aanwijzingen dat een dergelijk strafbaar feit zal worden gepleegd.
2. De in het eerste lid bedoelde bevoegdheid kan slechts worden uitgeoefend tegen bepaalde personen, indien daartoe jegens hen aanleiding bestaat. De officier van justitie kan gelasten dat deze bevoegdheid tegenover een ieder kan worden uitgeoefend.
3. Indien geen medewerking wordt verleend, kunnen de in het eerste lid bedoelde ambtenaren, op kosten en risico van de houder van de goederen, in het nodige voorzien.

Artikel 51

1. De in artikel 45, onder 1^o, bedoelde ambtenaren zijn bevoegd vervoermiddelen te onderzoeken, indien daartoe redelijkerwijs aanleiding bestaat op grond van een gepleegd strafbaar feit waarbij wapens zijn gebruikt of op grond van aanwijzingen dat een dergelijk strafbaar feit zal worden gepleegd.
2. De in het eerste lid bedoelde bevoegdheid kan slechts worden uitgeoefend ten aanzien van bepaalde vervoermiddelen, indien daartoe jegens deze aanleiding bestaat. De officier van justitie kan gelasten dat deze bevoegdheid tegenover elk vervoermiddel kan worden uitgeoefend.
3. De in het eerste lid bedoelde ambtenaren kunnen van de bestuurders van voertuigen en van de schippers van vaartuigen daartoe vorderen dat deze de vervoermiddelen tot stilstand brengen, deze vervoermiddelen naar een door hen aangewezen plaats overbrengen en overeenkomstig hun aanwijzingen terzake medewerking verlenen.

Artikel 52

1. De in artikel 45, onder 1^o, bedoelde ambtenaren zijn te allen tijde bevoegd tot inbeslagneming van daarvoor vatbare voorwerpen. Zij kunnen daartoe hun uitlevering vorderen.
2. De in het vorige lid bedoelde ambtenaren zijn bevoegd een persoon verdacht van overtreding van de artikelen 13 of 26 door het voorhanden hebben van een wapen, indien tegen hem ernstige bezwaren bestaan, aan zijn kleding te onderzoeken.
3. De bedoelde ambtenaren alsmede andere daartoe door Onze Minister aangewezen personen zijn bevoegd een persoon die zich bevindt op een voor aankomst en vertrek van reizigers bestemd gedeelte van een luchtvaartterrein, als omschreven bij of krachtens de Luchtvaartwet (Stb. 1958, 471), te allen tijde aan zijn kleding en reisbagage te onderzoeken.

Artikel 53

Vervallen.

Paragraaf 12 Strafbepalingen

Artikel 54

Met geldboete van de derde categorie wordt gestraft hij die handelt in strijd met een krachtens de artikelen 6, 8, tweede of derde lid, 33 of 42 vastgesteld voorschrift, dan wel in strijd met de artikelen 8, eerste lid, 14, vijfde lid, 26, vijfde lid, 27, eerste lid, 31, derde of vierde lid, of 47, derde lid.

Artikel 55

1. Met gevangenisstraf van ten hoogste drie maanden of geldboete van de derde categorie wordt gestraft hij die handelt in strijd met de artikelen 9, eerste lid, 13, eerste lid, 22, eerste lid, 26, eerste lid of 31, eerste lid.
2. Met gevangenisstraf van ten hoogste negen maanden of geldboete van de vierde categorie wordt gestraft:
 - a. hij die handelt in strijd met de artikelen 9, eerste lid, 26, eerste lid, of 31, eerste lid, en het feit begaat met betrekking tot een vuurwapen van categorie III;
 - b. hij die handelt in strijd met artikel 14, eerste lid.
3. Met gevangenisstraf van ten hoogste vier jaar of geldboete van de vijfde categorie wordt gestraft:
 - a. hij die handelt in strijd met de artikelen 9, eerste lid, 14, eerste lid, 26, eerste lid, of 31, eerste lid, en het feit begaat met betrekking tot een wapen van categorie II, of met betrekking tot meer dan één vuurwapen van categorie III;
 - b. hij die handelt in strijd met 26, eerste lid, en het feit begaat door het dragen van een vuurwapen van categorie III;
 - c. hij die handelt in strijd met de artikelen 9, eerste lid, 13, eerste lid, 14, eerste lid, 26, eerste lid, of 31, eerste lid, en van het vervaardigen, transformeren, uitwisselen, verhuren of anderszins ter beschikking stellen, herstellen, beproeven of verhandelen van wapens of munitie een beroep of gewoonte maakt;
 - d. hij die handelt in strijd met de artikelen 13, eerste lid, of 26, eerste lid, aan boord van een luchtvaartuig of op een luchtvaartterrein, als omschreven in artikel 1 van de Luchtvaartwet.

Artikel 56

De in artikel 54 strafbaar gestelde feiten zijn overtredingen. De in artikel 55 strafbaar gestelde feiten zijn misdrijven.

Paragraaf 13 Slotbepaling

Artikel 57

Deze wet kan worden aangehaald als Wet wapens en munitie, afgekort WWM.

Artikel 58 - 65

Vervallen.

Begrippen Wet wapens en munitie

Ballistisch mes

Een mes waarvan het lemmet, al dan niet tezamen met het heft, door middel van lucht-, gas- of veerdruk rechtstandig uit een geleidingscilinder wordt gedreven.

Binnenkomen en uitgaan

Het binnen het grondgebied van Nederland komen, respectievelijk het verlaten van het grondgebied van Nederland van wapens of munities.

Consent

Een vergunning tot invoer, uitvoer of doorvoer. Een consent moet worden aangevraagd bij de politie en wordt afgegeven door de korpschef van politie.

Doorvoer

Binnenkomen gevolgd door uitgaan.

Dragen van een wapen

Het op de openbare weg of andere voor het publiek toegankelijke plaatsen bij zich hebben van een wapen anders dan voor vervoer.

Erkenning

Een vergunning voor het bedrijfsmatig hanteren van wapens (verkoop, verhuur, aanpassing enz.). Een erkenning moet worden aangevraagd bij de politie en wordt afgegeven door de korpschef van politie.

Europese Vuurwapenpas

Het document dat wordt afgegeven door de autoriteiten van de lid-staten van de Europese Gemeenschappen (in Nederland: de korpschef in de politieregio) aan de wettige houder en gebruiker van een vuurwapen.

Geluiddemper

Een niet in het vuurwapen geïntegreerd, doorgaans aan de loopmond daarvan bevestigd voorwerp dat bestemd of geschikt is om te bewerkstelligen dat het geluid van het afgaan van het schot wordt gedempt.

Munitie

Patronen en andere voorwerpen, bestemd of geschikt om projectielen of stoffen door een loop af te schieten, waarvan de werking berust op het teweegbrengen van een scheikundige ontploffing of een andere scheikundige reactie.

Ontheffing

Individuele uitzondering op een wettelijk verbod. Ontheffing moet worden aangevraagd bij de minister van Justitie.

Overdragen

Het aan een ander doen overgaan van de feitelijke macht van wapens en munitie

Ploertendoder

Een verende of uitschuifbare staaf met verzwaard uiteinde.

Stiletto

Een opvouwbaar mes waarvan het lemmet door een druk-, of vergelijkbaar ontgrendelingsmechanisme zijdelings scharnierend uit het heft wordt gebracht.

Valmes

Een mes waarvan het lemmet door een druk- of vergelijkbaar ontgrendelingsmechanisme, dan wel door een zwaaibeweging rechtstandig uit het heft wordt gebracht.

Verlof

Vergunning voor een bepaalde handeling. Verlof moet worden aangevraagd bij de politie en wordt afgegeven door de korpschef.

Vervoer van een wapen

Het op de openbare weg of andere voor het publiek toegankelijke plaatsen bij zich hebben van een wapen dat zodanig is verpakt, dat het niet voor onmiddellijk gebruik kan worden aangewend.

Vervoer van munitie

Het op de openbare weg of andere voor het publiek toegankelijke plaatsen bij zich hebben van munitie.

Vilmes

Een niet-opvouwbaar mes waarvan het heft zeer kort is, haaks op het lemmet staat, en dat is bestemd om bij gebruik in de palm van de hand te worden gehouden, terwijl het lemmet tussen de vingers door naar buiten steekt.

Vlindermes

Een mes waarvan het heft in de lengterichting in tweeën is gedeeld en waarvan het lemmet naar buiten wordt gebracht door elk van de delen van het heft in tegenovergestelde richting zijdelings open te vouwen.

Vuurwapen

Een voorwerp bestemd of geschikt om projectielen of stoffen door een loop af te schieten, waarvan de werking berust op het teweegbrengen

van een scheikundige ontploffing of een andere scheikundige reactie.

Binnenlandse Veiligheidsdienst

De Binnenlandse Veiligheidsdienst (BVD) heeft tot taak bij te dragen aan de verdediging en de versterking van de nationale en internationale veiligheid.

Onderwerpen die de aandacht van de BVD krijgen zijn onder andere:

- o inbreuken op de democratische rechtsorde door krachten in binnen- en buitenland die de integratie van minderheden doelbewust ontmoedigen;
- o ontregeling van de politieke besluitvorming, terrorisme en ander politiek geweld;
- o bedreigingen van zowel (onderdelen van) de Nederlandse samenleving als de internationale positie en reputatie van de Nederlandse staat door de georganiseerde misdaad;
- o ongewenste handel in conventionele wapens, proliferatie van massavernietigingswapens;
- o inlichtingenactiviteiten van vreemde mogendheden binnen Nederland.

Op nationaal vlak werkt de BVD bij de uitvoering van zijn taken in toenemende mate samen met de politie en bijzondere opsporingsdiensten. Daarnaast kenmerkt het werkkterrein van de BVD zich door een groeiende internationalisering. Immers, veel veiligheidsvraagstukken zoals terrorisme, vormen van politiek en religieus extremisme en spionage hebben internationale dimensies. Hierop wordt ingespeeld door uitbreiding en versterking van het bestaande internationale relatienetwerk en inzet van vaste en reizende liaisons in het buitenland. Betrekkelijk nieuw zijn de relaties met de inlichtingen- en veiligheidsdiensten van de landen in Midden- en Oost-Europa. Die hebben onder meer het doel te komen tot gesaneerde en democratisch ingebedde inlichtingen- en veiligheidsdiensten in deze landen. Ook met de voorgenomen vestiging van een nieuwe BVD-liaison in Moskou wordt ingespeeld op de groeiende internationalisering.

Bij de opheffing van de Inlichtingendienst Buitenland (IDB) per 1 januari 1994 hebben de BVD en de Militaire Inlichtingendienst (MID) een aantal activiteiten van deze dienst overgenomen of geïntensiveerd voor zover die vallen binnen hun bestaande wettelijke taakomschrijving. De activiteiten die hierin niet pasten, zijn gestopt. Inmiddels heeft het kabinet besloten dat alsnog in deze leemte moet worden voorzien. Bij de herziening van de Wet op de inlichtingen- en veiligheidsdiensten wordt hiertoe een voorziening getroffen.

De snelle ontwikkelingen op het gebied van Informatie- en communicatietechnologie vormen voor de BVD een belangrijk aandachtspunt. Zo is er in toenemende mate sprake van gebruik van cryptografie in het (data)communicatieverkeer. Om te kunnen blijven voorzien in de behoefte aan informatie over de aandachtsgebieden van de BVD, is het noodzakelijk dat de BVD rechtmatig en op operationeel verantwoorde wijze toegang blijft hebben tot het (data)communicatieverkeer en daarvan kan aftappen.

De Binnenlandse Veiligheidsdienst (BVD) bestaat sinds 1949 en valt onder verantwoordelijkheid van de minister van Binnenlandse Zaken en Koninkrijksrelaties. Tussen toen en nu is er in de wereld veel veranderd. Na het einde van de Koude Oorlog hebben het werk en de organisatie van de BVD dan ook de nodige wijzigingen ondergaan. Ook de openheid over het werk van de BVD is vergroot. De BVD heeft als doelstelling: 'Het leveren van een wezenlijke bijdrage aan de bescherming van vitale belangen van de Nederlandse samenleving. Dat zijn: de democratische rechtsorde, de veiligheid van de staat en de instandhouding van het maatschappelijk leven'.

- o Taken
- o Nieuwe Ontwikkelingen
- o Organisatie

Taken

De BVD heeft drie taken, namelijk het verzamelen van gegevens over organisaties en personen, het verrichten van veiligheidsonderzoeken en het bevorderen van beveiligingsmaatregelen. Artikel 8 van de Wet op inlichtingen- en veiligheidsdiensten houdt in:

1. Er is een Binnenlandse Veiligheidsdienst.
2. Deze heeft tot taak:
 - a. het verzamelen van gegevens over organisaties en personen die door de doelen die zij nastreven, dan wel door hun activiteiten aanleiding geven tot het ernstige vermoeden dat zij gevaar vormen voor het voortbestaan van de democratische rechtsorde, dan wel voor de veiligheid of voor andere gewichtige belangen van de Staat;
 - b. het verrichten van veiligheidsonderzoeken voor de vervulling van:

- o vertrouwensfuncties
- o functies in het bedrijfsleven, die naar het oordeel van de verantwoordelijke ministers de mogelijkheid bieden de veiligheid of andere gewichtige belangen van de Staat te schaden;

- c. het bevorderen van maatregelen ter beveiliging van gegevens waarvan de geheimhouding door het belang van de Staat wordt geboden en van die onderdelen van de overheidsdienst en van het bedrijfsleven, welke naar het oordeel van de verantwoordelijke ministers van vitaal belang zijn voor de instandhouding van het maatschappelijk leven.

De huidige Wet op inlichtingen- en veiligheidsdiensten voldoet naar het oordeel van de rechter niet geheel aan het Europees verdrag tot bescherming van de rechten van de mens en de fundamentele vrijheden (EVRM). Daarom is een nieuwe Wet op inlichtingen- en veiligheidsdiensten in voorbereiding. In het wetsvoorstel is het toezicht op de BVD uitgebreid met een nieuw in te stellen onafhankelijke commissie.

Nieuwe ontwikkelingen

Binnen het kader van de wetgeving besteedt de BVD sinds 1996 steeds meer aandacht aan de georganiseerde criminaliteit. Hierbij gaat het niet om het proces van opsporing en vervolging, maar om onderzoek naar de mate waarin activiteiten van criminele organisaties een negatief effect hebben op het functioneren van het openbaar bestuur, de rechtsorde en de samenleving in brede zin.

Daarnaast wordt ook de BVD geconfronteerd met de snelle technologische ontwikkelingen op het gebied van telecommunicatie en de liberalisering en de globalisering van de telecommunicatiemarkt. Met behoud van de vrijheid van informatiestromen moeten op grond van veiligheidsbelangen de mogelijkheden tot interceptie ook voor de toekomst zijn gewaarborgd. In dit verband wordt de Wet op Telecommunicatievoorzieningen nu herzien. De nieuwe wet regelt onder meer dat telecommunicatiediensten en -netwerken, zodra zij op de markt worden gebracht, aftapbaar moeten zijn.

Organisatie

De minister van Binnenlandse Zaken en Koninkrijksrelaties is politiek verantwoordelijk voor het werk van de BVD. De BVD bestaat uit de volgende zes directies: de directie Strategie en Planning, de directie Democratische Rechtsorde, de directie Staatsveiligheid, de directie Maatschappelijke en Economische belangen, de directie Operationele Informatievergaring en de directie Managementadvies en Centrale Faciliteiten. In december 1996 waren er 552 mensen bij de BVD in dienst. Het hoofd van de BVD is de heer S.J. van Hulst.

Directie Strategie en Taak:

- Verzamelen van gegevens over organisaties en Project Inlichtingen personen die door de doelen die zij nastreven, of door hun activiteiten een gevaar kunnen vormen voor het voortbestaan van de democratische rechtsorde, de staatsveiligheid en het instandhouden van het maatschappelijk leven;
- verrichten van veiligheidsonderzoeken;
- geven van beveiligingsadviezen.

Toelichting: De taak van de BVD is geregeld in de Wet op de inlichtingen- en veiligheidsdiensten (Stb. 1987, nr. 635).

Wet op de weerkorpsen en de particuliere beveiligingsorganisaties

Paragraaf 2 Particuliere beveiligingsorganisaties

Artikel 5.

Het is verboden zonder vergunning van Onze Minister van Justitie een

particuliere beveiligingsorganisatie tot stand te brengen, te wijzigen, te steunen of daarvan deel uit te maken.

Artikel 6.

1. Onder een particuliere beveiligingsorganisatie wordt in deze wet verstaan, een door een of meer personen in het leven geroepen en in stand gehouden organisatie die is gericht of mede is gericht op feitelijke handhaving van de veiligheid van personen en goederen of van de openbare orde en rust, en die niet wordt aangemerkt als weerkorps.
2. Een particuliere beveiligingsorganisatie kan zijn:
 - a. een particulier beveiligingsbedrijf, zijnde een onderneming die in de uitoefening van beroep of bedrijf de in het eerste lid genoemde werkzaamheden, doch andere dan die genoemd onder d, verricht ten behoeve van derden en daarbij in hoofdzaak gebruik maakt van personen;
 - b. een particuliere bedrijfsbeveiligingsdienst, zijnde een door een onderneming in het leven geroepen organisatie die de in het eerste lid genoemde werkzaamheden ten behoeve van de eigen onderneming verricht;
 - c. een particuliere alarmcentrale, zijnde een onderneming die in de uitoefening van beroep of bedrijf ten behoeve van derden de in het eerste lid genoemde werkzaamheden verricht, met gebruikmaking van detectoren die signalen via telecommunicatie doorgeven aan en of meer centrale punten, waar die signalen worden geregistreerd en op hun waarde worden geschat en van waaruit assistentie wordt gevraagd aan de politie en eventueel andere overheidsinstanties of particulieren;
 - d. een particulier geld- en waardetransportbedrijf, zijnde een onderneming die in de uitoefening van beroep of bedrijf ten behoeve van derden geld en grote waarden van beperkte omvang vervoert;
 - e. een particulier recherchebureau, zijnde een onderneming die in de uitoefening van beroep en bedrijf de in het eerste lid genoemde werkzaamheden, doch andere dan die genoemd onder a en d, verricht ten behoeve van derden en daarbij in hoofdzaak gebruik maakt van personen en
 - f. een andere vorm van particuliere beveiligingsorganisaties.

Artikel 7.

1. Onze Minister van Justitie kan categorieën particuliere beveiligingsorganisaties aanwijzen waarvoor het verbod van artikel 5 niet

geldt.

2. Een particuliere beveiligingsorganisatie, behorend tot een categorie die krachtens het eerste lid is aangewezen, is verplicht zich aan te melden bij Onze Minister van Justitie.

Artikel 8.

1. Een vergunning als bedoeld in artikel 5 wordt verleend voor een termijn van ten hoogste vijf jaren.

2. Een vergunning bevat een omschrijving van het territoir waarbinnen de particuliere beveiligingsorganisatie haar werkzaamheden verricht.

3. Aan een vergunning kunnen voorschriften worden verbonden met betrekking tot:

- a. het waarborgen van een goed samenspel met overheidsinstellingen;
- b. de in artikel 9, eerste lid, genoemde onderwerpen;
- c. de controle op het personeel door de particuliere beveiligingsorganisatie.

4. Aan een vergunning kunnen voorts voorschriften worden verbonden met betrekking tot:

- a. de controle op het personeel door de particuliere beveiligingsorganisatie;
- b. de in artikel 9, derde lid, genoemde onderwerpen.

Artikel 9.

1. Onze Minister van Justitie kan ten aanzien van een particuliere beveiligingsorganisatie regels stellen met betrekking tot:

- a. de te verrichten werkzaamheden en de wijze waarop die werkzaamheden worden verricht;
- b. het gebouw en de inrichting van het gebouw waarin de particuliere beveiligingsorganisatie is gevestigd;
- c. het materieel waarvan bij de uitvoering van de werkzaamheden gebruik wordt gemaakt;
- d. de financiële grondslagen;
- e. de geschiktheid, bekwaamheid en betrouwbaarheid van de leiding en het personeel;
- f. het dragen van, zoveel mogelijk eenduidige, uniformen en het gebruik van legitimatiebewijzen.

2. Bij de uitvoering van de in het eerste lid, onder e en f, bedoelde regels kunnen aan het hoofd van de plaatselijke politie in de gemeente waar de particuliere beveiligingsorganisatie of een onderdeel van de organisatie is gevestigd ter zake bevoegdheden worden verleend en taken worden opgedragen.

3. Onze Minister van Justitie kan ten aanzien van een particuliere beveiligingsorganisatie voorts regels stellen met betrekking tot:

- a. de verslaglegging;

- b. het optreden naar buiten en de presentatie;
- c. andere onderwerpen die de kwaliteit en het functioneren raken.

Artikel 10.

Onze Minister van Justitie kan de vergunning intrekken indien:

- a. de aan de vergunning verbonden voorschriften niet in acht worden genomen;
- b. de voor de verkrijging van de vergunning verstrekte gegevens zodanig onjuist of onvolledig blijken, dat op de aanvraag een andere beslissing zou zijn genomen indien bij de beoordeling daarvan de juiste gegevens bekend waren geweest.

Paragraaf 3 Overige bepalingen

Artikel 11.

Indien de regels en voorschriften, gesteld krachtens de artikelen 8, vierde lid, en 9, derde lid, niet worden nageleefd, is Onze Minister van Justitie bevoegd de houder van de vergunning een administratieve boete van ten hoogste tienduizend gulden op te leggen.

Artikel 12.

Deze wet kan worden aangehaald als "Wet op de weerkorpsen en de particuliere beveiligingsorganisaties".

Artikel 13.

Zij treedt op een door Ons te bepalen tijdstip in werking.

Lasten en bevelen, dat deze in het Staatsblad zal worden geplaatst, en dat alle Ministeriële Departementen, Autoriteiten, Colleges en Ambtenaren, wie zulks aangaat, aan de nauwkeurige uitvoering de hand zullen houden.

Regeling particuliere beveiligingsorganisaties

Directie Politie

nr. 265120/592

De Minister van Justitie,

Gelet op de artikelen 7 en 9 van de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties (Stb.1936, 206),

Besluit:

1. ALGEMENE BEPALINGEN

Art. 1

In deze regeling wordt verstaan onder de korpschef: de korpschef van een regionaal politiekorps.

Art. 2

De opzet en de inrichting van een particuliere beveiligingsorganisatie zijn zodanig dat regelmatige, continue en volledige uitoefening van de beveiligingswerkzaamheden waartoe de organisatie zich heeft verbonden, is gewaarborgd.

Art. 3

Artikel 2 is niet van toepassing op particuliere bedrijfsbeveiligingsdiensten en particuliere recherchebureaus.

Art. 4

De wijze van acquisitie en promotie door een particuliere beveiligingsorganisatie, alsmede het optreden naar buiten, de presentatie en de uitvoering van de werkzaamheden, zijn niet in strijd met de belangen van de veiligheidszorg of de goede naam van de bedrijfstak.

Art. 5

1. Een particuliere beveiligingsorganisatie stelt een ministeriële goedgekeurde instructie ten behoeve van personen die met beveiligingswerkzaamheden zijn belast vast.
2. De instructie, bedoeld in het eerste lid, wordt door de particuliere beveiligingsorganisatie ter kennis gebracht van de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd.

Art. 6

Een particuliere beveiligingsorganisatie oefent voldoende en regelmatige controle uit op de verrichtingen van het personeel en het bij de uitvoering van

de werkzaamheden te gebruiken materiaal.

Art. 7

Een particuliere beveiligingsorganisatie treft maatregelen om te voorkomen dat persoons- en andere vertrouwelijke gegevens in handen van onbevoegden komen.

Art. 8

1. Een particuliere beveiligingsorganisatie draagt zorg voor een goede afstemming van de beveiligingswerkzaamheden met de korpschef van de regio waar de werkzaamheden worden verricht.

2. Een particuliere beveiligingsorganisatie stelt voordat de beveiligingswerkzaamheden worden verricht de korpschef van de regio waar deze werkzaamheden zullen worden uitgevoerd, door middel van een aanmeldingsformulier, overeenkomstig het in bijlage 1 bij deze regeling vastgestelde model, op de hoogte van:

- a. de aard, omvang en duur van de werkzaamheden en
 - b. de personalia van de personen die de werkzaamheden zullen uitvoeren.
3. Het tweede lid is niet van toepassing op particuliere recherchebureaus.

Art. 9

Een particuliere beveiligingsorganisatie verstrekt alle bescheiden en inlichtingen die naar het oordeel van de korpschef van de regio waar de werkzaamheden worden verricht of in de gemeente waar de organisatie of een onderdeel van de organisatie is gevestigd, noodzakelijk zijn voor de uitvoering van zijn taak.

Art. 10

1. Een particuliere beveiligingsorganisatie stelt jaarlijks een verslag vast van de in het afgelopen kalenderjaar verrichte beveiligingswerkzaamheden, overeenkomstig het in bijlage 2 bij deze regeling vastgestelde model en dient dit verslag in, uiterlijk op 1 april van het jaar volgend op het kalenderjaar waarin de beveiligingswerkzaamheden plaatsvonden.

2. Een particuliere beveiligingsorganisatie dient het verslag, bedoeld in het eerste lid, tevens in bij de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd.

Art. 11

1. Een particuliere beveiligingsorganisatie belast een persoon uitsluitend met de directe of indirecte leiding over de organisatie indien voor deze ministeriële toestemming is verkregen.

2. De toestemming, bedoeld in het eerste lid, wordt geweigerd of ingetrokken

indien de betrokkene niet, respectievelijk niet meer, voldoende geschikt, bekwaam of betrouwbaar is om leiding te geven aan een particuliere beveiligingsorganisatie.

Art. 12

1. Een particuliere beveiligingsorganisatie zorgt dat een persoon die met beveiligingswerkzaamheden is belast bij de uitvoering van die werkzaamheden een ministerieel goedgekeurd uniform draagt.
2. Het uniform is voorzien van een embleem, overeenkomstig het in bijlage 3 bij deze regeling vastgestelde model, op de wijze zoals in genoemde bijlage is omschreven.
3. Het bepaalde in het eerste lid is niet van toepassing op een persoon die beveiligingswerkzaamheden verricht voor een particuliere alarmcentrale, voorzover deze werkzaamheden binnen het gebouw van de alarmcentrale worden verricht, of voor een particulier recherchebureau.
4. In de vergunning, bedoeld in artikel 5 van de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties kan, indien het met de werkzaamheden nagestreefde doel niet in redelijkheid op andere wijze is te bereiken en zwaarwegende belangen zich daartegen niet verzetten, worden bepaald dat voor het verrichten van die werkzaamheden het voorschrift, bedoeld in het eerste lid, niet geldt.
5. De korpschef van de regio waar de beveiligingswerkzaamheden worden verricht, kan, uitsluitend voor die gemeente, aan een particuliere beveiligingsorganisatie ontheffing verlenen van de verplichting tot het dragen van een uniform, indien het met de werkzaamheden nagestreefde doel niet in redelijkheid op andere wijze is te bereiken en zwaarwegende belangen zich daartegen niet verzetten.

Art. 13

Een particuliere beveiligingsorganisatie stelt een persoon uitsluitend te werk, indien voor het verrichten van de werkzaamheden, ten behoeve van de betrokkene, toestemming is verkregen van de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd.

Art. 14

1. De toestemming, bedoeld in artikel 13, wordt geweigerd indien:
 - a. de betrokkene binnen vier jaar voorafgaande aan het moment van toetsing is veroordeeld wegens het plegen van een misdrijf, waarbij een geldboete is opgelegd, of
 - b. de betrokkene binnen acht jaar voorafgaande aan het moment van toetsing is veroordeeld wegens het plegen van een misdrijf, waarbij een vrijheidsstraf is opgelegd, of
 - c. op grond van andere omtrent de betrokkene bekende en relevante feiten kan

worden aangenomen dat deze niet voldoende betrouwbaar of geschikt is om voor een particuliere beveiligingsorganisatie werkzaamheden te verrichten en de belangen van de veiligheidszorg of de goede naam van de bedrijfstak niet te schaden.

2. Toestemming, bedoeld in artikel 13, wordt ten behoeve van een persoon die belast zal worden met beveiligingswerkzaamheden, slechts verleend indien deze in het bezit is van een diploma als bedoeld in artikel 16, eerste lid.

3. In afwijking van het bepaalde in het tweede lid wordt de toestemming, bedoeld in artikel 13, tevens verleend indien zich het geval van artikel 16, tweede, vierde, vijfde, zesde of zevende lid, voordoet.

4. Van het bepaalde in het eerste lid, onder a en b, kan de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd afwijken indien, gelet op de aard van het strafbare feit, de omstandigheden waaronder het feit is gepleegd, de geringe kans op recidive en recente persoonlijke ontwikkelingen, toepassing daarvan een voor de betrokkene onevenredig nadeel zou meebrengen ten opzichte van het daarmee te dienen belang.

5. Het tweede lid is niet van toepassing op personen die werkzaam zijn voor een particulier recherchebureau.

Art. 15

De toestemming, bedoeld in artikel 13, wordt ingetrokken indien feiten of omstandigheden bekend worden die, wanneer zij voor de verlening van de toestemming bekend waren geweest of waren voorgevallen, tot weigering van de toestemming hadden geleid. Het bepaalde in artikel 14, vierde lid, is van overeenkomstige toepassing.

Art. 16

1. Een particuliere beveiligingsorganisatie belast uitsluitend een persoon met beveiligingswerkzaamheden, indien deze in het bezit is van een diploma waarvan de exameneisen en het examenreglement zijn goedgekeurd.

2. De verplichting, bedoeld in het eerste lid, geldt niet voor een periode van 12 maanden, te rekenen vanaf de dag dat de betrokkene voor het eerst in dienst van een particuliere beveiligingsorganisatie met beveiligingswerkzaamheden wordt belast mits hij in het bezit is van een door de Stichting Vakopleiding voor de Particuliere Beveiligingsorganisaties afgegeven Certificaat Introductie cursus Aspirant Beveiligingsbeambte.

3. De in het tweede lid genoemde periode wordt op geen enkele wijze geschorst of onderbroken.

4. De periode, bedoeld in het tweede lid, wordt door de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd, verlengd voor de duur van ten hoogste drie maanden, met het oog op het ontslag van de betrokkene.

5. Het bepaalde in het eerste lid, is niet van toepassing indien de betrokkene is geboren vóór 1 december 1937 en van 1 december 1980 tot en met 30 november 1982 onafgebroken werkzaam is geweest bij een op grond van de Wet op de weerkorpsen toegelaten particuliere beveiligingsorganisatie.

6. Gedurende de periode bedoeld in het vierde lid kan ministeriële ontheffing worden verleend van het bepaalde in het eerste lid, indien de particuliere beveiligingsorganisatie aantoont dat de betrokkene redelijkerwijs al het mogelijke heeft gedaan om het diploma, bedoeld in het eerste lid, te behalen en er gelet op de door de betrokkene opgedane kennis en ervaring en de aard van de te verrichten werkzaamheden geen bedenkingen tegen bestaan dat deze niet in het bezit is van het diploma.

7. Het eerste lid is niet van toepassing op particuliere recherchebureaus.

Art. 17

1. Onverminderd het bepaalde in artikel 16, eerste lid, belast een particuliere beveiligingsorganisatie uitsluitend een persoon ongeüniformeerd met beveiligingswerkzaamheden, indien deze in het bezit is van het Vakdiploma Beveiliging van de Stichting Vakopleiding voor de Particuliere Beveiligingsorganisaties.

2. In afwijking van het eerste lid belast een particuliere beveiligingsorganisatie, onverminderd het bepaalde in artikel 16, eerste lid, een persoon uitsluitend ongeüniformeerd met beveiligingswerkzaamheden ten behoeve van grootwinkel- of detailhandelbedrijven, indien deze in het bezit is van het diploma Certificaat Detailhandel van de Stichting Vakopleiding voor de Particuliere Beveiligingsorganisaties.

3. Ministeriële ontheffing van het bepaalde in het eerste lid kan worden verleend voor een periode van 12 maanden, te rekenen vanaf de eerste dag dat de betrokkene de persoonsbeveiligingswerkzaamheden verricht.

4. Het eerste lid is niet van toepassing op particuliere recherchebureaus.

Art. 18

1. Goedkeuring als bedoeld in artikel 16, eerste lid, wordt verleend aan de exameneisen en het examenreglement voor het Basisdiploma Beveiliging van de Stichting Vakexamens voor de Particuliere Beveiligingsorganisaties en voor het Dealexamen A van het Diploma Leerlingenstelsel van het Instituut Vorming en Opleiding Beveiliging.

2. Als gelijkwaardig aan de diploma's, bedoeld in het eerste lid, worden erkend:

a. het Vakdiploma Bedrijfsbeveiliging en Bewakingsdienst van de Unie van Beveiligings en Bewakingspersoneel (UBB);

b. het Vakdiploma Bedrijfsbeveiliging en Bewakingsdienst van de Nederlandse Bond van Onbezoldigd opsporingsambtenaren en Bewakingspersoneel (NBOB);

c. de diploma's Beveiligingsbeambte B,C en D, van de Leidse

onderwijsinstellingen, behaald vóór 1 februari 1986; d. het diploma Beveiliging en Bewaking van de Stichting Vakexamens voor de Particuliere Beveiligingsorganisaties, behaald voor 1 februari 1986; e. het Vakdiploma Basiscursus Marine Bewakingskorps tezamen met het diploma van het Marine Bewakingskorps voor onbezoldigd ambtenaar van het Korps Rijkspolitie, beide behaald voor 1 februari 1986; f. het Certificaat Begincursus voor de bedrijfsbewaking, afgegeven door de Stichting Vervoer en Havenopleidingen te Rotterdam, behaald voor 1 februari 1986.

Art. 19

1. Een particuliere beveiligingsorganisatie zorgt dat een persoon die met beveiligingswerkzaamheden is belast bij de uitvoering van die werkzaamheden een legitimatiebewijs draagt, overeenkomstig het in bijlage 4 bij deze regeling vastgestelde model en de in die bijlage aangeduide kleur.
2. Het legitimatiebewijs, bedoeld in het eerste lid, bevat een verklaring van de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd, waaruit de toestemming, bedoeld in artikel 13, blijkt.
3. Het legitimatiebewijs, bedoeld in het eerste lid, kan een aantekening bevatten van de korpschef van de regio waar de organisatie of een onderdeel van de organisatie is gevestigd, waaruit blijkt dat het de betrokkene slechts is toegestaan de op het legitimatiebewijs omschreven beveiligingswerkzaamheden te verrichten.
4. Een legitimatiebewijs, bedoeld in het eerste lid, wordt op elk redelijk verzoek getoond.

Art. 20

1. Een particuliere beveiligingsorganisatie maakt bij de uitvoering van beveiligingswerkzaamheden slechts gebruik van een hond, indien uit een verklaring, afgegeven door de Koninklijke Nederlandse Politiehond Vereniging of de Nederlandse Bond voor de Diensthond, blijkt dat deze hond geschikt is om als surveillance dan wel als objectbewakingshond te worden ingezet.
2. De bewakingshondgeleider is bij de uitoefening van de beveiligingswerkzaamheden in het bezit van een verklaring, afgegeven door de Koninklijke Nederlandse Politiehond Vereniging of door de Nederlandse Bond voor de Diensthond, waaruit blijkt dat de geleider en de bewakingshond een, voor het verrichten van de werkzaamheden, geschikte combinatie vormen.
3. De bewakingshond staat tijdens de uitvoering van beveiligingswerkzaamheden onder direct toezicht van de geleider.
4. De bewakingshondgeleider verleent desgevorderd inzage in de verklaringen, bedoeld in het eerste en tweede lid, aan de met het toezicht en de controle op de naleving van de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties belaste personen, alsmede de korpschef van de regio

waar de werkzaamheden worden verricht.

5. Het gebruik van een bewakingshond gaat in geen geval de perken van redelijkheid en gematigdheid te buiten.

2. BIJZONDERE BEPALINGEN VOOR PARTICULIERE ALARM-CENTRALES EN GELD- EN WAARDETRANSPORTBEDRIJVEN

Art. 21

1. Het gebouw en de inrichting van het gebouw van een particuliere alarmcentrale, alsmede het door de particuliere alarmcentrale gebruikte materieel, voldoen aan de in bijlage 5 bij deze regeling gestelde eisen.

2. Van het bepaalde in het eerste lid kan ministeriële ontheffing worden verleend.

Art. 22

Een particuliere alarmcentrale licht de korpschef van de regio waar zich de objecten bevinden, die door de alarmcentrale worden beveiligd, aan het begin van ieder kwartaal in over:

- a. de aanvang en de beëindiging van een overeenkomst met een abonnee die strekt tot een aansluiting op de particuliere alarmcentrale van een op het object geplaatste installatie met betrekking tot inbraak- en overval-alarmering;
- b. de aard en situering van het object.

Art. 23

1. De wijze waarop de werkzaamheden door een particulier geld- en waardetransportbedrijf worden verricht, alsmede het door een particulier geld- en waardetransportbedrijf gebruikte materieel, voldoen aan de in bijlage 6 bij deze regeling gestelde eisen.

2. Van het bepaalde in het eerste lid kan ministeriële ontheffing worden verleend.

3. De bepalingen onder 4, 5, 8, 11 en 12 van de in het eerste lid bedoelde bijlage 6, zijn niet van toepassing op bulkvervoer van muntgeld.

3. BIJZONDERE BEPALING VOOR RECHERCHEBUREAUS

Art. 24

Het verbod in artikel 5 van de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties en de artikelen 2 tot en met 20 van deze regeling gelden niet voor particuliere recherchebureaus die voor 1 december 1993 een vergunning, als bedoeld in artikel 5 van de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties hebben aangevraagd voor het tot stand brengen van een particuliere beveiligingsorganisatie, tot het tijdstip waarop het

besluit op de aanvraag is bekend gemaakt.

4. OVERGANGS- EN SLOTBEPALINGEN

art.25

1. Artikel 12, tweede lid, treedt in werking op 1 februari 1993.
2. In afwijking van het bepaalde in het eerste lid, is het voorschrift van artikel 12, tweede lid, niet van toepassing tot 1 februari 1994, voorzover het betreft uniformen die vóór 1 februari 1993 bij een particuliere beveiligingsorganisatie in gebruik waren.
3. Artikel 5, eerste en tweede lid is tot en met 31 december 1994 niet van toepassing op particuliere recherchebureaus.

art.26

In afwijking van het bepaalde in artikel 16, tweede lid, geldt een periode van 22 maanden, voorzover het personen betreft die vóór 1 mei 1993 in dienst zijn getreden van enige particuliere beveiligingsorganisatie.

art. 27

De beschikking van 1 augustus 1988, Politie nr. 1056/588 (Stcrt 1988,161), vervalt.

art. 28

Deze regeling kan worden aangehaald als Regeling particuliere beveiligingsorganisaties en treedt in werking op 1 december 1992.

Deze regeling wordt, met uitzondering van de daarbij behorende bijlagen, in de Nederlandse Staatscourant en in het Algemeen Politieblad geplaatst.

`s Gravenhage, 25 november 1992

De Minister van Justitie,
namens de Minister,
het Hoofd van de Directie Politie

(mr H.P. Wooldrik)

de instantie die het legitimatiebewijs heeft afgestempeld

Regeling Particuliere beveiligingsorganisaties - Bijlage 6

Eisen omtrent de wijze waarop de werkzaamheden door een particuliere geld- en waardetransportbedrijf worden verricht en omtrent het door een particuliere geld- en waardetransportbedrijf gebruikte materieel (art.23 RPB).

- 1.Elk transport wordt door tenminste twee personen verricht.
- 2.Zendingen worden uitsluitend vervoerd wanneer deze verzekerd zijn door de vervoerder, de verzender of de ontvanger, waarbij ook het verhaalsrecht van assuradeuren op de vervoerder gedekt is
- 3.Het geld- en waardetransport is als zodanig herkenbaar. Op de beide zijkanten, de achterzijde en bij voorkeur de voorzijde van het voertuig is door middel van een duidelijk leesbare tekst, in een lettertype waarvan de hoogte tenminste 10 cm bedraagt, het geld-en waardetransport herkenbaar gemaakt. Het gebruik van spiegelschrift beantwoordt niet aan dit doel. Het wordt aanbevolen om op het dak een vanuit de lucht herkenbare nummering aan te brengen. Voor buitenlandse ondernemingen is het toegestaan de tekst ten behoeve van de herkenbaarheid in de eigen taal aan te brengen.
- 4.Alle ruimten van het voertuig die door het personeel tijdens de transporten worden gebruikt zijn rondom beveiligd met kogel- en slagwerend materiaal, dat voldoet aan de volgende eisen. De gebruikte materialen hebben een kogelwerendheid van ongeveer 1300 Nm, behoudens de materialen gebruikt voor het dak, de bodem en de in de wagen geplaatste tussenwanden, waarbij mag worden volstaan met een kogelwerendheid van respectievelijk 700 Nm, 500 Nm en 700 Nm. De transparante materialen voldoen bovendien aan een slagwerendheid van 20 x 150 Nm. Van de voor de bepantsering gebruikte materialen wordt bij de keuring een gespecificeerde originele verklaring -opgesteld door de carrosseriebouwer- overgelegd. Ter vaststelling van de mate van voldoening aan genoemde waarden van kogel- en

slagwerendheid, zijn monsters van de materialen beproefd op een wijze als door de verschillende normeringsinstanties is omschreven. Van deze proef moet op verzoek een rapport kunnen worden overgelegd. Dit rapport moet voldoen aan de eisen overeenkomstig het gestelde in bijlage 5A, waarin tevens staat beschreven op welke wijze de genoemde proeven moeten worden genomen.

Bij de verwerking van de materialen moet met het volgende rekening worden gehouden.

a. Metalen met kogelwerende eigenschappen verliezen deze eigenschappen in belangrijke mate bij sterke verhitting. Derhalve is het belangrijk er voor te waken dat bij het lassen en/of snijden van deze metalen, de kogelwerende eigenschappen behouden blijven. Daar waar de verwerking van enig kogelwerend materiaal niet wordt gecontinueerd, dient sprake te zijn van voldoende overlapping ten opzichte van het op andere plaatsen gebruikt kogelwerend materiaal, zodat bij een schot op het voertuig onder welke hoek dan ook, de kogel steeds kogelwerend materiaal treft.

b. Polycarbonaat is op eenvoudige manieren zodanig te beïnvloeden dat de kogelwerende eigenschappen verdwijnen. Derhalve zal bij verwerking van polycarbonaat steeds sprake moeten zijn van een combinatie met een ander materiaal, waarbij in ieder geval een laag van dat andere materiaal aan de buitenzijde moet zijn aangebracht.

c. Bij het gebruik van materialen welke geheel of gedeeltelijk zijn gemaakt uit aramidevezel, dient te worden gelet op de bevestiging van dit materiaal. Deze vezel heeft de kogelwerende eigenschappen te danken aan een ruime mate van elasticiteit. Wordt dit materiaal echter zo hecht bevestigd dat van elasticiteit geen sprake meer is, dan is het materiaal niet meer geschikt. Voorts dient aramidevezel uitsluitend op plaatsen te worden verwerkt waar het niet in aanmerking kan komen met vocht. Ook condensgevoelige plaatsen zijn ongeschikt voor de toepassing van aramidevezel. Door vocht verliest dit materiaal namelijk veel van de kogelwerende eigenschappen.

5.1. De scharnieren, sloten en eventuele schuifmechanismen van alle toegangsmogelijkheden zijn in voldoende mate verzwaard.

5.2 Scharnieren zijn niet aan de buitenzijde van het voertuig aangebracht, tenzij door middel van een "dievenklauw"; het openen van de deur door het beschadigen van de scharnieren wordt tegengegaan.

6. In het voertuig is voor iedere inzittende een universeel gasmasker aanwezig.

7. Indien het voertuig gebruik maakt van een andere brandstof dan diesel, dan moet de brandstoftank zelfdichtend en explosievrij zijn.
8. Om de ruimten van het voertuig die bestemd zijn voor het personeel en de zendingen ontoegankelijk te maken voor onbevoegden, zijn de volgende maatregelen getroffen.
 - a. De deur waardoor de geldloper het voertuig verlaat, dan wel betreedt, mag geen toegang verlenen tot het compartiment waarin zich het achterblijvende personeelslid bevindt.
 - b. De deuren en luiken zijn tijdens een vervoer uitsluitend vanuit het voertuig te bedienen.
 - c. De zijruiten mogen, tenzij voor gebruik als vluchtluk, niet door de bemanning worden geopend.
 - d. De voertuigen zijn tenminste in twee compartimenten onderverdeeld, waarvan alle toegangsdeuren (dus niet de vluchtluiken) zijn voorzien van een interlocksysteem. Indien één der portieren niet gesloten is, moet het rijden met het voertuig niet mogelijk zijn.
 - e. De zendingen zijn beschermd door plaatsing in afzonderlijke opbergeenheden. Deze opbergeenheden moeten bij gebruikmaking van handgebruikte breek- en snijwerktuigen in totaal een braak- en ontsluitingsweerstand hebben van minimaal 15 minuten. Het ontgrendelings-systeem van de opbergeenheden is zodanig uitgevoerd dat de totale lading niet vrijwillig of gedwongen binnen een gelijkelijk over de opbergeenheden te verdelen toelaat van 15 minuten vrijgegeven kan worden. Er zijn verschillende oplossingen denkbaar om deze vertragingstijd van 15 minuten te realiseren, bijvoorbeeld door middel van met elkaar doorverbonden tijdschakelingen in het voertuig. Ook vanuit het hierna onder punt 9 genoemde centrale punt, kan worden bepaald uit welke opbergeenheid de lading kan worden genomen. De voorgeschreven vertraging moet dan gevonden worden in de procedure vanuit de centrale. Vanzelfsprekend kan het verdelen van de zending over meerdere opbergeenheden slechts geschieden bij transport van een lading die in kleine volume-eenheden valt te verdelen, zoals in het geval van geld.

9.1. Via een gesloten telecommunicatienet wordt een verbinding onderhouden met een centraal punt. In geval van calamiteit wordt via het telefooncommunicatienet het centrale punt in kennis gesteld van de alarmsituatie, alsmede van alle op de calamiteit betrekking hebbende gegevens.

9.2. Het telefooncommunicatienet moet voldoen aan de volgende

voorwaarden.

- a. Het is goedgekeurd door de P.T.T.
- b. Het waarborgt een goede verbinding in het gehele werkgebied.
- c. De verbinding kan binnen enkele seconden tot stand gebracht worden.
- d. De voor de zend- en ontvangstapparatuur benodigde antenne is in voldoende mate beschermd tegen sabotage.
- e. Rijden met het voertuig in een alarmsituatie is niet mogelijk.
Teneinde te voorkomen dat het voertuig in geval van calamiteit onder bedreiging van het personeel weer mobiel kan worden gemaakt, mag de blokkering van het voertuig niet ter plaatse door de bemanning of overvallers ongedaan kunnen worden gemaakt. Het inschakelen van de alarm/blokkeringstoestand kan vanuit ieder compartiment van het voertuig geschieden.

10. Er wordt zo veel mogelijk een willekeurig wisselende bemanning op verschillende, variërende routes ingezet.

11. Er zijn voorzieningen getroffen voor een veilige overslag, opslag en overdracht van de lading. Teneinde bij de overdracht van de lading te kunnen constateren of er onregelmatigheden hebben plaatsgevonden, zijn de zendingen voor de verschillende verzenders en ontvangers zodanig geïdentificeerd, dat de door het personeel gepleegde onregelmatigheden op het moment van overdracht van de zendingen geconstateerd kunnen worden. Overslag en/of tijdelijke opslag van zendingen mag alleen in een beveiligde ruimte plaatsvinden. De voertuigen zijn zodanig uitgerust dat van eventuele gesloten overdrachtsfaciliteiten van de opdrachtgever gebruik kan worden gemaakt.

12. Het voertuig is tenminste met één vluchtluik uitgerust. Daarbij is het toegestaan de voor de overdracht aangebrachte gesloten luiken als vluchtweg voor het personeel te gebruiken.

13. Bulkvervoer van muntgeld vindt plaats met inachtneming van de volgende voorschriften:

- de cabine van de geldauto, waarin zich de beveiligingsbeambten bevinden, is gepantserd overeenkomstig het bepaalde in deze bijlage;
- het muntgeld wordt vervoerd in gesloten gaasboxen;
- op de vrachtauto's is het opschrift 'muntvervoer' aangebracht;
- de laadruimte is volledig afgesloten van de cabine.

Aan:

De Procureurs-Generaal
fgd. Directeuren van Politie;
de Korpschefs van de regionale politiekorpsen;
de leiding van particuliere beveiligingsorganisaties.

Datum: 7 februari 1994

Kenmerk: 421621/594/DR

Geldig tot 1 april 1998

Voorliggende circulaire, die kan worden aangehaald als Circulaire particuliere beveiligingsorganisaties (CPB), vervangt mijn circulaire van 1 december 1992 (nr. 268266/592/RT). Deze laatste circulaire is hierbij ingetrokken.

De circulaire bevat voornamelijk regels met betrekking tot de aanvraag voor (verlenging van) vergunningen voor particuliere beveiligingsorganisaties, de goedkeuring van de leiding van dergelijke organisaties, de goedkeuring van uniformen voor beveiligingsbeambten, het gebruik van legitimatiebewijzen en het inzenden van de jaarverslagen.

Wijzigingen in de Regeling particuliere beveiligingsorganisaties en de inwerkingtreding van de nieuwe Politiewet per 1 april 1994 vormden de aanleiding voor het verschijnen van onderliggende circulaire. Enkele van de meest opvallende wijzigingen zijn de vergunningplicht per 1 december 1993 voor particuliere recherchebureaus, de invoering van nieuwe legitimatiebewijzen, de wijze van aanvragen van een verlenging van een vergunning, de Introductiecursus Aspirant Beveiligingsbeambte en de wijziging van 'hoofd van plaatselijke politie' in 'Korpschef'.

N.B. Tekst die ten opzichte van de vorige circulaire (van 1 december 1992, nr.268266/592/RT) is gewijzigd, wordt vetgedrukt weergegeven.

1. Vergunningsprocedure

1.1. Aanvraag eerste vergunning

Verzoeken om een vergunning van particuliere beveiligingsorganisaties die niet in het bezit zijn van een geldige vergunning of van een onder de werking van de Wet op de weerkorpsen verleende toelating, worden rechtstreeks bij mij ingediend. Bij de aanvraag van de vergunning worden de in bijlage 1 bij deze circulaire gevoegde gegevens en bescheiden overgelegd.

Na ontvangst van de vergunningaanvraag worden door mij inlichtingen en

advies ingewonnen bij de procureur-generaal, fgd. Directeur van Politie in het ressort waar de beveiligingsorganisatie zijn hoofdvestiging heeft. Ik verzoek de procureurs-generaal, alsmede de hen adviserende Korpschefs, met name in te gaan op de mate waarin verwacht kan worden dat de betrokken beveiligingsorganisatie aan de in de Wet en in de RPB gestelde eisen kan voldoen.

Overigens zij in dit verband nog opgemerkt dat een aantal eisen die in de Beschikking particuliere beveiligingsorganisaties aan beveiligingsorganisaties waren gesteld, in de RPB niet zijn gehandhaafd. Het betreft hier onder andere het zogenaamde behoeftecriterium en de eis van financiële draagkracht. Voor een volledig overzicht van de vervallen eisen, alsmede een motivering daarvan, moge ik u verwijzen naar met name de eerste twee pagina's van de bij de RPB behorende toelichting. In dit verband wijs ik tevens op een verandering met betrekking tot de zogenaamde 22-maanden periode, waarbinnen een beveiligingsbeambte het vereiste diploma moet behalen. Deze periode is in de RPB (artikel 16, tweede lid) teruggebracht tot 12 maanden. Artikel 26 RPB bevat evenwel een ruime overgangsregeling.

Bij een positieve beslissing op het verzoek, zal een afschrift van de vergunning worden gezonden aan de desbetreffende Korpschef, alsmede aan de procureur(s)-generaal, fungerend Directeur(en) van Politie in het ressort waar de organisatie of een onderdeel van de organisatie is gevestigd. In de regel kan de vergunningsduur worden gesteld voor:

- particuliere beveiligingsbedrijven:

op 5 jaar

- particuliere bedrijfsbeveiligingsdiensten:

op 5 jaar

- particuliere alarmcentrales:

op 5 jaar

- particuliere geld- en waardetransportbedrijven:

op 5 jaar

- andere vormen van particuliere beveiligingsorganisaties:

op 5 jaar

- particuliere recherchebureaus:

op 5 jaar

1.2 Aanvraag verlenging vergunning

Voor aanvragen om verlenging van de vergunning (toelating) voor particuliere beveiligingsbedrijven, particuliere bedrijfsbeveiligingsdiensten, particuliere alarmcentrales, particuliere geld- en waardetransportbedrijven, particuliere recherchebureaus en andere vormen van particuliere beveiligingsorganisaties, geldt de hierna beschreven procedure. Bij het verzoek om verlenging van de vergunning kan gebruik worden gemaakt van het als bijlage 2 bij deze circulaire gevoegde formulier "Aanvraag verlenging vergunning".

- a. De betrokken organisatie dient een verzoek om verlenging van de vergunning bij mij in. Vervolgens vraag ik de Korpschef in de gemeente waar de organisatie, of een onderdeel van de organisatie, is gevestigd, om inlichtingen en advies. Bij de aanvraag voor verlenging wordt door de particuliere beveiligingsorganisatie een lijst overgelegd waarop de namen van de gemeenten zijn vermeld waar de beveiligingsorganisatie ten tijde van de aanvraag beveiligingswerkzaamheden verricht.
- b. Aan de hand van de bij het verzoek overgelegde lijst van gemeenten waar de organisatie ten tijde van de aanvraag werkzaamheden verricht, kan de Korpschef een onderzoek instellen naar de verrichtingen van de beveiligingsorganisatie in andere gemeenten. Het zal in sommige gevallen ondoenlijk zijn om in alle op de lijst vermelde gemeenten een onderzoek in te stellen. In die gevallen kan worden volstaan met een onderzoek waarbij in enkele op de lijst vermelde gemeenten wordt nagegaan of de onderhavige organisatie zich heeft gehouden aan de geldende voorschriften.
Indien blijkt, dat een particuliere beveiligingsorganisatie zich niet houdt aan de gestelde voorschriften, verzoek ik de betrokken Korpschef mij hiervan -ook tussentijds- schriftelijk in kennis te stellen.
- c. De Korpschef zendt zijn advies rechtstreeks, derhalve zonder tussenkomst van de procureur-generaal, fungerend Directeur van Politie, aan mij.
- d. Bij een positieve beslissing op het verzoek, zal een afschrift van de vergunning worden gezonden aan de desbetreffende Korpschef,

alsmede aan de procureur(s)-generaal, fungerend Directeur(en) van Politie in het ressort waar de organisatie of een onderdeel van de organisatie is gevestigd.

1.3 Particuliere Recherchebureaus (art. 24 RPB)

Vanaf 1 december 1993 geldt de vergunningplicht die reeds van toepassing was op andere particuliere beveiligingsorganisaties, ook voor particuliere recherchebureaus. Na die datum is het verboden zonder vergunning een particulier recherchebureau tot stand te brengen, te wijzigen, te steunen of daarvan deel uit te maken (artikel 5 van de Wet). Particuliere recherchebureaus maken deel uit van de categorie particuliere beveiligingsorganisaties en waren tot 1 december 1993 uitgezonderd van de vergunningplicht.

Ten aanzien van particuliere recherchebureaus die vóór 1 december 1993 een vergunning hebben aangevraagd, maar waarvan de procedure met betrekking tot de verlening daarvan, op 1 december 1993 nog niet is afgerond, geldt het verbod in artikel 5 van de Wet niet, tot het tijdstip dat het besluit op de aanvraag aan de betrokkene is bekendgemaakt (artikel 24 van de RPB). Indien op het verzoek negatief is beslist, geldt het verbod in artikel 5 van de Wet vanaf het moment van de beslissing. Voor particuliere recherchebureaus die na 1 december 1993 een aanvraag voor een vergunning indienen, geldt dat zij de beslissing op de aanvraag moeten afwachten voordat zij met de recherchewerkzaamheden kunnen aanvangen.

2. Toestemming leiding (art. 11, eerste lid, RPB)

Bij de aanvraag van een vergunning door een particuliere beveiligingsorganisatie die niet reeds over een geldige vergunning (toelating) beschikt, dienen tevens inlichtingen te worden verstrekt over diegenen die met de leiding van de organisatie worden belast. Ik verzoek de procureurs-generaal, fgd. Directeuren van Politie, mij hieromtrent te adviseren.

Bij inwilliging van het verzoek om een vergunning ex artikel 5 van de Wet kan tevens worden bepaald, dat overeenkomstig artikel 11, eerste lid, van de Regeling particuliere beveiligingsorganisaties, toestemming voor de leiding wordt verleend. Aangezien niet goed denkbaar is hoe een beveiligingsorganisatie ook zonder leiding zou kunnen functioneren, wordt in beginsel geen vergunning verleend, zolang niet bekend is wie met de leiding van de organisatie zal worden belast.

Overige verzoeken om toestemming om met de leiding van een particuliere beveiligingsorganisatie te worden belast, dienen eveneens bij mij te worden ingediend. Doorgaans zal het hier een (tussentijdse) wijziging van de leiding van de organisatie betreffen, nadat aan de organisatie een vergunning op grond van artikel 5 van de Wet is verleend. Ik vraag vervolgens de Korpschef in de regio waar de organisatie of een onderdeel van de organisatie is gevestigd, om inlichtingen en advies. Na inwinning van het advies beslis ik op het verzoek. Afschriften van de desbetreffende beschikking worden gezonden aan de betrokken Korpschef en aan de procureur-generaal, fgd. Directeur van Politie, in het ressort waar de organisatie of een onderdeel van de organisatie is gevestigd.

3. Uniform

3.1 Goedkeuring (art. 12, eerste lid, RPB)

Ingevolge artikel 12, eerste lid, van de Regeling particuliere beveiligingsorganisaties dragen personen, die belast zijn met het uitvoeren van beveiligingswerkzaamheden bij de uitoefening van hun dienst een uniform dat door mij is goedgekeurd. Deze goedkeuring kan worden verkregen door kleurenfoto's over te leggen, waarop de uitvoering van het uniform en de gebezigde herkenningstekens duidelijk zichtbaar zijn. Tevens dient een staal van de gebruikte stof te worden overgelegd.

Bij de uitvoering van het uniform dient er rekening mee te worden gehouden dat het uniform niet mag lijken op dat van de politie. Dit betekent dat een pantalon die is uitgevoerd in kleuren die een sterke gelijkenis vertonen met de kleuren die de politie gebruikt, niet mag zijn voorzien van een bias. Zo mag ook een eventueel gebruikte blouson geen sterke gelijkenis vertonen met de blouson die de politie gebruikt. Op het uniform mogen geen rangonderscheidingstekens zijn aangebracht. Ook de herkenningstekens (vignetten, emblemen of logo's) mogen geen gelijkenis vertonen met de vignetten van de politie. Dit betekent dat uniformen die zijn voorzien van goudkleurige emblemen in beginsel niet zullen worden goedgekeurd. Het in het politie-embleem tot uitdrukking komende symbool van het wetboek en de vlam, is als embleem voor een particuliere beveiligingsorganisatie niet noodzakelijk en zal slechts -onnodige- verwarring bij het publiek veroorzaken. Aan uniformen die van een dergelijk embleem of van een daarop gelijkend embleem zijn voorzien, zal daarom in beginsel geen goedkeuring worden verleend.

Elk uniform dient te zijn voorzien van een herkenningsteken van de particuliere beveiligingsorganisatie, zodat het voor zowel het publiek

als voor de politie duidelijk is, met welke particuliere beveiligingsorganisatie zij te maken hebben. Alle uniformen moeten eveneens zijn voorzien van het door mij vastgestelde embleem.

3.2 Ontheffing (art. 12, vijfde lid, RPB)

De Korpschef van de gemeente waar de beveiligingswerkzaamheden worden verricht, kan op grond van artikel 12, vijfde lid, van de Regeling particuliere beveiligingsorganisaties (uitsluitend voor die gemeente) ontheffing verlenen van de uniformdraagplicht. De ontheffing kan slechts worden verleend indien de beveiligingsbeambte in het bezit is van de vereiste diploma's en het gestelde doel van de beveiliging niet in redelijkheid op andere wijze (derhalve geüniformeerd) kan worden bereikt. De ontheffing blijft achterwege indien zwaarwegende belangen zich tegen de verlening van de ontheffing verzetten. Onder zwaarwegende belangen wordt mede verstaan het ontbreken van het in artikel 17, eerste of tweede lid, RPB genoemde diploma.

In uitzonderlijke gevallen kan van de uniformdraagplicht tevens ontheffing worden verleend indien naar het oordeel van de Korpschef geüniformeerd optreden provocerend of anderszins minder zinvol zou werken. Te denken valt hierbij aan popconcerten, recepties, tentoonstellingen en dergelijke.

4 Legitimatiebewijzen (art. 19 RPB)

4.1 Uitvoering

Het legitimatiebewijs, bedoeld in artikel 19, eerste lid, van de Regeling particuliere beveiligingsorganisaties, waarvan het model is vastgelegd in bijlage 4 bij de RPB, is uitgevoerd in de kleuren grijs, groen, blauw en geel.

Het grijze legitimatiebewijs wordt verstrekt aan de beveiligingsbeambten die in het bezit zijn van het diploma, als bedoeld in artikel 16, eerste lid, van genoemde Regeling, of een daaraan gelijk gesteld diploma (art. 18, tweede lid, RPB). Dit legitimatiebewijs wordt tevens verstrekt aan beambten voor wie door mij voor onbepaalde tijd ontheffing van de opleidingseis is verleend (artikel 16, zevende lid, RPB) of voor wie een vrijstelling van de opleidingseis geldt (art. 16, vijfde lid, RPB).

Beveiligingsbeambten die nog niet in het bezit zijn van het vereiste diploma dienen uitsluitend in het bezit te worden gesteld van het groene legitimatiebewijs.

Het blauwe legitimatiebewijs is bestemd voor personen die deel uitmaken van een beveiligingsorganisatie, waarvan de werkzaamheden zijn beperkt tot de handhaving van de orde en rust en de veiligheid van personen op terreinen en

in de gebouwen waar (muziek)evenementen plaatsvinden en dan uitsluitend ten tijde van de openstelling voor publiek. Het gaat hier om beveiligingsorganisaties, bedoeld in artikel 6, tweede lid, onder f, van de Wet (andere vormen van particuliere beveiligingsorganisaties). Op het legitimatiebewijs wordt een aantekening, als bedoeld in artikel 19, derde lid, RPB gemaakt, waaruit blijkt dat het de betrokkene slechts is toegestaan om de op het legitimatiebewijs omschreven beveiligingswerkzaamheden te verrichten.

Het gele legitimatiebewijs is bestemd voor een ieder die werkzaam is bij een particulier recherchebureau en die zich bezig houdt met recherchewerkzaamheden.

4.2 Gegevens

Op het legitimatiebewijs moeten de volgende gegevens machinaal worden ingevuld:

- naam, adres en telefoonnummer van de particuliere beveiligingsorganisatie,
- naam, voornamen, geboortedatum en functie van de houder,
- de datum waarop de geldigheid van het bewijs verstrijkt,
- plaats en datum van afgifte aan de houder,
- handtekening van degene die met de leiding van de beveiligingsorganisatie is belast,
- eventuele beperkingen voor wat betreft de uit te voeren werkzaamheden (art. 19, derde lid, RPB).

Het legitimatiebewijs dient te allen tijde te zijn voorzien van een goed gelijkende foto van de houder. De foto moet op het bewijs zijn bevestigd, zodanig dat verwijdering niet kan plaatsvinden zonder beschadiging. Het legitimatiebewijs dient na bevestiging van de foto te worden voorzien van een stempel van de particuliere beveiligingsorganisatie, gedeeltelijk op de foto en gedeeltelijk op het bewijs.

4.3 Geldigheidsduur

Bij het invullen van de datum waarop de geldigheid van het bewijs verstrijkt dient met het volgende rekening te worden gehouden:

- a. Het grijze legitimatiebewijs is na datum van de eerste afgifte maximaal 5 jaar geldig. Na het verstrijken van de geldigheidsduur van het legitimatiebewijs kan aan de beveiligingsbeambte, mits hij werkzaam blijft bij dezelfde beveiligingsorganisatie, een legitimatiebewijs worden afgegeven met een geldigheidsduur van maximaal 10 jaar.

b. De geldigheidsduur van het groene legitimatiebewijs is gelijk aan de periode van 12 maanden, genoemd in artikel 16, tweede lid, van de Regeling particuliere beveiligingsorganisaties. Hiervan wordt afgeweken indien:

- de betrokkene reeds eerder in het bezit is geweest van een groen legitimatiebewijs,
- de betrokkene gebruik maakt van een ontheffing, bedoeld in artikel 16, vierde of zesde lid, RPB,
- de termijn van 12 maanden om bijzondere redenen wordt verlengd (art. 16, zevende lid, RPB).

In het eerste geval dient een nieuw groen legitimatiebewijs te worden verstrekt, waarbij de gebruikelijke geldigheidsduur van 12 maanden wordt verminderd met de periode die ligt tussen de datum van afgifte van het eerste groene legitimatiebewijs en de datum van afgifte van het nieuwe groene legitimatiebewijs.

In de andere gevallen dient een nieuw groen legitimatiebewijs te worden verstrekt, waarvan de geldigheidsduur gelijk is aan de periode waarvoor betrokkene op grond van meergenoemde Regeling in aanmerking komt.

c. Het blauwe legitimatiebewijs heeft een geldigheidsduur van maximaal 2 jaar.

d. Het gele legitimatiebewijs heeft een geldigheidsduur van maximaal twee jaar.

Het legitimatiebewijs zal vanaf januari 1994 geleidelijk worden vervangen door een nieuw model. De kleuren en de daarbij behorende functies van de huidige legitimatiebewijzen blijven bij het nieuwe model gehandhaafd. Er geldt een overgangperiode waarbinnen iedere beveiligingsbeambte en iedere beveiligingsbeambte in opleiding een nieuw model legitimatiebewijs kan aanvragen voordat de huidige legitimatiebewijzen hun geldigheid verliezen. De huidige groene legitimatiebewijzen behouden hun geldigheid tot uiterlijk 1 april 1995. Na die datum dient iedere beveiligingsbeambte in opleiding te zijn voorzien van een nieuw groen legitimatiebewijs. De thans bestaande modellen kunnen vanaf die datum niet meer worden gebruikt. De huidige grijze legitimatiebewijzen blijven geldig tot 1 januari 1997. Na die datum dient iedere beveiligingsbeambte in de categorie waarvoor deze bewijzen zijn bestemd, te zijn voorzien van het nieuwe model grijze legitimatiebewijs. De invoering van nieuwe legitimatiebewijzen brengt met zich, dat gedurende een periode twee soorten legitimatiebewijzen naast elkaar zullen worden gebruikt. Hiertegen bestaat geen doorslaggevend bezwaar indien deze periode tijdelijk en duidelijk afgebakend is. Zoals gezegd dienen alle oude

legitimatiebewijzen uiterlijk op 1 januari 1997 door nieuwe te zijn vervangen.

4.4 Witte kaarten

Bij de groene legitimatiebewijzen worden witte kaarten verstrekt, in aantal gelijk aan de afgeleverde bewijzen. Op deze witte kaarten moeten de volgende gegevens machinaal worden ingevuld:

- naam van de particuliere beveiligingsorganisatie,
- naam, voornamen en geboortedatum van diegene aan wie het bijbehorende groene legitimatiebewijs is verstrekt,
- datum van afgifte van het groene legitimatiebewijs,
- datum waarop de geldigheid van het groene legitimatie bewijs verstrijkt,
- datum waarop het certificaat van de Introductiecursus Adspirant Beveiligingsbeambte is behaald.

4.5 Toestemming Korpschef

De Introductiecursus Aspirant Beveiligingsbeambte van de Stichting voor de Vakopleiding Particuliere Beveiligingsorganisaties is vanaf 1 januari 1994 verplicht voor iedere beveiligingsbeambte die in aanmerking wil komen voor een groen legitimatiebewijs. Na afloop van deze cursus ontvangen de deelnemers een certificaat. Bij aanvraag voor een groen legitimatiebewijs dient het legitimatiebewijs met de bijbehorende witte kaart, tezamen met dit certificaat, ter hand te worden gesteld aan de Korpschef in de gemeente waar de particuliere beveiligingsorganisatie of een onderdeel van die organisatie is gevestigd. De Korpschef controleert of een eventuele beperking, overeenkomstig artikel 19, derde lid, RPB is vermeld. Vervolgens wordt de witte kaart ten behoeve van de centrale administratie van ongediplomeerde beveiligingsbeambten door de Korpschef gezonden aan het Ministerie van Justitie, Directie Politie, afdeling Bijzondere Wetten.

4.6 Inneming

Wanneer de houder de dienst bij de particuliere beveiligingsorganisatie heeft verlaten of wanneer de geldigheidsduur van het bewijs is verstreken, dient het verstrekte bewijs te worden ingenomen en ter vernietiging ter hand te worden gesteld aan de Korpschef.

Een groen legitimatiebewijs, dat wordt vervangen door een grijs legitimatiebewijs, dient evenwel door de Korpschef te worden gestuurd aan de

Directie Politie, afdeling Bijzondere Wetten van het Ministerie van Justitie, nadat hierop door de Korpschef is aangetekend dat betrokkene het vereiste diploma heeft behaald. Na ontvangst wordt de bijbehorende witte kaart uit de hierboven genoemde centrale administratie verwijderd en samen met het groene legitimatiebewijs vernietigd.

4.7 Register

De particuliere beveiligingsorganisatie houdt een voor de politie toegankelijk register of kaartsysteem bij, dat de volgende gegevens met betrekking tot de legitimatiebewijzen moet bevatten:

- nummers van de bewijzen,
- namen, voornamen, geboortedata en functies van de houders,
- data waarop de geldigheid van de bewijzen verstrijkt,
- data van inlevering van de bewijzen.

De particuliere beveiligingsorganisatie is er voor verantwoordelijk dat met de legitimatiebewijzen niet lichtvaardig wordt gehandeld. Daarom is het wenselijk dat voorzieningen worden getroffen om zulks te voorkomen. De bewijzen mogen in geen geval in handen van onbevoegden komen.

4.8 Bestelling

De legitimatiebewijzen kunnen met gebruikmaking van het daarvoor bestemde bestelformulier naar behoefte in redelijke hoeveelheid worden besteld bij de Directie Politie, Afdeling bijzondere wetten van het Ministerie van Justitie. De uiteindelijke levering wordt -tegen vergoeding- verzorgd door de SDU Uitgeverij.

5. Jaarverslagen (art. 10 RPB)

Het model jaarverslag voor de particuliere beveiligingsbedrijven, de particuliere bedrijfsbeveiligingsdiensten, de particuliere alarmcentrales, de particuliere geld- en waardetransportbedrijven, alsmede de andere vormen van particuliere beveiligingsorganisaties, zijn als bijlage bij de Regeling particuliere beveiligingsorganisaties gevoegd (bijlage 2A tot en met 2E). In verband met de statistische verwerking van de gegevens is het wenselijk dat strikt de hand wordt gehouden aan de puntsgewijze indeling. Uiteraard zullen de gegevens zoveel mogelijk vertrouwelijk worden behandeld.

Particuliere recherchebureaus zijn uitgezonderd van de verplichting tot het indienen van een jaarverslag (art. 10 RPB). Deze uitzondering geldt tot 1 januari 1996.

Ik verzoek u aan de uitvoering van de Wet op de weerkorpsen en de particuliere beveiligingsorganisaties, alsmede aan de Regeling particuliere beveiligingsorganisaties en de onderhavige circulaire de nodige medewerking te verlenen.

De Minister van Justitie,
namens de Minister,
het Hoofd van de Directie Politie,

mr. H.P. Wooldrik

Circulaire particuliere beveiligingsorganisaties

bijlage 1

AANVRAAG VERGUNNING

Dit betreft een eerste verzoek om vergunning voor een particuliere beveiligingsorganisatie. Het verzoek kan worden samengesteld aan de hand van de hieronder afgedrukte lijsten. Het verzoek dient daarna te worden gezonden aan:

Ministerie van Justitie
Directie Politie
afdeling Bijzondere Wetten
postbus 20301
2500 EH 's-Gravenhage

De artikelen waarnaar wordt verwezen, betreffen artikelen uit de Regeling particuliere beveiligingsorganisaties.

PARTICULIERE BEVEILIGINGSBEDRIJVEN.

Overleg een kopie van de inschrijving bij de Kamer van Koophandel en Fabrieken.

Geef een omschrijving van de activiteiten van de particuliere beveiligingsorganisatie.

Geef een overzicht van de opzet en inrichting van het op te richten beveiligingsbedrijf, waaruit blijkt dat regelmatige en volledige uitoefening der

werkzaamheden waartoe het bedrijf zich heeft verbonden voldoende is gewaarborgd (art. 2).

Overleg een instructie voor het personeel (art. 5). Deze instructie dient te zijn voorzien van een datum en een kenmerk.

Toon de maatregelen die zijn getroffen om te voorkomen dat vertrouwelijke informatie in handen komt van onbevoegden (art. 7).

Voeg een curriculum vitae bij van de personen die met de leiding van het beveiligingsbedrijf worden belast (art. 11)

Toon d.m.v. kleurenfoto('s), alsmede een staal van de gebruikte stof, de uitvoering van het uniform (art. 12).

Overleg bij gebruikmaking van honden het certificaat waaruit blijkt dat deze honden geschikt zijn om als surveillance- dan wel als objectbewakingshond op te treden, alsmede de verklaring waaruit blijkt dat de bewakingshondgeleider en de bewakingshond een geschikte combinatie vormen (art. 20).

Geef aan of u er bezwaar tegen hebt dat de naam en het adres van uw organisatie aan derden (zoals het Centraal Bureau voor de Statistiek en uitgevers van boeken etc. op het terrein van de particuliere beveiliging) worden verstrekt.

PARTICULIERE BEDRIJFSBEVEILIGINGSDIENSTEN:

Geef een overzicht van de opzet en de inrichting van de op te richten bedrijfsbeveiligingsdienst.

Geef een omschrijving van de activiteiten van de particuliere beveiligingsorganisatie.

Overleg een instructie voor het personeel (art. 5). Deze instructie dient te zijn voorzien van een datum en een kenmerk.

Toon de maatregelen die zijn getroffen om te voorkomen dat vertrouwelijke informatie in handen komt van onbevoegden (art. 7).

Voeg een curriculum vitae bij van de personen die met de leiding van het beveiligingsbedrijf worden belast (art. 11)

Toon d.m.v. kleurenfoto's, alsmede een staal van de gebruikte stof, de uitvoering van het uniform (art. 12).

Overleg bij gebruikmaking van honden het certificaat waaruit blijkt dat deze honden geschikt zijn om als surveillance- dan wel als objectbewakingshond op te treden, alsmede de verklaring waaruit blijkt dat de bewakingshondgeleider en de bewakingshond een geschikte combinatie vormen (art.20).

Geef aan of u er bezwaar tegen hebt dat de naam en het adres van uw organisatie aan derden (zoals het Centraal Bureau voor de Statistiek en uitgevers van boeken etc. op het terrein van de particuliere beveiliging) worden verstrekt.

PARTICULIERE ALARMCENTRALES:

Overleg een kopie van de inschrijving bij de Kamer van Koophandel en Fabrieken.

Geef een omschrijving van de activiteiten van de particuliere beveiligingsorganisatie.

Geef een overzicht van de opzet en inrichting van het op te richten beveiligingsbedrijf, waaruit blijkt dat regelmatige en volledige uitoefening der werkzaamheden waartoe de organisatie zich heeft verbonden voldoende is gewaarborgd (art. 2).

Overleg een instructie voor het personeel (art. 5). Deze instructie dient te zijn voorzien van een datum en een kenmerk.

Toon de maatregelen die zijn getroffen om te voorkomen dat vertrouwelijke informatie in handen komt van onbevoegden (art. 7).

Voeg een curriculum vitae bij van de personen die met de leiding van de particuliere beveiligingsorganisatie worden belast (art. 11)

Toon -indien van toepassing- d.m.v. kleurenfoto's, alsmede een staal van de gebruikte stof, de uitvoering van het uniform (art. 12).

Geef aan op welke wijze de volgende maatregelen zijn getroffen en licht deze maatregelen zonedig toe (art. 21):

voorzieningen ter voorkoming en het tijdig opheffen van technische storingen;

voorzieningen tegen het door onbevoegden betreden van de centrale;

voorzieningen voor het signaleren van sabotage van zowel de centrale als haar gehele communicatienet tot aan de abonnee; instructies aan de abonnee om juist gebruik te bevorderen en instructies aan het alarmcentralepersoneel om volgens vaste procedures te werk te gaan;

beschikbaarheid van informatie (op ieder willekeurig tijdstip) over de toestand van de installatie van iedere abonnee evenals over de feitelijke toestand gedurende de alarmsituatie, ten behoeve van politie en brandweer;

beschikbaarheid van informatie over de feitelijke toestand van het beveiligde object ten behoeve van politie en brandweer bij alarmsituaties;

tenminste één betrouwbare verbinding van de alarmcentrale met politie en brandweer;

het onbeïnvloedbaar en niet uitwisbaar vastleggen van alle abonneemeldingen en uitgaande alarmen of acties, onder vermelding van abonnee, aard, datum en tijd;

permanente bezetting van de centrale door minimaal twee personen.

Geef aan of u er bezwaar tegen hebt dat de naam en het adres van uw organisatie aan derden (zoals het Centraal Bureau voor de Statistiek en uitgevers van boeken etc. op het terrein van de particuliere beveiliging) worden verstrekt.

PARTICULIERE GELD- EN WAARDETRANSPORTBEDRIJVEN:

Overleg een kopie van de inschrijving bij de Kamer van Koophandel en Fabrieken.

Geef een omschrijving van de activiteiten van de beveiligingsorganisatie.

Geef een overzicht van de opzet en inrichting van de op te richten beveiligingsorganisatie, waaruit blijkt dat regelmatige en volledige uitoefening der werkzaamheden waartoe het bedrijf zich heeft verbonden voldoende is gewaarborgd (art. 2).

Overleg een instructie voor het personeel (art. 5). Deze instructie dient te zijn voorzien van een datum en een kenmerk.

Toon de maatregelen die zijn getroffen om te voorkomen dat vertrouwelijke informatie in handen komt van onbevoegden (art. 7).

Voeg een curriculum vitae bij van de personen die met de leiding van de beveiligingsorganisatie worden belast (art. 11)

Toon d.m.v. kleurenfoto's, alsmede een staal van de gebruikte stof, de uitvoering van het uniform (art. 12).

Geef aan of de zendingen zijn verzekerd door uw organisatie, de opdrachtgever of de ontvanger en op welke wijze ten aanzien van de voertuigen waarmee de transporten plaats vinden de volgende voorzieningen zijn getroffen en licht deze voorzieningen zonodig toe (art. 23):

voorzieningen om het geld- en waardetransport als zodanig kenbaar te maken;

voorzieningen ter beveiliging van het personeel (kogelwerend materiaal) en ter bescherming van dat personeel tegen schadelijke stoffen en gassen;

voorzieningen waardoor de ruimten voor het personeel en de zendingen ontoegankelijk voor onbevoegden zijn gemaakt;

voorzieningen om de mogelijkheid te scheppen in geval van en calamiteit het voertuig te blokkeren en vanuit het voertuig alarm te geven;

voorzieningen om zendingen voor verschillende ontvangers en voor verschillende verzenders te separeren;

voorzieningen voor een gesloten communicatienet om verbinding te onderhouden met een centraal punt;

voorzieningen om via bovengenoemd net alarm te kunnen geven.

Geef aan of u er bezwaar tegen hebt dat de naam en het adres van uw organisatie aan derden (zoals het Centraal Bureau voor de Statistiek en uitgevers van boeken etc. op het terrein van de particuliere beveiliging) worden verstrekt.

PARTICULIERE RECHERCHEBUREAUS

Overleg een kopie van de inschrijving van de Kamer van Koophandel en Fabrieken.

Geef een omschrijving van de activiteiten van het recherchebureau.

Toon de maatregelen die zijn getroffen om te voorkomen dat vertrouwelijke informatie in handen komt van onbevoegden (art. 7).

Voeg een curriculum vitae bij van de personen die met de leiding van het recherchebureau worden belast (art. 11).

Overleg een afschrift van de ontvangstbevestiging van de Registratiekamer van het formulier, bedoeld in artikel 24, tweede lid van de Wet persoonsregistraties.

Geef aan hoeveel personen binnen uw organisatie met rekerchewerkzaamheden zijn (of zullen worden) belast.

Geef aan of u er bezwaar tegen hebt dat de naam en het adres van uw organisatie aan derden (zoals het Centraal Bureau voor de Statistiek en uitgevers van boeken en etc. op het terrein van de particuliere beveiliging) worden verstrekt.

AANVRAAG VERLENGING VERGUNNING

Het betreft hier een aanvraag voor verlenging van de vergunning van een:

(aankruisen wat van toepassing is)

Beveiligingsbedrijf

Bedrijfsbeveiligingsdienst
Alarmcentrale
Geld- en waardetransportbedrijf
Recherchebureau
Andere vorm van particuliere beveiligingsorganisatie

1. Naam organisatie:

Vergunningnummer:

Adres:

Postcode en plaatsnaam:

Contactpersoon:

Telefoonnummer:

2. Gegevens omtrent de huidige vergunning: (toelating)

Beschikking d.d. :.....

Vergunningnummer :.....

Geldig tot :.....

3. In welke gemeenten in Nederland is uw beveiligingsorganisatie werkzaam?
(Voeg -indien nodig- een lijst bij waarop deze gemeenten staan vermeld.)

1.

2.

3.

.....

4. Worden:

a. de beveiligingswerkzaamheden in uniform verricht?

ja/nee

b. bij de beveiligingswerkzaamheden bewakingshonden ingezet?

ja/nee

Indien de vragen onder a en b met ja zijn beantwoord, hieronder aangeven op welke gemeente(n) dit betrekking heeft.

a.

b.

c.

5. Is de uitvoering van het uniform gewijzigd sinds de laatste verlening van een vergunning aan uw organisatie?

ja/nee

Zo ja:

wat is de aard van deze wijziging?

Ministeriële goedkeuring d.d.:

6. Is sinds de laatste verlening van een vergunning een wijziging in de leiding van de particuliere beveiligingsorganisatie opgetreden?

ja/nee

Zo ja: Ministeriële goedkeuring d.d.:

Naam leidinggevende:

Geboortedatum:

Woonplaats:

7. Ruimte voor opmerkingen:

Standaardinstructie voor beveiligingsbeambten

Toelichting met betrekking tot de lay-out van de bijgevoegde voorbeeldinstructie.

Voor zover u achter het kopje een *vet- en cursiefgedrukte tekst* aantreft, zullen deze regelingen of procedures door u moeten worden ingevuld aangezien hiervoor geen standaardinstructie te geven is. De normale tekst achter het kopje is een voorstel voor de instructie, die, eventueel nog wat aangepast aan de door u of door de opdrachtgever gewenste toestand, in uw instructie kan worden opgenomen

Aanvullingen op de instructie.

Naast de in de voorbeeld-instructie opgenomen bepalingen kunnen nog bepalingen worden opgenomen die betrekking hebben op onderwerpen als:

- Controlemeldingen
- Toegangscontrole's
- Controleronden/-klokken/-bonnen
- Toegevoegde taken en hand- en spandiensten
- Bedrijfsvoorschriften
- Einde diensttijd
- Dienstauto
- Roken en alcohol

Gelet op de functie die een beveiligingsbeambte vervult, is het raadzaam om het gebruik van alcohol tijdens diensttijd te verbieden. Daarnaast kan gelet op het algemene overheidsbeleid om uit gezondheidsoverwegingen het roken terug te dringen een verbod op het roken tijdens diensttijd in openbare ruimten worden overwogen.

Voor alle duidelijkheid wil ik u er op wijzen dat de instructie slechts als

voorbeeld is bedoeld. Uw instructie kan hiervan op details verschillen of aanvullingen bevatten; de instructie dient echter wel helder en overzichtelijk te zijn en vrij van taalfouten.

Voorbeeld van een Standaardinstructie voor beveiligingsbeambten

Instructiedoel

De instructies hebben tot doel voor de beveiligingsbeambte een taakomschrijving te verschaffen waarin verantwoordelijkheden en bevoegdheden duidelijk tot uitdrukking komen. *Deze instructies zijn dwingend voorgeschreven. De instructies dienen overzichtelijk te zijn en in goed Nederlands geschreven.*

Kennis van instructies

De beveiligingsbeambte dient op de hoogte te zijn van deze instructies. Bij de instructies kunnen bijlagen en/of aanvullende instructies worden gevoegd, die betrekking hebben op de op een werkplek geldende regels of toegespitst zijn op de specifieke werksituatie. Ook hiervan zal de beambte kennis moeten kunnen nemen.

Geen instructie

Ontplooiën van eigen initiatief, dat niet in strijd mag zijn met wettelijke bepalingen, binnen het kader van de doelstelling.

Doel van de beveiliging

Doelstelling van de functie van beveiligingsbeambte.

Wapens

Het is de beveiligingsbeambte verboden, tijdens diensturen, enig wapen of munitie voorhanden te hebben en/of te vervoeren zoals genoemd in de Wet wapens en munitie. *Ook het gebruik van handboeien en/of knevelkettingen is ongewenst.*

Interne en externe gezagsverhoudingen

***Binnen het kader van het beveiligingsbedrijf:
van wie krijgt de beambte zijn/haar opdrachten;
aan wie kan de beambte opdrachten geven. Al dan niet
accepteren van opdrachten door derden of het geven van
opdrachten aan derden.***

Wijze van het verstrekken van opdrachten

Agenda, routeschema, publicatiebord etc.

Afwijking van instructies

Regeling voor afwijking van de instructies. Aanwijzingen gegeven door of vanwege een (algemeen) opsporingsambtenaar dienen door de beveiligingsbeambte stipt te worden opgevolgd.

Rapportage

Alle tijdens de dienst gesignaleerde feiten en omstandigheden dienen in een dienstrapport te worden vermeld met hun wijze van afhandeling. Ook van bijzondere gebeurtenissen of voorvallen dient rapport te worden opgemaakt.

Geheimhouding

Zowel tijdens, als ook na beëindiging van het dienstverband, verplicht de werknemer, in welke functie dan ook aangesteld, zich tot geheimhouding omtrent alle, op welke wijze dan ook, te zijner kennis gekomen bijzonderheden en aangelegenheden van de opdrachtgever en/of werkgever. Het is verboden inlichtingen of gegevens over bedrijven te verstrekken aan derden. Het is de beveiligingsbeambte verboden mondeling (hieronder wordt ook verstaan: telefonisch en/of schriftelijk) inlichtingen over privé gegevens of functies van medewerk(st)ers te verstrekken.

Vaste plaats

Aangegeven dient te worden wat de vaste plaats is waar de beambte zich doorgaans tijdens dienstdtijd moet bevinden, alsmede eventuele regels daaromtrent.

Uniform

Tenzij de beambte een individuele ontheffing van de Minister van Justitie of van het hoofd van plaatselijke politie heeft tot het dragen van een uniform inzake de Wet op de weerkorpsen, worden alle uitvoerende diensten verplicht in uniform verricht.
Eventueel beschrijving van zomer/winter uniform etc.

Legitimatiebewijs

De beveiligingsbeambten zijn, in de uitoefening van hun dienst, verplicht het door de Minister van Justitie voorgeschreven legitimatiebewijs bij zich te dragen en op verzoek te tonen dan wel aan de daartoe bevoegde instanties (politie), ter inzage af te geven.

Communicatieapparatuur

De beambte mag alleen (zakelijk) gebruik maken van goedgekeurde door de werkgever of de opdrachtgever verstrekte apparatuur.

Bevoegdheden

Bevoegdheden tijdens de dienstuitvoering zijn nader omschreven in volgende hoofdstukken. *De bevoegdheden zullen afhankelijk zijn van het soort dienst die de beambte vervult en de eisen/wensen van de opdrachtgever. In een standaardinstructie kunnen deze bevoegdheden daarom niet worden opgenomen. De beambte zal echter wel op de hoogte moeten worden gesteld van de bevoegdheden die hem/haar op een bepaalde werkplek toekomen.*

Fouilleren

Onderzoek aan kleding of lichaam is ten strengste verboden. Deze bevoegdheid hebben uitsluitend opsporingsambtenaren genoemd in de artikelen 141 en 142 Wetboek van Strafvordering.

Visiteren

Op verzoek van de bedrijfsleiding kan de beveiligingsbeambte

behulpzaam zijn bij de controle op personeel van dat bedrijf; het bedrijfsreglement dient daarbij in acht te worden genomen.

Aanhouden

Bij ontdekking van een strafbaar feit op heterdaad is een ieder bevoegd tot aanhouding van de verdachte. Indien men tot aanhouding is overgegaan is men verplicht de aangehoudene onverwijld over te dragen aan een opsporingsambtenaar.

Beslag

Indien men een verdachte heeft aangehouden mag men de goederen die niet aan de verdachte toebehoren en die hij/zij bij zich draagt, in beslag nemen. Deze goederen dienen tezamen met de verdachte aan de opsporingsambtenaar overgedragen te worden, omdat deze goederen als bewijsmiddel dienen.

Aangifte

In alle gevallen waarbij is overgegaan tot aanhouding van een verdachte en deze is overgedragen aan een opsporingsambtenaar dient aangifte te worden gedaan bij de betrokken politie-instantie.

Alarmering/calamiteiten

Deze procedures dienen te worden vastgesteld en bijgevoegd opdat de beveiligingsbeambte daarvan kennis kan nemen.

Sleutelbeheer

Regeling m.b.t. zorgvuldige omgang met sleutels.

Dienstrooster

Dient te worden vastgesteld en aan de individuele beambte ter kennis te worden gebracht. Gelet op de frequente wisselingen van de dienstroosters is het niet noodzakelijk deze roosters bij te voegen bij de instructies die ter goedkeuring worden gezonden aan de Minister van Justitie.

The Dutch model

How the government, trade unions and employers are organising the redistribution of wealth in the Netherlands

By Dietmar Henning and Wolfgang Weber

1 May 1998

Politicians in Europe, like the Social Democratic (SPD) candidate for German Chancellor, Gerhard Schröder, have praised it highly, as has US President Bill Clinton. Trade union magazines dedicate enthusiastic articles to it because it has managed "to halve the number of unemployed within the last 15 years." The president of the Bundesbank, Hans Tietmeyer, calls it "an example for the whole of Europe."

What is the object of this fulsome praise? The "Dutch model."

Dietmar Henning and Wolfgang Weber travelled to the Netherlands for the World Socialist Web Site to obtain a clearer picture of the supposed success story of the Dutch economy, to survey its leading figures, examine how it works, and find out who are its winners and who are its losers. They interviewed politicians, sociologists and members of an unemployed organisation in Amsterdam. They spoke with members of the Betriebsrat (works council) and employees at the Netherlands' biggest hospital, and visited striking dockers in Rotterdam.

The results presented here provide an insight into the social and political background of the upcoming Dutch parliamentary elections, to be held May 6.

What Europe's bankers and politicians are selling as the "Dutch model" for overcoming mass unemployment is called the "Polder-Model" in the Netherlands itself. "Polder--a piece of low-lying reclaimed land: the first stage in its reclamation." That is what the dictionary says.

"As in the building of a polder, everyone must co-operate and make sacrifices to repel the flood of unemployment and transform Dutch society into a flourishing, tranquil landscape." This and the like was repeated in the statements of government ministers, union officials and company directors when the unions and management in 1982 signed the Wassenaar agreement, the political birthright of the Polder-model.

At first glance--the official unemployment rate is presently at 6 percent and the economic growth rate at 3 percent--the model seems to have worked. Fifteen years ago the number of unemployed was rising by 10,000 a month. In 1984 it stood at 14 percent and 800,000 were officially registered as looking for work. According to the Organisation for Economic Co-operation and Development (OECD), the real jobless rate, including the unemployed in training schemes, early retirement or other social programs, was 27 percent.

In the Wassenaar agreement the trade unions committed themselves to modest pay demands for years ahead. The employers promised to try harder to create more jobs.

It soon became clear, however, what the agreement really meant--a corporatist policy for effecting the greatest redistribution of income in Holland since World War II!

Income and corporate taxes for employers were sharply lowered, according to the principle: "the higher the profit, the lower the taxes." Companies with more than 225,000 German marks in annual profit are required to pay a 35 percent corporation tax. Those that report lower profits must pay a 40 percent tax.

The disposable real income of employee households, on the other hand, had already dropped by 10 percent in 1982 and 1983 as a result of recession, while that of unemployed workers and social security recipients had dropped even more sharply.

In 1984 and 1985, real income dropped a further 9 percent each year after the trade unions annulled previous pay agreements that included an automatic increase in wages in line with the rate of inflation. The legal minimum wage was reduced and, with it, the level of social security, which is set at 100 percent of the minimum wage for a family of four and 70 percent for a single person. In 1981 the income from social security for a single person still stood at 64.4 percent of the average employee's real income. By 1990 it was down to 54.4 percent, and it presently stands at about 50 percent.

What has happened to the unemployed? The working population has increased since 1983 from 5.5 million people to 6.8 million today. But 75 percent of this impressive increase in jobs is attributable to the expansion of part-time and temporary work at the expense of full-time jobs. The net result has been a growth of poverty among wage earners.

This restructuring of the jobs market has benefited only the private and public employers. Jobs which they considered too expensive and "unproductive" were replaced by part-time jobs demanding greater productivity and higher qualifications, while providing lower pay. The Netherlands' statistics for labour productivity rose to the top of world surveys. From the mid-1980s on, production, trade and profit began to boom.

A further sharp change of course came at the end of the 1980s in reaction to the increasing globalisation of production and the demands of transnational corporations like Unilever, Akzo, Philips and Shell. The Wassenaar agreement had itself been shaped by the economic demands of a national commission headed by Gerrit Wagner, the chairman of Royal Dutch Shell.

But by 1989-90 the employers' associations were demanding not only cuts in social benefits, but a fundamental "restructuring of the welfare state." Those on social security had to be made available as cheap labour. The ability of workers to claim Work Incapacity Insurance Benefit (WAO) until retirement age on the strength of a doctor's certificate had to be ended. Similar to early retirement schemes in Germany, WAO, with some 900,000 beneficiaries, had become a cheap way for companies

to cut back on jobs.

Although it had won the elections of 1989, the ruling coalition of Christian Democrats (CDA) and Liberals proved incapable of pushing this through. The social democratic Partij van de Arbeid (PvdA) took the Liberals' place in the government to tackle this task, working together with the trade unions.

The PvdA's chairman was Wim Kok who, as head of the trade union umbrella organisation FNV, had signed the Wassenaar agreement in 1982. Now he took over the Treasury, the key ministry for shaping economic and social policy. The businessman Ruud Lubbers (CDA) remained Prime Minister.

The CDA/PvdA coalition dealt the first big blow in the summer of 1991 by sharply limiting WAO. All those receiving this benefit were now required to have a new medical examination each year. New criteria were imposed, according to which thousands of recipients were reclassified as completely or partly able to work. Once again they found themselves at the Unemployment Office, and soon after were forced to apply for social security.

The trade unions took over the task of containing and dissipating the growing anger in the working class. They organised a 250,000-strong protest demonstration in Den Haag, the biggest demonstration against the government since World War II. This, they declared, was all they could do. The issues would have to be resolved in the parliament, i.e., by their social democratic friends in the government.

Faced with continuing widespread resistance, the PvdA resorted to a political gimmick. Together with the Liberals, they pushed a measure through the parliament, over the opposition of their Christian Democratic coalition partners, establishing an all-party commission under the chairmanship of the social democratic politician Flip Buurmeijer.

In televised hearings the commission stage-managed a smear campaign against the welfare state. Those claiming benefits were derided as parasites, the administrators of various institutions were labelled charlatans and reformist politicians of the past dubbed "irresponsible." The Buurmeijer commission concluded that radical and immediate cutbacks in social spending were necessary.

One year later, entitlement to social security for youth up to 23 years of age, after the end of their formal education, was reduced to six months. Those not finding a job within these six months are assigned a job by the local council. Such jobs would pay no more than the rate of social security plus 20 percent, and the rate was to decline as the age of the recipient rose.

A series of training and job schemes for older long-term unemployed were introduced or expanded, including a wage subsidy scheme to hire jobless people. Employers can make use of this program to hire workers nearly free of charge for a time and, once the subsidies have ended, send them back to the Unemployment Office.

The number of unemployed removed from the official jobless count by means of such programs

increased from 75,000 in 1983 to 120,000 a decade later. Today it stands at around 170,000. For public institutions and local councils, so-called "job pools" have been created in which 25,000 long-term unemployed do the work of public sector employees at a fraction of their wage rate. The job pool workers receive the legal minimum wage.

The next major step came in the beginning of 1994, with the "restructuring" of health insurance to make it a voluntary system based purely on employees' contributions. Employers' contributions to health insurance were virtually abolished.

According to calculations by the Amsterdam-based political scientist Ruud Vlek, who has just received a doctorate for a study of social policy in the Netherlands from 1974 to 1994: "Since these reforms, employees have to contribute 80 percent of all social insurance contributions and employers just 20 percent."

This barrage of social attacks shook the government parties. A third of the PvdA's 90,000 members turned their back on the party during the next three years, and in the parliamentary elections of 1994 its vote declined by 25 percent. Its share of the total vote sank from 32 percent to 24 percent. The PvdA's coalition partner, the CDA, fared even worse. It lost a third of its votes, sinking from over 35 percent to 22 percent of the total ballots cast. Together, the two "people's parties" lost 32 of their former 103 seats, and gave up their absolute majority in the 150-member parliament.

The elections registered popular opposition to the previous government's pro-business austerity policies. Nevertheless, a new government came to power under Prime Minister Wim Kok which carried out exactly the same policies, only even more vigorously and ruthlessly.

The liberal parties, Volkspartij voor Vrijheid en Democratie (VVD)--Peoples Party for Freedom and Democracy--and Democraten 66 (D66)--Democrats 66--were able to increase their vote from 22 to 35 percent. They joined the government with four and five ministers respectively. The PvdA has a total of five ministers in addition to the prime minister. Its cabinet officials include Ad Melkert, who is responsible for employment and social policy.

Under the new coalition, implementation of the Polder-Model has been accelerated, and the trade unions have remained an important lever for carrying out the process. As early as December 1993, they had concluded another pact with the employers' associations, bearing the designation "new course." This encompassed further steps for reducing wages, making pay scales more flexible and expanding temporary and part-time work.

The agreement also stipulated that future negotiations on wages, jobs, part-time work, privatisations and other matters would not be conducted centrally. Rather, to the greatest extent possible, they would be conducted on a branch and company level. Accordingly, members of the works councils were granted extensive "co-determination rights," following the German example of Mitbestimmung, to facilitate the drawing up and pushing through of "concrete solutions on the ground."

In discussion with the government, new agreements were introduced in all wage contracts for a "starter-wage" for first-time employees, as well as "target group standard rates" for the long-term unemployed. The wage level of the latter hardly differs from the legal minimum wage or social security provisions.

The employers quickly realised the benefits of this "new course." According to the most recent surveys, between 8 and 10 percent of all employees are paid in accordance with these low-wage standards. Overall, nominal wage levels have stagnated and real incomes have declined.

Flexible working hours have provided the biggest boon to the employers. Of the 300,000 new jobs created between 1994 and 1996, half were based on flexible contracts with temporary work firms, 40 percent were part-time jobs and only 10 percent were full-time positions. Some 3 percent of total work capacity (the figure for Germany is 0.6 percent) is on the basis of temporary contracts.

Nearly 37 percent of jobs are part-time--2.5 million out of 6.8 million--the highest rate of part-time employment in Europe. And of these, 300,000 are only "mini-jobs" (less than 12 hours a week) with "mini-wages."

The unions concluded a further agreement in 1996 for "flexibility and security." They agreed, among other things, to relax the protection against unlawful dismissal and extend the trial period for full-time employees. They also agreed to the abolition of fixed opening hours in retail outlets and an end to bonus pay for work on weekends and national holidays.

These agreements have not only been passed into law in parliament, they have become the basis for carrying out mass layoffs. The so-called "Keks-Pakt" ("Biscuit Agreement") is a prime example. When several biscuit and cake factories announced the dismissal of 11,000 employees last year, the unions signed an agreement which directly transferred the sacked workers to the largest temporary work corporation, Ranstad (annual turnover--4.5 billion marks), which offered temporary contracts for a period of up to two years.

Over the past several years, temporary work companies have been springing up like mushrooms throughout Holland. With their countless branches in Amsterdam, Rotterdam, Utrecht and other towns, they are now part of the townscape--like the newspaper kiosk and the bakery. They not only provide temps for work that traditionally relies on casual employment--secretaries, switchboard operators, fitters, building workers--but they also farm out nurses, dental assistants, computer specialists, technicians and even business managers.

State-funded cheap wage schemes have been expanded. Various types of "job creation" schemes have been established, targeted at the long-term unemployed, including many immigrants from countries like Surinam, Turkey and Morocco, as well as high school dropouts and other youth. Recipients must work hard for near poverty wages, and their labour, subsidised by the government, costs the employers very little.

According to Ruud Vleeks' calculations, some 220,000 people are employed through such public schemes. Other sources put the figure at 300,000. A mere 10 percent of these workers obtain a steady job at the end of the program.

Adding together the 400,000 jobless who are officially registered for work, the 100,000 unemployed who are not recorded statistically and approximately 800,000 people still on WAO benefits, the army of unemployed in the Netherlands comprises in reality about 1.5 million. The OECD's latest calculations put the figure at 1.7 million.

This figure does not square with the much-lauded official unemployment rate of 6 percent. Rather it represents 27 percent of those capable of work, the same figure that was recorded 15 years ago.

The mass of new jobs paying a pittance has not only helped improve the official unemployment statistics; they have been a boon to the employers' business accounts and balance sheets. While the profits, share values and dividends of the big corporations have climbed to record highs, and the number of millionaires has increased to over 150,000, one million of the 6.6 million households in Holland must manage with an income at or below the poverty level.

Thus the Dutch model turns out to be a "model" for the systematic enrichment of the privileged few at the expense of workers and poor people. It has created a social powder keg that threatens to explode at any time. In this respect, it is not so much a Dutch model as a European model.

Over the past several years strikes and protest movements have broken out time and again--the 1991 mass demonstration against the government in Den Haag, protests against the closure of the Fokker works, a building workers' strike in 1995 and the recent strikes among Rotterdam dockers.

As in many other countries of Europe, the swing to the right of social democracy in the Netherlands has led to a growth of the neo-fascist party, the so-called Centrumsdemokraten (Centre Democrats). They have obtained increased votes in social democratic strongholds like Rotterdam. In 1994 they returned not one, as previously, but three deputies to the national parliament.

On the left wing of the parliamentary spectrum opposition to the Polder-Model expresses itself in support for the GroenLinks (Green Left) and the Socialist Party (SP). GroenLinks emerged from the extinct Stalinist Communist Party and layers of the petty-bourgeois radical movement left over from the seventies. It is comparable to the Greens in Germany. It has five seats in parliament, but plays its main role on a municipal level, where it endeavours to "take responsibility" and keep areas of high social tension under control.

The SP, founded as a Maoist organisation in 1972, opposes the government, mass unemployment and social cuts with radical words and demagogic slogans. Opinion polls predict it could double or triple its two seats in parliament in the parliamentary elections in May. Already in the local elections earlier this year, the SP increased its share of votes nation-wide to 6 percent, and its representation in local

parliaments from 145 to 190. In four towns it has become the strongest party. In the old industrial town of Oss (65,000 inhabitants) in Nordbrabant, it has formed the city government in coalition with the Social Democrats.

Asked what was the biggest difference between the SP and the PvdA or GroenLinks, the SP's chairman in Amsterdam, Wim Paquay, answered: "In our policy towards foreigners. We are for a strict application of the existing laws against illegal immigration. On the other hand, left-wing PvdA and GroenLinks politicians often want a sort of amnesty or exemption for problem cases. But such a procedure would attract even more foreigners, many more than could be naturally integrated into Dutch society."

Just as they call upon the police to keep domestic problems under control, the SP supports trade war measures abroad such as a punitive customs duty "if competitors threaten to undermine the social and ecological standards of the Netherlands and Europe." Like GroenLinks, the SP wants to strengthen the nation-state in response to globalisation and its social consequences.

| COUNTRY | ELECTION TYPE | DATE |
|----------------------------|---------------|-------------|
| Kingdom of the Netherlands | Parliamentary | May 6, 1998 |

At stake in this election:

Seats in the Second Chamber of the States-General: 150

Description of government structure:

The Netherlands' parliament, the States-General, is made up of the First Chamber and the Second Chamber.

The First Chamber, the Eerste Kamer, consists of 75 members indirectly elected by the country's provisional councils for four-year terms.

The Second Chamber, the Tweede Kamer, consists of 150 directly elected members serving four-year terms.

Members to the Second Chamber are elected according to a party-list system with proportional representation.

Results of the electoral race:

Party: Labour Party (PvdA)

Leader: Wim KOK

Seats won in last election to the Second Chamber: 37

Seats won in this election to the Second Chamber: 45

Party: People's Party for Freedom and Democracy (VVD)

Leader: Frits BOLKESTEIN

Seats won in last election to the Second Chamber: 31

Seats won in this election to the Second Chamber: 39

Party: Christian Democratic Appeal (CDA)

Leader: Jaap de HOOP SCHEFFER

Seats won in last election to the Second Chamber: 34

Seats won in this election to the Second Chamber: 28

Party: Democrats '66 (D66)

Leader: Els BORST

Seats won in last election to the Second Chamber: 24

Seats won in this election to the Second Chamber: 14

Party: Green Left Alliance

Leader: Paul ROSENMÖLLER

Seats won in last election to the Second Chamber: 5

Seats won in this election to the Second Chamber: 11

When was the last election? Number of seats in last election?

Elections to the Second Chamber of the States General last held: May 3, 1994

Seats decided in the last election to the Second Chamber of the States General: 150

Population and number of registered voters:

Population: 15,649,729

Number of registered voters: 11,462,085

HIGHLIGHTS OF DUTCH FOREIGN POLICY 1999

During this parliamentary year the spotlight will be on a number of foreign policy issues, including the enlargement of the EU, Agenda 2000, the euro, preparations for the expansion of NATO and the Netherlands' tasks as member of the Security Council in the period 1999-2000. The Netherlands is unlikely to remain unaffected by the economic problems that have beset several parts of the world. Asia, Latin America and Russia will continue to demand our attention, and the political problems in the Great Lakes Region of Africa are far from over. The public will be making ever greater demands of the Ministry of Foreign Affairs over the coming year.

The status of poor people all over the world has improved, but not always in equal measure. This has taught us much about the conditions needed for development, and the lessons learned will have a growing influence on development cooperation policy, through both bilateral and multilateral channels. The review of foreign policy has created opportunities for measures that will enhance the effectiveness of development cooperation. Now that the organisation of bilateral relations, in particular, has been improved, it will be possible to focus more attention on multilateral aid efforts. The Netherlands has a major role to play in these efforts, both financially and otherwise.

In Europe, negotiations with candidate member states are already under way. Given the developments in Russia, it is now even more important for the peace and security of Europe to maintain the momentum of the accession process, based on the criteria agreed in Copenhagen. The Treaty of Amsterdam must be ratified as soon as possible by the various EU member states. On the other hand, the internal reforms of the Union must also continue. Without new agreements on budget policy, the common agricultural policy, the structural funds and the institutions, the accession of new members will be doomed to failure.

The Netherlands has successfully campaigned for a seat on the Security Council from 1999 to 2000. The last time it held a seat on the Security Council was in 1983-1984. The Security Council plays a key role in finding solutions to the world's conflicts. Maintaining and strengthening the international rule of law is both a key feature of Dutch policy and a major responsibility of the UN.

The Dutch are travelling more and further afield than ever before, and this has not gone unnoticed at the Ministry of Foreign Affairs. The public are calling upon the services of the ministry and its diplomatic missions more and more often for things like travel advice, help with evacuation or assistance when someone dies abroad. As growing numbers of people travel to and from the Netherlands the missions are becoming busier and busier: issuing passports and visas, authenticating documents and checking people's identity. They also look after the 1600 Dutch people in foreign prisons.

There are still huge numbers of refugees throughout the world searching for a safe place to live. Most of them are cared for in their own region, and the Netherlands will continue to make major contributions to these efforts. But the Netherlands itself must also remain a safe haven for those truly in need of asylum. In assessing individual applications, the Ministry will do its best to improve the quality of its reports on individual cases, mindful of the ombudsman's recommendations. The Wijnholt Commission is due to

produce recommendations on how country reports can be further improved, and the Ministry of Foreign Affairs will work hand in hand with the Ministry of Justice to ensure that they are.

Many of the conflicts taking place in the world today are not between states, but within the borders of individual countries. Examples include Congo, Kosovo and Algeria. These conflicts are often caused by poorly functioning state structures, and can have a devastating effect on the civilian population. The Netherlands government will continue to help in the search for solutions, in both diplomatic and military terms.

The major international institutions, such as NATO and the OSCE, will remain the most important vehicles for Dutch policy on peace and security. The Netherlands will continue to call for NATO's Strategic Concept to be adapted so that it caters better for the changed international security situation, and in preparation for the accession of three new members.

Universal human rights are the cornerstone of the international rule of law. In this connection, the Netherlands will continue its dialogue with many countries, in both a bilateral and multilateral framework. One major human rights issue is the use of the death penalty. The advisory committee on human rights has issued a report, as announced during the last parliamentary budget debate, which the government will use as a basis for its official position on this issue.

In the world economy, growth in the United States and Europe stands in sharp contrast with the crises in Asia, Latin America and Russia. The international community will be sorely tested to find ways of dealing with these problems. The International Monetary Fund will have to take the lead, with the focus on sound economic and financial policies and debt relief. First and foremost, however, it will be up to the countries themselves to find and implement long-term solutions. Russia will need strong and decisive government to survive the present crisis.

The world's population has doubled in the last 25 years, and now stands at around six billion. Nevertheless, on average people are now better fed, healthier and more educated than they were 25 years ago. In recent years, the world's food production has increased faster than its population. The proportion of malnourished people in the world has fallen from 35% in the late sixties to 20%. Life expectancy rose from 55 in 1970 to 64 in 1995. Infant mortality has fallen from 107 per 1000 live births to 60. Major advances have been made in providing people in the developing world with access to clean water, and people's overall level of education is now higher.

Global figures like this tell us little about the situation in individual countries or regions, however. And of course not all the people within a particular country will benefit from the improvements. Experience and research have shown that good and effective governance in the recipient country are an important precondition for the success of development cooperation. This experience is reflected in the current policy. We focus our efforts mainly on countries with sound macroeconomic policies, and in future this condition will be enforced even more strictly than it has been in the past. We are also focusing more on democratisation, good governance and human rights, and will be highlighting projects in these areas in

the future. The way recipient countries distribute the funds they receive has a major impact on poverty, and these governments must make poverty alleviation part of their policies, too. The Netherlands is prepared to assist in this by engaging in dialogue with governments and helping to strengthen their institutions. All this will have implications for how the money reserved for development cooperation is spent. The development cooperation budget will again be 0.8% of GNP this coming year, or some 6.8 billion guilders.

The Dutch contribution to multilateral institutions will have to be looked at over the next few years. The Netherlands is a major donor to many of these bodies, including the World Bank, the Regional Development Banks and UN agencies. The Netherlands will make good use of the influence that comes from the size of its contributions in an attempt to maximise the effectiveness of multilateral channels. Other matters requiring our full attention include developing countries' potential input to the policies of multilateral institutions and the openness of these institutions towards different groups in society.

Now that the organisational aspects of the foreign policy review are in order, we shall have more opportunity to look at the effectiveness of aid. This is partly a question of management. The existing instruments must be improved and new ones introduced to guarantee that lessons learned at all levels are incorporated into new policies. Another way of enhancing the effectiveness of development cooperation is to ensure that the policy is coherent. Better coordination with other ministries at home, and with other countries, should ensure that any advances we achieve are not undone by, for example, trade measures in the Netherlands or in Europe.

The foreign policy review has produced a revitalised organisation in which the old barriers between different policy areas no longer exist. The process of change which this exercise initiated will continue with renewed vigour in 1999. The integration of the various aspects of policy, from politics to trade to development cooperation, will be even further improved. One important aspect of this operation, the biggest reorganisation since the Second World War, is the reform of personnel policy, which should begin to take shape in 1999. The recommendations in KPMG's report have been incorporated in a letter drawn up by the senior civil servants at the Ministry setting out their intentions as regards personnel policy. The Ministry will, as always, continue to invest in improving its computer systems and its communications with the diplomatic missions abroad.

COUNTRIES RECEIVING STRUCTURAL BILATERAL AID FROM THE NETHERLANDS

Minister for Development Cooperation Eveline Herfkens wishes to apply new criteria in selecting countries to receive structural bilateral aid. An Appendix with the 78 countries to be reviewed and the bilateral aid they received in 1997 follows below.

APPENDIX

* 1) Source: DAS (Data Analysis System)

* 2) Source: The World Bank Annual Report 1998 Appendix 6, upper limit USD 925 GNP per capita (IDA operational cut-off threshold for the 1999 financial year)

* 3) n.a. = precise figures not available

| RECIPIENT COUNTRY *1) | per capita GNP
USD 1997 *2) | RECIPIENT COUNTRY *1) | per capita GNP

Human Rights Practices for 1998 Report

*Released by the Bureau of Democracy, Human Rights, and Labor
U.S. Department of State*

THE NETHERLANDS COUNTRY REPORT

February 1999

The Netherlands is a constitutional monarchy with a parliamentary legislative system. Executive authority is exercised by the Prime Minister and Cabinet representing the governing political parties (traditionally a coalition of at least two major parties). The bicameral Parliament is elected through free and fair elections. The judiciary is independent.

Regional police forces are primarily responsible for maintaining internal security. The police, the royal constabulary, and investigative organizations concerned with internal and external security are effectively under civilian authority.

The market-based economy is export oriented and features a mixture of industry, services, and agriculture. Key industries include chemicals, oil refining, natural gas, machinery, and electronics. The agricultural sector produces fruit, vegetables, flowers, meat, and dairy products. Living standards and the level of social benefits are high. Unemployment is 4 percent; however, long-term unemployment, in particular among ethnic minorities, was still a problem.

The Government generally respects the rights of its citizens, and the law and judiciary provide effective means of dealing with individual instances of abuse. The Government is taking serious steps to address violence and discrimination against women. The Government has also taken steps to address societal discrimination against minorities.

Aruba and the Netherlands Antilles, which are two autonomous regions of the kingdom, also feature parliamentary systems and full constitutional protection of human rights. In practice government respect for human rights in these islands generally is little different from that in the European Netherlands. The two Caribbean Governments have taken measures to address past reports of police brutality, but the islands' prison conditions remain substandard.

RESPECT FOR HUMAN RIGHTS**Section 1 Respect for the Integrity of the Person, Including Freedom From:****a. Political and Other Extrajudicial Killing**

There were no reports of political or other extrajudicial killings.

b. Disappearance

There were no reports of politically motivated disappearances.

c. Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment

The Constitution prohibits such practices, and there were no reports that officials employed them.

Following a visit to the Netherlands, the Council of Europe's Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment (CPT) published a report in August which noted that it did not find any torture and few incidents in which officials did not treat arrested or detained persons correctly. The CPT made a positive assessment of the facilities at most police stations and at detention, secure psychiatric, and asylum centers. However, it recommended that detainees be allowed better access to medical and recreational facilities.

A government-funded police professionalization program, as well as the establishment of a grievance committee, have contributed significantly to countering incidents of police brutality in both the Netherlands Antilles and Aruba. No new incidents were reported, nor have there been any allegations of torture.

Prison conditions in the Netherlands meet minimum international standards, and the Government permits visits by human rights monitors.

In other reports, the CPT has urged the Governments of the Netherlands, the Netherlands Antilles, and Aruba to improve the "inhuman" conditions in Curacao's Koraal Specht prison and in cell blocks at the police stations on the islands of St. Maarten, Bonaire, and Aruba. The CPT's criticism focused on overcrowding, extremely poor sanitary conditions, poor food, and insufficient ventilation. The Committee also criticized widespread corruption and the mistreatment of prisoners by guards at Koraal Specht. The CPT's most recent report criticized the absence of any major improvement in conditions at the Koraal Specht prison.

The Dutch Government repeatedly offered financial assistance to the government of the Netherlands Antilles for the construction of a new juvenile wing, a maximum security facility, and other improvements at Koraal Specht. The Government also sent experts on prison organization and training of guards. While acknowledging that more work needs to be done, Koraal Specht prison officials point to recent progress in improving conditions (all prisoners now have mattresses, hygiene and food have improved, and construction has begun on a small new wing to relieve overcrowding). They add that the CPT was invited to visit again to witness the improvement.

The Governments of the Netherlands Antilles and Aruba allow access by nongovernmental

organizations to prisons.

d. Arbitrary Arrest, Detention, or Exile

The law prohibits arbitrary arrest, detention, or exile, and the Government observes this prohibition.

e. Denial of Fair Public Trial

The Constitution provides for an independent judiciary, and the Government respects this provision in practice. The judiciary provides citizens with a fair and efficient judicial process.

The judicial system is based on the Napoleonic Code. A pyramidal system of cantonal, district, and appellate courts handles both criminal and civil cases. The Supreme Court acts as the highest appellate court and ensures the uniform interpretation of the law. In criminal trials, the law provides for a presumption of innocence and the right to public trial, to counsel (virtually free for low income persons), and to appeal. The law provides for the right to a fair trial, and the independent judiciary vigorously enforces this right.

There were no reports of political prisoners.

f. Arbitrary Interference with Privacy, Family, Home, or Correspondence

The law prohibits such practices, government authorities generally respect these prohibitions, and violations are subject to effective legal sanction.

Section 2 Respect for Civil Liberties, Including:

a. Freedom of Speech and Press

The law provides for freedom of speech and of the press, and the Government respects these rights in practice. An independent press, an effective judiciary, and a functioning democratic political system combine to ensure freedom of speech and of the press, including academic freedom.

b. Freedom of Peaceful Assembly and Association

The law provides for these rights, and the Government respects them in practice.

c. Freedom of Religion

The law provides for freedom of religion, and the Government respects this right in practice. State subsidies are provided to religious organizations that maintain educational facilities.

d. Freedom of Movement Within the Country, Foreign Travel, Emigration, and Repatriation

The law provides for these rights, and the Government respects them in practice.

The Government cooperates with the office of the United Nations High Commissioner for Refugees and other humanitarian organizations in assisting refugees. There were no reports of forced expulsion of those having a valid claim to refugee status. The Government does not provide first asylum as such, but most asylum seekers (89 percent in 1997), except those who obviously came from a "safe country of origin" or stayed for some time in a "safe third country," are permitted to apply for resident status. Some of those (about 15 percent in 1997) whose applications eventually are denied nonetheless are permitted to stay temporarily on humanitarian grounds or as long as their country of origin is considered unsafe.

In recent years, new legislation has aimed to protect genuine refugees while excluding economic refugees and illegal immigrants. More stringent criteria for granting asylum resulted in a significant decrease in the number of new asylum seekers, from 52,576 in 1994 to 29,258 in 1995, and 22,857 in 1996. However, the number rose again to 34,400 in 1997 and to over 40,000 in 1998 due in large part to even stricter laws in other European countries. The focus has recently shifted to advancing the return of rejected asylum seekers through financial incentives, job training programs, and assistance with reintegration projects in their countries of origin. To this end, the Government concluded bilateral agreements with countries such as Ethiopia and Somalia.

The Government has an active policy against alien smuggling. The maximum sentence for trafficking in aliens is 6 years. In cases involving minors, severe physical violence, or organized trafficking, the maximum sentence is 10 years.

Section 3 Respect for Political Rights: The Right of Citizens to Change Their Government

The Constitution provides citizens with the right to change their government peacefully, and citizens exercise this right in practice through periodic, free, and fair elections held on the basis of universal suffrage.

There are no restrictions in law or in practice on the participation of women and minorities in government and politics. A total of 54 of the 150 members of the second chamber of Parliament are women, as are 4 of the 15 cabinet ministers. The Government pursues an active policy to promote the participation of women in politics and public administration.

Although a minority, women also hold positions in the parliaments and cabinets of the Netherlands Antilles and Aruba.

Section 4 Governmental Attitude Regarding International and Nongovernmental Investigation of Alleged Violations of Human Rights

Human rights groups operate without government restriction, investigating and publishing their findings. Government officials are very cooperative and responsive to their views.

Section 5 Discrimination Based on Race, Sex, Religion, Disability, Language, or Social Status

The law bans discrimination on the basis of any of these factors or on sexual orientation or political preference. The Government generally is effective in enforcing these provisions. Under a new Equal Treatment Act, complainants may take offenders to court under civil law.

Women

A recent study reported that about 211,000 women are victims of violence by their former and present partners each year; about 50,000 of these are subjected to severe violence. In addition to the personal suffering, this form of violence against women cost society about \$175 million (f. 332 million) per year in hospitalization and absence from work.

The Government supports programs to reduce and prevent violence against women. Battered women find refuge in a network of 48 government-subsidized women's shelters offering the services of social workers and psychologists. In addition, battered women who leave their domestic partners become eligible for social benefits, which include an adequate basic subsidy as well as an allowance for dependent children. Nongovernmental organizations also advise and assist women who are victims of sexual assault. Since 1991 marital rape has been a crime and carries the same penalty as nonmarital rape. Spousal abuse carries a one-third higher penalty than ordinary battery.

In addition to helping victims of sexual abuse, the Government has pursued an active prevention campaign through commercials and awareness training of educators. A recent evaluation of the results of the first 5 years of this campaign demonstrated greater awareness of the problem, particularly among the target group of men between the ages of 15 and 35, but little change in their attitudes.

Prostitution is legal, and an estimated 30,000 women work as prostitutes. Some 3,000 of these are believed to work under compulsion or in degrading circumstances. High-priority government measures to combat trafficking in women for prostitution include a more aggressive prosecution policy as well as more effective international cooperation. Several police forces have established special units to deal with the problem. A number of arrests were made in October of suspected traffickers who smuggled young girls into the country.

The Dutch Foundation Against Trafficking in Women estimates that each year between 1,500 and 2,000 women and girls are brought into the Netherlands for the purpose of prostitution, not only from Central and Eastern Europe, but also from the Far East and West Africa. Women victims of trafficking who are forced to work as prostitutes and who are apprehended are offered temporary residence permits by the Government so that they can avail themselves of social, medical, legal, and financial assistance.

Women are increasingly entering the job market, but traditional cultural factors and inadequate child care facilities can discourage women--especially those with young children--from working. The number of women in the labor market is rising steadily. In 1983 only 38 percent of women between the ages of 15 and 64 held paid jobs, compared with almost 50 percent at present. Unemployment among women dropped considerably, from 6.8 percent in July 1997 to 4.6 percent in July 1998. Male unemployment was 3.5 percent. About 67 percent of working women work part time, compared with 17 percent of the male working population. The Government established favorable conditions for part-time employment by adopting a law that prohibits employers from treating part-time workers differently from those in full-time jobs.

According to the Education Ministry, women have made up fully the arrears they had experienced in education. At present girls form the majority in higher secondary education where they also score better, and in 1996, for the first time, as many women as men entered college and university.

Women often are underemployed and have less chance of promotion than their male colleagues. They often hold lower level positions than men, mostly because of their part-time jobs. According to the Ministry of Social Affairs and Employment, the difference in earnings between men and women remains at 24 percent. Despite this, some women are making steady progress by moving into professional and high-visibility jobs.

In 1988 the Government started affirmative action programs for women. Collective labor agreements usually include one or more schemes to strengthen the position of women. Legislation mandates equal pay for equal work, prohibits dismissal because of marriage, pregnancy, or motherhood, and provides the basis for equality in other employment-related areas. A legislatively mandated equal Treatment Commission actively pursues complaints of discrimination in these areas as well as allegations of pay differences.

The social welfare and national health systems provide considerable assistance to working women with families. Women are eligible for 16 weeks of maternity leave with full pay. The Parental Leave Law that requires employers to allow new mothers and fathers to work 20 hours a week for up to 6 months was made more flexible in 1997. The new law allows parents to take (unpaid) full-time leave during 3 months and to extend the leave over a period longer than 6 months. People working fewer than 20 hours per week will also be entitled to parental leave.

Women have full legal and judicial rights and enter marriage with the option of choosing community property or separate regimes for their assets.

Women's groups dedicated to such problems as equal rights in social security, the legal position of women, sexual abuse, taxation, education, work, and prostitution operate freely. The law requires employers to take measures to protect workers against sexual harassment; research showed that one in three working women has experienced sexual harassment in the workplace. The Government funds an ongoing publicity campaign to increase awareness of the problem. As the largest employer, it has taken

measures to counter harassment among civil servants, for example, in the police force.

Children

The Government works to ensure the well-being of children through numerous well-funded health, education, and public information programs. The Council for the Protection of Children, operated through the Ministry of Justice, enforces child support orders, investigates cases of child abuse, and recommends remedies ranging from counseling to withdrawal of parental rights. In addition, the Government has set up a popular hot line for children and a network of pediatricians who track suspected cases of child abuse on a confidential basis. There is no societal pattern of abuse of children.

International sex tourism involving the abuse of minor children is prosecutable. Since 1996 several Dutch citizens have been tried and convicted for the abuse of minors in other countries. The age of consent is 16. The prosecution of adults for sex with minors between the ages of 12 and 16 only occurs when a complaint is filed by an interested party.

The maximum penalty for child pornography was raised from 3 months' to 4 years' imprisonment, 6 years in the event of financial gain, and the maximum fine was more than tripled. New legislation allows for provisional arrest, house searches, and criminal financial investigations. Moreover, the authorities no longer must prove that a person possesses child pornography for the purpose of distribution or public display. The Supreme Court has ruled that the mere possession of child pornography is sufficient cause for prosecution. For the first time, in September a Dutch citizen was convicted and sentenced solely on this ground. The discovery of a major child pornography case in July resulted in stricter enforcement of antichild abuse legislation and the allocation of additional resources to enforcement efforts. It also underscored the absence of appropriate legislation to fight the dissemination of child pornography over the Internet. The Government believes that international cooperation is required to deal effectively with the latter problem.

People with Disabilities

There is no discrimination against disabled persons in employment, education, or in the provision of other state services. Local governments are increasingly mandating access to public buildings for the disabled.

National/Racial/Ethnic Minorities

The integration of racial and ethnic minorities into the social and cultural mainstream remains a difficult problem.

The Government pursues an active campaign aimed at increasing public awareness of racism and discrimination. The Constitution prohibits discrimination on the basis of race and nationality and allows those who claim that they have been discriminated against to take alleged offenders to court under civil

law. In 1997 the prosecution norms for discrimination were tightened: Penalties were raised for discrimination by political parties, companies, and institutions, because it was considered more dangerous when this is done by such organizations than by individuals. The police were required to report any complaint of discrimination meticulously. Any policeman guilty of discrimination now risks disciplinary measures as well as criminal legal proceedings. According to the latest statistics, in 1997, 112 persons or organizations were brought to trial on discrimination charges. These included 37 labor disputes, 20 cases of defamation, and 11 consumer disputes.

Racially motivated incidents ranged from racist pamphlets and painted slogans to bomb threats, harassment, physical abuse, and destruction of property. However, no officially recorded incidents of a life-threatening nature were directed against ethnic minorities. As last year, local antidiscrimination bureaus reported over a thousand complaints during 1998. The Discrimination on the Internet Registration Center recorded 155 complaints in 1997 about discriminatory statements, racial discrimination, or anti-Semitism on the Internet. Most statements were removed voluntarily by the authors at the Center's request. In nine cases, the Center requested that a prosecutor initiate criminal proceedings.

Immigrant groups face some discrimination in housing and employment. These groups, concentrated in the larger cities, suffer from a high rate of unemployment. The Government has been working for several years with employers' groups and unions to reduce minority unemployment levels to the national average. As a result of these efforts, in recent years the rate of job creation among ethnic minorities was higher than among the general population. Despite this, unemployment among ethnic minorities is still about three times as high as within the native population.

On January 1, the Act on the Stimulation of Labor Participation by Ethnic Minorities (SAMEN) became effective. The law, which replaces a similar 1994 act, is intended to increase job opportunities for ethnic minorities. It requires employers with a work force of over 35 people to register their non-Dutch employees. Employers are to strive for a composition of their workforce that reflects the regional working population. They are required to submit their annual social action plans, including recruitment targets, to the regional labor bureaus. The Labor Inspectorate oversees implementation of the law.

Section 6 Worker Rights

a. The Right of Association

Membership in labor unions is open to all workers including military, police, and civil service employees. Workers are entitled to form or join unions of their own choosing without prior government authorization, and unions are free to affiliate with national trade union federations. This right is freely exercised.

Unions are entirely free of control by the Government and political parties. Union members may and do participate in political activities.

All workers have the right to strike, except for most civil servants who have other institutionalized means of protection and redress. Industrial relations are very harmonious, and strikes are infrequent. In 1997 some 15 labor days per 1,000 workers were lost, mostly over union demands for a 36-hour workweek. There is no retribution against striking workers.

About 28 percent of the work force is unionized, but union-negotiated collective bargaining agreements are usually extended to cover about three-quarters of the work force. The white-collar unions' membership is the fastest growing.

The four union federations are active internationally, without restriction.

b. The Right to Organize and Bargain Collectively

The right to organize and bargain collectively is recognized and well established. Discrimination against workers because of union membership is illegal and does not occur.

Collective bargaining agreements are negotiated in the framework of the "Social Partnership" developed between trade unions and private employers. Representatives of the main union federations, employers' organizations, and the government meet each autumn to discuss labor issues, including wage levels and their relation to the state of the economy and to international competition. The discussions lead to a central accord with social as well as economic goals for the coming year. Under this umbrella agreement, unions and employers in various sectors negotiate sectoral agreements, which the government usually extends to all companies in the respective sector.

Antiunion discrimination is prohibited. Union federations and employers' organizations are represented, along with independent experts, on the Social and Economic Council. The Council is the major advisory board for the government on policies and legislation regarding national and international social and economic matters.

There are no export processing zones.

c. Prohibition of Forced or Compulsory Labor

Forced or compulsory labor, including that performed by children, is prohibited by the Constitution and does not occur.

d. Status of Child Labor Practices and Minimum Age for Employment

The law prohibits forced and bonded labor by children, and this prohibition is enforced effectively (see Section 6.c.). The minimum age for employment is 16 years, and for full-time work it is conditioned on completion of the mandatory 10 years of schooling. Those still in school at the age of 16 may not work

more than 8 hours per week. People under the age of 18 are prohibited by law from working at night, overtime, or in areas dangerous to their physical or mental well-being. The laws are effectively enforced by the tripartite Labor Commission, which monitors hiring practices and conducts inspections.

The Government takes a leading role in an international campaign against child labor in developing countries. The main Dutch labor federation, together with the United Nations Children's Fund and several nongovernmental organizations, also started a campaign against the sale of products suspected of being made through child labor, and for a "trademark" for clothing made without child labor.

In March the Minister of Social Affairs and Employment announced measures to tighten the ban on working during school vacations by children under 13 years of age. Although child labor is banned, an increasing number of children work for pay during holidays. The parents of such children are to be reported officially by Labor Inspectors, and the Public Prosecutor may decide to prosecute the parents for violating the ban on child labor. In 1997 some 20 employers were cited for employing children under age 13 to do holiday work.

e. Acceptable Conditions of Work

The minimum wage for adults is established by law and can be adjusted every 6 months to changes in the cost-of-living index. Over the last few years, the statutory minimum wage has been pegged to the average wage in collective labor contracts. The gross minimum wage is about \$1,138 (f. 2,276) per month. For workers earning the minimum wage, employers currently pay \$3,750 a year (f. 6,000) in premiums for social security benefits, which includes medical insurance. Only 3 percent of workers earn the minimum wage because collective bargaining agreements, which are normally extended across a sector, usually set a minimum wage well above the legislated minimum. The Government, unions, and employers have taken measures to increase the number of minimum wage jobs and to decrease employers' social payments in order to lower the cost of hiring new workers and to create more jobs, especially for the long-term unemployed.

A reduced minimum wage applies to young people under the age of 23--one of the demographic groups with the highest rate of unemployment--intended to provide incentives for their employment. This wage ranges from 34.5 percent of the adult minimum wage for workers 16 years of age to 85 percent for those 22 years of age. The legislated minimum wage and social benefits available to all minimum wage earners provide an adequate standard of living for workers and their families.

Although the law establishes a 40-hour workweek, the average workweek for those with full-time jobs is 37.5 hours. This workweek is the result of agreements reached in collective bargaining on shorter workweeks, often in conjunction with more flexible working hours. This combination makes it possible to adapt shorter working hours to the specific situation in a particular business or branch of industry. Collective bargaining negotiations generally were heading toward a 36-hour week for full-time employees.

Working conditions, including comprehensive occupational safety and health standards set by law and regulations, are monitored actively by the tripartite Labor Commission. Enforcement is effective. Workers may refuse to continue working at a hazardous work site. The Ministry of Labor and Social Affairs also monitors standards through its Labor Inspectorate.

This is an official U.S. government source for information on the World [U.S. State Department seal] Wide Web. Inclusion of non-U.S. Government links does not imply endorsement of contents.

Jaarverslag van de Militaire Inlichtingendienst (MID) - 1997

Voorwoord

Voor u ligt het eerste jaarverslag van de Militaire Inlichtingendienst (MID). De huidige tijd vraagt meer openheid van de inlichtingendiensten dan voorheen het geval was. In december 1997 heb ik de Tweede Kamer der Staten Generaal dan ook toegezegd over 1997 een jaarverslag aan te zullen bieden.

Vanaf de oprichting in 1987 heeft de MID te maken gehad met een ingewikkeld integratieproces, waarbij de Marine Inlichtingendienst, de Landmacht Inlichtingendienst en de Luchtmacht Inlichtingendienst werden opgeheven en samengevoegd tot één Militaire Inlichtingendienst. Daarnaast werden in 1997 de verbindingsinlichtingen-elementen van de krijgsmachtdelen opgenomen in de MID.

In 1998 wordt de organisatie van de MID na een complex integratie- en reorganisatieproces geëvalueerd. Hierbij wordt ook aandacht besteed aan de kwaliteit van de ondersteuning door de MID van de krijgsmacht bij crisisbeheersings- en vredesoperaties.

Hoofdstuk 7 van dit jaarverslag is, conform mijn toezegging aan de Tweede Kamer, gewijd aan het archiefbeheer. Het beheer van de archieven heeft de afgelopen jaren te wensen overgelaten. Om hierin verbetering aan te brengen, is een aantal maatregelen genomen waarbij ook externe deskundigen zijn betrokken.

De MID levert een belangrijke bijdrage aan de voorbereiding van de politieke besluitvorming, onder andere inzake de opbouw en de inzet van de krijgsmacht. De deelnames aan crisisbeheersingsoperaties, bijvoorbeeld in het voormalige Joegoslavië, vragen om een kwalitatief hoogwaardige inbreng door de MID. Gezien de professionaliteit en toewijding van de medewerkers van de MID ben ik ervan overtuigd dat zij in de toekomst een belangrijke bijdrage aan het functioneren van de krijgsmacht zullen blijven leveren.

DE MINISTER VAN DEFENSIE

dr. ir. J.J.C. Voorhoeve

1. De Militaire Inlichtingendienst (MID)

1.1. Algemeen

Het ministerie van Defensie heeft door de jaren heen verschillende diensten, bureaus en afdelingen gehad voor het inlichtingen- en veiligheidswerk. Al in 1912 werd het "Studiebureau Vreemde Legers" opgericht. Eén van de belangrijkste taken was het verzamelen van inlichtingen over de krijgsmacht en het potentieel van andere mogendheden.

Sinds 1949 wordt samengewerkt met de inlichtingendiensten van de andere NAVO-landen. Het was voor de betrokken lidstaten van essentieel belang om voortdurend betrouwbare informatie te krijgen over de samenstelling, de sterkte, de slagkracht, de wapensystemen en de bewegingen van de troepen van het Warschau-Pact, alsmede over de politieke intenties en het potentieel van die landen. Daarover informatie verwerven was één van de kerntaken van de militaire inlichtingendiensten.

De politieke omwentelingen in Midden- en Oost-Europa en de uitvoering van het verdrag inzake Conventionele Strijdkrachten in Europa (CSE-verdrag, 1990) maakten een einde aan de dreiging van een grootschalige militaire aanval gericht tegen het NAVO-grondgebied. Het gewijzigde wereldbeeld heeft

er toe geleid dat Defensie zich, meer dan in het verleden richt op crisisbeheersings- en humanitaire operaties.

De inlichtingentaak blijft, ondanks de gewijzigde internationale omstandigheden, hetzelfde. De informatie van de MID dient nog steeds ter ondersteuning van de voorbereiding van de krijgsmacht op haar algemene verdedigingstaak, maar speelt ook een belangrijke rol bij de besluitvorming inzake de inzet van Nederlandse militairen bij crisisbeheersings- en humanitaire operaties. De analyses geven een nauwkeurig beeld van de risico's waarmee Nederlandse militairen te maken krijgen. Uitgezonden militairen moeten zoveel mogelijk duidelijkheid hebben over wat hen in het operatiegebied te wachten staat. Dat geldt niet alleen voor de zuiver militaire aspecten. Ook gegevens van politieke, culturele en maatschappelijke aard zijn van belang voor een goede uitvoering van de taken.

1.2. Wettelijk kader

1.2.1. Wet op de inlichtingen- en veiligheidsdiensten

De Wet op de inlichtingen- en veiligheidsdiensten (Wiv) vormt het wettelijk kader voor de taken en de bevoegdheden van de MID. De Afdeling bestuursrechtspraak van de Raad van State oordeelde in een tweetal uitspraken (van Baggum en Valkenier) dat de uit 1987 daterende Wiv op een aantal onderdelen niet in overeenstemming was met het Europees Verdrag tot bescherming van de Rechten van de Mens en de Fundamentele Vrijheden (EVRM). Het kabinet heeft daarom besloten een nieuw wetsvoorstel op de inlichtingen- en veiligheidsdiensten in te dienen bij het Parlement. Dit wetsvoorstel voorziet onder andere in een aantal nieuwe bevoegdheden voor de MID, waarvan onder bepaalde voorwaarden gebruik kan worden gemaakt: volgen en observeren, het inzetten van natuurlijke personen, het oprichten en inzetten van rechtspersonen, het doorzoeken van besloten plaatsen en gesloten voorwerpen, het openen van brieven en andere geadresseerde zendingen, het binnendringen in en het manipuleren van geautomatiseerde werken, het (gericht) aftappen en het ongedaan maken van versluiering, het ongericht aftappen van niet-kabelgebonden telecommunicatie (interceptie) en het opvragen van verkeersgegevens. Voorts voorziet het wetsvoorstel in de instelling van een Commissie van Toezicht die onder meer toeziet op het rechtmatig handelen van de inlichtingen- en veiligheidsdiensten. Daarnaast wordt voorzien in een openbaarheidsregime bij de diensten.

1.2.2. Wet veiligheidsonderzoeken (Wvo)

De Wet veiligheidsonderzoeken, welke sedert 1 februari 1997 van kracht is, bevat het wettelijk kader voor het uitvoeren van veiligheidsonderzoeken in de overheids- en de particuliere sector. De MID stelt veiligheidsonderzoeken in naar personen die een vertrouwensfunctie bij Defensie (gaan) vervullen en naar degenen die toegang tot militaire installaties moeten krijgen of daar werkzaamheden moeten uitvoeren.

1.3. Politieke en ambtelijke sturing

De minister van Defensie is verantwoordelijk voor het functioneren van de MID. De minister kan krachtens de Wiv ten aanzien van de organisatie, de werkwijze en het beheer van de MID nadere regels

stellen. De minister en het hoofd MID hebben regelmatig overleg over de activiteiten van de MID.

In 1997 is de Ministeriële Commissie voor de Inlichtingen- en Veiligheidsdiensten (MICIV) éénmaal bijeen geweest voor overleg over operationele activiteiten. Het MICIV bestaat uit de minister-president, de ministers van Binnenlandse Zaken, Defensie, Buitenlandse Zaken, Justitie, Economische Zaken en Financiën. Tevens nemen deel de coördinator Inlichtingen- en Veiligheidsdiensten van het ministerie van Algemene Zaken, het hoofd BVD en het hoofd MID.

Het hoofd MID geeft leiding aan de MID en draagt zorg voor een doeltreffende en doelmatige uitvoering van de wettelijke taken. Het hoofd MID ressorteert onder de secretaris-generaal (SG). De MID is onderworpen aan de reguliere besturingsinstrumenten binnen Defensie, zoals het Integraal Defensie Plannings Proces (IDPP), het begrotingsproces en het Defensie Materieelkeuze Proces (DMP). De SG en het hoofd MID hebben regelmatig overleg over het functioneren en de activiteiten van de MID. In 1997 is opdracht gegeven tot het evalueren van de integratie en reorganisatie van de MID.

In 1997 is het Comité Verenigde Inlichtingendiensten Nederland (CVIN) twaalfmaal bijeen geweest. Gesproken is onder andere over internationale politieke ontwikkelingen, bepaalde activiteiten van de diensten, het nieuwe wetsvoorstel Wiv, de samenwerking op het gebied van non-proliferatie, cryptografie en de beveiliging van informatietechnologie. Het CVIN bestaat uit de coördinator Inlichtingen- en Veiligheidsdiensten, de hoofden van de BVD en de MID en vertegenwoordigers van de bewindslieden die deel uitmaken van de MICIV. In 1997 is tweemaal vergaderd in de zogenaamde CVIN-plus samenstelling, dat wil zeggen inclusief de secretarissen -generaal van de betrokken departementen.

1.4. Parlementaire en publieke controle

De ministers verstrekken aan de Staten-Generaal alle informatie voorzover deze, overeenkomstig artikel 98 van de Grondwet, niet strijdig is met de belangen van de Staat. De Commissie voor de Inlichtingen- en Veiligheidsdiensten speelt een centrale rol bij de controle van de MID. Deze Commissie bestaat uit de fractievoorzitters van de PvdA, het CDA, de VVD en D66.

In 1997 is ook door de Vaste Commissie voor Defensie aandacht besteed aan de MID. Daarbij is gesproken over de staat van de archieven van de MID. In hoofdstuk 7 wordt hier nader op ingegaan.

De minister is in het kader van de Wet openbaarheid van bestuur verplicht informatie te verstrekken aan de recht- en bewijszoekende burgers. Het is van belang dat burgers zeker kunnen zijn van de bescherming van hun persoonlijke levenssfeer en dat zij zekerheid hebben over de juiste vernietiging van gegevens betreffende hun persoonlijke levenssfeer door de MID. In hoofdstuk 4 wordt daarop ingegaan.

In het kader van de grotere openbaarheid van de MID is in 1997, vooruitlopend op de wettelijke verplichting, besloten tot het opstellen van een jaarverslag.

2. De Inlichtingentaak van de MID

2.1. Algemeen

Dit hoofdstuk geeft een overzicht van de inlichtingentaak van de MID in het algemeen alsmede van de thema's waarop de MID zich in 1997 vooral heeft gericht en zich in 1998 zal richten. De inlichtingentaak van de MID is in de Wiv als volgt vastgesteld:

- het verzamelen van gegevens omtrent het potentieel en de strijdkrachten van andere mogendheden, welke nodig zijn voor een juiste opbouw en een doeltreffend gebruik van de krijgsmacht.

2.2. De Inlichtingentaak van de MID

De inlichtingenbehoefte van de krijgsmacht en de daaruit voortvloeiende inlichtingentaak van de MID was voorheen hoofdzakelijk gericht op de klassieke algemene verdedigingstaken van de krijgsmacht in nationaal, Koninkrijks- en bondgenootschappelijk verband. De taakstelling van de krijgsmacht is de afgelopen jaren sterk gewijzigd. De inlichtingenbehoefte is nu vooral gericht op de taken die betrekking hebben op de bevordering van de internationale rechtsorde. Het gaat hier met name om het uitvoeren van crisisbeheersings- en vredesoperaties. De MID moet ten behoeve van een adequate uitvoering van deze operaties inlichtingen inwinnen over de veiligheidssituatie in die landen waar Nederland dergelijke operaties uitvoert. Ten behoeve van een evenwichtige besluitvorming over deelname aan deze operaties en een doeltreffende inzet van de krijgsmacht moet de MID ook reeds inlichtingen kunnen verzamelen, indien de verwachting bestaat dat Nederland wordt gevraagd te gaan deelnemen aan zulke operaties. De primaire belangstellingsgebieden van de MID zijn daarmee vastgesteld.

2.3. Uitvoering van de inlichtingentaak

Het "verzamelen van gegevens", betreft onder andere het evalueren, bewerken en documenteren van (basis-) gegevens, en het produceren en distribueren van, op de behoeftestellers toegesneden, inlichtingen. Ter ondersteuning van het inlichtingenproductieproces is in 1997 gewerkt aan de intensivering van de relaties met buitenlandse zusterdiensten, alsmede aan de verbetering van de informatievoorziening uit open bronnen.

In 1997 is een toenemend deel van de inlichtingenproductiecapaciteit ingezet voor de ondersteuning van crisisbeheersings- en vredesoperaties. De inlichtingenproductie was erop gericht een tijdige en doelgerichte bijdrage te leveren aan zowel de politieke als de militaire en de ambtelijke besluitvorming en planning met betrekking tot de crisisbeheersings- en vredesoperaties waarmee de krijgsmacht in 1997 was of kon worden belast. De MID heeft in dat kader onder meer risico-analyses opgesteld over Nagorno-Karabach, Moldova, voormalig-Joegoslavië, Albanië, Cyprus, de Golan Hoogte, Hebron, de Westelijke Sahara, de Golf-regio, Algerije, Ruanda, Burundi, Zaïre, Congo-Brazzaville, Angola, Sierra Leone en Cambodja.

Gezien het belang van de ontwikkelingen in de Russische Federatie voor de stabiliteit en veiligheid in Europa worden deze nauwgezet gevolgd. In 1997 heeft de MID in zowel nationaal als NAVO-kader een aanzienlijk aantal inlichtingenrapportages terzake opgesteld. Hierin is aandacht besteed aan de actuele politieke en economische ontwikkelingen en hun gevolgen voor de politieke stabiliteit in Rusland en de situatie binnen de Russische krijgsmacht. In dat kader zijn ook analyses opgesteld over het defensie- en veiligheidsbeleid, de defensie-inspanning, de Russische opstelling ten aanzien van de uitbreiding van de NAVO, en de relaties tussen Rusland en de overige staten van het Gemenebest van Onafhankelijke Staten (GOS). De voortgang en de kans van slagen van het militaire hervormingsproces in Rusland is het afgelopen jaar een constant thema in de rapportages geweest. Daarbij is voortdurend bezien in hoeverre de militaire onvrede tot politieke onrust en instabiliteit kan leiden.

In 1997 werden de militaire en veiligheidspolitieke ontwikkelingen in Latijns Amerika en het Caribisch gebied nauwgezet gevolgd in verband met de veiligheidssituatie van de overzeese Koninkrijksdelen en de daar aanwezige onderdelen van de Nederlandse krijgsmacht alsmede de persoonlijke veiligheid van Nederlandse onderdanen in het gebied. Ook steun aan de Nederlandse rol bij de bestrijding van de drugshandel in deze regio heeft de nodige aandacht gekregen.

In 1997 rapporteerde de MID over de verspreiding (proliferatie) van nucleaire, biologische en chemische wapens, alsmede van de kennis, grondstoffen en apparatuur om deze wapens te produceren en hun overbrengingsmiddelen. De MID blijft deze ontwikkelingen nauwgezet volgen voor zover deze relevant zijn voor het Nederlandse defensie- en veiligheidsbeleid.

Voorts heeft de MID aandacht besteed aan de analyse van de ontwikkelingen op politiek, economisch, militair en technologisch gebied in verschillende regio's die van invloed kunnen zijn op de taakuitvoering van de krijgsmacht in de nabije en verre toekomst.

2.4. Organisatie Ressorst Inlichtingen

De inlichtingentaken worden uitgevoerd door de afdeling Inlichtingen van de MID en de bureaus Inlichtingen van de afdelingen van de MID bij de krijgsmachtdelen, tezamen aangeduid als het ressort Inlichtingen. De afdelingen Verbindingsinlichtingen en Operaties ondersteunen deze activiteit. De inlichtingentaken op politiek, militair-strategisch, economisch, wetenschappelijk en technologisch gebied zijn de verantwoordelijkheid van de afdeling Inlichtingen van de MID. De inlichtingentaken van tactische, operationele en technische aard worden bij de bureaus Inlichtingen van de afdelingen van de MID bij de krijgsmachtdelen uitgevoerd.

De minister van Defensie heeft de chef Defensiestaf (CDS) belast met de planning, de beleidsadvisering over de militaire aspecten en (het toezicht op) de uitvoering van crisisbeheersings- en vredesoperaties. Hij beschikt daartoe over het Defensie Crisis Beheersings-Centrum (DCBC). Om op een goede wijze aan de inlichtingenbehoefte te voldoen is bij het DCBC een permanent MID-element geplaatst. Dit is een liaison-cel van de MID. Het hoofd van de MID is verantwoordelijk voor de ondersteuning door de MID van crisisbeheersings- en vredesoperaties met een geplande of daadwerkelijke Nederlandse

betrokkenheid. Het zwaartepunt van deze activiteiten lag in 1997 bij ondersteuning van de vredesoperatie in het voormalige Joegoslavië.

De MID heeft een groot aantal briefings en inlichtingenrapporten over de crisis in het voormalige Joegoslavië verzorgd. Over de voortgang van het Dayton-vredesproces is regelmatig gerapporteerd.

3. De Contra-Inlichtingen- en Veiligheidstaak van de MID

3.1. Algemeen

Dit hoofdstuk geeft een overzicht van de contra-inlichtingen- en veiligheidstaak van de MID. Deze taak die betrekking heeft op de handhaving, de bevordering en de bescherming van de veiligheid en de integriteit van de defensie-organisatie, is in de Wiv als volgt vastgesteld:

- a. het verrichten van veiligheidsonderzoeken bij vertrouwensfuncties;
- b. het verzamelen van gegevens die nodig zijn om maatregelen te treffen ter:

- * voorkoming van activiteiten die de veiligheid en de paraatheid van de krijgsmacht kunnen schaden,
- * beveiliging van gegevens over de krijgsmacht die geheim moeten blijven,
- * bevordering van een juist verloop van mobilisatie en concentratie der strijdkrachten.

3.2. De Contra-Inlichtingen- en Veiligheidstaak van de MID

Bij de contra-inlichtingen- en veiligheidstaak gaat het om activiteiten op drie terreinen. Allereerst is dat het veiligheidsonderzoek naar de integriteit van het defensiepersoneel dat is of wordt geplaatst op een vertrouwensfunctie. Dit onderzoek leidt tot een veiligheidsadvies over de aanstelling van personeel of over te nemen maatregelen. Ten tweede worden gegevens verzameld over personen en organisaties die een risico kunnen vormen voor de veiligheid en de paraatheid van de krijgsmacht. Het gaat dan om de identificatie van potentiële risicofactoren, het vaststellen van het dreigingsniveau en het formuleren van adviezen over passende maatregelen. In dit kader wordt gelet op de activiteiten van buitenlandse inlichtingendiensten en terroristische of extremistische politieke groeperingen, die zich richten tegen de defensiebelangen. In de derde plaats wordt aandacht besteed aan de geheimhouding van gerubriceerde gegevens en de bescherming van vitale onderdelen van de defensie-organisatie. De secretaris-generaal stelt het integrale beleid op dit terrein vast, waaraan de MID een bijdrage levert. De MID assisteert bij de uitvoering ervan en voert inspectie- en controlewerkzaamheden uit.

Daarnaast ontwikkelt de MID regelgeving, initieert onderzoek en oefent controle uit bij bedrijven en organisaties die, al dan niet in internationaal verband, gerubriceerde defensie-opdrachten uitvoeren.

De MID verricht tevens werkzaamheden, op het gebied van de (militaire) veiligheid ten behoeve van de bevelhebbers van de krijgsmachtdelen. De praktische uitvoering van de beveiligingsmaatregelen is

overigens geen MID-taak; iedere zelfstandige commandant is verantwoordelijk voor de veiligheid binnen zijn organisatie.

In interdepartementaal verband draagt de MID, onder andere in de Technische Evaluatie-Commissie (TEC) van het Nationaal CoördinatieCentrum (NCC) van het ministerie van Binnenlandse Zaken, bij aan de formulering van bewakings- en beveiligingsadviezen voor objecten en personen, waarvoor de overheid een bijzondere verantwoordelijkheid draagt. De bijdrage van de MID is daarbij vooral gericht op defensie-gerelateerde objecten, personen en activiteiten.

3.3. Uitvoering van de contra-inlichtingen- en veiligheidstaak

3.3.1. Ondersteuning bij crisisbeheersings- en vredesoperaties

Bij de inzet van Nederlands defensiepersoneel in internationale crisisbeheersings- en vredesoperaties heeft de MID onder meer een veiligheidsbevorderende taak. In dit kader ging de aandacht in 1997 vooral uit naar de inzet van Nederlandse militairen in het voormalige Joegoslavië. In het crisisgebied worden door buitenlandse inlichtingendiensten activiteiten uitgevoerd. Deze inlichtingenactiviteiten kunnen worden toegeschreven aan de diensten van de drie etnische groeperingen, alswel aan de diensten van andere landen. Deze diensten maken gebruik van lokaal geworven personeel. Ook werden beïnvloedingsactiviteiten vastgesteld.

Een ander punt van zorg zijn de activiteiten van gewapende, paramilitaire groeperingen in deze regio. Zij kunnen een bedreiging vormen voor de veiligheid van de Nederlandse militairen.

Nieuw uit te zenden personeel werd op de hoogte gebracht van de gevaren en de veiligheidsrisico's in het operatiegebied. Daar ging een preventieve werking vanuit. Rekening houdend met reacties in Nederland op het militaire optreden in het voormalige Joegoslavië werd, mede op basis van gegevens van zusterdiensten, voortdurend een inschatting gemaakt van de veiligheidssituatie van defensieonderdelen in Nederland. Hierover werd regelmatig overleg gepleegd tussen de BVD, de Centrale Recherche Informatiedienst (CRI) en de MID.

Andere landen waaraan aandacht werd besteed in het kader van uit te voeren VN-vredes-missies of vanwege mogelijke uitzending van Nederlands defensiepersoneel, waren Angola, Ruanda, Burundi, Zaïre, Algerije, de Westelijke Sahara en Cyprus.

Het Defensiepersoneel dat in 1997 werd uitgezonden in het kader van vredesondersteunende operaties, kreeg voorafgaande aan die uitzending een briefing waarin de specifieke risico's in het beoogde operatiegebied aan de orde kwamen. Speciale aandacht werd hierbij besteed aan de personele en materiële veiligheid en het gedrag en de houding ten opzichte van de lokale bevolking.

In 1997 is al het terugkerende personeel zo spoedig mogelijk na thuiskomst gedebriefed. Het doel van deze debriefing was gegevens te verzamelen over de veiligheidssituatie ter plaatse, zodat kon worden

vastgesteld in hoeverre aanvullende maatregelen getroffen moesten worden. Tijdens debriefings kunnen voorvallen worden gemeld, die leiden tot een nader onderzoek. Zo werd in opdracht van de minister een onderzoek uitgevoerd naar vermeende wangedragingen door enkele Nederlandse militairen tijdens de missie in Angola. In 1998 zal ervaring worden opgedaan met debriefinggesprekken in de inzetgebieden.

3.3.2. Aandachtspunten op Contra-Inlichtingengebied

3.3.2.1. Buitenlandse inlichtingen- en veiligheidsdiensten

Buitenlandse inlichtingen- en veiligheidsdiensten vormen nog steeds een risico voor Nederland en haar defensiebelangen. In 1997 heeft de MID opnieuw vastgesteld, dat de Russische inlichtingendiensten in Nederland het inlichtingenwerk hebben hervat. In incidentele gevallen werd bij het verzamelen van informatie gebruik gemaakt van heimelijke methodieken. De Russische diensten richten zich, naast het verzamelen van economische, militaire en technologische informatie, vooral op het verwerven van politieke gegevens. Voorzover deze activiteiten zich richten op de krijgsmacht, zullen zij een punt van aandacht blijven voor de MID. Op dit terrein is sprake van een nauwe samenwerking met de BVD.

3.3.2.2. Terrorisme

In beginsel valt terrorismebestrijding in Nederland buiten het takenpakket van de MID. In die gevallen dat een bedreiging van de defensiebelangen in Nederland of het buitenland aan de orde komt, is samengewerkt met de BVD of de buitenlandse zusterdiensten. In 1997 deden zich enkele bedreigingen voor. Ten behoeve van de BVD voerde de MID in 1997 enige ondersteunende activiteiten uit.

3.3.2.3. Anti-militarisme

In 1997 bleven anti-militaristische acties de aandacht van de MID opeisen. In totaal werden 80 acties geregistreerd (in 1996 waren dat er 97 en in 1995 nog 350). Er was geen sprake van opvallende of nieuwe actievormen. Als vanouds moesten bij knip-, klad- en vernielingsacties vooral hekwerken en banden van militaire voertuigen het ontgelden. Ook waren er enkele lokale bezettingsacties. Een kleine groep anti-militaristen, die al jarenlang betrokken is bij tegen defensie gerichte vernielingsacties, wordt hiervoor verantwoordelijk gehouden. In 1997 bedroeg de totale schade f 50.000,- . Om de daders te ontmoedigen, wordt getracht de veroorzaakte schade op hen te verhalen. Uit het beperkte aantal demonstraties en de geringe deelname daaraan kan worden afgeleid dat het anti-militarisme een beperkt draagvlak heeft in de samenleving.

3.3.2.4. Rechts-extremisme

In 1997 kwam het tot enkele rechts-extremistische uitingen binnen Defensie. Het ging in de meeste gevallen niet om politiek geïnspireerd optreden, maar om 'macho'-gedrag. Er zijn passende maatregelen getroffen. Op het terrein van rechts-extremisme heeft de MID in 1997 enige activiteiten ontwikkeld voor de BVD.

3.3.3. Informatiebeveiliging

In verband met het sterk toegenomen gebruik van geautomatiseerde hulpmiddelen bij Defensie is een

sectie Technische Analyse opgericht. In 1997 zijn de risico's van de toepassing van hoogwaardige informatie- en communicatietechnologie geïnventariseerd. Ook is 'de elektronische snelweg' in beschouwing genomen. Aandachtspunten hierbij zijn, onder andere, de mogelijkheden op het gebied van uitwisseling, vergaring, verspreiding, onthouding of manipulatie van informatie. De informatiebeveiliging zal ook in de toekomst de aandacht blijven vragen.

3.3.4. Veiligheidsonderzoeken

De Wet veiligheidsonderzoeken (Wvo) voorziet in een procedure voor zowel de aanwijzing van een vertrouwensfunctie als het verrichten van een veiligheidsonderzoek eindigend met het afgeven, het weigeren of het intrekken van een verklaring van geen bezwaar. In 1997 werd aan 43 sollicitanten naar een militaire functie op grond van justitiële antecedenten de verklaring van geen bezwaar geweigerd. Bij sollicitaties naar burgerfuncties is dit geen enkele keer gebeurd. Eén sollicitant diende een bezwaar in tegen de weigering van de verklaring van geen bezwaar. Deze procedure is nog niet afgerond.

Overzicht veiligheidsonderzoeken:

| | |
|------|-------|
| 1994 | 63749 |
| 1995 | 39011 |
| 1996 | 18922 |

De minister van Defensie stelt de vertrouwensfuncties bij het ministerie van Defensie door middel van een aanwijzingsbesluit vast. Elke militaire functie is een vertrouwensfunctie. Ten aanzien van de burgerfuncties geldt dat per functie (of cluster van functies) wordt vastgesteld of het om vertrouwensfuncties gaat. In totaal is bij Defensie circa 80% van het aantal burgerfuncties aangewezen als vertrouwensfunctie.

De Wvo, de aandacht voor de ambtelijke integriteit en de herstructurering en de verkleining van de krijgsmacht noodzaken tot een herwaardering van de vertrouwensfuncties bij Defensie. Bij de herwaardering van vertrouwensfuncties wordt nadrukkelijk aandacht besteed aan integriteitsbewaking. Voor de herwaardering van vertrouwensfuncties is een projectgroep ingesteld. De eerste prioriteit van de herwaardering ligt bij de Centrale Organisatie van het ministerie van Defensie en de Koninklijke Marechaussee (KMar). Ook bij de krijgsmachtdelen worden dergelijke onderzoeken gedaan. Naar verwachting zijn deze onderzoeken in 1999 afgerond. Als onderdeel van het veiligheidsonderzoek worden de justitiële antecedenten onderzocht die een reden kunnen zijn om de verklaring van geen bezwaar te weigeren of in te trekken. In 1997 heeft de minister twee beleidsregelingen over de beoordeling van justitiële antecedenten vastgesteld. Het betreft een algemene beleidsregeling voor de krijgsmachtdelen, inclusief de Centrale Organisatie, en een aangescherpte versie voor de Koninklijke Marechaussee. Deze aanscherping werd nodig geacht, omdat de Koninklijke Marechaussee werkzaamheden uitvoert in het kader van de Politiewet, de Wiv en een aantal speciale beveiligingstaken. Het is evident dat in dit kader hogere eisen worden gesteld aan de integriteit. Beide regelingen vormen

het toetsingskader voor de beantwoording van de vraag in hoeverre bepaalde justitiële antecedenten toelaatbaar zijn voor de vervulling van een vertrouwensfunctie bij Defensie.

Overzicht vertrouwensfuncties:

| Jaar | 1994 | 1995 | 1996 | 1997 |
|------------|-------|-------|-------|-------|
| Militairen | 73340 | 67930 | 56987 | 56166 |
| Burgers | 17664 | 17468 | 14550 | 14164 |

3.3.5. Industrieveiligheid

De MID ontwikkelt regelgeving, initieert onderzoek en oefent controle uit bij Nederlandse bedrijven en organisaties die, al dan niet in internationaal verband, gerubriceerde defensieopdrachten uitvoeren. De BVD en MID zijn in 1997 overgegaan tot het gezamenlijk bezoeken van zowel defensiebedrijven als van bedrijven die in het kader van compensatie-orders door toedoen van het Ministerie van Economische Zaken (EZ/CMP) een goedkeuring behoeven en van de bedrijven die opdrachten uitvoeren voor de NAVO of de WEU.

De internationale ontwikkeling van de defensie-industrie (globalisering, privatisering en rationalisering) maken het noodzakelijk dat de internationale beveiligingsregimes meer dan tot dusverre het geval is geweest, worden geharmoniseerd. De Multinational Industrial Security Working Group (MISWG) heeft hier het afgelopen jaar aandacht aan besteed. De MID is vertegenwoordigd in het MISWG).

De General Working Group van het Wassenaar Arrangement, waaraan door de MID in de hoedanigheid van adviseur van de ministerie van Buitenlandse Zaken en Economische Zaken wordt deelgenomen, besteedt aandacht aan export-controle en non-proliferatie. De werkgroep kwam in 1997 tweemaal bijeen, waarbij aandacht is besteed aan de ontwikkelingen in de "Grote Meren regio" in Afrika, in Afghanistan en in het voormalig Joegoslavië. Daarnaast is door Nederland gewezen op het probleem van de illegale handel in kleine wapens.

3.4. Organisatie ressort Contra-Inlichtingen en Veiligheid

De contra-inlichtingen- en veiligheidstaken worden uitgevoerd door de afdeling Contra-Inlichtingen en Veiligheid van de MID en de bureaus Veiligheid van de afdelingen van de MID bij de krijgsmacht delen, te zamen aangeduid als het ressort Contra-Inlichtingen. De bureaus veiligheid bij de afdelingen van de MID bij de krijgsmacht delen ondersteunen hun krijgsmachtdeel op het gebied van militaire veiligheid. Er wordt op toegezien dat commandanten tijdig de noodzakelijke informatie ter beschikking wordt gesteld om beveiligingsmaatregelen te kunnen treffen. De door de MID in dit kader aan de bevelhebbers geleverde informatie bestaat uit: =risico-analyses, toegesneden op het operationele optreden van eenheden bij vredesondersteunende missies, humanitaire taken, oefeningen en militaire evenementen; =adviezen, assistentie, voorlichting en lessen over (militaire) veiligheid. Daarnaast werd geparticipeerd

in projecten en overlegfora over contra-inlichtingen en veiligheid. Binnen het ressort Contra-Inlichtingen en Veiligheid worden de contra-inlichtingen- en veiligheidsactiviteiten gecoördineerd.

4. Verzoeken in het kader van de Wet openbaarheid van bestuur

4.1. Algemeen

Op basis van de Wet openbaarheid van bestuur (Wob) zijn in 1997 15 verzoeken afgehandeld. Het ging niet alleen om verzoeken tot inzage in het eigen dossier, maar ook om dossiers van derden en over bepaalde thema 's. Daarnaast was de MID betrokken bij de interdepartementale afstemming van diverse verzoeken die bij andere ministeries waren ingediend en die raakvlakken hadden met de MID. Ook werd begonnen met de verwerking en afhandeling van de al bij de MID ingediende verzoeken tot inzage in het eigen dossier. Het ging hierbij vooral om verzoeken die tussen 1991 en 1993 werden ingediend door personen, die waren gealarmeerd door berichten over de vermeende vernietiging van MID-persoonsdossiers. De verzoeken werden ingediend door tussenkomst van de Vereniging Voorkom Vernietiging (VVV). In nauw overleg met de VVV zal in 1998 de afhandeling van deze verzoeken worden voortgezet.

4.2. Verruiming inzagerecht

Tot 14 juni 1994 werden verzoeken tot inzage in een MID-dossier in beginsel geweigerd; alleen persoonsgegevens ouder dan dertig jaar kwamen voor inzage in aanmerking. Dit vloeide voort uit de Wiv en de daarop gebaseerde Privacyregeling MID. Op 14 juni 1994 verklaarde de Afdeling bestuursrechtspraak van de Raad van State in de zaak Van Baggum, deze inzageregeling gebaseerd op de Wiv en de Privacyregeling, niet van toepassing omdat deze strijdig was met het EVRM. Het directe gevolg van deze rechterlijke uitspraak was, dat de nog lopende verzoeken tot inzage alsnog van geval tot geval moesten worden beoordeeld aan de hand van de criteria die de Wob stelt. Op verzoeken tot inzage van gegevens van derden blijft de Wiv en de daarop gebaseerde Privacyregeling echter onverkort van toepassing. Dit blijkt uit de uitspraak van de Afdeling bestuursrechtspraak op 12 december 1995 in de zaak Reydon/De Jager.

Bij een beslissing over een verzoek om inzage in het eigen dossier staat voorop, dat iedere informatieverstrekking achterwege dient te blijven als daardoor het goed functioneren van de MID, en daarmee de veiligheid van de Staat, zou kunnen worden geschaad. De bronnen en werkwijzen, en vooral ook het actuele kennisniveau van de MID, dienen geheim te blijven.

4.3. Afhandeling inzageverzoeken

Als een verzoek om informatie betrekking heeft op een bepaalde maatschappelijke ontwikkeling die met het oog op de taakuitvoering van de MID niet langer als actueel kan worden beschouwd, wordt deze doorgaans ter inzage gegeven. Het vaststellen van de actualiteit van de opgegeven (of in het dossier aangetroffen) onderwerpen vormt dan ook een essentiële stap in de beslissing over een inzageverzoek.

De volgende stap is dat de documenten waarin niet-actuele gegevens over de verzoeker zijn aangetroffen, worden gescreend op de mogelijkheid dat door openbaarmaking daarvan bronnen of werkwijzen bekend zouden kunnen worden. Vervolgens worden die documenten beoordeeld op de toepasbaarheid van andere Wob-weigeringsgronden en worden, geheel conform de vaste jurisprudentie, de gegevens over andere personen uit het materiaal verwijderd. Al met al gaat het hier om een arbeidsintensief proces. Om te voorkomen dat er in het geheel geen gegevens zouden mogen worden vrijgegeven, is het in vele gevallen noodzakelijk om parafrases of samenvattingen van omvangrijke dossierdelen te vervaardigen. Deze afhandeling van inzageverzoeken en de screening van dossiers is gelijk aan die van de BVD. De hierboven beschreven procedure heeft tot dusverre in alle gevallen de toets van de bestuursrechter doorstaan.

5. Verzamelen van gegevens

5.1. Algemeen

Het verzamelen van gegevens behoort tot de kernactiviteiten van de Militaire Inlichtingendienst. In dit verband wordt gesproken over "open en gesloten bronnen". Open bronnen zijn daarbij per definitie voor iedereen vrij toegankelijk. Gesloten bronnen zijn dat niet. Omdat informatie-aanbieders er steeds meer toe overgaan niet alleen in gedrukte maar ook in digitale vorm informatie te verstrekken, wordt door de MID meer gebruik gemaakt van open bronnen waar onder Internet.

5.2 Operationele informatieverwerving

Verwerving van hoogwaardige, niet vrij toegankelijke, informatie door middel van menselijke bronnen gebeurt door operationele activiteiten alsmede door de inzet van technische observatie-middelen. Alle operationele activiteiten, vastgelegd in jaarplannen en operatievoorstellen, zijn gebaseerd op de aandachtsgebieden en onderwerpen zoals vastgesteld door de minister van Defensie. Daarbij worden informatiebehoefte en veiligheidsrisico voortdurend tegen elkaar afgewogen. Met de operationele informatieverwerving worden de betreffende MID-afdelingen ondersteund.

5.3. Verbindingsinlichtingen

Onder verbindingsinlichtingen wordt verstaan: de informatie die wordt verkregen uit het met een technisch hulpmiddel ongericht ontvangen en opnemen van niet-kabelgebonden telecommunicatie. Verbindingsinlichtingen vormen een halfproduct, dat tezamen met informatie uit andere bronnen moet leiden tot een gewogen eindproduct. Bij verbindingsinlichtingen wordt onderscheid gemaakt tussen Operationele en Strategische verbindingsinlichtingen. Operationele verbindingsinlichtingen richten zich op militaire informatie op operationeel en tactisch niveau. Strategische verbindingsinlichtingen richten zich op militaire en algemene informatie.

Tot 1997 werden de verbindingsinlichtingesactiviteiten uitgevoerd door de verbindingsinlichtingen-elementen bij de krijgsmachtdelen. Bij de uiteindelijke integratie van de MID werden de aparte

verbindingsinlichtingen-elementen samengebracht in één afdeling Verbindingsinlichtingen. De operationele taakuitvoering, de bedrijfsvoering en de contacten met partners vinden nu eenmaal plaats onder de verantwoordelijkheid van het hoofd van de MID. Door de verandering van de aandachtsgebieden dient de huidige capaciteit en de inrichting van de afdeling verbindingsinlichtingen te worden aangepast. De samenwerking met zusterdiensten wordt geïntensiveerd. Voorts heeft de MID met betrekking tot encryptie en signaalanalyse een vergaande samenwerking met de Binnenlandse Veiligheidsdienst, het Gerechtelijk Laboratorium (GL) en het Nationaal Bureau voor Verbindingbeveiliging (NBV).

6. Nationale en internationale samenwerking

6.1. Algemeen

Om met de beschikbare mensen en middelen de taken doelmatig uit te voeren, wordt intensief samengewerkt met nationale en internationale organisaties.

6.2. Samenwerking in nationaal verband

6.2.1. Ministerie van Buitenlandse Zaken .De samenwerking met het ministerie van Buitenlandse Zaken had betrekking op het verrichten van landenstudies in het kader van het nationale veiligheidsbeleid. Ook in 1998 zal deze samenwerking worden voortgezet.

6.2.2. Ministerie van Financiën. De MID werkt samen met de Centrale Dienst In- en Uitvoer (CDUI) van het ministerie van Financiën op het terrein van proliferatie van strategisch militair materieel welke onder de exportregelgeving vallen.

6.2.3. Economische Controledienst (ECD) . De MID werkt samen met de ECD voor wat betreft de controle op export van strategische goederen in relatie tot defensie-orderbedrijven. Daarnaast wordt de MID betrokken bij risico-analyses van militair strategisch materieel.

6.2.4. Binnenlandse Veiligheidsdienst . De Militaire Inlichtingendienst werkt nauw samen met de Binnenlandse Veiligheidsdienst. De belangrijkste vormen van samenwerking zijn: . Wet- en regelgeving zowel nationaal als international (Wiv, Wvo, archiefbeheer, NAVO-voorschriften), en de afstemming van Wobverzoeken; . het verrichten van landenstudies: . onderzoek naar de proliferatie van conventionele en massavernietigingswapens; . gezamenlijke operationele activiteiten; . het exportbeleid van strategische goederen; . technische ondersteuning; . vaststelling van Contra-Inlichtingenrisico's; . industrieveiligheid.

6.3 Samenwerking in Koninkrijksverband

In 1997 hebben de hoofden van de Veiligheidsdienst Nederlandse Antillen en de Veiligheidsdienst Aruba met het hoofd van de Militaire Inlichtingendienst

zowel op Curaçao als in Den Haag overleg gevoerd over mogelijke samenwerking tussen de diensten. Dit overleg heeft geresulteerd in de totstandkoming van samenwerkingsovereenkomsten.

6.4. Internationale samenwerking

6.4.1. Algemeen Internationale verdragen en bondgenootschappelijke samenwerking geven aan de activiteiten van Defensie en daarmee van de MID een grensoverschrijdend karakter. In het kader van NAVO-, VN-, en WEU-operaties of anderszins zet Defensie Nederlandse militairen wereldwijd in. Om die inzet zo effectief maar ook zo veilig mogelijk te maken, groeit de noodzaak van internationale informatie-uitwisseling. Daartoe wordt door de MID geparticieerd in meerdere overlegfora. Door de MID wordt met andere dan NAVO-lidstaten contacten onderhouden op het gebied van inlichtingen en veiligheid.

6.4.2. Bondgenootschappelijke samenwerking . De MID leverde in 1997 verschillende inlichtingenbijdragen aan NAVO- en WEU-organen. Door de militaire inlichtingendienst van de NAVO wordt jaarlijks onder auspiciën van de International Military Staff een rapport opgesteld over de veiligheidsrisico's waarmee de NAVO naar verwachting de komende vijf tot tien jaar zal worden geconfronteerd. Dit rapport vormt de grondslag voor de politieke en militaire besluitvorming in NAVO-verband over de door de lidstaten te leveren defensie-inspanning en de daaruit voortvloeiende "force-planning". De MID is de afgelopen jaren nauw betrokken geweest bij de NAVO-beoordeling van de militaire en veiligheidspolitieke gevolgen van de omwentelingen in het voormalig Oostblok. De MID leverde een bijdrage aan de herwaardering van de dreiging die van de voormalige Sovjet-Unie uitging. Ook op het gebied van contra-inlichtingen en veiligheid werd in NAVO-verband samengewerkt met de zusterdiensten. Voorts wordt door de MID binnen NAV-organen en -eenheden op het gebied van inlichtingen en veiligheid personele ondersteuning geleverd.

6.4.3. Partnership for Peace (PFP) . De NAVO-lidstaten hebben met het PFP-programma een multilateraal kader geschapen om de samenwerking met de Midden- en Oost-Europese landen te intensiveren. In het kader van het PFP-programma worden ondermeer gezamenlijke militaire oefeningen gehouden en opleidingsprogramma's uitgewisseld. De MID heeft in 1997 met een aantal Midden- en Oost-Europese militaire inlichtingen- en veiligheidsdiensten samenwerkingsverbanden gesloten of reeds bestaande relaties geïntensiveerd. Het gaat hierbij om informatie-uitwisseling over gemeenschappelijke interessegebieden.

Op de topconferentie van de NAVO, begin juli 1997 in Madrid, zijn Polen, Tsjechië en Hongarije uitgenodigd onderhandelingen te beginnen over het lidmaatschap van de NAVO. De MID heeft de al bestaande contacten met de militaire zusterdiensten in die landen geïntensiveerd en overeenkomsten gesloten om samen te werken.

7. MID-archieven

7.1. Algemeen

De zorg voor een goed archiefbeheer is een wettelijke plicht die is gebaseerd op de bij of krachtens de Archiefwet 1995 vastgestelde regels. Het archief is de neerslag van het handelen van de overheid en speelt een belangrijke rol in het kader van de verantwoording in de richting van de volksvertegenwoordiging en de individuele recht- en bewijszoekende burger. Maar ook uit cultureel oogpunt en het belang van historisch onderzoek is een goed archiefbeheer noodzakelijk.

7.2. Inspectie Algemene Rijksarchivaris (ARA)

De ARA heeft in 1997, ter uitvoering van het in artikel 25 van de Archiefwet 1995 aan hem opgedragen toezicht op het beheer van de archiefbescheiden van de rijksorganen, een inspectie uitgevoerd bij de MID. Eind juli 1997 heeft de ARA het inspectieverslag aan minister Voorhoeve aangeboden. De minister heeft het inspectieverslag aangeboden aan de voorzitters van de Eerste en Tweede Kamer alsmede aan de voorzitter van de commissie voor de Inlichtingen- en Veiligheidsdiensten van de Tweede Kamer.

Het inspectieverslag bevat een aantal conclusies en aanbevelingen. In de conclusie schrijft de ARA dat de belangen van een goed geordend archiefbeheer in het verleden voor wat betreft de taken op het gebied van inlichtingen en veiligheid bij het ministerie van Defensie onvoldoende aandacht hebben gekregen. Dit geldt met name voor het archiefbeheer van de taakvoorgangers van de MID waarover de ARA in zijn inspectieverslag opmerkt dat vernietiging van archiefbescheiden uitgangspunt van het archiefbeheer is geweest. Een gevolg hiervan is dat de nog aanwezige archieven niet in de door de Archiefwet 1995 vereiste goede, geordende en toegankelijke staat zijn. Er bestaat geen goed overzicht van de bestaande archiefbestanden.

7.3. Plan van aanpak

Tijdens het mondelinge overleg van de vaste commissies voor Binnenlandse zaken, Defensie, Onderwijs, Cultuur en Wetenschappen van de Tweede Kamer heeft de minister een plan van aanpak gepresenteerd voor de verbetering van het archiefbeheer van de MID. De minister heeft het verbod op het vernietigen van archiefbescheiden bevestigd en opdracht gegeven tot een onderzoek naar de oorzaken van de vernietiging en alsmede tot het instellen van een institutioneel onderzoek. Daarnaast heeft de minister opdracht gegeven tot een inventarisatie van de archieven bij de MID waarna vervolgens de bewerking van de archieven zal plaatsvinden. Tenslotte werd bij de uitvoering van het plan van aanpak aangesloten bij de door de MID ingestelde werkgroepen die reeds bezig waren met het opzetten van procedures en het verbeteren van de werkwijze ten aanzien van het archiefbeheer binnen de MID en werd toegezegd dat de concept-selectielijst op korte termijn aan de staatssecretaris van OC&W zou worden aangeboden.

7.4. Verbod vernietiging

Na overleg tussen de minister, de secretaris-generaal en het hoofd MID is op 12 december 1997 door het hoofd van de MID, het personeel van de MID opgedragen dat geen enkel document tot nader order zou mogen worden vernietigd. Dit in afwachting van de goedkeuring van de Staatssecretaris van OCenW van de categorieën documenten, die wel vernietigd zouden mogen worden. Het niet nakomen van het verbod op vernietiging zou leiden tot de meest vergaande administratiefrechtelijke dan wel strafrechtelijke sancties. Alle medewerkers van de MID hebben een verklaring van bekendheid met deze opdracht getekend. Het hoofd van de MID heeft tevens de coördinator documentaire informatievoorziening belast met het houden van inspecties om de naleving van de opdracht te controleren.

7.5. Onderzoek vernietiging

Onduidelijk is welke en hoeveel archiefbescheiden zijn vernietigd. De historicus, dr. D. Engelen, werkzaam bij het ministerie van Binnenlandse Zaken, is door de minister belast met het uitvoeren van een onderzoek naar de aard en omvang van vernietiging van documenten alsmede het onderzoek naar de vraag hoe deze vernietiging heeft kunnen plaatsvinden. Het rapport van de dr. Engelen zal in 1998 aan de Tweede Kamer worden aangeboden.

7.6. Institutioneel onderzoek

Zonder institutioneel onderzoek van de MID kunnen uitspraken over de aard van het in de loop der jaren vernietigde materiaal niet worden gedaan. Een dergelijk onderzoek geeft immers aan wat gegeven de handelingen van de MID en de historische context bewaard had moeten blijven. De heer Engelen, die ook de institutionele onderzoeken heeft verricht bij de BVD en de voormalige IDB, is hier eveneens mee belast. Dit onderzoek zal eind 1998 worden afgerond en aan de Tweede Kamer worden aangeboden.

7.7. Inventarisatie archieven

De inventarisatie van de MID-archieven is opgedragen aan de Centrale Archief Selectiedienst (CAS), onderdeel van het ministerie van Binnenlandse Zaken. Hiertoe is een projectconvenant afgesloten. Het onderzoek van de CAS richt zich op de omvang, de aard, de materiële toestand en de toegankelijkheid van de archieven van de MID. Bij de inventarisatie zullen de aan de MID-gerelateerde archieven worden betrokken, dat wil zeggen de archieven van de organen, afdelingen en instellingen, die historisch of organisatorisch een relatie hebben met de MID. Over de resultaten van de inventarisatie zal de Tweede Kamer in 1998 worden geïnformeerd. Na de inventarisatie zal de CAS in 1998 beginnen met de bewerking van de archieven. Deze bewerking zal tenminste een aantal jaren vergen.

7.8. Werkgroepen

In 1997 zijn drie MID-werkgroepen bezig geweest om plannen op te stellen ter verbetering van het archiefbeheer te weten, de werkgroepen Post, Automatisering Archieven en Ontsluiting Archieven. De werkgroep Post richt zich op het standaardiseren van het postregistratiesysteem. Daarmee wordt een

einde gemaakt aan het gebruik van verschillende niet goed op elkaar afgestemde postregistratiesystemen binnen de MID. Het gaat daarbij met name om het effectiever en doelmatiger ondersteunen van het personeel dat is belast met de regulering van de interne en externe poststroom en de daarbij behorende archivering. In 1998 zal begonnen worden met de invoering van het postregistratiesysteem. De werkgroep Automatisering Archieven richt zich op de technische implementatie van het nieuwe postregistratiesysteem. Dewerkgroep Ontsluiting Archieven tenslotte richt zich op de verbetering van de toegankelijkheid van de archieven op de verschillende locaties. Daarnaast wordt aandacht besteed aan een vermindering van het aantal locaties waar zich archieven bevinden en wordt de mogelijkheid onderzocht om zoveel mogelijk te komen tot één centraal beheerd archief dat decentraal geraadpleegd kan worden.

7.9. Slot

In 1997 is verder de nodige aandacht besteed aan het opleiden van het archiefpersoneel. Eind 1997 is besloten tot het regelmatig uitbrengen van een informatiebulletin, aan de hand waarvan al het MID-personeel op de hoogte wordt gehouden van de ontwikkelingen van het archiefbeheer binnen de MID. Tenslotte is in december een aantal keren vergaderd door vertegenwoordigers van de interne archiefdienst, de ARA, de CAS, de heer Engelen en de MID. In 1998 zal het hoofd van de MID zich maandelijks door deze interne en externe deskundigen laten adviseren over de voortgang van de verbetering van het archiefbeheer en over onderwerpen, die in dat kader de aandacht vragen. In ieder geval zal advies worden gevraagd worden over de ordening en het beheer van foto- en digitale archieven. Het onderwerp digitale duurzaamheid is in dit kader van belang.

8. Organisatie, personeel en faciliteiten

8.1. Organisatie

Ten behoeve van de uitvoering van de in de vorige hoofdstukken beschreven taken en activiteiten omvat de MID uit de volgende organisatie-delen.

| | |
|----------|---|
| HMID | Hoofd Militaire Inlichtingendienst |
| CS | Chef Staf, tevens plaatsvervangend HMID |
| AI | Afdeling Inlichtingen |
| ACIV | Afdeling Contra-Inlichtingen en Veiligheid |
| AMID/KM | Afdeling Militaire Inlichtingendienst bij de Koninklijke Marine |
| AMID/KL | Afdeling Militaire Inlichtingendienst bij de Koninklijke Landmacht |
| AMID/KLu | Afdeling Militaire Inlichtingendienst bij de Koninklijke Luchtmacht |
| AVI | Afdeling Verbindingsinlichtingen |
| AO | Afdeling Operaties |

8.2. Personeel

8.2.1. *Algemeen*. Op 31 december 1997 telde de MID 807 medewerkers, waarvan 44 medewerkers een tijdelijk arbeidscontract hadden. Het aantal formatieplaatsen (functies) bedroeg 763.

8.2.2. *Opleiding en vorming*. Door MID-medewerkers zijn in 1997 cursussen gevolgd die betrekking hebben op het operationele werk. Daarnaast zijn ook cursussen gevolgd op het terrein van management en organisatie, financieel beheer, personeelsmanagement, documentaire informatievoorziening, archivering (zie hoofdstuk 7) en automatisering.

De School Militaire Inlichtingendienst (SMID) te Ede, een dienstonderdeel van de Koninklijke Landmacht, vervult een centrale rol bij de operationele opleiding van MID personeel. Een aantal medewerkers heeft ook een opleiding gevolgd op buitenlandse instituten.

8.2.3. *Medezeggenschap*. Op 15 februari 1996 ondertekende de secretaris-generaal de instellingsbeschikking voor een Buitengewone Medezeggenschapscommissie (BMC). De BMC heeft in 1997 zeven keer vergaderd. De commissie benadrukt het behoud van werk en het streven naar voorkoming van overtolligheid. In 1998 zullen verkiezingen worden gehouden voor een nieuw overlegorgaan en een dienstcommissie "MID-nieuwe stijl".

8.2.4. *Arbeidsomstandigheden*. In 1997 zijn op verschillende locaties bouwkundige maatregelen getroffen om de arbeidsomstandigheden te verbeteren. Ook zijn werkplekken anders ingericht en is in bepaalde gevallen aandacht besteed aan de werkbelasting. Begonnen is met het opstellen van een ARBO-jaarplan waardoor een meer beleidsmatige aanpak kan worden gegarandeerd.

8.2.5. *Interne veiligheid*. De MID let niet alleen op de veiligheid binnen Defensie maar ook op de veiligheid binnen de MID. Op elke locatie van de MID is een veiligheidsfunctionaris aangesteld die toezicht houdt op de juiste naleving van de veiligheidsprocedures.

8.3. Financiën

De overdracht van budgetten van de krijgsmachtdelen naar de MID is begin 1997 voltooid.

Overzicht van bestedingscijfers van de MID voor 1997 (in mln guldens)

| | |
|----------------------------|------|
| BEZOLDIGING BURGERS MID | 33,2 |
| BEZOLDIGING MILITAIREN MID | 31,3 |
| OVERIGE PERSONELE KOSTEN | 6,2 |

| | |
|------------------------------------|-------|
| MATERIEEL MID (W.O. INVESTERINGEN) | 44,7 |
| TOTAAL | 115,4 |

8.4. Informatisering en automatisering

Door de MID worden grote hoeveelheden informatie verzameld en binnen de MID geselecteerd, uitgewisseld en bewerkt. De computer is daarbij onmisbaar. Er zijn voorbereidingen getroffen voor de verwerving c.q. de bouw van een aantal geautomatiseerde systemen ten behoeve van de ondersteuning op operationeel en beheersmatig terrein. Daarnaast werd geparticipeerd in diverse projecten binnen de NAVO. De geautomatiseerde beveiliging van informatiesystemen heeft in 1997 de nodige aandacht gekregen. In 1997 is tenslotte een begin gemaakt met de inventarisatie van de millenniumproblematiek.

8.5. Huisvesting

In 1997 was de MID op 20 locaties binnen en buiten Nederland gehuisvest. Het Marineradiostation Terschelling en de locatie Alphen-Riel zijn in 1997 opgeheven. Er is begonnen met het verlaten van het complex Kalvermarkt in Den Haag. Op de Frederikkazerne zal een aantal van de afdelingen gezamenlijk worden gehuisvest. De komende jaren zal het aantal locaties afnemen.

THE NETHERLANDS AND THE EUROPEAN UNION

The first milestone on the road to the European Union (EU) was the launch of the European Coal and Steel Community (ECSC) in 1952. This was followed in 1958 by the European Economic Community (EEC) and the European Atomic Energy Community (Euratom). Today, the European Union plays a crucial part in many areas of our everyday lives. This factsheet outlines the EU's historical background, its structure, its aims, and the Netherlands' part in shaping it.

EU Member States

| Since 1952: | Joined in |
|-------------|----------------|
| Belgium | 1973: |
| France | Denmark |
| Germany | United Kingdom |
| Italy | Ireland |
| Luxembourg | |

| | Greece |
| | 1986: |
| | Portugal |
| | Spain |
| | 1995: |
| | Finland |
| | Austria |
| | Sweden |

Origins

Europe's postwar drive towards integration was inspired by the desire of its peoples to banish war from their continent. The seeds of integration were sown at the Congress of Europe, held in the *Ridderzaal* (Knights' Hall), The Hague, in May 1948. The Congress was hosted by Princess Juliana and Prince Bernhard of the Netherlands, and its participants included Winston Churchill, Charles de Gaulle, and Konrad Adenauer - the victors and the vanquished of the Second World War. They set in motion the process of ever-closer

cooperation that has given us the European Union as we know it.

From ECSC to EU

The Frenchman Jean Monnet, who was later made a "Citizen of Europe", was convinced that economic integration would lead to political union. The European Coal and Steel Community (ECSC) was launched on 1 January 1952. Control of the coal and steel industries had long been a prerequisite for any country intent on waging war. The ECSC brought these ingredients of Industrial Age warfare under common European control.

In 1958, two more European institutions were created: the European Atomic Energy Community (EAEC or Euratom) and the European Economic Community (EEC). The Dutch Minister of Foreign Affairs, J.W. Beyen, played a crucial role in setting up the EEC. In July 1967, the institutions of these three Communities merged to form the European Communities (EC). When the Maastricht Treaty came into force on 1 November 1993, the EC became the European Union (EU).

The three pillars of the EU

The European Union is an umbrella term covering three areas of integration, which are also known as the three pillars:

- the economy;
- foreign policy and security;
- justice and home affairs. >

Influence in many areas

The EU has a direct influence on many aspects of our everyday lives. It has brought us the single market and common policies in many areas including agriculture, fisheries, coal and steel production, the environment, external trade, development, and emergency relief in natural disasters.

As close to the people as possible

The basic principle for further cooperation and integration is subsidiarity, as set out in the Treaty of Maastricht. Subsidiarity means governing and taking decisions as close to the people as possible, that is, at the lowest possible level - be it local, regional, or national.

The four freedoms

In 1986 the EU Member States agreed that four freedoms must be established by 1 January 1993:

- the free movement of goods;
- the free movement of services;
- the free movement of capital, and
- the free movement of persons.

This objective was laid down in the Single European Act, and almost 300 regulations and directives (the two forms of European legislation) have been adopted to achieve them. This huge legislative programme is now almost complete, although the free movement of persons is not yet a reality throughout the EU.

The removal of trade restrictions within the EU has brought us the single market, and many regulatory measures have been taken to level the economic playing field, including measures to enforce the mutual recognition of national product requirements and prevent the formation of monopolies. There are also moves afoot to further harmonise VAT.

The EU has long pursued strong social policies to protect workers: equal pay for men and women doing the same work, for instance, was introduced as early as 1958. It also assists member states and regions with lagging economies, and it acts to safeguard public health and create employment.

The third and final phase of European Monetary Union was launched on 1 January 1999. Exchange rates were fixed, the European Central Bank opened for business, and the euro came into use for all banking transactions. Euro coins and banknotes will be introduced in January 2002. Monetary union is another incentive for effectively regulating the single market and ensuring that we all benefit from it fully.

The main institutions

The European Parliament:

represents the citizens of the EU member states.

The European Commission:

is responsible for the day-to-day administration of the EU. It is answerable to the Parliament. The Commission is the only institution with the power to initiate legislative proposals, which must be based on the EC treaties.

The Council of the European Union:

(also known as the "Council of Ministers" or "Council") has the ultimate power to adopt, amend, or reject proposals from the Commission, which it does in cooperation with the European Parliament. The Council consists of representatives of the fifteen member states (generally ministers or their deputies) and is assisted by representatives of the European Commission.

The EU member states and their votes in the Council of the European Union

Administration and democratic controls

The EU is not a state or confederation but a cooperative framework with its own distinctive character. This gives a unique structure to its legislative process, administration, and democratic controls.

The European Parliament

The European Parliament represents the citizens of the EU member states. Since 1979, it

has been directly elected. There are 626 members (MEPs), 31 representing the Netherlands. Of the Dutch MEPs, nine are from the CDA (Christian Democrats), six from the PvdA (social democrats), six from the VVD (right-leaning liberals), four from GroenLinks (former communists, pacifists, and greens), three from SGP/GPV/RPF (orthodox Protestants), two from D66 (left-leaning liberals), and one from the SP (Socialist Party). Most MEPs are affiliated to one pan-EU political party or another. Those belonging to the CDA, for instance, sit with Christian Democrats from other member states in the European People's Party (EPP). The current President of the European Parliament is the Frenchwoman Nicole Fontaine of the EPP.

The European Parliament and the Council of the European Union have joint control of the budget. The Parliament may amend spending proposals not required by the EC treaties, and the entire budget needs its approval to be adopted. The Parliament also has the casting vote in the conclusion of trade agreements and decisions about enlarging the EU.

European Parliament - 626 members

Pan-EU parties and their seats, 10 June 1999

- Party of European Socialists: 180
- European People's Party (Christian Democrats): 225
- Union for Europe: 55
- European Liberal and Democratic Party: 43
- European United Left: 35
- Greens: 37
- European Radical Alliance: 14
- Group of Independents for a Europe of Nations: 21
- Non-affiliated: 18
- Others: 36

The European Commission

The European Commission is the EU's civil service, the source of its legislation, and the source of many of its policies. It is currently headed by 20 Commissioners, appointed for five years by common agreement of the member states. The larger member states - Germany, France, the United Kingdom, Italy, and Spain - each provide two Commissioners, and the smaller ones each provide one. The Treaty of Amsterdam says that Commissioners must be nominated by the President of the Commission and their nomination approved by the European Parliament. The Commissioners are collectively responsible for all the Commission's actions and operate independently of their home governments. The Parliament has the power to dismiss the whole Commission.

The Commission is the only institution with the power to initiate legislative proposals, which must be based on the EC treaties. It also has the power to propose new policies in areas falling under the second pillar (foreign and security policy) and third pillar (justice and home affairs). It submits its proposals to the Parliament, which has to give its opinion on almost all of them before the Council of the European Union can take a decision. In many cases, if the Parliament objects to a proposal, the Council has to vote unanimously to override the objection. Once the Council and Parliament have agreed on a decision, the Commission is responsible for implementing it. The Parliament and the member states are both responsible for ensuring that decisions are carried out properly.

The Council of the European Union

The Council of the European Union consists of representatives of the fifteen member states (generally ministers or their deputies) and is assisted by representatives of the European Commission. Although it is generally referred to as "the Council", its composition varies according to the policy areas under discussion. The foreign ministers, for instance, meet at least once a month in the "General Affairs Council". Agriculture ministers meet in the "Agriculture Council", transport ministers in the "Transport Council", and so on. Council meetings in their various manifestations are held frequently and sometimes simultaneously.

The Council has the final say on whether proposals from the Commission are to be adopted, amended, or rejected - although almost all its decisions require the approval of the Parliament. Many decisions to do with economic integration can be taken by a qualified majority. There are 87 votes in all, divided among the 15 member states. Voting power is weighted, which means that the larger countries have more votes than the smaller ones. A decision by a qualified majority needs at least 62 votes from at least ten different countries; in other words, it can be blocked by 26 votes. Unanimity is required for decisions in second-pillar (foreign and security policy) and third-pillar (justice and home affairs) areas; each Member State thus has the power to veto them.

Legal and advisory bodies

The EU has several other institutions as well as the Parliament, the Commission, and the Council.

The European Court of Justice

The European Court of Justice monitors member states' compliance with the EC treaties and acts as a tribunal for EU employees.

The European Court of Auditors

The European Court of Auditors checks the regularity of EU spending and determines whether subsidies granted by the EU have been put to their intended use.

The Community Ombudsman

The Community Ombudsman deals with complaints from individuals who believe that they have been treated unfairly by an EU institution.

The Economic and Social Committee (ECOSOC)

The Economic and Social Committee consists of representatives of employer organisations, trade unions, and other interested groups. It advises the Council on social and economic legislation.

The Committee of the Regions

The Committee of the Regions consists of representatives of regions and big cities. It gives advice, on request or on its own initiative, in areas of regional interest.

The Presidency

The "President" of the European Union is not a person but the member state currently holding the Presidency of the Council of the European Union. The Presidency rotates among the member states, each holding it for six months. The presiding member state draws up the agenda for the Council, and its representatives chair Council meetings and many other meetings of officials. It also maintains close ties with all the other member states to enable it to pinpoint potential problems early and suggest compromises where possible. In addition, it represents the EU at international gatherings, often accompanied by the President of the European Commission.

The Presidency rotates

| 1998: | 2002: |
| Great Britain | Spain |
| Austria | Denmark |
| 1999: | 2003: |
| Germany | Greece |
| Finland | |

The EU summit

Every Presidency ends with a summit meeting, or "European Council", of the heads of government of 13 member states and the heads of state of two (France and Finland). The summit takes major political decisions, resolves controversial issues, and sets out the main policy items for the next six months.

Languages

There are thirteen official languages in the European Union: Danish, Dutch, English, Finnish, French, German, Greek, Irish (Gaelic), Italian, Luxemburgish, Portuguese, Spanish, and Swedish. Irish and Luxemburgish are not working languages. Only EU legislation is translated into Irish.

Locations

The EU institutions and bodies are located in three cities:

Brussels:

the Commission, the Council, the Economic and Social Committee, the Committee of the Regions, and the Parliament (committee and parliamentary party meetings and short plenary sessions).

Luxembourg

the Court of Justice, the Court of Auditors, some departments of the Commission, and the administrative seat of the European Parliament. The Council meets in Luxembourg in April, June, and October.

Strasbourg:

the Community Ombudsman and the Parliament (during its monthly five-day session).

The Netherlands and the EU

As one of the six "founding fathers" of the ECSC and the EEC, the Netherlands has been active in European integration since the very start. The removal of trade barriers and the creation of the single market are of obvious benefit to a country that relies so heavily on exports and its role as a hub of international distribution. On the eve of the Dutch Presidency of the Council in the first half of 1997, the Dutch government described the single market as one of the EU's greatest achievements.

As a small country, the Netherlands has always advocated supranational decision-making in many areas. It believes that countries must sometimes leave decision-making to organisations standing above them, guided by common rather than national interests. This makes it less likely that the in

Treaty of Amsterdam

Crucial EU decisions have been taken at two summit meetings held in the Netherlands. The Maastricht Summit in December 1991 approved the Treaty on European Union, which laid the foundations for economic and monetary union (EMU). And on 17 June 1997, the Amsterdam Summit approved the Treaty of Amsterdam, containing important reforms:

- The public now has the right to see documents originating in the Commission and the Parliament, and the Council must allow access to the minutes of its meetings on legislative proposals.
- The Parliament now has the final say in more policy areas and greater influence on appointments to the Commission.
- It is now easier to combat the fraudulent use of Community funds, since the Court of Auditors has been given greater powers to audit their management. In addition, the member states' customs services now have more scope for cooperation in combating

DE OUDE EN DE NIEUWE Wet op de Inlichtingen- en Veiligheidsdiensten

De nu bij de Tweede Kamer ingediende 'Regels met betrekking tot de inlichtingen- en veiligheidsdiensten alsmede wijziging van enkele wetten (Wet op de inlichtingen- en veiligheidsdiensten 1987) oftewel de 'nieuwe WIV' vindt zijn ontstaan in enkele schandalen. In 1984 bracht een inbraak van de actiegroep Onkruid aan het licht dat de Militaire Inlichtingendienst op grote schaal burgers bespiedde. Een door enkele van deze burgers vervolgens aanhangig gemaakte procedure leidde tot een veroordeling van de Nederlandse staat bij het Europees Hof voor de Rechten van de Mens. Geconstateerd werd dat de Nederlandse wetgeving over de diensten onvoldoende garantie bood voor de privacy van de Nederlanders. Tien jaar later werd de Inlichtingendienst Buitenland (IDB) opgeheven nadat medewerkers van de dienst via het Financieel Dagblad een complete mestvaalt van schandalen op straat hadden gekieperd. Tenslotte constateerde de parlementaire Enquêtecommissie over de opsporingsmethoden dat informatie van de inlichtingendiensten regelmatig op ongecontroleerde wijze in het opsporingsproces van justitie terecht kwam. Deze ontwikkelingen maakten een nieuwe wet onvermijdelijk. Het lijkt er nu echter op dat men van de nood een deugd maakt door de diensten een gigantische uitbreiding van bevoegdheden te geven en de bestaande bescheiden openbaarheid rond hun reilen en zeilen nog verder te beperken. Een overwegend geheim werkende controlecommissie zal daar weinig tegenin kunnen brengen. In het onderstaande overzicht wordt per wetsartikel vastgesteld wat er gaat veranderen als de voorstellen van de regering worden aangenomen. De tekst van de wetsartikelen zelf is cursief gedrukt.

1. De diensten en hun taken

Artikel 6

1. Er is een Algemene Inlichtingen- en Veiligheidsdienst.
2. Deze heeft tot taak:
 - a. het verrichten van onderzoek met betrekking tot organisaties en personen die door de doelen die zij nastreven, dan wel door hun activiteiten aanleiding geven tot het ernstige vermoeden dat zij een gevaar vormen voor het voortbestaan van de democratische rechtsorde, dan wel voor de veiligheid of andere gewichtige belangen van de staat;
 - b. het verrichten van veiligheidsonderzoeken als bedoeld in de Wet veiligheidsonderzoeken;
 - c. het bevorderen van maatregelen ter bescherming van de onder a genoemde belangen, waaronder begrepen maatregelen ter beveiliging van gegevens waarvan de geheimhouding door het belang van de

staat wordt geboden en van die onderdelen van de overheidsdienst en van het bedrijfsleven die naar het oordeel van Onze ter zake verantwoordelijke Ministers van vitaal belang zijn voor de instandhouding van het maatschappelijk leven;

d. het verrichten van onderzoek betreffende andere landen, ten aanzien van onderwerpen met een overwegend niet-militaire relevantie die door Onze Minister-President, Minister van Algemene Zaken, in overeenstemming met Onze betrokken Ministers, met het oog op het belang van de staat zijn aangewezen.

** De BVD verandert van naam en gaat Algemene Inlichtingen- en Veiligheidsdienst heten. De naamsverandering is van meer dan symbolische betekenis. Vanouds was de BVD (Binnenlandse Veiligheidsdienst) een veiligheidsdienst, een organisatie die de overheid en een aantal strategische bedrijven moest beschermen tegen infiltratie door 'staatsvijandige' groeperingen en moest voorkomen dat staatsgeheimen in verkeerde handen vielen. Natuurlijk moest de BVD om zijn werk te kunnen doen ook inlichtingen verzamelen over de groeperingen en individuen die men op het oog had. De naamsverandering suggereert ten eerste dat het verzamelen van inlichtingen over de tegenstanders van de staat meer een doel op zichzelf is geworden. Ten tweede is het de uitdrukking van de overname door de BVD van een aantal taken van de opgeheven Inlichtingendienst Buitenland (IDB), de Nederlandse versie van de CIA. Tot nu toe was het aan de BVD niet met zoveel woorden toegestaan om buitenlandse activiteiten te ontplooiën. Met de nieuwe taak onder Art. 6.2.d verandert dat. Bij de buitenlandse contacten van de BVD (de Duitse BND, de Britse MI6, de CIA) is het voor de dienst van groot belang dat zij zich als 'buitenlandse inlichtingendienst' kan afficheren om als gelijke te worden erkend.*

** Hiermee hangt samen de vervanging van de zinsnede 'verzamelen van gegevens' in de taakstelling van de BVD door de bredere term 'verrichten van onderzoek'. In de Memorie van toelichting (MvT) bij de wet (p.9) wordt deze wijziging in eerste instantie verkocht als een juistere term voor hetgeen in feite bij de dienst gebeurt. Immers de gegevens worden niet alleen verzameld, maar ook verwerkt. Men had dan ook de term 'verzamelen en verwerken van gegevens' kunnen gebruiken. De aap komt echter snel uit de mouw. Het begrip 'onderzoek' moet namelijk volgens de MvT breed worden uitgelegd, het gaat ook om het 'exploiteren van bevindingen uit het onderzoek betreffende geconstateerde bedreigingen' (p. 10). De term 'exploitatie' is binnen de studie van de inlichtingendiensten een bekend begrip. Het staat voor het overgaan tot geheime actie (covert action) door de diensten op basis van de verzamelde gegevens. In de tekst van de MvT is (bewust?) wat onduidelijk of de exploitatie nu plaatsvindt door de BVD of door de zogenaamde 'belangendragers', de organen wier belangen de BVD behartigt.*

Artikel 7

1. Er is een Militaire Inlichtingen- en Veiligheidsdienst.

2. Deze heeft tot taak:

a. het verrichten van onderzoek:

1e. omtrent het potentieel en de strijdkrachten van andere mogendheden, ten behoeve van een juiste opbouw en een doeltreffend gebruik van de krijgsmacht;

- 2e. naar factoren die van invloed zijn of kunnen zijn op de handhaving en bevordering van de internationale rechtsorde voor zover de krijgsmacht daarbij is betrokken of naar verwachting betrokken kan worden;
- b. het verrichten van veiligheidsonderzoeken als bedoeld in de Wet veiligheidsonderzoeken;
- c. het verrichten van onderzoek dat nodig is voor het treffen van maatregelen:
- 1e. ter voorkoming van activiteiten die ten doel hebben de veiligheid of paraatheid van de krijgsmacht te schaden;
- 2e. ter bevordering van een juist verloop van mobilisatie en concentratie der strijdkrachten;
- 3e. ten behoeve van een ongestoorde voorbereiding en inzet van de krijgsmacht als bedoeld in onderdeel a, onder 2e.
- d. het bevorderen van maatregelen ter bescherming van de onder c genoemde belangen, waaronder begrepen maatregelen ter beveiliging van gegevens betreffende de krijgsmacht waarvan de geheimhouding is geboden;
- e. het verrichten van onderzoek betreffende andere landen, ten aanzien van onderwerpen met een overwegend militaire relevantie die door Onze Minister-President, Minister van Algemene Zaken, in overeenstemming met Onze betrokken Ministers, met het oog op het belang van de staat zijn aangewezen.

** Ook de MID verandert van naam en zal nu Militaire Inlichtingen en Veiligheidsdienst gaan heten. In dit geval geldt dat de oude naam van de MID (Militaire Inlichtingendienst) inderdaad misleidend was omdat de dienst naast een inlichtingentaak een omvangrijke militaire veiligheidstaak had.*

** Een nieuwe taak voor de MID is het verrichten van onderzoek (ook hier de bredere term die we al bij de BVD tegenkwamen) naar factoren op het gebied van de internationale rechtsorde. Dit is een vertaling van de nieuwe activiteiten van de MID in verband met de VN-taken van het Nederlandse leger.*

** Ook de MID neemt een deel van de spionagetaken van de IDB over. Vroeger had de MID geen echte eigen buitenlandse activiteiten. Volstaan werd met het semi-legale verzamelen van inlichtingen door de militaire attachés en in het buitenland verblijvende marineschepen. Nu kan de MID beginnen met actieve spionage in het buitenland ten aanzien van doelen 'met een militaire relevantie'. Gezien de al genoemde brede betekenis van de term onderzoek kunnen de Nederlandse militairen nu zelfs legaal overgaan tot covert action in het buitenland.*

Artikel 8.1 en 2

1. Onze betrokken Minister brengt jaarlijks voor 1 mei aan beide kamers der Staten-Generaal een openbaar verslag uit van de wijze waarop de dienst zijn taken in het afgelopen jaar heeft verricht.

2. In het verslag wordt in ieder geval inzicht gegeven in:

a. de aandachtsgebieden waarop de dienst zijn activiteiten in het afgelopen jaar heeft gericht;

b. de aandachtsgebieden waarop de dienst zijn activiteiten in het lopende jaar in iedere geval zal richten.

Het jaarverslag van de BVD en (sinds dit jaar) van de MID krijgen hiermee een wettelijke basis. Het bekend zijn van de aandachtsgebieden van de diensten in samenhang met art. 13 dat regelt over welke personen gegevens mogen worden verwerkt moet de Nederlandse wetgeving in overeenstemming brengen met het Europees Verdrag voor de Rechten van de Mens.

Artikel 12.4

De gegevens die in het kader van de taakuitvoering van de diensten worden verwerkt, zijn voorzien van een aanduiding omtrent de mate van betrouwbaarheid dan wel een verwijzing naar het document of de bron waaraan de gegevens zijn ontleend.

In het verleden was de kwaliteit van de door de diensten verwerkte gegevens op zijn zachtst gezegd niet onomstreden. Giliam de Valk constateerde in zijn boek over de inlichtingenrapportages van de BVD dat er bij de chef operaties van die dienst bijvoorbeeld geen interesse bestond voor de herkomst van de gegevens van de PID's (politie-inlichtingendiensten) (1). Dat aanduidingen over de betrouwbaarheid, die internationaal behoren tot de standaardwerkwijze van inlichtingendiensten nu wettelijk moeten worden vastgelegd, zegt veel over de kwaliteit van de rapportage tot nu toe.

Artikel 13.1-4

1. De verwerking van persoonsgegevens door de Algemene Inlichtingen- en Veiligheidsdienst kan slechts betrekking hebben op personen:

a. die aanleiding geven tot het ernstige vermoeden dat zij een gevaar vormen voor de democratische rechtsorde, dan wel voor de veiligheid of voor andere gewichtige belangen van de staat;

b. die toestemming hebben verleend voor een veiligheidsonderzoek;

c. omtrent wie dat noodzakelijk is in het kader van onderzoek betreffende andere landen;

d. over wie door een andere inlichtingen- of veiligheidsdienst gegevens zijn ingewonnen;

e. wier gegevens noodzakelijk zijn ter ondersteuning van een goede taakuitvoering door de dienst;

f. die werkzaam zijn of zijn geweest voor een dienst.

2. Het eerste lid is van overeenkomstige toepassing op de Militaire Inlichtingen- en Veiligheidsdienst met dien verstande dat voor onderdeel a wordt gelezen: die aanleiding geven tot het ernstige vermoeden dat zijn een gevaar vormen voor de veiligheid of de paraatheid van de krijgsmacht.

3. De verwerking van persoonsgegevens wegens iemands godsdienst of levensovertuiging, ras, gezondheid en seksuele leven vindt niet plaats.

4. De verwerking van persoonsgegevens die betrekking hebben op de in het derde lid bedoelde kenmerken vindt slechts plaats in aanvulling op de verwerking van andere gegevens en slechts voor zover dat voor het doel van de gegevensverwerking onvermijdelijk is.

Op papier moet dit een beperking opleveren van het aantal mensen dat voorwerp van onderzoek van de diensten kan zijn. De bepaling onder lid 1.e. ontkracht dit streven onmiddellijk door zijn zeer algemene formulering. In de MvT (p. 20) wordt duidelijk gemaakt dat (net zoals tot nu toe) de enkele politieke gezindheid voldoende is voor registratie. Politieke gezindheid is dan ook niet opgenomen in de reeks uitzonderingen van lid 3. Besmuikt wordt opgemerkt dat het enkele lidmaatschap van een politieke groepering 'in overwegende mate [dus niet uitsluitend! KK] voor intern gebruik' wordt vastgelegd. Overigens wordt lid 3 zelf onmiddellijk ongedaan gemaakt door het lid 4. Want 'onvermijdelijk' is natuurlijk in de ogen van de dienst alles wat ze doen.

Uit het verslag van de vaste Kamercommissie voor Binnenlandse Zaken blijkt dat ook de fractie van D'66 grote twijfels heeft bij het huidige wetsvoorstel: 'Tot de minimale voorwaarden voor een wettelijke regeling behoort dat zij toegankelijk is voor betrokkenen en een adequate aanduiding geeft van de omstandigheden en voorwaarden waaronder inlichtingen- en veiligheidsdiensten bevoegd zijn over te gaan tot inmenging in de persoonlijke levenssfeer. De vraag moet worden gesteld of het nu voorliggende voorstel daaraan voldoet.'

2. Bevoegdheden, methoden en technieken

Als dit wetsvoorstel wordt aangenomen zullen de mogelijkheden van de diensten enorm worden uitgebreid. In het al genoemde verslag verbazen de kamerleden van GroenLinks zich over 'de presentatie van de nieuwe bevoegdhedencatalogus, alsof het hier om een eenvoudig herformuleren van bestaande of vanzelfsprekende bevoegdheden gaat. (...) De omschrijving van de bevoegdheden in dit voorstel oogt als een tamelijk complete vertaling van de wensenlijstjes die de diensten ongetwijfeld zullen hebben.' In het kader van de regeling van nieuwe bevoegdheden constateert zelfs de VVD-fractie dat 'vooralsnog alles mag, ook als het niet mag.'

Artikel 17.1

De diensten zijn bevoegd zich bij de uitvoering van hun taak voor het verzamelen van gegevens te wenden tot:

a. bestuursorganen, ambtenaren en voorts een ieder die geacht wordt de benodigde gegevens te kunnen

verstrekken.

b. de houder van een verzameling van persoonsgegevens.

In dit artikel wordt de bevoegdheid van de diensten geregeld om gegevens op te vragen bij overheidsorganen, ambtenaren en houders van persoonsregisters. In de oude wet was deze bevoegdheid beperkt tot twee gevallen. Ofwel er moest sprake zijn van een veiligheidsonderzoek, ofwel de betrokken minister en de minister van justitie moesten van tevoren vastgelegd hebben in welke gevallen de bevoegdheid mocht worden toegepast. Deze waarborg in de oude wet is in de nieuwe effectief gedemonteerd. Weliswaar hoeft, zoals in de MvT opgemerkt de houder van persoonsgegevens niet in te gaan op het verzoek (de ambtenaar dus wel! - KK), maar hij of zij moet wel sterk in de schoenen staan om een verzoek te weigeren, nu de wet zelf in deze geen enkele beperking meer stelt. In hun commentaar op het wetsontwerp vraagt ook de kamerfractie van D'66 zich af of 'nu niet een te grote verantwoordelijkheid bij de houders gelegd wordt om te beslissen of zij overgaan tot verstrekken.' In de praktijk kan het gemakkelijk leiden tot een onbegrensde snuffelarij van de diensten in allerlei bestanden. Opvallend is hier dat in tegenstelling tot enkele andere artikelen, waar de MID de instemming van het ministerie van binnenlandse zaken moet hebben om zich in de burgermaatschappij te begeven, hier ook aan de militaire snuffelarij geen enkele beperking is gesteld.

Artikel 20.1

De diensten zijn bevoegd tot:

- a. het observeren en in het kader daarvan vastleggen van gegevens betreffende gedragingen van natuurlijke personen of gegevens betreffende zaken, al dan niet met behulp van observatie- en registratiemiddelen;
- b. het volgen en in het kader daarvan vastleggen van gegevens betreffende natuurlijke personen of zaken, al dan niet met behulp van volgmiddelen, plaatsbepalingapparatuur en registratiemiddelen.

Observeren en volgen zijn natuurlijk traditionele activiteiten van de diensten. In de oude wet was niet geregeld welke methoden de diensten mochten toepassen. Als een woning moet worden betreden om observatie- en registratiemiddelen te plaatsen is toestemming van de minister nodig.

Artikel 21.1-3

1. De diensten zijn bevoegd tot;

- a. de inzet van natuurlijke personen, al dan niet onder dekmantel van een aangenomen identiteit of hoedanigheid, die onder verantwoordelijkheid en onder instructie van een dienst zijn belast met:
 - 1e. het gericht gegevens verzamelen omtrent personen en organisaties die voor de taakuitvoering van een dienst van belang kunnen zijn;

2e. het bevorderen of het treffen van maatregelen ter bescherming van door een dienst te behartigen belangen.

b. het oprichten en de inzet van rechtspersonen ter ondersteuning van operationele activiteiten.

2. Onze betrokken Minister kan daarvoor in aanmerking komende bestuursorganen schriftelijk opdragen die medewerking te verlenen die noodzakelijk is om een natuurlijke persoon als bedoeld in het eerste lid, onderdeel a, van een aan te nemen identiteit te voorzien (..).

3. De natuurlijke persoon, bedoeld in het eerste lid, onder a, kan bij instructie van de dienst tevens worden belast met het verrichten van handelingen die tot gevolg kunnen hebben dat medewerking wordt verleend aan het plegen van een strafbaar feit, dan wel een strafbaar feit wordt gepleegd. Een instructie als bedoeld in de eerste volzin wordt slechts gegeven, indien een goede taakuitvoering van de dienst dan wel de veiligheid van de betrokken natuurlijke persoon daartoe noodzaakt.

Dit artikel regelt de inzet van informanten, agenten en nepfirma's. Het verschil tussen de twee soorten 'medewerkers' is dat de informant beschikt over informatie die voor de dienst interessant is en dat een agent door de dienst wordt ingezet en gestuurd om in een positie te komen waarin hij dit soort informatie krijgt. Uiterst belangrijk is dat met name de agent ook kan worden ingezet voor het 'bevorderen of treffen van maatregelen ter bescherming van door een dienst te behartigen belangen'. Dit is een bevoegdheid tot geheime actie (covert action) die de diensten tot nu toe niet hadden, maar waarschijnlijk in de praktijk wel toepasten. Het kan variëren van 'zwarte propaganda' (die niet aan de dienst kan worden toegeschreven), via het storen van de acties van de tegenstander en contra-terreur tot en met het plegen van een staatsgreep. In dat verband is van belang dat de agenten volgens dit artikel ook strafbare feiten mogen plegen. Hieraan is in de wet geen enkele beperking gesteld. In de MvT (p. 34) wordt slechts geteld dat het plegen van moord 'evident' niet tot de mogelijkheden behoort. De tekst van nieuwe wet en MvT wijken behoorlijk af van de geldende praktijk, zoals die door de minister van binnenlandse zaken in de Kamer is verwoord. Deze is er eerder op gericht het plegen van strafbare feiten te voorkomen. Ook het toentertijd door de minister genoemde noodzakelijke overleg per geval met de bevoegde justitiële autoriteiten is niet in de wettekst opgenomen. Daar wordt nu alleen nog maar de mogelijkheid van algemene regelgeving genoemd. opmerkelijk is tenslotte dat dit een van de bevoegdheden is die kan worden uitgeoefend bij 'submandaat'. Dat betekent dat de bevoegdheid om over te gaan tot vrij ernstige strafbare feiten in opdracht van de diensten kan worden gedelegeerd aan functionarissen van lage rang.

Alles bij elkaar is dit een grote uitbreiding van de bevoegdheid van de diensten tot het voeren van geheime, illegale acties. Het lijkt erop dat hetgeen na de commissie Van Traa voor de politie minder gewenst werd geacht nu ondergebracht wordt bij de geheime diensten. Zelfs de over het algemeen over dit ontwerp tevreden Kamerfractie van de PvdA begint hier te steigeren. Ze constateren dat 'nu in beginsel alle strafbare feiten worden toegelaten' en vragen om nadere informatie. (2)

Artikel 22.1 en 3

1. De diensten zijn bevoegd tot het, al dan niet met behulp van een technisch hulpmiddel:

a. doorzoeken van besloten plaatsen;

b. doorzoeken van gesloten voorwerpen;

c. verrichten van onderzoek aan voorwerpen gericht op het vaststellen van de identiteit van een persoon.

(..)

3. Indien dit noodzakelijk is voor het onderzoek van een dienst, kan een bij de toepassing van de bevoegdheid, bedoeld in het eerste lid, aangetroffen voorwerp voor een beperkte tijd door de desbetreffende dienst worden meegenomen, voorzover onderzoek van het desbetreffende voorwerp ter plaatse van de doorzoeking onmogelijk is en de daarmee beoogde verzameling van gegevens niet op een andere, minder ingrijpende wijze kan worden bewerkstelligd. De desbetreffende voorwerpen worden zo spoedig mogelijk teruggeplaatst, tenzij het belang van een goede taakuitoefening van de dienst zich daartegen verzet of met terugplaatsing geen redelijk belang wordt gediend.

Hier wordt inbreken ('inkijkoperaties' volgens de terminologie van de commissie Van Traa) en stelen door de diensten gelegitimeerd. Dit is een bevoegdheid die de diensten tot nu toe niet hadden. Bij het betreden van een woning om in te breken dient ook hier toestemming van de minister te worden gevraagd. Tot nu toe was binnendringen in een woning door de overheid alleen legitiem met een schriftelijke last door de justitiële autoriteiten. In het wetsvoorstel kan het ook met een last van de minister of namens deze van het hoofd van de dienst gebeuren.

Artikel 23.1

De diensten zijn bevoegd tot het openen van brieven en andere geadresseerde zendingen, zonder goedvinden van de afzender of de geadresseerde, indien de rechtbank te Den Haag daartoe, op verzoek van het hoofd van de dienst, een last heeft afgegeven.

Schending van het briefgeheim, opnieuw een bevoegdheid die de diensten tot nu toe niet hadden. Als enig argument om dit voortaan wel te mogen wordt in de MvT aangegeven (p. 37) dat men E-mail wel mag lezen. Terecht vragen de kamerleden van de kleine christelijke fracties in de Tweede Kamer zich hierbij af of het ontbreken van deze bevoegdheid dan nooit als een gemis is ervaren. Of gebeurt het misschien allang en illegaal? De rol die de rechtbank in Den Haag (als tamelijk gezagsgetrouw bekend; ze behandelen de meeste rechtszaken tegen de staat) als controlerende instantie hier mag spelen is alleen opgenomen, omdat dat op dit moment nog in de Grondwet staat. Men is bezig dit laatste restje rechterlijke controle op de diensten uit de Grondwet te verwijderen en te vervangen door ministerieel toezicht.

Artikel 24.1

De diensten zijn bevoegd tot het al dan niet met gebruikmaking van technische hulpmiddelen, valse signalen, valse sleutels of valse hoedanigheid, binnendringen in een geautomatiseerd werk. (..)

Hacken, sinds enkele jaren strafbaar volgens het Wetboek van Strafrecht, maar nu niet meer voor de diensten.

Artikel 25.1

De diensten zijn bevoegd tot het met een technisch hulpmiddel gericht aftappen, opnemen en af luisteren van elke vorm van gesprek, telecommunicatie of gegevensoverdracht door middel van een geautomatiseerd werk, ongeacht waar een en ander plaatsvindt. Tot de bevoegdheid, bedoeld in de eerste volzin, behoort tevens de bevoegdheid tot het aanwenden van technische voorzieningen om versleuteling van de gesprekken, telecommunicatie of gegevensoverdracht ongedaan te maken.

Tappen, de huidige zogenaamde M-acties (microfoonacties) en T-acties (af luisteren van telefoon, fax en telex) van de BVD. Hiervoor is tot nu toe een last nodig van drie of vier ministers waaronder de premier en de minister van justitie. In de nieuwe situatie zal alleen de minister, waaronder de dienst valt, hoeven in te stemmen, een belangrijke vermindering van de controle. Een tweede belangrijke wijziging is dat, waar de MID dit tot nu toe helemaal niet mag, zij in het wetsvoorstel op gelijke voet wordt gesteld met de BVD. Alleen hebben de militairen voor af luisteren in de burgermaatschappij de instemming van de BVD nodig.

Artikel 26.1, 3 en 7

1. De diensten zijn bevoegd tot het met een technisch hulpmiddel ongericht ontvangen van niet kabelgebonden telecommunicatie. Tot de bevoegdheid, bedoeld in de eerste volzin, behoort tevens de bevoegdheid tot het aanwenden van technische hulpmiddelen om versleuteling van de telecommunicatie ongedaan te maken.

(..)

3. De gegevens die (..) zijn verzameld kunnen door de diensten worden geselecteerd aan de hand van:

- a. gegevens betreffende de identiteit van een persoon dan wel de hoedanigheid van een organisatie;
- b. een nummer als bedoeld in artikel 1, onder cc, van de Wet op de telecommunicatievoorzieningen, dan wel enig technisch kenmerk;
- c. aan een nader omschreven onderwerp gerelateerde trefwoorden.

(..)

7. Voor zover de selectie, bedoeld in het derde lid, geschiedt door de Militaire Inlichtingen- en Veiligheidsdienst ten aanzien van telecommunicatie die haar oorsprong en bestemming in Nederland

vindt, wordt de toestemming daarvoor verleend in overeenstemming met Onze Minister van Binnenlandse Zaken.

Ongericht af luisteren, met name van satellietgegevens over telefoon, telex en faxverbindingen - dit gebeurt momenteel alleen door de MID, gezien de speciale apparatuur die vereist is. De BVD krijgt deze gegevens dus via de MID binnen. Op zich hebben de diensten voor ongericht 'stofzuigen' geen enkele toestemming nodig. Voor een selectie uit dit ruwe materiaal op trefwoorden, namen, telefoonnummers etc. is toestemming van de betrokken minister vereist. Dat het hier allang niet meer alleen gaat om internationaal berichtenverkeer blijkt uit een beperking die wordt gesteld in lid 7 van dit artikel: Als de MID gegevens selecteert waarvan zowel oorsprong als bestemming zich in Nederland bevindt, moet ze toestemming vragen bij binnenlandse zaken.

Artikel 27

Regelt het opvragen van printgegevens bij de PTT en andere verzorgers van telecommunicatie. Het gaat om het opvragen van gegevens betreffende uitgaand verkeer (N-acties oftewel numerator- of notabene-acties) en binnenkomend verkeer (call-trace-acties). Hiervoor is ook nu al geen toestemming vereist en dat blijft zo. De telecommunicatiebedrijven zijn verplicht de gevraagde gegevens te verstrekken.

Artikel 28

Regelt het opvragen van abonnee-gegevens bij de verzorgers van telecommunicatiediensten. Er is geen toestemming vereist en de bedrijven zijn verplicht te verstrekken.

3. Inzage

Artikel 45.1 en 2

1. Onze betrokken Minister deelt een ieder op diens aanvraag zo spoedig mogelijk, doch uiterlijk binnen drie maanden mede of en, zo ja, welke hem betreffende persoonsgegevens door of ten behoeve van een dienst zijn verwerkt (..).

2. Voor zover een aanvraag als bedoeld in het eerste lid wordt ingewilligd, stelt Onze betrokken Minister de aanvrager zo spoedig mogelijk, doch uiterlijk binnen vier weken na bekendmaking van zijn besluit in de gelegenheid van zijn gegevens kennis te nemen. De gegevens worden door de aanvrager bij gelegenheid van de kennisneming op generlei wijze vastgelegd.

Een vorm van inzage van het eigen dossier die ver achterblijft bij hetgeen momenteel geboden wordt. Zelfs het kopierecht waarin de Raad van State momenteel geen enkel probleem ziet wordt aan de inziener onthouden.

Artikel 48.1

Onze betrokken Minister deelt een ieder op diens aanvraag zo spoedig mogelijk, doch uiterlijk binnen

drie maanden mede of kennis kan worden genomen van andere dan persoonsgegevens betreffende de in de aanvraag vermelde bestuurlijke aangelegenheid. (..)

De derdeninzage (van groot belang voor historisch en biografisch onderzoek) in persoonsgegevens wordt in dit artikel geheel onmogelijk gemaakt. Bij de andere gegevens wordt in grote lijnen de regeling van de Wet openbaarheid bestuur (Wob) gevolgd, zij het dat de termijnen waarbinnen geantwoord moet worden aanzienlijk langer zijn gesteld dan in de Wob. De kamerleden van D'66 hebben de indruk dat 'de koudwatervrees groot is en dat geheimhouding van gegevens in Nederland een aanzienlijk grotere prioriteit krijgt dan in vele andere landen.' (2)

Artikel 49.2

2. Bij het kiezen tussen de vormen van inkennisstelling houdt onze betrokken Minister rekening met de voorkeur van de aanvrager en het belang van de dienst.

Een belangrijke afwijking van de regeling over de vorm van de verstrekking in de Wob. De Wob gaat in deze uit van de voorkeur van de aanvrager. De WIV noemt als extra criterium 'het belang van de dienst'. In de praktijk zal dit gaan betekenen dat aanvragers veelal tevreden zullen moeten zijn met vage parafrasen in plaats van (eventueel van gevoelige gegevens geschoonde) kopieën van documenten.

4. Controle

Artikel 59

1. Er is een commissie van toezicht betreffende de inlichtingen- en veiligheidsdiensten.

2. De Commissie is belast met:

- a. het toezicht op de rechtmatigheid van de uitvoering van hetgeen bij of krachtens deze wet en de Wet veiligheidsonderzoeken is gesteld.
- b. het adviseren van Onze betrokken Ministers terzake van het onderzoeken en beoordelen van klachten.

De commissie zal dus alleen de rechtmatigheid van het optreden van de diensten bekijken en niet ook de doelmatigheid. De taak van de commissie bij het onderzoek van klachten is in de wet in het geheel niet uitgewerkt. Daar blijft als vanouds de ombudsman in beeld.

Artikel 60.1 en 2

1. De commissie van toezicht bestaat uit drie leden, onder wie de voorzitter.

2. De leden worden benoemd bij koninklijk besluit op voordracht van Onze betrokken Ministers

gezamenlijk voor een tijdvak van zes jaar en kunnen slechts eenmaal worden herbenoemd. Voor de benoeming van de voorzitter wordt door de vice-president van de Raad van State, de president van de Hoge Raad der Nederlanden en de Nationale ombudsman gezamenlijk een aanbeveling gedaan van drie personen.

Artikel 67

De vergaderingen van de commissie van toezicht zijn niet openbaar.

Artikel 75.1

De commissie van toezicht stelt naar aanleiding van het door haar verrichte onderzoek een toezichtsrapport op. Het toezichtsrapport is niet openbaar.

Er is hier gekozen voor een commissie die benoemd wordt vanuit de uitvoerende macht en niet voor een commissie die bestaat uit volksvertegenwoordigers of althans benoemd wordt door het parlement. De commissie vergadert in het geheim en brengt in het geheim verslag uit. Daarmee is het ondanks de bevoegdheden van de commissie (kennisname van alle inlichtingen, horen van getuigen met uitzondering van de ministers zelf, betreden van alle plaatsen met uitzondering van woningen) maar de vraag wat hiervan waargemaakt zal worden. Zo hoeven de ambtenaren van de betrokken diensten alleen een verklaring af te leggen als hun door de betrokken minister en de minister van justitie een ontheffing van de plicht tot geheimhouding is verleend. Het belangrijkste is echter dat de commissie (evenmin als de ombudsman) niet corrigerend op kan treden. Ze kan slechts aanbevelingen doen aan de minister. De leden van de D'66-fractie in de Tweede Kamer vrezen dan ook dat 'ook de nu gekozen oplossing een Europese toets der kritiek niet zal kunnen doorstaan.'

TITEL I Omvang van de werking van de strafwet

Art. 1 . - 1. Geen feit is strafbaar dan uit kracht van een daaraan voorafgegane wettelijke strafbepaling.
- 2. Bij verandering in de wetgeving na het tijdstip waarop het feit begaan is, worden de voor de verdachte gunstigste bepalingen toegepast.

Art. 2 . De Nederlandse strafwet is toepasselijk op ieder die zich in Nederland aan enig strafbaar feit schuldig maakt.

Art. 3 . De Nederlandse strafwet is toepasselijk op ieder die zich buiten Nederland aan boord van een

Nederlands vaartuig of
luchtvaartuig aan enig strafbaar feit schuldig maakt.

Art. 4 . De Nederlandse strafwet is toepasselijk op ieder die zich buiten Nederland schuldig maakt:

1° aan een der misdrijven omschreven in de artikelen 92-96 , 97a , 98-98c , 105 en 108-110 ;

2° aan een der misdrijven omschreven in de artikelen 131 tot en met 134 en 189 , indien het strafbare feit of het misdrijf waarvan in die

artikelen wordt gesproken, is een misdrijf als onder

1° bedoeld;

3° aan enig misdrijf ten opzichte van muntspeciën, munt- of bankbiljetten, van rijkswege uitgegeven zegels of rijksmerken;

4° aan valsheid in schuldbrieven of certificaten van schuld van de Nederlandse staat of van een Nederlandse provincie, gemeente of

openbare instelling, de talons, dividend- en rentebewijzen tot deze stukken behorende, en de bewijzen, uitgegeven in plaats van deze

stukken, inbegrepen, of aan het opzettelijk gebruik maken van zodanig vals of vervalst stuk als ware het echt en onvervalst;

5° aan een der misdrijven omschreven in de artikelen 216, tweede lid , 381-385 , 409 en 410 of aan de overtreding omschreven in artikel

446a ;

6° aan het misdrijf omschreven in artikel 207a ; 7°

a. aan het misdrijf omschreven in artikel 168 , begaan tegen een luchtvaartuig in bedrijf, indien dit een Nederlands luchtvaartuig is of

wanneer de verdachte zich in Nederland bevindt;

b. aan het misdrijf omschreven in artikel 385a , begaan aan boord van een luchtvaartuig in vlucht, wanneer de plaats van opstijgen of die

van de feitelijke landing gelegen is buiten het grondgebied van de staat waar het luchtvaartuig is ingeschreven en de verdachte zich in

Nederland bevindt;

c. aan het misdrijf omschreven in artikel 385b , indien het daar bedoelde luchtvaartuig een Nederlands luchtvaartuig is of wanneer de

verdachte zich in Nederland bevindt;

d. aan het misdrijf omschreven in artikel 385c , wanneer het is begaan, hetzij tegen een Nederlands luchtvaartuig, hetzij aan boord van een

luchtvaartuig dat vervolgens in Nederland landt met de verdachte aan boord.

8° aan de misdrijven omschreven in de artikelen 166 , 168 , 350 , 352 , 354 , 385a, vierde lid , 385b, tweede lid , en 385c, indien het feit is

begaan tegen een Nederlands zeegaand vaartuig, hetzij tegen of aan boord van enig ander zeegaand vaartuig en de verdachte zich in

Nederland bevindt.

9° Aan een der misdrijven omschreven in de artikelen 117 , 117a , 117b en 285 , voor zover die feiten zijn gepleegd tegen een in

Nederlandse dienst zijnde, of tot zijn gezin behorende, internationaal beschermd persoon of tegen diens

beschermde goederen en daarop
door de wet van het land, waar het begaan is, straf is gesteld.

Art. 4a . De Nederlandse strafwet is toepasselijk op ieder tegen wie de strafvervolgning door Nederland van een vreemde staat is overgenomen op grond van een verdrag waaruit de bevoegdheid tot strafvervolgning voor Nederland volgt.

Art. 5 . - 1. De Nederlandse strafwet is toepasselijk op de Nederlander die zich buiten Nederland schuldig maakt:

1° aan een der misdrijven omschreven in de Titels I en II van het Tweede Boek, en in de artikelen 197a , 197b , 197c , 206 , 237 , 272 , 273 , 388 en 389 ;

2° aan een feit hetwelk door de Nederlandse strafwet als misdrijf wordt beschouwd en waarop door de wet van het land waar het begaan is, straf is gesteld.

- 2. De vervolging kan ook plaatshebben, indien de verdachte eerst na het begaan van het feit Nederlander wordt.

Art. 6 . De Nederlandse strafwet is toepasselijk op de Nederlandse ambtenaar die zich buiten Nederland schuldig maakt aan een der misdrijven omschreven in Titel XXVIII van het Tweede Boek.

Art. 7 . De Nederlandse strafwet is toepasselijk op de schipper en de opvarenden van een Nederlands vaartuig die zich buiten Nederland, ook buiten boord, schuldig maken aan een der strafbare feiten omschreven in Titel XXIX van het Tweede Boek en Titel IX van het Derde Boek.

Art. 8 . De toepasselijkheid van de artikelen 2-7 wordt beperkt door de uitzonderingen in het volkenrecht erkend.

TITEL II Straffen

Art. 9 . - 1. De straffen zijn:

a. hoofdstraffen:

1° gevangenisstraf;

2° hechtenis;

3° het verrichten van onbetaalde arbeid ten algemenen nutte;

4° geldboete;

b. bijkomende straffen:

1° ontzetting van bepaalde rechten;

2° verbeurdverklaring;

3° openbaarmaking van de rechterlijke uitspraak.

- 2. In geval van veroordeling tot gevangenisstraf of tot hechtenis, vervangende hechtenis daaronder niet begrepen, kan de rechter tevens een geldboete opleggen.

- 3. Een bijkomende straf kan, in de gevallen waarin de wet haar oplegging toelaat, zowel afzonderlijk als te zamen met hoofdstraffen en met andere bijkomende straffen worden opgelegd.

Art. 9a . Indien de rechter dit raadzaam acht in verband met de geringe ernst van het feit, de persoonlijkheid van de dader of de omstandigheden waaronder het feit is begaan, dan wel die zich nadien hebben voorgedaan, kan hij in het vonnis bepalen dat geen straf of maatregel zal worden opgelegd.

Art. 10 . - 1. De gevangenisstraf is levenslang of tijdelijk.

- 2. De duur van de tijdelijke gevangenisstraf is ten minste een dag en ten hoogste vijftien achtereenvolgende jaren.

- 3. Zij kan voor ten hoogste twintig achtereenvolgende jaren worden opgelegd in de gevallen waarin op het misdrijf levenslange en tijdelijke gevangenisstraf ter keuze van de rechter zijn gesteld, en in die waarin wegens strafverhoging ter zake van samenloop van misdrijven, herhaling van misdrijf of het bepaalde bij artikel 44 , de tijd van vijftien jaren wordt overschreden.

- 4. Zij kan in geen geval de tijd van twintig jaren te boven gaan.

Art. 11 . Bij of krachtens wet worden regels gesteld ten aanzien van de tenuitvoerlegging van vrijheidsstraffen en vrijheidsbenemende maatregelen. Deze regels betreffen in elk geval:

a. de aanwijzing en de bestemming van inrichtingen bestemd voor deze tenuitvoerlegging;

b. de selectie van de personen ten aanzien van wie de tenuitvoerlegging van de voornoemde straffen en maatregelen plaatsvindt voor de inrichtingen;

c. het beheer van de inrichtingen en het toezicht daarop;

d. het regime in de inrichtingen;

e. gevallen waarin en de wijze waarop beperkingen op de grondrechten van de onder b omschreven personen plaats kan vinden;

f. de rechtsgang voor de onder b omschreven personen aangaande hun rakende beslissingen het regime van de inrichting betreffende alsmede aangaande hun betreffende beslissingen tot plaatsing en overplaatsing.

Art. 12 t/m 12a . Vervallen.

Art. 13 . - 1. Een veroordeelde tot gevangenisstraf die wegens de gebrekkige ontwikkeling of ziekelijke stoornis van zijn geestvermogens daarvoor in aanmerking komt, kan worden geplaatst in een justitiële inrichting voor verpleging van ter beschikking gestelden; de artikelen 37c , 37d en 37e zijn in dat geval van overeenkomstige toepassing.

- 2. Indien een veroordeelde tot gevangenisstraf tevens de maatregel van terbeschikkingstelling met bevel tot verpleging van overheidswege is opgelegd, wordt op regelmatige tijdstippen beoordeeld of de veroordeelde dient te worden geplaatst in een justitiële inrichting voor verpleging van ter beschikking gestelden. De Minister geeft nadere regels voor de frequentie van de beoordelingen, alsmede de wijze waarop de beoordelingen dienen plaats te vinden.

- 3. De plaatsing en de beëindiging daarvan geschieden volgens regels, bij algemene maatregel van bestuur te stellen, op last van de Minister van Justitie, gegeven na een met redenen omkleed, gedagtekend en ondertekend advies van ten minste twee gedragsdeskundigen van verschillende disciplines - waaronder een psychiater - die de betrokkene hebben onderzocht. Zodanig advies dient door de gedragsdeskundigen gezamenlijk dan wel door ieder van hen afzonderlijk te zijn uitgebracht.

- 4. Tegen de beslissing tot plaatsing, de beslissing tot beëindiging daarvan en de beslissing tot niet plaatsing in afwijking van het advies van de rechter overeenkomstig het bepaalde in artikel 37b, tweede lid , kan de veroordeelde binnen vier weken nadat die beslissing aan hem is medegedeeld beroep instellen bij de sectie terbeschikkingstelling van de Centrale Raad voor Strafrechtstoepassing. Het bepaalde in Hoofdstuk XVI van de Beginselenwet verpleging ter beschikking gestelden is van overeenkomstige toepassing.

- 5. De overplaatsing en het beroep daartegen van de veroordeelden geschieden overeenkomstig de regels die van toepassing zijn op de overplaatsing en het beroep daartegen van ter beschikking gestelden ten aanzien van wie een bevel tot verpleging van overheidswege als bedoeld in artikel 37b of 38c is gegeven.

Art. 13a t/m 14 . Vervallen.

Art. 14a . - 1. In geval van veroordeling tot gevangenisstraf van ten hoogste een jaar, tot hechtenis, vervangende hechtenis daaronder niet begrepen, of tot geldboete, kan de rechter bepalen dat de straf of een gedeelte daarvan niet zal worden tenuitvoergelegd.

- 2. Ingeval van veroordeling tot gevangenisstraf van meer dan een jaar en ten hoogste drie jaren kan de rechter bepalen dat een gedeelte van de straf, tot ten hoogste een derde, niet zal worden tenuitvoergelegd.

- 3. De rechter kan voorts bepalen dat opgelegde bijkomende straffen geheel of gedeeltelijk niet zullen worden tenuitvoergelegd.

Art. 14b . - 1. De rechter die bepaalt dat een door hem opgelegde straf geheel of gedeeltelijk niet zal worden tenuitvoergelegd, stelt daarbij een proeftijd vast.

- 2. De proeftijd bedraagt in de gevallen bedoeld in artikel 14c, eerste lid , en tweede lid , onder 3° en 4°, ten hoogste twee jaren en in de overige gevallen ten hoogste drie jaren.

- 3. De proeftijd gaat in:

a. indien een kennisgeving als bedoeld in artikel 366a, eerste en tweede lid , van het Wetboek van Strafvordering is uitgereikt of toegezonden, op de vijftiende dag nadat de einduitspraak is gedaan, tenzij door de tijdige aanwending van een rechtsmiddel het vonnis of arrest niet onherroepelijk is geworden;

b. indien een kennisgeving als bedoeld in artikel 366a, derde lid , van het Wetboek van Strafvordering moet worden betekend, op de vijftiende dag na die betekening, tenzij door de tijdige aanwending van een rechtsmiddel het vonnis of arrest niet onherroepelijk is geworden.

- 4. De proeftijd loopt niet gedurende de tijd dat de veroordeelde rechtens zijn vrijheid is ontnomen.

Art. 14c . - 1. Toepassing van artikel 14a geschiedt onder de algemene voorwaarde dat de veroordeelde zich voor het einde van de proeftijd niet schuldig maakt aan een strafbaar feit.

- 2. Bij toepassing van artikel 14a kunnen voorts de volgende bijzondere voorwaarden worden gesteld:
1° gehele of gedeeltelijke vergoeding van de door het strafbare feit veroorzaakte schade binnen een door de rechter te bepalen termijn, korter dan de proeftijd;

2° opneming van de veroordeelde in een inrichting ter verpleging gedurende een door de rechter te bepalen termijn, ten hoogste gelijk aan de proeftijd;

3° storting van een door de rechter vast te stellen waarborgsom, ten hoogste gelijk aan het verschil tussen het maximum van de geldboete die voor het feit kan worden opgelegd en de opgelegde boete;

4° storting van een door de rechter vast te stellen som gelds in het schadefonds geweldsmisdrijven of ten gunste van een instelling die zich ten doel stelt belangen van slachtoffers van strafbare feiten te behartigen. Het bedrag kan niet hoger zijn dan de geldboete die ten hoogste voor het strafbare feit kan worden opgelegd.

5° andere bijzondere voorwaarden, het gedrag van de veroordeelde betreffende, waaraan deze gedurende de proeftijd, of een bij de veroordeling te bepalen gedeelte daarvan, heeft te voldoen.

- 3. De bijzondere voorwaarden mogen de vrijheid van de veroordeelde zijn godsdienst of levensovertuiging te belijden en de staatkundige vrijheid niet beperken.
- 4. Bij het stellen van één van de bijzondere voorwaarden genoemd in het tweede lid, onder 3° en 4°, vinden de artikelen 23, eerste en tweede lid, en 24 overeenkomstige toepassing.

Art. 14d . - 1. Met het toezicht op de naleving van de voorwaarden is het openbaar ministerie belast.

- 2. De rechter kan aan een krachtens algemene maatregel van bestuur aangewezen reclasseringsinstelling dan wel aan een bijzondere reclasseringsambtenaar opdracht geven de veroordeelde bij de naleving van de voorwaarden hulp en steun te verlenen.

Art. 14e . Vervallen.

Art. 14f . - 1. De rechter die de voorwaarde heeft gesteld kan hetzij na de ontvangst van een vordering van het openbaar ministerie, hetzij op verzoek van de veroordeelde de proeftijd verkorten of deze éénmaal verlengen. De verlenging geschiedt met ten hoogste één jaar.

- 2. Evenzo kan de in het eerste lid bedoelde rechter gedurende de proeftijd of gedurende de tijd dat deze is geschorst in de gestelde bijzondere voorwaarden of in de termijn waartoe deze voorwaarden in haar werking binnen de proeftijd zijn beperkt wijziging brengen, deze voorwaarden opheffen, alsnog bijzondere voorwaarden stellen en een opdracht als bedoeld in artikel 14d geven, wijzigen of opheffen.

Art. 14g . - 1. Indien enige gestelde voorwaarde niet wordt nageleefd kan de rechter, indien hij daartoe termen vindt, na ontvangst van een vordering van het openbaar ministerie en onverminderd het bepaalde in artikel 14f, 1° gelasten dat de niet ten uitvoergelegde straf alsnog zal worden tenuitvoergelegd; 2° al of niet onder instandhouding of wijziging van de voorwaarden gelasten dat een gedeelte van de niet tenuitvoergelegde straf alsnog zal worden tenuitvoergelegd.

- 2. In geval de rechter overweegt een last te geven tot tenuitvoerlegging van een vrijheidsstraf, of van een gedeelte daarvan, van niet meer dan zes maanden, kan hij in de plaats daarvan het verrichten van onbetaalde arbeid, bedoeld in artikel 9, eerste lid, sub a, onder 3, gelasten. De artikelen 22c tot en met 22j zijn van overeenkomstige toepassing, met dien verstande dat het totaal aantal uren te verrichten arbeid dat terzake van het strafbare feit kan worden opgelegd ten hoogste tweehonderdenveertig bedraagt.

- 3. Tot behandeling van de vordering is bevoegd de rechter die de straf heeft opgelegd. Indien de veroordeelde wordt vervolgd wegens

een strafbaar feit, begaan voor het einde van de proeftijd, is tot behandeling van de vordering bevoegd:

- a. de arrondissementsrechtbank, indien deze bevoegd is tot kennisneming in eerste aanleg van het feit,
- b. de kantonrechter, indien deze bevoegd is tot kennisneming van dat feit en van feiten, terzake waarvan de veroordeling, waarop de vordering betrekking heeft, is uitgesproken. De vordering wordt in dat geval ingediend door het openbaar ministerie belast met de vervolging van het feit en kan slechts bij gelegenheid van een veroordeling terzake worden toegewezen. Strekt de vordering tot de tenuitvoerlegging van gevangenisstraf van meer dan zes maanden, dan wordt zij niet door een enkelvoudige kamer van de rechtbank behandeld.

- 4. Wanneer overeenkomstig artikel 14c, tweede lid , onder 3^o, een waarborgsom is gestort kan de rechter voorts een beslissing nemen, krachtens welke die som geheel of ten dele aan de Staat vervalt.

- 5. De in het eerste en tweede lid bedoelde vordering wordt gedagtekend op de dag van ontvangst ter griffie. Het openbaar ministerie is in zijn vordering niet ontvankelijk wanneer zij later wordt ingediend dan drie maanden na het verstrijken der proeftijd.

Art. 14h . - 1. In de gevallen in de artikelen 14f en 14g bedoeld brengt het openbaar ministerie de zaak aan door de indiening van een met redenen omklede vordering. Is door de veroordeelde een verzoek tot toepassing van artikel 14f tot de rechter gericht, dan dient het openbaar ministerie ten spoedigste nadat het verzoekschrift in zijn handen is gesteld een met redenen omklede conclusie in.

- 2. Onmiddellijk na de indiening van de vordering of de conclusie bepaalt de rechter, tenzij de summiere kennisneming van de stukken hem aanleiding geeft om de vordering of het verzoek buiten behandeling te laten, een dag voor het onderzoek van de zaak. In het geval, bedoeld in artikel 14g, derde lid , tweede volzin, geschiedt de behandeling van de vordering gelijktijdig met de behandeling van het feit waarvoor de veroordeelde wordt vervolgd.

- 3. Het openbaar ministerie doet de veroordeelde en degene die met het verlenen van hulp en steun was belast tot bijwoning van het onderzoek oproepen, onder betekening van de vordering of de conclusie aan de veroordeelde.

- 4. Zowel het openbaar ministerie als de veroordeelde is bevoegd getuigen en deskundigen te doen dagvaarden of schriftelijk te doen oproepen om bij het onderzoek tegenwoordig te zijn. De artikelen 260 en 263 van het Wetboek van Strafvordering vinden overeenkomstige toepassing.

- 5. De veroordeelde en degene die met het verlenen van hulp en steun is belast kunnen vóór de aanvang van het onderzoek van de stukken kennis nemen. Hetzelfde geldt ten aanzien van de raadsman van de veroordeelde of, indien de

zaak bij de kantonrechter wordt behandeld, ten aanzien van een bijzonder daartoe door de veroordeelde gemachtigde. Het bepaalde bij en krachtens artikel 34 van het Wetboek van Strafvordering is van overeenkomstige toepassing.

Art. 14i . - 1. Het onderzoek vindt plaats ter openbare terechtzitting.

- 2. Het openbaar ministerie is bij het onderzoek tegenwoordig en wordt terzake gehoord.

- 3. De veroordeelde en degene die met het verlenen van hulp en steun is belast kunnen bij het onderzoek tegenwoordig zijn en worden

alsdan gehoord. De veroordeelde kan zich door een raadsman of, indien de zaak bij de kantonrechter wordt behandeld, door een bijzonder

daartoe door de veroordeelde gemachtigde, doen bijstaan.

- 4. In gevallen waarin de behandeling van de zaak niet gelijktijdig geschiedt met de behandeling van een feit waarvoor de veroordeelde

wordt vervolgd, vinden de artikelen 260, eerste lid , 268, tweede lid , 269 tot en met 277 , 278, tweede lid , 281 , 284, eerste lid , 286 , 287,

tweede en `BREAK="INLINE"` derde lid , 288 , 289, eerste , tweede en derde lid , 290 tot en met 297 , 299 , 300 , 301 , 309 , 310 , 311 , 315 ,

316 , 318 , 319 , 320, eerste en tweede lid , 321 , 322 , 324 , 326 tot en met 329 , 331 , 345, eerste en derde lid , en 346 van het Wetboek van

Strafvordering overeenkomstige toepassing.

- 5. De in het vierde lid genoemde artikelen vinden geen toepassing voor zover deze betrekking hebben op een getuige wiens identiteit niet of slechts ten dele blijkt.

- 6. Gedurende het onderzoek kan het openbaar ministerie zijn ingediende vordering of conclusie en de veroordeelde zijn verzoek

wijzigen.

Art. 14j . - 1. Rechterlijke beslissingen omtrent vorderingen van het openbaar ministerie of verzoeken van de veroordeelde zijn met

redenen omkleed en worden in het openbaar uitgesproken. Zij zijn, voor zover zij geen deel uitmaken van uitspraken terzake van andere

strafbare feiten, niet aan enig rechtsmiddel onderworpen.

- 2. De inhoud van de in het eerste lid bedoelde beslissingen wordt onverwijld vanwege het openbaar ministerie schriftelijk medegedeeld

aan de veroordeelde en aan degene die met het verlenen van hulp en steun is belast, zomede aan degene die bij de beslissing daarvan

wordt ontheven. Indien de beslissing een wijziging van de bijzondere voorwaarden bevat of daarbij alsnog bijzondere voorwaarden zijn

gesteld wordt de mededeling aan de veroordeelde in persoon betekend.

Art. 14k . - 1. Wanneer overeenkomstig artikel 14c, tweede lid , onder 3°, een waarborgsom is gestort, wordt deze aan de veroordeelde

teruggegeven, voor zover die som niet krachtens een rechterlijke beslissing, als bedoeld in artikel 14g, derde lid, aan de Staat is vervallen.

De teruggave geschiedt zodra vaststaat dat zodanige beslissing niet meer kan worden genomen, onverminderd de bevoegdheid van de rechter om, op vordering van het openbaar ministerie of op verzoek van de veroordeelde, te bevelen dat gehele of gedeeltelijke teruggave op een eerder tijdstip zal plaats hebben.

- 2. In geval van een vordering of verzoek als bedoeld in het vorige lid vinden de artikelen 14h-14j overeenkomstige toepassing.

- 3. De aanspraak op teruggave is niet overdraagbaar.

Art. 14l . Vervallen.

Art. 15 . - 1. De veroordeelde tot vrijheidsstraf waarvan het onvoorwaardelijk ten uitvoer te leggen gedeelte ten hoogste een jaar bedraagt wordt vervroegd in vrijheid gesteld wanneer de vrijheidsbeneming ten minste zes maanden heeft geduurd en van het alsdan nog ten uitvoer te leggen gedeelte van de straf een derde gedeelte is ondergaan.

- 2. De veroordeelde tot tijdelijke vrijheidsstraf waarvan het onvoorwaardelijk ten uitvoer te leggen gedeelte meer dan een jaar bedraagt

wordt vervroegd in vrijheid gesteld wanneer hij twee derde gedeelte daarvan heeft ondergaan.

- 3. Voor de toepassing van de vorige leden wordt de tijd die door de veroordeelde voor de tenuitvoerlegging van de uitspraak in verzekering, in voorlopige hechtenis of in detentie in het buitenland ingevolge een Nederlands verzoek om uitlevering is doorgebracht onder de termijn begrepen, tenzij die tijd, met toepassing van artikel 68, eerste lid, laatste volzin, van het Wetboek van Strafvordering reeds in mindering is gebracht op een andere straf die de veroordeelde heeft ondergaan.

- 4. Het eerste lid is van overeenkomstige toepassing indien op grond van artikel 14g, eerste lid, de tenuitvoerlegging van het geheel of een gedeelte van een vrijheidsstraf is gelast.

- 5. Indien de veroordeelde meer dan één vrijheidsstraf geheel of gedeeltelijk heeft te ondergaan, worden deze zo enigszins mogelijk

aaneensluitend ten uitvoergelegd. In dat geval worden de tenuitvoer te leggen gedeelten gezamenlijk, met uitzondering van vervangende

hechtenis, als één vrijheidsstraf aangemerkt, waarop dit artikel en artikel 15a toepasselijk zijn.

- 6. De artikelen 570 en 570a van het Wetboek van Strafvordering zijn toepasselijk.

Art. 15a . - 1. Vervroegde invrijheidstelling kan worden uitgesteld of achterwege blijven indien:

a. de veroordeelde op grond van de gebrekkige ontwikkeling of ziekelijke stoornis van zijn geestvermogens is geplaatst in een inrichting

voor verpleging van ter beschikking gestelden en zijn verpleging voortzetting behoeft;

b. de veroordeelde onherroepelijk is veroordeeld terzake van een misdrijf waarvoor ingevolge artikel 67,

eerste lid , van het Wetboek van

Strafvordering voorlopige hechtenis is toegelaten en dat is begaan na de aanvang van de tenuitvoerlegging van zijn straf;

c. is gebleken dat de veroordeelde zich anderszins na de aanvang van de tenuitvoerlegging van zijn straf zeer ernstig heeft misdragen;

d. de veroordeelde na de aanvang van de tenuitvoerlegging van zijn straf zich hieraan onttrekt of hiertoe een poging doet.

- 2. Indien het openbaar ministerie, met de tenuitvoerlegging van de straf belast, van oordeel is dat er op een der gronden genoemd in het eerste lid reden is een vervroegde invrijheidstelling met een bepaalde termijn uit te stellen of achterwege te laten, richt het onverwijld een daartoe strekkende schriftelijke vordering tot het gerechtshof te Arnhem. De vordering bevat de grond waarop zij berust. Een afschrift van de vordering wordt toegezonden aan de veroordeelde.

- 3. In de gevallen als bedoeld in het vijfde lid van artikel 15 komt deze bevoegdheid toe aan het openbaar ministerie bij het gerecht waarvan de uitspraak het laatst in kracht van gewijsde is gegaan, dan wel aan het openbaar ministerie bij het gerecht, dat de langste ten uitvoer te leggen vrijheidsstraf heeft opgelegd.

- 4. De in het tweede lid bedoelde vordering dient uiterlijk dertig dagen vóór het tijdstip waarop vervroegde invrijheidstelling ingevolge het vorige artikel zou moeten plaats vinden te zijn ontvangen op de griffie van het gerechtshof. Het openbaar ministerie is in een later ingediende vordering ontvankelijk indien het aannemelijk maakt dat een omstandigheid als bedoeld in het eerste lid zich eerst nadien heeft voorgedaan.

- 5. Vervroegde invrijheidstelling kan tevens worden uitgesteld of achterwege blijven, indien de feiten of omstandigheden als genoemd in het eerste lid, onder b, c en d, zich hebben voorgedaan gedurende de periode die ingevolge artikel 27, eerste lid , op de gevangenisstraf in mindering wordt gebracht.

Art. 15b . - 1. Bij zijn vordering zendt het openbaar ministerie de daarop betrekking hebbende stukken aan het gerechtshof toe. De voorzitter van het gerechtshof bepaalt daarop onverwijld een dag voor het onderzoek van de zaak, tenzij hij vaststelt dat het openbaar ministerie in zijn vordering niet kan worden ontvangen. Indien zulks niet wordt vastgesteld, stelt de griffier een afschrift van de vordering

en van de daarop betrekking hebbende stukken de procureur-generaal bij het gerechtshof ter hand.

- 2. Hangende de beslissing van het gerechtshof op de vordering wordt de veroordeelde niet vervroegd in vrijheid gesteld.

- 3. Indien niet blijkt dat de veroordeelde een raadsman heeft, geeft de voorzitter op verzoek van de veroordeelde aan het bureau

rechtsbijstandvoorziening last tot toevoeging van een raadsman. De veroordeelde en zijn raadsman kunnen voor de aanvang van het onderzoek van de stukken kennis nemen. Het bepaalde bij en krachtens artikel 34 van het Wetboek van Strafvordering is van overeenkomstige toepassing.

- 4. Zowel de procureur-generaal als de veroordeelde is bevoegd getuigen en deskundigen te doen dagvaarden of schriftelijk te doen oproepen om bij het onderzoek tegenwoordig te zijn. De artikelen 260 en 263 van het Wetboek van Strafvordering vinden overeenkomstige toepassing. Het gerechtshof kan ambtshalve ook andere personen horen.
- 5. Het onderzoek vindt plaats ter openbare terechtzitting. De veroordeelde wordt in de gelegenheid gesteld bij de behandeling van zijn zaak tegenwoordig te zijn en zich door zijn raadsman te doen bijstaan. De procureur-generaal is bij het onderzoek aanwezig en wordt terzake gehoord.
- 6. De artikelen 268, tweede lid , 269 , 270 , 271, eerste lid , 272 , 273, eerste en tweede lid , 277 , 281 , 284, eerste lid , 287, tweede en derde lid , 288, eerste , tweede en vierde lid , 289, eerste , tweede en derde lid , 290 tot en met 297 , 315 , 319 , 320, eerste en tweede lid , 321 , 322 , 324 , 326 tot en met 331 , 345, eerste en derde lid , en 346 van het Wetboek van Strafvordering vinden overeenkomstige toepassing.
- 7. De in het zesde lid genoemde artikelen vinden geen toepassing voor zover deze betrekking hebben op een getuige wiens identiteit niet of slechts ten dele blijkt.

Art. 15c . - 1. Indien het gerechtshof de vordering van het openbaar ministerie toewijst, verleent het machtiging de veroordeelde op het in de vordering aangegeven tijdstip in vrijheid te stellen. Het openbaar ministerie is bevoegd te vorderen dat vervroegde invrijheidstelling, waarvan uitstel is gelast, wederom wordt uitgesteld of niet plaats vindt, indien zich na de aanvankelijke beslissing opnieuw een omstandigheid heeft voorgedaan als bedoeld in het eerste lid van artikel 15a.

- 2. Indien het gerechtshof de vordering geheel of gedeeltelijk afwijst, bepaalt het op welk tijdstip de veroordeelde vervroegd in vrijheid gesteld zal worden.
- 3. De beslissing van het gerechtshof omtrent een vordering is met redenen omkleed en wordt in het openbaar uitgesproken. Vanwege de procureur-generaal wordt zij onverwijld aan het openbaar ministerie dat de vordering instelde en aan de veroordeelde ter kennis gebracht.
- 4. Tegen de beslissing van het gerechtshof staat geen rechtsmiddel open.

Art. 15d . In gevallen waarin het gerechtshof een vordering geheel of gedeeltelijk afwijst kan het op verzoek van de veroordeelde hem een vergoeding ten laste van de Staat toekennen voor de schade die hij heeft geleden ten gevolge van vrijheidsbeneming, ondergaan uit hoofde van het tweede lid van artikel 15b . De artikelen 89, eerste lid , tweede volzin, derde , vierde en vijfde lid , 90 en 93 van het Wetboek van Strafvordering zijn van overeenkomstige toepassing.

Art. 15e t/m 15h . Vervallen.

Art. 16 . Voorschriften tot nadere regeling van het verlenen van hulp en steun aan veroordeelden worden vastgesteld bij of krachtens algemene maatregel van bestuur.

Art. 17 t/m 17a . Vervallen.

Art. 18 . - 1. De duur van de hechtenis is ten minste een dag en ten hoogste een jaar.
- 2. Zij kan voor ten hoogste een jaar en vier maanden worden opgelegd in de gevallen waarin wegens strafverhoging ter zake van samenloop, herhaling van misdrijf of het bepaalde bij artikel 44 , de tijd van een jaar wordt overschreden.
- 3. Zij kan in geen geval de tijd van een jaar en vier maanden te boven gaan.

Art. 19 . Artikel 13 is op de tot hechtenis of vervangende hechtenis veroordeelde van overeenkomstige toepassing.

Art. 20 . Vervallen.

Art. 21 . De duur van de tijdelijke gevangenisstraf en de hechtenis wordt in de rechterlijke uitspraak aangewezen in dagen, weken, maanden en jaren, niet in gedeelten daarvan.

Art. 22 . Vervallen.

Art. 22a . Het hoofd van het Departement van Justitie is bevoegd in bijzondere omstandigheden in het belang van de veiligheid van de staat te bepalen, dat vrijheidsstraffen buiten het Rijk in Europa ten uitvoer worden gelegd.

Art. 22b . - 1. In geval de rechter een onvoorwaardelijke vrijheidsstraf van niet meer dan zes maanden overweegt op te leggen dan wel een vrijheidsstraf, waarvan het onvoorwaardelijk ten uitvoer te leggen gedeelte niet meer dan zes maanden bedraagt, kan hij in plaats

daarvan het verrichten van onbetaalde arbeid ten algemenen nutte opleggen.

- 2. De straf van het verrichten van onbetaalde arbeid kan de rechter slechts opleggen indien hij zich ervan heeft vergewist dat op korte termijn een instelling of persoon bereid zal zijn de veroordeelde de arbeid te doen verrichten.

Art. 22c . - 1. De straf van het verrichten van onbetaalde arbeid kan de rechter slechts opleggen na een daartoe strekkend aanbod van de verdachte.

- 2. Het aanbod dient in ieder geval te vermelden de aard van de te verrichten werkzaamheden.

Art. 22d . - 1. Het vonnis vermeldt de vrijheidsstraf die de rechter overwoog op te leggen, en de straf van het verrichten van onbetaalde arbeid die hiervoor in de plaats komt.

- 2. Het vermeldt daarbij in ieder geval:

a. het aantal uren te verrichten arbeid;

b. de termijn binnen welke de arbeid, nadat het vonnis onherroepelijk is geworden, moet aanvangen en de termijn binnen welke de arbeid na aanvang dient te worden verricht;

c. de aard van de te verrichten werkzaamheden.

- 3. Het aantal uren te verrichten arbeid bedraagt ten hoogste tweehonderdenveertig. De termijn binnen welke de arbeid moet worden verricht is in geval de arbeid minder dan honderdentwintig uur bedraagt, ten hoogste zes maanden en in geval de arbeid meer dan honderdentwintig uur bedraagt, ten hoogste een jaar, tenzij het openbaar ministerie met toepassing van artikel 22f, eerste lid , de opgelegde straf heeft gewijzigd.

- 4. De straf wordt niet opgelegd dan met instemming van de verdachte.

Art. 22e . Over de wijze waarop de arbeid wordt of is verricht, kan het openbaar ministerie, naar regelen te stellen bij algemene maatregel van bestuur, inlichtingen inwinnen bij lichamen en personen die werkzaam zijn op het gebied van de reclassering. Artikel 147 van het Wetboek van Strafvordering is van overeenkomstige toepassing.

Art. 22f . - 1. Het openbaar ministerie kan de opgelegde straf wijzigen voor wat betreft de onderdelen bedoeld in artikel 22d, tweede lid , onder b en c, indien het van oordeel is dat de veroordeelde de arbeid niet geheel overeenkomstig de opgelegde straf, kan of heeft kunnen verrichten. Het benadert daarbij zo veel mogelijk de opgelegde straf.

- 2. Het openbaar ministerie zendt hiervan zo spoedig mogelijk een kennisgeving aan de veroordeelde. De kennisgeving behelst het aantal uren arbeid dat naar het oordeel van het openbaar ministerie is verricht, alsmede de straf zoals deze voor het overige nader is vastgesteld.

- 3. Tegen de kennisgeving bedoeld in het tweede lid kan de veroordeelde binnen acht dagen een bezwaarschrift indienen bij de rechter die de straf oplegde. De rechter kan dan de beslissing van het openbaar ministerie wijzigen. Het eerste lid is van overeenkomstige toepassing.

Art. 22g . De rechter die de straf oplegde kan op vordering van het openbaar ministerie, indien hij van oordeel is dat de veroordeelde de opgelegde straf niet naar behoren verricht of heeft verricht en indien hij daartoe termen vindt, alsnog de vrijheidsstraf in de plaats waarvan de opgelegde straf blijkens het vonnis werd opgelegd, opleggen en de gehele of gedeeltelijke tenuitvoerlegging daarvan gelasten. Hij houdt daarbij rekening met het deel van de te verrichten arbeid dat wel naar behoren is verricht.

Art. 22h . Op de behandeling van het bezwaarschrift van de veroordeelde ingevolge artikel 22f, derde lid , of op de behandeling van de vordering ingevolge artikel 22g , zijn de artikelen 14h tot en met 14j van overeenkomstige toepassing.

Art. 22i . Het openbaar ministerie kan een beslissing bedoeld in artikel 22f, eerste lid , slechts nemen, of een vordering bedoeld in artikel 22g , slechts instellen gedurende de termijn bedoeld in artikel 22d, tweede lid , onder b, waarbinnen de arbeid dient te zijn voltooid, of binnen drie maanden na afloop van deze termijn.

Art. 22j . - 1. Indien naar het oordeel van het openbaar ministerie de opgelegde arbeid naar behoren is verricht, stelt het zo spoedig mogelijk de veroordeelde hiervan in kennis.
- 2. Het openbaar ministerie kan daarna geen gebruik meer maken van zijn bevoegdheid genoemd in de artikelen 22f, eerste lid , en 22g .

Art. 23 . - 1. Hij die tot een geldboete is veroordeeld is verplicht tot betaling van het bij de rechterlijke uitspraak vastgestelde bedrag aan de staat binnen de termijn door het openbaar ministerie dat met de tenuitvoerlegging van het vonnis of arrest is belast, te stellen.

- 2. Het bedrag van de geldboete is ten minste vijf gulden.

- 3. De geldboete die voor een strafbaar feit ten hoogste kan worden opgelegd, is gelijk aan het bedrag van de categorie die voor dat feit is bepaald.

- 4. Er zijn zes categorieën: de eerste categorie, vijfhonderd gulden; de tweede categorie, vijfduizend gulden; de derde categorie, tienduizend gulden; de vierde categorie, vijftienduizend gulden; de vijfde categorie, honderdduizend gulden; de zesde categorie, één

miljoen gulden.

- 5. Voor een overtreding, onderscheidenlijk een misdrijf, waarop geen geldboete is gesteld, kan de rechter een geldboete opleggen tot ten hoogste het bedrag van de eerste, onderscheidenlijk de derde categorie.
- 6. Voor een overtreding, onderscheidenlijk een misdrijf, waarop een geldboete is gesteld, maar waarvoor geen boetecategorie is bepaald, kan de rechter een geldboete opleggen tot ten hoogste het bedrag van de eerste, onderscheidenlijk de derde categorie, indien dit bedrag hoger is dan het bedrag van de op het betrokken strafbare feit gestelde geldboete.
- 7. Bij veroordeling van een rechtspersoon kan, indien de voor het feit bepaalde boetecategorie geen passende bestraffing toelaat, een geldboete worden opgelegd tot ten hoogste het bedrag van de naast hogere categorie.
- 8. Het voorgaande lid is van overeenkomstige toepassing bij veroordeling van een vennootschap zonder rechtspersoonlijkheid, maatschap of doelvermogen.

Art. 24 . Bij de vaststelling van de geldboete houdt de rechter rekening met de draagkracht van de verdachte in de mate waarin hij dat nodig acht met het oog op een passende bestraffing van de verdachte zonder dat deze in zijn inkomen en vermogen onevenredig wordt getroffen.

Art. 24a . - 1. Indien bij het vonnis een of meer geldboeten zijn opgelegd tot een bedrag van ten minste vijfhonderd gulden, is de rechter bevoegd bij de uitspraak te bepalen, dat de veroordeelde het bedrag in gedeelten mag voldoen. Elk van die gedeelten wordt daarbij op ten minste honderd gulden bepaald.

- 2. In geval van toepassing van het eerste lid stelt de rechter bij de uitspraak tevens termijnen vast voor de betaling van het tweede en - zo de geldboete in meer gedeelten mag worden voldaan - de volgende gedeelten.

- 3. Deze termijnen worden op ten minste één en ten hoogste drie maanden gesteld. Zij mogen te zamen een tijdvak van twee jaar niet overschrijden.

Art. 24b . - 1. Wanneer een ingevolge een onherroepelijke veroordeling tot geldboete te betalen bedrag binnen de daarvoor gestelde termijn niet in zijn geheel is voldaan, wordt de veroordeelde door het openbaar ministerie schriftelijk tot betaling aangemaand. Het bedrag wordt dan van rechtswege verhoogd met vijftientig gulden. Het openbaar ministerie wijst de veroordeelde op het bepaalde in het tweede lid.

- 2. Is het overeenkomstig het eerste lid verhoogde bedrag na verloop van de bij de aanmaning gestelde termijn geheel of ten dele

onbetaald gebleven, dan wordt het bedrag, dan wel het nog verschuldigde gedeelte daarvan, van rechtswege verder verhoogd met een vijfde, doch ten minste met vijftig gulden.

- 3. Een geldboete die krachtens een rechterlijke beslissing overeenkomstig artikel 24a in gedeelten mag worden voldaan, of ten aanzien waarvan het openbaar ministerie betaling in termijnen heeft toegestaan, is onmiddellijk in haar geheel opeisbaar, zodra een verhoging krachtens het eerste lid is ingetreden.
- 4. In gevallen waarin het openbaar ministerie, nadat de veroordeelde reeds in verzuim was, alsnog uitstel van betaling heeft verleend, dan wel afbetaling heeft toegestaan, vinden de voorgaande leden van dit artikel geen toepassing, zolang de veroordeelde zijn verplichtingen volgens de getroffen nadere regeling nakomt.
- 5. Betalingen door de veroordeelde gedaan, worden geacht in de eerste plaats tot voldoening van de krachtens het eerste en tweede lid ingetreden verhogingen te strekken.

Art. 24c . - 1. Bij de uitspraak waarbij geldboete wordt opgelegd, beveelt de rechter voor het geval dat noch volledige betaling noch

volledig verhaal van het verschuldigde bedrag volgt, dat vervangende hechtenis zal worden toegepast.

Indien de veroordeelde een

rechtspersoon is, blijft dit bevel achterwege. Artikel 51 , laatste lid, is van overeenkomstige toepassing.

- 2. De duur van de vervangende hechtenis wordt in gehele dagen, weken of maanden vastgesteld.
- 3. De vervangende hechtenis belooft ten minste één dag en ten hoogste een jaar. Voor elke volle vijftig gulden van de geldboete wordt niet meer dan één dag opgelegd.
- 4. Wanneer een gedeelte van het verschuldigde bedrag is voldaan, vermindert de duur van de vervangende hechtenis naar evenredigheid. Heeft deze vermindering tot gevolg dat voor een gedeelte van een dag vervangende hechtenis zou moeten worden ondergaan, dan vindt afronding naar boven plaats tot het naaste aantal gehele dagen.
- 5. Het vorige lid is ook van toepassing in gevallen waarin de betaling geschiedt nadat reeds een deel van de vervangende hechtenis ten uitvoer is gelegd.

Art. 24d . - 1. Bij de uitspraak waarbij een natuurlijk persoon de verplichting is opgelegd tot betaling van een geldbedrag aan de staat ter

ontneming van wederrechtelijk verkregen voordeel, beveelt de rechter voor het geval dat noch volledige betaling noch volledig verhaal

van het verschuldigde bedrag volgt, dat vervangende hechtenis zal worden toegepast, met dien verstande dat vervangende hechtenis op

grond van dit artikel op te leggen op ten hoogste zes jaren kan worden bepaald.

- 2. De duur van deze vervangende hechtenis wordt niet verminderd door het voldoen van slechts een

gedeelte van het verschuldigde bedrag.

Art. 24e . Op de tenuitvoerlegging van vervangende hechtenis is het bepaalde in artikel 15 niet van toepassing.

Art. 25 . Vervallen.

Art. 26 . De gevangenisstraf en de hechtenis gaan, voor zover elk van deze straffen betreft, in:

- a. ten aanzien van veroordeelden die zich in voorlopige hechtenis bevinden ter zake van het feit waarvoor zij veroordeeld zijn, op de dag waarop de rechterlijke uitspraak in kracht van gewijsde is gegaan;
- b. ten aanzien van andere veroordeelden, op de dag van de tenuitvoerlegging van de rechterlijke uitspraak.

Art. 27 . - 1. Bij het opleggen van tijdelijke gevangenisstraf, hechtenis of de straf van het verrichten van onbetaalde arbeid ten algemenen nutte beveelt de rechter, dat de tijd die door de veroordeelde vóór de tenuitvoerlegging van de uitspraak in verzekering, in voorlopige hechtenis, in een psychiatrisch ziekenhuis of een inrichting voor klinische observatie bestemd ingevolge een bevel tot observatie of in detentie in het buitenland ingevolge een Nederlands verzoek om uitlevering is doorgebracht, bij de uitvoering van die straf geheel in mindering zal worden gebracht. Indien hij dit bevel geeft terzake van het verrichten van onbetaalde arbeid, bepaalt hij in zijn uitspraak volgens welke maatstaf de aftrek zal geschieden. Het vorenstaande blijft buiten toepassing voor zover die tijd reeds met toepassing van artikel 68, eerste lid , laatste volzin, van het Wetboek van Strafvordering in mindering is gebracht op een andere vrijheidsstraf die de veroordeelde heeft ondergaan.

- 2. Bij het berekenen van de in mindering te brengen tijd geldt de eerste dag van de verzekering als een volle dag en blijft de dag waarop zij is geëindigd buiten beschouwing.
- 3. De rechter kan een overeenkomstig bevel geven bij het opleggen van geldboete. Indien hij dit bevel geeft, bepaalt hij in zijn uitspraak volgens welke maatstaf de aftrek zal geschieden.
- 4. De voorgaande leden van dit artikel zijn ook van toepassing in gevallen waarin, bij gelijktijdige vervolging wegens twee of meer feiten, de veroordeling wordt uitgesproken ter zake van een ander feit dan dat waarvoor de verzekering of de voorlopige hechtenis is bevolen.

Art. 27a . De tijd die door de tot gevangenisstraf of hechtenis veroordeelde in het buitenland in detentie

is doorgebracht ingevolge een Nederlands verzoek om uitlevering ten behoeve van de tenuitvoerlegging of verdere tenuitvoerlegging van deze straf, komt daarop in mindering.

Art. 27bis t/m 27quater . Vervallen.

Art. 28 . - 1. De rechten waarvan de schuldige, in de bij de wet bepaalde gevallen, bij rechterlijke uitspraak kan worden ontzet, zijn:

1° het bekleden van ambten of van bepaalde ambten;

2° het dienen bij de gewapende macht;

3° het recht de leden van algemeen vertegenwoordigende organen te verkiezen en tot lid van deze organen te worden verkozen;

4° het zijn van raadsman of gerechtelijk bewindvoerder;

5° de uitoefening van bepaalde beroepen.

- 2. Ontzetting van leden van de rechterlijke macht die, hetzij voor hun leven, hetzij voor een bepaalde tijd, zijn aangesteld, of van andere

voor hun leven aangestelde ambtenaren, geschiedt, ten opzichte van het ambt waartoe zij aldus zijn aangesteld, alleen in de gevallen en op

de wijze bij de wet bepaald.

- 3. Ontzetting van het recht bedoeld in het eerste lid, onder 3°, kan alleen worden uitgesproken bij veroordeling tot gevangenisstraf van ten minste een jaar.

Art. 29 . Ontzetting van het recht om ambten of bepaalde ambten te bekleden en bij de gewapende macht te dienen kan, behalve in de gevallen in het Tweede Boek omschreven, worden uitgesproken bij veroordeling wegens enig ambtsmisdrijf of wegens enig misdrijf waardoor de schuldige een bijzondere ambtsplicht schond of waarbij hij gebruik maakte van macht, gelegenheid of middel hem door zijn ambt geschonken.

Art. 30 . Vervallen.

Art. 31 . - 1. Wanneer ontzetting van rechten wordt uitgesproken, bepaalt de rechter de duur als volgt:

1° bij veroordeling tot levenslange gevangenisstraf, voor het leven;

2° bij veroordeling tot tijdelijke gevangenisstraf of tot hechtenis, voor een tijd de duur van de hoofdstraf ten minste twee en ten hoogste vijf

jaren te boven gaande;

3° bij veroordeling tot geldboete, voor een tijd van ten minste twee en ten hoogste vijf jaren;

4° bij afzonderlijke oplegging, voor een tijd van ten minste twee en ten hoogste vijf jaren.

- 2. De ontzetting van het recht vermeld in artikel 28, eerste lid , onder 3°, gaat in op de dag dat de

veroordeling daartoe onherroepelijk is geworden. De ontzetting van een van de andere in artikel 28, eerste lid, vermelde rechten gaat in op de dag waarop de rechterlijke uitspraak kan worden ten uitvoer gelegd.

Art. 32 . Vervallen.

Art. 33 . - 1. Verbeurdverklaring kan worden uitgesproken bij veroordeling wegens enig strafbaar feit.
- 2. Artikel 24 is van overeenkomstige toepassing.

Art. 33a . - 1. Vatbaar voor verbeurdverklaring zijn:
a. voorwerpen die aan de veroordeelde toebehoren of die hij geheel of ten dele ten eigen bate kan aanwenden en die geheel of grotendeels door middel van het strafbare feit zijn verkregen;
b. voorwerpen met betrekking tot welke het feit is begaan;
c. voorwerpen met behulp van welke het feit is begaan of voorbereid;
d. voorwerpen met behulp van welke de opsporing van het misdrijf is belemmerd;
e. voorwerpen die tot het begaan van het misdrijf zijn vervaardigd of bestemd;
f. zakelijke rechten op of persoonlijke rechten ten aanzien van de onder a tot en met e bedoelde voorwerpen.

- 2. Voorwerpen als bedoeld in het eerste lid onder a tot en met e die niet aan de veroordeelde toebehoren kunnen alleen verbeurd worden verklaard indien:
a. degene aan wie zij toebehoren bekend was met hun verkrijging door middel van het strafbare feit of met het gebruik of de bestemming in verband daarmee, dan wel die verkrijging, dat gebruik of die bestemming redelijkerwijs had kunnen vermoeden, of
b. niet is kunnen worden vastgesteld aan wie zij toebehoren.

- 3. Rechten als bedoeld in het eerste lid, onder f, die niet aan de veroordeelde toebehoren kunnen alleen verbeurd worden verklaard indien degene aan wie zij toebehoren bekend was met de verkrijging van de voorwerpen waarop of ten aanzien waarvan deze rechten bestaan, door middel van het strafbare feit of met het gebruik of de bestemming in verband daarmee, danwel die verkrijging, dat gebruik of die bestemming redelijkerwijs had kunnen vermoeden.

- 4. Onder voorwerpen worden verstaan alle zaken en alle vermogensrechten.

Art. 33b . In de verbeurdverklaring van een voorwerp is begrepen die van de verpakking waarin het zich bevindt, tenzij de rechter het tegendeel bepaalt.

Art. 33c . - 1. Bij de verbeurdverklaring van voorwerpen kan de rechter voor het geval waarin de

verbeurd verklaarde voorwerpen meer

zouden opbrengen dan een in de uitspraak vastgesteld bedrag, bevelen dat het verschil wordt vergoed.

- 2. De rechter kent een vergoeding, als bedoeld in het eerste lid, of een geldelijke tegemoetkoming toe wanneer dit nodig is om te

voorkomen dat de verdachte, of een ander aan wie de verbeurd verklaarde voorwerpen toebehoren, onevenredig zou worden getroffen.

- 3. De rechter bepaalt aan wie het bedrag van de vergoeding of tegemoetkoming wordt uitbetaald; zulks laat ieders recht op dit bedrag onverlet.

Art. 34 . - 1. Niet in beslag genomen voorwerpen worden, bij verbeurdverklaring, in de uitspraak op een bepaald geldelijk bedrag

geschat.

- 2. De voorwerpen moeten in dit geval worden uitgeleverd of de geschatte waarde moet worden betaald.

- 3. De artikelen 24b, 24c en 25 vinden overeenkomstige toepassing.

Art. 35 . - 1. De kosten van gevangenisstraf en hechtenis komen, voor zover niet bij of krachtens enige wet anders is bepaald, ten laste

van de Staat.

- 2. Al hetgeen wordt verkregen uit geldboeten en verbeurdverklaringen komt ten bate van de Staat.

Art. 36 . - 1. In de gevallen waarin de rechter krachtens de wet de openbaarmaking van zijn uitspraak gelast, bepaalt hij tevens de wijze

waarop aan die last uitvoering wordt gegeven.

- 2. De kosten van openbaarmaking worden in de uitspraak op een bepaald bedrag geschat.

- 3. De artikelen 24b, 24c en 25 vinden overeenkomstige toepassing.

TITEL II A Maatregelen

EERSTE AFDELING Onttrekking aan het verkeer, ontneming van het wederrechtelijk verkregen voordeel en schadevergoeding

Art. 36a . Alle kosten van tenuitvoerlegging van de in deze afdeling bedoelde maatregelen - met uitzondering van de kosten van het

verhaal, de invorderingskosten daaronder begrepen, - komen ten laste, al hetgeen door die tenuitvoerlegging wordt verkregen, komt ten

bate van de staat, met uitzondering van hetgeen door de tenuitvoerlegging van de maatregel, genoemd in artikel 36f , wordt verkregen.

Art. 36b . - 1. Onttrekking aan het verkeer van in beslag genomen voorwerpen kan worden uitgesproken:

1° bij de rechterlijke uitspraak waarbij iemand wegens een strafbaar feit wordt veroordeeld;

- 2° bij de rechterlijke uitspraak waarbij overeenkomstig artikel 9a wordt bepaald dat geen straf zal worden opgelegd;
 - 3° bij de rechterlijke uitspraak waarbij, niettegenstaande vrijspraak of ontslag van alle rechtsvervolging, wordt vastgesteld dat een strafbaar feit is begaan;
 - 4° bij een afzonderlijke rechterlijke beschikking op vordering van het openbaar ministerie.
- 2. De artikelen 33b en 33c, tweede en derde lid, alsmede artikel 446 van het Wetboek van Strafvordering, zijn van overeenkomstige toepassing.
- 3. De maatregel kan te zamen met straffen en met andere maatregelen worden opgelegd.

Art. 36c . Vatbaar voor onttrekking aan het verkeer zijn alle voorwerpen:

- 1° die geheel of grotendeels door middel van of uit de baten van het feit zijn verkregen;
- 2° met betrekking tot welke het feit is begaan;
- 3° met behulp van welke het feit is begaan of voorbereid;
- 4° met behulp van welke de opsporing van het feit is belemmerd;
- 5° die tot het begaan van het feit zijn vervaardigd of bestemd; een en ander voor zover zij van zodanige aard zijn, dat het ongecontroleerde bezit daarvan in strijd is met de wet of met het algemeen belang.

Art. 36d . Vatbaar voor onttrekking aan het verkeer zijn bovendien de aan de dader of verdachte toebehorende voorwerpen van zodanige aard dat het ongecontroleerde bezit daarvan in strijd is met de wet of met het algemeen belang, welke bij gelegenheid van het onderzoek naar het door hem begane feit, dan wel het feit waarvan hij wordt verdacht, zijn aangetroffen, doch alleen indien de voorwerpen kunnen dienen tot het begaan of de voorbereiding van soortgelijke feiten, dan wel tot de belemmering van de opsporing daarvan.

Art. 36e . - 1. Op vordering van het openbaar ministerie kan bij een afzonderlijke rechterlijke beslissing aan degene die is veroordeeld wegens een strafbaar feit de verplichting worden opgelegd tot betaling van een geldbedrag aan de staat ter ontneming van wederrechtelijk verkregen voordeel.

- 2. De verplichting kan worden opgelegd aan de in het eerste lid bedoelde persoon die voordeel heeft verkregen door middel van of uit de baten van het daar bedoelde strafbare feit of soortgelijke feiten of feiten waarvoor een geldboete van de vijfde categorie kan worden opgelegd, waaromtrent voldoende aanwijzingen bestaan dat zij door hem zijn begaan.

- 3. Op vordering van het openbaar ministerie kan bij een afzonderlijke rechterlijke beslissing aan degene die is veroordeeld wegens een misdrijf, waarvoor een geldboete van de vijfde categorie kan worden opgelegd, en tegen wie als verdachte van dat misdrijf een

- strafrechtelijk financieel onderzoek is ingesteld, de verplichting worden opgelegd tot betaling van een geldbedrag aan de staat ter ontneming van wederrechtelijk verkregen voordeel, indien gelet op dat onderzoek aannemelijk is dat ook andere strafbare feiten er op enigerlei wijze toe hebben geleid dat de veroordeelde wederrechtelijk voordeel heeft verkregen.
- 4. De rechter stelt het bedrag vast waarop het wederrechtelijk verkregen voordeel wordt geschat. Onder voordeel is de besparing van kosten begrepen. De waarde van voorwerpen die door de rechter tot het wederrechtelijk verkregen voordeel worden gerekend, kan worden geschat op de marktwaarde op het tijdstip van de beslissing of door verwijzing naar de bij openbare verkoop te behalen opbrengst, indien verhaal moet worden genomen. De rechter kan het te betalen bedrag lager vaststellen dan het geschatte voordeel.
 - 5. Onder voorwerpen worden verstaan alle zaken en alle vermogensrechten.
 - 6. Bij de bepaling van de omvang van het bedrag waarop het wederrechtelijk verkregen voordeel wordt geschat, worden aan benadeelde derden in rechte toegekende vorderingen in mindering gebracht.
 - 7. Bij de oplegging van de maatregel wordt rekening gehouden met uit hoofde van eerdere beslissingen opgelegde verplichtingen tot betaling van een geldbedrag ter ontneming van wederrechtelijk verkregen voordeel.

Art. 36f . - 1. Bij een rechterlijke uitspraak waarbij iemand wegens een strafbaar feit wordt veroordeeld, kan hem de verplichting worden opgelegd tot betaling aan de staat van een som geld ten behoeve van het slachtoffer. De staat keert een ontvangen bedrag onverwijld uit aan het slachtoffer.

- 2. De rechter kan de maatregel opleggen indien en voor zover de verdachte jegens het slachtoffer naar burgerlijk recht aansprakelijk is voor de schade die door het strafbare feit is toegebracht.
- 3. De maatregel kan te zamen met straffen en andere maatregelen worden opgelegd.
- 4. De artikelen 24a en 24b, eerste tot en met vierde lid , zijn van overeenkomstige toepassing, met dien verstande dat de verhoging van het ingevolge de maatregel verschuldigde bedrag vervalt aan de staat.
- 5. Betalingen door de veroordeelde aan de staat verricht, strekken in de eerste plaats tot voldoening van de maatregel en vervolgens tot voldoening van de krachtens het vierde lid ingetreden verhogingen.
- 6. De artikelen 24c en 771, tweede tot en met zesde lid , zijn van overeenkomstige toepassing, met dien verstande dat de toepassing van de vervangende hechtenis of vervangende jeugddetentie de verplichting ingevolge de maatregel tot schadevergoeding ten behoeve van het slachtoffer niet opheft.

TWEEDE AFDELING Plaatsing in een psychiatrisch ziekenhuis en terbeschikkingstelling

- Art. 37 . - 1.** De rechter kan gelasten dat degene aan wie een strafbaar feit wegens de gebrekkige ontwikkeling of ziekelijke stoornis van zijn geestvermogens niet kan worden toegerekend, in een psychiatrisch ziekenhuis zal worden geplaatst voor een termijn van een jaar, doch alleen indien hij gevaarlijk is voor zichzelf, voor anderen, of voor de algemene veiligheid van personen of goederen.
- 2. De rechter geeft een last als bedoeld in het eerste lid slechts nadat hij zich een met redenen omkleed, gedagtekend en ondertekend advies heeft doen overleggen van ten minste twee gedragsdeskundigen van verschillende disciplines - waaronder een psychiater - die de betrokkene hebben onderzocht. Zodanig advies dient door de gedragsdeskundigen gezamenlijk dan wel door ieder van hen afzonderlijk te zijn uitgebracht. Indien dit advies eerder dan een jaar voor de aanvang van de terechtzitting is gedagtekend kan de rechter hiervan slechts gebruik maken met instemming van het openbaar ministerie en de verdachte.
- 3. Het tweede lid blijft buiten toepassing indien de betrokkene weigert medewerking te verlenen aan het onderzoek dat ten behoeve van het advies moet worden verricht. Voor zover mogelijk maken de gedragsdeskundigen gezamenlijk dan wel ieder van hen afzonderlijk over de reden van de weigering rapport op. De rechter doet zich zoveel mogelijk een ander advies of rapport, dat hem over de wenselijkheid of noodzakelijkheid van een last als bedoeld in het eerste lid kan voorlichten en aan de totstandkoming waarvan de betrokkene wel bereid is om medewerking te verlenen, overleggen.

- Art. 37a . - 1.** De verdachte bij wie tijdens het begaan van het feit gebrekkige ontwikkeling of ziekelijke stoornis van de geestvermogens bestond, kan op last van de rechter ter beschikking worden gesteld indien:
- 1° het door hem begane feit een misdrijf is waarop naar de wettelijke omschrijving een gevangenisstraf van vier jaren of meer is gesteld dan wel behoort tot een der misdrijven omschreven in de artikelen 132 , 285, eerste lid , 318 , 326a en 395 van het Wetboek van Strafrecht, 175, tweede lid , van de Wegenverkeerswet 1994, 11, tweede lid van de Opiumwet, of de overtreding is omschreven in artikel 432 onder 3° van het Wetboek van Strafrecht, en
- 2° de veiligheid van anderen, dan wel de algemene veiligheid van personen of goederen het opleggen van die maatregel eist.
- 2. Bij toepassing van het vorige lid kan de rechter afzien van het opleggen van straf, ook indien hij bevindt dat het feit wel aan de verdachte kan worden toegerekend.
- 3. Het tweede en derde lid van artikel 37 zijn van overeenkomstige toepassing.
- 4. Bij het geven van een last als bedoeld in het eerste lid neemt de rechter de inhoud van de overige

adviezen en rapporten die over de persoonlijkheid van de verdachte zijn uitgebracht, alsmede de ernst van het begane feit of de veelvuldigheid van voorafgegane veroordelingen wegens misdrijf in aanmerking.

Art. 37b . - 1. De rechter kan bevelen dat de ter beschikking gestelde van overheidswege wordt verpleegd, indien de veiligheid van anderen dan wel de algemene veiligheid van personen of goederen de verpleging eist.

- 2. Indien de rechter naast de maatregel van terbeschikkingstelling met bevel tot verpleging van overheidswege een gevangenisstraf heeft opgelegd kan de rechter in zijn uitspraak een advies opnemen omtrent het tijdstip waarop de terbeschikkingstelling met verpleging van overheidswege dient aan te vangen.

Art. 37c . - 1. Bij of krachtens de wet worden regels gesteld ten aanzien van de verpleging van overheidswege en de rechtspositie van de ter beschikking gestelden.

- 2. De Minister van Justitie ziet erop toe, dat de ter beschikking gestelde die van overheidswege wordt verpleegd de nodige behandeling krijgt. Hij kan met betrekking tot bepaalde verpleegden aan het hoofd van de inrichting bijzondere aanwijzingen geven in het belang van de veiligheid van anderen of de algemene veiligheid van personen of goederen.

Art. 37d . - 1. Ter beschikking gestelden kunnen worden verpleegd in door de Minister van Justitie aangewezen:

- a. particuliere inrichtingen, in beheer bij een in Nederland gevestigde rechtspersoon;
- b. rijksinrichtingen.

- 2. De verpleging geschiedt bij voorkeur in een particuliere inrichting.

Art. 37e . De kosten van de verpleging en behandeling van ter beschikking gestelden komen, voor zover niet bij of krachtens enige wet anders is bepaald, ten laste van de Staat.

Art. 37f t/m 37j . Vervallen.

Art. 38 . - 1. Indien de rechter niet een bevel als bedoeld in artikel 37b geeft, stelt hij ter bescherming van de veiligheid van anderen dan wel de algemene veiligheid van personen of goederen voorwaarden betreffende het gedrag van de ter beschikking gestelde. De rechter

kan tevens een in de uitspraak aangewezen instelling, die aan bepaalde, bij of krachtens algemene maatregel van bestuur te stellen, eisen voldoet opdracht geven de ter beschikking gestelde bij de naleving van de voorwaarden hulp en steun te

verlenen.

- 2. Indien bij de uitspraak tevens een vrijheidsstraf wordt opgelegd, kan deze in het in het eerste lid van dit artikel bedoelde geval ten hoogste op drie jaar worden bepaald.
- 3. Een voorwaarde als bedoeld in het eerste lid kan de rechter slechts stellen, indien de ter beschikking gestelde zich bereid heeft verklaard tot naleving van de voorwaarde.

Art. 38a . - 1. De voorwaarden bedoeld in het eerste lid van artikel 38 kunnen inhouden dat de ter beschikking gestelde zich in een door de rechter aangewezen inrichting laat opnemen, zich onder behandeling stelt van een in de uitspraak aangewezen deskundige, of door de behandelend arts voorgeschreven geneesmiddelen inneemt dan wel gedooft dat deze door de behandelend arts aan hem worden toegediend.

- 2. Bij of krachtens algemene maatregel van bestuur kunnen regels worden gesteld omtrent de eisen waaraan een door de rechter aan te wijzen inrichting moet voldoen.
- 3. Het openbaar ministerie houdt toezicht op de naleving van de gestelde voorwaarden.
- 4. De in artikel 38, eerste lid , bedoelde voorwaarden mogen de vrijheid de godsdienst of levensovertuiging te belijden en de staatkundige vrijheid niet beperken.

Art. 38b . De rechter kan, op vordering van het openbaar ministerie of op verzoek van de ter beschikking gestelde of diens raadsman, met inachtneming van het bepaalde in de voorgaande artikelen van deze afdeling:

- 1° de voorwaarden aanvullen, wijzigen of opheffen;
- 2° aan een andere instelling dan die welke daarmede tevoren was belast het verlenen van hulp en steun bij de naleving van de voorwaarden opdragen.

Art. 38c . De rechter kan, op vordering van het openbaar ministerie, indien een gestelde voorwaarde niet wordt nageleefd of anderszins het belang van de veiligheid van anderen dan wel de algemene veiligheid van personen of goederen zulks eist bevelen dat de ter beschikking gestelde alsnog van overheidswege zal worden verpleegd.

Art. 38d . - 1. De terbeschikkingstelling geldt voor de tijd van twee jaar, te rekenen van de dag waarop de rechterlijke uitspraak waarbij zij is opgelegd onherroepelijk is geworden.

- 2. De termijn van de terbeschikkingstelling kan, behoudens het bepaalde in artikel 38e of artikel 38j , door de rechter, op vordering van het openbaar ministerie, telkens hetzij met een jaar hetzij met twee jaar worden verlengd, indien de

veiligheid van anderen, dan wel de algemene veiligheid van personen of goederen die verlenging eist. Een tweede verlenging is slechts mogelijk wanneer een bevel als bedoeld in artikel 37b of artikel 38c is gegeven.

Art. 38e . - 1. De totale duur van de maatregel van terbeschikkingstelling gaat een periode van vier jaar niet te boven, tenzij de terbeschikkingstelling is opgelegd ter zake van een misdrijf dat gericht is tegen of gevaar veroorzaakt voor de onaantastbaarheid van het lichaam van een of meer personen.

- 2. Indien de totale duur van de terbeschikkingstelling niet in tijd is beperkt, kan de termijn van de terbeschikkingstelling telkens worden verlengd, wanneer de veiligheid van anderen, dan wel de algemene veiligheid van personen die verlenging eist.

Art. 38f . - 1. De termijn van de terbeschikkingstelling loopt niet:

a. gedurende de tijd dat aan de ter beschikking gestelde uit anderen hoofde rechtens zijn vrijheid is ontnomen en gedurende de tijd dat hij

zich aan zodanige vrijheidsontneming heeft onttrokken;

b. wanneer de ter beschikking gestelde zich langer dan een week achtereen ongeoorloofd ophoudt buiten de inrichting voor verpleging van ter beschikking gestelden waarin hij krachtens een bevel als bedoeld in artikel 37b of artikel 38c is opgenomen;

c. wanneer de ter beschikking gestelde zich langer dan een week achtereen ongeoorloofd ophoudt buiten een inrichting waarin hij krachtens een voorwaarde als bedoeld in artikel 38a, eerste lid , is opgenomen.

- 2. In afwijking van het bepaalde in het eerste lid, aanhef en onder a, loopt de termijn van de terbeschikkingstelling wel indien de ter beschikking gestelde:

a. krachtens een last als bedoeld in artikel 13 of ingevolge het bepaalde bij en krachtens de Penitentiaire beginselenwet in een inrichting voor verpleging van ter beschikking gestelden of in een ander psychiatrisch ziekenhuis is opgenomen, tenzij hij zich langer dan een week achtereen ongeoorloofd ophoudt buiten die inrichting of dat ziekenhuis;

b. nadat de termijn van de terbeschikkingstelling een aanvang heeft genomen, in een psychiatrisch ziekenhuis is opgenomen, tenzij hij zich langer dan een week achtereen ongeoorloofd ophoudt buiten dat ziekenhuis.

Art. 38g . - 1. De verpleging van overheidswege kan bij de beslissing tot verlenging van de terbeschikkingstelling voor de tijd van een jaar door de rechter ambtshalve, op vordering van het openbaar ministerie of op verzoek van de ter beschikking gestelde of zijn raadsman voorwaardelijk worden beëindigd.

- 2. De rechter kan ter bescherming van de veiligheid van anderen dan wel de algemene veiligheid van personen of goederen voorwaarden betreffende het gedrag van de ter beschikking gestelde stellen. De artikelen 38, eerste lid , tweede volzin en derde lid en 38a zijn van overeenkomstige toepassing.
- 3. De in het tweede lid, bedoelde voorwaarden mogen de vrijheid de godsdienst of levensovertuiging te belijden en de staatkundige vrijheid niet beperken.

Art. 38h . - 1. Onverminderd het bepaalde in artikel 38g, eerste lid , kan, indien het proefverlof van een ter beschikking gestelde ten minste twaalf maanden onafgebroken heeft voortgeduurd, zonder dat in deze periode de terbeschikkingstelling is verlengd, de rechter op vordering van het openbaar ministerie of op verzoek van de ter beschikking gestelde of diens raadsman de verpleging van overheidswege voorwaardelijk beëindigen.

- 2. In zodanig geval beëindigt de rechter de verpleging van overheidswege voorwaardelijk voor de duur van het gegeven bevel tot terbeschikkingstelling.

- 3. De artikelen 509p , 509r , 509s , 509t, eerste en vijfde lid , en 509u bis van het Wetboek van Strafvordering zijn van overeenkomstige toepassing.

Art. 38i . De rechter kan ambtshalve, op vordering van het openbaar ministerie of op verzoek van de ter beschikking gestelde of diens

raadsman, met inachtneming van het bepaalde in de voorgaande artikelen van deze afdeling:

1° de voorwaarden aanvullen, wijzigen of opheffen;

2° aan een andere instelling dan die welke daarmede tevoren was belast het verlenen van hulp en steun bij de naleving van voorwaarden opdragen.

Art. 38j . - 1. In geval van voorwaardelijke beëindiging van de verpleging van overheidswege kan de terbeschikkingstelling telkens met een jaar worden verlengd.

- 2. De totale duur van de voorwaardelijke beëindiging van de verpleging bedraagt ten hoogste drie jaren.

- 3. Indien de in het tweede lid bedoelde termijn is verstreken, zonder dat een last tot hervatting van de verpleging van overheidswege als bedoeld in artikel 38k is gegeven, eindigt de terbeschikkingstelling van rechtswege.

Art. 38k . De rechter kan, op vordering van het openbaar ministerie, een last tot hervatting van de verpleging van overheidswege geven, indien:

1° een gestelde voorwaarde niet wordt nageleefd of

2° het belang van de veiligheid van anderen dan wel van de algemene veiligheid van personen of goederen zulks eist, of

3° wanneer toepassing is gegeven aan artikel 38e , het belang van de veiligheid van anderen dan wel de algemene veiligheid van personen
zulks eist.

Art. 381 . - 1. Een terbeschikkingstelling vervalt bij het onherroepelijk worden van een rechterlijke uitspraak waarbij dezelfde persoon wederom ter beschikking wordt gesteld.

- 2. Een last tot plaatsing in een psychiatrisch ziekenhuis vervalt bij het onherroepelijk worden van een rechterlijke uitspraak waarbij ten aanzien van dezelfde persoon wederom een last tot plaatsing in een psychiatrisch ziekenhuis is gegeven.

- 3. Een last tot plaatsing in een psychiatrisch ziekenhuis eindigt van rechtswege bij het onherroepelijk worden van een rechterlijke uitspraak waarbij ten aanzien van dezelfde persoon een terbeschikkingstelling met bevel tot verpleging van overheidswege dan wel een last tot hervatting van zodanig bevel is gegeven.

TITEL III Uitsluiting en verhoging van strafbaarheid

Art. 39 . Niet strafbaar is hij die een feit begaat, dat hem wegens de gebrekkige ontwikkeling of ziekelijke stoornis van zijn geestvermogens niet kan worden toegerekend.

Art. 39bis a t/m 39decies . Vervallen.

Art. 40 . Niet strafbaar is hij die een feit begaat waartoe hij door overmacht is gedrongen.

Art. 41 . - 1. Niet strafbaar is hij die een feit begaat, geboden door de noodzakelijke verdediging van eigen of eens anders lijf, eerbaarheid of goed tegen ogenblikkelijke, wederrechtelijke aanranding.

- 2. Niet strafbaar is de overschrijding van de grenzen van noodzakelijke verdediging, indien zij het onmiddellijk gevolg is geweest van een hevige gemoedsbeweging, door de aanranding veroorzaakt.

Art. 42 . Niet strafbaar is hij die een feit begaat ter uitvoering van een wettelijk voorschrift.

Art. 43 . - 1. Niet strafbaar is hij die een feit begaat ter uitvoering van een ambtelijk bevel, gegeven door het daartoe bevoegde gezag.

- 2. Een onbevoegd gegeven ambtelijk bevel heft de strafbaarheid niet op, tenzij het door de ondergeschikte te goeder trouw als bevoegd

gegeven werd beschouwd en de nakoming daarvan binnen de kring van zijn ondergeschiktheid was gelegen.

Art. 44 . Indien een ambtenaar door het begaan van een strafbaar feit een bijzondere ambtsplicht schendt of bij het begaan van een strafbaar feit gebruik maakt van macht, gelegenheid of middel hem door zijn ambt geschonken, kan de op het feit gestelde straf, met uitzondering van geldboete, met een derde worden verhoogd.

TITEL IV Poging en voorbereiding

Art. 45 . - 1. Poging tot misdrijf is strafbaar, wanneer het voornemen van de dader zich door een begin van uitvoering heeft geopenbaard.

- 2. Het maximum van de hoofdstraffen op het misdrijf gesteld wordt bij poging met een derde verminderd.

- 3. Geldt het een misdrijf waarop levenslange gevangenisstraf is gesteld, dan wordt gevangenisstraf opgelegd van ten hoogste vijftien jaren.

- 4. De bijkomende straffen zijn voor poging dezelfde als voor het voltooide misdrijf.

Art. 46 . - 1. Voorbereiding van een misdrijf waarop naar de wettelijke omschrijving een gevangenisstraf van acht jaren of meer is gesteld is strafbaar, wanneer de dader opzettelijk voorwerpen, stoffen, gelden of andere betaalmiddelen, informatiedragers, ruimten of vervoermiddelen kennelijk bestemd tot het in vereniging begaan van dat misdrijf verwerft, vervaardigt, invoert, doorvoert, uitvoert of voorhanden heeft.

- 2. Het maximum van de hoofdstraffen op het misdrijf gesteld wordt bij voorbereiding met de helft verminderd.

- 3. Geldt het een misdrijf waarop levenslange gevangenisstraf is gesteld, dan wordt gevangenisstraf opgelegd van ten hoogste tien jaren.

- 4. De bijkomende straffen zijn voor voorbereiding dezelfde als voor het voltooide misdrijf.

Art. 46a . Poging om een ander door een der in artikel 47, eerste lid onder 2e, vermelde middelen te bewegen om een misdrijf te begaan, is strafbaar, met dien verstande dat geen zwaardere straf wordt uitgesproken dan ter zake van poging tot het misdrijf of, indien zodanige poging niet strafbaar is, terzake van het misdrijf zelf kan worden opgelegd.

Art. 46b . Voorbereiding noch poging bestaat indien het misdrijf niet is voltooid tengevolge van omstandigheden van de wil van de dader afhankelijk.

TITEL V Deelneming aan strafbare feiten

Art. 47 . - 1. Als daders van een strafbaar feit worden gestraft:

1° zij die het feit plegen, doen plegen of medeplegen;

2° zij die door giften, beloften, misbruik van gezag, geweld, bedreiging, of misleiding of door het verschaffen van gelegenheid, middelen of inlichtingen het feit opzettelijk uitlokken.

- 2. Ten aanzien van de laatsten komen alleen die handelingen in aanmerking die zij opzettelijk hebben uitgelokt, benevens hun gevolgen.

Art. 48 . Als medeplichtigen van een misdrijf worden gestraft:

1° zij die opzettelijk behulpzaam zijn bij het plegen van het misdrijf;

2° zij die opzettelijk gelegenheid, middelen of inlichtingen verschaffen tot het plegen van het misdrijf.

Art. 49 . - 1. Het maximum van de hoofdstraffen op het misdrijf gesteld wordt bij medeplichtigheid met een derde verminderd.

- 2. Geldt het een misdrijf waarop levenslange gevangenisstraf is gesteld, dan wordt gevangenisstraf opgelegd van ten hoogste vijftien jaren.

- 3. De bijkomende straffen zijn voor medeplichtigheid dezelfde als voor het misdrijf zelf.

- 4. Bij het bepalen van de straf komen alleen die handelingen in aanmerking die de medeplichtige opzettelijk heeft gemakkelijk gemaakt of bevorderd, benevens hun gevolgen.

Art. 50 . De persoonlijke omstandigheden waardoor de strafbaarheid uitgesloten, verminderd of verhoogd wordt, komen bij de toepassing

van de strafwet alleen in aanmerking ten aanzien van die dader of medeplichtige wie zij persoonlijk betreffen.

Art. 50a . Vervallen.

Art. 51 . - 1. Strafbare feiten kunnen worden begaan door natuurlijke personen en rechtspersonen.

- 2. Indien een strafbaar feit wordt begaan door een rechtspersoon, kan de strafvervolgning worden ingesteld en kunnen de in de wet

voorzien straffen en maatregelen, indien zij daarvoor in aanmerking komen, worden uitgesproken:

1° tegen die rechtspersoon, dan wel

2° tegen hen die tot het feit opdracht hebben gegeven, alsmede tegen hen die feitelijke leiding hebben gegeven aan de verboden gedraging,

dan wel

3° tegen de onder 1° en 2° genoemden te zamen.

- 3. Voor de toepassing van de vorige leden wordt met de rechtspersoon gelijkgesteld: de vennootschap zonder rechtspersoonlijkheid, de

maatschap, de rederij en het doelvermogen.

Art. 52 . Medeplichtigheid aan overtreding is niet strafbaar.

Art. 53 . - 1. Bij misdrijven door middel van de drukpers gepleegd wordt de uitgever als zodanig niet vervolgd, indien het gedrukte stuk zijn naam en woonplaats vermeldt en de dader bekend is of op de eerste aanmaning nadat tot het instellen van een gerechtelijk vooronderzoek is overgegaan, door de uitgever is bekendgemaakt.

- 2. Deze bepaling is niet toepasselijk, indien de dader op het tijdstip van de uitgave strafrechtelijk niet vervolgbaar of buiten het Rijk in Europa gevestigd was.

Art. 54 . - 1. Bij misdrijven door middel van de drukpers gepleegd wordt de drukker als zodanig niet vervolgd, indien het gedrukte stuk zijn naam en woonplaats vermeldt en de persoon op wiens last het stuk is gedrukt, bekend is of op de eerste aanmaning nadat tot het instellen van een gerechtelijk vooronderzoek is overgegaan, door de drukker is bekendgemaakt.

- 2. Deze bepaling is niet toepasselijk, indien de persoon op wiens last het stuk is gedrukt, op het tijdstip van het drukken strafrechtelijk niet vervolgbaar of buiten het Rijk in Europa gevestigd was.

TITEL VI Samenloop van strafbare feiten

Art. 55 . - 1. Valt een feit in meer dan één strafbepaling, dan wordt slechts één van die bepalingen toegepast, bij verschil die waarbij de zwaarste hoofdstraf is gesteld.

- 2. Indien voor een feit dat in een algemene strafbepaling valt een bijzondere strafbepaling bestaat, komt deze alleen in aanmerking.

Art. 56 . - 1. Staan meerdere feiten, ofschoon elk op zichzelf misdrijf of overtreding opleverende, in zodanig verband dat zij moeten worden beschouwd als één voortgezette handeling, dan wordt slechts één strafbepaling toegepast, bij verschil die waarbij de zwaarste hoofdstraf is gesteld.

- 2. Insgelijks wordt slechts één strafbepaling toegepast bij schuldigverklaring aan valsheid of muntschennis en aan het gebruikmaken van het voorwerp ten opzichte waarvan de valsheid of muntschennis gepleegd is.

Art. 57 . - 1. Bij samenloop van feiten die als op zichzelf staande handelingen moeten worden beschouwd en meer dan één misdrijf opleveren waarop gelijksoortige hoofdstraffen zijn gesteld, wordt één straf uitgesproken.

- 2. Het maximum van deze straf is het totaal van de hoogste straffen op de feiten gesteld, doch - voor zover het gevangenisstraf of hechtenis betreft - niet meer dan een derde boven het hoogste maximum.

Art. 58 . Bij samenloop van feiten die als op zichzelf staande handelingen moeten worden beschouwd en meer dan één misdrijf opleveren waarop ongelijksoortige hoofdstraffen zijn gesteld, kan elk van die straffen worden uitgesproken, doch deze mogen - voor zover het gevangenisstraf en hechtenis betreft - te zamen in duur de langstdurende niet meer dan een derde overtreffen.

Art. 59 . Bij veroordeling tot levenslange gevangenisstraf kunnen daarnevens geen andere straffen worden opgelegd dan ontzetting van bepaalde rechten, verbeurdverklaring van reeds in beslag genomen voorwerpen en openbaarmaking van de rechterlijke uitspraak.

Art. 60 . In de gevallen van de artikelen 57 en 58 gelden ten aanzien van bijkomende straffen de volgende bepalingen:

1° de straffen van ontzetting van dezelfde rechten worden opgelost in één straf, in duur de opgelegde hoofdstraf of hoofdstraffen ten minste twee en ten hoogste vijf jaren te boven gaande, of ingeval geen andere hoofdstraf dan geldboete is opgelegd, in één straf van ten minste twee en ten hoogste vijf jaren;

2° de straffen van ontzetting van verschillende rechten worden voor elk misdrijf afzonderlijk en zonder vermindering opgelegd;

3° de straffen van verbeurdverklaring van bepaalde voorwerpen worden voor elk misdrijf afzonderlijk en zonder vermindering opgelegd;
de vervangende vrijheidsstraffen mogen gezamenlijk het maximum, bepaald in artikel 24c, derde lid , niet overschrijden.

Art. 60a . Bij samenloop op de wijze in de artikelen 57 en 58 bedoeld, geldt voor de maatregel genoemd in artikel 36f dat de vervangende vrijheidsstraffen gezamenlijk het maximum, bepaald in artikel 24c, derde lid , niet mogen overschrijden.

Art. 61 . - 1. De betrekkelijke zwaarte van ongelijksoortige hoofdstraffen wordt bepaald door de volgorde van artikel 9 .

- 2. Waar de rechter de keuze tussen twee hoofdstraffen is gelaten, komt bij de vergelijking alleen de zwaarste van die straffen in aanmerking.

- 3. De betrekkelijke zwaarte van gelijksoortige hoofdstraffen wordt bepaald door het maximum.

- 4. De betrekkelijke duur, zowel van ongelijksoortige als van gelijksoortige hoofdstraffen, wordt eveneens bepaald door het maximum.

Art. 62 . - 1. Bij samenloop op de wijze in de artikelen 57 en 58 bedoeld, hetzij van overtredingen met misdrijven, hetzij van overtredingen onderling, wordt voor elke overtreding zonder vermindering straf opgelegd.

- 2. De vervangende vrijheidsstraffen mogen voor de misdrijven en overtredingen of voor de overtredingen gezamenlijk het maximum, bepaald in artikel 24c, derde lid , niet overschrijden.

Art. 63 . Indien iemand, na veroordeling tot straf, opnieuw wordt schuldig verklaard aan misdrijf of overtreding vóór die veroordeling gepleegd, zijn de bepalingen van deze titel voor het geval van gelijktijdige berechting van toepassing.

Art. 63a . Voor de toepassing van de bepalingen van deze titel wordt met de straf van het verrichten van onbetaalde arbeid ten algemenen nutte rekening gehouden als ware die straf de vrijheidsstraf in de plaats waarvan zij is opgelegd.

TITEL VII Indiening en intrekking van de klacht bij misdrijven alleen op klacht vervolgbaar

Art. 64 . Inzake een misdrijf dat alleen op klacht wordt vervolgd, is degene tegen wie het feit is begaan, tot de klacht gerechtigd.

Art. 65 . - 1. Indien de in artikel 64 aangewezen persoon de leeftijd van zestien jaren nog niet heeft bereikt of anders dan wegens verkwisting onder curatele is gesteld, dan wel aan een zodanige gebrekkige ontwikkeling of ziekelijke stoornis van zijn geestvermogens lijdt dat hij niet in staat is te beoordelen of zijn belang gediend is met de klacht, geschiedt de klacht door zijn wettige vertegenwoordiger in burgerlijke zaken.

- 2. Indien de in artikel 64 aangewezen persoon overleden is, zijn tot de klacht gerechtigd: zijn ouders, zijn kinderen en zijn overlevende echtgenoot, tenzij blijkt dat hij een vervolging niet heeft gewild.

- 3. Indien de klacht tegen de wettige vertegenwoordiger in burgerlijke zaken van de in artikel 64 aangewezen persoon moet geschieden, zijn tot de klacht gerechtigd: de echtgenoot, een bloedverwant in de rechte linie of, bij het ontbreken van al die personen, een broer en een zuster.

- 4. Indien een in het tweede of derde lid aangewezen persoon de leeftijd van zestien jaren nog niet heeft bereikt of anders dan wegens verkwisting onder curatele is gesteld, dan wel aan een zodanige gebrekkige ontwikkeling of ziekelijke stoornis van zijn geestvermogens lijdt dat hij niet in staat is te beoordelen of zijn belang gediend is met de klacht, kan vervolging plaatsvinden op klacht van diens wettige vertegenwoordiger in burgerlijke zaken.

Art. 66 . - 1. De klacht kan worden ingediend gedurende drie maanden na de dag waarop de tot klacht gerechtigde kennis heeft genomen van het gepleegde feit.

- 2. Indien degene tegen wie het feit is begaan, nadat de termijn een aanvang heeft genomen, is overleden, dan wel het recht tot het indienen van de klacht heeft verloren, verkregen of herkreten, loopt deze termijn zonder verlenging door.

Art. 67 . Hij die de klacht indient, blijft gedurende acht dagen na de dag der indiening bevoegd deze in te trekken.

Art. 67a . Vervallen.

TITEL VIII Verval van het recht tot strafvordering en van de straf

Art. 68 . - 1. Behoudens de gevallen waarin rechterlijke uitspraken voor herziening vatbaar zijn, kan niemand andermaal worden vervolgd wegens een feit waarover te zijnen aanzien bij gewijsde van de rechter in Nederland, de Nederlandse Antillen of Aruba onherroepelijk is beslist.

- 2. Is het gewijsde afkomstig van een andere rechter, dan heeft tegen dezelfde persoon wegens hetzelfde feit geen vervolging plaats in geval van:

1° vrijspraak of ontslag van rechtsvervolging;

2° veroordeling, indien een straf is opgelegd, gevolgd door gehele uitvoering, gratie of verjaring der straf.

- 3. Niemand kan worden vervolgd wegens een feit dat te zijnen aanzien in een vreemde staat onherroepelijk is afgedaan door de voldoening aan een voorwaarde, door de bevoegde autoriteit gesteld ter voorkoming van strafvervolging.

Art. 69 . Het recht tot strafvordering vervalt door de dood van de verdachte.

Art. 70 . Het recht tot strafvordering vervalt door verjaring:

1° in twee jaren voor alle overtredingen;

2° in zes jaren voor de misdrijven waarop geldboete, hechtenis of gevangenisstraf van niet meer dan drie jaren is gesteld;

3° in twaalf jaren voor de misdrijven waarop tijdelijke gevangenisstraf van meer dan drie jaren is gesteld;

4° in vijftien jaren voor de misdrijven waarop gevangenisstraf van meer dan tien jaren is gesteld;

5° in achttien jaren voor de misdrijven waarop levenslange gevangenisstraf is gesteld.

Art. 71 . - 1. De termijn van verjaring vangt aan op de dag na die waarop het feit is gepleegd, behoudens in de volgende gevallen:

- 1° bij de misdrijven omschreven in de artikelen 172, eerste lid , 173, eerste lid , 173a en 173b , vangt de termijn aan op de dag na die waarop het misdrijf ter kennis is gekomen van een ambtenaar belast met de opsporing van strafbare feiten;
- 2° bij valsheid of muntschennis op de dag na die waarop gebruik is gemaakt van het voorwerp ten opzichte waarvan de valsheid of muntschennis gepleegd is;
- 3° bij de misdrijven omschreven in de artikelen 240b en 242 tot en met 250ter , en gepleegd ten aanzien van een minderjarige, op de dag na die waarop die persoon achttien jaren is geworden;
- 4° bij de misdrijven omschreven in de artikelen 278 , 279 , 282 en 282a op de dag na die van de bevrijding of de dood van hem tegen wie onmiddellijk het misdrijf gepleegd is;
- 5° bij de overtredingen omschreven in de artikelen 465 , 466 en 467 , op de dag na die waarop ingevolge de voorschriften gegeven in of ter uitvoering van artikel 18c van Boek 1 van het Burgerlijk Wetboek, de aldaar bedoelde registers waaruit zodanige overtreding blijkt, naar de centrale bewaarplaats, bedoeld in afdeling 8 van hoofdstuk 1 van het Besluit burgerlijke stand 1994 zijn overgebracht.

Art. 72 . - 1. Elke daad van vervolging stuit de verjaring, mits die daad de vervolgte bekend of hem betekend zij.

- 2. Na de stuiting vangt een nieuwe verjaringstermijn aan.

Art. 73 . De schorsing van de strafvervolging ter zake van een prejudicieel geschil schorst de verjaring.

Art. 74 . - 1. De officier van justitie kan voor de aanvang van de terechtzitting een of meer voorwaarden stellen ter voorkoming van de strafvervolging wegens misdrijven, met uitzondering van die waarop naar de wettelijke omschrijving gevangenisstraf is gesteld van meer dan zes jaar, en wegens overtreding. Door voldoening aan die voorwaarden vervalt het recht tot strafvordering.

- 2. De volgende voorwaarden kunnen worden gesteld:

- a. betaling aan de staat van een geldsom, te bepalen op ten minste vijf gulden en ten hoogste het maximum van de geldboete die voor het feit kan worden opgelegd;
- b. afstand van voorwerpen die in beslag zijn genomen en vatbaar zijn voor verbeurdverklaring of onttrekking aan het verkeer;
- c. uitlevering, of voldoening aan de staat van de geschatte waarde, van voorwerpen die vatbaar zijn voor verbeurdverklaring;
- d. voldoening aan de staat van een geldbedrag of overdracht van inbeslaggenomen voorwerpen ter

gehele of gedeeltelijke ontneming van het geschatte voordeel - met inbegrip van besparing van kosten - door de verdachte door middel van of uit de baten van het strafbare feit of soortgelijke feiten verkregen.

e. gehele of gedeeltelijke vergoeding van de door het strafbare feit veroorzaakte schade.

- 3. De officier van justitie doet aan de rechtstreeks belanghebbende die daarom heeft verzocht, onverwijld mededeling van de datum waarop aan die voorwaarden is voldaan.

Art. 74a . Is op het strafbare feit naar de wettelijke omschrijving geen andere hoofdstraf gesteld dan geldboete en biedt de verdachte aan, binnen een door de officier van justitie te bepalen termijn, het maximum van de geldboete te betalen en aan alle overige, overeenkomstig artikel 74, tweede lid , te stellen voorwaarden te voldoen, dan mag de officier van justitie het stellen van voorwaarden, als bedoeld in artikel 74 , niet weigeren.

Art. 74b . - 1. Een bevel als bedoeld in artikel 12k van het Wetboek van Strafvordering doet, na voldoening aan de overeenkomstig artikel 74 gestelde voorwaarden, het recht tot strafvordering herleven als ware het niet vervallen geweest.

- 2. Na een bevel, als bedoeld in het vorige lid, worden bedragen, betaald in toepassing van artikel 74, tweede lid , onder a, c en d, onverwijld terugbetaald aan degene die ze heeft betaald.

- 3. Volgt na een bevel als bedoeld in het eerste lid een veroordeling, dan houdt de rechter rekening met de afstand of uitlevering door de veroordeelde van voorwerpen op grond van artikel 74, tweede lid , onder b en c, en met de vergoeding van schade op grond van artikel 74, tweede lid , onder e.

Art. 74c . - 1. Bij algemene maatregel van bestuur kan aan daartoe aan te wijzen opsporingsambtenaren in bij die algemene maatregel van bestuur aangewezen zaken betreffende overtredingen, begaan door personen die de leeftijd van twaalf jaren hebben bereikt, tot wederopzeggens de bevoegdheid worden verleend die bij artikel 74, eerste lid , aan de officier van justitie is toegekend.

- 2. De te stellen voorwaarde bestaat in de betaling van een bepaalde geldsom. Bij algemene maatregel van bestuur worden voorschriften gegeven met betrekking tot de wijze van betaling en de termijn waarbinnen de betaling moet zijn geschied.

- 3. Het eerste en het tweede lid zijn van overeenkomstige toepassing op zaken betreffende misdrijven, als bedoeld in artikel 74, eerste lid , van eenvoudige aard, welke zijn begaan door personen die de leeftijd van achttien jaren hebben bereikt, met dien verstande dat de te

betalen geldsom ten hoogste zevenhonderdvijftig gulden bedraagt. De artikelen 74, derde lid en 74b zijn van overeenkomstige toepassing.

- 4. De ambtenaren bekleed met de bevoegdheid bedoeld in het eerste lid, maken hiervan gebruik volgens richtlijnen, te geven door het openbaar ministerie. Voor zover deze richtlijnen niet zijn uitgevaardigd door de procureur-generaal bij een gerechtshof, behoeven zij diens goedkeuring.
- 5. Bij algemene maatregel van bestuur worden voorschriften gegeven met betrekking tot de aanwijzing van de in het eerste lid bedoelde opsporingsambtenaren, het toezicht op de wijze waarop zij van de hun verleende bevoegdheid gebruik maken en de intrekking van de aanwijzing van een opsporingsambtenaar.
- 6. Bij of krachtens algemene maatregel van bestuur worden voorschriften gegeven inzake de verantwoording van ingevolge het tweede en derde lid betaalde geldbedragen.

Art. 75 . Het recht tot uitvoering van de straf of maatregel vervalt door de dood van de veroordeelde, met uitzondering van de maatregel tot ontneming van wederrechtelijk verkregen voordeel.

Art. 76 . - 1. Het recht tot uitvoering van de straf of maatregel vervalt door verjaring.

- 2. De termijn van deze verjaring is een derde langer dan de termijn van verjaring van het recht tot strafvordering. In geen geval is de termijn korter dan de duur van de opgelegde straf.

Art. 76a . - 1. De termijn van verjaring vangt aan op de dag na die waarop de rechterlijke uitspraak kan worden ten uitvoer gelegd.

- 2. Bij ontvluchting van een veroordeelde uit het gesticht of de inrichting waarin hij zijn straf ondergaat, vangt een nieuwe verjaringstermijn aan op de dag na die van de ontvluchting. Bij herroeping van een voorwaardelijke invrijheidstelling vangt een nieuwe verjaringstermijn aan op de dag na die van de herroeping.
- 3. De termijn loopt niet gedurende de bij de wet bevolen schorsing van de tenuitvoerlegging, noch gedurende de tijd dat de veroordeelde, zij het ook ter zake van een andere veroordeling, in verzekerde bewaring is.
- 4. Wanneer een geldboete wegens een overtreding is opgelegd en de rechter heeft beslist dat het bedrag daarvan in gedeelten mag worden voldaan, dan wel het openbaar ministerie aan de veroordeelde op diens verzoek uitstel van betaling heeft verleend of betaling in termijnen heeft toegestaan, wordt de verjaringstermijn verlengd met twee jaren.
- 5. De termijn loopt niet gedurende de tijd dat de tenuitvoerlegging aan een vreemde Staat is overgedragen, zolang de Minister van Justitie van de autoriteiten van die Staat geen mededeling, houdende een beslissing omtrent de overname

van de tenuitvoerlegging, heeft ontvangen.

- 6. Indien, nadat de tenuitvoerlegging door een vreemde Staat is overgenomen, die Staat afstand doet van zijn recht tot tenuitvoerlegging ten behoeve van Nederland, vangt een nieuwe verjaringstermijn aan op de dag waarop de Minister van Justitie de mededeling van de autoriteiten van die Staat omtrent de afstand heeft ontvangen.

Art. 77 . - 1. Het recht tot strafvordering en het recht tot uitvoering van de straf vervallen door de overdracht van de strafvervolgning aan een vreemde staat overeenkomstig de bepalingen van de derde afdeling van titel X van het vierde boek van het Wetboek van Strafvordering.

- 2. In het geval, bedoeld in het vorige lid, herleven het recht tot strafvordering en het recht tot uitvoering van de straf, indien de autoriteiten van de staat die de strafvervolgning had overgenomen op die beslissing terugkomen of mededelen dat geen strafvervolgning wordt ingesteld dan wel een ingestelde vervolging is gestaakt.

Art. 77bis . Vervallen.

TITEL VIII A Bijzondere bepalingen voor jeugdige personen

Art. 77a . Ten aanzien van degene die ten tijde van het begaan van een strafbaar feit de leeftijd van twaalf jaren doch nog niet die van achttien jaren heeft bereikt, zijn de artikelen 9, eerste lid , 10 tot en met 22a , 24c , 37 tot en met 38i , 44 en 57 tot en met 62 niet van toepassing. In de plaats daarvan treden de bijzondere bepalingen vervat in de artikelen 77d tot en met 77gg .

Art. 77b . Ten aanzien van degene die ten tijde van het begaan van een strafbaar feit de leeftijd van zestien jaren doch nog niet die van achttien jaren heeft bereikt, kan de rechter de artikelen 77g tot en met 77gg buiten toepassing laten en recht doen overeenkomstig de bepalingen in de voorgaande titels vervat, indien hij daartoe grond vindt in de ernst van het begane feit, de persoonlijkheid van de dader of de omstandigheden waaronder het feit is begaan.

Art. 77c . Ten aanzien van degene die ten tijde van het begaan van het strafbaar feit de leeftijd van achttien jaren doch nog niet die van eenentwintig jaren heeft bereikt, kan de rechter, indien hij daartoe grond vindt in de persoonlijkheid van de dader of de omstandigheden

waaronder het feit is begaan, recht doen overeenkomstig de artikelen 77g tot en met 77gg . De uitvoering van de straf van jeugddetentie vindt dan plaats in een door Onze Minister van Justitie daartoe aangewezen gevangenis. Artikel 22 is van overeenkomstige toepassing. De uitvoering van de maatregel van plaatsing in een inrichting voor jeugdigen vindt dan plaats overeenkomstig artikel 37c .

Art. 77d . De verjaringstermijn van het recht tot strafvordering, genoemd in artikel 70 , wordt ten aanzien van misdrijven tot de helft van de daar bedoelde duur ingekort.

Art. 77e . - 1. De opsporingsambtenaar die daartoe door de officier van justitie is aangewezen, kan na verkregen toestemming door de officier van justitie aan de verdachte voorstellen dat deze deelneemt aan een project. De deelneming strekt tot voorkoming van toezending van het opgemaakte proces-verbaal aan de officier van justitie. Bij algemene maatregel van bestuur worden de strafbare feiten aangewezen die op deze wijze kunnen worden afgedaan.

- 2. Bij een voorstel als bedoeld in het eerste lid, deelt de opsporingsambtenaar de verdachte mede dat hij niet verplicht is aan het project deel te nemen en licht hem in over de mogelijke gevolgen van niet-deelneming. Het voorstel, de mededeling en de inlichtingen over de mogelijke gevolgen worden daarbij de verdachte tevens schriftelijk ter hand gesteld.

- 3. De officier van justitie geeft algemene aanwijzingen omtrent de wijze van afdoening ingevolge het eerste lid. Deze aanwijzingen betreffen in ieder geval:

a. de projecten en de categorieën van strafbare feiten die, gelet op de aard van deze projecten, in aanmerking komen voor deze wijze van afdoening;

b. de duur van de deelneming, afhankelijk van de aard van het strafbare feit en het project en

c. de wijze waarop de toestemming van de officier van justitie kan worden verkregen.

- 4. De duur van de deelneming is ten hoogste twintig uren.

- 5. Indien de opsporingsambtenaar, bedoeld in het eerste lid, van oordeel is dat de verdachte naar behoren aan een project heeft

deelgenomen, stelt hij de officier van justitie en de verdachte hiervan schriftelijk in kennis. Daarmee vervalt het recht tot strafvordering,

behalve indien een bevel wordt gegeven als bedoeld in artikel 12i van het Wetboek van Strafvordering.

In dat geval houdt de rechter,

indien hij een straf oplegt, rekening met de voltooide deelneming.

Art. 77f . - 1. Bij toepassing van artikel 74, eerste lid , kan de officier van justitie tevens als voorwaarde stellen dat de verdachte

a. zich zal richten naar de aanwijzingen van een instelling als bedoeld in artikel 60, eerste lid , onder b,

van de Wet op de

jeugdhulpverlening, voor een daarbij te bepalen termijn van ten hoogste zes maanden;

b. onbetaalde arbeid ten algemene nutte of arbeid tot herstel van de door het strafbare feit aangerichte schade verricht dan wel een

leerproject volgt gedurende een door hem te bepalen duur van ten hoogste veertig uren binnen een door hem te bepalen termijn van ten

hoogste drie maanden.

- 2. Op de in het eerste lid, onder b, bedoelde voorwaarden is het bepaalde bij en krachtens de artikelen 77m, eerste lid, en 77n, eerste en

tweede lid, met betrekking tot alternatieve sancties van overeenkomstige toepassing.

- 3. De geldsom vermeld in artikel 74, tweede lid, onder a, bedraagt ten hoogste vijfduizend gulden.

Art. 77g. - 1. In plaats van de op een feit gestelde straffen worden de straffen, de alternatieve sancties en maatregelen opgelegd, in deze

Titel voorzien.

- 2. Naast de maatregel van plaatsing in een inrichting voor jeugdigen wordt voor hetzelfde feit geen geldboete of een alternatieve sanctie

opgelegd, behoudens het bepaalde in artikel 77x, tweede lid.

Art. 77g bis. Door vernummering is dit artikel vervallen.

Art. 77h. - 1. De hoofdstraffen zijn:

a. in geval van misdrijf: jeugddetentie of geldboete;

b. in geval van overtreding: geldboete.

- 2. In plaats van een hoofdstraf, genoemd in het eerste lid, kunnen één of meer van de volgende alternatieve sancties worden opgelegd:

a. het verrichten van onbetaalde arbeid ten algemene nutte;

b. het verrichten van arbeid tot herstel van de door het strafbare feit aangerichte schade;

c. het volgen van een leerproject.

- 3. De bijkomende straffen zijn:

a. verbeurdverklaring;

b. ontzegging van de bevoegdheid motorrijtuigen te besturen.

- 4. De maatregelen zijn:

a. plaatsing in een inrichting voor jeugdigen;

b. onttrekking aan het verkeer;

c. ontneming van wederrechtelijk verkregen voordeel;

d. schadevergoeding.

Art. 77h bis. Door vernummering is dit artikel vervallen.

Art. 77i. - 1. De duur van de jeugddetentie is:

a. voor degene die ten tijde van het begaan van het misdrijf de leeftijd van zestien jaren nog niet had

bereikt: ten minste een dag en ten hoogste twaalf maanden, en

b. overigens ten hoogste vierentwintig maanden.

- 2. De duur van de jeugddetentie wordt in de rechterlijke uitspraak aangewezen in dagen, weken of maanden.

- 3. De artikelen 26 en 27 zijn bij veroordeling tot jeugddetentie van overeenkomstige toepassing.

- 4. Jeugddetentie wordt ten uitvoer gelegd in een rijksinrichting of in een daartoe door Onze Minister van Justitie gesubsidieerde voorziening als bedoeld in artikel 65 van de Wet op de jeugdhulpverlening, voor zover deze daartoe is bestemd krachtens artikel 66 van die wet.

Art. 77j . - 1. In bijzondere gevallen kan Onze Minister van Justitie bepalen dat

a. de tenuitvoerlegging van de jeugddetentie gedurende een tijdvak van ten hoogste drie maanden wordt onderbroken of

b. degeen die een jeugddetentie ondergaat, tijdelijk, onder door hem te stellen waarborgen, de inrichting verlaat.

- 2. De rechter die de straf heeft opgelegd kan te allen tijde de jeugdige aan wie een jeugddetentie is opgelegd, voorwaardelijk in vrijheid stellen.

- 3. In geval van een voorwaardelijke invrijheidstelling wordt een proeftijd bepaald van ten hoogste twee jaren. De duur van de proeftijd en de gestelde voorwaarden worden de veroordeelde in persoon betekend. De artikelen 77y, derde lid , 77z , 77aa en 77cc tot en met 77ee zijn van overeenkomstige toepassing.

Art. 77k . De straf van jeugddetentie kan door de rechter die de straf heeft opgelegd op vordering van het openbaar ministerie of op

verzoek van de veroordeelde geheel of gedeeltelijk worden vervangen door een van de straffen genoemd in artikel 9, eerste lid , indien de

tenuitvoerlegging van de opgelegde straf geheel of gedeeltelijk zou moeten plaatsvinden nadat de veroordeelde de leeftijd van achttien

jaren heeft bereikt en deze naar het oordeel van de rechter niet meer voor een zodanige straf in aanmerking komt.

Art. 77l . - 1. Het bedrag van de geldboete is ten minste vijf gulden en ten hoogste vijfduizend gulden.

Artikel 24a is van overeenkomstige

toepassing met dien verstande dat de rechter bij elke geldboete kan bepalen dat het bedrag in gedeelten kan worden voldaan. De rechter

stelt daarbij de hoogte van elk van die gedeelten vast.

- 2. De rechter kan bij de uitspraak waarbij geldboete wordt opgelegd, bevelen dat voor het geval volledige betaling noch volledig verhaal

van het verschuldigde bedrag volgt, vervangende jeugddetentie zal worden toegepast.

- 3. Indien geen of geen volledige betaling van het bedrag van de geldboete heeft plaatsgevonden en geen of geen volledig verhaal mogelijk is, kan de rechter die de straf heeft opgelegd het nog te betalen bedrag op vordering van het openbaar ministerie vervangen door jeugddetentie of op verzoek van de veroordeelde vervangen door een alternatieve sanctie. Indien de rechter gebruik heeft gemaakt van de bevoegdheid van het tweede lid, kan hij de duur van de eerder opgelegde vervangende jeugddetentie ook wijzigen, tenzij deze reeds is aangevangen.
- 4. De vervangende jeugddetentie wordt tenuitvoergelegd op een door het openbaar ministerie te bepalen plaats.
- 5. De alternatieve sanctie, bedoeld in het derde lid, wordt opgelegd in evenredigheid met het nog verschuldigde bedrag. De artikelen 77m tot en met 77q zijn van overeenkomstige toepassing. De sanctie kan slechts worden opgelegd zolang de veroordeelde de leeftijd van achttien jaren niet heeft bereikt.
- 6. Indien de veroordeelde de leeftijd van achttien jaren heeft bereikt, legt de rechter vervangende hechtenis op, tenzij naar zijn oordeel de veroordeelde in aanmerking komt voor vervangende jeugddetentie.
- 7. De duur van de vervangende jeugddetentie of vervangende hechtenis is ten minste één dag en ten hoogste drie maanden. Voor elke volle vijftientig gulden van de nog te betalen geldboete wordt niet meer dan één dag opgelegd. Door betaling van het nog te betalen bedrag vervalt de vervangende jeugddetentie of de vervangende hechtenis. Artikel 24c, vierde lid, is van overeenkomstige toepassing.
- 8. Artikel 27, derde en vierde lid, is bij veroordeling tot een geldboete van overeenkomstige toepassing.

Art. 77m . - 1. Een alternatieve sanctie kan de rechter slechts opleggen na een daartoe strekkend aanbod van de verdachte. Het aanbod vermeldt de aard van de alternatieve sanctie.

- 2. De duur van de onbetaalde arbeid ten algemenen nutte of van de arbeid tot herstel van de door het strafbare feit aangerichte schade, is ten hoogste tweehonderd uren.
- 3. De termijn waarbinnen de arbeid moet zijn verricht bedraagt ten hoogste zes maanden indien niet meer dan honderd uren is opgelegd en overigens ten hoogste een jaar. Het openbaar ministerie kan evenwel bij toepassing van artikel 77o, tweede lid, de duur verlengen.
- 4. De duur van een leerproject is ten hoogste tweehonderd uren.
- 5. De termijn waarbinnen een leerproject plaatsvindt bedraagt ten hoogste zes maanden. Bij algemene maatregel van bestuur kunnen regels worden gesteld over de aard en de inhoud ervan, alsmede over de wijze waarop de toepassing van deze regels wordt getoetst.

Daarbij kan van het aantal uren, bepaald in het vierde lid, worden afgeweken indien de aard van het leerproject daartoe aanleiding geeft.

- 6. Indien meer dan één alternatieve sanctie wordt opgelegd, bedraagt het totaal aantal uren niet meer dan tweehonderdenveertig.

- 7. Artikel 27, eerste en vierde lid, is bij veroordeling tot een alternatieve sanctie van overeenkomstige toepassing.

Art. 77n . - 1. De rechter legt een alternatieve sanctie slechts op nadat hij zich een advies omtrent de aard, de inhoud en de mogelijkheid tot de tenuitvoerlegging van de aangeboden alternatieve sanctie heeft doen overleggen door de raad voor de kindbescherming.

- 2. In het vonnis vermeldt de rechter:

a. in geval van onbetaalde arbeid of het verrichten van arbeid tot herstel van de door het strafbare feit aangerichte schade:

1° het aantal uren te verrichten arbeid;

2° de termijn binnen welke de arbeid, nadat het vonnis onherroepelijk is geworden, dient aan te vangen en de termijn binnen welke de arbeid dient te worden verricht en

3° de aard en inhoud van de te verrichten arbeid.

b. in geval van een leerproject:

1° de duur van het leerproject, de termijn binnen welke dit, nadat het vonnis onherroepelijk is geworden, dient aan te vangen en de termijn

binnen welke het dient te zijn gevolgd;

2° de instelling waarbij het leerproject zal worden gevolgd en

3° de aard en de inhoud van het leerproject.

- 3. De alternatieve sanctie wordt niet opgelegd dan met instemming van de verdachte.

Art. 77o . - 1. De raad voor de kindbescherming heeft tot taak de voorbereiding en de ondersteuning van de tenuitvoerlegging van

alternatieve sancties. Over de wijze waarop de veroordeelde de alternatieve sanctie uitvoert, kan het openbaar ministerie inlichtingen

inwinnen bij de raad voor de kindbescherming. Het openbaar ministerie kan diens medewerking inroepen en hem de nodige opdrachten geven.

- 2. Het openbaar ministerie kan na overleg met de raad voor de kindbescherming en de veroordeelde, de opgelegde sanctie, behoudens voor wat betreft het aantal opgelegde uren, wijzigen indien het van oordeel is dat de veroordeelde de alternatieve sanctie niet geheel overeenkomstig het vonnis kan of heeft kunnen volbrengen. Het benadert daarbij zo veel mogelijk de opgelegde alternatieve sanctie.

- 3. Van de wijziging wordt zo spoedig mogelijk een kennisgeving gezonden aan de veroordeelde en de raad voor de kindbescherming.

De kennisgeving behelst het aantal uren dat naar het oordeel van het openbaar ministerie reeds naar

behoren is volbracht, alsmede de sanctie zoals deze voor het overige nader is vastgesteld.

- 4. Tegen de kennisgeving, bedoeld in het derde lid, kan de veroordeelde binnen acht dagen na de betekening een bezwaarschrift indienen bij de rechter die de sanctie oplegde. De rechter kan de beslissing van het openbaar ministerie wijzigen. Het tweede lid is van overeenkomstige toepassing.
- 5. Op vordering van het openbaar ministerie kan de rechter die de alternatieve sanctie oplegde, indien hij van oordeel is dat deze niet naar behoren wordt of is uitgevoerd, alsnog één der straffen, genoemd in artikel 77h, eerste lid, dan wel een andere alternatieve sanctie opleggen. Hij houdt daarbij rekening met het deel van de alternatieve sanctie dat wel naar behoren is uitgevoerd.

Art. 77p . Vervallen.

Art. 77q . - 1. Het openbaar ministerie kan slechts een beslissing nemen of een vordering instellen krachtens artikel 77o, tweede lid, onderscheidenlijk vijfde lid, binnen drie maanden na afloop van de termijn waarbinnen de arbeid moet zijn verricht krachtens artikel 77n, tweede lid, onder a, onder 2°, of waarbinnen het leerproject moet zijn gevolgd krachtens artikel 77n, tweede lid, onder b, onder 1°.

- 2. Indien naar het oordeel van het openbaar ministerie de opgelegde alternatieve sanctie naar behoren is uitgevoerd, stelt het zo spoedig mogelijk de veroordeelde hiervan in kennis.

- 3. Het openbaar ministerie kan daarna geen gebruik meer maken van zijn bevoegdheid bedoeld in artikel 77o, tweede lid, en geen vordering meer instellen als bedoeld in artikel 77o, vijfde lid.

Art. 77r . Ontzegging van de bevoegdheid motorrijtuigen te besturen is slechts mogelijk in de gevallen genoemd in de artikelen 179, 179a en 180 van de Wegenverkeerswet 1994 en in artikel 30, zesde lid, van de Wet aansprakelijkheidsverzekering motorrijtuigen (Stb. 1963, 228). Die artikelen zijn dan van overeenkomstige toepassing.

Art. 77s . - 1. De maatregel van plaatsing in een inrichting voor jeugdigen kan slechts worden opgelegd, indien

- a. het een misdrijf betreft waarvoor voorlopige hechtenis is toegelaten;
- b. de veiligheid van anderen dan wel de algemene veiligheid van personen of goederen het opleggen van die maatregel eist, en
- c. de maatregel in het belang is van een zo gunstig mogelijke verdere ontwikkeling van de verdachte.

- 2. De rechter legt de maatregel slechts op, nadat hij zich een met redenen omkleed, gedagtekend en ondertekend advies heeft doen

- overleggen van ten minste twee gedragsdeskundigen van verschillende disciplines. Het advies wordt door de deskundigen gezamenlijk dan wel door ieder van hen afzonderlijk uitgebracht. Indien dit advies eerder dan een jaar voor de aanvang van de terechtzitting is gedagtekend kan de rechter hier slechts gebruik van maken met instemming van het openbaar ministerie en de verdachte.
- 3. De maatregel kan ook worden opgelegd indien de verdachte niet strafbaar is op de grond dat het feit hem wegens de gebrekkige ontwikkeling of ziekelijke stoornis niet kan worden toegerekend. Indien bij de verdachte tijdens het begaan van het feit een gebrekkige ontwikkeling of ziekelijke stoornis van de geestvermogens bestond, dient bij toepassing van het eerste lid één van de gedragsdeskundigen een psychiater te zijn.
 - 4. Het tweede lid blijft buiten toepassing indien de betrokkene weigert medewerking te verlenen aan het onderzoek dat ten behoeve van het advies moet worden verricht. Voor zover mogelijk maken de gedragsdeskundigen gezamenlijk dan wel ieder van hen afzonderlijk over de reden van weigering rapport op. De rechter doet zich zoveel mogelijk een ander advies of rapport, dat hem over de wenselijkheid of noodzakelijkheid van de oplegging van de maatregel kan voorlichten en aan de totstandkoming waarvan de betrokkene wel bereid is om medewerking te verlenen, overleggen.
 - 5. Indien de maatregel is opgelegd, draagt Onze Minister van Justitie de tenuitvoerlegging op aan een rechtspersoon als bedoeld in artikel 60, eerste lid , onder a, van de Wet op de jeugdhulpverlening, of doet hij de veroordeelde opnemen in een tehuis, behorende tot de categorie, genoemd onder II, onderdelen 3 of 4, van de bijlage behorende bij die wet, voor zover dit door Onze Minister van Justitie in stand wordt gehouden, of elders.
 - 6. De maatregel geldt voor de tijd van twee jaar. De termijn gaat in nadat de rechterlijke uitspraak onherroepelijk is geworden.
 - 7. Onze Minister van Justitie kan de maatregel te allen tijde, na advies te hebben ingewonnen van de raad voor de kindbescherming, voorwaardelijk of onvoorwaardelijk beëindigen.

Art. 77s bis . Door vernummering is dit artikel vervallen.

- Art. 77t** . - 1. De rechter die in eerste aanleg heeft kennis genomen van het misdrijf ter zake waarvan de maatregel is opgelegd, kan op vordering van het openbaar ministerie de termijn, bedoeld in artikel 77s, zesde lid , telkens met ten hoogste twee jaren verlengen.
- 2. Verlenging van de termijn van de maatregel is slechts mogelijk voor zover de maatregel daardoor de duur van vier jaar niet te boven

gaat, tenzij de maatregel is opgelegd aan een verdachte als bedoeld in artikel 77s, derde lid . In zodanig geval is verlenging mogelijk voor zover de maatregel de duur van zes jaar niet te boven gaat.

- 3. De verlenging is slechts mogelijk, indien de maatregel is opgelegd ter zake van een misdrijf dat gericht is tegen of gevaar veroorzaakt voor de onaantastbaarheid van het lichaam van één of meer personen. Artikel 77s, eerste lid , onder b en c, is van overeenkomstige toepassing. De verlenging is niet mogelijk indien gebruik is gemaakt van de bevoegdheid, bedoeld in artikel 77x .

- 4. Een vordering tot verlenging van de maatregel van plaatsing in een inrichting voor jeugdigen wordt bij de rechtbank behandeld door de meervoudige kamer.

- 5. Bij de vordering worden overgelegd:

a. een recent opgemaakt, met redenen omkleed en ondertekend advies afkomstig van het hoofd van de inrichting, en

b. een afschrift van de aantekeningen omtrent de lichamelijke en geestelijke gesteldheid van de veroordeelde.

- 6. De maatregel kan zonder advies, bedoeld in het vierde lid, onder a, worden verlengd indien dit door gebrek aan medewerking van de veroordeelde niet kan worden uitgebracht.

Art. 77u . Een beslissing op grond van artikel 77t wordt bij beschikking genomen, nadat de veroordeelde en indien deze minderjarig is, ook degenen die het gezag over hem uitoefenen, zijn gehoord of behoorlijk opgeroepen. De artikelen 14h , 14i, tweede tot en met zesde lid , en 14j van dit wetboek alsmede artikel 495b van het Wetboek van Strafvordering zijn van overeenkomstige toepassing, onverminderd de artikelen 502 en 503 van het Wetboek van Strafvordering.

Art. 77v . - 1. Indien jeugddetentie of plaatsing in een inrichting voor jeugdigen wordt opgelegd, neemt de rechter in zijn uitspraak een advies op over de plaats waar en de wijze waarop deze straf of maatregel zal moeten worden ten uitvoer gelegd. De rechter kan bij een beslissing als bedoeld in artikel 77t zodanig advies opnemen.

- 2. Het eerste lid is niet van toepassing indien met gebruikmaking van artikel 77x , de straf of maatregel geheel niet wordt ten uitvoer gelegd. Indien ingevolge artikel 77dd de straf of maatregel alsnog geheel of gedeeltelijk ten uitvoer wordt gelegd, neemt de rechter het advies op in de last tot tenuitvoerlegging.

- 3. Het openbaar ministerie stelt Onze Minister van Justitie in kennis van rechterlijke uitspraken, zodra deze voor tenuitvoerlegging vatbaar zijn geworden. Het voegt daarbij het advies van de rechter omtrent de plaatsing.

- 4. Onze Minister beslist omtrent de plaats van de tenuitvoerlegging, gelet op het advies van de rechter

die de veroordeling uitsprak, de wens van degene die het gezag uitoefent en de godsdienstige gezindheid of levensbeschouwelijke overtuiging van de jeugdige persoon. De beslissing kan later worden gewijzigd indien bijzondere omstandigheden daartoe aanleiding geven.

- 5. Onze Minister kan het advies van de raad voor de kindbescherming inwinnen omtrent de plaats van de tenuitvoerlegging.

Art. 77w . - 1. De veroordeelde kan beroep instellen tegen een beslissing van Onze Minister van Justitie omtrent de plaats van de tenuitvoerlegging bij het College van advies voor de justitiële kindbescherming, bedoeld in artikel 81 van de Wet op de jeugdhulpverlening. Hetzelfde geldt voor een latere wijziging van deze beslissing.

- 2. Het beroep wordt ingesteld binnen veertien dagen, nadat de veroordeelde met de beslissing van de Minister bekend is.
- 3. De veroordeelde kan zich door een raadsman doen bijstaan.
- 4. Het beroep wordt schriftelijk ingediend bij Onze Minister die, indien hij zijn beslissing niet voordien wijzigt, het beroepschrift voorzien van zijn beschouwingen en vergezeld van de hem omtrent de betrokkene ten dienste staande gegevens, binnen een maand doorzendt aan het college.
- 5. Het beroep heeft geen schorsende werking.
- 6. Het college of een uit zijn midden benoemde commissie is bevoegd nadere inlichtingen omtrent de veroordeelde in te winnen bij Onze Minister en bij administratieve of gerechtelijke instanties. Het college of de commissie is bevoegd de veroordeelde te horen.
- 7. De beslissing wordt genomen binnen veertien dagen na ontvangst van het beroepschrift. Indien gebruik wordt gemaakt van de bevoegdheid, bedoeld in het zesde lid, wordt zij genomen binnen veertien dagen nadat de inlichtingen zijn ontvangen of nadat de veroordeelde is gehoord.
- 8. Het beroep kan gegrond of ongegrond worden verklaard, waarbij wordt aangegeven welke plaats voor tenuitvoerlegging naar het oordeel van het college of van de commissie, bedoeld in het zesde lid, in aanmerking komt.
- 9. De beslissing wordt zo spoedig mogelijk genomen en toegezonden aan Onze Minister en aan de veroordeelde.
- 10. Onze Minister geeft zo spoedig mogelijk uitvoering aan de beslissing.

Art. 77x . - 1. In geval van veroordeling tot jeugddetentie, vervangende jeugddetentie daaronder niet begrepen, tot geldboete of tot plaatsing in een inrichting voor jeugdigen, kan de rechter bepalen dat deze of een gedeelte daarvan, niet zal worden ten uitvoer gelegd.

- 2. In geval van veroordeling tot jeugddetentie of in geval van plaatsing in een inrichting voor jeugdigen, met toepassing van het eerste lid,

kan de rechter tevens geldboete opleggen.

Art. 77y . - 1. De rechter die bepaalt dat een door hem opgelegde straf of maatregel niet zal worden ten uitvoer gelegd, stelt daarbij een proeftijd vast van ten hoogste twee jaren.

- 2. De proeftijd gaat in:

a. indien een kennisgeving als bedoeld in artikel 366a, eerste en tweede lid , van het Wetboek van Strafvordering is uitgereikt of

toegezonden, op de vijftiende dag nadat de einduitspraak is gedaan, tenzij door de tijdige aanwending van een rechtsmiddel het vonnis of arrest niet onherroepelijk is geworden;

b. indien een kennisgeving als bedoeld in artikel 366a, derde lid , van het Wetboek van Strafvordering moet worden betekend, op de vijftiende dag na die betekening, tenzij door de tijdige aanwending van een rechtsmiddel het vonnis of arrest niet onherroepelijk is geworden.

- 3. De proeftijd loopt niet gedurende de tijd dat de veroordeelde rechtens zijn vrijheid is ontnomen.

Art. 77z . - 1. Toepassing van artikel 77x geschiedt onder de algemene voorwaarde dat de veroordeelde zich voor het einde van de proeftijd niet schuldig maakt aan een strafbaar feit. Bovendien kunnen bijzondere voorwaarden, het gedrag van de veroordeelde betreffende, worden gesteld. Deze mogen de vrijheid van de veroordeelde zijn godsdienst of levensovertuiging te belijden en de staatkundige vrijheid niet beperken. De rechter kan de werking van de bijzondere voorwaarden beperken tot een bij de uitspraak te bepalen tijdsduur binnen de proeftijd.

- 2. Als bijzondere voorwaarde kan worden gesteld dat de veroordeelde zich zal laten opnemen in een inrichting gedurende een door de rechter te bepalen termijn, korter dan de proeftijd.

Art. 77aa . - 1. Met het toezicht op de naleving van de voorwaarden is het openbaar ministerie belast.

- 2. De rechter kan aan een rechtspersoon als bedoeld in artikel 60, eerste lid , onder b, van de Wet op de jeugdhulpverlening, of, in bijzondere gevallen en na overleg met een dergelijke rechtspersoon, aan een particulier persoon, opdragen aan de veroordeelde ter zake van de naleving der bijzondere voorwaarden hulp en steun te verlenen.

- 3. De rechter kan, indien de veroordeelde ingevolge artikel 254 van Boek 1 van het Burgerlijk Wetboek onder toezicht is gesteld, aan de gezinsvoogdij-instelling opdragen aan de veroordeelde ter zake van de naleving der bijzondere voorwaarden hulp en steun te verlenen.

- 4. Is de veroordeelde meerderjarig dan is artikel 14d, tweede lid , van overeenkomstige toepassing.

Art. 77bb . Artikel 366a van het Wetboek van Strafvordering is van overeenkomstige toepassing op de mededeling van de veroordeling, waarbij artikel 77x en 77z zijn toegepast.

Art. 77cc . - 1. De rechter die de voorwaarde heeft gesteld, kan na ontvangst van een vordering van het openbaar ministerie of op verzoek van veroordeelde, de proeftijd verkorten of deze eenmaal verlengen. De verlenging geschiedt met ten hoogste één jaar.

- 2. Evenzo kan de in het eerste lid bedoelde rechter gedurende de proeftijd of gedurende de tijd dat deze is geschorst, in de gestelde bijzondere voorwaarden of in de termijn waartoe deze voorwaarden in haar werking binnen de proeftijd zijn beperkt, wijziging brengen, deze voorwaarden opheffen, alsnog bijzondere voorwaarden stellen en een opdracht als bedoeld in artikel 77aa, tweede lid , geven, wijzigen of opheffen.

Art. 77dd . - 1. Onverminderd het bepaalde in artikel 77cc kan de rechter, indien enige gestelde voorwaarde niet wordt nageleefd en hij daartoe termen vindt, na ontvangst van de vordering van het openbaar ministerie:

a. gelasten dat de niet ten uitvoer gelegde straf of maatregel, alsnog zal worden ten uitvoer gelegd;

b. al of niet onder instandhouding of wijziging van de voorwaarden gelasten dat een gedeelte van de niet ten uitvoer gelegde straf of maatregel, alsnog zal worden ten uitvoer gelegd.

- 2. Artikel 14g, derde en vijfde lid , is van overeenkomstige toepassing, met dien verstande dat indien bij overeenkomstige toepassing van artikel 14 g, derde lid , onder a, het daar bedoelde strafbaar feit wordt vervolgd voor de politierechter, deze tevens bevoegd is tot toepassing van het eerste lid voor zover de ten uitvoer te leggen straf een geldboete of een jeugddetentie van niet meer dan zes maanden betreft.

Art. 77ee . - 1. Indien in het kader van de tenuitvoerlegging van een sanctie enige beslissing wordt genomen met gebruikmaking van de artikelen 77k , 77l, derde lid , 77o, vierde of vijfde lid , 77cc of 77dd, eerste lid , zijn de artikelen 14h , 14i, tweede tot en met zesde lid , en 14j van dit wetboek alsmede artikel 495b van het Wetboek van Strafvordering van overeenkomstige toepassing.

- 2. Indien de veroordeelde op het tijdstip dat de procedure op zijn verzoek of op vordering van het openbaar ministerie is ingesteld, de leeftijd van achttien jaren nog niet heeft bereikt, zijn daarenboven de artikelen 496 tot en met 498 , 504 en 505 van het Wetboek van Strafvordering van overeenkomstige toepassing. Heeft hij de leeftijd van zestien jaren nog niet bereikt, dan is tevens artikel 503 van

toepassing.

Art. 77ff . - 1. De kosten van jeugddetentie en van plaatsing in een inrichting voor jeugdigen komen ten laste van de staat.

- 2. Bij algemene maatregel van bestuur worden nadere regels gesteld betreffende

a. de uitvoering van jeugddetentie;

b. de uitvoering van de plaatsing in een inrichting voor jeugdigen;

c. het verstrekken van inlichtingen aan het openbaar ministerie over degene jegens wie een voorwaardelijke veroordeling is uitgesproken;

d. de wijze waarop een beslissing tot voorwaardelijke invrijheidstelling wordt uitgelokt.

- 3. Bij algemene maatregel van bestuur kunnen regels worden gesteld voor de verstrekking van rijkswege van een bijdrage in de

bekostiging van de voorbereiding en uitvoering van

a. projecten als bedoeld in de artikelen 77e en 77f, eerste lid , onder b, en

b. alternatieve sancties als bedoeld in artikel 77h, tweede lid .

Art. 77gg . - 1. De straffen en maatregelen als bedoeld in deze Titel, zijn voor poging, voorbereiding, deelneming en medeplichtigheid

dezelfde als die voor het voltooide misdrijf.

- 2. Bij samenloop worden meer feiten die als op zichzelf staande handelingen moeten worden beschouwd, voor de toepassing van

straffen, alternatieve sancties en maatregelen als één feit aangemerkt. Artikel 63 is met betrekking tot straffen van toepassing en met

betrekking tot alternatieve sancties van overeenkomstige toepassing.

Art. 77hh . Door vernummering is dit artikel vervallen.

Art. 77ii . Door vernummering is dit artikel vervallen.

Art. 77jj . Door vernummering is dit artikel vervallen.

Art. 77kk . Door vernummering is dit artikel vervallen.

TITEL IX Betekenis van sommige in het wetboek voorkomende uitdrukkingen

Art. 78 . Waar van misdrijf in het algemeen of van enig misdrijf in het bijzonder gesproken wordt, wordt daaronder medeplichtigheid aan,

poging tot en voorbereiding van dat misdrijf begrepen, voorzover niet uit enige bepaling het tegendeel volgt.

Art. 79 . Aanslag tot een feit bestaat, zodra het voornemen van de dader zich door een begin van

uitvoering, in de zin van artikel 45 , heeft geopenbaard.

Art. 80 . Samenspanning bestaat zodra twee of meer personen overeengekomen zijn om het misdrijf te plegen.

Art. 80bis . Onder omwenteling wordt verstaan het vernietigen of op onwettige wijze veranderen van de grondwettige regeringsvorm of de orde van troonopvolging.

Art. 80ter . Onder verboden plaats wordt verstaan iedere plaats die als verboden plaats is aangewezen ingevolge de Wet bescherming staatsgeheimen .

Art. 80quater . Onder gegeven waarvan de geheimhouding door het belang van de staat wordt geboden, wordt mede verstaan een gegeven, behorende tot of ontleend aan gegevens, hulpmiddelen of materialen of met behulp daarvan verrichte onderzoeken of toegepaste werkmethode, ter zake van de geheimhouding waarvan krachtens artikel 68 van de Kernenergiewet gestelde regelen gelden.

Art. 80quinquies . Onder gegevens wordt verstaan iedere weergave van feiten, begrippen of instructies, al dan niet op een overeengekomen wijze, geschikt voor overdracht, interpretatie of verwerking door personen of geautomatiseerde werken.

Art. 80sexies . Onder geautomatiseerd werk wordt verstaan een inrichting die bestemd is om langs elektronische weg gegevens op te slaan en te verwerken.

Art. 81 . Met het plegen van geweld wordt gelijkgesteld het brengen in een staat van bewusteloosheid of onmacht.

Art. 82 . - 1. Onder zwaar lichamelijk letsel worden begrepen: ziekte die geen uitzicht op volkomen genezing overlaat, voortdurende ongeschiktheid tot uitoefening van zijn ambts- of beroepsbezigheden, en afdrijving of dood van de vrucht van een vrouw.

- 2. Onder zwaar lichamelijk letsel wordt mede begrepen storing van de verstandelijke vermogens die langer dan vier weken geduurd heeft.

Art. 82a . Onder een ander, of een kind bij of kort na de geboorte, van het leven beroven wordt

begrepen: het doden van een vrucht die naar redelijkerwijs verwacht mag worden in staat is buiten het moederlichaam in leven te blijven.

Art. 83 t/m 83bis . Vervallen.

Art. 84 . - 1. Onder ambtenaren worden begrepen alle personen verkozen bij krachtens wettelijk voorschrift uitgeschreven verkiezingen.

- 2. Onder ambtenaren en onder rechters worden begrepen scheidsrechters; onder rechters zij die administratieve rechtsmacht oefenen.

- 3. Allen die tot de gewapende macht behoren worden mede als ambtenaar beschouwd.

Art. 84bis . Onder koopman wordt verstaan ieder die een bedrijf uitoefent.

Art. 85 . - 1. Onder schipper wordt verstaan elke gezagvoerder van een vaartuig of die deze vervangt.

- 2. Opvarenden zijn allen die zich aan boord bevinden, met uitzondering van de schipper.

- 3. Schepelingen zijn allen die zich als scheepsofficieren of scheepsgezellen aan boord bevinden.

- 4. Vaartuigen in aanbouw noch schepen in aanbouw worden als vaartuigen of schepen aangemerkt.

Art. 86 . Onder Nederlandse schepen worden alleen verstaan die vaartuigen welke door de wet betrekkelijk de afgifte van zeebrieven en

vergunningen tot het voeren van de Nederlandse vlag als zeeschepen worden aangemerkt.

Art. 86a . - 1. Onder Nederlandse luchtvaartuigen worden verstaan:

a. luchtvaartuigen die zijn ingeschreven in Nederlandse luchtvaartuigregisters;

b. luchtvaartuigen die zonder bemanning zijn verhuurd aan een huurder die de hoofdzetel van zijn bedrijf, of, indien de huurder niet een zodanige zetel heeft, zijn vaste verblijfplaats, in Nederland heeft.

- 2. Een luchtvaartuig is in vlucht van het moment af waarop alle buitendeuren, na het instappen, zijn gesloten tot het moment waarop een

van de deuren wordt geopend voor het uitstappen. In geval van een noodlanding wordt de vlucht geacht voort te duren, totdat de bevoegde autoriteiten de verantwoordelijkheid voor het luchtvaartuig en voor de personen en goederen aan boord overnemen.

- 3. Een luchtvaartuig is in bedrijf van het begin van het gereedmaken van dat luchtvaartuig voor een bepaalde vlucht door het

grondpersoneel of door de bemanning tot het moment dat sedert de landing vierentwintig uren zijn verstreken. De periode tijdens welke

het luchtvaartuig in bedrijf is strekt zich in elk geval uit tot de gehele periode tijdens welke het luchtvaartuig in vlucht is, zoals omschreven

in het tweede lid.

Art. 87 . - 1. Onder vijand worden begrepen opstandelingen.

- 2. Onder oorlog wordt begrepen burgeroorlog.
- 3. Onder tijd van oorlog wordt begrepen de tijd waarin oorlog dreigende is. Tijd van oorlog wordt mede geacht te bestaan zodra dienstplichtigen buitengewoon in werkelijke dienst worden opgeroepen en zolang zij buitengewoon in werkelijke dienst worden gehouden.

Art. 87a . Onder een bevriende staat wordt verstaan een buitenlandse mogendheid waarmede Nederland niet in een gewapend conflict is gewikkeld.

Art. 87b . - 1. Onder internationaal beschermd persoon wordt verstaan een persoon vallende onder de omschrijving van artikel 1, eerste lid , van het Verdrag inzake de voorkoming en bestraffing van misdrijven tegen internationaal beschermde personen, met inbegrip van diplomaten van 14 december 1973 (Trb. 1981, 69).

- 2. Onder beschermde goederen worden verstaan de goederen bedoeld in artikel 2, eerste lid , onder b, van voornoemd Verdrag.

Art. 88 . Onder maand wordt verstaan een tijd van dertig dagen, onder dag, behoudens voor de toepassing van de Algemene termijnenwet , een tijd van vierentwintig uren.

Art. 89 . Onder inklimming wordt begrepen ondergraving, alsmede het overschrijden van sloten of grachten tot afsluiting dienende.

Art. 90 . Onder valse sleutels worden begrepen alle tot opening van het slot niet bestemde werktuigen.

- 1. Onder opkoper wordt verstaan hij die van opkopen een beroep of een gewoonte maakt.
- 2. Onder opkopen worden begrepen alle handelingen, hoe ook genaamd, waarmede kennelijk hetzelfde wordt beoogd.

Art. 90ter . - 1. Onder electriciteitswerken worden verstaan werken dienende tot voortbrenging, geleiding, transformatie of levering van electriciteit en daarmede in verband staande beveiligings-, bevestigings-, ondersteunings- en waarschuwingswerken.

- 2. Onder electriciteitswerken worden niet begrepen telegraaf- en telefoonwerken.

Art. 90quater . Onder discriminatie of discrimineren wordt verstaan elke vorm van onderscheid, elke uitsluiting, beperking of voorkeur, die ten doel heeft of ten gevolge kan hebben dat de erkenning, het genot of de uitoefening op voet van gelijkheid van de rechten van de mens en de fundamentele vrijheden op politiek, economisch, sociaal of cultureel terrein of op andere

terreinen van het maatschappelijk leven, wordt teniet gedaan of aangetast.

Art. 90quinquies . - 1. Onder inrichting voor verpleging van ter beschikking gestelden wordt verstaan een inrichting als bedoeld in artikel 37d, eerste lid .

- 2. Onder justitiële inrichting voor verpleging van ter beschikking gestelden wordt verstaan een inrichting als bedoeld in artikel 37d, eerste lid , onder a waarvan de verpleegkosten vanwege de Minister van Justitie worden vergoed op grond van een door hem goedgekeurde inrichtingsbegroting, dan wel een inrichting als bedoeld in artikel 37d, eerste lid , onder b waarvan de algehele exploitatiekosten ten laste van het Ministerie van Justitie komen.

Art. 90sexies . Onder psychiatrisch ziekenhuis wordt verstaan:

1° een voor de toepassing van de Ziekenfondswet of de Algemene Wet Bijzondere Ziektekosten als ziekenhuis, verpleeginrichting of zwakzinnigeninrichting toegelaten of in overeenstemming met de Minister van Justitie aangewezen inrichting of afdeling daarvan, voor zover die inrichting of afdeling blijkens de toelating of aanwijzing gericht is op de behandeling van psychiatrische patiënten;

2° een psychiatrische afdeling van een academisch ziekenhuis.

Art. 90septies . Onder psychiater wordt verstaan een arts die bevoegd is de titel van psychiater of zenuwarts te voeren.

Art. 90octies . Waar van huwelijk of echtgenoot wordt gesproken wordt, met uitzondering van artikel 449 , daaronder mede begrepen geregistreerd partnerschap dan wel geregistreerde partner. Slotbepaling

Art. 91 . De bepalingen van de Titels I-VIII A van dit Boek zijn ook toepasselijk op feiten waarop bij andere wetten of verordeningen straf is gesteld, tenzij de wet anders bepaalt.

WETBOEK VAN STRAFRECHT --- MISDRIJVEN

TITEL I Misdrijven tegen de veiligheid van de staat

Art. 92 . De aanslag ondernomen met het oogmerk om de Koning, de regerende Koningin of de Regent van het leven of de vrijheid te beroven of tot regeren ongeschikt te maken, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 93 . De aanslag ondernomen met het oogmerk om het Rijk geheel of gedeeltelijk onder vreemde heerschappij te brengen of om een deel daarvan af te scheiden, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 94 . De aanslag ondernomen met het oogmerk om de grondwettige regeringsvorm of de orde van troonopvolging te vernietigen of op onwettige wijze te veranderen, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 95 . Hij die door geweld of bedreiging met geweld een vergadering van de regeringsraad uiteenjaagt, tot het nemen of niet nemen van enig besluit dwingt, een lid uit die vergadering verwijdert of opzettelijk een lid verhindert die vergadering bij te wonen of daarin vrij en onbelemmerd zijn plicht te vervullen, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 95a . Hij die door geweld of bedreiging met geweld een vergadering van de raad van ministers uiteenjaagt, tot het nemen of niet nemen van enig besluit dwingt, een lid uit die vergadering verwijdert of opzettelijk een lid verhindert die

vergadering bij te wonen of daarin vrij en onbelemmerd zijn plicht te vervullen, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 96 . - 1. De samenspanning tot een der in de artikelen 92-95a omschreven misdrijven wordt gestraft met gevangenisstraf van ten hoogste tien jaren of geldboete van de vijfde categorie.

- 2. Dezelfde straf is toepasselijk op hem die, met het oogmerk om een der in de artikelen 92-95a omschreven misdrijven voor te bereiden of te bevorderen:

1° een ander tracht te bewegen om het misdrijf te plegen, te doen plegen of mede te plegen, om daarbij behulpzaam te zijn of om daartoe

gelegenheid, middelen of inlichtingen te verschaffen;

2° gelegenheid, middelen of inlichtingen tot het plegen van het misdrijf zich of anderen tracht te verschaffen;

3° voorwerpen voorhanden heeft waarvan hij weet dat zij bestemd zijn tot het plegen van het misdrijf;

4° plannen voor de uitvoering van het misdrijf, welke bestemd zijn om aan anderen te worden medegedeeld, in gereedheid brengt of onder zich heeft;

5° enige maatregel van regeringswege genomen om de uitvoering van het misdrijf te voorkomen of te onderdrukken, tracht te beletten, te belemmeren of te verijdelen.

- 3. Niet strafbaar is hij van wie blijkt, dat zijn oogmerk enkel gericht is op het voorbereiden of bevorderen van staatkundige veranderingen in algemene zin.

Art. 97 . - 1. Hij die met een buitenlandse mogendheid in verbinding treedt, met het oogmerk om haar tot het plegen van vijandelijkheden of het voeren van oorlog tegen de staat te bewegen, haar in het daartoe opgevatte voornemen te versterken, haar daarbij hulp toe te zeggen of bij de voorbereiding hulp te verlenen, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

- 2. Handelingen gepleegd ter voorbereiding van een misdrijf als omschreven in het voorgaande lid, worden gestraft met gevangenisstraf van ten hoogste tien jaren of geldboete van de vijfde categorie.

Art. 97a . Hij die met een in het buitenland gevestigd persoon of lichaam in verbinding treedt met het oogmerk om een zodanig persoon of lichaam tot het verschaffen van steun aan het voorbereiden, bevorderen of teweegbrengen van omwenteling te bewegen, om een zodanig persoon of lichaam in het daartoe opgevatte voornemen te versterken of aan een zodanig persoon of

lichaam daarbij hulp toe te zeggen of te verlenen, of om omwenteling voor te bereiden, te bevorderen of teweeg te brengen, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 97b . Met gevangenisstraf van ten hoogste tien jaren of geldboete van de vijfde categorie wordt gestraft:

1° hij die enig voorwerp invoert dat geschikt is tot het verschaffen van stoffelijke steun aan het voorbereiden, bevorderen of teweegbrengen van omwenteling, indien hij weet of ernstige reden heeft om te vermoeden dat het daartoe bestemd is;

2° hij die enig voorwerp onder zich heeft of tot onderwerp van een overeenkomst maakt dat geschikt is tot het verschaffen van stoffelijke steun aan het voorbereiden, bevorderen of teweegbrengen van omwenteling, indien hij weet of ernstige reden heeft om te vermoeden, dat het daartoe bestemd is en dat het voorwerp of enig ander voorwerp waarvoor het in de plaats is getreden, hetzij met die bestemming is ingevoerd, hetzij door of vanwege een in het buitenland gevestigd persoon of lichaam daartoe is bestemd.

Art. 98 . - 1. Hij die een inlichting waarvan de geheimhouding door het belang van de staat of van zijn bondgenoten wordt geboden, een voorwerp waaraan een zodanige inlichting kan worden ontleend, of zodanige gegevens opzettelijk verstrekt aan of ter beschikking stelt van een tot kennisneming daarvan niet gerechtigd persoon of lichaam, wordt, indien hij weet of redelijkerwijs moet vermoeden dat het een zodanige inlichting, een zodanig voorwerp of zodanige gegevens betreft, gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

- 2. Met dezelfde straf wordt gestraft hij die een inlichting die van een verboden plaats afkomstig is en tot de veiligheid van de staat of van zijn bondgenoten in betrekking staat, een voorwerp waaraan een zodanige inlichting kan worden ontleend, of zodanige gegevens opzettelijk verstrekt aan of ter beschikking stelt van een tot kennisneming daarvan niet gerechtigd persoon of lichaam, indien hij weet of redelijkerwijs moet vermoeden dat het een zodanige inlichting, een zodanig voorwerp of zodanige gegevens betreft.

Art. 98a . - 1. Hij die een inlichting, een voorwerp of gegevens als bedoeld in artikel 98 , hetzij opzettelijk openbaar maakt, hetzij zonder daartoe gerechtigd te zijn opzettelijk verstrekt aan of ter beschikking stelt van een buitenlandse mogendheid, een in het buitenland gevestigd persoon of lichaam, dan wel een zodanig persoon of lichaam dat gevaar ontstaat dat de

inlichting of de gegevens aan een buitenlandse mogendheid of aan een in het buitenland gevestigd persoon of lichaam bekend wordt, indien hij weet of redelijkerwijs moet vermoeden dat het een zodanige inlichting of zodanige gegevens betreft, gestraft met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

- 2. Indien de schuldige heeft gehandeld in tijd van oorlog dan wel in dienst of in opdracht van een buitenlandse mogendheid of van een in het buitenland gevestigd persoon of lichaam, kan levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie worden opgelegd.

- 3. Handelingen gepleegd ter voorbereiding van een misdrijf als omschreven in de voorgaande leden worden gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

Art. 98b . Hij aan wiens schuld te wijten is dat een inlichting, een voorwerp of gegevens als bedoeld in artikel 98 , openbaar worden gemaakt of ter beschikking komt van een tot kennisneming daarvan niet gerechtigd persoon of lichaam, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 98c . - 1. Met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie wordt gestraft:

1° hij die opzettelijk een inlichting, een voorwerp of gegevens als bedoeld in artikel 98 , zonder daartoe gerechtigd te zijn, onder zich neemt of houdt;

2° hij die enige handeling verricht, ondernomen met het oogmerk om, zonder daartoe gerechtigd te zijn, de beschikking te krijgen over een inlichting, een voorwerp of gegevens als bedoeld in artikel 98 ;

3° hij die tersluik, onder een vals voorgeven, door middel van een vermomming of langs een andere dan de gewone toegang op of in een verboden plaats komt of tracht te komen, aldaar in dier voege aanwezig is, of zich op een van die wijzen of door een van die middelen vandaar verwijderd of tracht te verwijderen.

- 2. De bepaling onder 3° is niet toepasselijk, indien de rechter blijkt dat de dader niet heeft gehandeld met het oogmerk bedoeld onder 2°.

Art. 99 . Hij die een hem van regeringswege opgedragen onderhandeling met een buitenlandse mogendheid opzettelijk ten nadele van de staat voert, wordt gestraft met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

Art. 100 . Met gevangenisstraf van ten hoogste tien jaren of geldboete van de vijfde categorie wordt

gestraft:

1° hij die, in geval van een oorlog waarin Nederland niet betrokken is, opzettelijk enige handeling verricht waardoor het gevaar ontstaat

dat de staat in een oorlog wordt betrokken, of enig van overheidswege gegeven en bekendgemaakt bijzonder voorschrift tot handhaving

van het niet deelnemen aan de oorlog opzettelijk overtreedt;

2° hij die, in tijd van oorlog, enig voorschrift van overheidswege in het belang van de veiligheid van de staat gegeven en bekendgemaakt, opzettelijk overtreedt.

Art. 101 . De Nederlander die in het vooruitzicht van een oorlog met een buitenlandse mogendheid vrijwillig bij deze mogendheid in krijgsdienst treedt, wordt, indien de oorlog uitbreekt, gestraft met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

Art. 102 . Met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie wordt gestraft hij die opzettelijk, in tijd van oorlog, de vijand hulp verleent of de staat tegenover de vijand benadeelt.

Art. 103 . De samenspanning tot het in artikel 102 omschreven misdrijf wordt gestraft met gevangenisstraf van ten hoogste tien jaren of geldboete van de vijfde categorie.

Art. 103a . Niet strafbaar is hij die een der in de artikelen 102 en 103 omschreven misdrijven heeft begaan in de redelijke overtuiging het Nederlandse belang niet te schaden.

Art. 104 . Met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie wordt gestraft hij die, in tijd van oorlog, zonder oogmerk om de vijand hulp te verlenen of de staat tegenover de vijand te benadelen, opzettelijk:
1° een verspieder van de vijand opneemt, verbergt of voorthelpt;
2° desertie van een krijgsman, in dienst van het Rijk, teweegbrengt of bevordert.

Art. 105 . - 1. Hij die, in tijd van oorlog, enige bedrieglijke handeling pleegt bij levering van benodigdheden ten dienste van de krijgsmacht, wordt gestraft met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie.
- 2. Met dezelfde straf wordt gestraft hij die, met het opzicht over de levering van de goederen belast, de bedrieglijke handeling opzettelijk toelaat.

Art. 106 . - 1. Bij veroordeling wegens het in artikel 92 omschreven misdrijf, kan ontzetting van de in

artikel 28, eerste lid , onder 1°-4°,
vermelde rechten worden uitgesproken.

- 2. Bij veroordeling wegens een der in de artikelen 93-103 omschreven misdrijven, kan ontzetting van de in artikel 28, eerste lid , onder 1°-3°, vermelde rechten worden uitgesproken.

- 3. Bij veroordeling wegens het in artikel 105 omschreven misdrijf, kan de schuldige worden ontzet van de uitoefening van het beroep waarin hij het misdrijf begaan heeft en van de in artikel 28, eerste lid , onder 1°-4°, vermelde rechten, en kan openbaarmaking van de rechterlijke uitspraak worden gelast.

Art. 107 . De straffen gesteld op de in de artikelen 102-105 omschreven feiten, zijn toepasselijk indien een van die feiten wordt gepleegd tegen of met betrekking tot de bondgenoten van de staat in een gemeenschappelijke oorlog.

Art. 107a . De artikelen 100 , onder 2°, en 101-107 vinden overeenkomstige toepassing in geval van een gewapend conflict dat niet als oorlog kan worden aangemerkt en waarbij Nederland is betrokken, hetzij ter individuele of collectieve zelfverdediging, hetzij tot herstel van internationale vrede en veiligheid.

TITEL II Misdrijven tegen de koninklijke waardigheid

Art. 108 . - 1. De aanslag op het leven of de vrijheid van de echtgenoot van de Koning, van de vermoedelijke opvolger van de Koning, of van diens echtgenoot, wordt gestraft met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

- 2. Indien de aanslag op het leven de dood ten gevolge heeft of met voorbedachten rade wordt ondernomen, wordt levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren opgelegd of geldboete van de vijfde categorie.

Art. 109 . Elke feitelijke aanranding van de persoon van de Koning die niet valt in een zwaardere strafbepaling wordt gestraft met gevangenisstraf van ten hoogste zeven jaren en zes maanden of geldboete van de vijfde categorie.

Art. 110 . Elke feitelijke aanranding van de persoon van de echtgenoot van de Koning, van de vermoedelijke opvolger van de Koning, van diens echtgenoot, of van de Regent die niet valt in een zwaardere strafbepaling wordt gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

Art. 111 . Opzettelijke belediging van de Koning wordt gestraft met gevangenisstraf van ten hoogste vijf

jaren of geldboete van de vierde categorie.

Art. 112 . Opzettelijke belediging van de echtgenoot van de Koning, van de vermoedelijke opvolger van de Koning, van diens echtgenoot, of van de Regent, wordt gestraft met gevangenisstraf van ten hoogste vier jaren of geldboete van de vierde categorie.

Art. 113 . - 1. Hij die een geschrift of afbeelding waarin een belediging voorkomt voor de Koning, de echtgenoot van de Koning, de vermoedelijke opvolger van de Koning, diens echtgenoot of de Regent, verspreidt, openlijk tentoonstelt of aanslaat of, om verspreid, openlijk tentoongesteld of aangeslagen te worden in voorraad heeft, wordt, indien hij weet of ernstige reden heeft om te vermoeden dat in het geschrift of de afbeelding zodanige belediging voorkomt, gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

- 2. Met dezelfde straf wordt gestraft hij die, met gelijke wetenschap of een gelijke reden tot vermoeden, de inhoud van een zodanig geschrift openlijk ten gehore brengt.

- 3. Indien de schuldige een van de misdrijven omschreven in dit artikel in zijn beroep begaat en er, tijdens het plegen van het misdrijf, nog geen twee jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens een van deze misdrijven onherroepelijk is geworden, kan hij van de uitoefening van dat beroep worden ontzet.

Art. 114 . - 1. Bij veroordeling wegens een der in de artikelen 108 , 109 en 110 omschreven misdrijven kan ontzetting van de in artikel 28, eerste lid , onder 1^o-4^o, vermelde rechten worden uitgesproken.

- 2. Bij veroordeling wegens een der in de artikelen 111 en 112 omschreven misdrijven, kan ontzetting van de in artikel 28, eerste lid , onder 1^o-3^o, vermelde rechten worden uitgesproken.

TITEL III Misdrijven tegen hoofden van bevriende Staten en andere internationaal beschermde personen

Art. 115 . - 1. De aanslag op het leven of de vrijheid van een hoofd van een bevriende staat wordt gestraft met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

- 2. Indien de aanslag op het leven de dood ten gevolge heeft of met voorbedachten rade wordt ondernomen, wordt levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie opgelegd.

Art. 116 . Elke feitelijke aanranding van de persoon van een hoofd van een bevriende staat, die niet valt in een zwaardere strafbepaling, wordt gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

Art. 117 . - 1. De aanslag op het leven of de vrijheid van een internationaal beschermd persoon wordt gestraft met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie.

- 2. Indien de aanslag op het leven de dood ten gevolge heeft of met voorbedachte rade wordt ondernomen, wordt levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren opgelegd of geldboete van de vijfde categorie.

Art. 117a . Elke feitelijke aanranding van de persoon van een internationaal beschermd persoon, die niet valt in een zwaardere strafbepaling, wordt gestraft met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie.

Art. 117b . Hij die opzettelijk geweld pleegt tegen de beschermde goederen van een internationaal beschermd persoon wordt, indien daardoor gevaar voor de veiligheid of de vrijheid van die persoon te duchten is, gestraft met gevangenisstraf van ten hoogste zeven jaren of geldboete van de vijfde categorie.

Art. 118 . - 1. Opzettelijke belediging van het hoofd of een lid van de regering van een bevriende staat, in de uitoefening van zijn ambt in Nederland verblijvende, wordt gestraft met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie.

- 2. Met dezelfde straf wordt gestraft opzettelijke belediging van een officieel bij de Nederlandse regering toegelaten vertegenwoordiger van een bevriende staat in diens hoedanigheid.

- 3. Bij veroordeling wegens een der in dit artikel omschreven misdrijven kan ontzetting van de in artikel 28, eerste lid , onder 1^o-2^o, vermelde rechten worden uitgesproken.

Art. 119 . - 1. Hij die een geschrift of afbeelding waarin een belediging voorkomt voor het hoofd of een lid van de regering van een bevriende staat, in de uitoefening van zijn ambt in Nederland verblijvende, verspreidt, openlijk tentoonstelt of aanslaat, dan wel de inhoud

van zulk een geschrift openlijk ten gehore brengt, wordt, indien hij weet of ernstige reden heeft om te vermoeden dat in het geschrift of de afbeelding zodanige belediging voorkomt, gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

- 2. Met dezelfde straf wordt gestraft hij die een geschrift of afbeelding waarin een belediging voorkomt

voor een officieel bij de

Nederlandse regering toegelaten vertegenwoordiger van een bevriende staat in diens hoedanigheid, verspreidt, openlijk tentoonstelt of aanslaat, of om verspreid, openlijk tentoongesteld of aangeslagen te worden in voorraad heeft, dan wel de inhoud van zulk een geschrift openlijk ten gehore brengt, indien hij weet of ernstige reden heeft om te vermoeden dat in het geschrift of de afbeelding zodanige belediging voorkomt.

- 3. Indien de schuldige een van de misdrijven omschreven in dit artikel, in zijn beroep begaat en er, tijdens het plegen van het misdrijf, nog geen twee jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens een van deze misdrijven onherroepelijk is geworden, kan hij van de uitoefening van dat beroep worden ontzet.

Art. 120 . Bij veroordeling wegens een der in de artikelen 115 en 116 omschreven misdrijven, kan ontzetting van de in artikel 28, eerste lid, onder 1^o-4^o, vermelde rechten worden uitgesproken.

TITEL IV Misdrijven betreffende de uitoefening van staatsplichten en staatsrechten

Art. 121 . Hij die door geweld of bedreiging met geweld een vergadering van de beide kamers der Staten-Generaal of van een van deze uiteenjaagt, tot het nemen of niet nemen van enig besluit dwingt, een lid uit die vergadering verwijdert of opzettelijk een lid verhindert die vergadering bij te wonen of daarin vrij en onbelemmerd zijn plicht te vervullen, wordt gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 122 . - 1. De samenspanning tot het in artikel 121 omschreven misdrijf wordt gestraft met gevangenisstraf van ten hoogste tien jaren of geldboete van de vijfde categorie.

- 2. Artikel 96, tweede en derde lid , is van overeenkomstige toepassing.

Art. 123 . Hij die door geweld of bedreiging met geweld opzettelijk een vergadering van de staten van een provincie of van de raad van een gemeente uiteenjaagt, tot het nemen of niet nemen van enig besluit dwingt, of de voorzitter of een lid uit die vergadering verwijdert, wordt gestraft met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie.

Art. 124 . Hij die door geweld of bedreiging met geweld opzettelijk de voorzitter of een lid van de staten van een provincie of van de raad van een gemeente verhindert de vergadering bij te wonen of daarin vrij en onbelemmerd zijn plicht te vervullen, wordt gestraft met

gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie.

Art. 125 . Hij die bij gelegenheid van een krachtens wettelijk voorschrift uitgeschreven verkiezing door geweld of bedreiging met geweld opzettelijk iemand verhindert zijn of eens anders kiesrecht vrij en onbelemmerd uit te oefenen, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 126 . - 1. Hij die bij gelegenheid van een krachtens wettelijk voorschrift uitgeschreven verkiezing door gift of belofte iemand omkoopt om zijn of eens anders kiesrecht hetzij niet, hetzij op bepaalde wijze uit te oefenen, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.
- 2. Dezelfde straf wordt toegepast op de kiezer of de gemachtigde van een kiezer die zich door gift of belofte tot een of ander laat omkopen.

Art. 127 . Hij die bij gelegenheid van een krachtens wettelijk voorschrift uitgeschreven verkiezing, enige bedrieglijke handeling pleegt waardoor een stem van onwaarde wordt of een ander dan de bij het uitbrengen van de stem bedoelde persoon wordt aangewezen, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 128 . Hij die opzettelijk zich voor een ander uitgevende, aan een krachtens wettelijk voorschrift uitgeschreven verkiezing deelneemt, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 129 . Hij die bij gelegenheid van een krachtens wettelijk voorschrift uitgeschreven verkiezing, opzettelijk een plaats gehad hebbende stemming verijdelt of enige bedrieglijke handeling pleegt waardoor aan de stemming een andere uitslag wordt gegeven dan door de wettig uitgebrachte stemmen zou zijn verkregen, wordt gestraft met gevangenisstraf van ten hoogste een jaar en zes maanden of geldboete van de vierde categorie.

Art. 130 . - 1. Bij veroordeling wegens een der in de artikelen 121 en 123 omschreven misdrijven, kan ontzetting van de in artikel 28, eerste lid , onder 1^o-3^o, vermelde rechten worden uitgesproken.
- 2. Bij veroordeling wegens een der in de artikelen 122 , 124 en 129 omschreven misdrijven, kan ontzetting van de in artikel 28, eerste lid , onder 3^o, vermelde rechten worden uitgesproken.

TITEL V Misdrijven tegen de openbare orde

Art. 131 . Hij die in het openbaar, mondeling of bij geschrift of afbeelding, tot enig strafbaar feit of tot gewelddadig optreden tegen het openbaar gezag opruit, wordt gestraft met gevangenisstraf van ten hoogste vijf jaren of geldboete van de vierde categorie.

Art. 132 . - 1. Hij die een geschrift of afbeelding waarin tot enig strafbaar feit of tot gewelddadig optreden tegen het openbaar gezag wordt opgeruid, verspreidt, openlijk tentoonstelt of aanslaat of, om verspreid, openlijk tentoongesteld of aangeslagen te worden, in voorraad heeft, wordt, indien hij weet of ernstige reden heeft te vermoeden dat in het geschrift of de afbeelding zodanige opruiing voorkomt, gestraft met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie.

- 2. Met dezelfde straf wordt gestraft hij die, met gelijke wetenschap of een gelijke reden tot vermoeden, de inhoud van een zodanig geschrift openlijk ten gehore brengt.

- 3. Indien de schuldige een van de misdrijven omschreven in dit artikel in zijn beroep begaat en er, tijdens het plegen van het misdrijf, nog geen vijf jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens een van deze misdrijven onherroepelijk is geworden, kan hij van de uitoefening van dat beroep worden ontzet.

Art. 133 . Hij die in het openbaar, mondeling of bij geschrift of afbeelding, aanbiedt inlichtingen, gelegenheid of middelen te verschaffen om enig strafbaar feit te plegen, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 134 . - 1. Hij die een geschrift of afbeelding waarin wordt aangeboden inlichtingen, gelegenheid of middelen te verschaffen om enig strafbaar feit te plegen, verspreidt, openlijk tentoonstelt of aanslaat of, om verspreid, openlijk tentoongesteld of aangeslagen te worden, in voorraad heeft, wordt, indien hij weet of ernstige reden heeft om te vermoeden dat in het geschrift of de afbeelding zodanig aanbod voorkomt, gestraft met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede categorie.

- 2. Met dezelfde straf wordt gestraft hij die, met gelijke wetenschap of een gelijke reden tot vermoeden, de inhoud van een zodanig geschrift openlijk ten gehore brengt.

- 3. Indien de schuldige een van de misdrijven omschreven in dit artikel in zijn beroep begaat en er, tijdens het plegen van het misdrijf, nog geen vijf jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens een van deze misdrijven onherroepelijk is

geworden, kan hij van de uitoefening van dat beroep worden ontzet.

Art. 134bis . Vervallen.

Art. 135 . Hij die, kennis dragende van een samenspanning tot een der in de artikelen 92-95a, 102 of 121 bedoelde misdrijven, op een tijdstip waarop het plegen van deze misdrijven nog kan worden voorkomen, opzettelijk nalaat daarvan tijdig voldoende kennis te geven, hetzij aan de ambtenaren van de justitie of politie, hetzij aan de bedreigde, wordt, indien het misdrijf is gevolgd, gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 136 . - 1. Hij die, kennis dragende van een voornemen tot het plegen van een der in de artikelen 92-110 omschreven misdrijven, tot desertie in tijd van oorlog, tot militair verraad, tot moord, mensenroof of verkrachting of tot een der in Titel VII van dit Boek omschreven misdrijven voor zover daardoor levensgevaar wordt veroorzaakt, op een tijdstip waarop het plegen van deze misdrijven nog kan worden voorkomen, opzettelijk nalaat daarvan tijdig voldoende kennis te geven, hetzij aan de ambtenaren van de justitie of politie, hetzij aan de bedreigde, wordt, indien het misdrijf is gevolgd, gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

- 2. Dezelfde straf is toepasselijk op hem die, kennis dragende van enig in het eerste lid vermeld reeds gepleegd misdrijf waardoor levensgevaar is ontstaan, op een tijdstip waarop de gevolgen nog kunnen worden afgewend, opzettelijk nalaat daarvan gelijke kennisgeving te doen.

Art. 137 . De bepalingen van de artikelen 135 en 136 zijn niet van toepassing op hem die door de kennisgeving gevaar voor een strafvervolgung zou doen ontstaan voor zichzelf, voor een van zijn bloedverwanten of aangehuwden in de rechte linie of in de tweede of derde graad van de zijlinie, voor zijn echtgenoot of gewezen echtgenoot, of voor een ander bij wiens vervolging hij zich, uit hoofde van zijn ambt of beroep, van het afleggen van getuigenis zou kunnen verschonen.

Art. 137a t/m 137b . Vervallen.

Art. 137c . Hij die zich in het openbaar, mondeling of bij geschrift of afbeelding, opzettelijk beledigend uitlaat over een groep mensen wegens hun ras, hun godsdienst of levensovertuiging of hun hetero- of homoseksuele gerichtheid, wordt

gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 137d . Hij die in het openbaar, mondeling of bij geschrift of afbeelding, aanzet tot haat tegen of discriminatie van mensen of gewelddadig optreden tegen persoon of goed van mensen wegens hun ras, hun godsdienst of levensovertuiging, hun geslacht of hun hetero- of homoseksuele gerichtheid, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 137e . - 1. Hij die, anders dan ten behoeve van zakelijke berichtgeving:

1° een uitlating openbaar maakt die, naar hij weet of redelijkerwijs moet vermoeden, voor een groep mensen wegens hun ras, hun godsdienst of levensovertuiging of hun hetero- of homoseksuele gerichtheid beledigend is, of aanzet tot haat tegen of discriminatie van mensen of gewelddadig optreden tegen persoon of goed van mensen wegens hun ras, hun godsdienst of levensovertuiging, hun geslacht of hun hetero- of homoseksuele gerichtheid;

2° een voorwerp waarin, naar hij weet of redelijkerwijs moet vermoeden, zulk een uitlating is vervat, aan iemand, anders dan op diens verzoek, doet toekomen, dan wel verspreidt of ter openbaarmaking van die uitlating of verspreiding in voorraad heeft; wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

- 2. Indien de schuldige een van de strafbare feiten, omschreven in dit artikel, in zijn beroep begaat en er, tijdens het plegen van het feit, nog geen vijf jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens een van deze misdrijven onherroepelijk is geworden, kan hij van de uitoefening van dat beroep worden ontzet.

Art. 137f . Hij die deelneemt of geldelijke of andere stoffelijke steun verleent aan activiteiten gericht op discriminatie van mensen wegens hun ras, hun godsdienst, hun levensovertuiging, hun geslacht of hun hetero- of homoseksuele gerichtheid, wordt gestraft met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede categorie.

Art. 137g . Hij die, in de uitoefening van een ambt, beroep of bedrijf personen opzettelijk discrimineert wegens hun ras, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 138 . - 1. Hij die in de woning of het besloten lokaal of erf, bij een ander in gebruik, wederrechtelijk binnendringt of, wederrechtelijk aldaar vertoevende, zich niet op de vordering van of vanwege de rechthebbende aanstonds verwijdert,

wordt gestraft met gevangenisstraf

van ten hoogste zes maanden of geldboete van de derde categorie.

- 2. Hij die zich de toegang heeft verschaft door middel van braak of inklimming, van valse sleutels, van een valse order of een vals

kostuum, of die, zonder voorkennis van de rechthebbende en anders dan ten gevolge van vergissing binnengekomen, aldaar wordt

aangetroffen in de voor de nachtrust bestemde tijd, wordt geacht te zijn binnengedrongen.

- 3. Indien hij bedreigingen uit of zich bedient van middelen geschikt om vrees aan te jagen, wordt hij gestraft met gevangenisstraf van ten

hoogste een jaar of geldboete van de derde categorie.

- 4. De in het eerste en derde lid bepaalde gevangenisstraffen kunnen met een derde worden verhoogd, indien twee of meer verenigde personen het misdrijf plegen.

Art. 138a . - 1. Met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie wordt, als schuldig aan

computervredesbreuk, gestraft hij die opzettelijk wederrechtelijk binnendringt in een geautomatiseerd werk voor de opslag of verwerking

van gegevens, of in een deel daarvan, indien hij

a. daarbij enige beveiliging doorbreekt of

b. de toegang verwerft door een technische ingreep, met behulp van valse signalen of een valse sleutel dan wel door het aannemen van een valse hoedanigheid.

- 2. Met gevangenisstraf van ten hoogste vier jaren of geldboete van de vierde categorie wordt gestraft computervredesbreuk, indien de

dader vervolgens gegevens die zijn opgeslagen in een geautomatiseerd werk waarin hij zich wederrechtelijk bevindt, overneemt en voor

zichzelf of een ander vastlegt.

- 3. Met gevangenisstraf van ten hoogste vier jaren of geldboete van de vierde categorie wordt gestraft computervredesbreuk gepleegd

door tussenkomst van een openbaar telecommunicatienetwerk, indien de dader vervolgens

a. met het oogmerk zich wederrechtelijk te bevoordelen gebruik maakt van verwerkingscapaciteit van een geautomatiseerd werk;

b. door tussenkomst van het geautomatiseerd werk waarin hij is binnengedrongen de toegang verwerft tot het geautomatiseerd werk van een derde.

Art. 139 . - 1. Hij die in een voor de openbare dienst bestemd lokaal wederrechtelijk binnendringt, of, wederrechtelijk aldaar

vertoevende, zich niet op de vordering van de bevoegde ambtenaar aanstonds verwijdert, wordt gestraft met gevangenisstraf van ten

hoogste drie maanden of geldboete van de tweede categorie.

- 2. Hij die zich de toegang heeft verschaft door middel van braak of inklimming, van valse sleutels, van

een valse order of een vals

kostuum, of die zonder voorkennis van de bevoegde ambtenaar en anders dan ten gevolge van vergissing binnengekomen, aldaar wordt

aangetroffen in de voor de nachtrust bestemde tijd, wordt geacht te zijn binnengedrongen.

- 3. Indien hij bedreigingen uit of zich bedient van middelen geschikt om vrees aan te jagen, wordt hij gestraft met gevangenisstraf van ten

hoogste een jaar of geldboete van de derde categorie.

- 4. De in het eerste en derde lid bepaalde gevangenisstraffen kunnen met een derde worden verhoogd, indien twee of meer verenigde personen het misdrijf plegen.

Art. 139a . - 1. Met gevangenisstraf van ten hoogste zes maanden of geldboete van de vierde categorie wordt gestraft hij die met een

technisch hulpmiddel een gesprek dat in een woning, besloten lokaal of erf wordt gevoerd opzettelijk:

1° anders dan in opdracht van een deelnemer aan dat gesprek afluistert;

2° zonder deelnemer aan dat gesprek te zijn en anders dan in opdracht van zulk een deelnemer opneemt.

- 2. Met dezelfde straf wordt gestraft hij die gegevens die in een woning, besloten lokaal of erf, door middel van een geautomatiseerd

werk worden overgedragen, met een technisch hulpmiddel opzettelijk, zonder daartoe gerechtigd te zijn, aftapt of opneemt.

- 3. Het eerste en tweede lid zijn niet van toepassing op het aftappen of opnemen:

1° van telecommunicatie via een openbaar telecommunicatienetwerk,

2° behoudens in geval van kennelijk misbruik, met een technisch hulpmiddel dat op gezag van degene bij wie de woning, het lokaal of het

erf in gebruik is, niet heimelijk aanwezig is;

3° op bijzondere last van de Minister-President, de Minister van Justitie en de Minister van Binnenlandse Zaken gezamenlijk, telkens voor

de duur van ten hoogste drie maanden aan het Hoofd van de Binnenlandse Veiligheidsdienst te geven, in gevallen waarin zulks nodig is in

het belang van de veiligheid van de staat.

Art. 139b . - 1. Met gevangenisstraf van ten hoogste drie maanden of geldboete van de derde categorie wordt gestraft hij die, met het

oogmerk een gesprek dat elders dan in een woning, besloten lokaal of erf wordt gevoerd af te luisteren of op te nemen, dat gesprek met

een technisch hulpmiddel heimelijk:

1° anders dan in opdracht van een deelnemer aan dat gesprek afluistert;

2° zonder deelnemer aan dat gesprek te zijn en anders dan in opdracht van zulk een deelnemer opneemt.

- 2. Met dezelfde straf wordt gestraft hij die gegevensoverdracht elders dan in een woning, besloten lokaal of erf door middel van een

geautomatiseerd werk of telecommunicatie, met een technisch hulpmiddel opzettelijk, zonder daartoe gerechtigd te zijn, heimelijk aftapt of

opneemt.

- 3. Op het eerste en tweede lid is artikel 139a, derde lid , onder 1° en 3°, van overeenkomstige toepassing. Op het tweede lid is artikel 139c, tweede lid , van overeenkomstige toepassing.

Art. 139c . - 1. Hij die door middel van een openbaar telecommunicatienetwerk, of door middel van daarop aangesloten randapparatuur overgedragen gegevens die niet voor hem, mede voor hem of voor degenen in wiens opdracht hij handelt, zijn bestemd, opzettelijk met een technisch hulpmiddel aftapt of opneemt, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de vierde categorie.

- 2. Het eerste lid is niet van toepassing op het aftappen of opnemen:

1° van door middel van een radio-ontvangapparaat ontvangen gegevens, tenzij om de ontvangst mogelijk te maken een bijzondere inspanning is geleverd of een niet toegestane ontvanginrichting is gebruikt.

2° door of in opdracht van de gerechtigde tot een voor de telecommunicatie gebezigde aansluiting, behoudens in geval van kennelijk misbruik;

3° ten behoeve van de goede werking van een openbaar telecommunicatienetwerk, ten behoeve van de strafvordering, dan wel, op bijzondere last van Onze Minister-President en Onze Ministers van Justitie, van Binnenlandse Zaken en Koninkrijksrelaties en van Verkeer en Waterstaat gezamenlijk, telkens voor de duur van ten hoogste drie maanden aan het Hoofd van de Binnenlandse Veiligheidsdienst te geven, in gevallen waarin zulks nodig is in het belang van de veiligheid van de staat.

Art. 139d . Met gevangenisstraf van ten hoogste zes maanden of geldboete van de vierde categorie wordt gestraft hij die met het oogmerk dat daardoor een gesprek, telecommunicatie of andere gegevensoverdracht door een geautomatiseerd werk wederrechtelijk wordt afgeluisterd, afgetapt of opgenomen, een technisch hulpmiddel op een bepaalde plaats aanwezig doet zijn.

Art. 139e . Met gevangenisstraf van ten hoogste zes maanden of geldboete van de vierde categorie wordt gestraft:

1° hij die de beschikking heeft over een voorwerp waarop, naar hij weet of redelijkerwijs moet vermoeden, gegevens zijn vastgelegd die door wederrechtelijk afluisteren, aftappen of opnemen van een gesprek, telecommunicatie of andere gegevensoverdracht door een geautomatiseerd werk zijn verkregen;

2° hij die gegevens die hij door wederrechtelijk afluisteren, aftappen of opnemen van een gesprek, telecommunicatie of andere

gegevensoverdracht door een geautomatiseerd werk heeft verkregen of die, naar hij weet of redelijkerwijs moet vermoeden, ten gevolge van zulk afluisteren, aftappen of opnemen te zijner kennis zijn gekomen, opzettelijk aan een ander bekend maakt;

3° hij die een voorwerp als omschreven onder 1° opzettelijk ter beschikking stelt van een ander.

Art. 139f . Met gevangenisstraf van ten hoogste zes maanden of geldboete van de vierde categorie wordt gestraft:

1° hij die, gebruik makende van een door een list of een kunstgreep daartoe geschapen gelegenheid, van een in een woning of een niet

voor het publiek toegankelijk lokaal aanwezige persoon met een technisch hulpmiddel opzettelijk een afbeelding vervaardigt waardoor

diens rechtmatig belang kan worden geschaad;

2° hij die de beschikking heeft over een afbeelding welke, naar hij weet of redelijkerwijs moet vermoeden, door of ten gevolge van een

onder 1° strafbaar gestelde handeling is verkregen.

Art. 139g . Met gevangenisstraf van ten hoogste zes maanden of geldboete van de vierde categorie wordt gestraft hij die een afbeelding, als bedoeld in het vorige artikel, onder 2°, openbaar maakt.

Art. 140 . - 1. Deelneming aan een organisatie die tot oogmerk heeft het plegen van misdrijven, wordt gestraft met gevangenisstraf van

ten hoogste zes jaren of geldboete van de vijfde categorie.

- 2. Deelneming aan de voortzetting van de werkzaamheid van een rechtspersoon die bij onherroepelijke rechterlijke beslissing verboden

is verklaard en deswege is ontbonden wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

- 3. Ten aanzien van de oprichters, leiders of bestuurders kunnen de gevangenisstraffen met een derde worden verhoogd.

Art. 141 . - 1. Zij die openlijk met verenigde krachten geweld plegen tegen personen of goederen, worden gestraft met gevangenisstraf

van ten hoogste vier jaren en zes maanden of geldboete van de vierde categorie.

- 2. De schuldige wordt gestraft:

1° met gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie, indien hij opzettelijk goederen vernielt of indien het

door hem gepleegde geweld enig lichamenlijk letsel ten gevolge heeft;

2° met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie, indien dat geweld zwaar lichamenlijk letsel ten gevolge heeft;

3° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien dat geweld de dood ten gevolge heeft.

- 3. Artikel 81 blijft buiten toepassing.

Art. 142 . - 1. Hij die opzettelijk door valse alarmkreten of signalen de rust verstoort, wordt gestraft met gevangenisstraf van ten hoogste twee weken of geldboete van de tweede categorie.

- 2. Hij die opzettelijk, zonder dat daartoe de noodzaak aanwezig is, gebruik maakt van een alarmnummer voor publieke diensten wordt gestraft met gevangenisstraf van ten hoogste twee weken of geldboete van de tweede categorie.

Art. 143 . Hij die door geweld of bedreiging met geweld een geoorloofde openbare vergadering of betoging verhindert, wordt gestraft met gevangenisstraf van ten hoogste negen maanden of geldboete van de derde categorie.

Art. 144 . Hij die door het verwekken van wanorde of het maken van gedruis een geoorloofde openbare vergadering opzettelijk stoort, of door het verwekken van wanorde een geoorloofde betoging opzettelijk stoort, wordt gestraft met gevangenisstraf van ten hoogste twee weken of geldboete van de tweede categorie.

Art. 145 . Hij die door geweld of bedreiging met geweld hetzij een geoorloofde openbare samenkomst tot het belijden van godsdienst of levensovertuiging, hetzij een geoorloofde godsdienstige of levensbeschouwelijke plechtigheid of lijkplechtigheid verhindert, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 146 . Hij die door het verwekken van wanorde of het maken van gedruis hetzij een geoorloofde openbare samenkomst tot het belijden van godsdienst of levensovertuiging, hetzij een geoorloofde godsdienstige of levensbeschouwelijke plechtigheid of lijkplechtigheid opzettelijk stoort, wordt gestraft met gevangenisstraf van ten hoogste twee maanden of geldboete van de tweede categorie.

Art. 147 . Met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede categorie wordt gestraft:

1° hij die zich in het openbaar, mondeling of bij geschrift of afbeelding, door smalende godslasteringen op voor godsdienstige gevoelens

krenkende wijze uitlaat;

2° hij die een bedienaar van de godsdienst in de geoorloofde waarneming van zijn bediening bespot;

3° hij die voorwerpen aan een eredienst gewijd, waar en wanneer de uitoefening van die dienst geoorloofd is, beschimpt.

Art. 147a . - 1. Hij die een geschrift of afbeelding waarin uitlatingen voorkomen die, als smalende

godslasteringen, voor godsdienstige gevoelens krenkend zijn, verspreidt, openlijk tentoonstelt of aanslaat of, om verspreid, openlijk tentoongesteld of aangeslagen te worden, in voorraad heeft, wordt, indien hij weet of ernstige reden heeft om te vermoeden dat in het geschrift of de afbeelding zodanige uitlatingen voorkomen, gestraft met gevangenisstraf van ten hoogste twee maanden of geldboete van de tweede categorie.

- 2. Met dezelfde straf wordt gestraft hij die, met gelijke wetenschap of een gelijke reden tot vermoeden, de inhoud van een zodanig geschrift openlijk ten gehore brengt.

- 3. Indien de schuldige een van de misdrijven omschreven in dit artikel in zijn beroep begaat en er, tijdens het plegen van het misdrijf, nog geen twee jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens een van deze misdrijven onherroepelijk is geworden, kan hij van de uitoefening van dat beroep worden ontzet.

Art. 148 . Hij die opzettelijk de geoorloofde toegang tot een begraafplaats of crematorium of het geoorloofd vervoer van een lijk naar een begraafplaats of crematorium verhindert of belemmert, wordt gestraft met gevangenisstraf van ten hoogste een maand of geldboete van de tweede categorie.

Art. 149 . Hij die opzettelijk een graf schendt of enig op een begraafplaats opgericht gedenkteken opzettelijk en wederrechtelijk vernielt of beschadigt, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 150 . Hij die opzettelijk en wederrechtelijk een lijk opgraaft of wegneemt of een opgegraven of weggenomen lijk verplaatst of vervoert, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 151 . Hij die een lijk begraaft, verbrandt, vernietigt, verbergt, wegvoert of wegmaakt, met het oogmerk om het feit of de oorzaak van het overlijden, dan wel van het dood ter wereld komen te verhelen, wordt gestraft met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie.

Art. 151a . Hij die uit winstbejag opzettelijk bevordert dat een kind beneden de leeftijd van zes maanden hetwelk niet onder voogdij van een rechtspersoon staat, zonder voorafgaande schriftelijke toestemming van de raad voor de kindbescherming, als pleegkind wordt

opgenomen, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 151b . - 1. Degene die in de uitoefening van een beroep of bedrijf opzettelijk teweegbrengt of bevordert dat een draagmoeder of een vrouw die draagmoeder wenst te worden, rechtstreeks of middellijk met een ander onderhandelt of een afspraak maakt ten einde het voornemen, bedoeld in het derde lid, uit te voeren, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de vierde categorie.

- 2. Met dezelfde straf wordt gestraft:

a. degene die in het openbaar diensten aanbiedt, bestaande uit het teweegbrengen of bevorderen van onderhandelingen of een afspraak als bedoeld in het eerste lid;

b. degene die openbaar maakt dat een vrouw draagmoeder wenst te worden of als zodanig beschikbaar is, dan wel dat een vrouw die draagmoeder wenst te worden of als zodanig beschikbaar is, wordt gezocht.

- 3. Als draagmoeder wordt aangemerkt de vrouw die zwanger is geworden met het voornemen een kind te baren ten behoeve van een ander die het ouderlijk gezag over dat kind wil verwerven, dan wel anderszins duurzaam de verzorging en opvoeding van dat kind op zich wil nemen.

Art. 151c . - 1. Degene die in de uitoefening van een beroep of bedrijf opzettelijk teweegbrengt of bevordert dat een vrouw rechtstreeks of middellijk met een ander onderhandelt of een afspraak maakt in verband met de wens van die vrouw de verzorging en opvoeding van haar kind duurzaam aan een ander over te laten, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

- 2. Onverminderd het bepaalde in artikel 151b, eerste lid , is het eerste lid niet van toepassing

a. indien het in dat lid bedoelde teweegbrengen of bevorderen geschiedt door de raad voor de kindbescherming of een door de raad daartoe aangewezen rechtspersoon;

b. indien het in dat lid bedoelde teweegbrengen of bevorderen een verwijzing betreft naar een organisatie als bedoeld onder a.

TITEL VI Tweegevecht

Art. 152 . Met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie wordt gestraft:

1° hij die iemand tot een uitdaging tot tweegevecht of tot het aannemen van een uitdaging aanzet, indien daarop een tweegevecht volgt;

2° hij die opzettelijk een uitdaging overbrengt, indien daarop een tweegevecht volgt.

Art. 153 . Met gevangenisstraf van ten hoogste vier maanden of geldboete van de tweede categorie wordt gestraft hij die iemand in het openbaar of in tegenwoordigheid van derden verwijtingen doet of hem aan bespotting prijsgeeft, omdat hij niet tot tweegevecht heeft uitgedaagd of omdat hij een uitdaging heeft afgewezen.

Art. 154 . - 1. Tweegevecht wordt ten aanzien van hem die zijn tegenpartij geen lichamelijk letsel toebrengt gestraft met gevangenisstraf

van ten hoogste zes maanden of geldboete van de derde categorie.

- 2. Hij die zijn tegenpartij enig lichamelijk letsel toebrengt wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

- 3. Hij die zijn tegenpartij zwaar lichamelijk letsel toebrengt wordt gestraft met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie.

- 4. Hij die zijn tegenpartij van het leven berooft wordt gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie of, indien het tweegevecht op leven of dood was aangegaan, met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie.

- 5. Poging tot tweegevecht is niet strafbaar.

Art. 155 . Op hem die in een tweegevecht zijn tegenpartij van het leven berooft of haar enig lichamelijk letsel toebrengt, worden de

bepalingen omtrent moord, doodslag of mishandeling toegepast:

1° indien de voorwaarden niet vooraf zijn geregeld;

2° indien het tweegevecht niet plaats heeft in tegenwoordigheid van wederzijdse getuigen;

3° indien de dader, opzettelijk en ten nadele van de tegenpartij, zich aan enige bedrieglijke handeling schuldig maakt of van de voorwaarden afwijkt.

Art. 156 . - 1. Getuigen en artsen die een tweegevecht bijwonen, zijn niet strafbaar.

- 2. De getuigen worden gestraft:

1° met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie, indien de voorwaarden niet vooraf zijn geregeld,

of indien zij partijen tot voortzetting van het tweegevecht aanzetten;

2° met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie, indien zij opzettelijk en ten nadele van een of beide partijen, zich aan enige bedrieglijke handeling schuldig maken of enige door partijen gepleegde bedrieglijke handeling toelaten, of toelaten dat van de voorwaarden wordt afgeweken.

- 3. De bepalingen omtrent moord, doodslag of mishandeling worden toegepast op de getuige bij een tweegevecht waarin een van de partijen van het leven is beroofd of haar enig lichamelijk letsel is toegebracht, indien hij, opzettelijk en ten nadele van die partij, zich aan enige bedrieglijke handeling heeft schuldig gemaakt of enige bedrieglijke handeling heeft toegelaten, of heeft toegelaten dat ten nadele van de verslagene of verwonde van de voorwaarden is afgeweken.

TITEL VII Misdrijven waardoor de algemene veiligheid van personen of goederen wordt in gevaar gebracht

Art. 157 . Hij die opzettelijk brand sticht, een ontploffing teweegbrengt of een overstroming veroorzaakt, wordt gestraft:

1° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien daarvan gemeen gevaar voor goederen te duchten is;

2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is;

3° met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 158 . Hij aan wiens schuld brand, ontploffing of overstroming te wijten is, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor gemeen gevaar voor goederen ontstaat;

2° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien daardoor levensgevaar voor een ander ontstaat;

3° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten gevolge heeft.

Art. 159 . Hij die opzettelijk bij of in het vooruitzicht van brand blusgereedschappen of blusmiddelen wederrechtelijk verbergt of onbruikbaar maakt, of op enige wijze de blussing van brand verhindert of belemmert, wordt gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

Art. 160 . Hij die opzettelijk bij of in het vooruitzicht van watersnood dijkmaterialen of gereedschappen wederrechtelijk verbergt of

onbruikbaar maakt, enige poging tot herstel van dijken of andere waterstaatswerken verijdelt, of de aangewende middelen tot het voorkomen of stuiten van overstroming tegenwerkt, wordt gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

Art. 161 . Hij die opzettelijk enig werk dienende tot waterkering of waterlozing vernielt, onbruikbaar maakt of beschadigt, wordt, indien daarvan gevaar voor overstroming te duchten is, gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie.

Art. 161bis . Hij die opzettelijk enig electriciteitswerk vernielt, beschadigt of onbruikbaar maakt, stoornis in de gang of in de werking van zodanig werk veroorzaakt, of een ten opzichte van zodanig werk genomen veiligheidsmaatregel verijdelt, wordt gestraft:

1° met gevangenisstraf van ten hoogste zes maanden of geldboete van de vijfde categorie, indien daardoor verhindering of bemoeilijking van stroomlevering ten algemenen nutte ontstaat;

2° met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie, indien daarvan gemeen gevaar voor goederen te duchten is;

3° met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is;

4° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 161ter . Hij aan wiens schuld te wijten is, dat enig electriciteitswerk wordt vernield, beschadigd, of onbruikbaar gemaakt, dat stoornis in de gang of in de werking van zodanig werk ontstaat, of dat een ten opzichte van zodanig werk genomen veiligheidsmaatregel wordt verijdeld, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor verhindering of bemoeilijking van stroomlevering ten algemenen nutte of gemeen gevaar voor goederen ontstaat;

2° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien daardoor levensgevaar voor een ander ontstaat;

3° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten gevolge heeft.

Art. 161quater . Hij die opzettelijk mensen, dieren, planten of goederen aan ioniserende stralen blootstelt, dan wel mensen, dieren, planten, goederen, bodem, water of lucht met radioactieve stoffen besmet, wordt gestraft:
1° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan gevaar voor de openbare gezondheid of levensgevaar voor een ander te duchten is;
2° met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 161quinquies . Hij aan wiens schuld te wijten is dat mensen, dieren, planten of goederen aan ioniserende stralen worden blootgesteld, dan wel mensen, dieren, planten, goederen, bodem, water of lucht met radioactieve stoffen worden besmet, wordt gestraft:
1° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien daarvan gevaar voor de openbare gezondheid of levensgevaar voor een ander te duchten is;
2° met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 161sexies . Hij die opzettelijk enig geautomatiseerd werk voor opslag of verwerking van gegevens of enig werk voor telecommunicatie vernielt, beschadigt of onbruikbaar maakt, stoornis in de gang of in de werking van zodanig werk veroorzaakt, of een ten opzichte van zodanig werk genomen veiligheidsmaatregel verijdelt, wordt gestraft:
1° met gevangenisstraf van ten hoogste zes maanden of geldboete van de vijfde categorie, indien daardoor wederrechtelijk verhindering of bemoeilijking van de opslag of verwerking van gegevens ten algemene nutte of stoornis in een openbaar telecommunicatienetwerk of in de uitvoering van een openbare telecommunicatiedienst, ontstaat;
2° met gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie, indien daarvan gemeen gevaar voor goederen of voor de verlening van diensten te duchten is;
3° met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is;
4° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 161septies . Hij aan wiens schuld te wijten is dat enig geautomatiseerd werk voor opslag of

verwerking van gegevens of enig werk

voor telecommunicatie wordt vernield, beschadigd of onbruikbaar gemaakt, dat stoornis in de gang of in de werking van zodanig werk

ontstaat, of dat een ten opzichte van zodanig werk genomen veiligheidsmaatregel wordt verijdeld, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor verhindering of

bemoeilijking van de opslag of verwerking van gegevens ten algemene nutte, stoornis in een openbaar telecommunicatienetwerk of in de

uitvoering van een openbare telecommunicatiedienst, of gemeen gevaar voor goederen of voor de verlening van diensten ontstaat;

2° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien daardoor levensgevaar

voor een ander ontstaat;

3° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten

gevolge heeft.

Art. 162 . Hij die opzettelijk enig werk dienende voor het openbaar verkeer of het luchtverkeer vernielt, onbruikbaar maakt of beschadigt,

enige openbare land- of waterweg verspert of een ten aanzien van zodanig werk of van zodanige weg genomen veiligheidsmaatregel

verijdelt, wordt gestraft:

1° met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie, indien daarvan gevaar voor de veiligheid van het

verkeer te duchten is;

2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan gevaar voor de veiligheid van

het verkeer te duchten is en het feit iemands dood ten gevolge heeft.

Art. 162a . Hij die opzettelijk op een luchthaven een luchtvaartuig buiten bedrijf of enige voorziening vernielt, onbruikbaar maakt of

beschadigt, dan wel de diensten op een luchthaven verstoort, wordt gestraft:

1° met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie, indien daarvan gevaar voor de veiligheid van de

luchtvaart te duchten valt;

2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan gevaar voor de veiligheid van de

luchtvaart te duchten valt en het feit iemands dood ten gevolge heeft.

Art. 163 . Hij aan wiens schuld te wijten is dat enig werk dienende voor het openbaar verkeer of het luchtverkeer wordt vernield,

onbruikbaar gemaakt of beschadigd, enige openbare land- of waterweg versperd of een ten aanzien van

zodanig werk of van zodanige

weg genomen veiligheidsmaatregel vrijdeld wordt, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor het verkeer

onveilig wordt;

2° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten

gevolge heeft.

Art. 164 . - 1. Hij die opzettelijk gevaar veroorzaakt voor het verkeer door mechanische kracht over een spoorweg, wordt gestraft met

gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

- 2. Indien het feit iemands dood ten gevolge heeft, wordt de schuldige gestraft met levenslange gevangenisstraf of tijdelijke van ten

hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 165 . - 1. Hij aan wiens schuld te wijten is dat gevaar ontstaat voor het verkeer door mechanische kracht over een spoorweg, wordt

gestraft met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie.

- 2. Indien het feit iemands dood ten gevolge heeft, wordt de schuldige gestraft met gevangenisstraf of hechtenis van ten hoogste een jaar

of geldboete van de vierde categorie.

Art. 166 . Hij die opzettelijk een voor de veiligheid van de scheepvaart of luchtvaart gesteld teken of hulpmiddel vernielt, beschadigt,

wegneemt of verplaatst, de werking daarvan vrijdelt of een verkeerd teken stelt, wordt gestraft:

1° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien daarvan gevaar voor de veiligheid van de

scheepvaart of luchtvaart te duchten is;

2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien

daarvan gevaar voor de veiligheid van de

scheepvaart of luchtvaart te duchten is en het feit het zinken, stranden of verongelukken van een vaartuig of een luchtvaartuig ten gevolge

heeft;

3° met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie, indien daarvan gevaar

voor de veiligheid van de scheepvaart of luchtvaart te duchten is en het feit iemands dood ten gevolge heeft.

Art. 167 . Hij aan wiens schuld vernieling, beschadiging, wegneming of verplaatsing van een voor de veiligheid van de scheepvaart of

luchtvaart gesteld teken of hulpmiddel dan wel de vrijdeling van de werking daarvan of het stellen van

een verkeerd teken te wijten is,
wordt gestraft:

- 1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor de scheepvaart of de luchtvaart onveilig wordt;
- 2° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien het feit het zinken, stranden of verongelukken van een vaartuig of een luchtvaartuig ten gevolge heeft;
- 3° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten gevolge heeft.

Art. 168 . Hij die enig vaartuig of luchtvaartuig opzettelijk en wederrechtelijk doet zinken, stranden of verongelukken, vernielt, onbruikbaar maakt of beschadigt, wordt gestraft:

- 1° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is;
- 2° met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 169 . Hij aan wiens schuld te wijten is dat enig vaartuig of luchtvaartuig zinkt, strandt of verongelukt, vernield, onbruikbaar gemaakt of beschadigd wordt, wordt gestraft:

- 1° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien daardoor levensgevaar voor een ander ontstaat;
- 2° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten gevolge heeft.

Art. 170 . Hij die enig gebouw of getimmerte opzettelijk vernielt of beschadigt, wordt gestraft:

- 1° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien daarvan gemeen gevaar voor goederen te duchten is;
- 2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is;
- 3° met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 171 . Hij aan wiens schuld de vernieling of beschadiging van enig gebouw of getimmerte te wijten is, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor gemeen gevaar

voor goederen ontstaat;

2° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien daardoor levensgevaar

voor een ander ontstaat;

3° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten

gevolge heeft.

Art. 172 . - 1. Hij die opzettelijk en wederrechtelijk een stof in een inrichting ten behoeve van de drinkwatervoorziening of in een tot

gezamenlijk gebruik van of met anderen bestemde waterleiding brengt, wordt gestraft:

1° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien de schuldige weet of ernstige reden heeft

om te vermoeden dat daarvan gevaar voor een ander te duchten is;

2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien de schuldige weet of ernstige reden heeft

om te vermoeden dat daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolg heeft.

- 2. Hij die opzettelijk enig voor de openbare drinkwatervoorziening bestemd werk vernielt, beschadigt of onbruikbaar maakt, stoornis in

de gang of in de werking van zodanig werk veroorzaakt, of een ten opzichte van zodanig werk genomen veiligheidsmaatregel verijdelt,

wordt, indien daardoor verhinderings of bemoeilijking van de openbare drinkwatervoorziening te duchten is, gestraft met gevangenisstraf

van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 173 . - 1. Hij aan wiens schuld te wijten is, dat wederrechtelijk een stof in een inrichting ten behoeve van de drinkwatervoorziening

of in een tot gezamenlijk gebruik van of met anderen bestemde waterleiding, wordt gebracht, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien de schuldige weet of ernstige

reden heeft om te vermoeden dat daarvan gevaar voor de openbare gezondheid of levensgevaar voor een ander te duchten is;

2° met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie, indien de schuldige weet of ernstige reden heeft

om te vermoeden dat daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolg heeft.

- 2. Hij aan wiens schuld te wijten is, dat enig voor de openbare drinkwatervoorziening bestemd werk

wordt vernield, beschadigd, of onbruikbaar gemaakt, dat stoornis in de gang of in de werking van een zodanig werk ontstaat of dat een ten opzichte van zodanig werk genomen veiligheidsmaatregel wordt verijdeld, wordt, indien daardoor verhindering of bemoeilijking van de openbare drinkwatervoorziening te duchten is, gestraft met een gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de tweede categorie.

Art. 173a . Hij die opzettelijk en wederrechtelijk een stof op of in de bodem, in de lucht of in het oppervlaktewater brengt, wordt gestraft:

1° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien de schuldige weet of ernstige redenen heeft om te vermoeden dat daarvan gevaar voor de openbare gezondheid of levensgevaar voor een ander te duchten is;

2° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien de schuldige weet of ernstige reden heeft om te vermoeden dat daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 173b . Hij aan wiens schuld te wijten is, dat wederrechtelijk een stof op of in de bodem, in de lucht of in het oppervlaktewater wordt gebracht, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien de schuldige weet of ernstige reden heeft om te vermoeden dat daarvan gevaar voor de openbare gezondheid of levensgevaar voor een ander te duchten is;

2° met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie, indien de schuldige weet of ernstige reden heeft om te vermoeden dat daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 174 . - 1. Hij die waren verkoopt, te koop aanbiedt, aflevert of uitdeelt, wetende dat zij voor het leven of de gezondheid schadelijk zijn, en dat schadelijk karakter verzwijgende, wordt gestraft met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie.

- 2. Indien het feit iemands dood ten gevolge heeft, wordt de schuldige gestraft met levenslange gevangenisstraf of tijdelijke van ten hoogste twintig jaren of geldboete van de vijfde categorie.

Art. 175 . - 1. Hij aan wiens schuld te wijten is dat waren, schadelijk voor het leven of de gezondheid, verkocht, afgeleverd of uitgedeeld

worden, zonder dat de koper of verkrijger met dat schadelijk karakter bekend is, wordt gestraft met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie.

- 2. Indien het feit iemands dood ten gevolge heeft, wordt de schuldige gestraft met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie.

Art. 175a . Hij die in geval van oorlog opzettelijk een bekendgemaakt bevel, bedoeld in artikel 7 van de Wet bescherming bevolking (Stb.

1952, 404), dan wel een bij of krachtens een van de algemene maatregelen van bestuur, bedoeld in artikel 29 van de Intrekkingswet BB

(Stb. 1986, 312), gegeven en bekendgemaakt voorschrift overtreedt, wordt gestraft:

1° met gevangenisstraf van ten hoogste twee jaren of geldboete van de vijfde categorie, indien daarvan gemeen gevaar voor goederen te duchten is;

2° met gevangenisstraf van ten hoogste drie jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is;

3° met gevangenisstraf van ten hoogste vijf jaren of geldboete van de vijfde categorie, indien daarvan levensgevaar voor een ander te duchten is en het feit iemands dood ten gevolge heeft.

Art. 175b . Hij aan wiens schuld in geval van oorlog overtreding te wijten is van een bekendgemaakt bevel, bedoeld in artikel 7 van de

Wet bescherming bevolking, dan wel van een bij of krachtens een van de algemene maatregelen van bestuur, bedoeld in artikel 29 van de

Intrekkingswet BB, gegeven en bekendgemaakt voorschrift, wordt gestraft:

1° met gevangenisstraf of hechtenis van ten hoogste drie maanden of geldboete van de vierde categorie, indien daardoor gemeen gevaar voor goederen ontstaat;

2° met gevangenisstraf of hechtenis van ten hoogste zes maanden of geldboete van de vierde categorie, indien daardoor levensgevaar voor een ander ontstaat;

3° met gevangenisstraf of hechtenis van ten hoogste een jaar of geldboete van de vierde categorie, indien het feit iemands dood ten gevolge heeft.

Art. 176 . - 1. Bij veroordeling wegens enig in deze titel omschreven misdrijf kan de schuldige worden ontzet van de uitoefening van het beroep waarin hij het misdrijf begaan heeft.

- 2. Bij veroordeling wegens een der in de artikelen 174 en 175 omschreven misdrijven, kan de rechter de openbaarmaking van zijn uitspraak gelasten.

TITEL VIII Misdrijven tegen het openbaar gezag

Art. 177 . - 1. Met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie wordt gestraft:

1° hij die een ambtenaar een gift of belofte doet met het oogmerk om hem te bewegen in zijn bediening, in strijd met zijn plicht, iets te doen

of na te laten;

2° hij die een ambtenaar een gift of belofte doet ten gevolge of naar aanleiding van hetgeen door deze in zijn bediening, in strijd met zijn plicht, is gedaan of nagelaten.

- 2. Ontzetting van de in artikel 28, eerste lid , onder 1°, 2° en 4°, vermelde rechten kan worden uitgesproken.

Art. 178 . - 1. Hij die een rechter een gift of belofte doet met het oogmerk om invloed te oefenen op de beslissing van een aan diens oordeel onderworpen zaak, wordt gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie.

- 2. Indien die gift of belofte gedaan wordt met het oogmerk om een veroordeling in een strafzaak te verkrijgen, wordt de schuldige

gestraft met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie.

- 3. Ontzetting van de in artikel 28, eerste lid , onder 1°, 2° en 4°, vermelde rechten kan worden uitgesproken.

Art. 179 . Hij die door geweld of bedreiging met geweld een ambtenaar dwingt tot het volvoeren van een ambtsverrichting of het nalaten van een rechtmatige ambtsverrichting, wordt gestraft met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie.

Art. 180 . Hij die zich met geweld of bedreiging met geweld verzet tegen een ambtenaar werkzaam in de rechtmatige uitoefening van zijn bediening, of tegen personen die hem daarbij krachtens wettelijke verplichting of op zijn verzoek bijstand verlenen, wordt als schuldig aan wederspanning gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 181 . De dwang en de wederspanning in de artikelen 179 en 180 omschreven worden gestraft:

1° met gevangenisstraf van ten hoogste vier jaren of geldboete van de vierde categorie, indien het misdrijf of de daarmede gepaard

gaande feitelijkheden enig lichamelijk letsel ten gevolge hebben;

2° met gevangenisstraf van ten hoogste zeven jaren en zes maanden of geldboete van de vijfde categorie,

indien zij zwaar lichamelijk

letsel ten gevolge hebben;

3° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien zij de dood ten gevolge hebben.

Art. 182 . - 1. De dwang en de wederspanning in de artikelen 179 en 180 omschreven, door twee of meer personen met verenigde krachten gepleegd, worden gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie.

- 2. De schuldige wordt gestraft:

1° met gevangenisstraf van ten hoogste zeven jaren en zes maanden of geldboete van de vijfde categorie, indien het door hem gepleegde

misdrijf of de daarbij door hem gepleegde feitelijkheden enig lichamelijk letsel ten gevolge hebben;

2° met gevangenisstraf van ten hoogste twaalf jaren of geldboete van de vijfde categorie, indien zij zwaar lichamelijk letsel ten gevolge

hebben;

3° met gevangenisstraf van ten hoogste vijftien jaren of geldboete van de vijfde categorie, indien zij de dood ten gevolge hebben.

Art. 183 . - 1. Met ambtenaren worden ten aanzien van de artikelen 179-182 gelijkgesteld de bestuurders benevens de beëdigde

beambten en bedienden van spoorwegdiensten.

- 2. Voorts worden ten aanzien van die artikelen met ambtenaren gelijkgesteld de schipper of gezagvoerder van een luchtvaartuig die een

bevoegdheid uitoefent of een verplichting vervult welke hem als zodanig is toegekend of opgelegd bij een bepaling van het Wetboek van

Strafvordering . Onder schipper wordt begrepen hij die het hoogste gezag uitoefent op een overeenkomstig artikel 136a, tweede lid , van

het Wetboek van Strafvordering aangewezen installatie.

Art. 184 . - 1. Hij die opzettelijk niet voldoet aan een bevel of een vordering, krachtens wettelijk voorschrift gedaan door een ambtenaar

met de uitoefening van enig toezicht belast of door een ambtenaar belast met of bevoegd verklaard tot het opsporen of onderzoeken van

strafbare feiten, alsmede hij die opzettelijk enige handeling, door een van die ambtenaren ondernomen ter uitvoering van enig wettelijk

voorschrift, belet, belemmert of verijdelt, wordt gestraft met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede

categorie.

- 2. Met de in het eerste gedeelte van het vorige lid bedoelde ambtenaar wordt gelijkgesteld ieder die, krachtens wettelijk voorschrift,

voortdurend of tijdelijk met enige openbare dienst is belast.

- 3. Met een vordering of handeling als bedoeld in het eerste lid wordt gelijkgesteld een vordering of

handeling van de schipper of gezagvoerder van een luchtvaartuig die een bevoegdheid uitoefent of een verplichting vervult, welke hem als zodanig is toegekend of opgelegd bij een bepaling van het Wetboek van Strafvordering . Onder schipper wordt begrepen hij die het hoogste gezag uitoefent op een overeenkomstig artikel 136a, tweede lid , van het Wetboek van Strafvordering aangewezen installatie.

- 4. Indien tijdens het plegen van het misdrijf nog geen twee jaren zijn verlopen sedert een vroegere veroordeling van de schuldige wegens gelijk misdrijf onherroepelijk is geworden, kan de gevangenisstraf met een derde worden verhoogd.

Art. 185 . Hij die bij een terechtzitting of ter plaatse waar een ambtenaar in het openbaar in de rechtmatige uitoefening van zijn bediening werkzaam is, opschudding veroorzaakt en na het door of vanwege het bevoegd gezag gegeven bevel zich niet verwijdert, wordt gestraft met gevangenisstraf van ten hoogste twee weken of geldboete van de tweede categorie.

Art. 185a . Met ambtenaren worden ten aanzien van de artikelen 179 tot en met 182 , 184 en 185 gelijkgesteld personen in de openbare dienst van een vreemde staat of van een volkenrechtelijke organisatie die in Nederland op door het volkenrecht toegelaten wijze hun bediening uitoefenen.

Art. 186 . Hij die opzettelijk bij gelegenheid van een volksoploop zich niet onmiddellijk verwijdert na het derde door of vanwege het bevoegd gezag gegeven bevel, wordt, als schuldig aan deelneming aan samensholing, gestraft met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede categorie.

Art. 187 . Hij die een bekendmaking, vanwege het bevoegd gezag in het openbaar gedaan, wederrechtelijk afscheurt, onleesbaar maakt of beschadigt, met het oogmerk om de kennisneming daarvan te beletten of te bemoeilijken, wordt gestraft met gevangenisstraf van ten hoogste een maand of geldboete van de tweede categorie.

Art. 188 . Hij die aangifte of klacht doet dat een strafbaar feit gepleegd is, wetende dat het niet gepleegd is, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 189 . - 1. Met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie wordt gestraft:

1° hij die opzettelijk iemand die schuldig is aan of vervolgd wordt ter zake van enig misdrijf, verbergt of

hem behulpzaam is in het ontkomen aan de nasporing van of aanhouding door de ambtenaren van de justitie of politie;

2° hij die nadat enig misdrijf is gepleegd, met het oogmerk om het te bedekken of de nasporing of vervolging te beletten of te bemoeilijken, voorwerpen waarop of waarmede het misdrijf gepleegd is of andere sporen van het misdrijf vernietigt, wegmaakt, verbergt of aan het onderzoek van de ambtenaren van de justitie of politie onttrekt;

3° hij die opzettelijk voorwerpen die kunnen dienen om de waarheid aan de dag te brengen of om wederrechtelijk verkregen voordeel als bedoeld in artikel 36e aan te tonen, met het oogmerk om de inbeslagneming daarvan te beletten, te belemmeren of te vrijdelen, verbergt, vernietigt, wegmaakt of aan het onderzoek van de ambtenaren van de justitie of politie onttrekt, dan wel door het opzettelijk verstrekken van gegevens of inlichtingen aan derden die inbeslagneming belet, belemmert of vrijdelt.

- 2. Deze bepalingen zijn niet van toepassing op hem die de daarin vermelde handelingen verricht ten einde gevaar van vervolging te ontgaan of af te wenden van een van zijn bloedverwanten of aangehuwden in de rechte linie of in de tweede of derde graad van de zijlinie of van zijn echtgenoot of gewezen echtgenoot.

Art. 190 . Hij die opzettelijk een gerechtelijke lijkschouwing belet, belemmert of vrijdelt, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 191 . Hij die opzettelijk iemand, op openbaar gezag of krachtens rechterlijke uitspraak of beschikking van de vrijheid berooft, bevrijdt of bij zijn zelfbevrijding behulpzaam is, wordt gestraft met gevangenisstraf van ten hoogste vier jaren of geldboete van de vierde categorie.

Art. 192 . - 1. Hij die, wettelijk als getuige, als deskundige of als tolk opgeroepen, opzettelijk niet voldoet aan enige wettelijke verplichting die hij als zodanig te vervullen heeft, wordt gestraft:

1° in strafzaken met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie;

2° in andere zaken met gevangenisstraf van ten hoogste vier maanden of geldboete van de tweede categorie.

- 2. Het bepaalde in het vorige lid van dit artikel is niet van toepassing op de partij in een burgerlijke procedure die, wanneer zij als getuige wordt gehoord, weigert op de haar gestelde vragen te antwoorden.

Art. 192a . Hij die opzettelijk niet voldoet aan de vordering van een parlementaire enquêtecommissie tot het hebben van inzage in of het nemen van afschrift van bescheiden wordt gestraft met gevangenisstraf van ten hoogste vier maanden of geldboete van de tweede

categorie.

Art. 193 . Hij die opzettelijk niet voldoet aan een wettig bevel tot overlegging van een stuk hetwelk beweerd wordt vals of vervalst te zijn, of hetwelk dienen moet ter vergelijking met een ander waarvan de valsheid of vervalsing beweerd, of de echtheid ontkend of niet erkend wordt, wordt gestraft:
1° in strafzaken met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie;
2° in andere zaken met gevangenisstraf van ten hoogste vier maanden of geldboete van de tweede categorie.

Art. 194 . - 1. Hij die, in staat van faillissement verklaard of als echtgenoot van een gefailleerde met wie hij in gemeenschap van goederen is gehuwd, of als bestuurder of commissaris van een rechtspersoon, wettelijk opgeroepen tot het geven van inlichtingen, hetzij zonder geldige reden opzettelijk wegblijft, hetzij weigert de vereiste inlichtingen te geven, hetzij opzettelijk verkeerde inlichtingen geeft, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.
- 2. Terzake van het feit, bedoeld in het eerste lid, wordt met dezelfde straf gestraft hij, ten aanzien van wie of ten aanzien van wiens echtgenoot met wie hij in gemeenschap van goederen is gehuwd, de schuldsaneringsregeling natuurlijke personen van toepassing is.

Art. 195 . Hij die een recht uitoefent, wetende dat hij daarvan bij rechterlijke uitspraak is ontzet, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 196 . Hij die opzettelijk onderscheidingstekens draagt of een daad verricht behorende tot een ambt dat hij niet bekleedt of waarin hij geschorst is, wordt gestraft met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede categorie.

Art. 197 . Een vreemdeling die in Nederland verblijft, terwijl hij weet of ernstige reden heeft te vermoeden, dat hij op grond van een wettelijk voorschrift tot ongewenste vreemdeling is verklaard, wordt gestraft met een gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 197a . - 1. Hij die een ander uit winstbejag behulpzaam is bij het zich verschaffen van toegang tot of verblijven in Nederland of enige staat welke gehouden is mede ten behoeve van Nederland grenscontrole uit te oefenen, of hem daartoe uit winstbejag gelegenheid,

middelen of inlichtingen verschaft terwijl hij weet of ernstige redenen heeft te vermoeden dat de toegang of dat verblijf wederrechtelijk is,
wordt gestraft met een gevangenisstraf van ten hoogste vier jaren of geldboete van de vijfde categorie.

- 2. Indien het feit wordt begaan in de uitoefening van enig ambt of beroep wordt gevangenisstraf van ten hoogste zes jaren of geldboete van de vijfde categorie opgelegd en kan ontzetting worden uitgesproken van de uitoefening van het recht het ambt te bekleden of het beroep uit te oefenen en kan de rechter openbaarmaking van zijn uitspraak gelasten.

- 3. Indien het feit wordt begaan door een persoon die daarvan een beroep of gewoonte maakt of in vereniging wordt begaan door meerdere personen wordt gevangenisstraf van ten hoogste acht jaren of geldboete van de vijfde categorie opgelegd.

Art. 197b . Hij die een ander, die zich wederrechtelijk toegang tot of verblijf in Nederland heeft verschaft, krachtens overeenkomst of aanstelling arbeid doet verrichten, terwijl hij weet of ernstige redenen heeft om te vermoeden dat de toegang of dat verblijf wederrechtelijk is, wordt gestraft met een gevangenisstraf van ten hoogste een jaar of geldboete van de vijfde categorie.

Art. 197c . Hij die van het in artikel 197b omschreven feit een beroep of gewoonte maakt wordt gestraft met een gevangenisstraf van ten hoogste drie jaren of geldboete van de vijfde categorie.

Art. 197d . Indien de schuldige de in de artikelen 197b of 197c omschreven feiten begaat in de uitoefening van enig ambt of beroep kan de rechter tevens de ontzetting uitspreken van de uitoefening van het recht het ambt te bekleden of het beroep uit te oefenen en de openbaarmaking van zijn uitspraak gelasten.

Art. 198 . - 1. Hij die opzettelijk enig goed aan het krachtens de wet daarop gelegd beslag of aan een gerechtelijke bewaring onttrekt of, wetende dat het daaraan onttrokken is, verbergt, wordt gestraft met gevangenisstraf van ten hoogste vier jaren of geldboete van de vierde categorie.

- 2. Met dezelfde straf wordt gestraft hij die opzettelijk enig krachtens de wet in beslag genomen goed vernielt, beschadigt of onbruikbaar maakt.

- 3. Met dezelfde straf wordt gestraft de bewaarder die opzettelijk een van deze feiten pleegt of toelaat, of de dader als medeplichtige ter zijde staat.

Art. 199 . - 1. Hij die opzettelijk zegels waarmede voorwerpen door of vanwege het bevoegd openbaar gezag verzegeld zijn, verbreekt, opheft of beschadigt, of de door zodanig zegel bewerkte afsluiting op andere wijze verijdelt, wordt gestraft met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie.

- 2. De bewaarder die opzettelijk het feit pleegt of toelaat of de dader als medeplichtige ter zijde staat wordt gestraft met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie.

- 3. Indien het feit ten gevolge van onachtzaamheid van de bewaarder gepleegd is, wordt deze gestraft met hechtenis van ten hoogste een maand of geldboete van de tweede categorie.

Art. 200 . Hij die opzettelijk zaken, bestemd om voor de bevoegde macht tot overtuiging of bewijs te dienen, akten, bescheiden of registers die voortdurend of tijdelijk op openbaar gezag bewaard worden, of hetzij aan een ambtenaar, hetzij aan een ander in het belang van de openbare dienst zijn ter hand gesteld, vernielt, beschadigt, onbruikbaar maakt of wegmaakt, wordt gestraft met gevangenisstraf van ten hoogste drie jaren of geldboete van de vierde categorie.

Art. 201 . Hij die opzettelijk brieven of andere stukken, aan een post- of telegraafkantoor bezorgd of in een postbus gestoken, aan hun bestemming onttrekt, opent of beschadigt, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de derde categorie.

Art. 202 . Indien de schuldige aan een der in de artikelen 198-201 omschreven misdrijven zich de toegang tot de plaats van het misdrijf verschaft of het goed onder zijn bereik brengt door middel van braak, verbreking of inklimming, van valse sleutels, van een valse order of een vals kostuum, kan de straf met ten hoogste een jaar gevangenisstraf worden verhoogd.

Art. 203 . Hij die in tijd van vrede opzettelijk desertie van een krijgsman in dienst van het Rijk uitlokt door een der in artikel 47, eerste lid , onder 2^o, vermelde middelen, of bevordert op enige in artikel 48 vermelde wijze, wordt gestraft met gevangenisstraf van ten hoogste zes maanden of geldboete van de derde categorie.

Art. 204 . Hij die, in tijd van vrede, opzettelijk oproer of mouterij van krijgslieden, in dienst van het Rijk, uitlokt door een der in artikel 47, eerste lid , onder 2^o, vermelde middelen, of bevordert op enige in artikel 48 vermelde wijze, wordt gestraft met gevangenisstraf van ten

hoogste zes jaren of geldboete van de vierde categorie.

Art. 205 . Hij die, zonder toestemming van de Koning, iemand voor vreemde krijgsdienst aanwerft, wordt gestraft met gevangenisstraf van ten hoogste een jaar of geldboete van de vierde categorie.

Art. 206 . - 1. Met gevangenisstraf van ten hoogste twee jaren of geldboete van de vierde categorie wordt gestraft:

1° hij die zich opzettelijk voor de dienst bij de krijgsmacht dan wel voor enige werkzaamheid uit hoofde van burgerdienstplicht ongeschikt

maakt of laat maken;

2° hij die een ander op diens verzoek opzettelijk voor die dienst dan wel voor zodanige werkzaamheid ongeschikt maakt.

- 2. Indien in het laatste geval het feit de dood ten gevolge heeft, wordt gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie opgelegd.

TITEL IX Meineed

Art. 207 . - 1. Hij die in de gevallen waarin een wettelijk voorschrift een verklaring onder ede vordert of daaraan rechtsgevolgen verbindt, mondeling of schriftelijk, persoonlijk of door een bijzonder daartoe gemachtigde, opzettelijk een valse verklaring onder ede aflegt, wordt

gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie.

- 2. Indien de valse verklaring is afgelegd in een strafzaak ten nadele van de beklaagde of verdachte, wordt de schuldige gestraft met

gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie.

- 3. Met de eed staat gelijk de belofte of bevestiging die krachtens de wet voor de eed in de plaats treedt.

- 4. Ontzetting van de in artikel 28, eerste lid , onder 1°, 2° en 4°, vermelde rechten kan worden uitgesproken.

Art. 207a . - 1. Hij die in de gevallen waarin door of krachtens een internationale overeenkomst waarbij het Koninkrijk partij is, een verklaring onder ede of onder een daarvoor in de plaats tredende bevestiging of belofte wordt gevorderd, voor een internationaal gerecht

mondeling of schriftelijk, persoonlijk of door een bijzonder daartoe gemachtigde, opzettelijk een valse verklaring in die vorm aflegt, wordt

gestraft met gevangenisstraf van ten hoogste zes jaren of geldboete van de vierde categorie.

- 2. De leden 2 en 4 van artikel 207 zijn van toepassing.

- 3. Geen vervolging vindt plaats dan op klacht van het internationale gerecht voor hetwelk de valse verklaring werd afgelegd. Artikel 66

blijft met betrekking tot de in dit lid bedoelde klacht buiten toepassing.

TITEL X Valsheid in muntspeciën en munt- en bankbiljetten

Art. 208 . Hij die muntspeciën of munt- of bankbiljetten namaakt of vervalst, met het oogmerk om die muntspeciën of munt- of bankbiljetten als echt en onvervalst uit te geven of te doen uitgeven, wordt gestraft met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie.

Art. 209 . Hij die opzettelijk als echte en onvervalste muntspeciën of munt- of bankbiljetten uitgeeft muntspeciën of munt- of bankbiljetten die hij zelf heeft nagemaakt of vervalst of waarvan de valsheid of vervalsing hem, toen hij ze ontving, bekend was, of deze, met het oogmerk om ze als echt en onvervalst uit te geven of te doen uitgeven, in voorraad heeft of binnen het Rijk in Europa invoert, wordt gestraft met gevangenisstraf van ten hoogste negen jaren of geldboete van de vijfde categorie.

Art. 210 . Hij die muntspeciën in waarde vermindert, met het oogmerk om ze aldus in waarde verminderd uit te geven of te doen uitgeven, wordt, als schuldig aan muntschennis, gestraft met gevangenisstraf van ten hoogste acht jaren of geldboete van de vijfde categorie.

Art. 211 . Hij die opzettelijk als ongeschonden muntspeciën uitgeeft muntspeciën die hij zelf in waarde heeft verminderd of waarvan de schennis hem, toen hij ze ontving, bekend was, of deze, met het oogmerk om ze als ongeschonden uit te geven of te doen uitgeven, in voorraad heeft of binnen het Rijk in Europa invoert, wordt gestraft met gevangenisstraf van ten hoogste acht jaren of geldboete van de vijfde categorie.

Art. 212 . Vervallen.

Art. 213 . Hij die opzettelijk valse, vervalste, of geschonden muntspeciën of valse of vervalste munt- of bankbiljetten uitgeeft, wordt, behoudens het bepaalde in de artikelen 209 en 211 , gestraft met gevangenisstraf van ten hoogste drie maanden of geldboete van de tweede categorie.
