	910066-4
	CIET-20HDL
	DRK145
	M81969/1-02
	MS3156-20

- (1) Make a selection of a removal tool from Table 11.
- (2) Put the wide part of the tool on the wire.
- (3) Push the wire into the narrow part of the tool.
- (4) Axially align the tool with the contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

- (5) If the removal tool has an indicating ring, push the tool into the contact cavity until the indicating ring is aligned with the surface of the grommet.
- (6) If the removal tool does not have an indicating ring, carefully push the tool into the contact cavity until the retention mechanism is released.
- (7) Pull the wire and the removal tool from the contact cavity at the same time.
- (8) If the contact does not release:
 - (a) Remove the tool from the contact cavity and the wire.
 - (b) Turn the tool approximately 90 degrees.
 - (c) Do Step (2) through Step (7) again.

D. Wire Wrap Post Removal

The wire wrap post is:

- Released from the rear of the receptacle
- Removed from the front of the receptacle.

**Table 12
WIRE WRAP POST REMOVAL TOOLS**

Contact Size	Removal Tool
20	58324-1-0
	DRK347

- (1) Remove the protective cover from the receptacle.
- (2) Remove all of the wire from the wire wrap post. Refer to Subject 20-72-18.
- (3) Make a selection of a post removal tool from Table 12. Refer to Figure 24.

**WIRE WRAP POST REMOVAL TOOL
Figure 24**

- (4) Carefully put the tool tip on the post so that the tool is axially aligned with the post. Refer to Figure 25.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

ALIGNMENT OF THE REMOVAL TOOL AND THE POST
Figure 25

- (5) Push the tool onto the post until the tips of the tool are in the slots that are adjacent to the sides of the post. Refer to Figure 26.

CAUTION: IF THE REMOVAL TOOL DOES NOT STAY AXIALLY ALIGNED WITH THE POST, DAMAGE TO THE RECEPTACLE CAN OCCUR.

POSITION OF THE TIPS OF THE REMOVAL TOOL IN THE LONGITUDINAL SLOT
Figure 26

- (6) Hold the tool in position against the receptacle.
(7) Push the post driver of the tool until the pin is released from the contact retention mechanism.
(8) Remove the wire wrap pin from the front of the receptacle.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS****5. ASSEMBLY OF THE PLUG MODULE****A. Wafer Assembly**

AIE LATCH HOOK
Figure 27

AMP PLUG LATCH
Figure 28

- (1) Make a selection of plug latches or latch hooks from Table 6. Refer to Figure 27 and Figure 28.
Make sure that the selection agrees with the connector installation retention mechanism of the lifter latch system. Refer to Paragraph 8.A.
- (2) If the connector has more than one wafer, put the wafers together so that:
 - The sides of the wafers are against each other
 - The ends of the wafers are aligned.
- (3) Install the wafer latches or the latch hooks in both lower slots of each wafer.

Refer to:

- Figure 29 and Figure 30 for a wafer assembly with plug latches
- Figure 31 and Figure 32 for a wafer assembly with latch hooks.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00(-) AND 284U1147(-) CONNECTORS

SINGLE WAFER WITH PLUG LATCHES
Figure 29

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

SINGLE WAFER WITH LATCH HOOKS

Figure 31

FIVE WAFERS WITH LATCH HOOKS

Figure 32

- (4) Put the polarization post into the plug module so that:
- The polarization post is in the correct position
 - The plug latches or the latch hooks stay in position.

Refer to Table 9 for the post polarization codes.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

Refer to:

- Figure 19 for a one wafer module
- Figure 20 for a two wafer module
- Figure 21 for a three wafer module.

6. 280U00()-() CONNECTOR ASSEMBLY

A. Wafer Assembly

Refer to Paragraph 5.

B. Contact Assembly

**Table 13
CONTACT CRIMP TOOLS**

Contact Size	Wire Size (AWG)	Crimp Tool		
		Basic Unit		Locator
		Part Number	Setting	
2020HD	24	AFM8	5	K13-1
		M22520/2-01		M22520/2-08
	22	AFM8	6	K13-1
		M22520/2-01		M22520/2-08
	20	AFM8	7	K13-1
		M22520/2-01		M22520/2-08

- (1) Make a selection of a contact crimp tool from Table 13.
- (2) Remove a 0.16 inch ±0.03 inch length of insulation from the end of the wire.
- (3) Put the wire in the crimp barrel of the contact.

Make sure that:

- The end of the conductor is against the bottom of the crimp barrel
- All of the conductor strands are in the crimp barrel
- The conductor strands can be seen in the inspection hole.

- (4) Crimp the contact.

Make sure that the distance from the end of the wire insulation to the end of the crimp barrel is not more than 0.06 inch.

C. Contact Insertion

This paragraph gives the procedure to install crimp contacts. Refer to Paragraph 6.D. for the procedure to install wire wrap pin contacts.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

**Table 14
CONTACT INSERTION TOOLS**

Contact Size	-
2020HD	282881
	91066-4
	ATC1072
	CIET-20HDL
	DAK145J
	M81969/1-02
	MS3156-20

- (1) Make a selection of an insertion tool from Table 14.
- (2) Put the insertion tool on the contact.
- (3) Axially align the contact with the contact cavity.
- (4) Push the contact into the contact cavity until it stops.
- (5) Carefully pull the insertion tool out of the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact out of the contact cavity.
 - (b) Do Step (2) through Step (6) again.

WIRED WAFER ASSEMBLIES

Figure 33

STANDARD WIRING PRACTICES MANUAL

D. Wire Wrap Pin Insertion

**Table 15
WIRE WRAP PIN INSERTION TOOLS**

Contact Size	Insertion Tool
20	58347
20	DAK346

(1) Make a selection of a wire wrap pin insertion tool from Table 15. Refer to Figure 34.

**AMP WIRE WRAP PIN INSERTION TOOL
Figure 34**

- (2) Put the wire wrap pin into the front of the receptacle so that:
 - The pin end points toward the contact cavity
 - The pin is axially aligned with the contact cavity.
- (3) Align the center of the tool tip hole with the end of the wire wrap pin.
- (4) Put the shaft of the tool over the wire wrap pin.
- (5) Push the tool until the tip is against the shoulder of the wire wrap pin.
- (6) Carefully push the tool into the contact cavity until the tip of the tool is against the front face of the receptacle.

CAUTION: THE INSERTION TOOL MUST STAY PERPENDICULAR TO THE FRONT FACE OF THE RECEPTACLE. DAMAGE TO THE RECEPTACLE CAN OCCUR.

7. 284U1147()-() CONNECTOR ASSEMBLY

A. Wafer Assembly

Refer to Paragraph 5.

B. Configuration of Contact Assembly Components

S	Figure 37
T	Figure 37

- (1) Make a selection of a wafer from Table 4.
- (2) Make a selection of the necessary components from Table 16.
NOTE: For the satisfactory alternatives to the resistors in Table 16, refer to Table 17.
- (3) Remove the necessary length of the solid wire conductor so that the distance from the end of the component to the end of the solid wire conductor is dimension L.
Refer to Table 18 and Table 19.

SOLID WIRE CONDUCTOR TRIM DIMENSION
Figure 35

- (4) Install a contact on each component conductor.
 - (a) Make a selection of:
 - A Sn63 solder
 - A RMA Flux.
Refer to Subject 20-00-11.
 - (b) Put 0.2 inch of the end of the conductor into RMA flux momentarily.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

- (c) Put the crimp barrel of the contact into RMA flux momentarily.
Make sure that no flux touches the front socket area of the contact.
- (d) Put the conductor into the crimp barrel so that the distance from the end of the crimp barrel to the component body is dimension D.

Refer to:

- Table 18
- Table 19.

POSITION OF THE CONTACT ON THE COMPONENT CONDUCTOR

Figure 36

- (e) Apply heat to the crimp barrel of the contact so that contact is soldered to the conductor.

CAUTION: DO NOT APPLY MORE THAN THE NECESSARY AMOUNT OF HEAT FOR LONGER THAN THE NECESSARY AMOUNT OF TIME TO MELT THE SOLDER.

CAUTION: DO NOT PUT SOLDER ON THE OUTSIDE OF THE CRIMP BARREL. SOLDER ON THE OUTSIDE OF THE CONTACT CAN PREVENT THE INSERTION OF THE CONTACT INTO THE CONTACT CAVITY.

- (f) Remove the flux from the component conductor and contact.

C. Contact Insertion

- (1) Bend each conductor so that:
 - The contacts are parallel with each other
 - The distance between the axial center of the contacts is dimension S
 - The minimum length of the straight axial conductor from the component to the first bend is dimension T
 - The minimum bend radius of the conductor is dimension R.

Refer to:

- Table 18 for the dimensions
- Table 19 for the Figures that show the dimensions.

NOTE: For a satisfactory alternative configuration of the components, refer to Figure 38.

8. CONNECTOR INSTALLATION

A. General Conditions

These conditions are applicable:

- A plug module that is assembled with latch hooks must be installed in a receptacle assembly that has a lifter latch system with lifter blocks
- If a lifter latch system does not have any lifter blocks, a plug module that is assembled with latch hooks can be assembled again with plug latches
- A plug module that is assembled with plug latches can be installed in a lifter latch system that does or does not have lifter blocks.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

B. Assembly of the Lifter Latch System with Lifter Blocks

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

- (2) Put each of these components on the rail:
 - The spacers
 - The receptacle
 - The lifter blocks.
- (3) Install the mounting hardware on the end blocks.
- (4) Put the end blocks into the rails.
Make sure that the end blocks have the correct polarization.
- (5) Put the mounting hardware through the mounting holes.
- (6) Tighten the mounting hardware.

C. Installation of the Plug

- (1) If the plug is assembled with plug latches, push the plug into the receptacle until the plug latches are locked in the internal latch mechanism of the receptacle.

CAUTION: IF THE PLUG LATCHES ARE NOT LOCKED IN POSITION, UNSATISFACTORY PERFORMANCE CAN OCCUR.

- (2) If the plug is assembled with latch hooks:
 - (a) If it is necessary, loosen the jackscrews of the lifter blocks on both sides of the receptacle.
 - (b) Push both lifter blocks away from the receptacle. Refer to Figure 47.

LIFTER BLOCKS IN THE OPEN POSITION

Figure 47

- (c) Push the plug into the receptacle.
- (d) Push both lifter blocks toward the plug so that the latch hooks go into the lifter blocks. Refer to Figure 48.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BOEING 280U00()-() AND 284U1147()-() CONNECTORS

DIRECTION TO MOVE THE LIFTER BLOCK
Figure 48

- (e) Tighten each jackscrew at the same time until:
- The plug is fully installed in the receptacle
 - The latch hooks are locked in position
 - The mate with indicator can be seen.

Refer to Figure 49.

CAUTION: IF THE LATCH HOOKS ARE NOT LOCK IN POSITION, UNSATISFACTORY PERFORMANCE CAN OCCUR.

POSITION OF THE LIFTER BLOCKS AND LATCH HOOKS
Figure 49

- (3) If the lifter latch system has lifter blocks, install the rod assembly so that:
- The rod goes through the hole in one end block
 - The rod goes through the hole in the other end block
 - The shoulder of the rod assembly touches the first end block.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

1. GENERAL DATA

A. Definitions

A wire wrap connection is a continuous, solid, and uninsulated wire that is tightly wrapped around a terminal post without any overlaps to make a mechanically and electrically stable connection.

**Table 1
DEFINITIONS**

Term	Definition
End Tail	The end of the last turn of uninsulated wire
End Turn	The last or top turn of a wire wrap connection
Gas Tight Area	The area where the wire touches the terminal post and where no gas fumes are permitted when the wire wrap connection is correct
High Turn	A turn of wire raised off the post by interference with an adjacent turn of wire; a condition that can be caused by more than the necessary pressure applied to the tool
Insulation Removal	The removal of insulation from the end of the wire
Lead Turn	The first or lowest turn of the wire on the post
Manual Wire Wrap	A wire wrap connection that is made with a manual tool
Overwrap	A wire turn on top of a another wire turn in the same wire wrap connection
Strip Force	The force that is necessary to move the entire wrapped connection the length of one connection
Terminal Post	A rigid, metallic post with a rectangular or square cross section on which a solid round wire is wrapped
Turn	Refer to Wire Turn
Unwrap Tool	A tool used to unwrap the wire turns in order to remove a wire wrap connection
Wire Dress	The direction or position of the wiring between the connections of the assembly
Wire Routing	The physical location and position of the wiring
Wire Turn	One full turn of the wire around the terminal post so that the wire touches all of the corners of the post; to count turns, count the number of times the wire goes across the corner of the post above the first corner touched by the wire
Wrap Tool	A tool that has a bit and a sleeve assembly and is used to wrap a solid conductor wire around a terminal post
Wrap Level	The area of the terminal post that has the wire wrap connection; the 1st level is at the base of the post; the 2nd level is at the middle post; the 3rd level is at the top of the post

B. General Conditions for Assembly and Installation

For the protection of all personnel, it is necessary that the power to all applicable circuits in the Wire Integration Unit (WIU) is set to the OFF position before and during the work that is done on the WIU.

STANDARD WIRING PRACTICES MANUAL**WIRE WRAP CONNECTIONS**

For the protection of the equipment and any circuit that is connected to the equipment, it is necessary that:

- The power to all applicable circuits in the WIU is set to the OFF position
- A connector cover is on a connector set while no work is done on the set
- The cover is on the WIU at all times while no work is done on the WIU
- Damage from Electrostatic Discharge is prevented; refer to Subject 20-41-01.

C. Process Control for the Assembly of Wire Wrap Connections

Some tests can and should be done to make sure that the wire wrap process, that is the procedures and the tools, has results that are serviceable. These tests include:

- The Resistance Test to measure the resistance between the terminal post and the conductor: refer to Paragraph 9.B.
- The Terminal Strip Force Test to measure the force that is necessary to axially move a wrapped wire along the terminal post; refer to Paragraph 9.C.
- The Unwrap Test to find a broken conductor after the wire has been wrapped; refer to Paragraph 9.D.
- The Gas Tight Test to make sure that there is a gas tight joint between the terminal post and the conductor; refer to Paragraph 9.E.

NOTE: It is recommended that the tests are done on prepared samples and not on the aircraft hardware.

These tests are recommended as standard practices:

- The Resistance Test
- The Terminal Strip Force Test.

The aircraft operator can make the decision to do these tests:

- The Unwrap Test
- The Gas Tight Test.

D. General Conditions of the Wire Wrap Tests

These conditions are applicable for the test samples:

- 24 samples for initial tests
- 6 samples for regular schedule tests
- 2 wrap levels on each post with some space between the levels
- Sufficient space between the first level and the terminal base for an insulation removal tool; refer to Figure 23.

E. Initial Tests

The initial tests are done:

- On new tools
- On tools that have been repaired, adjusted, or modified
- On tools that have not had an initial test for a six month period
- Every ten working days on tools that are constantly used.

These tests are done in sequence on 12 of the samples:

- The Resistance Test
- The Terminal Strip Force Test
- The Unwrap Test.

The Gas Tight Test is done on the remaining 12 samples.

20-72-18

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

F. Regular Schedule Tests

The regular schedule tests are done:

- On the tools that are constantly used
- After any tool bit, sleeve, or wrapper is changed
- On a tool that has been dropped or has not been handled correctly so that it is possible that the operation of the tool is not satisfactory.

These tests are done in sequence on the 6 samples:

- The Terminal Strip Force Test
- The Unwrap Test.

4. GENERAL CONDITIONS FOR THE WIRE ROUTING

This paragraph gives the necessary conditions for the wire routing in the Wire Integration Unit (WIU).

A. Effect of Wire Routing on the Tension of the Wires

The tension that the wire routing puts on the wires must not:

- Move the wires away from the wire wrap post
- Cause the number of corners of the wire wrap post that the one turn of insulated wire is against to fall below the limit that is specified in Table 11
- Put any force on the wire wrap post
- Put any force on the area where the wire is attached to the wire wrap post.

B. Directions of the Wire Routing

Refer to Figure 1 and Figure 2.

The direction of the wire routing from one wire wrap post to another wire wrap post in a set of wire wrap posts is:

- Parallel to the longitudinal axis of the set of wire wrap posts
- Parallel to the axis that is perpendicular to the longitudinal axis.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

SATISFACTORY DIRECTION OF THE WIRE ROUTING
Figure 1

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

UNSATISFACTORY DIRECTION OF THE WIRE ROUTING

Figure 2

C. Wire Routing in the Same Set of Wire Wrap Posts

The wire routing in the same set of wire wrap posts goes from one wire wrap post to another wire wrap post:

- Between the wire wrap posts
- Around the outside of the perimeter of the wire wrap posts and the cover posts.

Refer to Figure 3 and Figure 4.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

SATISFACTORY WIRE ROUTING IN THE SAME SET OF WIRE WRAP POSTS

Figure 3

UNSATISFACTORY WIRE ROUTING IN THE SAME SET OF WIRE WRAP POSTS

Figure 4

STANDARD WIRING PRACTICES MANUAL**WIRE WRAP CONNECTIONS****D. Wire Routing Between Adjacent Sets of Wire Wrap Posts**

The wire routing between adjacent sets of wire wrap posts goes from a post in one set to a post in the adjacent set:

- Between the posts
- Around the outer of the perimeter of the wire wrap posts and the cover posts.

Refer to Figure 5 and Figure 6.

**SATISFACTORY WIRE ROUTING BETWEEN ADJACENT SETS OF WIRE WRAP POSTS****Figure 5**

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

UNSATISFACTORY WIRE ROUTING BETWEEN ADJACENT SETS OF WIRE WRAP POSTS

Figure 6

E. Wire Routing Between Sets of Wire Wrap Posts That Are Not Adjacent

The wire routing:

- Between the sets of wire wrap posts that are not adjacent goes from a post in one set to a post in another set around the outside of the perimeter of the wire wrap posts and the cover posts
- Keeps wires that are not in the same separation category apart.

A wire harness tie is assembled on the wires that have the same separation category.

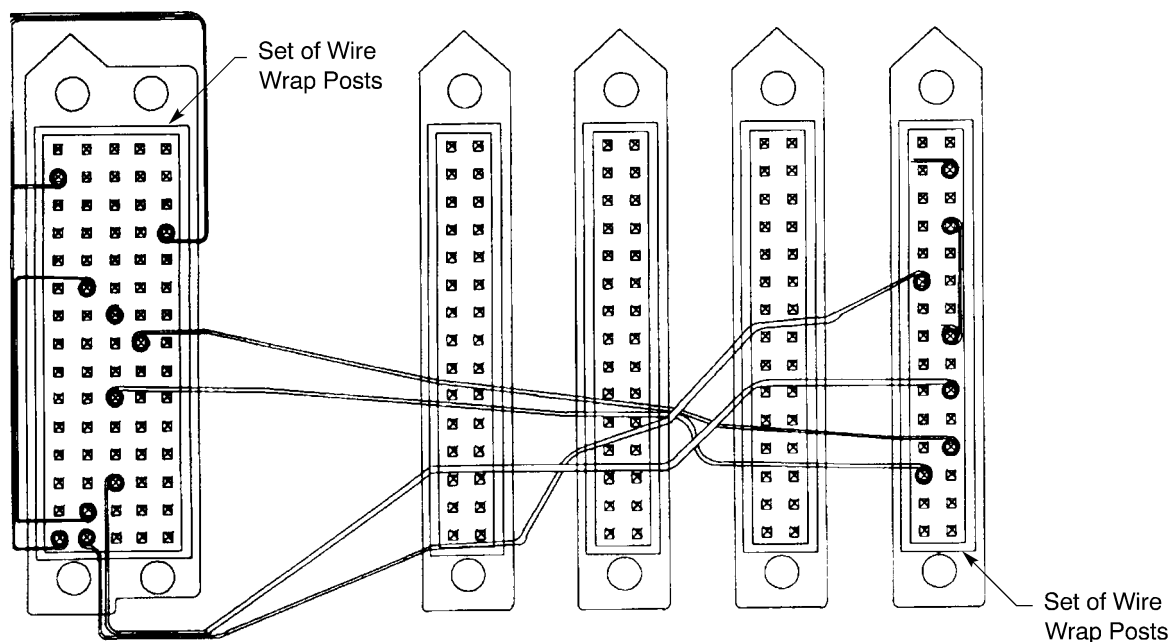

Refer to Figure 7 and Figure 8.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

SATISFACTORY WIRE ROUTING BETWEEN SETS OF WIRE WRAP POSTS THAT ARE NOT ADJACENT

20-72-18

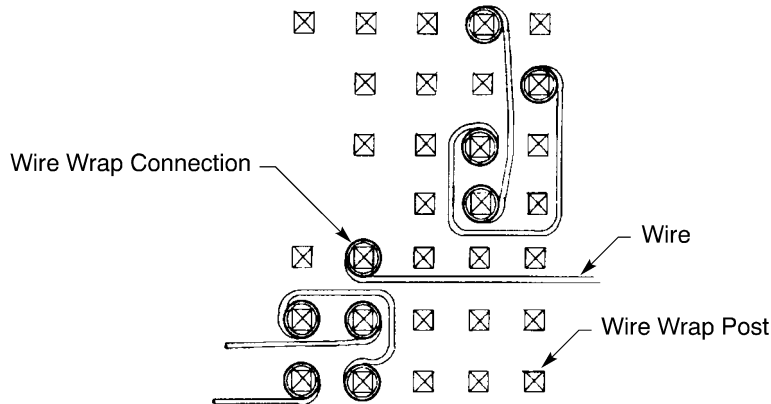

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

F. Position of the Wires in Relation to the Wire Wrap Posts

The wires that go between the wire wrap posts:

- Do not touch the posts; refer to Figure 9 and Figure 10.
- Can touch the wires that are already installed on the wire wrap posts; refer to Figure 11 and Figure 12.

SATISFACTORY WIRE ROUTING BETWEEN THE WIRE WRAP POSTS

UNSATISFACTORY WIRE ROUTING BETWEEN WIRE WRAP POSTS WITH WRAPPED WIRE

Figure 12

5. APPLICABLE CONDITIONS FOR A WIRE WRAP CONNECTION

A. Conditions for Repair of Damage

A wire wrap post must be replaced if it has damage that:

- Shows the primary metal of the post
- Can be seen with 5X magnification.

Refer to Paragraph 6.A.

If the conductor cannot be seen, these types of damage to the wire insulation of the wire turns are permitted:

- The insulation has cut
- The insulation is torn
- The insulation has a gouge
- The insulation is crushed.

B. Approved Tools

The wire wrap connections must be made only with the approved wire wrap tools. Refer to Paragraph 3.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

C. General Conditions for a Wire Turn on a Wire Wrap Post

These conditions are applicable:

- The connection must have one turn of an insulated length of wire at the start of the connection near the rear face of the connector or board, or the end of the last level of the wrap on the post; refer to Figure 13
- The insulation of the one turn of the length of the insulated wire must touch a specified number of the corners of the wire wrap post; refer to Table 11.
- The length of the uninsulated wire, that starts at the end of the one turn of the length of the insulated wire and goes up the post to the end of the wire, must make a specified number of turns; refer to Table 11

**Table 11
NECESSARY NUMBER OF WIRE TURNS**

Wire Size (AWG)	Terminal Post Size (inch)	Number of Post Corners For the Turn of the Insulated Length of Wire		Number of Turns of the Uninsulated Length of Wire	
		Minimum	Maximum	Minimum	Maximum
26	0.025 x 0.025	3	9	6	7
	0.045 x 0.045	4	9	6	7
24	0.025 x 0.025	3	9	5	6
	0.045 x 0.045	4	9	5	6
22	0.045 x 0.045	4	9	5	6
20	0.045 x 0.045	4	9	4	5
18	0.045 x 0.045	4	9	4	5

D. Configuration of the Wire Turns on the Wire Wrap Post

These conditions are applicable:

- The maximum distance between the start of the first wire turn and the rear face of the connector or board is 1/16 inch; refer to Figure 13
- The maximum distance between one wrap level and an adjacent wrap level on the same post is 1/16 inch; refer to Figure 13
- The minimum distance between the end turn of the last wrap level and the end of the square part of the post is the diameter of the bare conductor; refer to Figure 13
- A wrap level can have a maximum of 3 turns that are not against an adjacent turn; refer to Figure 17
- The maximum distance between adjacent turns is 1/2 the diameter of the wire; refer to Figure 17.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

POSITION OF THE WRAP LEVELS ON THE WIRE WRAP POST

Figure 13

These positions of the wires are satisfactory alternatives:

- On the first wrap level, the first turn of the insulated wire can make an overlap with the terminal bushing
- On the second or third wrap levels, the first turn of the insulated wire can make an overlap with the uninsulated, end wire turns of the wrap level that is already installed.

Refer to Figure 14.

ALTERNATIVE POSITIONS OF THE WRAP LEVELS ON THE WIRE WRAP POST

Figure 14

E. Length of a Free End Tail

The maximum length of the end tail that is not against the wire wrap post is the diameter of the bare conductor.

Refer to Figure 15.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

MAXIMUM LENGTH OF A FREE END TAIL

Figure 15

F. Unsatisfactory Wire Wrap Connections

These wire wrap connections are not satisfactory:

- An overlap of the wire turns in the same wrap level; refer to Figure 16
- Too much distance between adjacent wire turns; refer to Figure 17
- A wire turn that has a larger outer diameter than the other turns in the wrap level; refer to Figure 18.

OVERLAP OF WIRE TURNS IN THE SAME WRAP LEVEL

Figure 16

TOO MUCH DISTANCE BETWEEN ADJACENT WIRE TURNS

Figure 17

STANDARD WIRING PRACTICES MANUAL**WIRE WRAP CONNECTIONS****WRAP LEVEL WITH A HIGH TURN****Figure 18****6. CHANGES TO WIRE INTEGRATION UNIT**

Usually, the changes to Wire Integration Unit (WIU) are:

- The removal of a wire
- The replacement of a wire
- The installation of a new circuit.

CAUTION: TO GIVE THE NECESSARY PROTECTION TO PERSONNEL AND THE EQUIPMENT:

- THE ELECTRICAL POWER TO THE WIU MUST BE SET TO THE OFF POSITION BEFORE THE REMOVAL OF THE WIU COVER
- THE INSTRUCTIONS ON THE DECAL ON THE WIU COVER MUST BE READ AND FOLLOWED.

A. Replacement of a Damaged Wire Wrap Post

- (1) Remove and replace the damaged wire wrap post. Refer to Subject 20-72-17.

B. Repair of a Bent Ground Bus Post

- (1) If the ground bus post is bent, make it straight.

NOTE: The ground bus post cannot be removed; it is permanently installed.

C. Removal of a Wire

- (1) Make a selection of a removal tool from Table 9 or Table 10.
- (2) Find the cover of the applicable connector or connectors.
- (3) Remove the necessary covers.
- (4) Find the ends of the wire.
- (5) Unwrap the wire from the wire wrap post at one end of the wire.
- (6) Unwrap the wire from the wire wrap post at the other end of the wire.
- (7) Remove any unwanted material from the area.
- (8) If there is no more work:
 - (a) Install the connector covers that were removed.
 - (b) Install the WIU cover.

D. Replacement of a Wire

- (1) Remove the applicable wire from the WIU. Refer to Paragraph 6.C.
- (2) Make a selection of the replacement wire.

20-72-18

STANDARD WIRING PRACTICES MANUAL**WIRE WRAP CONNECTIONS**

These properties are used to make the selection:

- The wire routing
 - The wire type
 - The wire size.
- (a) If the replacement wire has a wire routing that is the same as the routing of the wire that is removed, use the same type and size of wire.
- (b) If the replacement wire has a wire routing that is different from the routing of the wire that is removed, use a wire that has:
- A solid copper conductor
 - A shield
 - A jacket on the shield
 - The same size as the wire that is removed.

NOTE: For example, the BMS13-46 Type 4 Class 1 wire is a satisfactory selection.

The reasons for this selection are:

- It is necessary to keep the correct wire separation categories
 - It is necessary that wires with different wire separation categories are not put together
 - The replacement wire routing, that is different from the routing of the wire that is replaced, can touch or be near the wire routing that has a different separation category than the category of the replacement wire routing
 - The shield of the replacement wire automatically gives, without a more careful analysis, the mechanical protection for wires that must have mechanical separation
 - The shield of the replacement wire automatically gives, without a more careful analysis, the EMI protection for wires that must have EMI separation.
- (3) Install the replacement wire. Refer to Paragraph 6.E.

E. Installation of a New Wire

- (1) Make a selection of the new wire.

These properties are used to make the selection:

- A solid copper conductor
- A shield
- A jacket on the shield
- A maximum size AWG 22 for 0.045 x 0.045 wire wrap posts.

NOTE: For example, the BMS13-46 Type 4 Class 1 wire is a satisfactory selection.

Shielded wire is used to keep the correct wire separation categories.

- (2) Prepare each end of the wire:
- (a) Remove 2.0 inches ± 0.1 inch of the jacket from the end of the wire.
- (b) Remove 1.6 inches ± 0.1 inch of the shield.
- (c) Fold the remaining shield back over the cable jacket.
- (3) Install a heat shrinkable sleeve on each end of the wire.

NOTE: A layer of insulation tape is a satisfactory alternative to the heat shrinkable sleeve.

- (a) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11.
Make sure that the sleeve has the smallest diameter that can move easily on the wire.

20-72-18

STANDARD WIRING PRACTICES MANUAL**WIRE WRAP CONNECTIONS**

- (b) Push a length of the sleeve on the shield.
Make sure that the end of the sleeve is aligned with the end of the shield.
- (c) Shrink the sleeve in position. Refer to Subject 20-10-14.
- (4) Remove 1.4 inches \pm 0.1 inch of the dielectric from the end of the conductor.
- (5) Remove the cover from the WIU.
- (6) Find the cover of the applicable connector or connectors.
- (7) Remove the necessary covers.
- (8) Wrap one end of the wire on the applicable wire wrap post.
- (9) Put the wire in the correct routing. Refer to Paragraph 4.
- (10) Wrap the other end of the wire on the applicable wire wrap post.
- (11) Do a continuity test.

7. CONNECTOR DISASSEMBLY**A. General Conditions for the Removal of a Wire from the Wire Wrap Post**

These conditions are applicable:

- The wire must be unwrapped only with the approved tools. Refer to Paragraph 3.
- The wire of the wire turn of an unwrapped wire must not be used again.

B. Removal of an Epoxied Connector Cover

- (1) Make a selection of a hot air gun. Refer to Subject 20-00-11.

CAUTION: MAKE SURE TO OBEY ALL THE RECOMMENDED SAFETY PRECAUTIONS FOR THE USE OF HEAT GUNS AND HOT AIR GUNS ON AIRPLANES THAT ARE IN SERVICE. REFER TO SUBJECT 20-00-10.

- (2) Find the cover of the applicable connector or connectors.
- (3) Remove the printed circuit board (PCB) assembly that is attached to the connector.
- (4) Remove any other assemblies that are necessary to get access to the connector.
- (5) Hold the heat gun one inch from the cover.
- (6) Apply heat to the cover until the adhesive becomes soft. This usually occurs in 10 to 15 seconds.

WARNING: DO NOT APPLY THE HEAT TO ANY ONE AREA FOR MORE THAN 20 SECONDS SO THAT DAMAGE TO THE WIRES DOES NOT OCCUR.

- (7) Apply an even, upward force on the cover to remove the cover.
- (8) Examine the wire wrap to make sure that no damage has occurred.
- (9) Discard the used cover.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

8. CONNECTOR ASSEMBLY

A. Insulation Removal

**Table 12
INSULATION REMOVAL LENGTH**

Wire Size (AWG)	Wire	Wire Wrap Post Size (inch)	Removal Length (inch)	
			Target	Tolerance
26	BMS 13-46 Type 1	0.045 x 0.045	1.4	±0.10
		0.025 x 0.025	1.0	±0.10
	BMS 13-46 Type 7	0.045 x 0.045	1.4	±0.10
		0.025 x 0.025	1.0	±0.10
	BMS 13-46 Type 3	0.045 x 0.045	1.4	±0.10
		0.025 x 0.025	1.0	±0.10
24	BMS 13-46 Type 1	0.045 x 0.045	1.4	±0.10
		0.025 x 0.025	1.0	±0.10
	BMS 13-46 Type 7	0.045 x 0.045	1.4	±0.10
		0.025 x 0.025	1.0	±0.10
	BMS 13-46 Type 3	0.045 x 0.045	1.4	±0.10
		0.025 x 0.025	1.0	±0.10
22	BMS 13-46 Type 1	0.045 x 0.045	1.4	±0.10
	BMS 13-46 Type 7	0.045 x 0.045	1.4	±0.10
	BMS 13-46 Type 3	0.045 x 0.045	1.4	±0.10
20	BMS 13-46 Type 1	0.045 x 0.045	1.4	±0.10
	BMS 13-46 Type 7	0.045 x 0.045	1.4	±0.10
	BMS 13-46 Type 3	0.045 x 0.045	1.4	±0.10
18	BMS 13-46 Type 1	0.045 x 0.045	1.4	±0.10
	BMS 13-46 Type 7	0.045 x 0.045	1.4	±0.10
	BMS 13-46 Type 3	0.045 x 0.045	1.4	±0.10

- (1) Make a selection of an insulation removal tool from Table 4.
- (2) Remove the necessary length of insulation from the end of the wire. Refer to Table 12.

CAUTION: MAKE SURE THAT DAMAGE TO THE CONDUCTOR DOES NOT OCCUR. IF THE BASE METAL OF THE CONDUCTOR CAN BE SEEN, THE CONDUCTOR CAN GIVE UNSATISFACTORY PERFORMANCE.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

B. Assembly of a Wire Wrap Connection with Stranded Wire and a TermaPost Solder Sleeve

This paragraph gives the procedure to attach one or two stranded conductors to a 0.025 inch x 0.025 inch wire wrap post with a Raychem TermaPost solder sleeve.

NOTE: If it is necessary to assemble the connection with two wires, the wires must be the same size.

CAUTION: THIS PROCEDURE PUTS SOLDER ON THE WIRE WRAP POST. IT IS NOT POSSIBLE TO WRAP A WIRE WITH A SOLID CONDUCTOR DIRECTLY ON A WIRE WRAP POST THAT HAS SOLDER ON THE CORNERS OF THE POST. THE SOLDER ON THE POST CAN CAUSE UNSATISFACTORY PERFORMANCE OF A WIRE WRAP CONNECTION.

**Table 13
TERMAPOST SOLDER SLEEVE PART NUMBERS**

Wires Size (AWG)	Number of Wires	Solder Sleeve		
		Part Number	Color of Dot	Supplier
30	1	D-141-0111	Red	Raychem

20	1	AD-1546	Yellow and Green	Raychem
18	1	AD-1546	Yellow and Green	Raychem

**Table 15
NECESSARY TOOLS**

Tool	Description	Supplier
RH-3900	Resistance Heater, 115V	Raychem

- (1) Make a selection of the solder sleeve from Table 13.
- (2) Make a selection:
 - An insulation removal tool from Table 4
 - An installation tool from Table 14
 - A resistance heater from Table 15.
- (3) Put the small end of the sleeve into the end of the installation tool with the spring clip.
- (4) Prepare the wire:
 - (a) Remove 0.15 inch \pm 0.015 inch of insulation from the end of each wire.
 - (b) Put the conductor in the hole in the other end of the tool.
 - (c) Carefully push the conductor into the hole until the end of the conductor is against the bottom of the hole in the tool.
 - (d) Bend the conductor at the edge of the hole in the tool so that the conductor makes an angle of 90 degrees \pm 10 degrees.
 - (e) Remove the bent conductor from the tool.
 - (f) If it is necessary to assemble the connection with two wires, do Step (b) through Step (e) for the second wire.
- (5) Push each bent conductor into the sleeve on the other end of the tool until it stops.
- (6) Axially align the tool and the wire wrap post.
- (7) Push the tool, the sleeve, and each conductor down the wire wrap post until the end of the post:
 - Goes through the hole in the top of the sleeve
 - Is against the end of the hole inside the tool.

Make sure that the tool and the post stay axially aligned.
- (8) Remove the tool from the wire wrap post.

Make sure that the end of the insulation of each wire is inside the insulation of the sleeve. Refer to Figure 19.

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

POSITION OF THE TERMAPOST SOLDER SLEEVE ON THE WIRE WRAP POST
Figure 19

- (9) Solder the sleeve and the conductor or conductors to the post:
 - (a) Set the control of the resistance heater on 90.
 - (b) Hold the heater against the top of the wire wrap post above the sleeve so that the two electrodes are against the post.

NOTE: The temperature of the post is not increased if both electrodes do not touch the post.

- (c) Apply heat to the post until the solder ring melts and a fillet is made between the post and each conductor.

This condition usually occurs in 3 seconds to 5 seconds.

C. Installation of an Insulation Sleeve on a Wire Wrap Post

Table 16
INSULATION SLEEVE PART NUMBERS

Part Number	Supplier
T-Fit 063-2	Raychem

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

POSITION OF THE INSULATION SLEEVE ON A POST WITH ONE WRAP LEVEL
Figure 20

- (1) Make a selection of an insulation sleeve from Table 16.
- (2) Axially align the sleeve with the wire wrap post so that the slot of the sleeve is above the wire at the start of the lead turn of the nearest wrap level. Refer to Figure 20.
- (3) Push the sleeve down on the post until the bottom of the sleeve is against either of these objects:
 - The face of the receptacle or board
 - The wire at the start of the lead turn of the first wrap level if the wire is in a different position than the position of the wire in the slot.

Make sure that:

- At least one wire is in the slot of sleeve
- The friction between the sleeve and the post holds the sleeve in position.

D. Installation of an Epoxied Connector Cover

Table 17
EPOXY ADHESIVES

Epoxy		Primer		Cure Time (Hours)
Part Number	Supplier	Part Number	Supplier	
BMS 5-92 Type I	QPL	-	-	24
BMS 5-92 Type III	QPL	-	-	24
BMS 5-105 Type I	QPL	BMS 10-83 Type I	QPL	6
DP-100	3M Scotch	-	-	24

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

POSITION OF THE CONNECTOR COVER ON THE CONNECTOR
Figure 21

Refer to Figure 21.

- (1) Make a selection of a cover for the connector from Table 2.
- (2) Make a selection of an adhesive from Table 17.
- (3) Push the cover, with equal pressure, down on the connector until the cover is fully installed on the cap pins. Refer to Figure 21.

Make sure that the cover is fully installed or, as a minimum, has direct contact with the second wrap level.

- (4) Apply the adhesive in the upper half of the pin groove until the pin is under the adhesive.

9. TEST PROCEDURES FOR WIRE WRAP CONNECTIONS

A. Test Failure Conditions

If any of the wire wrap connections do not pass the necessary test, these conditions are applicable:

- The tool must be adjusted or repaired, if it is possible
- Another set of tests must be done.
- It is possible that the wire wrap connections, made with the tool before the test, are unsatisfactory and should be examined.

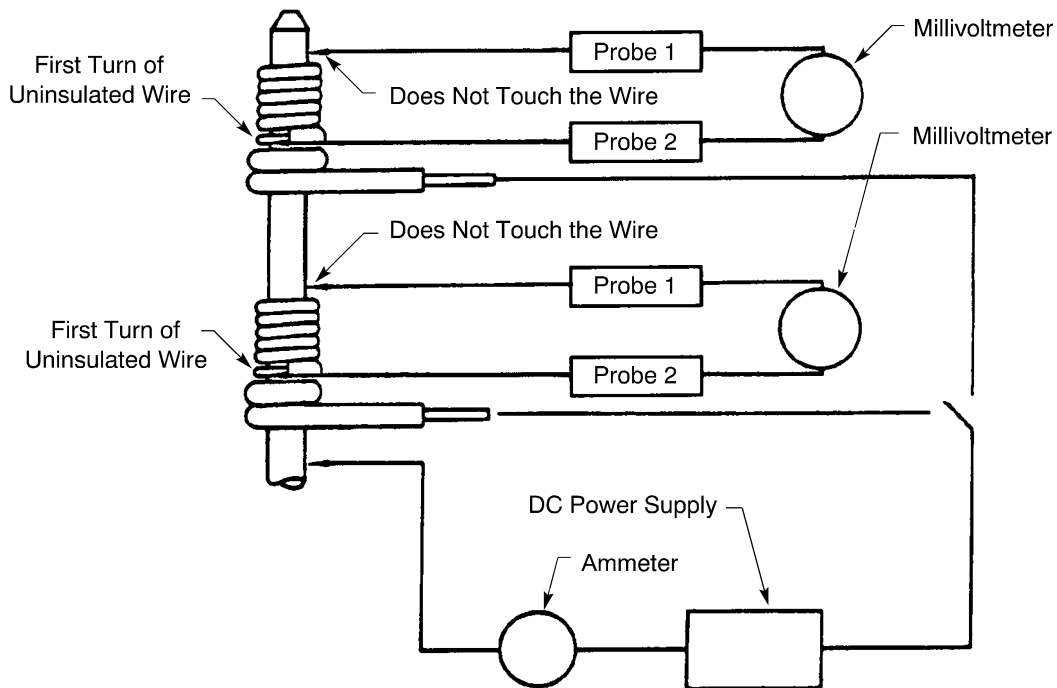

B. Resistance Test

Table 18
WIRE WRAP RESISTANCE TEST VALUES

Wire Size (AWG)	DC Current	
	Target (ampere)	Tolerance (percent)
30	1.0	± 2
28	2.0	± 2
26	2.4	± 2

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

CONFIGURATION OF THE WIRE WRAP RESISTANCE TEST
Figure 22

- (1) Set the power supply on zero.
- (2) Make the necessary wire wrap connections. Refer to Figure 22.
- (3) Slowly increase the voltage until the ammeter shows the specified value for the size of wire. Refer to Table 18.
- (4) Read the millivoltmeter.

If the millivoltmeter shows more than 4 millivolts, the electrical connection is not satisfactory.

C. Terminal Strip Force Test

Table 19
TERMINAL STRIP FORCE

Wire Size (AWG)	Strip Force (pounds)
30	3
28	4
26	6
24	7
22	8
20	9
18	15

STANDARD WIRING PRACTICES MANUAL

WIRE WRAP CONNECTIONS

CONFIGURATION OF THE TERMINAL STRIP FORCE TEST

Figure 23

Refer to Figure 23.

- (1) Put the jaws of the strip tool on the post so that the longitudinal axis of the post is at an angle of 90 degrees \pm 10 degrees from the surface of the jaws.

Make sure that:

- The surfaces of both jaws of the strip tool are aligned so that those surfaces touch the lead turn at the same time
 - There is a minimum clearance between the jaws of the strip tool and the post so that there is no interference
 - The total clearance between the post and the jaws of the strip tool is not greater than 70 percent of the diameter of the uninsulated wire.
- (2) Slowly pull the jaws of the strip tool against the lead turn in the direction toward the end of the post. If the wrap level moves before the force is equal to the specified value in Table 19, the electrical connection is not satisfactory.

D. Unwrap Test

- (1) Put the unwrap tool on the terminal post.
- (2) Engage the tool with the end turn of the wrap level.
- (3) Turn the tool counterclockwise until either of these conditions occur:
 - All of the wire is transferred to the tool
 - The wrap level becomes loose and is removed from post.
- (4) If the wire is not transferred to the tool, put a cylinder or rod that can go into the center of the unwrapped wire for support.
- (5) Hold the insulated part of the wire tightly.
- (6) Turn the tool or the rod to straighten the wire.

NOTE: It is not necessary for the wire to be fully straight.

If the wire breaks when it is straightened, the electrical connection is not satisfactory.

STANDARD WIRING PRACTICES MANUAL**WIRE WRAP CONNECTIONS****E. Gas Tight Test**

In the gas tight test, the wire wrap connection has exposure to aqua regia fumes first, and then to ammonium sulfide gas.

Make sure that test solutions do not touch the connection during the test.

- (1) Put 1 milliliter to 2 milliliters of aqua regia solution, made of a 1:1 concentrated hydrochloric and nitric acid mixture, in a 16 x 15 milliliter test tube.
- (2) Put 1 milliliter of concentrated ammonium sulfide solution in another test tube.
- (3) Hang the wire wrap connection in the test tube with the aqua regia solution.
- (4) Put a cork on the end of the test tube.
- (5) Let the connection have exposure to the fumes for 10 minutes minimum.
- (6) Put the connection in the other test tube with the concentrated ammonium sulfide solution.
- (7) Put a cork on the end of the test tube.
- (8) Let the connection have exposure to the fumes until the wire becomes dark.
The color of the dark area should be copper or gold sulfide.
- (9) Remove connection from the test tube.
- (10) Let the connection dry.
- (11) Unwrap the connection with a tool that does not put any scratches on the post.
- (12) Examine the post.

NOTE: The gas tight area should be light in color when it is compared to the dark post.

If the wire wrap is not gas tight on 75 percent of the corners that touch the uninsulated wire, except for the lead turn and the end turn, the electrical connection is not satisfactory.

- (1) For plugs, install the polarization posts. Refer to Figure 5, Figure 4, and Table 6.
Make sure to tighten the polarization post screws.
- (2) For receptacles, install the polarization inserts. Refer to Figure 7, Figure 4, and Table 6.
- (3) If the polarization post or the insert position is changed, the polarization code on the connector must be changed. Refer to Paragraph 2.C.

NOTE: A portion of the connector part number has the polarization post code.

C. Polarization Code Change

- (1) If the polarization code is stamped on the connector:
 - (a) Erase the old polarization code numbers.
 - (b) Use a steel stamp to stamp the new code adjacent to the original number.
Make sure that the stamp is the same size as the original connector part number.
- (2) If the code is printed in ink on the connector:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF ARIZONA INTEGRATED ELECTRONICS APC() SERIES CONNECTORS

- (a) Put Independent 73X NW black ink on the old polarization code.
- (b) Put the new code on the connector with Independent 73X NW Opaque ink.
Make sure to add the new numbers adjacent to the original number.
- (c) After the ink dries, apply a layer of Akzo 683-3-2 or 3M EC-776 coating over the ink mark.

3. CONNECTOR DISASSEMBLY

A. Contact Removal

**Table 7
CONTACT REMOVAL TOOLS**

Crimp Barrel Size	Removal Tool	
	Part Number	Supplier
20	ATMS2078	Astro
16	ATR2112	Astro

- (1) Make a selection of a contact removal tool from Table 7.
- (2) Remove the contact.

4. CONNECTOR PLUG ASSEMBLY

A. Plug Assembly

Refer to Figure 5 and Subject 20-71-14.

Make sure to use the tools in Table 8 to insert the contacts.

**Table 8
CONTACT INSERTION TOOLS**

PLUG ASSEMBLY
Figure 5

B. Strain Relief Clamp Installation

Refer to Figure 6 and Subject 21-61-00.

STRAIN RELIEF CLAMP
Figure 6

- (1) Form and hold the wires with a string or plastic tie.
- (2) Make a selection of a strain relief clamp from Table 2.
- (3) Put the strain relief clamp on the wires and align the clamp holes with the holes on the connector.
- (4) Put a layer of insulation tape around the wires where the clamp touches the wires.
- (5) Apply an additional 1, 2, or 3 layers of these tapes:
 - Strip-n-Stick 220A silicone sponge rubber adhesive tape
 - 3M Scotch 70 silicone rubber tape.
- (6) Tighten the clamp screws.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF ARIZONA INTEGRATED ELECTRONICS APC() SERIES CONNECTORS****5. CONNECTOR RECEPTACLE ASSEMBLY****A. Receptacle Assembly****RECEPTACLE ASSEMBLY****Figure 7**

- (1) Wrap the wires onto the wire wrap posts. Refer to Subject 20-72-18.
- (2) Install the latch plate. Refer to Figure 7.
- (3) Make a selection of a protective cover from Table 2.
- (4) Install the protective cover.

C. Souriau Part Numbers

CAUTION: DO NOT USE CLASS 3 AND 4 CONNECTORS. THE O-RING CAN PREVENT THE SHELLS TO INCORRECTLY CONNECT.

NOTE: To convert a Class 3 connector to a Class 5 connector, remove and discard the 0-ring.

2. CONNECTOR POLARIZATION

A. General

Connectors are polarized:

- Vertically by post and key at the bottom and the top of a connector shell; refer to Figure 5
- Horizontally by post and key at the left side and the right side of a connector shell; refer to Figure 7.

These components are supplied with each connector:

- Polarization posts
- Polarization keys
- Retaining plates
- Screws.

The components can be installed in or changed to any of the 36 combinations in:

- Table 3; refer to Figure 6
- Table 4; refer to Figure 8.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

1. GENERAL DATA

A. Minimum Wire O.D. for an Environmentally Sealed Connector

Refer to:

- Subject 20-60-08 for the identification of an environmentally sealed connector
- Table 1 for the minimum wire O.D. that is necessary for a satisfactory seal of a contact cavity hole
- Subject 20-60-08 for the procedure to increase the diameter of the wire.

**Table 1
MINIMUM WIRE O.D. FOR A SATISFACTORY SEAL**

Contact Cavity Size	Minimum Wire O.D. (inch)
20	0.040
16	0.068

Table 4
ALTERNATIVE CONNECTORS

Specified Connector	Alternative Connector
CB05-15S	CBME05-15S
CB02C-15P	CBRE02C-15P

B. Connector Description

The Tri-Star CB(), Cory CB(), and Hughes 116706()-() Series connectors have these features:

- Plastic shells with a keyhole shape
- Wire seal grommets in the environmental CBME() and CBRE() connectors
- Solder tail contacts in the 1167060, 1167061, CB02-15P, and CB02-15S connectors

The connectors with solder tail contacts:

- Are usually used as a component in electronic equipment
- Can be used as a connector on the end of a wire harness
- Are assembled with crimp type socket contacts that are soldered on the solder tails at the rear of the connector; refer to Paragraph 6.

For the configuration of:

- The CB02-15P receptacle, refer to Figure 1
- The CB02C-15P receptacle, refer to Figure 2
- The CB05-15S plug, refer to Figure 3
- The CB06-15S plug, refer to Figure 4
- The CB08-15P plug, refer to Figure 5
- The CB08T-15P plug, refer to Figure 5
- The CB24P-4 plug, refer to Figure 6
- The CBCX12R-1 receptacle, refer to Figure 7
- The CBME05-15S plug, refer to Figure 8
- The CBRE02-15P-1 shorting receptacle, refer to Figure 9
- The CBRE02C-15P receptacle, refer to Figure 10
- The CBX12PM-1A plug, refer to Figure 11.

The shell of:

- The CB02-15S receptacle is the same as the CB02-15P receptacle; refer to Figure 1
- The CB02C-15S receptacle is the same as the CB02C-15P receptacle; refer to Figure 2
- The CB05-15P plug is the same as the CB05-15S plug; refer to Figure 3
- The CB06-15P plug is the same as the CB06-15S plug; refer to Figure 4
- The CB08-15S plug is the same as the CB08-15P plug; refer to Figure 5
- The CB08T-15S plug is the same as the CB08T-15P plug; refer to Figure 5.

Figure 18

24 POSITION CONFIGURATION
Figure 19

4. CONNECTOR DISASSEMBLY

A. Integral Strain Relief Removal

Refer to Figure 14 for the configurations of the integral strain relief cable clamps.

- (1) If the connector has an integral straight strain relief with a clamp bar, or an integral 90 degree strain relief with a clamp bar:
 - (a) Disengage the screws that hold the clamp bar to the strain relief legs of the connector.
 - (b) Remove the screws.
 - (c) Remove the clamp bar from the wire harness.
- (2) If the connector has an integral 90 degree tie wrap bar:
 - (a) Cut the plastic tie strap or wire harness tie that holds the wire harness to the tie wrap bar.

CAUTION: DO NOT CUT THE INSULATION OF THE WIRES IN THE WIRE HARNESS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (b) Disengage the screws that hold the tie wrap bar to the strain relief legs of the connector.
- (c) Remove the screws.
- (d) Remove the tie wrap bar.

B. Backshell Removal

Refer to Figure 15 and Figure 16 for the configurations of the backshells.

20-72-22

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

- (1) Cut the plastic tie strap or wire harness tie that holds the wire harness on the backshell.

CAUTION: DO NOT CUT THE INSULATION OF THE WIRES IN THE WIRE HARNESS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (2) If the wire harness has a layer of tape or a sleeve at the strain relief, remove the tape or the sleeve from the harness.
- (3) Disengage the threads of the backshell and the connector.
- (4) Push the backshell rearward away from the connector.

C. Contact Removal - Front Release Contact

**Table 18
CONTACT REMOVAL TOOLS**

Engaging End Size	Removal Tool
20	M81969/19-07

NOTE: The deadface of the CBX12PM-1 connector must be removed before the contacts can be removed.

- (1) If it is necessary, remove the strain relief or the backshell from the connector.

Refer to:

- Paragraph 4.A. for the removal of the integral strain relief
- Paragraph 4.B. for the removal of the backshell.

- (2) If the connector has a deadface, remove the deadface. Refer to Paragraph 4.F.

- (3) Make a selection of a contact removal tool from Table 18.

- (4) Axially align the tool and the contact cavity at the front face of the connector.

Make sure that the plunger of the removal tool is fully retracted.

- (5) Push the tool into the contact cavity until it stops.

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE REMOVAL TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Push the plunger of the tool until the contact starts to come out of the contact cavity.

- (7) Carefully pull the tool out of the contact cavity.

Make sure that the removal tools stays axially aligned with the contact cavity.

- (8) Pull the contact out of the contact cavity from the rear of the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

D. Contact Removal - Rear Release Contact

**Table 19
CONTACT REMOVAL TOOLS - STANDARD CONTACTS**

Contact Engaging End Size	Removal Tool	
	Part Number	Color
20	6500-001-20	-

**Table 20
CONTACT REMOVAL TOOLS - TRI-STAR CONTACTS**

Contact Engaging End Size	Removal Tool	
	Part Number	Color
20	M81969/8-06	-
	M81969/14-02	White
16	M81969/8-08	-
	M81969/14-03	White

- (1) If it is necessary, remove the strain relief or the backshell from the connector.

Refer to:

- Paragraph 4.A. for the removal of the integral strain relief
- Paragraph 4.B. for the removal of the backshell.

- (2) Make a selection of a contact removal tool from Table 19 or Table 20.
 (3) Axially align the tool and the contact cavity at the rear face of the connector.
 (4) Push the tool into the contact cavity until it stops.

Make sure that the tool is not turned in the contact cavity.

CAUTION: IF THE REMOVAL TOOL IS TURNED WHILE IT IS IN THE CONTACT CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

- (5) Carefully pull the wire and the tool from the contact cavity at the same time.
 Make sure that the removal tool stays axially aligned with the contact cavity.
 (6) If the contact is not released:
 (a) Carefully remove the tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

- (b) Turn the tool approximately 90 degrees.
- (c) Do Step (3) through Step (5) again.

E. Contact Removal - Coax Contact

**Table 21
COAX CONTACT REMOVAL TOOLS**

Contact Cavity Size	Removal Tool
8	M81969/19-03

NOTE: The deadface of the CBX12PM-1 connector must be removed before the contacts can be removed.

- (1) If it is necessary, remove the strain relief or the backshell from the connector.

Refer to:

- Paragraph 4.A. for the removal of the integral strain relief
- Paragraph 4.B. for the removal of the backshell.

- (2) If the connector has a deadface, remove the deadface. Refer to Paragraph 4.F.
- (3) Make a selection of a contact removal tool from or Table 21.
- (4) Axially align the tool and the contact cavity at the front face of the connector.
Make sure that the plunger of the removal tool is fully retracted.
- (5) Push the tool into the contact cavity until it stops.

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE REMOVAL TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Push the plunger of the tool until the contact starts to come out of the contact cavity.
- (7) Carefully pull the tool out of the contact cavity.
Make sure that the removal tools stays axially aligned with the contact cavity.
- (8) Pull the contact out of the contact cavity from the rear of the connector.

F. Deadface Removal

**Table 22
NECESSARY TOOLS**

Tool	Type	Tip Size (inch)
Screwdriver	Flat Blade	1/4

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

CBX12PM-1 CONNECTOR DEADFACE COMPONENTS
Figure 20

Refer to Figure 20.

- (1) Make a selection of a flat blade screwdriver from Table 22.
- (2) Push the deadface in and hold it away from the front face of the connector.
- (3) Continue to hold the deadface and put the tip of the screwdriver in one of the slots on the side of the connector near the front face.
- (4) Continue to hold the deadface and twist the screwdriver until the side of the retainer moves away from the connector.
- (5) Do Step (3) and Step (4) again for the slot on the other side of the connector.
- (6) Remove the retainer, the deadface, and the spring.

5. ASSEMBLY OF A CONNECTOR WITH CRIMP TYPE CONTACTS

A. Wire Preparation

The Paragraph gives the procedure to prepare a wire for the assembly of a front release or a rear release contact.

Table 23
INSULATION REMOVAL LENGTH

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)		Special Instructions
		Target	Tolerance	
26	20	0.19	± 0.03	-
24	20	0.19	± 0.03	-
	16	0.50	± 0.03	Fold the conductor back on itself
22	20	0.19	± 0.03	-
	16	0.25	± 0.03	Use a Y6015C eyelet; refer to Subject 20-60-00
		0.50	± 0.03	Fold the conductor back on itself

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

Table 23 (continued)

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)		Special Instructions
		Target	Tolerance	
20	20	0.19	± 0.03	-
	16	0.25	± 0.03	-
18	16	0.25	± 0.03	-
16	16	0.25	± 0.03	-

(1) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 21
- Table 23 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedure.

NOTE: If the wire size and a larger crimp barrel size are not specified in Table 23, the size of the conductor must be increased. Refer to Subject 20-60-00.

INSULATION REMOVAL
Figure 21

(2) For CBME and CBRE connectors:

- (a) Measure the O.D. of the wire.
- (b) If the O.D. of the wire is less than the minimum seal diameter of the connector grommet hole, increase the O.D. of the wire. Refer to Paragraph 1.A.

(3) If it is specified, fold the conductor back. Refer to Figure 22.

FOLDED BACK CONDUCTOR
Figure 22

B. Contact Assembly

This paragraph gives the procedure to assemble:

- A standard front release contact
- A standard rear release contact
- A Tri-Star rear release contact.

For the procedure to assemble a coax contact, refer to Paragraph 5.C.

STANDARD WIRING PRACTICES MANUAL

- (1) Make a selection of a crimp tool from:
 - Table 24 for a standard front release contact
 - Table 25 for a standard rear release contact
 - Table 26 for a Tri-Star rear release contact.
- (2) Put the end of the wire in the crimp barrel of the contact.
 Make sure that:
 - All of the strands of the conductor are in the crimp barrel
 - The conductor can be seen in the inspection hole
 - The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.
- (3) Crimp the contact.
 Make sure that:
 - All of the strands of the conductor are in the crimp barrel
 - The conductor can be seen in the inspection hole
 - The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

**Table 29
NECESSARY MATERIALS**

Material	Part Number	Supplier
Sleeve, Heat Shrinkable	AMS-DTL-23053/8	Available source
	RW-175	Raychem

- (1) Make a selection of a center contact crimp tool from Table 27.
- (2) Make a selection of a contact body crimp tool from Table 28.
- (3) Make a selection of a heat shrinkable sleeve from Table 29.

NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.

- (4) Put a 1.75 inch \pm 0.13 inch length of 3/16 inch diameter heat shrinkable sleeve on the cable.
- (5) Remove 0.30 inch \pm 0.05 inch of the outer jacket from the end of the cable. Refer to Figure 23.

CAUTION: DAMAGE TO THE SHIELDS, THE DIELECTRIC, OR THE CENTER CONDUCTOR CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

**OUTER JACKET REMOVAL LENGTH
Figure 23**

- (6) Put the inner ferrule on the cable. Refer to Figure 24.

Make sure that:

- The end of the ferrule with the shoulder is put on the cable first
- The inner shoulder of the ferrule is against the end of the outer jacket.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

ALIGNMENT OF THE INNER FERRULE AND THE CABLE
Figure 24

- (7) Fold the outer round conductor shield back on the inner ferrule.
 Make sure that the strands of the shield are equal and symmetrical around the circumference of the ferrule.
- (8) Remove the inner flat conductor shield at the forward edge of the inner ferrule.

CAUTION: DAMAGE TO THE OUTER SHIELD, THE DIELECTRIC, OR THE CENTER CONDUCTOR CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

- (9) Cut the strands of the outer shield at the forward edge of the shoulder of the inner ferrule. Refer to Figure 25.

POSITION OF THE OUTER SHIELD ON THE INNER FERRULE
Figure 25

- (10) Remove 0.23 inch \pm 0.03 inch of the dielectric from the end of the cable. Refer to Figure 26.

DIELECTRIC REMOVAL
Figure 26

20-72-22

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS**

- (11) If all of the strands of the center conductor are not together, twist the strands together in their initial direction.
- (12) Put the center conductor in the crimp barrel of the center contact. Refer to Figure 27.
- Make sure that:
- The end of the dielectric is against the end of the center contact
 - The strands of the conductor can be seen in the inspection hole.

**POSITION OF THE CENTER CONTACT ON THE CENTER CONDUCTOR****Figure 27**

- (13) Crimp the center contact.
- (14) Put the contact body on the center contact.
- Make sure that the retainer rib of the center contact is locked in the contact body.
- (15) Lightly pull the cable to make sure that the center contact is locked in the body assembly.
- (16) If the center contact is not locked in the contact body, do Step (14) and Step (15) again.
- (17) Put the contact body in the die of the contact body crimp tool.
- Make sure that the distance from:
- The forward edge of the crimp tool die to the shoulder of the contact body is not more than 0.06 inch
 - The rear end of the crimp barrel to the forward edge of the shoulder of the inner ferrule is not more than 0.035 inch.
- (18) Crimp the contact body. Refer to Figure 28.
- Make sure that the distance from:
- The forward end of the crimp area to the shoulder of the contact body is not more than 0.06 inch
 - The rear end of the crimp barrel to the forward edge of the shoulder of the inner ferrule is not more than 0.035 inch.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

POSITION OF THE CONTACT BODY ON THE INNER FERRULE

Figure 28

- (19) Remove the unwanted length of the strands of the shield from the end of the contact body to the end of the shield.
- (20) Push the heat shrinkable sleeve forward until the forward end of the sleeve is 0.035 inch maximum from the rear edge of the shoulder of the contact body. Refer to Figure 29.

POSITION OF THE HEAT SHRINKABLE SLEEVE ON THE CONTACT BODY

Figure 29

- (21) Shrink the sleeve into its position. Refer to Subject 20-10-14.

D. Contact Insertion

This paragraph gives the procedure to install:

- A standard front release contact
- A standard rear release contact
- A Tri-Star rear release contact.

For the procedure to install a coax contact, refer to Paragraph 5.E.

**Table 30
CONTACT INSERTION TOOLS**

Crimp Barrel Size	Insertion Tool	
	Part Number	Color

	CIET-20	Red
	M81969/14-02	-

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

Table 30 (continued)

Crimp Barrel Size	Insertion Tool	
	Part Number	Color
16	6500-001-16	-
	CIET-16	Blue
	M81969/14-03	-

- (1) Make a selection of an insertion tool from Table 30.
- (2) Put the necessary backshell components on the wire harness.
Make sure that the strain relief end of the backshell is pointed away from the end of the wire harness.
- (3) Put the contact assembly in the insertion tool.
Make sure that the end of the tool is against the rear shoulder of the contact.
- (4) Axially align the insertion tool and the contact cavity at the rear of the connector.
- (5) Carefully push the insertion tool and the contact assembly in the contact cavity until it stops.
Make sure that the insertion tool stays axially aligned with the contact cavity.

CAUTION: DO NOT TURN THE INSERTION TOOL IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Carefully pull the tool out of the contact cavity.
- (7) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (8) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the contact cavity.
 - (b) Do Step (3) through Step (7) again.

E. Coax Contact Insertion

- (1) If the connector has a backshell, put the backshell on the wire harness.
Make sure that the strain relief end of the backshell is pointed away from the end of the wire harness.
- (2) Axially align the coax contact assembly with the contact cavity.
- (3) Carefully push the contact into the contact cavity until it stops.
- (4) Lightly pull the cable to make sure that the contact is locked in the contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

CAUTION: DO NOT PULL THE CABLE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONEACT.

CAUTION: DO NOT MAKE A DENT IN THE CABLE JACKET WITH THE FINGERNAILS. DAMAGE TO THE CABLE JACKET CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

- (5) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the contact cavity.
 - (b) Do Step (2) through Step (4) again.

F. Seal of an Empty Contact Cavity

If the connector has a rear grommet, all empty contact cavities must be sealed. Refer to Subject 20-60-08.

G. Deadface Installation

CBX12PM-1 CONNECTOR DEADFACE COMPONENTS
Figure 30

Refer to Figure 30.

- (1) Put the spring in the front face of the connector.
- (2) Put the deadface on the spring. Refer to Figure 31.

Make sure that:

- The side of the deadface with the contact cavity identification is to the front.
- The key of the deadface is aligned with the keyway in the connector shell.
- The contact holes in the deadface are aligned with the contacts or contact cavities in the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

ALIGNMENT OF THE CONNECTOR SHELL, THE DEADFACE, AND THE RETAINER

Figure 31

- (3) Align the flat side of the retainer with flat side of the connector. Refer to Figure 31. Make sure that the deadface stays aligned with the connector.
- (4) Push the retainer into the connector shell until it makes a click.

H. Integral Strain Relief Assembly

Refer to Figure 14 for the configurations the integral strain relief cable clamps.

- (1) If the connector has a straight strain relief clamp with a clamp bar, or a 90 degree strain relief with a clamp bar:
 - (a) Put the clamp bar on the wire harness.
 - (b) Align the holes of the clamp bar with the holes in the strain relief legs of the connector.
 - (c) Install the clamp screws.
- (2) If the connector has a 90 degree tie wrap bar:
 - (a) Attach the legs of the tie wrap bar to the strain relief legs of the connector.
 - (b) Install a plastic tie strap or assemble a wire harness tie to hold the wire harness in its position.

Refer to:

- Subject 20-10-11 for procedure to install a plastic tie strap
- Subject 20-10-11 for the procedure to assemble a wire harness tie.

I. Backshell Assembly

Refer to:

- Figure 15 for the configurations of backshells for non-environmental connectors
- Figure 16 for the configurations of backshells for environmental connectors.

- (1) If the connector has a CT-14S backshell:
 - (a) Fully engage the threads of the backshell and the connector.
 - (b) Make a mark on the wire harness or the wires at the end of the backshell.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS**

CAUTION: MAKE SURE THAT THE MARK DOES NOT CAUSE DAMAGE TO THE WIRE INSULATION. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (c) Disengage the threads of the backshell and the connector.
 - (d) Put the necessary layers of protective tape or the necessary quantity of heat shrinkable sleeves on the wire harness to make a tight fit in the rear hole of the backshell.
Refer to Subject 20-00-11 for the protective tape or heat shrinkable sleeve.
 - (e) Fully engage the threads of the backshell and the connector.
 - (f) Install a plastic tie strap or assemble a wire harness tie on the wire harness and the strain relief of the backshell.
Refer to:
 - Subject 20-10-11 for procedure to install a plastic tie strap
 - Subject 20-10-11 for the procedure to assemble a wire harness tie.
- (2) If the connector has a CTS-16 backshell:
- (a) Fully engage the threads of the backshell and connector.
 - (b) Install a plastic tie strap or assemble a wire harness tie on the wire harness and the strain relief of the backshell.
Refer to:
 - Subject 20-10-11 for procedure to install a plastic tie strap
 - Subject 20-10-11 for the procedure to assemble a wire harness tie.
- (3) If the connector has a CTF-14S, a CTR-14S, a CTF-16, or a CTR-16 backshell:
- (a) Engage the threads of the backshell and connector.
 - (b) Put the backshell in the specified clock position. Refer to Figure 32 for examples of clock positions.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

BACKSHELL CLOCK POSITION 6 AND CLOCK POSITION 3

Figure 32

- (c) Fully tighten the threads of the backshell on the connector.
- (d) Install a plastic tie strap or assemble a wire harness tie on the wire harness and the strain relief of the backshell.

Refer to:

- Figure 33
- Subject 20-10-11 for procedure to install a plastic tie strap
- Subject 20-10-11 for the procedure to assemble a wire harness tie.

BACKSHELL ASSEMBLY

Figure 33

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

6. ASSEMBLY OF A CONNECTOR WITH SOLDER TYPE CONTACTS

This Paragraph gives the procedures to assemble the connectors that have solder tail contacts.

Refer to Figure 1 for the configuration of the CB02-15() connector.

- (1) If it is specified, assemble a shield ground wire. Refer to Subject 20-10-15.
Make sure that the maximum distance from the shield termination on the wire harness to the rear face of the connector is 3.0 inches. Refer to Figure 34.
- (2) Make a selection of a contact from Table 33.
- (3) Make a selection of a heat shrinkable sleeve from Table 31.
NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.
- (4) Put a 1.5 inch \pm 0.25 inch length of heat shrinkable sleeve on the wire.
- (5) Assemble the contact. Refer to Table 35.

C. Contact Assembly

FULLY ASSEMBLED TRI-STAR CB02-15() RECEPTACLE CONNECTOR
Figure 34

- (1) Make a selection of a potting boot from Table 34.
NOTE: A satisfactory alternative to a boot is a plastic connector dust cap that has:
 - An outer diameter less than or equal to 0.925 inch
 - An inner diameter more than or equal to 0.70 inch
 - The closed end removed.
- (2) Make a selection of a sealant from Table 31.
- (3) Put the boot or the cap on the wire harness.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF TRI-STAR CB()-(), CORY CB()-(), AND HUGHES 116706()-() SERIES CONNECTORS

- (4) Put a 0.06 inch to 0.1 inch length of solder in the engaging end of the socket contact on the end of the wire.
- (5) Start to engage the socket contact and the solder tail.
- (6) Apply heat to the contact and at the same time push it forward until the end of the contact is against the rear face of the connector.

CAUTION: MAKE SURE TO REMOVE THE SOLDER OR SOLDER FLUX THAT MAKES A BRIDGE BETWEEN ADJACENT CONTACTS.

- (7) Push the heat shrinkable sleeve forward until the end of the sleeve is against the rear face of the connector. Refer to Figure 34.
- (8) Shrink the sleeve into its position. Refer to Subject 20-10-14.

CAUTION: MAKE SURE TO USE ONLY THE MINIMUM AMOUNT OF HEAT THAT IS NECESSARY TO SHRINK THE SLEEVE. IF TOO MUCH HEAT IS APPLIED, DAMAGE TO SOLDER JOINT OCCURS.

- (9) Point the front face of the connector down.
- (10) Push the boot down until the forward end of the boot is against the body of the connector.
- (11) Fill the boot fully with sealant.
- (12) Let the sealant cure the necessary amount of time.
- (13) If the potting boot is a connector dust cap, remove it.

NOTE: It is not necessary to remove a potting boot that is specified in Table 34.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Insert

It is necessary to replace the connector if one or more of these conditions occur:

- The depth of the damage extends farther than the bottom of the outer seal web; refer to Figure 1
- The damage extends from one contact cavity to a different contact cavity; refer to Figure 2
- The damage extends from one contact cavity to the outer edge of the insert; refer to Figure 2.

Depth of the Damage That is not Farther Than the Bottom of the Seal Web

REAR FACE OF THE INSERT - DEPTH OF DAMAGE

Figure 1

REAR FACE OF THE INSERT - LENGTH OF DAMAGE

Figure 2

B. Damage Conditions - Front Face of the Insert

It is necessary to replace the connector if one of these conditions occur:

- The damage extends from one contact cavity to a different contact cavity
- The damage extends from one contact cavity to the outer edge of the insert.

Refer to Figure 3.

CQ()ME()	Cory Components	CQ()ME()	Tri-Star
CQ()RA()	Cory Components	CQ()RA()	Tri-Star
CQ()RE()	Cory Components	CQ()RE()	Tri-Star

B. Connector Description

The CQ() rectangular connectors have these properties:

- A D subminiature rectangular configuration
- A plastic shell for the plug
- A quick release latch mechanism
- Crimp type contacts
- Rear release, rear removable standard contacts
- Front release, rear removable size 08 coax contacts
- Front release, rear removable special purpose contacts
- Non-removable size 2018 special purpose contacts
- A removable, snap-on, plastic backshell with a cable tie strain relief.

3. INSERT CONFIGURATIONS

A. CQ() Connectors

NOTE: The contact cavity size that is specified in Table 15 is equivalent to the size of the engaging end of the contact.

NOTE: Figure 14 through Figure 26 show the rear face of an insert that has pin contacts. The view of the rear face of an insert that has socket contacts is the mirror image of this view.

4. CONNECTOR DISASSEMBLY

A. Separation of the Plug and the Receptacle

- (1) Push and hold the quick release mechanism on each side of the plug at the same time. Refer to Figure 27.

LOCATION OF THE QUICK RELEASE MECHANISM ON THE PLUG

Figure 27

- (2) Pull the plug from the receptacle. Refer to Figure 28.

SEPARATION OF THE PLUG FROM THE RECEPTACLE

Figure 28

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

B. Removal of the Receptacle from a Panel

**Table 16
NECESSARY TOOLS**

Tool	Size (inch)
Nut Driver	3/16
Wrench	3/16

- (1) Make a selection of a tool from Table 16.
- (2) Remove the 4-40 self locking nuts at the rear of the receptacle.

NOTE: Make sure to keep the nuts in a safe location; they are necessary to install the receptacle in the panel again.

- (3) Remove the receptacle from the panel.

C. Backshell Removal

**Table 17
NECESSARY TOOLS**

Tool	Diameter (inch)	Reference
Awl, Plastic	0.25	Figure 29

**DIMENSIONS OF THE PLASTIC AWL
Figure 29**

- (1) Make a selection of an awl from Table 17.
- (2) Put the tip of the awl between the backshell and the connector at one of the four backshell latches. Refer to Figure 5 for the location of the backshell latches on the connector.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

For the location of the backshell latch retainers on a connector that has:

- An equatorial backshell, refer to Figure 11
 - A polar backshell, refer to Figure 12
 - A straight backshell, refer to Figure 13.
- (3) Lift the latch retainer of the backshell away from the plug shell.
 - (4) Do Step (2) and Step (3) again for each remaining latch.
 - (5) Remove the backshell from the connector.

D. Contact Removal

This paragraph gives the procedure to remove standard contacts.

For the procedure to remove:

- Special purpose contacts, refer to Paragraph 4.E.
- Coax contacts, refer to Paragraph 4.F.

**Table 18
CONTACT REMOVAL TOOLS**

Contact Size	Removal Tool
2020HD	282-891
	91066-4
	CIET-20HDL
	DAK125
	M81969/1-02
	MS3156-20

NOTE: The backshell must be removed from the connector before the contacts can be removed. Refer to Paragraph 4.C.

- (1) Make a selection of a contact removal tool from Table 18.
- (2) Put the tip of the tool on the wire.
- (3) At the rear of the connector, axially align the tool and the contact cavity.
- (4) Carefully push the tool into the contact cavity until it stops. Refer to Figure 30.
Make sure that the tool stays aligned with the contact cavity.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

POSITION OF THE REMOVAL TOOL IN THE CONTACT CAVITY
Figure 30

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

CAUTION: DO NOT TURN THE TOOL CLOCKWISE OR COUNTERCLOCKWISE WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (5) Hold the wire against the tool.
- (6) Pull the tool and the wire out of the contact cavity at the same time.
 Make sure that the tool stays aligned with the contact cavity.
- (7) If the contact is not released:
 - (a) Carefully pull the tool out of the contact cavity.
 - (b) Turn the tool approximately 90 degrees.
 - (c) Do Step (2) through Step (6) again.

E. Special Purpose Contact Removal

NOTE: Size 2018 special purpose contacts cannot be removed from the connector.

Table 19
CONTACT REMOVAL TOOLS

Contact Cavity Size	Removal Tool
08	DRK38

NOTE: The backshell must be removed from the connector before the contacts can be removed. Refer to Paragraph 4.C.

- (1) For a pin contact, remove the alignment ring from the contact at the front of the connector.
- (2) Make a selection of a contact removal tool from Table 19.
- (3) At the front of the connector, axially align the tool with the engaging end of the contact. Refer to Figure 31.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

ALIGNMENT OF THE REMOVAL TOOL AND THE CONTACT
Figure 31

- (4) Put the tip of the tool on the contact.
- (5) Push the tool forward until the first mark on the tool is aligned with the front face of the connector.

CAUTION: IF THE REMOVAL TOOL IS PUSHED FARTHER THAN THE SPECIFIED MARK, DAMAGE TO THE RETENTION CLIPS OF THE CONTACT CAN OCCUR.

- (6) Hold the tool and the connector tightly in position.
- (7) Push the slider knob forward to release the contact. Refer to Figure 32.

OPERATION OF THE REMOVAL TOOL SLIDER KNOB
Figure 32

- (8) From the rear of the connector, carefully pull the cable or the contact crimp barrel.

F. Coax Contact Removal

The procedure to remove coax contacts is the same as the procedure to remove special purpose contacts. Refer to Paragraph 4.E.

5. CONNECTOR ASSEMBLY

A. Contact Assembly

This paragraph gives the procedure to assemble standard and special purpose contacts.

For the procedure to assemble:

- The CQME()-316, CQME()-501, and CQME()-502 coax contacts, refer to Paragraph 5.B.
- The CQME()-503 coax contacts, refer to Paragraph 5.C.

STANDARD WIRING PRACTICES MANUAL

08	08	M309	6	TP884

(1) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 33
- Table 20 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedures.

**WIRE PREPARATION
Figure 33**

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

- (2) Make a selection of a crimp tool from:
 - Table 21 for standard contacts
 - Table 22 for special purpose contacts.
- (3) Push the conductor into the crimp barrel of the contact until the end of the conductor is against the end of the crimp barrel. Refer to Figure 34.

Make sure that:

- All the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF WIRE IN THE CRIMP BARREL OF THE CONTACT

Figure 34

- (4) Crimp the contact.

Make sure that:

 - All the strands of the conductor are in the crimp barrel
 - The conductor can be seen in the inspection hole
 - The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

B. Coax Contact Assembly

This paragraph gives the procedure to assemble these coax contacts:

- CQME()-316
- CQME()-501
- CQME()-502.

For the procedure to assemble a CQME()-503 coax contact, refer to Paragraph 5.C.

**Table 25
NECESSARY MATERIALS**

Material	Part Number	Supplier
Sleeve, Heat Shrinkable	MIL-LT	Raychem
	PLF 100	Plastronic
	RW-175	Raychem

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

- (1) Make a selection of a center contact crimp tool from Table 23.
- (2) Make a selection of a contact body crimp tool from Table 24.
- (3) Make a selection of a 3/16 inch diameter heat shrinkable sleeve from Table 25.

NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.

- (4) Cut the cable to make the end of the cable perpendicular to the longitudinal axis of the cable.
- (5) Put a 1.75 inch \pm 0.13 inch length of the heat shrinkable sleeve on the cable.
- (6) Remove 0.30 inch \pm 0.05 inch of the outer jacket from the end of the cable. Refer to Figure 35.

CAUTION: DAMAGE TO THE SHIELD, THE DIELECTRIC, OR THE CENTER CONDUCTOR CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

OUTER JACKET REMOVAL LENGTH

Figure 35

- (7) Align the inner ferrule and the end of the cable. Refer to Figure 36.

ALIGNMENT OF THE INNER FERRULE AND THE END OF THE CABLE

Figure 36

- (8) Push the inner ferrule rearward until the shoulder of the ferrule is against the end of the outer jacket.
- (9) If the cable has a flat conductor outer shield and a round conductor inner shield, cut the flat conductor shield at the forward edge of the inner ferrule.
- (10) Fold the shield back on the outer surface of the inner ferrule.
Make sure that the strands of the shield are symmetrical around the circumference of the ferrule.
- (11) Cut the strands of the shield at the forward edge of the shoulder of the inner ferrule. Refer to Figure 37.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

POSITION OF THE SHIELD ON THE INNER FERRULE
Figure 37

- (12) Remove 0.23 inch \pm 0.03 inch of the dielectric from the end of the cable. Refer to Figure 38.

DIELECTRIC REMOVAL
Figure 38

- (13) If all of the strands of the center conductor are not together, twist the strands together in their initial direction.
- (14) Push the center conductor into the crimp barrel of the center contact until the end of the dielectric is against the end of the center contact. Refer to Figure 39.

Make sure that the strands of the conductor can be seen in the inspection hole.

POSITION OF THE CENTER CONTACT ON THE CENTER CONDUCTOR
Figure 39

- (15) Crimp the center contact.
- (16) Put the contact body on the center contact.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

- (17) Push the center contact into the contact body until the retainer rib of the center contact is locked in the contact body.
- (18) Lightly pull the cable to make sure that the center contact is locked in the contact body.
- (19) If the center contact is not locked in the contact body, do Step (17) and Step (18) again.
- (20) Put the contact in the crimp die.
Make sure that the rear end of the contact is aligned with the edge of the crimp die.
- (21) Crimp the contact body. Refer to Figure 40.

Make sure that the distance from:

- The forward end of the crimp area to the shoulder of the contact body is not more than 0.06 inch
- The rear end of the crimp barrel to the shoulder of the inner ferrule is not more than 0.03 inch.

POSITION OF THE CONTACT BODY
Figure 40

- (22) Remove the unwanted length of the strands of the shield.
Make sure that the end of the shield is aligned with the rear end of the contact body.
- (23) Push the heat shrinkable sleeve forward until the forward end of the sleeve is 0.07 inch to 0.13 inch from the shoulder of the contact body. Refer to Figure 41.

POSITION OF THE HEAT SHRINKABLE SLEEVE ON THE CONTACT ASSEMBLY
Figure 41

- (24) Shrink the sleeve into its position. Refer to Subject 20-10-14.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

NECESSARY MATERIALS**

Material	Part Number	Supplier
Sleeve, Heat Shrinkable	MIL-LT	Raychem
	PLF 100	Plastronic
	RW-175	Raychem

- (1) Make a selection of a coax center contact crimp tool from Table 26.
- (2) Make a selection of a coax outer ferrule crimp tool from Table 27.
- (3) Make a selection of a 1/4 inch diameter heat shrinkable sleeve from Table 28.

NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.

- (4) Put a 1.50 inch ± 0.13 inch length of heat shrinkable sleeve on the cable.
- (5) Put the outer ferrule on the cable.
- (6) Prepare the cable. Refer to Figure 42.

CAUTION: DAMAGE TO THE SHIELD, THE DIELECTRIC, OR THE CENTER CONDUCTOR CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

COAX CABLE PREPARATION

Figure 42

- (a) Remove 0.45 inch \pm 0.05 inch of the outer jacket.
- (b) Remove 0.16 inch \pm 0.05 inch of the shield.
- (c) Remove 0.14 inch \pm 0.05 inch of the dielectric.
- (7) If all of the strands of the center conductor are not together, twist the strands together in their initial direction.
- (8) Push the center conductor into the crimp barrel of the center contact until the end of the center contact is against the end of the dielectric. Refer to Figure 43.

Make sure that the strands of the conductor can be seen in the inspection hole.

POSITION OF THE CENTER CONTACT ON THE CENTER CONDUCTOR

Figure 43

- (9) Crimp the center contact.
- (10) Move the strands of the shield apart.
- (11) Align the strands of the shield with the longitudinal axis of the cable. Refer to Figure 44.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

ALIGNMENT OF THE STRANDS OF THE SHIELD

Figure 44

- (12) Push the outer ferrule forward until the ferrule makes an approximate 75 percent overlap with the strands of the shield. Refer to Figure 45.

POSITION OF THE OUTER FERRULE ON THE SHIELD

Figure 45

- (13) Move the outer ferrule rearward away from the end of the cable jacket.
- (14) Push the center contact assembly into the contact body until the retainer rib of the center contact is locked in the contact body. Refer to Figure 46.

Make sure that the crimp barrel of the contact body is between the dielectric and all of the strands of the shield.

POSITION OF THE CONTACT BODY

Figure 46

- (15) Lightly pull the cable to make sure that the center contact is locked in the contact body.
- (16) If the center contact is not locked in the contact body, do Step (14) and Step (15) again.
- (17) Push the outer ferrule forward until the forward edge of the ferrule is 0.35 inch maximum from the shoulder of the contact body. Refer to Figure 47.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

POSITION OF THE OUTER FERRULE ON THE CONTACT BODY
Figure 47

(18) Crimp the outer ferrule.

Make sure that the distance from the forward end of the outer ferrule to the shoulder of the contact body is 0.035 inch maximum.

(19) Cut the unwanted strands of the shield at the forward edge of the outer ferrule. Refer to Figure 47.

(20) Push the heat shrinkable sleeve forward until the forward end of the sleeve is 0.15 inch to 0.20 inch from the shoulder of the contact body. Refer to Figure 48.

POSITION OF THE HEAT SHRINKABLE SLEEVE ON THE CONTACT ASSEMBLY
Figure 48

(21) Shrink the sleeve into its position. Refer to Subject 20-10-14.

D. Contact Insertion

This paragraph gives the procedure to install:

- Standard contacts
- Size 2018 special purpose contacts.

For the procedure to install:

- Other special purpose contacts, refer to Paragraph 5.E.
- Coax contacts, refer to Paragraph 5.E.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

**Table 29
CONTACT INSERTION TOOLS**

Contact Size	Insertion Tool
2020HD	282-881

	CIET-20HDL
	DAK145J
	M81969/1-02
	MS3156-22
2018	282-881
	91066-4
	ATC1072
	CIET-20HDL
	DAK145J
	M81969/1-02
	MS3156-22

NOTE: A size 2018 special purpose contact cannot be removed after it is inserted.

- (1) If a backshell is specified, put the backshell on the wire harness.
Make sure that the end of the backshell with the latch retainers is pointed forward to the end of the wire harness.
- (2) Make a selection of the contact insertion tool from Table 29.
- (3) If it is necessary to install an unwired contact in an empty contact cavity, install each unwired contact. Refer to Paragraph 5.F.
- (4) Put the contact assembly in the insertion tool. Refer to Figure 49.

POSITION OF THE CONTACT ASSEMBLY IN THE INSERTION TOOL
Figure 49

- (5) At the rear of the connector, axially align the contact assembly, the insertion tool, and the contact cavity. Refer to Figure 50.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

ALIGNMENT OF THE CONTACT ASSEMBLY, THE INSERTION TOOL, AND THE CONTACT CAVITY
Figure 50

- (6) Push the tool into the contact cavity until it stops.

Make sure that the tool stays aligned with the contact cavity.

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

CAUTION: DO NOT TURN THE TOOL CLOCKWISE OR COUNTERCLOCKWISE WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (7) Carefully pull the tool from the contact cavity.

- (8) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (9) If the contact is not locked in the contact cavity:

- (a) Pull the contact assembly out of the cavity.
- (b) Do Step (4) through Step (8) again.

E. Insertion of Special Purpose and Coax Contacts

For the conditions that are applicable for this procedure, refer to Paragraph 5.D.

Table 30
SPECIAL PURPOSE CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool
16	ST2220-2-4
12	ST2220-2-5

Pin	ST2220-2-5
Socket	ST2220-2-5

**Table 32
CONTACT ALIGNMENT RING INSTALLATION TOOLS**

Contact Type	Installation Tool
Pin	M81969/14-04

- (1) Make a selection of a contact insertion tool from:
 - Table 30 for a special purpose contact
 - Table 31 for a coax contact.
- (2) If it is necessary to install an unwired contact in an empty contact cavity, install each unwired contact. Refer to Paragraph 5.F.
- (3) Put the contact assembly in the insertion tool. Refer to Figure 51.

**POSITION OF THE CONTACT ASSEMBLY IN THE INSERTION TOOL
Figure 51**

- (4) At the rear of the connector, axially align the contact assembly, the insertion tool, and the contact cavity. Refer to Figure 52.

**ALIGNMENT OF THE CONTACT ASSEMBLY, THE INSERTION TOOL, AND THE CONTACT CAVITY
Figure 52**

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

- (5) Push the tool into the contact cavity until it stops.

Make sure that the tool stays aligned with the contact cavity.

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

CAUTION: DO NOT TURN THE TOOL CLOCKWISE OR COUNTERCLOCKWISE WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Carefully pull the tool from the contact cavity.

- (7) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (8) If the contact is not locked in the contact cavity:

- (a) Pull the contact assembly out of the cavity.

- (b) Do Step (3) through Step (7) again.

- (9) For a pin contact:

- (a) Make a selection of a contact alignment ring from Table 13.

- (b) Make a selection of an alignment ring installation tool from Table 32.

- (c) Put the alignment ring on the engaging end of the contact. Refer to Figure 53.

INITIAL POSITION OF THE ALIGNMENT RING

Figure 53

- (d) Put the end of the tool on the engaging end of the contact.

- (e) Push the alignment ring forward to the engaging face of the connector. Refer to Figure 54.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

POSITION OF THE ALIGNMENT RING AGAINST THE FACE OF THE CONNECTOR
Figure 54

- (f) Remove the tool from the engaging end of the contact.

F. Seal of an Empty Contact Cavity

For environmental connectors, an empty contact cavity must be sealed with a seal rod or a seal plug. Refer to Figure 4 and Subject 20-60-08.

G. Backshell Installation

- (1) Align the forward end of the backshell with the rear end of the connector.
- (2) Engage the four latches on the connector with the latch retainers on the backshell. Refer to Figure 55.

If the backshell is an equatorial backshell or a polar backshell, make sure that the backshell is in the correct clock position. Refer to Figure 56 and Figure 57.

POSITION OF THE LATCH RETAINERS AND THE LATCHES
Figure 55

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

CLOCK POSITIONS OF THE EQUATORIAL BACKSHELLS
Figure 56

CLOCK POSITIONS OF THE POLAR BACKSHELLS
Figure 57

(3) Assemble the strain relief.

For the assembly of the strain relief of a wire harness that:

- Does not have a coax cable, refer to Paragraph 5.H.
- Has a coax cable, refer to Paragraph 5.I.

H. Strain Relief Assembly

This paragraph gives the procedure to assemble the strain relief for a wire harness that does not have a coax cable.

For the procedure to assemble the strain relief for a wire harness that has a coax cable, refer to Paragraph 5.I.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

CONFIGURATION OF THE WIRE HARNESS TIES OF THE STRAIN RELIEF
Figure 58

Refer to Figure 58.

- (1) Make a selection of a silicone tape. Refer to Subject 20-10-11.
- (2) Put a minimum of two layers of the tape around the wire harness at the location that is adjacent to the cable tie retainer of the backshell.
- (3) Assemble the wire harness ties around:
 - The wires and cables of the wire harness
 - The wire harness and the cable tie retainer.

Refer to Subject 20-10-11.

NOTE: A plastic tie strap is an acceptable alternative to a wire harness tie. Refer to Subject 20-10-11.

I. Strain Relief Assembly for a Wire Harness with a Coax Cable

CONFIGURATION OF THE WIRE HARNESS TIES OF THE STRAIN RELIEF
Figure 59

Refer to Figure 59.

- (1) Make a selection of a silicone tape. Refer to Subject 20-10-11.

STANDARD WIRING PRACTICES MANUAL**TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS**

- (2) At the location that is adjacent to the cable tie retainer of the backshell, put a minimum of two layers of the tape around:
- The wires of the harness
 - The cables of the wire harness that are not coax cables.
- (3) If the connector has a straight backshell, assemble a wire harness tie around:
- The wires and cables of the wire harness
 - The cable tie retainer.

Refer to Subject 20-10-11.

NOTE: A plastic tie strap is an acceptable alternative to a wire harness tie. Refer to Subject 20-10-11.

- (4) If the connector has a polar or an equatorial backshell and the distance from the rear end of the coax contact to the cable tie retainer is equal to or more than 2.0 inches, assemble a wire harness tie around:
- The wires and cables of the wire harness
 - The cable tie retainer.

Refer to Subject 20-10-11.

Make sure that the radius of the curve of the coax cable is not less than the minimum bend radius for coax cable. Refer to Subject 20-10-11.

CAUTION: IF THE COAX CABLE IS ATTACHED TO THE CABLE TIE RETAINER WHEN THE DISTANCE FROM THE COAX CONTACT TO THE CABLE TIE RETAINER IS LESS THAN 2.0 INCHES, DAMAGE TO THE COAX CONTACT OR THE COAX CABLE CAN OCCUR.

NOTE: A plastic tie strap is an acceptable alternative to a wire harness tie. Refer to Subject 20-10-11.

- (5) If the connector has a polar or an equatorial backshell and the distance from the rear end of the coax contact to the cable tie retainer is less than 2.0 inches:
- (a) Assemble a wire harness tie around:
- The wires of the harness
 - The cables of the wire harness that are not coax cables
 - The cable tie retainer.

Refer to Subject 20-10-11.

NOTE: A plastic tie strap is an acceptable alternative to a wire harness tie. Refer to Subject 20-10-11.

- (b) At a location that is equal to or more than 2.0 inches from the rear end of the coax contact, assemble a wire harness tie around:
- The coax cable
 - The wire harness.

Refer to Subject 20-10-11.

Make sure that the radius of the curve of the coax cable is not less than the minimum bend radius for coax cable. Refer to Subject 20-10-11.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

CAUTION: IF THE COAX CABLE IS ATTACHED TO THE WIRE HARNESS AT A LOCATION THAT IS LESS THAN 2.0 INCHES, DAMAGE TO THE COAX CONTACT OR THE COAX CABLE CAN OCCUR.

NOTE: A plastic tie strap is an acceptable alternative to a wire harness tie. Refer to Subject 20-10-11.

6. CONNECTOR INSTALLATION

A. Installation of a Receptacle in a Panel

**Table 33
NECESSARY TOOLS**

Tool	Size (inch)
Hex Nut Driver	3/16
Wrench	3/16

- (1) Make a selection of a tool from Table 33.
- (2) Remove these components from the flanges of the receptacle:
 - The two latch posts
 - The lockwashers
 - The 4-40 self-locking nuts.
- (3) From the front of the panel, align the receptacle with the hole in the panel. Refer to Figure 60. Make sure that the top of the receptacle is in the correct position in relation to the top of the hole.

**POSITION OF THE RECEPTACLE IN THE PANEL
Figure 60**

- (4) Push the front of the receptacle through the hole until the front surface of the receptacle is against the rear surface of the panel.
- (5) Align the holes on the flange of the receptacle with the holes in the panel.
- (6) From the front of the panel, push a latch post through the each hole until the shoulder of the latch post is against the front of the flange. Refer to Figure 61.

STANDARD WIRING PRACTICES MANUAL

TRI-STAR CQ() AND CORY CQ() RECTANGULAR CONNECTORS

CONFIGURATION OF THE LATCH POST ASSEMBLIES
Figure 61

- (7) From the rear of the panel, put a lockwasher on each latch post.
 - (8) Put a self-locking nut on each latch post.
 - (9) Tighten the nuts.
- Make sure that the receptacle does not move in the panel.

B. Connection of a Plug and a Receptacle

- (1) Align the front face of the plug with the front face of the receptacle.
- (2) Push the plug into the receptacle until it makes a click.
- (3) Lightly pull the plug to make sure that the plug is locked in the receptacle.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Connector

The connector must be replaced when one or more of these conditions occur:

- The depth of the damage extends farther than the bottom of the outer seal web; refer to Figure 1
- The damage extends from one contact cavity to a different contact cavity; refer to Figure 2.

Depth of the Damage That is not Farther Than the Bottom of the Seal Web

REAR FACE OF THE CONNECTOR - DEPTH OF DAMAGE

Figure 1

REAR FACE OF THE CONNECTOR - LENGTH OF DAMAGE

Figure 2

B. Damage Conditions - Front Face of the Connector

The connector must be replaced when one or more of these conditions occur:

- The damage extends from one contact cavity to a different contact cavity
- The damage extends from one contact cavity to the outer edge of the insert.

Refer to Figure 3.

STANDARD WIRING PRACTICES MANUAL

Figure 5

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

B. Connector Description

The connectors have these technical features:

- A plastic, rectangular shell
- A rectangular insert configuration
- An environmental seal
- A cable tie retainer
- Rear release, rear removable contacts
- A plug with socket contacts
- A receptacle with pin contacts
- An integral track channel for installation on a track
- A separate installation track
- A polarization key position
- A latch for quick disconnection of the plug and receptacle
- The BACC65AJ() plug can be connected to the S280W557-2() receptacle
- The S280W557-1() plug can be connected to the BACC65AK() receptacle.

INSERT CONFIGURATION 7
Figure 15

4. CONNECTOR DISASSEMBLY**A. Connector Separation**

CONNECTOR SEPARATION
Figure 16

Refer to Figure 16.

- (1) Push the latches on each side of one of the connectors.
- (2) Pull one connector away from the mating connector.

B. Removal of a Connector from a Track

- (1) Push the connector release mechanism down. Refer to Figure 17.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

LOCATION OF THE RELEASE MECHANISM ON THE TRACK
Figure 17

- (2) Hold the mechanism down.
- (3) Move the connector forward until the edge of the front face of the connector makes an overlap with the edge of the release mechanism.
- (4) Release the mechanism.
- (5) Push the connector forward until it comes off the track.

C. Contact Removal

Table 9
CONTACT REMOVAL TOOLS

Contact Size	Removal Tool
2020HD	282-891
	91066-4
	CIET-20HDL
	DAK125

	MS3156-20

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

Table 9 (continued)

Contact Size	Removal Tool
1616	282-892
	91066-3
	CET-16-15
	DRK83-16
	M81969/1-03
	MS3156-16

- (1) Make a selection of a contact removal tool from Table 9.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) If it is necessary, carefully cut the plastic tie strap or the wire harness tie that holds the wire harness to the cable tie retainer.
- (3) Put the wire into the slot of the tool.
- (4) At the rear of the connector, axially align the removal tool and the contact cavity.
- (5) Carefully push the tool into the contact cavity until it stops.
- (6) If the O.D. of the wire is too large for the removal tool to go into the contact cavity, replace the contact. Refer to Subject 20-63-00.
- (7) Carefully pull the wire and the tool out of the contact cavity at the same time.

CAUTION: DO NOT PULL THE WIRE AND THE REMOVAL TOOL WITH TOO MUCH FORCE. DAMAGE TO THE CONTACT RETENTION CLIPS IN THE CONTACT CAVITY CAN OCCUR.

- (8) If the removal tool does not release the contact from the contact cavity, do these steps a maximum of 3 times:
 - (a) Carefully pull the tool out of the contact cavity.
 - (b) Turn the tool approximately 90 degrees.

CAUTION: DO NOT TURN THE REMOVAL TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE RETENTION CLIPS IN THE CONTACT CAVITY CAN OCCUR.

- (c) Do Step (3) through Step (7) again.
- (9) If the contact cannot be removed, replace the contact. Refer to Subject 20-63-00.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

D. Seal Plug and Seal Rod Removal

**Table 10
NECESSARY TOOLS**

Tool	Type
Pliers	Needle Nose

- (1) Make a selection of pliers from Table 10.

CAUTION: MAKE SURE THAT THE PLIERS HAVE SMOOTH SURFACES AND NO SHARP EDGES. PLIERS WITH A ROUGH SURFACE OR A SHARP EDGE CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) If it is necessary, carefully cut the plastic tie strap or the wire harness tie that holds the wire harness to the cable tie retainer.
- (3) Tightly hold the end of the seal plug or the seal rod in the jaws of the pliers.
- (4) Pull the seal plug or the seal rod out of the contact cavity.

E. Removal of a Track from the Structure

**TRACK REMOVAL
Figure 18**

Refer to Figure 18.

- (1) Remove the two installation screws that hold the track on the structure or the stringer clip.

NOTE: The stringer clip has an insert with threads for the installation screw.

- (2) Put the screws and the washers in a safe area because they are necessary when the track is installed again.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

WIRE PREPARATION
Figure 19

- (1) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 19
- Table 11 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedure.

NOTE: If the wire size and a larger crimp barrel size are not given in Table 11, refer to Subject 20-60-00.

- (2) Measure the O.D. of the wire.
- (3) If the O.D. of the wire is less than the minimum seal diameter of the connector grommet hole, increase the O.D. of the wire. Refer to Paragraph 1.C.

Make sure that a Raychem RT-850 heat shrinkable sleeve is used to increase the O.D. of a 24 AWG wire installed in a size 20 contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

(4) If it is specified, fold the conductor back. Refer to Figure 20.

FOLDED BACK CONDUCTOR

Figure 20

NOTE: As an alternative, the conductor size can be increased with filler wires or an eyelet. Refer to Subject 20-60-00.

(5) Make a selection of a crimp tool from Table 12.

(6) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 21.

Make sure that:

- All the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF WIRE IN THE CRIMP BARREL OF THE CONTACT

Figure 21

(7) Crimp the contact.

(8) Examine the contact assembly for these types of damage:

- A crack in the crimp barrel
- Broken strands of the conductor
- Base metal can be seen on the strands of the conductor.

B. Contact Insertion

**Table 13
CONTACT INSERTION TOOLS**

	91066-3
	ATR1106
	DAK55-16
	M81969/1-03
	MS3156-16

- (1) Make a selection of a contact insertion tool from Table 13.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) Put the contact assembly in the end of the insertion tool. Refer to Figure 22.

POSITION OF THE CONTACT ASSEMBLY IN THE INSERTION TOOL
Figure 22

- (3) At the rear of the connector, axially align the contact, the tool, and the correct contact cavity. Refer to Figure 23.

ALIGNMENT OF THE CONTACT, THE INSERTION TOOL, AND THE CONTACT CAVITY
Figure 23

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS**

- (4) Carefully push the tool into the contact cavity until it stops.
- (5) Carefully pull the tool out of the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL ON THE WIRE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the cavity.
 - (b) Do Step (2) through Step (6) again.
- (8) Examine the rear grommet for damage. Refer to Paragraph 1.A.

C. Unwired Contact Installation

Refer to Subject 20-60-08.

If it is necessary to install unwired contacts:

- (1) Make a selection of a contact insertion tool from Table 13.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) Put the contact in the contact cavity.
- (3) Axially align the contact and the tool with the correct contact cavity.
- (4) Carefully push the tool into the contact cavity until it stops.
- (5) Carefully pull the tool out of the contact cavity.

D. Seal of an Empty Contact Cavity

Empty contact cavities in these connectors must be sealed with an unwired pin contact and a seal plug or a seal rod:

- BACC65AK
- S280W557-2().

For all other connectors, empty contact cavities must be sealed with a seal plug or a seal rod.

Refer to Subject 20-60-08.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

E. Assembly of a Wire Harness Strain Relief

**Table 14
NECESSARY MATERIALS**

Plastic Tie Strap	BACS38K1	-	Panduit
		-	Tyton
	-	M23190/3-1	QPL

POSITION OF THE PLASTIC TIE STRAP OR TIE MATERIAL

Figure 24

- (1) If it is not necessary to assemble the wire harness strain relief, cut each cable tie retainer as near the connector as possible.
Make sure that the remaining length of each retainer:
 - Has no sharp edges
 - Is not more than 0.20 inch.
- (2) Make a selection of a tape from Table 14.
- (3) Put a minimum of 2 layers of the tape around the wire bundle at the location adjacent to the cable tie retainer when the retainer is in the correct position.
- (4) Attach the wire bundle to the cable tie retainer with a wire harness tie.

20-72-24

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS**

Refer to:

- Figure 24
- Subject 20-10-11 for the assembly of a wire harness tie.

(5) Examine each cable tie retainer.

Make sure that the retainer:

- Is not broken
- Does not have a crack.

6. CONNECTOR INSTALLATION**A. Installation of a Track****TRACK INSTALLATION****Figure 25**

Refer to Figure 25.

- (1) Align the installation holes in the track and the holes in the structure.
- (2) Install the track to the structure with the necessary installation screws and washers.

Make sure that:

- The forward end of the track is pointed in the same direction as the engaging end of the connector
- The screws are tight.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS****B. Installation of a Connector on a Track****CONNECTOR INSTALLATION ON A TRACK****Figure 26**

Refer to Figure 26.

- (1) Put the track channel at the rear end of the connector on the forward end of the track.
- (2) Push the connector to the rear end of the track until it makes a click.
- (3) Lightly pull the connector forward to make sure that it is locked in the track.

C. Plug and Receptacle Connection

This paragraph gives the procedure to connect a plug or a receptacle, with a mating plug or a mating receptacle installed on a track.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AJ, BACC65AK, S280W557-1, AND S280W557-2 CONNECTORS

PLUG AND RECEPTACLE CONNECTION
Figure 27

Refer to Figure 27.

- (1) Put the track channel at the engaging end of the connector on the forward end of the track.
- (2) Push the connector to the rear end of the track until the latches on each side of the plug and the receptacle are locked.
- (3) Lightly pull back on the connector to make sure that it locks to the connector on the track.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Connector

The connector must be replaced when one or more of these conditions occur:

- The depth of the damage extends farther than the bottom of the outer seal web; refer to Figure 1
- The damage extends from one contact cavity to a different contact cavity; refer to Figure 2.

Depth of the Damage That is not Farther Than the Bottom of the Seal Web

REAR FACE OF THE CONNECTOR - DEPTH OF DAMAGE

Figure 1

REAR FACE OF THE CONNECTOR - LENGTH OF DAMAGE

Figure 2

B. Damage Conditions - Front Face of the Connector

The connector must be replaced when one or more of these conditions occur:

- The damage extends from one contact cavity to a different contact cavity
- The damage extends from one contact cavity to the outer edge of the insert.

Refer to Figure 3.

STANDARD WIRING PRACTICES MANUAL

FRONT FACE OF THE CONNECTOR - LENGTH OF DAMAGE
Figure 3

C. Minimum Wire O.D. for an Environmentally Sealed Connector

Refer to:

- Subject 20-60-08 for the identification of an environmentally sealed connector
- Table 1 for the minimum wire O.D. that is necessary for a satisfactory seal of a contact cavity hole
- Subject 20-60-08 for the procedure to increase the diameter of the wire.

Table 1
MINIMUM WIRE O.D. FOR A SATISFACTORY SEAL

Connector	Description	Contact Cavity Size	Minimum Wire O.D. (inch)
BACC65AL	Rear release, rear removal contacts	20	0.033
		16	0.068
002368-0802	Rear release, rear removal contacts	20	0.033
		16	0.068
S280W557-801	Rear release, rear removal contacts	20	0.033

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

B. Connector Description

The connectors have these technical features:

- A plastic, rectangular shell
- A rectangular insert configuration
- An environmental seal
- Rear release, rear removable contacts
- A plug with socket contacts
- A receptacle with pin contacts
- An integral installation base on the receptacle
- A latch for quick disconnection of the plug and receptacle.

3. INSERT CONFIGURATIONS AND POLARIZATION

A. 002368-0802, BACC65AL, and S280W557-8 Connectors

NOTE: The contact cavity size that is specified in Table 7 is equivalent to the size of the engaging end of the contact.

**Table 7
CONNECTOR INSERT CONFIGURATIONS**

Insert Configuration	Contact Cavity		Reference
	Count	Size	
8	3	20	Figure 9
	3	16	

NOTE: Figure 9 shows the rear side of an insert that has pin contacts. The view of the rear side of an insert that has socket contacts is a mirror image of this view.

**INSERT CONFIGURATION 8
Figure 9**

4. CONNECTOR DISASSEMBLY

A. Connector Separation

(1) Put the hand in the correct position on the plug. Refer to Figure 10.

**POSITION OF THE HAND ON THE PLUG
Figure 10**

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

- (2) Push and hold down the latch release.
Make sure that the latch moves below the latch retainer of the receptacle.
- (3) Pull the plug away from the receptacle. Refer to Figure 11.

CONNECTOR SEPARATION
Figure 11

B. Contact Removal

Table 8
CONTACT REMOVAL TOOLS

Contact Size	Removal Tool
2020HD	282-891
	91066-4
	CIET-20HDL
	DAK125
	M81969/1-02
	MS3156-20
1616	282-892
	91066-3
	CET-16-15
	DRK83-16
	M81969/1-03
	MS3156-16

- (1) Make a selection of a contact removal tool from Table 8.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) If it is necessary, carefully cut the plastic tie strap or the wire harness tie near the end of the wire harness.
- (3) Put the wire into the slot of the tool.
- (4) At the rear of the connector, axially align the removal tool and the contact cavity.
- (5) Carefully push the tool into the contact cavity until it stops.
- (6) If the O.D. of the wire is too large for the removal tool to go into the contact cavity, replace the contact. Refer to Subject 20-63-00.
- (7) Carefully pull the wire and the tool out of the contact cavity at the same time.

CAUTION: DO NOT PULL THE WIRE AND THE REMOVAL TOOL WITH TOO MUCH FORCE. DAMAGE TO THE CONTACT RETENTION CLIPS IN THE CONTACT CAVITY CAN OCCUR.

- (8) If the removal tool does not release the contact from the contact cavity, do these steps a maximum of 3 times:
 - (a) Carefully pull the tool out of the contact cavity.
 - (b) Turn the tool approximately 90 degrees.

CAUTION: DO NOT TURN THE REMOVAL TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE RETENTION CLIPS IN THE CONTACT CAVITY CAN OCCUR.

- (c) Do Step (3) through Step (7) again.
- (9) If the contact cannot be removed, replace the contact. Refer to Subject 20-63-00.

C. Seal Plug and Seal Rod Removal

**Table 9
NECESSARY TOOLS**

Tool	Type
Pliers	Needle Nose

- (1) Make a selection of pliers from Table 9.

CAUTION: MAKE SURE THAT THE PLIERS HAVE SMOOTH SURFACES AND NO SHARP EDGES. PLIERS WITH A ROUGH SURFACE OR A SHARP EDGE CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) If it is necessary, carefully cut the plastic tie strap or the wire harness tie near the end of the wire harness.
- (3) Tightly hold the end of the seal plug or the seal rod in the jaws of the pliers.
- (4) Pull the seal plug or the seal rod out of the contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

D. Removal of the Receptacle from the Structure

RECEPTACLE REMOVAL
Figure 12

Refer to Figure 12.

- (1) Remove the installation screws that hold the installation base on the structure.
- (2) Put the screws and the washers in a safe area because they are necessary when the receptacle is installed again.

5. CONNECTOR ASSEMBLY

A. Contact Assembly

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

WIRE PREPARATION
Figure 13

- (1) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 13
- Table 10 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedure.

NOTE: If the wire size and a larger crimp barrel size are not given in Table 10, refer to Subject 20-60-00.

- (2) Measure the O.D. of the wire.
- (3) If the O.D. of the wire is less than the minimum seal diameter of the connector grommet hole, increase the O.D. of the wire. Refer to Paragraph 1.C.

Make sure that a Raychem RT-850 heat shrinkable sleeve is used to increase the O.D. of a 24 AWG wire installed in a size 20 contact cavity.

- (4) If it is specified, fold the conductor back. Refer to Figure 14.

FOLDED BACK CONDUCTOR
Figure 14

NOTE: As an alternative, the conductor size can be increased with filler wires or an eyelet. Refer to Subject 20-60-00.

- (5) Make a selection of a crimp tool from Table 11.
- (6) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 15.

Make sure that:

- All the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF WIRE IN THE CRIMP BARREL OF THE CONTACT
Figure 15

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

- (7) Crimp the contact.
- (8) Examine the contact assembly for these types of damage:
 - A crack in the crimp barrel
 - Broken strands of the conductor
 - Base metal can be seen on the strands of the conductor.

B. Contact Insertion

**Table 12
CONTACT INSERTION TOOLS**

Contact Size	Insertion Tool
2020HD	282-881
	91066-4
	ATC1072
	CIET-20HDL

	91066-3
	ATR1106
	DAK55-16
	M81969/1-03
	MS3156-16

- (1) Make a selection of a contact insertion tool from Table 12.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) Put the contact assembly in the end of the insertion tool. Refer to Figure 16.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

POSITION OF THE CONTACT ASSEMBLY IN THE INSERTION TOOL
Figure 16

- (3) At the rear of the connector, axially align the contact, the tool, and the correct contact cavity. Refer to Figure 17.

ALIGNMENT OF THE CONTACT, THE INSERTION TOOL, AND THE CONTACT CAVITY
Figure 17

- (4) Carefully push the tool into the contact cavity until it stops.
- (5) Carefully pull the tool out of the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL ON THE WIRE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the cavity.
 - (b) Do Step (2) through Step (6) again.
- (8) Examine the rear grommet for damage. Refer to Paragraph 1.A.

C. Unwired Contact Installation

Refer to Subject 20-60-08.

If it is necessary to install unwired contacts:

- (1) Make a selection of a contact insertion tool from Table 12.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) Put the contact in the contact cavity.
- (3) Axially align the contact, the tool, and the correct contact cavity.
- (4) Carefully push the tool into the contact cavity until it stops.
- (5) Carefully pull the tool out of the contact cavity.

D. Seal of an Empty Contact Cavity

Empty contact cavities in these connectors must be sealed with an unwired pin contact and a seal plug or a seal rod:

- 002368-0802
- S280W557-802.

For all other connectors, empty contact cavities must be sealed with a seal plug or a seal rod.

Refer to Subject 20-60-08.

6. CONNECTOR INSTALLATION

A. Installation of a Receptacle

RECEPTACLE INSTALLATION
Figure 18

Refer to Figure 18.

- (1) Align the installation holes and the holes in the structure.
- (2) Install the receptacle to the structure with the necessary installation screws and washers.
Make sure that the screws are tight.

B. Plug and Receptacle Connection

- (1) Align the plug with the receptacle. Refer to Figure 19.
Make sure that the latch is aligned with the latch retainer.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF 002368-0802, BACC65AL, AND S280W557-8 CONNECTORS****ALIGNMENT OF THE PLUG AND THE RECEPTACLE****Figure 19**

- (2) Push the plug into the receptacle until:
- The plug stops
 - The latch engages the latch retainer.

Refer to Figure 20.

**PLUG AND RECEPTACLE CONNECTION****Figure 20**

- (3) Lightly pull back on the plug to make sure that it locks to the receptacle.
- (4) If the plug is not locked in the receptacle:
- (a) Remove the plug from the receptacle.
 - (b) Do Step (1) through Step (3) again.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Connector

The connector must be replaced when one or more of these conditions occur:

- The depth of the damage extends farther than the bottom of the outer seal web; refer to Figure 1
- The damage extends from one contact cavity to a different contact cavity; refer to Figure 2.

Depth of the Damage That is not Farther Than the Bottom of the Seal Web

Refer to Figure 12.

- (1) Push the receptacle retention clip down.
- (2) Hold the clip down.
- (3) Move the receptacle forward.

Make sure that:

- The edge of the engaging end of the receptacle makes an overlap with the edge of the clip.
- The clip is held down.

- (4) Release the clip.
- (5) Push the receptacle forward until it comes off the track.

C. Contact Removal

**Table 7
CONTACT REMOVAL TOOLS**

Contact Size	Removal Tool
2020HD	282-891
	91066-4
	CIET-20HDL
	DAK125
	M81969/1-02
	MS3156-20
1616	282-892
	91066-3
	CET-16-15
	DRK83-16
	M81969/1-03
	MS3156-16

- (1) Make a selection of a contact removal tool from Table 7.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) If it is necessary, carefully cut the plastic tie strap or the wire harness tie that holds the wire harness to the cable tie retainer.
- (3) Put the wire into the slot of the tool.
- (4) At the rear of the connector, axially align the removal tool and the contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

- (5) Carefully push the tool into the contact cavity until it stops.
- (6) If the O.D. of the wire is too large for the removal tool to go into the contact cavity, replace the contact. Refer to Subject 20-63-00.
- (7) Carefully pull the wire and the tool out of the contact cavity at the same time.

CAUTION: DO NOT PULL THE WIRE AND THE REMOVAL TOOL WITH TOO MUCH FORCE. DAMAGE TO THE CONTACT RETENTION CLIPS IN THE CONTACT CAVITY CAN OCCUR.

- (8) If the removal tool does not release the contact from the contact cavity, do these steps a maximum of 3 times:
 - (a) Carefully pull the tool out of the contact cavity.
 - (b) Turn the tool approximately 90 degrees.

CAUTION: DO NOT TURN THE REMOVAL TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE RETENTION CLIPS IN THE CONTACT CAVITY CAN OCCUR.

- (c) Do Step (3) through Step (7) again.
- (9) If the contact cannot be removed, replace the contact. Refer to Subject 20-63-00.

D. Seal Plug and Seal Rod Removal

**Table 8
NECESSARY TOOLS**

Tool	Type
Pliers	Needle Nose

- (1) Make a selection of pliers from Table 8.

CAUTION: MAKE SURE THAT THE PLIERS HAVE SMOOTH SURFACES AND NO SHARP EDGES. PLIERS WITH A ROUGH SURFACE OR A SHARP EDGE CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) If it is necessary, carefully cut the plastic tie strap or the wire harness tie that holds the wire harness to the cable tie retainer.
- (3) Tightly hold the end of the seal plug or the seal rod in the jaws of the pliers.
- (4) Pull the seal plug or the seal rod out of the contact cavity.

E. Removal of a Track from the Structure

- (1) Remove the two installation screws that hold the track on the structure or the stringer clip.

NOTE: The stringer clip has an insert with threads for the installation screw.

- (2) Put the screws and the washers in a safe area because they are necessary when the track is installed again.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

WIRE PREPARATION
Figure 13

- (1) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 13
- Table 9 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedure.

NOTE: If the wire size and a larger crimp barrel size are not given in Table 9, refer to Subject 20-60-00.

- (2) If the O.D. of the wire is less than the minimum seal diameter of the grommet holes, increase the O.D. of the wire. Refer to Subject 20-60-08.
- (3) If it is specified, fold the conductor back. Refer to Figure 14.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

FOLDED BACK CONDUCTOR

Figure 14

NOTE: As an alternative, the conductor size can be increased with filler wires or an eyelet. Refer to Subject 20-60-00.

- (4) Make a selection of a crimp tool from Table 10.
- (5) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 15.

Make sure that:

- All the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF WIRE IN THE CRIMP BARREL OF THE CONTACT

Figure 15

- (6) Crimp the contact.
- (7) Examine the contact assembly for these types of damage:
 - A crack in the crimp barrel
 - Broken strands of the conductor
 - Base metal can be seen on the strands of the conductor.

B. Contact Insertion

**Table 11
CONTACT INSERTION TOOLS**

Contact Size	Insertion Tool
2020HD	282-881
	91066-4
	ATC1072

	91066-3
	ATR1106
	DAK55-16
	M81969/1-03
	MS3156-16

- (1) Make a selection of a contact insertion tool from Table 11.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK. DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS CAN OCCUR.

WARNING: A TOOL WITH A TIP THAT IS BENT, BROKEN, OR HAS A CRACK CAN CAUSE INJURY TO PERSONNEL.

- (2) Put the contact assembly in the end of the insertion tool. Refer to Figure 16.

POSITION OF THE CONTACT ASSEMBLY IN THE INSERTION TOOL
Figure 16

- (3) At the rear of the connector, axially align the contact, the tool, and the correct contact cavity. Refer to Figure 17.

ALIGNMENT OF THE CONTACT, THE INSERTION TOOL, AND THE CONTACT CAVITY
Figure 17

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

- (4) Carefully push the tool into the contact cavity until it stops.
- (5) Carefully pull the tool out of the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL ON THE WIRE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the cavity.
 - (b) Do Step (2) through Step (6) again.
- (8) Examine the rear grommet for damage. Refer to Paragraph 1.A.

C. Seal of an Empty Contact Cavity

Empty contact cavities must be sealed. Refer to Subject 20-60-08.

D. Assembly of a Wire Harness Strain Relief

**Table 12
NECESSARY MATERIALS**

Material	Boeing Standard	Part Number	Supplier
Tape	DMS 2186, Type 1	-	Moxness Products

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

POSITION OF THE PLASTIC TIE STRAP OR TIE MATERIAL
Figure 18

- (1) If it is not necessary to assemble the wire harness strain relief, cut each cable tie retainer as near the connector as possible.

Make sure that the remaining length of each retainer:

- Has no sharp edges
- Is not more than 0.20 inch.

- (2) Make a selection of a tape from Table 12.
- (3) Put a minimum of 2 layers of the tape around the wire bundle at the location adjacent to the cable tie retainer when the retainer is in the correct position.
- (4) Attach the wire bundle to the cable tie retainer with a wire harness tie.

Refer to:

- Figure 18
- Subject 20-10-11 for the assembly of a wire harness tie.

- (5) Examine each cable tie retainer.

Make sure that the retainer:

- Is not broken
- Does not have a crack.

6. CONNECTOR INSTALLATION

A. Installation of a Track

- (1) Align the installation holes in the track and the holes in the structure.
- (2) Install the track to the structure with the necessary installation screws and washers.

Make sure that:

- The forward end of the track is pointed in the same direction as the front face of the receptacle
- The screws are tight.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

B. Installation of a Receptacle on a Track

RECEPTACLE INSTALLATION ON A TRACK

Figure 19

Refer to Figure 19.

- (1) Put the track channel at the rear end of the receptacle on the forward end of the track.
- (2) Push the receptacle to the rear end of the track until it makes a click.
- (3) Lightly pull the receptacle forward to make sure that it is locked in the track.

C. Plug and Receptacle Connection

This paragraph gives the procedure to connect a plug and receptacle installed on a track.

PLUG AND RECEPTACLE CONNECTION

Figure 20

Refer to Figure 20.

- (1) Put the track channel at the engaging end of the plug on the forward end of the track.
- (2) Push the plug to the rear end of the track until the latch and the hook on each side of the plug and the receptacle are locked.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF VIKING ELECTRONICS ATM() CONNECTORS

(3) Lightly pull back on the plug to make sure that it locks to the receptacle.

20-73-00 CONTENTS

STANDARD WIRING PRACTICES MANUAL

REPAIR OF FLAT CABLE CONNECTOR ASSEMBLIES

1. GENERAL DATA

A. Flat Cable Connector Assemblies

Flat cable connectors are used to assemble wire harnesses with either of these types of cable:

- Flat conductor cable
- Round conductor wires that are put in a flat configuration with each wire parallel to the other.

B. Conditions for Flat Conductor Cable Assembly and Repair

This Subject does not give the procedures to assemble wire harnesses that have either of these configurations:

- A BACS52H multiple termination splice that connects a flat conductor cable to a round conductor cable
- A flat cable connector that is assembled with a flat conductor.

NOTE: Special tools are necessary to assemble the flat cable connector or the multiple termination splice with the flat conductor cable.

This Subject does give the procedures to repair flat conductor cable assemblies when the conditions for repair are applicable. Refer to Subject 20-10-13.

2. PART NUMBERS AND DESCRIPTION

A. Connector Part Numbers

**Table 1
CONNECTOR PART NUMBERS**

Boeing Standard	Description
BACC65M()	Plug, Flat Cable
BACC65N()	Receptacle, Flat Cable
BACC65P()	Plug, Flat Cable
BACC65R()	Receptacle, Flat Cable

B. BACS52H() Splice Part Numbers

**Table 2
BACS52H() SPLICE PART NUMBERS**

Boeing Standard	Description	Supplier Kit	
		Part Number	Supplier
BACS52H1B-B1-1	Splice, multiple termination, flat conductor to round conductor	CTM-1001	Raychem

STANDARD WIRING PRACTICES MANUAL

REPAIR OF FLAT CABLE CONNECTOR ASSEMBLIES

BACS52H() SERIES SPLICE PART NUMBER STRUCTURE
Figure 1

BACS52H MULTIPLE TERMINATION SPLICE
Figure 2

3. REPAIR OF THE FLAT CABLE ASSEMBLY

A. Connector Disassembly

Refer to Subject 20-73-01.

B. Removal of the Round Conductor Wire from the Connector Wafer

(1) Isolate the wire from the other wires with a heat shield. Refer to Figure 3.

NOTE: Metal foil or MIL-I-695 electrical insulation paper can be used as a heat shield.

STANDARD WIRING PRACTICES MANUAL**REPAIR OF FLAT CABLE CONNECTOR ASSEMBLIES****ISOLATED WIRE AND SOLDER SLEEVE****Figure 3**

- (2) Make a selection of a hot air gun. Refer to Subject 20-10-13.

WARNING: THE OPERATION OF A HOT AIR GUN CAN CAUSE AN EXPLOSION. REFER TO THE SAFETY PRACTICES IN SUBJECT 20-00-10 FOR THE NECESSARY PRECAUTIONS TO AVOID:

- DAMAGE TO THE EQUIPMENT
- INJURY TO THE PERSON.

- (3) Remove the solder sleeve:

- (a) Cut the solder sleeve with a sharp knife.
- (b) Apply hot air on the solder joint until the solder melts. Refer to Subject 20-10-13 for the procedure to use the hot air gun.

Make sure that heat is not applied to the adjacent wires or the adjacent solder sleeves that are installed.

- (c) With a pair of tweezers, pull the wire straight out the wafer contact terminal.

- (4) Remove any unwanted solder sleeve material from the wire.

If it is necessary, apply hot air again:

- To make the plastic of the sleeve soft
- To melt any unwanted solder.

CAUTION: DO NOT APPLY MORE THAN THE NECESSARY AMOUNT OF HEAT TO REMOVE THE UNWANTED SOLDER SLEEVE MATERIAL. MORE THAN THE NECESSARY AMOUNT OF HEAT CAN CAUSE DAMAGE TO THE INSULATION OF THE WIRE OR THE CONNECTOR DIELECTRIC, OR BOTH.

STANDARD WIRING PRACTICES MANUAL

REPAIR OF FLAT CABLE CONNECTOR ASSEMBLIES

C. Installation of a Solder Sleeve

Table 3
SOLDER SLEEVE PART NUMBERS FOR FLAT CONDUCTOR CABLE

Part Number	Description	Supplier
CTA 0036	Solder Sleeve, Standard	Raychem
CTA 0070	Solder Sleeve, Large Wire Entry	Raychem

- (1) If it is necessary to replace the wire:
 - (a) Remove 0.15 inch \pm 0.03 inch of the insulation from the end of the wire.
 - (b) Twist the strands of the conductor in their initial direction.
 - (c) Make the end of the wire straight.
- (2) Make a selection of a solder sleeve from Table 3.
- (3) Put the new sleeve on the wire.
- (4) Put the wire on the wafer contact terminal.
- (5) Push the sleeve over the terminal until the yellow insert touches the wafer.
- (6) Put the sleeve and the wire on the terminal. Refer to Figure 4.

POSITION OF THE SOLDER SLEEVE, THE WIRE, AND THE TERMINAL
Figure 4

- (7) Make a selection of a hot air gun. Refer to Subject 20-10-13.
Make sure that the hot air gun is ready for operation. Refer to Subject 20-10-13.

WARNING: THE OPERATION OF A HOT AIR GUN CAN CAUSE AN EXPLOSION. REFER TO THE SAFETY PRACTICES IN SUBJECT 20-00-10 FOR THE NECESSARY PRECAUTIONS TO AVOID:

- DAMAGE TO THE EQUIPMENT
- INJURY TO THE PERSON.

- (8) Turn the knob in a clockwise direction to adjust the air pressure to 50 psi.

The air from the nozzle should be:

- Hot within 30 seconds
- At a stable temperature within 1 minute.

STANDARD WIRING PRACTICES MANUAL**REPAIR OF FLAT CABLE CONNECTOR ASSEMBLIES**

CAUTION: DO NOT POINT THE HOT AIR STREAM AT:

- THE UNIT HOSE
- THE POWER CORD
- THE OPERATOR.

- (9) Point the hot air gun at the middle of the solder sleeve to shrink the sleeve in position.

Make sure that:

- The conductor is in the correct position on the contact terminal of the wafer
- The sleeve is fully formed and in the correct position
- A solder fillet is formed between the conductor and the contact terminal of the wafer.

Make sure that the necessary amount of heat is applied to the solder sleeve. A sleeve with applied heat that is not sufficient shows:

- The solder has not flowed
- The solder sleeve is not fully formed in position.

Make sure that only the necessary amount of heat is applied to the solder sleeve. A sleeve with too much heat applied shows any of these conditions:

- The insulation of the sleeve is not transparent
- The sleeve has a hole
- The insulation of the sleeve is very dark.

- (10) If the solder sleeve is not installed correctly:

- (a) Remove the solder sleeve. Refer to Paragraph 3.B.
- (b) Do the installation procedure again from Step (2).

D. Connector Assembly

Refer to Subject 20-73-01.

46	4B	8	2	4	5
47	4C	8	3	3	5
48	4D	8	4	2	5

B. Keying Pin Insertion

- (1) Put the keying pins straight into the square holes of the shell. Refer to Figure 6 and Table 4.

CAUTION: DO NOT USE DAMAGED KEYING PINS.

C. Keying Pin Removal

- (1) Hold the keying pin and pull it straight back.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65() FLAT CABLE CONNECTORS

CAUTION: IF THE KEYING PIN HAS DAMAGE AFTER IT IS REMOVED, IT MUST BE DISCARDED.

3. CONNECTOR DISASSEMBLY

A. Wired Wafer Removal

**Table 5
WAFER REMOVAL TOOLS**

Removal Tool	Type	Supplier
CE-1201900	Metal	Raychem
CE-1202400	Metal, Right Angle	Raychem
D-659-0001	Plastic	Raychem

NOTE: The Raychem tools in Table 5 are used for both wafer insertion and wafer removal.

**WAFER REMOVAL
Figure 7**

- (1) Remove the cable clamp.
Make sure that the shell is not connected.
- (2) Make a selection of a removal tool from Table 5.
- (3) Put the tool into the rear of the connector shell on either the A side or B side. Refer to Figure 7.
- (4) Push the tool in until it passes the retention clip and hits the bottom inside the connector shell.
- (5) Pull firmly on the cable or wires of the wafer next to the tool.
- (6) After one wafer has been removed, the other wafer can be removed by hand.

B. Unwired Wafer Removal

- (1) Make a selection of a removal tool from Table 5.
- (2) Push the removal tool into the rear of the connector shell on either the A side or the B side.
- (3) Push the wafer out of the shell with a wafer that has the opposite type of contacts. Refer to Figure 7.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65() FLAT CABLE CONNECTORS

4. CONNECTOR ASSEMBLY

A. Mating Hardware Installation

Mating hardware can be installed on the receptacle shells either before or after the wafers are inserted.

- (1) On each side of the shell, install:
 - One or more panel washers
 - One adapter nut
 - One adapter screw.

Make sure to use only the hardware supplied with the connector.

Refer to Figure 2 and Figure 3.

- (2) Hold the adapter nut and tighten the adapter screw.

B. Wafer Insertion

**Table 6
WAFER INSERTION TOOLS**

Insertion Tool	Type	Supplier
CE-1201900	Metal	Raychem
CE-1202400	Metal, Right Angle	Raychem
D-659-0001	Plastic	Raychem

NOTE: The Raychem tools in Table 6 are used for both wafer insertion and wafer removal.

**WAFER INSERTION
Figure 8**

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65() FLAT CABLE CONNECTORS

For correct assembly:

- A wafers are inserted into the A side of the shell
- B wafers are inserted into the B side of the shell
- Wafers are inserted into shells that are not connected
- A wafers and B wafers are inserted as a pair.

Make sure to use only the allowable combinations of A wafers and B wafers. Refer to Table 7.

**Table 7
WAFER COMBINATIONS**

Position A	Position B
Pin	Pin
Pin	Socket
Pin	Blank
Socket	Socket
Socket	Pin
Socket	Blank
Blank	Pin
Blank	Socket

- (1) Put the two wafers together so that the retention ribs face outward. Refer to Figure 8.
- (2) Turn the A wafer toward the A side of the shell and B wafer toward B side of shell.
- (3) If any of the wafers are unwired or if the wires are not rigid enough to push the wafer into position:
 - (a) Make a selection of an insertion tool from Table 6.
 - (b) Put the tool against the edge of the wafer.
- (4) Push the wafers into the connector shell until the retention clips make a click.
Make sure that the wafers are locked in position.

C. Cable Clamp Installation

Refer to Figure 2 and Figure 3.

- (1) If a cable clamp is required:
 - (a) Put the clamp on the cable.
 - (b) Dress any round wires evenly across the clamp.
 - (c) Tighten the clamp.
 - (d) If a cable shield is required, terminate the shield under the cable clamp.
Make sure to use only the components that are supplied with the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65() FLAT CABLE CONNECTORS

D. Installation of a Connector Receptacle in a Panel

Table 8
NECESSARY PANEL WASHERS

Panel Thickness (inch)		Number of Washers
Minimum	Maximum	
0.073	0.103	0
0.042	0.072	1
0.011	0.041	2
0	0.010	3

- (1) Measure the panel thickness.
- (2) Make a selection of the number of washers that are required from Table 8.
- (3) Put the receptacle and the washers, if any, on the panel.
- (4) Hold the adapter nut and tighten the screw.

Make sure that the adapter nut is within 0 inch +0.020 inch, -0.010 inch with the front surface of the connector shell.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Insert

The insert must be replaced when one or more of these conditions occur:

- The depth of the damage extends farther than the bottom of the outer seal web; refer to Figure 1
- The damage extends from one contact cavity to a different contact cavity; refer to Figure 2.

Depth of the Damage That is not Farther Than the Bottom of the Seal Web

REAR FACE OF THE INSERT - DEPTH OF DAMAGE

Figure 1

REAR FACE OF THE INSERT - LENGTH OF DAMAGE

Figure 2

B. Damage Conditions - Front Face of the Insert

Refer to Figure 3.

The insert for pin contacts must be replaced when one or more of these conditions occur:

- The damage extends from one contact cavity to a different contact cavity
- The damage extends from one contact cavity to the outer edge of the insert.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACI10AL, BACI10AM, AND BACI10AP RECTANGULAR CONNECTOR INSERTS

FRONT FACE OF THE INSERT - LENGTH OF DAMAGE

4. CONNECTOR INSERT DISASSEMBLY

A. Seal Plug and Seal Rod Removal

**Table 24
NECESSARY TOOLS**

Tool	Type
Pliers	Needle Nose

(1) Make a selection of a pair of pliers from Table 24.

CAUTION: MAKE SURE THE PLIERS HAVE SMOOTH SURFACES AND NO SHARP EDGES. PLIERS WITH A ROUGH SURFACE OR A SHARP EDGE CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) If it is necessary to get access to the rear of the insert, remove the plastic tie straps or the wire harness ties that are less than 6 inches from the connector.
- (3) Tightly hold the end of the seal plug or the seal rod in the jaws of the pliers.
- (4) Pull the seal plug or the seal rod straight out of the contact cavity.

B. Contact Removal

This paragraph gives the procedure to remove size 2222, 2020, 1616, 1212, size 8 coax, twinax and quadrax, and size 0808 power contacts from the connector insert.

For the procedure to remove these contacts from the insert, refer to:

- Paragraph 4.C. for size 5 coax and size 0508 power contacts
- Paragraph 4.D. for fiber optic contact termini.

For the procedure to remove ground block contacts from the connector ground block, refer to:

- Subject 20-74-12 for BACC65AA and BACC65AB connectors
- Subject 20-74-13 for BACC65AN, BACC65AP, BACC65AV and BACC65AW connectors
- Subject 20-74-14 for BACC65BJ and BACC65BK connectors.

**Table 25
REMOVAL TOOLS FOR SIZE 2222, 2020, 1616, AND 1212 CONTACTS**

Contact Size	Contact Engaging End Size	Contact Cavity Size	Removal Tool	
			Part Number	Color

1212	12	12	M81969/14-04	White
			CET-12-4	-

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

Table 26
REMOVAL TOOLS FOR SIZE 8 COAX, TWINAX, QUADRAX, AND SIZE 0808 POWER CONTACTS

Contact Cavity Size	Removal Tool	
	Part Number	
8	1738894-1	

- (1) Make a selection of a contact removal tool from:
 - Table 25 for size 2222, 2020, 1616 and 1212 contacts
 - Table 26 for size 8 coax, size 8 twinax, size 8 quadrax and size 0808 power contacts.

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE GROMMET OR THE RETENTION CLIP.

- (2) If the contact is a size 8 coax, size 8 twinax, size 8 quadrax or a size 0808 power contact, pull the seal boot out of the contact cavity and back away from the grommet.
- (3) Put the tip of the removal tool on the wire near the rear of the insert.
- (4) Axially align the removal tool and the contact cavity.
Make sure that the removal tool is perpendicular to the face of the insert.
- (5) Carefully push the removal tool into the contact cavity until it stops.
Make sure that:
 - The tool stays aligned with the cavity
 - The tool is not turned in the cavity.

CAUTION: IF THE TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

- (6) Carefully pull the wire and the removal tool out of the contact cavity at the same time.
- (7) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the removal tool approximately 90 degrees.
 - (c) Do Step (3) through Step (6) again.

C. Removal of Size 5 Coax and Size 0508 Power Contacts

This paragraph gives the procedure to remove size 5 coax contacts and size 0508 power contacts from the connector insert.

Table 27
REMOVAL TOOLS FOR SIZE 5 COAX AND SIZE 0508 POWER CONTACTS

Contact Cavity Size	Removal Tool	
	Part Number	Color
5	MS3178-001	White
	CET-C8	-

- (1) Make a selection of a contact removal tool from Table 27.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE GROMMET OR THE RETENTION CLIP.

- (2) If the contact has a blue intermediate seal boot, pull the silicone seal boot and the blue intermediate seal boot out of the contact cavity and back away from the insert. Refer to Figure 52.

REMOVAL OF THE SILICONE SEAL BOOT AND THE BLUE INTERMEDIATE SEAL BOOT
Figure 52

- (3) If the contact has an amber intermediate seal boot:
 - (a) Carefully cut the heat shrinkable sleeve longitudinally to remove it from the cable. Refer to Figure 53.

REMOVAL OF THE HEAT SHRINKABLE SLEEVE AND THE AMBER INTERMEDIATE SEAL BOOT
Figure 53

CAUTION: DO NOT CUT ALL THE WAY THROUGH THE HEAT SHRINKABLE SLEEVE. DAMAGE TO THE INSULATION OF THE WIRE OR CABLE CAN OCCUR.

- (b) Pull or tear the heat shrinkable sleeve until it is not attached.
- (c) Pull the amber intermediate seal boot out of the contact cavity and back away from the insert.
- (4) Put the tip of the removal tool on the wire near the rear of the insert.
- (5) Axially align the removal tool and the contact cavity.
 Make sure that the removal tool is perpendicular to the rear face of the insert.
- (6) Carefully push the removal tool into the contact cavity until it stops.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

Make sure that:

- The removal tool stays perpendicular to the rear face of the insert
- The removal tool is not turned in the cavity.

CAUTION: IF THE REMOVAL TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

- (7) Carefully pull the wire and the removal tool out of the contact cavity at the same time.
- (8) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the removal tool approximately 90 degrees.
 - (c) Do Step (5) through Step (7) again.

D. Removal of Fiber Optic Contact Termini

CAUTION: THE CONTACT TERMINUS MUST HAVE PROTECTION FROM CONTAMINATION WITH A PROTECTION CAP OR A SEALED CLEAN PLASTIC BAG WHEN IT IS NOT INSTALLED IN THE CONNECTOR. CONTAMINATION OF THE CONTACT TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

**Table 28
CONTACT TERMINUS REMOVAL TOOLS**

Terminus Size	Cavity Size	Removal Tool	
		Part Number	Color
16	16	M81969/14-03	White
		DRK83-16	-

- (1) Make a selection of a contact terminus removal tool from Table 28.

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. DAMAGE TO THE GROMMET OR THE RETENTION CLIPS CAN OCCUR.

- (2) Remove the plastic tie straps on the wire harness ties that are less than 6 inches from the connector.
- (3) At the rear of the connector, put the tip of the removal tool on the cable.
- (4) Axially align the removal tool and contact terminus cavity.
- (5) Push the removal tool into the contact terminus cavity until it stops.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

CAUTION: IF THE REMOVAL TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE REMOVAL TOOL IN THE CONTACT TERMINUS CAVITY
Figure 54

- (6) Hold the cable against the tool and, at the same time, carefully pull the tool and the contact terminus out of the cavity.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

CAUTION: IF THE REMOVAL TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

- (7) If the contact terminus is not released:
 - (a) Carefully remove the tool.
 - (b) Turn the tool approximately 90 degrees on the cable assembly.
 - (c) Do Step (3) through Step (6) again.
- (8) If it is necessary, examine the contact terminus. Refer to Subject 20-12-20.
- (9) If the inspection is not necessary, put a clean protection cap on the contact terminus. Refer to Subject 20-12-20 for the protection cap part numbers.

NOTE: A clean plastic bag is a satisfactory alternative for the protection cap.

E. Removal of the Fiber Optic Alignment Sleeve Insert

CAUTION: DO NOT PULL, SHAKE, OR TWIST THE ALIGNMENT SLEEVE INSERT FROM THE CONNECTOR INSERT. DAMAGE TO THE CERAMIC FERRULES OF THE CONTACT TERMINI CAN OCCUR.

Table 29
NECESSARY TOOLS

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

ALIGNMENT SLEEVE INSERT INSTALLATION SCREW

Figure 55

- (1) Make a selection of a driver from Table 29.

NOTE: The driver can have a ball type end.

- (2) Turn the installation screw in a counterclockwise direction until the screw is disengaged from the face of the insert.

CAUTION: DO NOT SHAKE OR TWIST THE ALIGNMENT SLEEVE INSERT TO REMOVE IT FROM THE CONNECTOR INSERT. DAMAGE TO THE CERAMIC FERRULES OF THE CONTACT TERMINI CAN OCCUR.

- (3) Put the alignment sleeve insert in a clean plastic bag.

CAUTION: KEEP THE ALIGNMENT SLEEVE INSERT IN A CLEAN PLASTIC BAG UNTIL IT IS INSTALLED IN THE CONNECTOR INSERT. CONTAMINATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR INSERT.

5. CONNECTOR INSERT ASSEMBLY

A. Contact Assembly

This paragraph gives the procedure to assemble size 2222, 2020, 1616, 1212, and 0808 contacts that are intended for installation in the connector insert.

For the procedure to assemble these insert contacts, refer to:

- Paragraph 5.I. for size 0508 power contacts
- Paragraph 5.C. for size 5 coax contacts
- Paragraph 5.D. for S280W554-111 and S280W554-113 size 8 coax contacts
- Paragraph 5.E. for Tyco 1757624-1 and Tyco 1883369-2 size 8 coax contacts
- Paragraph 5.F. for size 8 twinax contacts
- Paragraph 5.G. for size 8 quadrax contacts

For the procedure to assemble the connector ground block contacts, refer to the Subject for the connector:

- (1) Make a selection of a crimp tool from Table 31.
- (2) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 56
- Table 30 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedures.

NOTE: Refer to Subject 20-60-00:

- If the wire size and a larger crimp barrel size are not given in Table 30
- For the alternative to the assembly of a contact with a conductor that is folded back.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

INSULATION REMOVAL LENGTH

Figure 56

- (3) For size 20 and larger contact cavities:
 - (a) Measure the O.D. of the wire.
 - (b) If the O.D. of the wire is less than the minimum seal diameter of the grommet hole, increase the O.D. of the wire. Refer to Paragraph 1.C.
- (4) If it is specified, fold the conductor back. Refer to Figure 57.

FOLDED BACK CONDUCTOR

Figure 57

- (5) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 58.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL OF THE CONTACT

Figure 58

- (6) Crimp the contact.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

- (1) Cut the end of the wire perpendicular to the longitudinal axis of the wire.
- (2) If the contact is supplied with a blue intermediate seal boot:
Refer to Figure 59.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

WIRE PREPARATION - BLUE INTERMEDIATE SEAL BOOT
Figure 59

- (a) Put the flexible silicone seal boot on the cable.
 Make sure that the larger end of the silicone seal boot points forward toward the end of the wire. Refer to Figure 59
- (b) Put the blue intermediate seal boot on the wire.
 Make sure that the longer end of the intermediate seal boot points forward toward the end of the wire. Refer to Figure 59
- (3) If the contact is supplied with an amber intermediate seal boot:
 Refer to Figure 60.

WIRE PREPARATION - AMBER INTERMEDIATE SEAL BOOT
Figure 60

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

- (a) Keep these parts from the contact kit:
 - The contact
 - The intermediate seal boot.
- (b) Discard the flexible silicone seal boot.
- (c) Make a selection of a 3/8 inch diameter Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11.
- (d) Put a 0.65 inch \pm 0.10 inch length of the 3/8 inch diameter sleeve on the wire.
- (e) Put the amber intermediate seal boot on the wire.

Make sure that the longer end of the amber seal boot points forward toward the end of the wire. Refer to Figure 60

- (4) If the wire size is AWG 12 or 14, make a selection of a 1/4 inch diameter Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11
- (5) If the wire size is AWG 12 or 14 put a 1.25 inch \pm 0.05 inch length of the 1/4 inch diameter sleeve on the wire. Refer to Table 32.
- (6) If the wire size is AWG 16, make a selection of a 3/16 inch diameter Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11.
- (7) If the wire size is AWG 16, put a 1.25 inch \pm 0.05 inch length of the 3/16 inch diameter sleeve on the wire. Refer to Table 32.
- (8) Remove 0.38 inch \pm 0.02 inch of the insulation from the end of the wire.

Refer to:

- Figure 59 if the contact is supplied with a blue intermediate seal boot
- Figure 60 if the contact is supplied with an amber intermediate seal boot
- Subject 20-00-15 for the insulation removal procedure..

- (9) Make a selection of a crimp tool from Table 32.
- (10) Put the wire and the necessary filler wire in the contact crimp barrel of the contact. Refer to Figure 61.

Make sure that:

- You can see the conductor strands in the inspection hole
- The maximum distance from the end of the wire insulation to the end of the contact is 0.03 inch.

NOTE: The filler wire must be the same wire type as the primary wire.

THE PRIMARY WIRE AND THE FILLER WIRE IN THE CRIMP BARREL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

(11) Crimp the contact.

NOTE: Deformation of the inspection hole is permitted if you can see the conductor strands in the hole.

(12) If the contact has a filler wire, carefully remove the unwanted length of the filler wire as close as possible to the end of the crimp barrel. Refer to Figure 62.

CAUTION: DO NOT CUT OR CAUSE DAMAGE TO THE STRANDS OF THE PRIMARY WIRE. DAMAGE TO THE CONDUCTOR CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

UNWANTED LENGTH OF THE FILLER WIRE REMOVED
Figure 62

(13) If the primary wire size is AWG 12, 14, or 16, push the 1/4 or 3/16 inch diameter sleeve forward, as close as possible to the crimp barrel of the contact.

(14) Shrink the sleeve into its position.

Refer to:

- Figure 63.
- Subject 20-10-14.

(15) If the contact has a silicone seal boot and a blue intermediate seal boot, Let the silicone seal boot and the blue intermediate seal boot stay on the wire, away from the contact, until the contact is installed in a connector insert. Refer to Figure 63.

POSITION OF THE BLUE INTERMEDIATE SEAL BOOT
Figure 63

(16) If the contact has an amber intermediate seal boot:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

- (a) Push the amber seal boot forward onto the contact body until the forward edge of the seal boot is 0.22 inch \pm 0.03 inch from the rear edge of the shoulder of the contact. Refer to Figure 64..
- (b) Push the 3/8 inch diameter sleeve forward on the intermediate seal boot. Refer to Figure 64.
Make sure that the forward edge of the 3/8 inch diameter sleeve is against the shoulder of the intermediate seal boot.

POSITION OF THE AMBER INTERMEDIATE SEAL BOOT AND THE HEAT SHRINKABLE SLEEVES
Figure 64

- (c) Shrink the 3/8 inch diameter sleeve into its position.
Refer to:
 - Figure 64.
 - Subject 20-10-14.

C. Assembly of Size 5 Coax Contacts

BACC47FU0G	M22520/5-01	M22520/5-45	B

- (1) Make a selection of a center contact crimp tool from Table 34.
- (2) Make a selection of a ferrule crimp tool from Table 35.
- (3) Cut the cable to make the end of the cable perpendicular to the longitudinal axis of the cable.
- (4) If the contact is supplied with a blue intermediate seal boot, prepare the cable. Refer to Figure 65.

CABLE PREPARATION - BLUE INTERMEDIATE SEAL BOOT
Figure 65

- (a) Put these components on the cable:
 - The silicone sealing boot
 - The blue intermediate seal boot
 - The crimp ferrule.
 - (b) Remove 0.55 inch \pm 0.02 inch of cable jacket from the end of the cable.
 - (c) Remove the necessary length of shield to make the distance from the end of the shield to the end of the cable jacket equal to 0.18 inch \pm 0.02 inch.
 - (d) Remove the necessary length of dielectric to make the distance from the end of the center conductor to the end of the dielectric equal to 0.18 inch \pm 0.02 inch.
- (5) If the contact is supplied with an amber intermediate seal boot, prepare the cable. Refer to Figure 66.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

CABLE PREPARATION - AMBER INTERMEDIATE SEAL BOOT
Figure 66

- (a) Make a selection of a Grade B, Class 1 Heat Shrinkable Sleeve from Subject 20-00-11.
 - (b) Put these components on the cable:
 - A 0.65 inch \pm 0.10 inch length of 3/8 inch diameter heat shrinkable sleeve
 - The amber intermediate seal boot
 - The crimp ferrule.
 - (c) Remove 0.55 inch \pm 0.02 inch of cable jacket from the end of the cable.
 - (d) Remove the necessary length of shield to make the distance from the end of the shield to the end of the cable jacket equal to 0.18 inch \pm 0.02 inch.
 - (e) Remove the necessary length of dielectric to make the distance from the end of the center conductor to the end of the dielectric equal to 0.18 inch \pm 0.02 inch.
- (6) Prepare the shield. Refer to Figure 67.

SHIELD PREPARATION
Figure 67

- (a) Move the strands of the round conductor shield apart.
 - (b) Move the strands of the flat conductor shield apart.
- (7) Put the center conductor into the crimp barrel of the center contact. Refer to Figure 68.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

Make sure that:

- All of the strands are in the crimp barrel of the center contact.
- The strands of the center conductor can be seen in the inspection hole
- The distance between the dielectric and end of the crimp barrel is not more than 0.03 inch

POSITION OF THE CENTER CONDUCTOR IN THE CRIMP BARREL
Figure 68

(8) Crimp the contact.

Make sure that:

- All of the strands are in the crimp barrel of the center contact.
- The strands of the center conductor can be seen in the inspection hole
- The distance between the dielectric and end of the crimp barrel is not more than 0.03 inch

(9) Push the outer contact onto the center contact assembly. Refer to Figure 69.

Make sure that the strands of the shield stay on the outer surface of the crimp barrel until the rear end of the crimp barrel is tight against the end of the jacket.

POSITION OF THE OUTER CONTACT
Figure 69

(10) Put the strands of the shield against the outer surface of the crimp barrel.

(11) Push the crimp ferrule forward until the forward end of the crimp ferrule is against the shoulder of the crimp barrel. Refer to Figure 70.

Make sure that the distance between the forward end of the crimp ferrule and the shoulder of the crimp barrel is not more than 0.02 inch.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE CRIMP FERRULE ON THE SHIELD AND THE CRIMP BARREL

Figure 70

- (12) Crimp the ferrule.

Make sure that the distance between the forward end of the crimp ferrule and the shoulder of the crimp barrel is not more than 0.02 inch.

- (13) If the contact has a silicone seal boot and a blue intermediate seal boot, Let the silicone seal boot and the blue intermediate seal boot stay on the cable, away from the contact, until the contact is installed in a connector insert. Refer to Figure 71.

POSITION OF THE BLUE INTERMEDIATE SEAL BOOT

Figure 71

- (14) If the contact is supplied with an amber intermediate seal boot:

- (a) Push the amber intermediate seal boot forward onto the contact body until the forward edge of the seal boot is 0.22 inch \pm 0.03 inch from the rear edge of the shoulder of the contact. Refer to Figure 72..
- (b) Push the 3/8 inch diameter sleeve forward on the intermediate seal boot. Refer to Figure 72. Make sure that the forward edge of the 3/8 inch diameter sleeve is against the shoulder of the intermediate seal boot.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE AMBER INTERMEDIATE SEAL BOOT AND THE HEAT SHRINKABLE SLEEVES
Figure 72

(c) Shrink the 3/8 inch diameter sleeve into its position.

Refer to:

- Figure 72.
- Subject 20-10-14.

D. Assembly of S280W554-111 and S280W554-113 Size 8 Coax Contacts

Table 36
CENTER CONTACT CRIMP TOOLS

Coax Contact Size	Crimp Tool		
	Basic Unit		Locator
	Part Number	Setting

OUTER CONTACT CRIMP TOOLS

Coax Contact Size	Crimp Tool		
	Basic Unit	Die	
		Part Number	Cavity
8	M22520/5-01	Y793A	A

- (1) Make a selection of a center contact crimp tool from Table 36.
- (2) Make a selection of an outer contact crimp tool from Table 37.
- (3) Put these components on the cable:
 - The seal boot and cable support assembly
 - The outer ferrule.

Refer to Figure 73.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE SEAL BOOT AND THE OUTER FERRULE ON THE CABLE

Figure 73

- (4) Remove 0.62 inch \pm 0.02 inch of jacket from the end of the cable. Refer to Figure 74.

OUTER JACKET REMOVAL LENGTH

Figure 74

- (5) Cut the outer round shield to make the distance from the end of the cable jacket to the end of the round shield equal to 0.20 inch \pm 0.02 inch.

Refer to Figure 75.

REMOVAL OF THE OUTER ROUND SHIELD

Figure 75

- (6) Loosen the round shield and fold it back on the cable jacket.
- (7) Cut the inner flat shield to align the edge of the shield with the edge of the folded back outer round shield. Refer to Figure 76.

OUTER ROUND SHIELD FOLDED BACK

Figure 76

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

- (8) Push the inner ferrule assembly rearward on the dielectric until it is against the edge of the round shield. Refer to Figure 77.

POSITION OF THE INNER FERRULE ASSEMBLY ON THE CABLE
Figure 77

- (9) Remove the length of the dielectric between the end of the inner ferrule assembly and the end of the cable. Refer to Figure 78.

Make sure that the distance from the end of the dielectric to the edge of the inner ferrule assembly is not greater than 0.02 inch.

DIELECTRIC REMOVAL
Figure 78

- (10) Put the conductor into the crimp barrel of the center contact.

Make sure that:

- All of the strands of the conductor are in the center contact
- The conductor can be seen in the inspection hole.

- (11) Push the center contact rearward toward the outer ferrule until the inner ferrule assembly is against the outer round shield. Refer to Figure 79.

POSITION OF THE CENTER CONTACT ON THE CABLE
Figure 79

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

- (12) Crimp the center contact.
- (13) Symmetrically put the outer round shield around the inner ferrule assembly. Refer to Figure 80.

POSITION OF THE OUTER ROUND SHIELD ON THE INNER FERRULE ASSEMBLY

Figure 80

- (14) Push the outer ferrule forward until it is against the inner ferrule assembly. Refer to Figure 81. Make sure that the shield is between the outer ferrule and the inner ferrule assembly.

POSITION OF THE OUTER FERRULE AGAINST THE INNER FERRULE ASSEMBLY

Figure 81

- (15) Remove the unwanted length of the shield strands. Make sure that the end of the shield strands aligns with the rear edge of the shoulder of the inner ferrule assembly.
- (16) Push the cable and the inner contact assembly into the outer contact assembly until it stops. Refer to Figure 82.

ALIGNMENT OF THE CENTER CONTACT AND THE OUTER CONTACT

Figure 82

- (17) Apply pressure on the outer contact toward the outer and inner ferrule and crimp the outer contact. Refer to Figure 83. Make sure that the outer contact is against the outer ferrule during the crimp operation.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

DIRECTION OF PRESSURE DURING THE CRIMP OPERATION
Figure 83

- (18) Examine the crimp area of the outer contact.

Make sure that the length of the crimp area on the outer contact is 0.09 inch or longer. Refer to Figure 84.

CRIMP AREA OF THE OUTER CONTACT
Figure 84

- (19) Push the seal boot and cable support assembly toward the contact assembly until it stops. Refer to Figure 85.

POSITION OF THE SEAL BOOT AGAINST THE CONTACT ASSEMBLY
Figure 85

E. Assembly of Tyco 1757624-1 and 1883369-2 Size 8 Coax Contacts to BMS 13-65 Type 0F Coax Cable

Table 38
CENTER CONTACT CRIMP TOOLS

1883369-2	M22520/2-01	5	NONE

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

**Table 39
OUTER CONTACT CRIMP TOOLS**

Coax Contact	Crimp Tool		
	Basic Unit	Die	
		Part Number	Cavity
1757624-1	M22520/5-01	M22520/5-45	B
1883369-2	M22520/5-01	M22520/5-45	B

- (1) Make a selection of a center contact crimp tool from Table 38.
- (2) Make a selection of an outer contact crimp tool from Table 39.
- (3) Discard the seal boot that is included in the coax contact kit.
- (4) Put a Tyco 1877626-1 seal boot on the cable. Refer to Figure 86.

**SEAL BOOT ON THE CABLE
Figure 86**

- (5) Make a selection of a 3/16 inch diameter Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11.
 - (6) Put a 0.5 inch ± 0.05 inch length of the heat shrinkable sleeve on the cable.
 - (7) Remove 0.60 inch ± 0.03 inch of jacket from the end of the cable.
 - (8) Shrink the sleeve into its position. Refer to Figure 87.
- Make sure that the distance from the end of the cable jacket to the end of the sleeve is 0.33 inch ± 0.03 inch.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE HEAT SHRINKABLE SLEEVE ON THE CABLE

Figure 87

(9) Put the ferrule on the cable. Refer to Figure 88.

Make sure that:

- The smaller end of the the ferrule points to the end of the cable
- The end of the ferrule and the end of the cable outer jacket are aligned.

POSITION OF THE FERRULE ON THE CABLE

Figure 88

(10) Loosen the strands of the round shield and fold the round shield back on the ferrule. Refer to Figure 89.

ROUND SHIELD FOLDED BACK ON THE FERRULE

Figure 89

(11) Remove the unwanted length of the round shield strands that extend rearward of the forward edge of the shoulder of the ferrule. Refer to Figure 89.

(12) Cut the inner flat shield to align the trimmed end of the flat shield and the edge of the folded back round shield. Refer to Figure 89.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

- (13) Remove 0.33 inch \pm 0.03 inch of the insulation from the end of the center conductor.
- (14) Put the center conductor into the crimp barrel of the center contact. Refer to Figure 90.

Make sure that:

- All of the strands of the center conductor are in the crimp barrel of the center contact
- The conductor can be seen in the inspection hole.

POSITION OF THE CENTER CONTACT ON THE CENTER CONDUCTOR

Figure 90

- (15) Crimp the center contact.

Make sure that:

- All of the strands of the conductor are in the crimp barrel of the center contact
- The conductor can be seen in the inspection hole.

- (16) Push the cable and the center contact assembly into the outer contact until it stops. Refer to Figure 91.

COAX CONTACT ASSEMBLY

Figure 91

- (17) Hold the contact assembly together, and at the same time, crimp the outer contact.
Make sure that the distance from the shoulder of the inner ferrule to the edge of the outer contact crimp barrel is less than 0.03 inch. Refer to Figure 91.
- (18) Remove the unwanted shield strands that come out from between the outer contact crimp barrel and the shoulder of the ferrule.
- (19) Push the seal boot to the contact assembly until it stops.

F. Twinax Cable Preparation and Contact Assembly

This paragraph gives the procedure to prepare the twinax cable and assemble the twinax contact.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

Table 40
CRIMP TOOLS FOR THE TWINAX CONTACT INNER CONTACTS

Twinax Cable Component	Twinax Contact			Crimp Tool

	Code	Component	Conductor Location	Basic Unit	Die	
					Part Number	Cavity
Shield	C	Outer Contact Body	Outer Contact Body	M22520/5-01	Y797	B

- (1) Put the seal boot on the cable. Refer to Figure 92.
Make sure that the larger end of the seal boot is pointed forward to the end of the cable.

POSITION OF THE SEAL BOOT AND THE FERRULE ON THE CABLE
Figure 92

- (2) Put the shield termination ferrule on the cable. Refer to Figure 92.
Make sure that the larger end of the shield termination ferrule is pointed rearward away from the end of the cable.
- (3) Remove 0.48 inch \pm 0.03 inch of the jacket from the end of the cable.
Refer to Figure 93 and Subject 20-00-15.

CAUTION: DO NOT CAUSE DAMAGE TO THE STRANDS OF THE SHIELD. UNSATISFACTORY PERFORMANCE OF THE CABLE CAN OCCUR.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

CABLE JACKET REMOVAL LENGTH
Figure 93

- (4) Fold the shield back against the jacket of the cable.
- (5) Cut the fillers at the necessary location to make the distance from the forward end of the shield to the end of the fillers equal to or less than 0.03 inch. Refer to Figure 94.

REMOVAL OF THE CABLE FILLERS
Figure 94

- (6) Prepare the wires. Refer to Figure 95.

INSULATION REMOVAL LENGTH
Figure 95

- (a) Cut the white wire 0.25 inch \pm 0.02 inch from the end of the wire.
- (b) Remove 0.11 inch \pm 0.02 inch of the insulation from the end of the white wire.

CAUTION: DO NOT CAUSE DAMAGE TO THE CONDUCTOR. UNSATISFACTORY PERFORMANCE OF THE WIRE CAN OCCUR.

- (c) Remove 0.35 inch \pm 0.02 inch of the insulation from the end of the blue wire.

CAUTION: DO NOT CAUSE DAMAGE TO THE CONDUCTOR. UNSATISFACTORY PERFORMANCE OF THE WIRE CAN OCCUR.

- (7) Put the insulator bushing on the cable. Refer to Figure 96.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

Make sure that:

- The white wire is in the hole near the edge of the bushing
- The blue wire is in the hole near the center of the bushing
- The bushing is against the shield.

POSITION OF THE INSULATOR BUSHING ON THE CABLE

Figure 96

- (8) Align the conductor of the blue wire and the longer cavity in the center of the center contact.
- (9) Align the conductor of the white wire and the shorter cavity near the side of the center contact.
Make sure that the conductor of the blue wire stays aligned with the longer cavity in the center of the contact.
- (10) Put the center contact on the wires. Refer to Figure 97.

Make sure that:

- All of the strands of the conductor of the blue wire are in the longer center cavity
- All of the strands of the conductor of the white wire are in the shorter side cavity
- The conductor of the blue wire can be seen in the inspection hole
- The distance between the center contact and the end of the insulation of the white wire is a maximum of 0.02 inch.

POSITION OF THE CENTER CONTACT ON THE CABLE

Figure 97

- (11) Make a selection of a center contact crimp tool for the blue wire from Table 40.
- (12) Put the center contact in the crimp tool.
- (13) Crimp the contact.
- (14) Make a selection of a center contact crimp tool for the white wire from Table 40.
- (15) Put the center contact in the crimp tool. Refer to Figure 98.

Make sure that the contact is correctly aligned in the tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE CENTER CONTACT IN THE CRIMP TOOL
Figure 98

- (16) Crimp the contact.
- (17) Examine the crimp area of the contact. Refer to Figure 99.
 Make sure that each crimp area does not have a crack.

CRIMP AREAS OF THE CENTER CONTACT
Figure 99

- (18) Push the shield termination ferrule forward until it is against the insulator bushing. Refer to Figure 100.

POSITION OF THE FERRULE
Figure 100

- (19) Make the shield flat against the outer surface of the ferrule.
- (20) Cut the shield at the forward edge of the shoulder of the ferrule. Refer to Figure 101.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

LOCATION OF SHIELD REMOVAL
Figure 101

- (21) Make a selection of an outer contact body crimp tool from Table 41.
- (22) Align the center contact and the outer body. Refer to Figure 102.

ALIGNMENT OF THE CENTER CONTACT AND THE OUTER BODY
Figure 102

- (23) Push the center contact into the outer body until it stops.
 Make sure that the rear edge of the outer body is against the shoulder of the ferrule. Refer to Figure 103.

POSITION OF THE OUTER BODY ON THE CENTER CONTACT
Figure 103

- (24) Put the contact in the crimp tool. Refer to Figure 104.
 Make sure that the contact is in the small groove of the die.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE CONTACT IN THE CRIMP TOOL
Figure 104

- (25) Push the outer body against the die.
- (26) Continue to push the outer body against the die and crimp the outer body.
 Make sure that the contact stays tight against the die during the crimp operation.
- (27) Examine the crimp area of the contact. Refer to Figure 105.

Make sure that:

- The crimp area does not have a crack
- The distance from the rear edge of the outer body to the forward edge of the shoulder of the ferrule is not more than 0.01 inch.

POSITION OF THE OUTER BODY AFTER THE CRIMP OPERATION
Figure 105

- (28) If the crimp area has deformed metal on the edges, turn the contact assembly 60 degrees on its axis and do Step (24) through Step (27) again.
- (29) Remove the unwanted strands of the shield between the outer body and the ferrule.
- (30) Carefully push the seal boot forward until it stops. Refer to Figure 106.

POSITION OF THE SEAL BOOT ON THE CONTACT
Figure 106

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

- (31) Examine the position of the engaging end of the center contact.
- (32) If the engaging end of the center contact is not located at the center of the outer contact, carefully push it into its correct position.

CAUTION: IF THE ENGAGING END OF THE CENTER CONTACT IS NOT LOCATED AT THE CENTER OF THE OUTER CONTACT, DAMAGE TO THE CONTACT, THE CONNECTOR, OR THE RECEPTACLE CONNECTOR CAN OCCUR.

G. Assembly of BACC47GA and BACC47GB Quadrax Contacts

**Table 42
QUADRAX CONTACT INNER CONTACT CRIMP TOOLS**

Quadrax Contact	Crimp Tool		
	Basic Unit		Locator
	Part Number	Setting	Part Number
BACC47GA1	M22520/2-01	5	K709
BACC47GB1	M22520/2-01	5	K709

**Table 43
QUADRAX CONTACT OUTER CONTACT CRIMP TOOLS**

Quadrax Contact	Crimp Tool		
	Basic Unit	Die	
		Part Number	Cavity
BACC47GA1	M22520/5-01	M22520/5-45	B
BACC47GB1	M22520/5-01	M22520/5-45	B

- (1) Make a selection of an inner contact crimp tool from Table 42.
- (2) Make a selection of an outer contact crimp tool from Table 43.
- (3) Cut the cable perpendicular to its longitudinal axis.
- (4) Discard the seal boot that is included in the quadrax contact kit.
- (5) Put a Tyco 1877626-1 seal boot on the cable. Refer to Figure 107.

Make sure that:

- The end of the seal boot that has the chamfer points forward to the end of the cable
- The end of the seal boot that has the inner elastomer points rearward, away from the end of the cable.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

THE SEAL BOOT ON THE CABLE
Figure 107

- (6) Move the seal boot away from the end of the cable.
- (7) Prepare the end of the cable. Refer to Figure 108.

QUADRAX CABLE TRIM DIMENSIONS
Figure 108

- (a) Remove 0.61 inch ± 0.02 inch of the outer jacket from the end of the cable.
 - (b) Remove the necessary length of the shield from the end of the cable to make the distance from the end of the outer jacket to the end of the shield equal to 0.56 inch ± 0.02 inch.
- (8) Put the ferrule on the cable. Refer to Figure 109.
- Make sure that the end of the ferrule that has the smaller diameter points forward to the end of the cable.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

POSITION OF THE FERRULE ON THE CABLE

Figure 109

- (9) Push the ferrule rearward until it is against the end of the outer jacket. Refer to Figure 109.
- (10) Fold the outer round shield back on the ferrule. Refer to Figure 110.

INNER CONDUCTOR TRIM DIMENSIONS AND SHIELD PREPARATION

Figure 110

- (11) Remove the necessary length of the inner flat shield and the tape wrap insulation.
Make sure that the ends of the flat shield and the tape wrap are approximately aligned with the front end of the ferrule.
- (12) Move the four inner conductors apart.
Make sure that:
 - The inner conductors do not cross each other
 - The initial positions of the inner conductors in the cable is not changed.
- (13) Remove the necessary length of the filler rods.
Make sure that the ends of the filler rods are approximately aligned with the front end of the ferrule.
- (14) Remove 0.15 inch \pm 0.02 inch of insulation from each of the four inner conductors.
Refer to:
 - Refer to Figure 110.
 - Subject 20-00-15 for the procedure to remove the wire insulation.
- (15) Crimp an inner contact on each of the four inner conductors.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

Make sure that:

- The distance between the wire insulation and the end of each inner contact crimp barrel is 0.02 inch maximum
- The wire insulation is not in the crimp barrel
- The conductor strands can be seen in the inspection hole
- All conductor strands are in the crimp barrel
- The conductor strands do not go out of the inspection hole
- The plating of each inner contact is not removed
- The inner contacts have no cracks.

(16) Put the inner contacts into the larger end of the insulator. Refer to Figure 111 and Figure 112.

Make sure that:

- The red conductor and the yellow conductor are adjacent to the wiring keyway of the insulator
- The position of the conductors in the insulator is the same as the position of the conductors in the cable
- Each inner contact is fully installed in the insulator
- The conductors do not cross each other.

INSTALLATION OF THE INNER CONTACTS IN THE INSULATOR
Figure 111

INSULATOR REAR VIEW - WIRE SIDE
POSITIONS OF THE INNER CONTACTS IN THE INSULATOR
Figure 112

(17) Align the wiring key on the outer contact and the wiring keyway of the insulator. Refer to Figure 113.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

THE OUTER CONTACT AND THE INSULATOR ASSEMBLY
Figure 113

(18) Push the insulator assembly into the outer contact until it stops . Refer to Figure 114.

Make sure that:

- The wiring key on the outer contact and the wiring keyway of the insulator are aligned
- The rear of the insulator is against the shield that is folded back on the ferrule
- The distance from the rear edge of the outer contact to the shoulder of the ferrule is not more than 0.02 inch
- The distance from the rear end of the ferrule to the end of the cable jacket is not more than 0.02 inch.

QUADRAX CONTACT ASSEMBLY
Figure 114

(19) Crimp the outer contact. Refer to Figure 114.

(20) Remove all of the strands of the shield that are between the rear edge of the outer contact and the shoulder of the ferrule.

H. Contact Insertion

This paragraph gives the procedure to install size 2222, 2020, 1616, and 1212 contacts in the connector insert.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

For the procedure to install these contacts in the insert, refer to:

- Paragraph 5.I. for size 5 coax contacts and size 0508 power contacts
- Paragraph 5.J. for size 8 coax, twinax, and size 0808 power contacts
- Paragraph 5.K. for size 8 quadrax contacts
- Paragraph 5.L. for fiber optic termini.

For the procedure to install ground block contacts in the connector ground block, refer to:

- Subject 20-74-12 for BACC65AA and BACC65AB connectors
- Subject 20-74-13 for BACC65AN, BACC65AP, BACC65AV and BACC65AW connectors
- Subject 20-74-14 for BACC65BJ and BACC65BK connectors.

NOTE: Contacts can be installed in the insert before or after the insert is installed in the connector shell.

**Table 44
CONTACT INSERTION TOOLS**

Connector Insert Contact Cavity Size	Contact Size	Insertion Tool	
		Part Number	Color
22	2222	M81969/1-01	Green
		DAK266J	-
20	2020	M81969/39-01	Green
		CIET-20HDL	-
16	1616	M81969/14-03	Blue
		CIET-16	-
12	1212	M81969/14-04	Yellow
		CET-12-4	-

(1) Make a selection of a contact insertion tool from Table 44.

NOTE: An insertion tool is not necessary for the insertion of these contacts:

- Size 2020
- Size 1616
- Size 1212.

(2) If an insertion tool is used:

- (a) Put the contact assembly in the insertion tool.
- (b) Axially align the insertion tool, the contact assembly and the contact cavity.

Make sure that the insertion tool and the contact assembly are perpendicular to the rear face of the connector insert.

- (c) Carefully push the insertion tool into the contact cavity until it stops.
Make sure that the the insertion tool and the contact cavity stay aligned.
- (d) Carefully pull the insertion tool out of the contact cavity.
Make sure that the insertion tool stays aligned with the contact cavity.
- (e) Remove the insertion tool from the wire.

(3) If an insertion tool is not used:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

- (a) Axially align the contact assembly and the contact cavity.
Make sure that the contact assembly is perpendicular to the rear face of the insert.
- (b) Carefully push the the contact assembly into the contact cavity until it stops.
Make sure that the contact assembly and the contact cavity stay aligned.
- (4) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (5) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly from the contact cavity.
 - (b) Do Step (2) or Step (4) again.

I. Installation of Size 5 Coax and Size 0508 Power Contacts

- (1) If a blue intermediate seal boot and a silicone seal boot are on the contact assembly, move them rearward on the cable away from the contact.
- (2) Axially align the contact assembly and the contact cavity.
- (3) Carefully push the contact assembly into the contact cavity until it stops.
Make sure that the contact assembly and the contact cavity stay aligned.
- (4) Lightly pull the wire.
Make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

- (5) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly from the cavity.
 - (b) Do Step (2) through Step (4) again.
- (6) If a silicone seal boot and a blue intermediate seal boot are on the contact assembly:
 - (a) Push the nylon sealing boot into the silicone sealing boot. Refer to Figure 115.

POSITION OF THE NYLON SEALING BOOT IN THE SILICONE SEALING BOOT
Figure 115

20-74-02

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

- (b) Push the sealing boots forward on the cable until the edge of the step of the nylon sealing boot is against the rear of the grommet. Refer to Figure 116.

POSITION OF THE SEALING BOOTS ON THE COAX CONTACT ASSEMBLY
Figure 116

J. Installation of Size 8 Coax, Size 8 Twinax, and Size 0808 Power Contacts

Table 45
LUBRICANTS

Lubricant	Specification	Supplier
Alcohol, Isopropyl	TT-I-735	An available source

- (1) At the rear of the connector, align the size 8 coax contact assembly and the size 8 contact cavity.
Make sure that the longitudinal axis of the contact assembly is perpendicular to the rear face of the connector.
NOTE: A contact insertion tool is not necessary for the installation of these contacts.
- (2) Push the contact into the contact cavity until the contact stops and is locked.
NOTE: A lubricant can be used to make it easier to push the contact into the contact cavity. Refer to Table 45
- (3) Align the key of the seal boot with the keyway of the contact cavity.
- (4) Push the seal boot into the contact cavity.
Make sure that the rear edge of the seal boot key is aligned with the rear face of the connector.
NOTE: A lubricant can be used to make it easier to push the seal boot into the contact cavity. Refer to Table 45.
- (5) Lightly pull on the cable.
Make sure that the contact is locked in the contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (6) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the contact cavity.
 - (b) Do Step (2) through Step (5) again.

K. Installation of Size 8 Quadrax Contacts

**Table 46
LUBRICANTS**

Lubricant	Specification	Supplier
Alcohol, Isopropyl	TT-I-735	An available source

- (1) At the rear of the connector, align the contact polarization key and the keyway of the quadrax contact cavity.

Make sure that the longitudinal axis of the contact assembly is perpendicular to the rear face of the connector.

NOTE: A contact insertion tool is not necessary to install these contacts.

Refer to:

- Figure 117 for the polarization key of the quadrax contact
- Figure 118 for the keyway of the quadrax contact cavity.

**POLARIZATION KEY OF THE QUADRAX CONTACT
Figure 117**

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

THE QUADRAX CONTACT CAVITY KEYWAYS
Figure 118

- (2) Push the contact into the contact cavity until the contact stops and is locked.

NOTE: A lubricant can be used to make it easier to push the contact into the contact cavity. Refer to Table 46

- (3) Align the seal boot key with the contact cavity keyway. Refer to Figure 118.

- (4) Push the seal boot into the contact cavity.

Make sure that the rear edge of the seal boot key is aligned with the rear face of the connector.

NOTE: A lubricant can be used to make it easier to push the seal boot into the contact cavity. Refer to Table 46.

- (5) Lightly pull on the cable.

Make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (6) If the contact is not locked in the contact cavity:

- (a) Pull the contact assembly out of the contact cavity.
- (b) Do Step (2) through Step (5) again.

L. Insertion of Fiber Optic Contact Termini

NOTE: A contact terminus can be installed before or after the alignment sleeve insert is installed in the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

CAUTION: THE CONTACT TERMINUS MUST HAVE PROTECTION FROM CONTAMINATION WITH A PROTECTION CAP OR A CLEAN PLASTIC BAG WHEN IT IS NOT INSTALLED IN THE CONNECTOR. CONTAMINATION OF THE CONTACT TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

Table 47
CONTACT TERMINUS INSERTION TOOLS

Terminus Size	Insertion Tool	
	Part Number	Color
16	M81969/14-03	Blue

- (1) Make a selection of a contact terminus insertion tool from Table 47.

CAUTION: DO NOT USE AN INSERTION TOOL THAT HAS A DEFECT. DAMAGE TO THE GROMMET OR THE RETENTION CLIPS CAN OCCUR.

- (2) If the contact terminus does not have a protection cap or is not in a plastic bag, examine the contact terminus. Refer to Subject 20-12-20.
- (3) Remove the protection from the contact terminus.
- (4) Carefully put the insertion tool on the cable and the contact terminus.

CAUTION: THE CONTACT TERMINUS MUST BE INSTALLED IN THE CONNECTOR IF IT DOES NOT HAVE PROTECTION FROM CONTAMINATION. CONTAMINATION OF THE CONTACT TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

CAUTION: DO NOT TOUCH THE FRONT FACE OF THE TERMINUS. CONTAMINATION ON THE TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

- (5) At the rear of the connector, axially align the insertion tool and the terminus with the contact terminus cavity.

ALIGNMENT OF THE CONTACT TERMINUS, THE INSERTION TOOL, AND THE CONTACT TERMINUS CAVITY
Figure 119

- (6) If the contact terminus has a key, align the key of the terminus and the keyway of the contact terminus cavity.

NOTE: A contact terminus that has a key can only be installed in a contact terminus cavity that has a keyway.

- (7) Carefully push the insertion tool and the contact terminus into the terminus cavity until it stops.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

CAUTION: DO NOT PUSH THE CABLE. DAMAGE TO THE FIBER OPTIC CABLE CAN OCCUR.

CAUTION: IF THE INSERTION TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

- (8) Carefully pull the insertion tool out of the terminus cavity.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

- (9) Lightly pull the cable to make sure that the terminus is locked in the terminus cavity.

CAUTION: DO NOT PULL THE CABLE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE TERMINUS, THE CABLE, OR THE CONNECTOR.

CAUTION: DO NOT MAKE A DENT IN THE CABLE JACKET WITH THE FINGERNAILS. DAMAGE TO THE CABLE JACKET CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

- (10) If the terminus is not locked in the cavity:

- (a) Pull the terminus out of the cavity.
- (b) Do Step (4) through Step (8) again.

- (11) If the connector is not connected immediately, put a protective cap on the connector.

NOTE: A clean plastic bag is a satisfactory alternative for the protection from contamination.

CAUTION: THE CONNECTOR MUST HAVE PROTECTION FROM CONTAMINATION WHEN THE CONNECTOR IS NOT CONNECTED. UNSATISFACTORY PERFORMANCE OF THE CONNECTOR CAN OCCUR.

M. Installation of the Fiber Optic Alignment Sleeve Insert

NOTE: The alignment sleeve insert can be installed before or after the contact termini are installed in the insert.

**Table 48
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64
Torque	Allen Wrench	5/64
	Screwdriver, Hex	5/64

- (1) Examine the alignment sleeve insert. Refer to Paragraph 6.B.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

(2) Make a selection of these tools from Table 48:

- A driver
- A torque tool.

NOTE: The driver can have a ball type end.

(3) Align the rear face of the alignment sleeve insert with the engaging face of the connector.

CAUTION: DO NOT SHAKE OR TWIST THE ALIGNMENT SLEEVE INSERT WHEN IT IS INSTALLED IN THE INSERT. DAMAGE TO THE CERAMIC FERRULES OF THE CONTACT TERMINI CAN OCCUR.

ALIGNMENT SLEEVE INSERT
Figure 120

(4) Fully engage the threads of the installation screw and the screw hole in the connector insert.

(5) Torque the screw 8 inch-pounds \pm 1 inch-pound.

N. Seal of an Empty Contact Cavity

Empty contact cavities in the insert must be sealed. Refer to Subject 20-60-08.

Make sure that a size 5 contact cavity is sealed with one of these:

- A seal plug from Table 49.
- A 0.50 inch \pm 0.05 inch length of silicone rubber seal rod from Table 50.

Table 49
SEAL PLUG FOR SIZE 5 CONTACT CAVITY

Part Number	Color	Supplier
MS27488-4-1	Blue	QPL

Table 50
SEAL ROD FOR SIZE 5 CONTACT CAVITY

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC10AL, BAC10AM, AND BAC10AP RECTANGULAR CONNECTOR INSERTS

6. INSPECTION AND CLEANING OF A FIBER OPTIC ALIGNMENT SLEEVE INSERT

A. Necessary Tools and Materials

**Table 51
NECESSARY TOOLS**

Tool	Description	Part Number	Supplier
Canned Air	Tetrafluoroethane	ES1620	Chemtronics
Protective Equipment	Finger Cot	-	Available Source
	Gloves, Powder Free	-	Available Source

**Table 52
SOLVENTS**

Solvent	Specification	Supplier
Alcohol, Ethyl	O-E-760	Available Source
Alcohol, Isopropyl	TT-I-735	Available Source
Water, Distilled	-	Available Source

B. Inspection and Cleaning

**ALIGNMENT SLEEVE INSERT
Figure 121**

CAUTION: KEEP THE ALIGNMENT SLEEVE INSERT IN A CLEAN PLASTIC BAG UNTIL IT IS INSTALLED ON THE CONNECTOR. CONTAMINATION ON THE ALIGNMENT SLEEVE INSERT CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

Refer to Figure 121.

- (1) Without magnification, examine each end of the alignment sleeves of the insert.
- (2) If an alignment sleeve has contamination, clean the sleeve without solvent. Refer to Paragraph 6.C.
- (3) Without magnification, examine each end of the alignment sleeves again.
- (4) If an alignment sleeve has remaining contamination, clean the sleeve with solvent. Refer to Paragraph 6.D.
 - (a) Without magnification, examine each end of the alignment sleeves again.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS**

- (b) If an alignment sleeve has remaining contamination, clean the sleeve with solvent again. Refer to Paragraph 6.D.
- (c) Without magnification, examine the alignment sleeves again.
- (d) If an alignment sleeve has remaining contamination, replace the alignment sleeve insert.

C. Contamination Removal - Without Solvent

For the conditions that are applicable for this procedure, refer to Paragraph 6.B.

Refer to Figure 121.

- (1) Make a selection of canned air from Table 51.

NOTE: An equivalent canned air is a satisfactory alternative.

- (2) Make a selection of a protection equipment from Table 51.

NOTE: A satisfactory alternative is to clean the hands.

- (3) If the hands are not clean, put the protection equipment on.
- (4) Apply the canned air in each alignment sleeve that has contamination.

D. Contamination Removal - With Solvent

For the conditions that are applicable for this procedure, refer to Paragraph 6.B.

WARNING: SOME SOLVENTS ARE FLAMMABLE. MAKE SURE THAT THE QUANTITY OF A FLAMMABLE SOLVENT NEAR THE AIRPLANE IS NOT MORE THAN THE QUANTITY THAT IS NECESSARY TO CLEAN THE ALIGNMENT SLEEVE INSERT.

Refer to Figure 121.

- (1) Make a selection of canned air from Table 51.

NOTE: An equivalent canned air is a satisfactory alternative.

- (2) Make a selection of these solvents from Table 52:

- An alcohol
- Distilled water.

- (3) Make a selection of a protection equipment from Table 51.

NOTE: A satisfactory alternative is to clean the hands.

- (4) If the hands are not clean, put the protection equipment on.
- (5) Put a quantity of alcohol in a small container that can be sealed with a lid.

Make sure that:

- The container is clean
- The size of the container is sufficient to hold the alignment sleeve insert
- The quantity of alcohol is sufficient to put the body of the alignment sleeve insert below the surface of the alcohol.

- (6) Put a quantity of distilled water in a small container that can be sealed with a lid.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BAC110AL, BAC110AM, AND BAC110AP RECTANGULAR CONNECTOR INSERTS

Make sure that:

- The container is clean
- The size of the container is sufficient to hold the alignment sleeve insert
- The quantity of distilled water is sufficient to put the body of the alignment sleeve insert below the surface of the alcohol.

(7) Put the alignment sleeve insert in the container that has alcohol for 30 seconds minimum.

Make sure that the body of the alignment sleeve insert is below the surface of the alcohol.

(8) Remove the alignment sleeve insert from the alcohol.

(9) Seal the alignment sleeve insert in the container that has distilled water.

Make sure that the body of the alignment sleeve insert is below the surface of the distilled water.

(10) Lightly shake the container for 1 to 3 minutes.

(11) Remove the alignment sleeve insert from the water.

(12) Dry the alignment sleeve insert with canned air.

(13) Put the alignment sleeve insert in the container that has alcohol for 30 seconds minimum.

Make sure that the body of the alignment sleeve insert is below the surface of the alcohol.

(14) Remove the alignment sleeve insert from the alcohol.

(15) Dry the alignment sleeve insert with canned air.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Insert

It is necessary to replace the insert if one or more of these conditions occur:

- The depth of the damage extends farther than the bottom of the outer seal web; refer to Figure 1
- The damage extends from one contact cavity to a different contact cavity; refer to Figure 2
- The damage extends from one contact cavity to the outer edge of the insert; refer to Figure 2.

Depth of the Damage That is not Farther Than the Bottom of the Seal Web

REAR FACE OF THE INSERT - DEPTH OF DAMAGE

Figure 1

REAR FACE OF THE INSERT - LENGTH OF DAMAGE

Figure 2

B. Damage Conditions - Front Face of the Insert

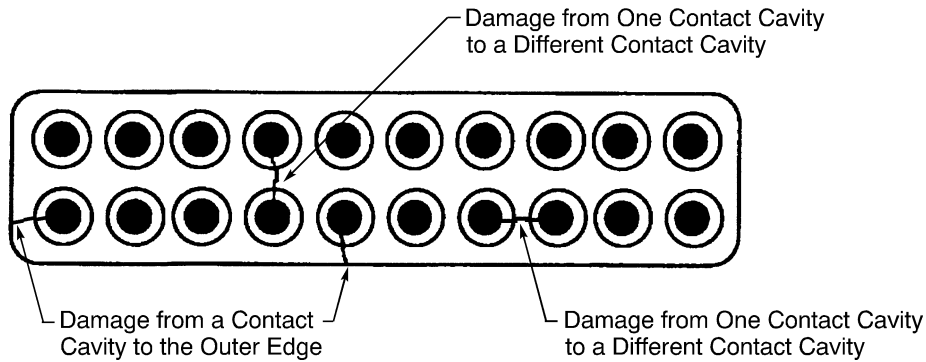

It is necessary to replace the insert if one of these conditions occur:

- The damage extends from one contact cavity to a different contact cavity
- The damage extends from one contact cavity to the outer edge of the insert.

Refer to Figure 3.

STANDARD WIRING PRACTICES MANUAL

FRONT FACE OF THE INSERT - LENGTH OF DAMAGE

Figure 3

C. Minimum Wire O.D. for an Environmentally Sealed Connector

Refer to:

- Subject 20-60-08 for the identification of an environmentally sealed connector
- Table 1 for the minimum wire O.D. that is necessary for a satisfactory seal of a contact cavity hole
- Subject 20-60-08 for the procedure to increase the diameter of the wire.

**Table 1
MINIMUM WIRE O.D. FOR A SATISFACTORY SEAL**

Connector	Description	Contact Cavity Size	Minimum Wire O.D. (inch)

B. Connector Description

The ACIS or MTC100 connector has these technical features:

- A captivated jack screw coupling mechanism
- A rectangular metal shell
- Two shell sizes
- An inline plug
- An inline receptacle or panel mounted receptacle
- Removable inserts
- Rear release, rear removal, crimp contacts.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC100, MTCPQ, AND MTCTQ CONNECTORS

ACIS OR MTC100 CONNECTOR CONFIGURATION

Figure 8

The MTCPQ connector has these technical features:

- A quick disconnect coupling mechanism
- A rectangular metal shell
- Two shell sizes
- An inline plug
- An inline receptacle or panel mounted receptacle
- Removable inserts
- Rear release, rear removal crimp contacts
- A ground block in alternative plug and receptacle configurations
- Ground springs in alternative plug configurations.

The MTCTQ connector has these technical features:

- An insert for fiber optic contact termini
- A rectangular metal shell
- One shell size
- Two backshell brackets
- An inline plug
- A panel mounted receptacle
- A quick disconnect coupling mechanism
- Removable insert that have fiber optic contact termini
- Rear release, rear removal, size 16 fiber optic contact termini

4. CONNECTOR DISASSEMBLY

A. Connector Separation

- (1) For an ACIS or a MTC100 connector:
 - (a) Make a selection of one of these tools:
 - A 7/64 inch hex-head driver with or without a ball type end
 - A 7/64 inch allen wrench with or without a ball type end.
 - (b) Turn one of the captivated jack screws two turns in the counterclockwise direction.
 - (c) Turn the other captivated jack screw two turns in the counterclockwise direction.
 - (d) Do Step (b) and Step (c) again until each jack screw is disengaged from each adapter nut.
 - (e) Pull the plug out of the receptacle.
- (2) For an MTCPQ and MTCTQ connectors:

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

- (a) Make a selection of one of these tools:
 - A 7/64 inch hex-head driver with or without a ball type end
 - A 7/64 inch allen wrench with or without a ball type end
 - A screwdriver.
- (b) At the same time, push one of the quick disconnect fasteners with the tool and make a 1/2 turn in the counterclockwise direction.
- (c) At the same time, push the other quick disconnect fastener with the tool and make a 1/2 turn in the counterclockwise direction.
- (d) Pull the plug out of the receptacle.

B. Receptacle Removal

CAUTION: MAKE SURE TO KEEP ALL OF THE PANEL WASHERS, PANEL GASKET, AND THE ADAPTER NUTS FROM THE FRONT OF THE CONNECTOR. THEY ARE NECESSARY TO INSTALL THE RECEPTACLE AGAIN.

RECEPTACLE SHELL REMOVAL FROM A PANEL
Figure 28

- (1) Make a selection of one of these tools:
 - A 7/64 inch hex-head driver with or without a ball type end
 - A 7/64 inch allen wrench with or without a ball type end.
- (2) From the rear of the panel, remove one of the adapter nut screws that attach the connector to the panel. Refer to Figure 28.
- (3) From the rear of the panel, remove the other screw.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

CAUTION: MAKE SURE TO KEEP ALL OF THE PANEL WASHERS AND THE ADAPTER NUTS FROM THE FRONT OF THE CONNECTOR. THEY ARE NECESSARY TO INSTALL THE RECEPTACLE AGAIN.

(4) Pull the receptacle from the rear of the panel.

CAUTION: IF THERE IS A PANEL GASKET AT THE REAR OF THE PANEL, MAKE SURE TO KEEP THE GASKET.

C. Insert Removal

NOTE: Contacts or termini can be removed from the insert with the connector inserts in the connector shell.

**Table 19
INSERT REMOVAL TOOLS**

Shell Size	Removal Tool
1	599-11 11 596
	CTA-0161
2	599-11 11 596
	CTA-0161

**INSERT REMOVAL TOOL
Figure 29**

(1) Loosen the screws on the cable clamp bars. Refer to Figure 8.

NOTE: It is not necessary to remove the contacts or termini from the connector insert.

(2) Remove the cable clamp bars and the terminal lugs of the shield ground wires from the ears of the connector shell.

(3) Make a selection of an insert removal tool from Table 19. Refer to Figure 29.

NOTE: Two tools are necessary to remove an insert.

(4) Put a removal tool on each side of the connector insert in the rear of the connector shell.

Make sure to use the:

- The small end of the removal tools for a Size 1 shell
- The large end of the removal tools for a Size 2 shell.

(5) At the same time, push each of the tools into the connector until each tool releases the retention clips and stop.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTCPPQ, AND MTCTQ CONNECTORS

- (6) If the connector insert has assembled contacts or termini:
 - (a) Hold the wires and carefully pull the insert from the connector shell.
 - (b) If the insert or inserts do not move when the wires are pulled, do Step (4) through Step (5) again.
- (7) If the connector insert does not have assembled contacts or termini:
 - (a) Put a plastic awl on the front face of the insert.
 - (b) Push the insert out of the connector shell.

D. Contact Removal

**Table 20
CONTACT REMOVAL TOOLS**

Crimp Barrel Size	Removal Tool		
	Part Number	Color	Type
22	M81969/14-01	White	Plastic
20	ATBO-2062	Green	Metal
	ATT 2059	-	Metal Tweezers
	CTA-1160	Green	Plastic
	DRK 237	-	Metal Tweezers
	RRX22RC	-	Metal
16	11-8675-16	White	-
	11-8795-16	White	-
	DRK95-16B	Blue	Metal
	M81969/14-03	White	Plastic
	M81969/8-08	Blue	Metal
	MS27495R16	White	-
	MS27534-16	White	-
	RX16-9	White	-

NOTE: Contacts can be removed from the insert with the connector inserts in the connector shell.

- (1) Make a selection of the contact removal tool from Table 20.
- (2) Remove the cable clamp bars from the rear of the connector. Refer to Paragraph 4.C.
- (3) Put the tip of the tool on the wire near the rear grommet.
- (4) Axially align the tool and the contact cavity.
- (5) Carefully push the tool into the contact cavity until it stops.
- (6) Pull the wire and the tool out of the contact cavity at the same time.
- (7) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the tool approximately 10 degrees.
 - (c) Do Step (3) through Step (6) again.

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

E. Fiber Optic Terminus Removal

CAUTION: THE CONTACT TERMINUS MUST HAVE PROTECTION FROM CONTAMINATION WITH A PROTECTION CAP OR A SEALED CLEAN PLASTIC BAG WHEN IT IS NOT INSTALLED IN THE CONNECTOR. CONTAMINATION OF THE CONTACT TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

**Table 21
CONTACT TERMINUS REMOVAL TOOLS**

Terminus Size	Removal Tool	
	Part Number	Color
16	M81969/14-03	White

(1) Make a selection of a contact terminus removal tool from Table 21.

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. DAMAGE TO THE GROMMET OR THE RETENTION CLIPS CAN OCCUR.

- (2) Remove the plastic tie straps or the wire harness ties that are less than 6 inches from the connector.
- (3) At the rear of the connector, put the tip of the removal tool on the cable.
- (4) Axially align the removal tool and contact terminus cavity.
- (5) Push the removal tool into the contact terminus cavity until it stops.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

CAUTION: IF THE REMOVAL TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

POSITION OF THE REMOVAL TOOL IN THE CONTACT TERMINUS CAVITY

Figure 30

(6) Hold the cable against the tool and, at the same time, carefully pull the tool and the contact terminus out of the cavity.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

CAUTION: IF THE REMOVAL TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

- (7) If the contact terminus is not released:
 - (a) Carefully remove the tool.
 - (b) Turn the tool approximately 90 degrees on the cable assembly.
 - (c) Do Step (3) through Step (6) again.
- (8) If it is necessary, examine the contact terminus. Refer to Subject 20-12-20.
- (9) If the inspection is not necessary, put a clean protection cap on the contact terminus. Refer to Subject 20-12-20 for the protection cap part numbers.

NOTE: A clean plastic bag is a satisfactory alternative for the protection cap.

- (10) Put the connector in a clean plastic bag.

CAUTION: THE CONNECTOR MUST HAVE PROTECTION FROM CONTAMINATION WHEN THE CONNECTOR IS NOT CONNECTED. CONTAMINATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

F. Seal Plug or Seal Rod Removal

- (1) Make a selection of a pair of needle nose pliers that has smooth surfaces and no sharp edges.

CAUTION: NEEDLE NOSE PLIERS WITH A ROUGH SURFACE OR A SHARP EDGE CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) Hold the end of the seal plug or seal rod tightly in the jaws of the needle nose pliers.
- (3) Pull the seal plug or the seal rod out of the contact cavity in the direction that is perpendicular to the face of the rear grommet.

5. CONNECTOR ASSEMBLY

A. Unshielded Wire Preparation

**Table 22
HEAT SHRINKABLE SLEEVES**

Part Number or Specification	Supplier
AMS-DTL-23053/12 Class 5	An available source
RW-175	Raychem
TFE-4X	Chemplast
	Zeus

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC100, MTCPQ, AND MTCTQ CONNECTORS

**Table 23
UNSHIELDED WIRE PREPARATION**

Connector	Wire O.D. (inch)	Removal Length L (inch)		Heat Shrinkable Sleeve Length (inch)	
		Target	Tolerance	Target	Tolerance
ACIS	Less than or equal to 0.061	0.20	± 0.03	-	-
	More than 0.061	1.10	± 0.06	1.15	± 0.06
MTC100	Less than or equal to 0.061	0.20	± 0.03	-	-
	More than 0.061	1.10	± 0.06	1.15	± 0.06
MTCPQ	Less than or equal to 0.061	0.20	± 0.03	-	-
	More than 0.061	1.25	± 0.06	1.50	± 0.06

**UNSHIELDED WIRE PREPARATION
Figure 31**

Refer to Table 23 and Figure 31.

- (1) Remove the necessary length of insulation from the end of the wire.
- (2) If a heat shrinkable sleeve is specified:
 - (a) Make a selection of a heat shrinkable sleeve from Table 22.
NOTE: For alternate heat shrinkable sleeves, refer to Subject 20-00-11.
 - (b) Push the necessary length of heat shrinkable sleeve on the wire until the forward end of the sleeve is 0.20 inch ± 0.03 inch from the end of the wire.
Make sure that the sleeve makes approximately a 0.5 inch ± 0.2 inch overlap with the wire insulation.
 - (c) Shrink the sleeve into its position. Refer to Subject 20-10-14.

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

- (3) For size 16 and larger contact cavities:
 - (a) Measure the O.D. of the wire.
 - (b) If the O.D. of the wire is less than the minimum seal diameter of the connector grommet hole, increase the O.D. of the wire. Refer to Paragraph 1.C.

B. Shielded Cable Preparation

**Table 24
OUTER JACKET REMOVAL LENGTH**

Connector Series	Wire O.D. (inch)	Removal Length L (inch)	
		Target	Tolerance
ACIS	Less than or equal to 0.061	1.80	± 0.05
	Larger than 0.061	2.25	± 0.10
MTC100	Less than or equal to 0.061	1.80	± 0.05
	Larger than 0.061	2.25	± 0.10
MTC PQ	Less than or equal to 0.061	2.00	± 0.10
	Larger than 0.061	2.25	± 0.10

**SHIELDED CABLE PREPARATION
Figure 32**

Refer to Table 24 and Figure 32.

- (1) Remove the necessary length of outer jacket from the end of the cable.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC100, MTCPQ, AND MTCTQ CONNECTORS

- (2) Remove the necessary length of the shield that makes the distance from the end of the shield to the end of the outer jacket equal to 0.25 inch ±0.05 inch.
- (3) Assemble the necessary shield ground wires.

Refer to:

- Paragraph 5.C. for the ACIS and MTC100 connectors
- Paragraph 5.D. for the MTCPQ connector.

- (4) Prepare each wire. Refer to Paragraph 5.A.

C. Assembly of a Shield Ground Wire with a Terminal Lug

**Table 25
SHIELD GROUND WIRE TERMINAL LUGS**

Terminal Lug	Maximum Number of Shield Ground Wires	Supplier
321892	3	AMP
BACT12AR222	1	QPL
BACT12AC2	3	QPL
BACT12M2	3	QPL

- (1) Make a selection of an AWG 22 wire for a shield ground wire. Refer to Subject 20-10-15 for the type of wire.
- (2) Cut a 2.0 inch ±0.1 inch length of the wire.
- (3) Assemble the shield ground wire with a solder sleeve. Refer to Subject 20-10-15.

Make sure that the shield ground wire makes an exit from the end of the solder sleeve that is adjacent to the connector. Refer to Figure 33.

**SHIELD GROUND WIRE CONFIGURATION
Figure 33**

- (4) Assemble a terminal lug on the end of the wire or wires:
 - (a) Make a selection of a terminal lug from Table 25.
 - (b) Remove 0.17 inch ±0.01 inch of insulation from the end of each shield ground wire.
 - (c) Crimp the wire or wires in the crimp barrel of the terminal lug. Refer to Subject 20-30-11.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

D. Assembly of a Shield Ground Wire with a Contact

**Table 26
SHIELD GROUND WIRE LENGTH**

Shield Ground Wire Contact Installation	Cable Configuration	Length (inch)	
		Minimum	Maximum
Connector Contact Cavity	Shielded cable with one shield	2.5	2.8
	Shielded cable with two shields	-	4.0
	Microdot 202-3836-000	-	6.0
Ground Block Contact Cavity	Shielded cable with one shield	1.5	1.8
	Shielded cable with two shields	-	3.0
	Microdot 202-3836-000	-	5.0

**Table 27
GROUND BLOCK CONTACT CRIMP TOOLS**

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool			
		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color
22	22	M22520/2-01	4	M22520/2-09	-
		WA22	4		

- (1) Make a selection of a shield ground wire. Refer to Subject 20-10-15 for the type of wire. Make that the wire is AWG 22.
- (2) Cut the necessary length of the ground wire. Refer to Table 26.
- (3) Assemble the shield ground wire with a solder sleeve. Refer to Subject 20-10-15. Make sure that the shield ground wire makes an exit from the end of the solder sleeve that is:
 - Not adjacent to the connector for Microdot 202-3836-000 cable; refer to Figure 34
 - Adjacent to the connector for other shielded cables; refer to Figure 33.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

SHIELD GROUND WIRE CONFIGURATION FOR MICRODOT 202-3836-000 CABLE
Figure 34

- (4) Assemble a contact on the end of the wire:
 - (a) Make a selection of a size 22 contact from Table 9.
 - (b) Make a selection of a crimp tool from Table 27.
 - (c) Remove 0.15 inch \pm 0.03 inch of insulation from the end of the wire.
 - (d) Crimp the wire in the crimp barrel of the contact.

E. Contact Assembly

- (1) Find the applicable conditions for the adjustment of the conductor size in Table 28.
- (2) If a filler wire is specified, assemble the contact with a filler wire. Refer to Paragraph 5.F.
- (3) If an eyelet is specified, assemble the contact with an eyelet. Refer to Paragraph 5.G.
- (4) Make a selection of a crimp tool from Table 29.
- (5) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 35.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the shoulder of the contact is not more than 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 35

(6) Crimp the contact.

F. Contact Assembly with Filler Wire

For the conditions that are applicable for this procedure, refer to Paragraph 5.E.

Table 30
SIZE OF THE FILLER WIRE

Wire Size (AWG)	Crimp Barrel Size	Filler Wire	
		Quantity	Size (AWG)
26	20	1	26

Table 31
CONTACT CRIMP TOOLS

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool			
		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color
26	20	M22520/2-01	4	K818-11	-
		WA22	4	K818-11	-

- (1) Make a selection of a crimp tool from Table 31.
- (2) Find the quantity and the size of the filler wire in Table 30.
Make sure that the filler wire is the same wire type as the primary wire.
- (3) Prepare the end of the filler wire. Refer to Paragraph 5.A.
- (4) Put the end of each wire in the crimp barrel of the contact. Refer to Figure 36.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

Make sure that:

- All of the strands of each conductor are in the crimp barrel
- The conductors can be seen in the inspection hole
- The distance from the end of the insulation to the shoulder of the contact is not more than 0.03 inch.

POSITION OF THE PRIMARY WIRE AND THE FILLER WIRE IN THE CRIMP BARREL
Figure 36

(5) Crimp the contact.

Make sure that:

- All of the strands of each conductor are in the crimp barrel
- The conductors can be seen in the inspection hole
- The distance from the end of the insulation to the shoulder of the contact is not more than 0.03 inch.

(6) Remove the unwanted length of the filler wire as close as possible to the end of the crimp barrel. Refer to Figure 37.

CAUTION: DO NOT CUT OR CAUSE DAMAGE TO THE STRANDS OF THE PRIMARY WIRE. THE MECHANICAL STRENGTH OF THE WIRE CAN BE DECREASED.

REMOVAL OF THE UNWANTED LENGTH OF THE FILLER WIRE
Figure 37

G. Contact Assembly with an Eyelet

For the conditions that are applicable for this procedure, refer to Paragraph 5.E.

Table 32
CONTACT CRIMP TOOLS

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool			
		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color
24	16	M22520/1-01	5	M22520/1-04	Blue

		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color
22	16	M22520/1-01	6	M22520/1-04	Blue

- (1) Make a selection of a crimp tool from Table 32.
- (2) Make as selection of an eyelet from Table 12.
- (3) Put the eyelet in the crimp barrel of the contact.
Make sure that the shoulder of the eyelet is against the end of the crimp barrel.
- (4) Put the end of the wire in the eyelet. Refer to Figure 38.
Make sure that:
 - All of the strands of the conductor are in the crimp barrel
 - The conductor can be seen in the inspection hole
 - The distance from the end of the insulation to the shoulder of the eyelet is not more than 0.03 inch.

	RTM16-4	Blue	Metal
	ATBX1108	-	Metal
	MS27534-16	Blue	Plastic

(1) Make a selection of a contact insertion tool from Table 33.

CAUTION: DO NOT USE AN INSERTION TOOL THAT HAS:

- A BENT TIP
- A BENT BIT
- A FLARED TIP
- A BROKEN TIP
- A TIP WITH A CRACK.

WARNING: IF A DEFECTIVE INSERTION TOOL IS USED, INJURY TO THE OPERATOR CAN OCCUR.

CAUTION: A DEFECTIVE INSERTION TOOL CAN CAUSE:

- DAMAGE TO THE REAR GROMMET OF THE CONNECTOR
- DAMAGE TO THE CONTACT RETENTION CLIPS.

(2) Put the contact assembly in the insertion tool. Refer to Figure 39 and Figure 40.

POSITION OF THE SIZE 2020 CONTACT IN THE INSERTION TOOL
Figure 39

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

POSITION OF THE SIZE 1616 CONTACT IN THE INSERTION TOOL
Figure 40

- (3) For a size 20 pin contact, align the flat surface of the contact with the longitudinal axis of the connector insert. Refer to Figure 41.

POSITION OF THE PIN CONTACT FOR INSERTION
Figure 41

- (4) For a size 20 socket contact, align the flat surface of the contact with the perpendicular axis of the connector insert. Refer to Figure 42.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

POSITION OF THE SOCKET CONTACT FOR INSERTION
Figure 42

- (5) Push the tool and the contact into the contact cavity until the tool stops.
- (6) Carefully remove the tool from the contact cavity.
- (7) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (8) If the contact is not locked in the contact cavity:
 - (a) Pull the contact from the contact cavity.
 - (b) Do Step (2) through Step (7) again.

I. Fiber Optic Terminus Insertion

NOTE: A contact terminus can be installed before or after the alignment sleeve insert is installed in the connector.

CAUTION: THE CONTACT TERMINUS MUST HAVE PROTECTION FROM CONTAMINATION WITH A PROTECTION CAP OR A CLEAN PLASTIC BAG WHEN IT IS NOT INSTALLED IN THE CONNECTOR. CONTAMINATION OF THE CONTACT TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

Table 34
CONTACT TERMINUS INSERTION TOOLS

Terminus Size	Insertion Tool	
	Part Number	Color
16	M81969/14-03	Blue

20-74-11

STANDARD WIRING PRACTICES MANUAL**CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS**

- (1) Make a selection of a contact terminus insertion tool from Table 34.

CAUTION: DO NOT USE AN INSERTION TOOL THAT HAS A DEFECT. DAMAGE TO THE GROMMET OR THE RETENTION CLIPS CAN OCCUR.

- (2) If the contact terminus does not have a protection cap or is not in a plastic bag, examine the contact terminus. Refer to Subject 20-12-20.
- (3) Remove the protection from the contact terminus.
- (4) Carefully put the insertion tool on the cable and the contact terminus.

CAUTION: THE CONTACT TERMINUS MUST BE INSTALLED IN THE CONNECTOR IF IT DOES NOT HAVE PROTECTION FROM CONTAMINATION. CONTAMINATION OF THE CONTACT TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

CAUTION: DO NOT TOUCH THE FRONT FACE OF THE TERMINUS. CONTAMINATION ON THE TERMINUS CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

- (5) At the rear of the connector, axially align the insertion tool and the terminus with the contact terminus cavity.

ALIGNMENT OF THE CONTACT TERMINUS, THE INSERTION TOOL, AND THE CONTACT TERMINUS CAVITY
Figure 43

- (6) Carefully push the insertion tool and the contact terminus into the terminus cavity until it stops.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

CAUTION: IF THE INSERTION TOOL IS TURNED WHILE IT IS IN THE CAVITY, DAMAGE TO THE CONNECTOR CAN OCCUR.

CAUTION: DO NOT PUSH THE CABLE. DAMAGE TO THE FIBER OPTIC CABLE CAN OCCUR.

- (7) Carefully pull the insertion tool out of the terminus cavity.

Make sure that:

- The tool stays aligned with the cavity
- The tool is not turned in the cavity.

- (8) Lightly pull the cable to make sure that the terminus is locked in the terminus cavity.

20-74-11

STANDARD WIRING PRACTICES MANUAL**CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS**

CAUTION: DO NOT PULL THE CABLE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE TERMINUS, THE CABLE, OR THE CONNECTOR.

CAUTION: DO NOT MAKE A DENT IN THE CABLE JACKET WITH THE FINGERNAILS. DAMAGE TO THE CABLE JACKET CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CABLE.

- (9) If the terminus is not locked in the cavity:
 - (a) Pull the terminus out of the cavity.
 - (b) Do Step (4) through Step (8) again.
- (10) If the connector is not connected immediately, put the connector in a clean plastic bag.

CAUTION: THE CONNECTOR MUST HAVE PROTECTION FROM CONTAMINATION WHEN THE CONNECTOR IS NOT CONNECTED. UNSATISFACTORY PERFORMANCE OF THE CONNECTOR CAN OCCUR.

J. Seal of an Empty Contact Cavity and an Empty Terminus Cavity

An empty contact cavity or an empty terminus cavity must be sealed with a seal plug or a seal rod. Refer to Subject 20-60-08.

K. Insert Installation - Size 1 Shell

NOTE: The insert that has fiber optic contact cavities can only be installed in the MTCTQ connector shells.

NOTE: The MTCTQ connector shell can only contain the insert that has fiber optic contact cavities. Refer to Figure 44.

**INSTALLATION OF A CONNECTOR INSERT IN A SIZE 1 SHELL****Figure 44**

- (1) Align Side A of the connector insert with Side A of the connector shell.
- (2) Push the insert into the connector shell until it is locked in position.
- (3) Pull lightly on the wires to make sure that the insert is locked in the shell.
- (4) If the insert is not locked in the shell, do Step (2) and Step (3) again.

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

L. Insert Installation with Pin Contacts - Size 2 Shell

Refer to Figure 45.

INSTALLATION OF CONNECTOR INSERTS WITH PIN CONTACTS IN A SIZE 2 SHELL

Figure 45

- (1) Put the connector shell flat with Side A up.
- (2) Put the primary 1-10 insert on the right side with Side A1 up.
- (3) Put the secondary 11-20 or F-K insert on the left side with Side A2 up.
- (4) At the same time, push each of the inserts into the connector shell until each insert is locked in position.
- (5) Pull lightly on the wires to make sure that the each insert is locked in the shell.
- (6) If the inserts are not locked in the shell, do Step (4) and Step (5) again.

M. Insert Installation with Socket Contacts - Size 2 Shell

Refer to Figure 46.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

INSTALLATION OF CONNECTOR INSERTS WITH SOCKET CONTACTS IN A SIZE 2 SHELL
Figure 46

- (1) Put the connector shell flat with Side A up.
- (2) Put the primary 1-10 insert on the left side with Side A1 up.
- (3) Put the secondary 11-20 or F-K insert on the right side with Side A2 up.
- (4) At the same time, push each of the inserts into the connector shell until each insert is locked in position.
- (5) Pull lightly on the wires to make sure that the each insert is locked in the shell.
- (6) If the inserts are not locked in the shell, do Step (4) and Step (5) again.

N. Installation of a Cory Ground Block

For the installation of a Raychem ground block, refer to Paragraph 5.O.

Table 35
NECESSARY MATERIALS

Description	Part Number	Supplier
Thread Lock Compound	Loctite 222	Loctite
	Loctite 271	Loctite

Refer to Figure 10.

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTCPPQ, AND MTCTQ CONNECTORS

- (1) Make a selection of a Cory ground block from Table 9.
- (2) Make a selection of a screw from Table 8.
- (3) If the connector is a plug:
 - (a) Make a selection of a ground spring from Table 8.
 - (b) Put the ground spring on the connector shell.
- (4) Put the connector flat with Side A up.
- (5) Align each hole of the ground block with the applicable hole in the shell.
- (6) If the screw is not a self-lock screw:
 - (a) Make a selection of a thread lock compound from Table 35.
 - (b) Put one drop of thread lock compound on the threads of each screw.
- (7) Install each screw.

O. Installation of a Raychem Ground Block

For the installation of a Cory ground block, refer to Paragraph 5.N.

Refer to Figure 10.

- (1) Make a selection of a Raychem ground block from Table 9.
- (2) Put the connector flat with Side A up.
- (3) Align each hole of the ground block with the applicable hole in the shell.
- (4) Install each screw.

P. Contact Insertion in the Ground Block

**Table 36
GROUND BLOCK CONTACT INSERTION TOOLS**

Crimp Barrel Size	Insertion Tool		
	Part Number	Color	Description
22	M81969/14-01	Green	Plastic

- (1) Make a selection of a contact insertion tool from Table 36.
- (2) Put the contact assembly in the insertion tool.
- (3) Align the contact with the contact cavity.
- (4) Push the tool and the contact straight into the contact cavity until the tool stops.
- (5) Carefully remove the tool from the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE GROUND BLOCK OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact from the contact cavity.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

(b) Do Step (2) through Step (6) again.

Q. Strain Relief Assembly

**Table 37
NECESSARY PARTS AND MATERIALS**

Description	Part Number	Supplier
Tape, Filler, Silicone	10-62034	QPL
Thread Lock Compound	Loctite 222	Loctite
	Loctite 271	Loctite
Washer	NAS1149DN332J	QPL

These conditions are applicable:

- A maximum of six terminal lugs can be attached to one connector shell
- A maximum of three terminal lugs can be attached to one ear of the connector shell.

(1) Align the holes of each cable clamp bar with the holes in the ears of the connector shell.

(2) If a shield ground wire has a terminal lug:

(a) Put an equal quantity of terminal lugs between the clamp bars against each ear of the shell.

NOTE: If the length of the shield ground wire is not sufficient to be attached to an ear to keep the quantity equal, the terminal lugs can be attached to the same ear.

Refer to:

- Figure 47 for alternative positions of one terminal lug
- Figure 48 and Figure 49 for alternative positions of two terminal lugs
- Figure 50 for alternative positions of three terminal lugs.

**ALTERNATIVE POSITIONS FOR ONE TERMINAL LUG
Figure 47**

STANDARD WIRING PRACTICES MANUAL

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

ALTERNATIVE POSITIONS FOR THREE TERMINAL LUGS
Figure 50

- (b) Align the hole of each terminal lug with the hole in the ear of the shell.
- (c) If the clamp bars are not parallel, put the necessary number of washers below the clamp bar at the ear where the distance between the clamp bars is smaller.

Refer to:

- Table 37 for the washers
- Table 38 for the configuration of terminal lugs and washers.

Table 38
CONFIGURATION OF TERMINAL LUGS, WASHERS AND FILLER TAPE

Total Number of Terminal Lugs	Number of Terminal Lugs on One Ear	Number of Terminal Lugs on the Other Ear	Number of Washers on the Other Ear	Number of Strips of Filler Tape

6	3	3	0	2

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

(d) Put the necessary quantity of strips of filler tape on the cushion of the clamp bars.

Make sure that:

- The groove in the filler tape is against the cushion of the clamp bar
- The wires do not make an overlap.

Refer to:

- Table 37 for the filler tape
- Table 38 for the necessary quantity of strips of filler tape
- Table 39 for the length of the strips of filler tape
- Figure 51 for a cable clamp with one strip of filler tape
- Figure 52 for a cable clamp with two strips of filler tape.

Table 39
LENGTH OF SILICONE FILLER TAPE

Shell Size (inch)	Length (inch)

CABLE CLAMP WITH ONE STRIP OF FILLER TAPE
Figure 51

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

CABLE CLAMP WITH TWO STRIPS OF FILLER TAPE
Figure 52

- (3) Make a selection of an installation screw from Table 6.

NOTE: 2 screws are necessary.

- (4) For a NAS514P440-()P screw:

- (a) Make a selection of a thread lock compound from Table 37.
- (b) Put one drop of thread lock compound on the threads of the screw.

- (5) If the shield ground wire has a terminal lug:

- (a) Examine each ear of the connector shell.

Make sure that a terminal lug is not installed between the head of the screw and the clamp bar.

- (b) Align each ground wire to make the longitudinal axis of the terminal lug point to the wires and away from the sides of the connector shell. Refer to Figure 53.

NOTE: If the terminal lugs are pointed to the side of a connector, it is not possible to tighten the jack screw when the plug and the receptacle are engaged.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

POSITION OF SHIELD GROUND WIRE TERMINAL LUGS

Figure 53

(6) Install each screw.

Make sure that:

- The wires between the cushions of the clamp bars do not make an overlap
- The end of each screw extends through the clamp bar a minimum of one and a half threads
- The distance from the edge of the cable clamp to the end of the screw head is a maximum of 0.04 inch.

(7) Torque each screw 8.5 ± 0.5 inch-pounds.

6. CONNECTOR POLARIZATION AND THE CONNECTOR PART NUMBER

A. Connector Polarization and the Connector Part Number

NOTE: The polarization code in the connector part number identifies the polarization position of the key posts.

- (1) Find the polarization code in the connector part number from the equipment list.
- (2) For that code, find the correct connector polarization for the key posts. Refer to Figure 54.
- (3) If the polarization position of the key posts on the connector do not agree with the polarization code, put the key posts in the correct position.

Refer to Paragraph 6.C.

- (4) If the polarization code in the part number on the connector does not agree with the polarization positions, change the part number on the connector.

Refer to Paragraph 6.D.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

B. Polarization Key Post Positions

KEY POST POSITIONS
Figure 54

STANDARD WIRING PRACTICES MANUAL**CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS****C. Change of the Polarization Key Posts**

If the position of the key posts on a connector are changed, the polarization code in the connector part number must be changed. Refer to Paragraph 6.D.

- (1) Identify the polarization code in the connector part number from the equipment list.
- (2) For that code, find the correct key post positions. Refer to Figure 54.
- (3) Remove the incorrect polarization key post. Refer to Figure 55.

KEY POST REMOVAL
Figure 55

- (a) Make a selection of a pair of long needle nose pliers that has smooth surfaces and no sharp edges.

CAUTION: A NEEDLE NOSE PLIERS WITH A ROUGH SURFACE OR A SHARP EDGE CAN CAUSE DAMAGE TO THE KEY POST.
- (b) Hold the top of the key post tightly in the jaws of the pliers.
- (c) Pull the pliers straight back from the face of the connector.
- (4) Align the key post in the correct position with the key post slot in the connector shell. Refer to Figure 56.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

ALIGNMENT OF THE KEY POST AND THE KEY POST SLOT
Figure 56

- (5) Push the key post into the slot.
 Make sure that the key post is in the correct position.
- (6) Do Step (3) through Step (5) again for the second key post.
 Make sure that the key post is in the correct position.

D. Change of the Polarization Code, Any Part of the Connector Part Number, or the Complete Part Number, on the Connector Shell

Table 40
NECESSARY MATERIALS

Material	Part Number	Supplier
Ink	No. 68 Fast Dry	Independent
	No. 73X NW Opaque	Independent
	No. 73X Opaque	Independent
Paint, Clear	683-3-2	Akzo
	Clear Lacquer	Tartan
	EC-776	3M
	EC-776SR	3M
Pen	Permanent Ink Pen, Ultra Fine Point	Sanford Sharpie

- (1) Make a selection of these necessary materials from Table 40:
 - An ink or a permanent ink pen
 - A clear paint.
- (2) If the connector does not have a part number or a polarization code, write the part number and polarization code in the correct position on the connector shell.

20-74-11

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC100, MTCPQ, AND MTCTQ CONNECTORS

Refer to the details of the applicable connector part number:

- Figure 4 for the Cinch ACIS series
- Figure 5 for the Raychem MTC100 series
- Figure 6 for the Raychem MTCPQ series.

(3) If the connector part number or polarization code is incorrect:

- (a) Apply a layer of ink on the incorrect part number or polarization code on the connector shell. Make sure that the incorrect part number and polarization code cannot be read.
- (b) Write the new part number or polarization code on the connector shell:
 - Adjacent to the location of the incorrect part number and polarization code
 - In the correct position on the connector shell.

Refer to the details of the applicable connector part number:

- Figure 4 for the Cinch ACIS series
- Figure 5 for the Raychem MTC100 series
- Figure 6 for the Raychem MTCPQ series.

- (4) Let the ink dry for a minimum of 10 minutes.
- (5) Apply a layer of clear paint on the part number and polarization code on the connector shell.

CAUTION: DO NOT APPLY PAINT ON THE CONTACTS. PAINT ON THE SURFACE OF A CONTACT CAN CAUSE UNSATISFACTORY ELECTRICAL PERFORMANCE OF THE CONTACT.

- (6) Let the paint dry before the connector shell is touched or moved.

7. CONNECTOR INSTALLATION

A. Installation of the ACIS or MTC100 Receptacle in a Panel

**Table 41
INSTALLATION PANEL WASHERS**

Panel Thickness (inch)		Necessary Panel Washers
Minimum	Maximum	
0.073	0.103	0
0.042	0.072	1
0.011	0.041	2

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC PQ, AND MTCTQ CONNECTORS

RECEPTACLE INSTALLATION IN A PANEL

Figure 57

- (1) For installation with a panel gasket, put the panel gasket on the engaging end of the receptacle. Refer to Figure 57.
- (2) For installation without a panel gasket:
 - (a) Measure the thickness of the panel.
 - (b) Find the number of panel washers that are necessary for each adapter nut. Refer to Table 41.
 - (c) Put the necessary quantity of washers on each adapter nut.
- (3) From the back of the panel, push the receptacle into the connector slot in the panel.
- (4) From the front of the panel, put the adapter nuts and the necessary panel washers in the end of the connector slot in the panel and into the adapter nut hole in the end of the receptacle shell.
- (5) From the back of the panel, put an adapter nut screw on the end of each adapter nut.
- (6) Tighten the each screw with one of these tools:
 - A 7/64 inch hex-head driver
 - A 7/64 inch allen wrench.

Make sure that the front surface of the adapter nuts is at the same level as the front surface of the receptacle.
- (7) Torque the screws 13.5 ± 1.5 inch-pounds.

STANDARD WIRING PRACTICES MANUAL

CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTC100, MTC100, AND MTCTQ CONNECTORS

B. Installation of the MTC100 or MTCTQ Receptacle in a Panel

INSTALLATION OF THE RECEPTACLE
Figure 58

- (1) Align the receptacle installation holes with the holes in the panel. Refer to Figure 58.
Make sure that:
 - If the receptacle is installed horizontally, Side A is on top
 - If the receptacle is installed vertically, contact cavity 1 is on top.
- (2) Engage the threads of the screws and the quick disconnect post.
- (3) Torque the screw 20.0 inch-pounds ± 2.0 inch-pounds.

C. Plug and Receptacle Connection

Table 42
CONNECTOR INSTALLATION TOOLS

Driver				Calibration (inch-pound)	
Handle		Tip		Target	Tolerance
Part Number	Supplier	Part Number	Supplier		
CE-1603400	Raychem	CE-1603600	Raychem	-	-
TS-35	UTICA	7/64 Hex	Any Source	9.0	± 1.0

STANDARD WIRING PRACTICES MANUAL

CONNECTION OF THE ASIC OR MTC100 PLUG AND RECEPTACLE

Figure 59

CONNECTION OF THE MTC100 PLUG AND RECEPTACLE

Figure 60

- (1) To connect an ACIS or a MTC100 plug and an inline receptacle:
 - (a) Make a selection of a connection tool from Table 42.
 - (b) Put three washers on each adapter nut of the receptacle.
 - (c) Put the adapter nuts in the mounting holes of the receptacle.

STANDARD WIRING PRACTICES MANUAL**CINCH ACIS CONNECTORS, RAYCHEM MTC100, MTCPPQ, AND MTCTQ CONNECTORS**

- (d) Tighten the adapter nut screws with one of these tools:
- A 7/64 inch hex-head driver
 - A 7/64 inch allen wrench.
- Make sure that the front surface of the adapter nut is level with the front surface of the receptacle.
- (e) Align the front face of the plug with the front face of the receptacle. Refer to Figure 59.
Make sure that:
- Side A of the plug is on the same side as the Side A of the receptacle
 - The key posts in the plug and the receptacle are in the correct positions.
- (f) Push the plug into the receptacle.
- (g) Turn each captivated jack screw two turns in the clockwise direction.
- (h) Turn each screw again until the screw does not turn.
- (2) To connect an ACIS or MTC100 plug and a receptacle that is installed in a panel:
- (a) Make a selection of a connection tool from Table 42.
- (b) Align the front face of the plug with the front face of the receptacle. Refer to Figure 59.
Make sure that:
- Side A of the plug is on the same side as the Side A of the receptacle
 - The key posts in the plug and the receptacle are in the correct positions.
- (c) Push the plug into the receptacle.
- (d) Turn each captivated jack screw two turns in the clockwise direction.
- (e) Turn each screw again until the screw does not turn.
- (3) To connect a MTCPPQ or MTCTQ plug and a receptacle:
- (a) Make a selection of one of these tools:
- A 7/64 inch hex-head driver with or without a ball type end
 - A 7/64 inch allen wrench with or without a ball type end
 - A screwdriver.
- (b) Align the front face of the plug with the front face of the receptacle. Refer to Figure 60.
Make sure that:
- Side A of the plug is on the same side as the Side A of the receptacle
 - The key posts in the plug and the receptacle are in the correct positions.
- (c) Push the plug into the receptacle.
- (d) Put the tool on the head of one of the quick disconnect screws.
- (e) At the same time, push the tool and turn the screw 1/4 turn in the clockwise direction.
- (f) Put the tool on the head of the other quick disconnect screw.
- (g) At the same time, push the tool and turn the screw 1/4 turn in the clockwise direction.
- (h) Turn each screw again until the screw does not turn.

20-74-12 CONTENTS

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Insert

Refer to Subject 20-74-02.

B. Damage Conditions - Front Face of the Insert

Refer to Subject 20-74-02.

C. Damage Conditions - BACC69A Fiber Optic Cable Assembly

The cable assembly must be replaced when one of these conditions occur:

- The fiber optic cable has damage that makes the cable assembly unserviceable; refer to Subject 20-12-20
- The fiber optic contact terminus has damage; refer to Subject 20-12-20.

D. Damage Conditions - EMI Ground Springs

The EMI Ground Springs must be replaced when one or more of the ground spring fingers is bent or broken.

E. Damage Conditions - Cable Clamp

The cable clamp must be replaced if:

- The clamp has a crack
- A wire harness tie tab is broken.

Refer to Figure 17.

F. Minimum Wire O.D. for an Environmentally Sealed Connector

Refer to Subject 20-74-02.

2. PART NUMBERS AND DESCRIPTION

A. Connector Shell Part Numbers

**Table 1

Connector Shell	Supplier
BACC65AA()	Radiall
BACC65AB()	Radiall

B. Connector Description

Refer to:

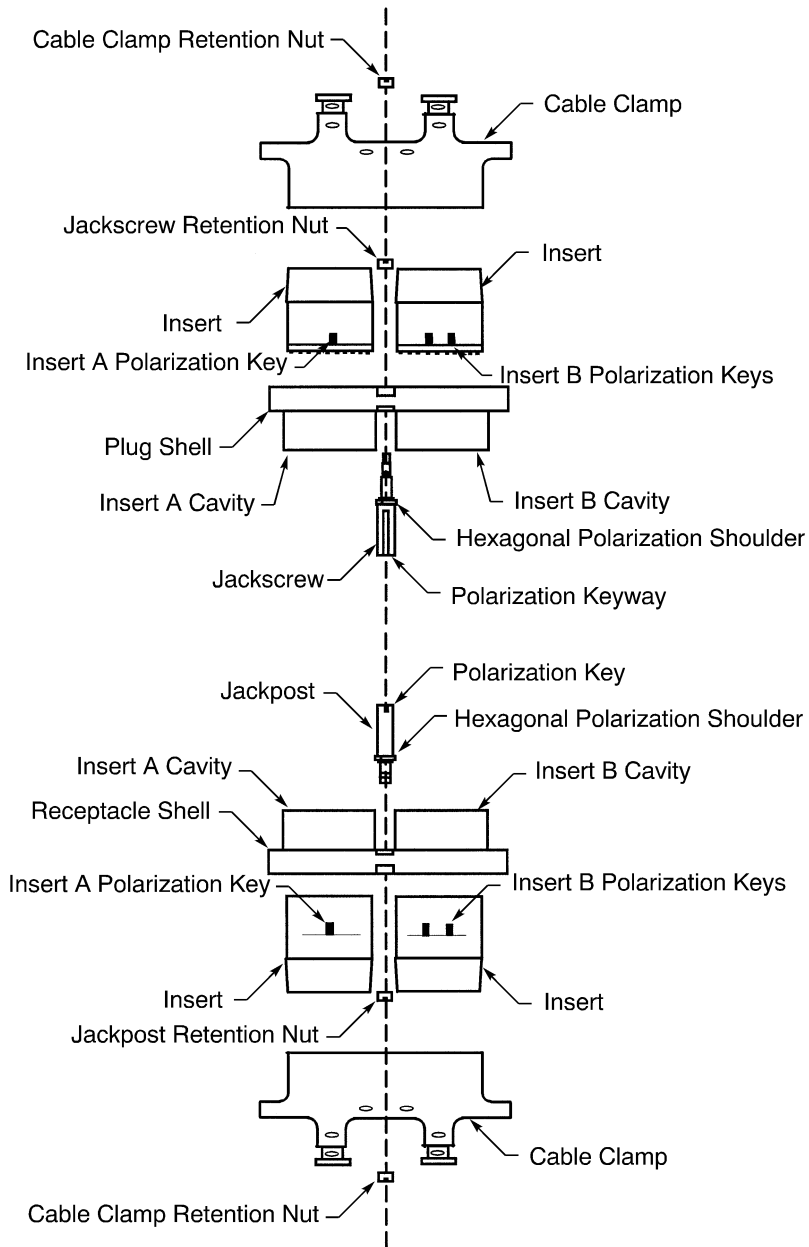

- Figure 2 for the configuration of the BACC65AA() plug and BACC65AB() receptacle
- Figure 3 for the BACC65AA() plug
- Figure 4 for the BACC65AB() receptacle
- Figure 5 for the BACC65AA() plug with a ground block
- Figure 6 for the BACC65AB() receptacle with a ground block.

The BACC65AA and BACC65AB connectors have these technical features:

- A rectangular metal shell
- A ground block
- EMI ground springs on the receptacle with a ground block
- A center jackscrew and jackpost for the retention of the plug and receptacle
- 6 polarization positions
- The polarization key is part of the jackpost for the receptacle
- The polarization keyway is part of the jackscrew for the plug
- 2 removable inserts
- Rear release, rear removal, crimp type contacts
- Rear release, rear removal, fiber optic termini
- A removable cable clamp.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

4. CONNECTOR DISASSEMBLY

A. Connector Separation

**Table 10
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	9/64
	Screwdriver, Hex	9/64

- (1) Make a selection of a driver from Table 10.
- (2) Turn the jackscrew on the plug counterclockwise with the driver until it is disengaged. Refer to Figure 10.

**ALIGNMENT OF THE WRENCH
Figure 10**

- (3) Pull the plug straight away from the receptacle. Refer to Figure 11.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

SEPARATION OF THE PLUG AND THE RECEPTACLE

Figure 11

- (4) For a receptacle with a fiber optic insert, install a protective cap. Refer to Paragraph 4.B.

NOTE: A sealed clean plastic bag is a satisfactory alternative for the protection from contamination.

CAUTION: THE CONNECTOR WITH A FIBER OPTIC CONTACT TERMINUS MUST HAVE PROTECTION FROM CONTAMINATION WHEN THE CONNECTOR IS NOT CONNECTED. CONTAMINATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

- (5) For a plug connector with a fiber optic insert, put the plug in a clean plastic bag.

CAUTION: THE CONNECTOR WITH A FIBER OPTIC CONTACT TERMINUS MUST HAVE PROTECTION FROM CONTAMINATION WHEN THE CONNECTOR IS NOT CONNECTED. CONTAMINATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

B. Fiber Optic Insert Receptacle Cap Installation

**Table 11
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	9/64
	Screwdriver, Hex	9/64
Torque	Allen Wrench	9/64
	Screwdriver, Hex	9/64

**INSTALLATION OF THE CAP
Figure 12**

(1) Make a selection of these tools from Table 11:

- A driver
- A torque tool.

NOTE: The driver can have a ball type end.

(2) Align the cap with the face of the engaging face of the receptacle.

Make sure that the end of the cap that has threads is pointed to the face of the receptacle.

(3) Fully engage the threads of the installation screw and the screw hole in the receptacle.

(4) Torque the screw to 7 inch-pounds \pm 1 inch-pound.

C. Removal of the Receptacle from a Panel

**Table 12
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Phillips Head Screwdriver	-
	Socket Wrench	1/4

(1) Make a selection of a driver from Table 12.

20-74-12

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

- (2) Remove the plastic tie straps or wire harness ties that:
 - Hold the wire harness to structure
 - Are less than 9 inches from the connector.
- (3) Remove the four installation screws. Refer to Figure 13.

REMOVAL OF THE RECEPACLE
Figure 13

- (4) Discard the four screws.
- (5) Pull the connector from the structure.

D. Removal of the Alignment Sleeve Insert

Refer to Subject 20-74-02.

E. Insert Removal

NOTE: It is not necessary to remove the insert contacts, or the cable clamp before an insert is removed.

Table 13
INSERT REMOVAL TOOLS

Tool	Part Number
Insert Removal Tool	282 521 002

- (1) Make a selection of an insert removal tool from Table 13.
- (2) If the connector has:
 - A cable clamp, remove the plastic tie straps or the wire harness ties from the clamp.
 - A ground block, remove the ground block contacts from the ground block; refer to Paragraph 4.G.
- (3) From the rear of the connector, align the two ends of the removal tool with the shorter sides of the insert. Refer to Figure 14.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS****ALIGNMENT OF THE INSERT REMOVAL TOOL****Figure 14**

- (4) Carefully push the removal tool between the insert cavity and the insert. Make sure to keep the tool aligned with the insert.
- (5) Push the two sides of the tool at the same time into the connector.
- (6) Pull the insert removal tool and the insert straight out of the connector. Refer to Figure 15.

**REMOVAL OF THE INSERT****Figure 15****F. Seal Plug and Seal Rod Removal**

Refer to Subject 20-74-02.

G. Contact Removal

This paragraph gives the procedure to remove size 16 ground block contacts from the connector ground block.

Refer to Subject 20-74-02. to remove contacts from the connector insert.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

**Table 14
REMOVAL TOOLS FOR SIZE 16 GROUND BLOCK CONTACTS**

Ground Block Contact Cavity Size	Removal Tool	
	Part Number	Color
16	ATR2080	-
	ATR2079	-
	M81969/14-11	White
	RRX20B	-

(1) Make a selection of a contact removal tool from Table 14 for the ground block contacts.

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE GROMMET OR THE RETENTION CLIP.

- (2) Remove the plastic tie straps or the wire harness ties that are less than 6 inches from the connector.
- (3) Put the tip of the removal tool on the wire near the grommet or the ground block.
- (4) Axially align the removal tool and the contact cavity.
- (5) Carefully push the removal tool straight into the contact cavity until it stops.
- (6) Carefully pull the wire and the removal tool straight out of the contact cavity at the same time.
- (7) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the removal tool approximately 90 degrees.
 - (c) Do Step (3) through Step (6) again.

H. Contact Terminus Removal

Refer to Subject 20-74-02.

I. EMI Ground Spring Removal

**EMI GROUND SPRING REMOVAL
Figure 16**

Refer to Figure 16.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

- (1) Make a selection of a tool with a small sharp point at a right angle to the handle.
- NOTE: An awl is a satisfactory tool.
- (2) Carefully put the tip of the tool between the inner wall of the insert cavity and the bottom of the middle finger of the ground spring.
 - (3) Push the tip of the tool through the slot against the ground spring latch that is behind the ground spring fingers.
 - (4) Pull the ground spring away from the insert cavity.

J. Cable Clamp Removal

**Table 15
CABLE CLAMP REMOVAL TOOLS**

Tool	Type	Size (inch)	Part Number
Driver	Retention Nut Wrench	-	282664
	Socket Wrench	1/4	-

**CABLE CLAMP REMOVAL
Figure 17**

Refer to Figure 17.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

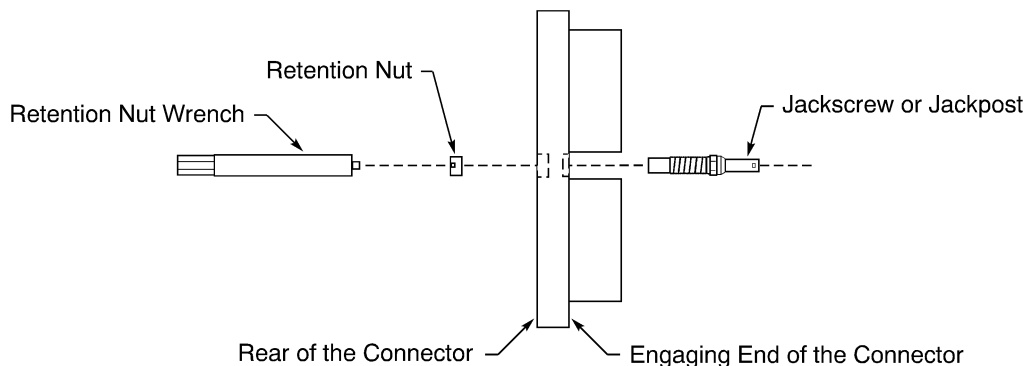

- (1) Make a selection of these tools from Table 15.
 - A retention nut wrench
 - A socket wrench.
- (2) Remove the plastic tie straps or the wire harness tie from the cable clamp.
- (3) If the connector has a ground block, and the ground block has contacts that are installed, remove the contacts from the ground block. Refer to Paragraph 4.G.
- (4) If the inserts are installed and have wired contacts, remove the inserts from the connector. Refer to Paragraph 4.E.
- (5) Put the retention nut wrench with the socket wrench on the cable clamp retention nut.
- (6) Turn the wrench counterclockwise until the threads of the cable clamp retention nut are disengaged with the threads of the jackscrew or jackpost.
- (7) Pull the cable clamp straight from the connector.

K. Jackscrew and Jackpost Removal

**Table 16
JACKSCREW AND JACKPOST REMOVAL TOOLS**

Tool	Type	Size (inch)	Part Number
Driver	Retention Nut Wrench	-	282664
	Socket Wrench	1/4	-

- (1) Make a selection of these tools from Table 16.
 - A retention nut wrench
 - A socket wrench.
- (2) Make a selection of a socket wrench from Table 16.
- (3) If a cable clamp is installed, remove it. Refer to Paragraph 4.J.
- (4) Put the retention nut wrench with the socket wrench on the retention nut on the rear of the connector. Refer to Figure 18.

**JACKSCREW AND JACKPOST REMOVAL
Figure 18**

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS**

- (5) Turn the wrench counterclockwise until the threads of the retention nut are disengaged with the threads of the jackscrew or jackpost.
- (6) Pull the jackscrew or jackpost straight out the engaging side of the connector. Refer to Figure 18.

5. CONNECTOR ASSEMBLY**A. Connector Jackscrew and Jackpost Installation**

Polarization of the connector must be done before the installation of the cable clamp.

Refer to Paragraph 6.

B. Cable Clamp Installation

The cable clamp:

- Must be installed on the connector before the installation of an insert with assembled contacts
- Can be installed before or after the installation of an insert with unwired contacts.

Table 17
NECESSARY MATERIALS

Material	Part Number	Supplier
Thread Lock Compound	222	Loctite
Tape	Scotch 70	3M

Table 18
CABLE CLAMP INSTALLATION TOOLS

Tool	Type	Size (inch)	Part Number
Driver	Retention Nut Wrench	-	282664
Torque	Socket Torque Wrench	1/4	-

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

CABLE CLAMP INSTALLATION

Figure 19

Refer to Figure 19.

- (1) Make a selection of these tools from Table 18.
 - Retention nut wrench
 - Socket torque wrench.
- (2) Make a selection of these materials from Table 17.
 - Thread lock compound
 - Tape.
- (3) Align the four locators on the cable clamp with the four slots on the rear of the connector.
- (4) Put the cable clamp on the rear side of the connector. Make sure that the locators are in the slots.
- (5) Put a drop of the thread lock compound on a minimum of two threads of the cable clamp retention nut included with the cable clamp.
- (6) Engage the threads of the cable clamp retention nut with the threads of the jackscrew.
- (7) Torque the cable clamp retention nut 7 inch-pounds \pm 1 inch-pound.
- (8) Wind two layers of tape around one of the wire harnesses where the harness is against a wire harness tie tab.
- (9) Assemble a wire harness tie or install a plastic tie strap on the wire harness and the wire harness tie tab. Refer to Subject 20-10-11.
- (10) Do Step (8) and Step (9) for the other wire harness.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

C. Shield Ground Wire Assembly

This paragraph gives the procedure to assemble a shield ground wire and a contact for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Raychem 55A6160-() cable, refer to Paragraph 5.D.
- BMS13-60 Type 27 Class 1 wire, refer to Paragraph 5.E.

(1) Remove 2.5 inches ± 0.1 inch of the cable jacket from the end of the cable. Refer to Figure 20.

CABLE JACKET REMOVAL
Figure 20

(2) Assemble an insulated shield ground wire. Refer to Subject 20-10-15.

NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to:

- Table 3 for the ground block contact
- Subject 20-74-02 for the insert contact.

Make sure that:

- The shield ground wire assembly components are applicable for the shield material of the wire
- The length of the shield ground wire is 2.5 inches minimum
- The free end of the shield ground wire is pointed forward to the end of the cable.

CAUTION: A SHIELD GROUND WIRE ASSEMBLY WITH A SOLDER SLEEVE IS NOT APPLICABLE FOR A CABLE OR A WIRE WITH A SHIELD THAT HAS NICKEL PLATED CONDUCTORS. UNSATISFACTORY PERFORMANCE OF THE SHIELD TERMINATION CAN OCCUR.

(3) Remove the unwanted length from the end of the shield ground wire and the wires of the cable. Refer to Figure 21.

LENGTH OF THE SHIELD GROUND WIRE AND THE WIRES OF THE CABLE
Figure 21

20-74-12

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

NOTE: The connection of the shield and the shield ground wire can be:

- The melted solder ring of a solder sleeve
 - A mechanical ferrule
 - An RSK Shield-Kon.
- (a) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the connection to the end of the shield ground wire equal to 2.0 inches maximum.
- (b) Remove the necessary length from the end of the each wire of the cable to make the distance from the forward edge of the connection to the end of the wire equal to 2.00 inches \pm 0.06 inch.
- (4) Assemble the specified contact on the end of the shield ground wire.
- For the assembly of:
- A ground block contact, refer to Paragraph 5.G.
 - An insert contact, refer to Paragraph 5.F.

D. Shield Ground Wire Assembly for Raychem 55A6160-() Cable

This paragraph gives the procedure to assemble the shield ground wires and contacts for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Wire or cable that has one shield, refer to Paragraph 5.C.
- BMS13-60 Type 27 Class 1 wire, refer to Paragraph 5.E.

**Table 19
NECESSARY PARTS**

Part	Boeing Standard	Shield Ground Wire Size (AWG)
Solder Sleeve with an integral wire	BACS13CT3C	20

- (1) Make a selection of a solder sleeve with an integral wire from Table 19.

NOTE: Two solder sleeves are necessary.

Refer to Subject 20-10-15 for approved suppliers of Boeing standard solder sleeves.

- (2) Prepare the cable for termination of the outer shield. Refer to Figure 22 and Subject 20-00-15.

**OUTER JACKET AND OUTER SHIELD REMOVAL
Figure 22**

- (a) Remove 2.80 inches \pm 0.02 inch of the outer jacket from the end of the cable.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

- (b) Remove the necessary length of the shield to make the distance from the end of the jacket to the end of the shield equal to 0.25 inch \pm 0.06 inch.
- (3) Assemble the shield ground wire of the outer shield. Refer to Figure 23.

TERMINATION OF THE OUTER SHIELD
Figure 23

- (a) Put the solder sleeve on the wire or cable.
 Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the cable
 - The large end of the solder sleeve is put on the wire or cable first
 - The inner edge of the rear seal ring is aligned with the end of the outer jacket.
- (b) Shrink the solder sleeve into its position.
 Make sure that:
 - The solder sleeve stays in the correct position
 - A minimum of 75 percent of the indicator ring on top of the solder ring is melted.
- (c) Remove the necessary length of the shield ground wire to make the distance from the forward edge of the solder ring to the end of the wire equal to 2.0 inches maximum.
- (4) Prepare the cable for termination of the inner shield. Refer to Figure 24 and Subject 20-00-15.

INNER JACKET AND INNER SHIELD REMOVAL
Figure 24

- (a) Remove 2.00 inches \pm 0.02 inch of the inner jacket from the end of the cable.
- (b) Remove the necessary length of the inner shield to make the distance from the end of the shield to the end of the jacket equal to 0.25 inch \pm 0.06 inch.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

- (c) Remove the necessary length of the red wire to make the distance from the end of the red wire to the end of the blue wire equal to 0.30 inch \pm 0.02 inch.
- (d) Remove 0.21 inch \pm 0.02 inch of insulation from the end of the blue wire. Refer to Subject 20-00-15.
- (5) Assemble the shield ground wire of the inner shield. Refer to Figure 25.

Make sure that:

- The free end of the shield ground wire is pointed forward to the end of the cable
- The large end of the solder sleeve is put on the wire or cable first
- The inner edge of the rear seal ring is aligned with the end of the jacket.

TERMINATION OF THE INNER SHIELD
Figure 25

- (a) Fold the blue wire back and put the end of the wire between the inner shield and the rear end of the solder sleeve.

Make sure the center of the conductor is aligned with the solder ring of the solder sleeve.

CAUTION: THE STRANDS OF THE WIRE MUST NOT GO INTO THE SHIELD OF THE CABLE. A SHORT CIRCUIT BETWEEN THE CONDUCTOR OF THE WIRE CAN OCCUR.

- (b) Shrink the solder sleeve into its position.

Make sure that:

- The solder sleeve stays in the correct position
- A minimum of 75 percent of the indicator ring on top of the solder ring is melted.

- (c) Remove the necessary length of the shield ground wire to make the distance from the forward edge of the solder ring to the end of the wire equal to 2.0 inches maximum.

- (6) Assemble the specified contact on the end of each shield ground wire.

For the assembly of:

- A ground block contact, refer to Paragraph 5.G.
- An insert contact, refer to Paragraph 5.F.

E. Shield Ground Wire Assembly for BMS13-60 Type 27 Class 1 Wire

Table 20
WIRE TYPE CODES

Cable Description	Wire Type Code
BMS13-60 Type 27 Class 1	M1

20-74-12

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

This paragraph gives the procedure to assemble shield ground wires and contacts for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Wire or cable that has one shield, refer to Paragraph 5.C.
- Raychem 55A6160-() cable, refer to Paragraph 5.D.

**Table 21
MECHANICAL FERRULE PART NUMBERS**

Shield	Ferrule Type	Boeing Standard
Inner	Inner	BACS13S071BNP
	Outer	BACS13S149CNP
Outer	Inner	BACS13S090BNP
	Outer	BACS13S175CNP

NOTE: Refer to Subject 20-10-15 for approved suppliers of Boeing standard mechanical ferrules.

**Table 22
NECESSARY MATERIALS**

Material	Part Number	Supplier
Sleeve, Heat Shrinkable	SAE-AMS-DTL-23053/12 Class 2	QPL
	SAE-AMS-DTL-23053/12 Class 5	QPL
	TFE-2X	Zeus
	TFE-4X	Zeus

- (1) Prepare the cable for the termination of the outer shield. Refer to Figure 26 and Subject 20-00-15.

**OUTER JACKET AND OUTER SHIELD REMOVAL
Figure 26**

- (a) Remove 2.60 inches ±0.02 inch of the outer jacket from the end of the cable.
- (b) Remove the necessary length of the outer shield to make the distance from the end of the jacket to the end of the shield equal to 0.35 inch ±0.03 inch.
- (2) Assemble the shield ground wire of the outer shield. Refer to Figure 27.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

TERMINATION OF THE OUTER SHIELD

Figure 27

- (a) Make a selection of an inner and outer ferrule from Table 21.
- (b) Make a selection of a ferrule crimp tool. Refer to Subject 20-10-15.
- (c) Make a selection of a heat shrinkable sleeve from Table 22.
Make sure that the heat shrinkable sleeve has the smallest diameter that can move freely on the shield ground wire assembly.
- NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.
- (d) Make a selection of a shield ground wire. Refer to Subject 20-10-15.
NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to Table 3 for the ground block contact.
- (e) Put the outer ferrule on the cable.
- (f) Put the inner ferrule on the cable.
Make sure that:
 - The inner ferrule is between the shield and the inner jacket
 - The rear end of the inner ferrule is tight against the end of the outer jacket.
- (g) Remove the necessary length of insulation from one end of the shield ground wire. Refer to Subject 20-00-15.
Make sure that the bare conductor can extend a small amount farther than the length of the outer ferrule.
- (h) Put the conductor of the shield ground wire between the shield and the outer ferrule.
Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the wire
 - The bare conductor extends a small amount farther than the rear end of the outer ferrule.
- (i) Push the outer ferrule and the shield ground wire forward until the center of the outer ferrule is aligned with the center of the inner ferrule.
- (j) Make sure that the forward end of the inner ferrule does not extend farther than 0.06 inch from the forward end of the outer ferrule.
- (k) Crimp the outer ferrule.
- (l) Remove the unwanted length of the shield that extends farther than the forward edge of the outer ferrule.

NOTE: The outer surface of the inner ferrule can be used to cut against.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

- (m) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the outer ferrule to the end of the wire equal to 2.0 inches maximum.
- (n) Put the necessary length of heat shrinkable sleeve on the wire or cable.

Make sure that the distance:

- From the rear end of the ferrule to the rear end of the sleeve is 0.25 inch minimum
- From the forward end of the ferrule to the forward end of the sleeve is 0.5 inch minimum.

- (o) Shrink the sleeve into its position. Refer to Subject 20-10-14.

- (3) Prepare the cable for the termination of the inner shield. Refer to Figure 28 and Subject 20-00-15.

INNER JACKET AND INNER SHIELD REMOVAL

Figure 28

- (a) Remove 1.85 inches ± 0.02 inch of the inner jacket from the end of the cable.
 - (b) Remove the necessary length of the inner shield to make the distance from the end of the jacket to the end of the shield equal to 0.35 inch ± 0.03 inch.
- (4) Assemble the shield ground wire of the inner shield. Refer to Figure 29.

TERMINATION OF THE INNER SHIELD

Figure 29

- (a) Make a selection of an inner and outer ferrule from Table 21.
- (b) Make a selection of a ferrule crimp tool. Refer to Subject 20-10-15.
- (c) Make a selection of a heat shrinkable sleeve from Table 22.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS**

Make sure that the heat shrinkable sleeve has the smallest diameter that can move freely on the shield ground wire assembly.

NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.

- (d) Make a selection of a shield ground wire. Refer to Subject 20-10-15.

NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to Subject 20-74-02 for the insert contact.

- (e) Put the outer ferrule on the cable.
(f) Put the inner ferrule on the cable.

Make sure that:

- The inner ferrule is between the shield and the primary insulation
- The rear end of the inner ferrule is tight against the end of the inner jacket.

- (g) Remove the necessary length of insulation from one end of the shield ground wire. Refer to Subject 20-00-15.

Make sure that the bare conductor can extend a small amount farther than the length of the outer ferrule.

- (h) Put the conductor of the shield ground wire between the shield and the outer ferrule.

Make sure that:

- The free end of the shield ground wire is pointed forward to the end of the wire
- The bare conductor extends a small amount farther than the rear end of the outer ferrule.

- (i) Push the outer ferrule and the shield ground wire forward until the center of the outer ferrule is aligned with the center of the inner ferrule.

- (j) Make sure that the forward end of the inner ferrule does not extend farther than 0.06 inch from the forward end of the outer ferrule.

- (k) Crimp the outer ferrule.

- (l) Remove the unwanted length of the shield that extends farther than the forward edge of the outer ferrule.

NOTE: The outer surface of the inner ferrule can be used to cut against.

- (m) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the outer ferrule to the end of the wire equal to 2.0 inches maximum.

- (n) Put the necessary length of heat shrinkable sleeve on the wire or cable.

Make sure that the distance:

- From the rear end of the ferrule to the rear end of the sleeve is 0.25 inch minimum
- From the forward end of the ferrule to the forward end of the sleeve is 0.5 inch minimum.

- (o) Shrink the sleeve into its position. Refer to Subject 20-10-14.

- (5) Assemble the specified contact on the end of each shield ground wire.

For the assembly of:

- A ground block contact, refer to Paragraph 5.G.
- An insert contact, refer to Paragraph 5.F.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

F. Contact Assembly

For the procedure to assemble:

- Insert contacts, refer to Subject 20-74-02.
- Ground block contacts, refer to Paragraph 5.G.

G. Ground Block Contact Assembly

**Table 23
GROUND BLOCK CONTACT CRIMP TOOLS**

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool			
		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color
20	20	M22520/1-01	4	M22520/1-02	Red
		M22520/2-01	7	M22520/2-11	-
		WA22	7	M22520/2-11	-
		WA22LC	7	M22520/2-11	-
		WA27F	4	M22520/1-02	Red
18	18	M22520/1-01	5	M22520/1-02	Red
		WA27F	5	M22520/1-02	Red

- (1) Make a selection of a crimp tool from Table 23.
- (2) Remove 0.18 inch ± 0.02 inch of insulation from the end of the shield ground wire.

Refer to:

- Figure 30
- Subject 20-00-15 for the insulation removal procedures.

**INSULATION REMOVAL LENGTH
Figure 30**

- (3) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 31.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the crimp barrel is not more than 0.03 inch.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

POSITION OF THE WIRE IN THE CRIMP BARREL OF THE CONTACT
Figure 31

(4) Crimp the contact.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the crimp barrel is not more than 0.03 inch.

H. Assembly of Size 5 Power Contacts

Refer to Subject 20-74-02.

I. Size 5 Coax Contact Assembly

Refer to Subject 20-74-02.

J. Assembly of Size 8 Coax Contacts

Refer to Subject 20-74-02.

K. Twinax Cable Preparation and Contact Assembly

Refer to Subject 20-74-02.

L. Size 8 Quadrax Contact Assembly

Refer to Subject 20-74-02.

M. Contact Insertion

This paragraph gives the procedure to install ground block contacts. For the procedure to install other contacts in the connector insert, refer to Subject 20-74-02.

Table 24
GROUND BLOCK CONTACT INSERTION TOOLS

Ground Block Contact Cavity Size	Contact Size	Insertion Tool

		ST2220-2-28	-

20-74-12

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS**

- (1) If a strain relief clamp is specified, put the strain relief clamp on the wire harness.
Make sure that the wire harness tie tab of the strain relief points away from the end of the harness.
- (2) Make a selection of the contact insertion tool from Table 24 for ground block contacts.
NOTE: An insertion tool is not necessary.
- (3) If an insertion tool is used:
 - (a) Put the contact assembly in the insertion tool.
 - (b) Axially align the insertion tool, the contact assembly and the contact cavity.
Make sure that the insertion tool and the contact assembly are perpendicular to the rear face of the ground block.
 - (c) Carefully push the insertion tool into the contact cavity until it stops.
Make sure that:
 - The contact assembly and the contact cavity stay aligned
 - Tension does not occur between the shield ground wire and the solder sleeve or the contact crimp barrel.
 - (d) Carefully pull the insertion tool out of the contact cavity.
Make sure that the insertion tool stays aligned with the contact cavity.
 - (e) Remove the insertion tool from the wire.
- (4) If an insertion tool is not used:
 - (a) Axially align the contact assembly and the contact cavity.
Make sure that the contact assembly is perpendicular to the rear face of the ground block.
 - (b) Carefully push the the contact assembly into the contact cavity until it stops.
Make sure that:
 - The contact assembly and the contact cavity stay aligned
 - Tension does not occur between the shield ground wire and the solder sleeve or the contact crimp barrel.
- (5) Lightly pull the wire to make sure that the contact is locked in the contact cavity.
CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.
CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.
- (6) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly from the contact cavity.
 - (b) Do Step (3) or Step (4) again.

N. Insertion of Fiber Optic Contact Termini

Refer to Subject 20-74-02.

O. Size 5 Coax Contact Insertion

Refer to Subject 20-74-02.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

P. Insertion of Size 8 Coax and Size 8 Twinax Contacts

Refer to Subject 20-74-02.

Q. Installation of Size 8 Quadrax Contacts

Refer to Subject 20-74-02.

R. Seal of an Empty Contact Cavity

Refer to Subject 20-74-02.

S. Seal of an Empty Contact Terminus Cavity

An empty contact terminus cavity must be sealed with a seal plug or a seal rod. Refer to Subject 20-60-08.

NOTE: The size of the contact terminus cavity is equivalent to the size 16 contact cavity.

T. EMI Ground Spring Installation

EMI GROUND SPRING INSTALLATION
Figure 32

Note: A receptacle with a ground block must have EMI ground springs installed.

Refer to Figure 32.

- (1) From the engaging end of the connector, align the EMI ground spring with the longer sides of the insert cavity.
 Make sure that the three springs are on the inside of the insert cavity.
- (2) Push the ground spring to the face of the connector shell until the latch on the spring locks in the slot on the side of the insert cavity.

U. Insert Installation

NOTE: The inserts can be installed with or without contacts.

If a cable clamp is specified, it must be installed before an insert with assembled contacts is installed in the connector shell.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

ALIGNMENT OF THE INSERTS IN THE RECEPTACLE

Figure 33

ALIGNMENT OF OF THE INSERTS IN THE PLUG

Figure 34

Refer to Figure 33 and Figure 34.

- (1) Align the polarization key on the insert A with the polarization keyway on the rear side of the insert cavity A.
- (2) Push the insert A into the insert cavity A until it stops and is locked in position.
- (3) Align the polarization keys on the insert B with the polarization keyways on the rear side of the insert cavity B.
- (4) Push the insert B into the insert cavity B until it stops and is locked in position.

V. Installation of the Fiber Optic Alignment Sleeve Insert

Refer to Subject 20-74-02.

6. CONNECTOR POLARIZATION

A. Connector Polarization

The polarization code of the connector part number identifies the position of:

- The polarization key on the jackpost on the receptacle connector
- The polarization keyway on the jackscrew on the plug connector.

Refer to Figure 1.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

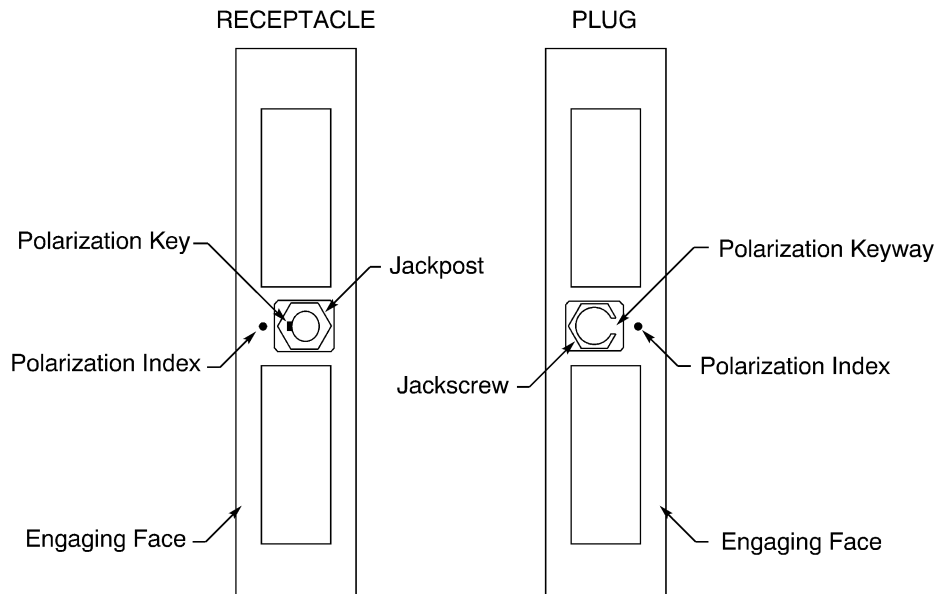

- (1) Find the polarization code in the connector part number from the equipment list.
- (2) For that polarization code, find the correct position of:
 - The polarization key on the receptacle
 - The polarization keyway on the plug.

Refer to Paragraph 6.B.

- (3) If the position of the key or the keyway does not agree with the code in the part number from the equipment list, put the key or keyway into the correct position. Refer to Paragraph 6.C.
- (4) If the polarization code in the part number on the connector shell does not agree with the polarization code in the part number from the equipment list, change the part number on the connector shell. Refer to Paragraph 6.D.

B. Polarization Key and Polarization Keyway Positions

Refer to Figure 35 and Figure 36 for the polarization key position on the receptacle and the polarization keyway position on the plug.

POLARIZATION KEY AND KEYWAY ON THE CONNECTOR
Figure 35

STANDARD WIRING PRACTICES MANUAL

Thread Lock Compound	222	Loctite

**Table 26
JACKSCREW AND JACKPOST INSTALLATION TOOLS**

Tool	Type	Size (inch)	Part Number
Driver	Retention Nut Wrench	-	282664
Torque	Socket Torque Wrench	1/4	-

JACKSCREW AND JACKPOST INSTALLATION

Figure 37

Refer to Figure 37.

- (1) Make a selection of these tools from Table 26.
 - A retention nut wrench
 - A socket torque wrench.
- (2) Make a selection of thread lock compound from Table 25.
- (3) If it is necessary, remove the jackscrew or jackpost. Refer to Paragraph 4.K.
- (4) Put a drop of thread lock compound on a minimum of two threads on the rear end of the jackscrew or jackpost, near the hexagonal shoulder. Refer to Figure 38.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

PREPARATION OF THE JACKSCREW AND THE JACKPOST
Figure 38

- (5) Put the jackscrew or jackpost in the correct polarization position. Refer to Figure 35 and Figure 36.
- (6) Put the end of the jackscrew or jackpost with threads in the polarization cavity on the engaging end of the connector.
 Make sure that the hexagonal shoulder is in the cavity.
- (7) From the rear of the connector, engage the threads of the retention nut with the threads of the jackscrew or jackpost.
- (8) Torque the nut on the jackscrew 7 inch-pounds \pm 1 inch-pound.

D. Change of the Polarization Code in the Part Number on the Connector

Table 27
NECESSARY MATERIALS

Material	Part Number	Supplier
Ink	No. 68 Fast Dry	Independent
	No. 73X NW Opaque	Independent
	No. 73X Opaque	Independent
Paint, Clear	683-3-2	Akzo
	Clear Lacquer	Tartan

	EC-776SR	3M
Pen	Permanent Ink Pen, Ultra Fine Point	Sanford Sharpie

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

LOCATION OF THE POLARIZATION CODE ON THE CONNECTOR
Figure 39

Refer to Figure 39.

- (1) Make a selection of these materials from Table 27:
 - An ink or a permanent ink pen
 - A clear paint.
- (2) If the polarization code in the part number on the connector is incorrect:
 - (a) Apply a layer of ink on the code on the connector shell.
 Make sure that the code cannot be read.
 - (b) Write the new code on the connector shell adjacent to the layer of ink.
- (3) If the part number on the connector does not have a polarization code, write the code on the connector shell at the end of the part number.
- (4) Let the ink dry for a minimum of 10 minutes.
- (5) Apply a layer of the clear paint on the part number on the connector shell.

CAUTION: DO NOT APPLY PAINT ON THE CONTACTS. PAINT ON THE SURFACE OF A CONTACT CAN CAUSE UNSATISFACTORY ELECTRICAL PERFORMANCE OF THE CONTACT.

- (6) Let the paint dry before the connector shell is touched or moved.

7. INSPECTION AND CLEANING OF A FIBER OPTIC ALIGNMENT SLEEVE INSERT

A. Inspection and Cleaning of a Fiber Optic Alignment Sleeve Insert

Refer to Subject 20-74-02.

8. CONNECTOR INSTALLATION

A. Connector Equipment Identification Number

An equipment identification number for each insert cavity must be put on each related end of the connector.

Table 28
IDENTIFICATION LABEL MATERIAL

Part Number	Type	Supplier

Table 29

MAXIMUM SIZE OF IDENTIFICATION LABELS

Connector			Label Size (inch)	
Part Number	Type	Configuration	Maximum Length	Maximum Width
BACC65AA2A()	Plug	Without Ground Block	0.7	0.2
BACC65AA2B()	Plug	Ground Block	1.0	0.2
BACC65AB2A()	Receptacle	Without Ground Block	0.7	0.2
BACC65AB2B()	Receptacle	Ground Block	0.7	0.2

- (1) Make a selection of an identification label material from Table 28.
Make sure the identification label material is the correct size for the plug or receptacle. Refer to Table 29.
- (2) Make a selection of these materials from Table 27:
 - An ink or a permanent ink pen
 - A clear paint.
- (3) Make the correct equipment identification number for each insert cavity. Refer to Figure 40.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

EQUIPMENT IDENTIFICATION NUMBER

Figure 40

- (a) From the equipment list, identify the equipment number of the connector shell.
 - (b) From this number, use only the numeric portion and the first letter after the numeric portion to make the equipment number of the insert cavity.
- NOTE:** The first letter after the numeric portion is a P or a J.
- (c) For insert cavity A, add the characters DA in front of this number.
 - (d) For insert cavity B, add the characters DB in front of this number.
- (4) For each insert cavity, put the applicable equipment number on each applicable label.
 - (5) Let the ink dry for a minimum of 10 minutes.
 - (6) Apply a layer of the clear paint on the equipment number.
 - (7) Let the layer of paint dry.
 - (8) Put the applicable label on the smaller side of the receptacle or plug, near the related insert cavity.

Refer to:

- Figure 41 for the receptacle
- Figure 42 for the plug.

NOTE: Each connector has 2 labels or 2 pieces of tape.

POSITION OF THE EQUIPMENT IDENTIFICATION LABEL ON THE RECEPTACLE

Figure 41

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

POSITION OF THE EQUIPMENT IDENTIFICATION LABEL ON THE PLUG
Figure 42

B. Installation of the Receptacle in a Panel

For the installation of the receptacle with a ground block, refer to Paragraph 8.C.

Table 30
RECEPTACLE INSTALLATION FASTENERS

Part	Part Number	Supplier

Driver	Phillips Head Screwdriver	-
	Socket Wrench	1/4
Torque	Phillips Head Torque Screwdriver	-
	Socket Torque Wrench	1/4

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

ALIGNMENT OF THE RECEPTACLE AND THE STRUCTURE
Figure 43

Refer to Figure 43.

- (1) Make a selection of four new screws from Table 30.

CAUTION: MAKE SURE THAT THE SCREWS ARE NEW. SCREWS THAT ARE NOT NEW CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

- (2) Make a selection of these tools from Table 31.
 - A torque tool
 - A driver.
- (3) On the rear side of the structure, align the mounting holes of the receptacle flange with the holes on the structure.
- (4) Put the connector shell in the cutout.
- (5) From the front side of the structure, install a screw in each of the four mounting holes.
- (6) In sequence, tighten each screw a small amount until:
 - Each screw head is against the structure
 - The connector flange is fully against the structure.
- (7) Torque each screw 30 inch-pounds \pm 2 inch-pounds.

C. Installation of the Receptacle with a Ground Block

For the installation of the receptacle in an unpressurized area, refer to Paragraph 8.D.

- (1) Prepare the faying surfaces necessary for the electrical bond of the receptacle shell to structure.

Refer to:

- Figure 44 for the connector receptacle flange
- Figure 44 and Figure 45 for the rear surface of the structure
- Figure 44 and Figure 46 for the front surface of the structure adjacent to the bottom surface of the head of the installation screws.
- Subject 20-20-00 for the procedures to prepare the faying surface.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

LOCATION OF THE FAYING SURFACES

Figure 44

FAYING SURFACE ON THE REAR SIDE OF THE STRUCTURE

Figure 45

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

FAYING SURFACE ON THE FRONT SIDE OF THE STRUCTURE
Figure 46

- (2) Install the receptacle. Refer to Paragraph 8.B.
- (3) Do the electrical bond test for receptacle connector shells. Refer to Subject 20-20-00 and Figure 47.

TEST POINTS FOR THE RECEPTACLE TO STRUCTURE BOND
Figure 47

- (4) If the bond has an electrical resistance greater than the maximum for connector shell bonds specified in Subject 20-20-00:
 - Remove the receptacle from the structure. Refer to Paragraph 4.C.
 - Do Step (1) through Step (3) again.

D. Installation of the Receptacle with a Ground Block in an Unpressurized Area

- (1) Install the receptacle. Refer to Paragraph 8.C.
 Make sure that alodine is not applied to the faying surface on the front side of the installation surface adjacent to the bottom of the head of the screw, when the screw is installed. These areas must to remain bare aluminum.
- (2) Seal the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

Refer to Subject 20-20-00 for the assembly of a seal for electrical connector shell bonds.

- (3) Apply a layer the sealant on the head of each screw.

Make sure that the sealant makes an overlap with the head of the screw and the installation surface.

E. Plug and Receptacle Connection

**Table 32
NECESSARY TOOLS**

Tool	Type	Size (inch)
Torque	Wrench with a Hex Driver	9/64

These conditions are applicable:

- Inserts must be installed in each insert cavity
- The polarization position of the plug and receptacle must be the same.

- (1) Make a selection of an torque tool from Table 32.
- (2) If the receptacle has a cap, remove the cap. Refer to Paragraph 8.F.
- (3) Align the plug with the receptacle.

Make sure that:

- Insert A on the plug is aligned with insert A on the receptacle
- Insert B on the plug is aligned with insert B on the receptacle.

Refer to Figure 48.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

ALIGNMENT OF THE PLUG AND THE RECEPTACLE
Figure 48

(4) Push the plug to the receptacle until the screw in the jackscrew stops in the jackpost.

Make sure that:

- The polarization key and keyway are engaged
- The insert cavities are engaged.

Refer to Figure 49.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AA AND BACC65AB CONNECTORS

PLUG AND RECEPTACLE CONNECTION

Figure 49

- (5) Torque the jackscrew to 7 inch-pounds \pm 1 inch-pound.

F. Fiber Optic Insert Receptacle Cap Removal

**Table 33
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	9/64
	Screwdriver, Hex	9/64

- (1) Make a selection of a driver from Table 33.

NOTE: The driver can have a ball type end.

- (2) Turn the coupling screw on the cap counterclockwise with the driver until the coupling screw is disengaged. Refer to Figure 8.
- (3) Pull the cap from the receptacle.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Insert

Refer to Subject 20-74-02.

B. Damage Conditions - Front Face of the Insert

Refer to Subject 20-74-02.

C. Damage Conditions - Coupling Fastener

The coupling fastener must be replaced if:

- The fastener has a crack
- The fastener is bent
- The fastener is broken.

D. Damage Conditions - EMI Ground Springs

The EMI ground springs must be replaced when one or more of the ground spring fingers is bent or broken.

E. Damage Conditions - Strain Relief Clamp

The strain relief clamp must be replaced if:

- The clamp has a crack
- The wire harness tie tab is broken.

A saddle bar of a strain relief clamp must be replaced if:

- The saddle bar screw hole threads are damaged
- The saddle bar has a crack.

F. Minimum Wire O.D. for an Environmentally Sealed Connector

Refer to Subject 20-74-02.

C. BACC65AN and BACC65AP Connector Description

Refer to Figure 2 and Figure 3 for configurations of these connectors.

707, 727-787

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

The BACC65AN and BACC65AP connectors have these technical features:

- A rectangular metal or composite shell in two shell sizes
- The larger shell size has a removable BACI10AL, or BACI10AM insert
- The smaller shell size has a removable BACI10AP insert
- Two 1/4 turn coupling fasteners that attach the plug to the receptacle
- Two polarization posts on the BACC65AN plug connector
- Two polarization receptacles on the BACC65AP receptacle connector
- 16 polarization positions
- EMI ground springs on some receptacle shell configurations
- A ground block for ground wire terminations on some connector configurations
- Rear insertion and removal of the insert assembly
- Rear release, rear removal size 2222, 2020, 1616, 1212, 0808, and 0505 crimp type contacts
- Rear release, rear removal size 5 coax contacts
- Rear release, rear removal size 8 coax, twinax, and quadrax contacts
- A removable strain relief clamp
- An EMI backshell on some configurations.

D. BACC65AV and BACC65AW Connector Description

Refer to Figure 14 for the configuration of the BACC65AV receptacle and the BACC65AW plug.

The BACC65AV and BACC65AW connectors have these technical features:

- A rectangular metal shell
- Size 3 coax contacts that are assembled to the rear of the connector shell
- Two 1/4 turn coupling fasteners that attach the plug to the receptacle
- Two polarization posts on the BACC65AW plug connector
- Two polarization receptacles on the BACC65AV receptacle connector
- 16 polarization positions
- A removable strain relief clamp

3. INSERT CONFIGURATIONS

A. BACI10AL, BACI10AM, and BACI10AP Connector Inserts

Refer to Subject 20-74-02.

4. CONNECTOR DISASSEMBLY

A. Connector Separation

Table 18
NECESSARY TOOLS

Tool	Type	Size (inch)
Driver	Allen Wrench	3/32
	Screwdriver, Hex	3/32

(1) Make a selection of a driver from Table 18.

NOTE: The driver can have a ball style end.

(2) Put the driver into the hex drive hole in one of the coupling fasteners on the rear of the plug connector. Refer to Figure 29.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

LOCATION OF THE COUPLING FASTENER HEX DRIVE HOLES

Figure 29

- (3) Turn the coupling fastener with the driver in a counterclockwise direction 1/4 turn to release it. Refer to Figure 30 and Figure 31.

COUPLING FASTENER IN THE LOCKED POSITION

Figure 30

COUPLING FASTENER IN THE RELEASED POSITION

Figure 31

- (4) Do Step (2) and Step (3) again for the other coupling fastener.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (5) Pull the plug straight away from the receptacle.

B. Removal of the Receptacle

**Table 19
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Phillips Head Screwdriver	-
	Socket Wrench	1/4

- (1) Make a selection of a driver from Table 19.
- (2) Remove the plastic tie straps or the wire harness ties that:
 - Hold the wire harness to the structure
 - Are less than 9 inches from the connector.
- (3) Remove the two receptacle connector installation screws. Refer to Figure 32.

**LOCATION OF THE INSTALLATION SCREWS
Figure 32**

- (4) Discard the two screws.
- (5) Pull the receptacle shell from the structure.

C. Removal of the Fiber Optic Alignment Sleeve Insert

Refer to Subject 20-74-02.

D. Coupling Fastener Removal

- (1) Make a selection of a razor blade or a different tool with a thin edge.
- (2) Bend each of the brackets of the retention clip a small amount away from the shoulder of the coupling fastener. Refer to Figure 33.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

COUPLING FASTENER REMOVAL
Figure 33

- (3) Pull the fastener from the connector shell.
- (4) Discard the coupling fastener, the clip, and the washer.

E. Insert Removal

NOTE: It is not necessary to remove the insert contacts, or the strain relief clamp before the insert is removed.

Table 20
INSERT REMOVAL TOOLS

Tool	Part Number
Insert Removal Tool	282 521 002

- (1) Make a selection of an insert removal tool from Table 20.
- (2) If the connector has:
 - An EMI backshell installed, remove the EMI backshell from the connector; refer to Paragraph 4.L.
 - A strain relief clamp, remove the plastic tie strap or the wire harness tie from the clamp
 - A ground block, remove the ground block contacts from the ground block; refer to Paragraph 4.G.
- (3) From the rear of the connector, align the two ends of the removal tool with the shorter sides of the insert. Refer to Figure 34.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS****ALIGNMENT OF THE INSERT REMOVAL TOOL****Figure 34**

- (4) Carefully push the removal tool between the insert cavity and the insert.
Make sure to keep the tool aligned with the insert.
- (5) Push the two sides of the tool at the same time into the connector.
- (6) Pull the insert removal tool and the insert straight out of the connector. Refer to Figure 35.

**REMOVAL OF THE INSERT****Figure 35****F. Seal Plug and Seal Rod Removal**

Refer to Subject 20-74-02.

G. Contact Removal

This paragraph gives the procedure to remove size 16 ground block contacts from the connector ground block.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Refer to:

- Subject 20-74-02. to remove contacts from the connector insert
- Paragraph 4.I. for the procedure to remove size 3 coax contacts from the connector.

**Table 21
REMOVAL TOOLS FOR SIZE 16 GROUND BLOCK CONTACTS**

Ground Block Contact Cavity Size	Removal Tool	
	Part Number	Color
16	ATR2080	-
	ATR2079	-
	M81969/14-11	White
	RRX20B	-

(1) Make a selection of a contact removal tool from Table 21 for size 16 ground block contacts.

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE GROMMET OR THE RETENTION CLIP.

- (2) Remove the plastic tie straps or the wire harness ties that are less than 6 inches from the connector.
- (3) Put the tip of the removal tool on the wire near the ground block.
- (4) Axially align the removal tool and the contact cavity.
- (5) Carefully push the removal tool straight into the contact cavity until it stops.
- (6) Carefully pull the wire and the removal tool straight out of the contact cavity at the same time.
- (7) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the removal tool approximately 90 degrees.
 - (c) Do Step (3) through Step (6) again.

H. Removal of a Fiber Optic Contact Terminus

Refer to Subject 20-74-02.

I. Size 3 Coax Contact Removal

**Table 22
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64
Pliers	-	-

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (1) Make a selection of these tools from from Table 22.
 - A driver
 - A pair of pliers.
- (2) Remove the plastic tie straps or the wire harness ties that are less than 6 inches from the connector.
- (3) Disengage the two screws on the coax contact assembly from the connector shell. Refer to Figure 36.

NOTE: The two screws on the coax contact assembly are captivated and cannot be removed from the coax contact assembly.

LOCATION OF THE COAX CONTACT INSTALLATION SCREWS
Figure 36

- (4) Pull on the head of one of the screws on the rear of the coax contact assembly with the pliers.

NOTE: Make sure the threads of the screws are completely disengaged from the connector shell before they are removed.

NOTE: A satisfactory alternative is to push on the engaging end of the coax contact with the end of a finger, or a 0.4 inch maximum diameter blunt plastic tool to move the contact out of the rear of the connector.

CAUTION: DO NOT PULL ON THE COAX CABLE TO REMOVE THE COAX CONTACT FROM THE CONNECTOR SHELL. DAMAGE TO THE COAX CABLE TERMINATION, OR DAMAGE TO THE COAX CONTACT CAN OCCUR.

J. EMI Ground Spring Removal

EMI GROUND SPRING REMOVAL
Figure 37

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Refer to Figure 37.

- (1) Make a selection of a tool with a small sharp point at a right angle to the handle.

NOTE: An awl is a satisfactory tool.

- (2) For a ground spring with two fingers, carefully put the tip of the tool between the inner wall of the insert cavity and the bottom of the ground spring between the two fingers.
- (3) For a ground spring with three fingers, carefully put the tip of the tool between the inner wall of the insert cavity and the bottom of the middle finger of the ground spring.
- (4) Push the tip of the tool through the slot against the ground spring latch that is behind the ground spring fingers.
- (5) Pull the ground spring away from the insert cavity.

K. Strain Relief Backshell Removal

**Table 23
BACKSHELL REMOVAL TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64

- (1) Make a selection of a driver from Table 23.
- (2) For backshells with a tie tab, remove the plastic tie strap or the wire harness tie from the tie tab.
- (3) For backshells with a saddle clamp, remove the saddle clamp.
- (4) If the inserts are installed and have wired contacts, remove the inserts from the connector. Refer to Paragraph 4.E.
- (5) If the connector has a ground block, and the ground block has contacts that are installed, remove the contacts from the ground block. Refer to Paragraph 4.G.
- (6) Disengage the threads of the backshell installation screws. Refer to Figure 38.

NOTE: The screws are captivated and cannot be removed from the strain relief clamp.

LOCATION OF BACKSHELL INSTALLATION SCREWS

Figure 38

- (7) Pull the backshell from the connector shell. Refer to Figure 39.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

BACKSHELL REMOVAL
Figure 39

L. EMI Backshell Removal

Table 24
EMI BACKSHELL REMOVAL TOOLS

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64
Diagonal Cutter	-	-
Knife	-	-

(1) Remove the heat shrinkable sleeve from the wire harness. Refer to Figure 40.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

REMOVAL OF THE HEAT SHRINKABLE SLEEVE

Figure 40

- (a) If the heat shrinkable sleeve has tie straps or wire harness ties, cut them off.
- (b) Carefully make a longitudinal cut in the heat shrinkable sleeve from one end to the other end.

CAUTION: DO NOT CUT INTO THE STRANDS OF THE OVERALL SHIELD OR OTHER COMPONENTS OF THE WIRE HARNESS. DAMAGE TO THE SHIELD OR COMPONENTS CAN OCCUR.

- (c) Remove the heat shrinkable sleeve from the wire harness.
- (2) Remove the tape at the end of the overall shield. Refer to Figure 41.

REMOVAL OF THE TAPE

Figure 41

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS**

- (3) Make a selection of a pair of diagonal cutters from Table 24.
- (4) Remove the shield terminator band from the overall shield. Refer to Figure 42.

**REMOVAL OF THE SHIELD TERMINATOR BAND FROM THE OVERALL SHIELD****Figure 42**

- (a) Hold the buckle of the shield terminator band with the cutters.
 - (b) Rotate the cutters and lift the buckle of the band away from the backshell until the buckle releases or the band breaks.
 - (c) Remove the band.
- (5) Push the overall shield away from the band termination platform.
 - (6) Remove the shield terminator band from the shield ground wires on the band termination platform. Refer to Figure 43.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

REMOVAL OF THE SHIELD TERMINATOR BAND FROM THE SHIELD GROUND WIRES

Figure 43

- (a) Hold the buckle of the shield terminator band with the cutters.
 - (b) Rotate the cutters and lift the buckle of the band away from the backshell until the buckle releases or the band breaks.
 - (c) Remove the band.
- (7) Make a selection of a driver from Table 24.
- (8) Disengage the threads of the two backshell assembly screws on each side of the EMI backshell. Refer to Figure 44.

LOCATION OF OF THE BACKSHELL ASSEMBLY AND INSTALLATION SCREWS

Figure 44

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS**

- (9) Disengage the threads of the two backshell installation screws on each side of the EMI backshell. Refer to Figure 44.
- (10) Remove the ends of the shield ground wires from each half of the EMI backshell. Refer to Figure 44.
 - (a) Carefully pull one of the shield ground wires through the slot in the EMI backshell.
 - (b) If the insulation on the end of the shield ground wire does not go through the slot, remove the insulation from the shield ground wire.
 - (c) Do Step (a) and Step (b) for each shield ground wire.

5. CONNECTOR ASSEMBLY**A. Shield Ground Wire Assembly**

This paragraph gives the procedure to assemble a shield ground wire and a contact for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Raychem 55A6160-() cable, refer to Paragraph 5.C.
- BMS13-60 Type 27 Class 1 wire, refer to Paragraph 5.D.
- The termination of the shield at the EMI backshell, refer to Paragraph 5.B.

- (1) Remove 2.5 inches \pm 0.1 inch of the cable jacket from the end of the cable. Refer to Figure 45.

CABLE JACKET REMOVAL
Figure 45

- (2) Assemble an insulated shield ground wire. Refer to Subject 20-10-15.

NOTE: The shield ground wire must have the same size as the crimp barrel of the applicable contact. Refer to:

- Table 8 for the ground block contact
- Subject 20-74-02 for the insert contact.

Make sure that:

- The shield ground wire assembly components are applicable for the shield material of the wire
- The length of the shield ground wire is 2.5 inches minimum
- The free end of the shield ground wire is pointed forward to the end of the cable.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

CAUTION: A SHIELD GROUND WIRE ASSEMBLY WITH A SOLDER SLEEVE IS NOT APPLICABLE FOR A CABLE OR A WIRE WITH A SHIELD THAT HAS NICKEL PLATED CONDUCTORS. UNSATISFACTORY PERFORMANCE OF THE SHIELD TERMINATION CAN OCCUR.

- (3) Remove the unwanted length from the end of the shield ground wire and the wires of the cable. Refer to Figure 46.

LENGTH OF THE SHIELD GROUND WIRE AND THE WIRES OF THE CABLE

Figure 46

NOTE: The connection of the shield and the shield ground wire can be:

- The melted solder ring of a solder sleeve
 - A mechanical ferrule
 - An RSK Shield-Kon.
- (a) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the connection to the end of the shield ground wire equal to 2.0 inches maximum.
 - (b) Remove the necessary length from the end of the each wire of the cable to make the distance from the forward edge of the connection to the end of the wire equal to 2.25 inches ± 0.06 inch.
- (4) Assemble the specified contact on the end of the shield ground wire.
- For the assembly of:
- A ground block contact, refer to Paragraph 5.F.
 - An insert contact, refer to Paragraph 5.E.

B. Shield Ground Wire Assembly for Shield Termination at the EMI Backshell

- (1) Remove 2.50 inches ± 0.1 inch of the cable jacket from the end of the cable. Refer to Figure 47.

CABLE PREPARATION

Figure 47

- (2) Assemble an uninsulated shield ground wire. Refer to Subject 20-10-15 and Figure 48.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Make sure that:

- The size of the shield ground wire is AWG 20
- The length of the shield ground wire is 5 inches minimum
- The shield ground wire is pointed back away from the end of the cable.

CAUTION: A SHIELD GROUND WIRE ASSEMBLY WITH A SOLDER SLEEVE IS NOT APPLICABLE FOR A CABLE OR A WIRE WITH A SHIELD THAT HAS NICKEL PLATED CONDUCTORS. UNSATISFACTORY PERFORMANCE OF THE SHIELD TERMINATION CAN OCCUR.

SHIELD GROUND WIRE CONFIGURATION
Figure 48

C. Shield Ground Wire Assembly for Raychem 55A6160-() Cable

This paragraph gives the procedure to assemble the shield ground wires and contacts for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Wire or cable that has one shield, refer to Paragraph 5.A.
- BMS13-60 Type 27 Class 1 wire, refer to Paragraph 5.D.

Table 25
NECESSARY PARTS

Part	Boeing Standard	Shield Ground Wire Size (AWG)
Solder Sleeve with an integral wire	BACS13CT3C	20

- (1) Make a selection of a solder sleeve with an integral wire from Table 25.

NOTE: Two solder sleeves are necessary.

Refer to Subject 20-10-15 for approved suppliers of Boeing standard solder sleeves.

- (2) Prepare the cable for termination of the outer shield. Refer to Figure 49 and Subject 20-00-15.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

OUTER JACKET AND OUTER SHIELD REMOVAL

Figure 49

- (a) Remove 2.80 inches ± 0.02 inch of the outer jacket from the end of the cable.
- (b) Remove the necessary length of the shield to make the distance from the end of the jacket to the end of the shield equal to 0.25 inch ± 0.06 inch.
- (3) Assemble the shield ground wire of the outer shield. Refer to Figure 50.

TERMINATION OF THE OUTER SHIELD

Figure 50

- (a) Put the solder sleeve on the wire or cable.
Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the cable
 - The large end of the solder sleeve is put on the wire or cable first
 - The inner edge of the rear seal ring is aligned with the end of the outer jacket.
- (b) Shrink the solder sleeve into its position.
Make sure that:
 - The solder sleeve stays in the correct position
 - A minimum of 75 percent of the indicator ring on top of the solder ring is melted.
- (c) Remove the necessary length of the shield ground wire to make the distance from the forward edge of the solder ring to the end of the wire equal to 2.0 inches maximum.
- (4) Prepare the cable for termination of the inner shield. Refer to Figure 51 and Subject 20-00-15.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

INNER JACKET AND INNER SHIELD REMOVAL

Figure 51

- (a) Remove 2.00 inches ± 0.02 inch of the inner jacket from the end of the cable.
- (b) Remove the necessary length of the inner shield to make the distance from the end of the shield to the end of the jacket equal to 0.25 inch ± 0.06 inch.
- (c) Remove the necessary length of the red wire to make the distance from the end of the red wire to the end of the blue wire equal to 0.30 inch ± 0.02 inch.
- (d) Remove 0.21 inch ± 0.02 inch of insulation from the end of the blue wire. Refer to Subject 20-00-15.
- (5) Assemble the shield ground wire of the inner shield. Refer to Figure 52.

Make sure that:

- The free end of the shield ground wire is pointed forward to the end of the cable
- The large end of the solder sleeve is put on the wire or cable first
- The inner edge of the rear seal ring is aligned with the end of the jacket.

TERMINATION OF THE INNER SHIELD

Figure 52

- (a) Fold the blue wire back and put the end of the wire between the inner shield and the rear end of the solder sleeve.

Make sure the center of the conductor is aligned with the solder ring of the solder sleeve.

CAUTION: THE STRANDS OF THE WIRE MUST NOT GO INTO THE SHIELD OF THE CABLE. A SHORT CIRCUIT BETWEEN THE CONDUCTOR OF THE WIRE CAN OCCUR.

- (b) Shrink the solder sleeve into its position.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Make sure that:

- The solder sleeve stays in the correct position
 - A minimum of 75 percent of the indicator ring on top of the solder ring is melted.
- (c) Remove the necessary length of the shield ground wire to make the distance from the forward edge of the solder ring to the end of the wire equal to 2.0 inches maximum.
- (6) Assemble the specified contact on the end of the shield ground wire.

For the assembly of:

- A ground block contact, refer to Paragraph 5.F.
- An insert contact, refer to Paragraph 5.E.

D. Shield Ground Wire Assembly for BMS13-60 Type 27 Class 1 Wire

**Table 26
WIRE TYPE CODES**

Cable Description	Wire Type Code
BMS13-60 Type 27 Class 1	M1

This paragraph gives the procedure to assemble shield ground wires and contacts for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Wire or cable that has one shield, refer to Paragraph 5.A.
- Raychem 55A6160-() cable, refer to Paragraph 5.C.

**Table 27
MECHANICAL FERRULE PART NUMBERS**

Shield	Ferrule Type	Boeing Standard
Inner	Inner	BACS13S071BNP
	Outer	BACS13S149CNP
Outer	Inner	BACS13S090BNP
	Outer	BACS13S175CNP

NOTE: Refer to Subject 20-10-15 for approved suppliers of Boeing standard mechanical ferrules.

**Table 28
NECESSARY MATERIALS**

Material	Part Number	Supplier
Sleeve, Heat Shrinkable	SAE-AMS-DTL-23053/12 Class 2	QPL
	SAE-AMS-DTL-23053/12 Class 5	QPL
	TFE-2X	Zeus
	TFE-4X	Zeus

- (1) Prepare the cable for the termination of the outer shield. Refer to Figure 53 and Subject 20-00-15.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

OUTER JACKET AND OUTER SHIELD REMOVAL

Figure 53

- (a) Remove 2.60 inches ± 0.02 inch of the outer jacket from the end of the cable.
- (b) Remove the necessary length of the outer shield to make the distance from the end of the jacket to the end of the shield equal to 0.35 inch ± 0.03 inch.
- (2) Assemble the shield ground wire of the outer shield. Refer to Figure 54.

TERMINATION OF THE OUTER SHIELD

Figure 54

- (a) Make a selection of an inner and outer ferrule from Table 27.
- (b) Make a selection of a ferrule crimp tool. Refer to Subject 20-10-15.
- (c) Make a selection of a heat shrinkable sleeve from Table 28.
Make sure that the heat shrinkable sleeve has the smallest diameter that can move freely on the shield ground wire assembly.

NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.

- (d) Make a selection of a shield ground wire. Refer to Subject 20-10-15.
NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to Table 8 for the ground block contact.

- (e) Put the outer ferrule on the cable.
- (f) Put the inner ferrule on the cable.

Make sure that:

- The inner ferrule is between the shield and the inner jacket
- The rear end of the inner ferrule is tight against the end of the outer jacket.

- (g) Remove the necessary length of insulation from one end of the shield ground wire. Refer to Subject 20-00-15.

Make sure that the bare conductor can extend a small amount farther than the length of the outer ferrule.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (h) Put the conductor of the shield ground wire between the shield and the outer ferrule.
Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the wire
 - The bare conductor extends a small amount farther than the rear end of the outer ferrule.
- (i) Push the outer ferrule and the shield ground wire forward until the center of the outer ferrule is aligned with the center of the inner ferrule.
- (j) Make sure that the forward end of the inner ferrule does not extend farther than 0.06 inch from the forward end of the outer ferrule.
- (k) Crimp the outer ferrule.
- (l) Remove the unwanted length of the shield that extends farther than the forward edge of the outer ferrule.

NOTE: The outer surface of the inner ferrule can be used to cut against.

- (m) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the outer ferrule to the end of the wire equal to 2.0 inches maximum.
 - (n) Put the necessary length of heat shrinkable sleeve on the wire or cable.
Make sure that the distance:
 - From the rear end of the ferrule to the rear end of the sleeve is 0.25 inch minimum
 - From the forward end of the ferrule to the forward end of the sleeve is 0.5 inch minimum.
 - (o) Shrink the sleeve into its position. Refer to Subject 20-10-14.
- (3) Prepare the cable for the termination of the inner shield. Refer to Figure 55 and Subject 20-00-15.

INNER JACKET AND INNER SHIELD REMOVAL

Figure 55

- (a) Remove 1.85 inches ± 0.02 inch of the inner jacket from the end of the cable.
 - (b) Remove the necessary length of the inner shield to make the distance from the end of the jacket to the end of the shield equal to 0.35 inch ± 0.03 inch.
- (4) Assemble the shield ground wire of the inner shield. Refer to Figure 56.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

TERMINATION OF THE INNER SHIELD

Figure 56

- (a) Make a selection of an inner and outer ferrule from Table 27.
- (b) Make a selection of a ferrule crimp tool. Refer to Subject 20-10-15.
- (c) Make a selection of a heat shrinkable sleeve from Table 28.
Make sure that the heat shrinkable sleeve has the smallest diameter that can move freely on the shield ground wire assembly.
- NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.
- (d) Make a selection of a shield ground wire. Refer to Subject 20-10-15.
NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to Subject 20-74-02 for the insert contact.
- (e) Put the outer ferrule on the cable.
- (f) Put the inner ferrule on the cable.
Make sure that:
 - The inner ferrule is between the shield and the primary insulation
 - The rear end of the inner ferrule is tight against the end of the inner jacket.
- (g) Remove the necessary length of insulation from one end of the shield ground wire. Refer to Subject 20-00-15.
Make sure that the bare conductor can extend a small amount farther than the length of the outer ferrule.
- (h) Put the conductor of the shield ground wire between the shield and the outer ferrule.
Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the wire
 - The bare conductor extends a small amount farther than the rear end of the outer ferrule.
- (i) Push the outer ferrule and the shield ground wire forward until the center of the outer ferrule is aligned with the center of the inner ferrule.
- (j) Make sure that the forward end of the inner ferrule does not extend farther than 0.06 inch from the forward end of the outer ferrule.
- (k) Crimp the outer ferrule.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (l) Remove the unwanted length of the shield that extends farther than the forward edge of the outer ferrule.

NOTE: The outer surface of the inner ferrule can be used to cut against.

- (m) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the outer ferrule to the end of the wire equal to 2.0 inches maximum.
- (n) Put the necessary length of heat shrinkable sleeve on the wire or cable.

Make sure that the distance:

- From the rear end of the ferrule to the rear end of the sleeve is 0.25 inch minimum
- From the forward end of the ferrule to the forward end of the sleeve is 0.5 inch minimum.

- (o) Shrink the sleeve into its position. Refer to Subject 20-10-14.

- (5) Assemble the specified contact on the end of the shield ground wire.

For the assembly of:

- A ground block contact, refer to Paragraph 5.F.
- An insert contact, refer to Paragraph 5.E.

E. Contact Assembly

For the procedure to assemble:

- Insert contacts, refer to Subject 20-74-02.
- Ground block contacts, refer to Paragraph 5.F.
- Size 3 coax contacts, refer to Paragraph 5.L.

F. Ground Block Contact Assembly

**Table 29
GROUND BLOCK CONTACT CRIMP TOOLS**

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool			
		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color

		WA27F	5	M22520/1-02	Red

- (1) Make a selection of a crimp tool from Table 29.
- (2) Remove 0.18 inch ± 0.02 inch of insulation from the end of the shield ground wire.

Refer to:

- Figure 57
- Subject 20-00-15 for the insulation removal procedures.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

INSULATION REMOVAL LENGTH

Figure 57

(3) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 58.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL OF THE CONTACT

Figure 58

(4) Crimp the contact.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

G. Assembly of Size 0505 Power Contacts

Refer to Subject 20-74-02.

H. Size 5 Coax Contact Assembly

Refer to Subject 20-74-02.

I. Assembly of Size 8 Coax Contacts

Refer to Subject 20-74-02.

J. Assembly of Size 8 Twinax Contacts

Refer to Subject 20-74-02.

K. Assembly of Size 8 Quadrax Contacts

Refer to Subject 20-74-02.

- (1) Make a selection of a center contact crimp tool from Table 31.
- (2) Make a selection of a ferrule crimp tool from Table 32.
- (3) Cut the cable to make the end of the cable perpendicular to the longitudinal axis of the cable.
- (4) Put these components on the cable:
 - The sealing boot
 - The crimp ferrule.

Refer to:

- Figure 59 for BMS 13-65 Type 0F and 0G cable
- Figure 60 for BMS 13-65 Type 0H, 0J, and 0K cable.

**SEALING BOOT AND CRIMP FERRULE ON TYPE 0F AND TYPE 0G CABLE

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

SEALING BOOT AND CRIMP FERRULE ON TYPE 0H, TYPE 0J, AND TYPE 0K CABLE
Figure 60

- (5) Prepare the cable. Refer to Figure 61 and Table 30.

CABLE PREPARATION
Figure 61

- (a) Remove the necessary length of jacket from the end of the cable to make the distance from the end of the jacket to the end of the cable equal to dimension A.
- (b) Remove the necessary length of shield to make the distance from the end of the shield to the end of the cable jacket equal to dimension B.
- (c) Remove the necessary length of the dielectric to make the distance from the end of the dielectric to the end of the center conductor equal to dimension C.
- (6) Prepare the shield. Refer to Figure 62.

SHIELD PREPARATION
Figure 62

- (a) Move the strands of the round conductor shield apart.
- (b) Move the strands of the flat conductor shield apart.
- (7) Put the center conductor into the crimp barrel of the center contact. Refer to Figure 63.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Make sure that:

- All of the strands are in the crimp barrel
- The strands of the center conductor can be seen in the inspection hole
- The distance between the dielectric and end of the crimp barrel is not more than 0.03 inch.

POSITION OF THE CENTER CONDUCTOR IN THE CRIMP BARREL
Figure 63

(8) Crimp the contact.

Make sure that:

- All of the strands are in the crimp barrel
- The strands of the center conductor can be seen in the inspection hole
- The distance between the dielectric and end of the crimp barrel is not more than 0.03 inch.

(9) Axially align the center contact assembly with the outer contact.

(10) Push the center contact into the outer contact until it makes a click.

Make sure that the strands of the shield stay on the outer surface of the crimp barrel.

Refer to:

- Figure 64 for BMS 13-65 Type 0F and 0G cable
- Figure 65 for BMS 13-65 Type 0H, 0J, and 0K cable.

POSITION OF THE OUTER CONTACT FOR TYPE 0F AND TYPE 0G CABLE
Figure 64

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

POSITION OF THE OUTER CONTACT FOR TYPE 0H, TYPE 0J, AND TYPE 0K CABLE
Figure 65

(11) Lightly pull the cable.

Make sure that the center contact is locked in the outer contact.

CAUTION: DO NOT PULL THE CABLE WITH A STRONG OR A SUDDEN FORCE. DAMAGE TO THE CONNECTOR OR THE CONTACT CAN OCCUR.

(12) If the center contact is not locked in the outer contact, do Step (10) and Step (11) again.

(13) Put the strands of the shield against the outer surface of the crimp barrel.

(14) Push the crimp ferrule forward until the forward end of the ferrule is against the shoulder of the crimp barrel. Refer to Figure 66.

Make sure that the distance between the forward end of the crimp ferrule and the shoulder of the crimp barrel is not more than 0.02 inch.

POSITION OF THE CRIMP FERRULE ON THE SHIELD AND THE CRIMP BARREL
Figure 66

(15) Crimp the ferrule.

Make sure that the distance between the forward end of the crimp ferrule and the shoulder of the crimp barrel is not more than 0.02 inch.

(16) Push the sealing boot forward until the forward edge of the boot is against:

- the shoulder of the coax socket contact
- the retaining ring on the coax pin contact.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

M. Contact Insertion

This paragraph gives the procedure to install ground block contacts. For the procedure to install:

- Other contacts in the connector Insert, refer to Subject 20-74-02.
- Size 3 coax contacts in BACC65AV and BACC65AW connectors, refer to Paragraph 5.L..

**Table 33
GROUND BLOCK CONTACT INSERTION TOOLS**

Ground Block Contact Cavity Size	Contact Size	Insertion Tool	
		Part Number	Color
16	1618	DAK83-20	-
		M81969/14-11	Red
		ST2220-2-28	-
	1620	DAK83-20	-
		M81969/14-11	Red
		ST2220-2-28	-

- (1) If a strain relief clamp is specified, put the strain relief clamp on the wire harness.
Make sure that the wire harness tie tab of the strain relief points away from the end of the harness.
- (2) If an EMI backshell is specified:
 - (a) Make a selection of a heat shrinkable sleeve from Table 38.
Make sure that the sleeve has the smallest diameter that can move on the wire harness easily.
 - (b) Put a 4.0 inch \pm 0.2 inch length of heat shrinkable sleeve on the wire harness.
NOTE: As an alternative, the heat shrinkable sleeve can be cut and attached to the wire harness after the EMI backshell is installed.
- (3) Make a selection of a ground block contact insertion tool from Table 33.
NOTE: An insertion tool is not necessary.
- (4) If an insertion tool is used:
 - (a) Put the contact assembly in the insertion tool.
 - (b) Axially align the insertion tool, the contact assembly and the contact cavity.
Make sure that the insertion tool and the contact assembly are perpendicular to the rear face of the ground block.
 - (c) Carefully push the insertion tool into the contact cavity until it stops.
Make sure that:
 - The contact assembly and the contact cavity stay aligned
 - Tension does not occur between the shield ground wire and the solder sleeve or the contact crimp barrel.
 - (d) Carefully pull the insertion tool out of the contact cavity.
Make sure that the insertion tool stays aligned with the contact cavity.
 - (e) Remove the insertion tool from the wire.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS**

(5) If an insertion tool is not used:

(a) Axially align the contact assembly and the contact cavity.

Make sure that the contact assembly is perpendicular to the rear face of the ground block.

(b) Carefully push the the contact assembly into the contact cavity until it stops.

Make sure that:

- The contact assembly and the contact cavity stay aligned
- Tension does not occur between the shield ground wire and the solder sleeve or the contact crimp barrel.

(6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

(7) If the contact is not locked in the contact cavity:

(a) Pull the contact assembly from the contact cavity.

(b) Do Step (4) or Step (5) again.

N. Insertion of a Fiber Optic Contact Terminus

Refer to Subject 20-74-02.

O. Installation of Size 8 Quadrax Contacts

Refer to Subject 20-74-02.

P. Size 5 Coax Contact Insertion

Refer to Subject 20-74-02.

Q. Seal of an Empty Insert Contact Cavity

Refer to Subject 20-74-02.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS****R. EMI Ground Spring Installation**

EMI GROUND SPRING INSTALLATION
Figure 67

A receptacle with a ground block must have EMI ground springs installed.

Refer to Figure 67.

- (1) From the engaging end of the connector, align the EMI ground spring with the longer sides of the insert cavity.
Make sure that the spring fingers are on the inside of the insert cavity.
- (2) Push the ground spring to the front face of the connector shell until the latch on the spring locks in the slot on the side of the insert cavity.

S. Insert Installation

NOTE: An insert can be installed with contacts or without contacts.

If a strain relief clamp is specified, it must be put on the wire harness with the wire harness tie tab pointed away from the end of the harness before:

- An insert with assembled contacts is installed in the connector shell
- Assembled ground block contacts are installed in the ground block.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

ALIGNMENT OF THE INSERT AND THE CONNECTOR SHELL
Figure 68

Refer to Figure 68.

- (1) Align the polarization key on the insert with the polarization keyway on the rear side of the insert cavity.

NOTE: A blank insert does not have a polarization key.

- (2) Push the insert into the insert cavity until it stops and is locked in position.

CAUTION: IF THE INSERT DOES NOT GO INTO THE CONNECTOR SHELL EASILY, DO NOT CONTINUE TO PUSH THE INSERT. DAMAGE TO THE INSERT CAN OCCUR.

- (3) If the insert does not go into the connector shell correctly:
 - (a) Remove the insert. Refer to Paragraph 4.E.
 - (b) Do Step (1) and Step (2) again.

T. Installation of the Fiber Optic Alignment Sleeve Insert

Refer to Subject 20-74-02.

U. Coupling Fastener Installation

INSTALLATION OF THE COUPLING FASTENER
Figure 69

Refer to Figure 69.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (1) Put the coupling fastener in the hole of the connector shell from the rear.
Make sure that the engaging end of the fastener is pointed forward.
- (2) Put the wave washer on the engaging end of the coupling fastener.
- (3) Put the retention clip on the engaging end of coupling fastener.
- (4) Push the clip against the plug shell until end of each bracket is against the body of the fastener below the shoulder of the fastener.
- (5) Turn the coupling fastener to the released position. Refer to Figure 70.

COUPLING FASTENER IN THE RELEASED POSITION
Figure 70

V. Installation of the BACC10LL and BACC10LM Backshells

The strain relief clamp must be put on the wire harness before:

- An insert with assembled contacts is installed in the connector shell
- Assembled ground block contacts are installed in the ground block.

Table 34
NECESSARY MATERIALS

Material	Part Number	Supplier
Tape	Scotch 70	3M

Table 35
BACKSHELL INSTALLATION TOOLS

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

BACKSHELL INSTALLATION

Figure 71

Refer to Figure 71.

- (1) Make a selection of these tools from Table 35:
 - A driver
 - A torque tool.
- (2) Make a selection of a tape from Table 34.
- (3) Align the wire harness tie tab on the backshell with the bottom edge of the connector. Refer to Figure 72.

ALIGNMENT OF THE STRAIN RELIEF CLAMP AND THE CONNECTOR SHELL

Figure 72

- (4) Engage the threads of the backshell installation screws with the screw holes in the connector shell.
- (5) Torque each installation screw 7 inch-pounds \pm 1 inch-pound.
- (6) Wind two layers of tape around the wire harness where the harness is against the wire harness tie tab.
- (7) Assemble a wire harness tie or install a plastic tie strap on the wire harness and the wire harness tie tab. Refer to Subject 20-10-11.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

W. Installation of the BACC10LV Backshell

The strain relief clamp must be put on the wire harness before:

- An insert with assembled contacts is installed in the connector shell
- Assembled ground block contacts are installed in the ground block.

**Table 36
NECESSARY MATERIALS**

Material	Part Number	Supplier
Tape	Scotch 70	3M

**Table 37
BACKSHELL INSTALLATION TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64
Torque	Wrench with a Hex Driver	5/64

- (1) Make a selection of these tools from Table 37:
 - A driver
 - A torque tool.
- (2) Make a selection of a tape from Table 36.
- (3) Align the strain relief clamp with the connector. Refer to Figure 73.

**ALIGNMENT OF THE BACKSHELL AND THE CONNECTOR SHELL
Figure 73**

- (4) Engage the threads of the backshell installation screws with the screw holes in the connector shell.
- (5) Torque each installation screw 7 inch-pounds \pm 1 inch-pound.
- (6) Wind a minimum of two layers of tape on the wire harness where the saddle bars of the cable clamp hold the harness.

Make sure that:

- The center of the tape is aligned with the saddle bar screw holes.
 - The layers of tape make a 100 percent overlap.
 - The number of layers of tape is correct for the correct fit of the wire harness between the saddle bars.
- (7) Install and tighten the saddle bar screws. Refer to Figure 74.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Make sure that:

- The wire harness is tight between the saddle bars
- The saddle bar screws are tight
- The saddle bars do not crush or pinch the wire harness.

STRAIN RELIEF CLAMP ASSEMBLY
Figure 74

(8) If the wire harness is too tight in the clamp:

- (a) Remove the saddle bar screws.
- (b) Remove some of the tape on the wire harness.
Make sure that the number of layers of tape is correct for the correct fit of the wire harness between the saddle bars.
- (c) Do Step (7) again.
- (d) If it is necessary, do Step (8) or Step (9) again.

(9) If the wire harness is too loose in the clamp:

- (a) Remove the saddle bar screws.
- (b) Put more layers of tape on the wire harness where the saddle bars hold the wire harness.
Make sure that the number of layers of tape is correct for the correct fit of the wire harness between the saddle bars.
- (c) Do Step (7) again.
- (d) If it is necessary, do Step (8) or Step (9) again.

X. Installation of the BACC10LH Backshell

The EMI backshell strain must be installed after:

- An insert with assembled contacts is installed in the connector shell
- Assembled ground block contacts are installed in the ground block.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

**Table 38

EMI BACKSHELL INSTALLATION TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64
Torque	Wrench with a Hex Driver	5/64

- (1) Make a selection of these tools from Table 41:
 - A driver
 - A torque tool.
- (2) Make a selection of a shield terminator band from Table 39.
NOTE: 2 bands are necessary for the installation of the EMI backshell.
- (3) Make a selection of a tape from Table 38.
 Make sure that the tape has a width of 0.25 inch.
- (4) Make a selection of a heat shrinkable sleeve from Table 38.
 Make sure that the sleeve has a diameter of 0.19 inch.
- (5) Cut a 3.0 inch ± 0.1 inch length of the 0.19 inch diameter heat shrinkable sleeve for each shield ground wire.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (6) Put one half of the EMI backshell on the wire harness at the rear of the connector shell. Refer to Figure 75.

NOTE: Each half of an EMI backshell has the same configuration.

POSITION OF ONE HALF OF THE EMI BACKSHELL CONNECTOR ASSEMBLY
Figure 75

- (7) Engage the threads of the backshell installation screw with the threads of the backshell mounting hole on the rear side of the connector shell. Refer to Figure 75.
- (8) Put approximately half of the uninsulated shield ground wires through the slot in the EMI backshell. Refer to Figure 76.

POSITION OF THE SHIELD GROUND WIRES IN THE BACKSHELL SLOT
Figure 76

- (9) Put the remaining uninsulated shield ground wires through the slot in the other half of the EMI backshell.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (10) Do Step (6) through Step (8) again for the other half of the EMI backshell.
- (11) Put each half of the EMI backshell together.
- (12) Engage the threads of each assembly screw with the threads in the body of the other half of the EMI backshell. Refer to Figure 76.
- (13) Torque each assembly screw and installation screw 7 inch-pounds \pm 1 inch-pound.
- (14) Carefully pull the end of each uninsulated shield ground wire through the slot in the EMI backshell to decrease unwanted shield ground wire length inside the EMI backshell.
- (15) Put each uninsulated shield ground wire tightly and symmetrically across the band termination platform of the EMI backshell. Refer to Figure 77.

Make sure that:

- The distances between the shield ground wires in the slot are equal.
- Each shield ground wire does not make an overlap with a different shield ground wire on the band termination platform.

POSITION OF THE SHIELD GROUND WIRES ON THE BAND TERMINATION PLATFORM
Figure 77

- (16) Install a shield terminator band on the shield ground wires and the band termination platform. Refer to Figure 78 and Paragraph 5.Y.

Make sure that the band buckle does not make an overlap with the shield ground wires or the slot.

POSITION OF THE SHIELD TERMINATOR BAND ON THE BAND TERMINATION PLATFORM
Figure 78

- (17) Remove the necessary length of each shield ground wire to make the distance from the shield terminator band to the end of the shield ground wire equal to approximately 2.5 inches.
- (18) Put a 3.0 inch length of heat shrinkable sleeve on each shield ground wire. Refer to Figure 79.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

POSITION OF THE HEAT SHRINKABLE SLEEVES
Figure 79

- (19) Shrink each sleeve into position. Refer to Subject 20-10-14.
 - (20) Align each of the shield ground wires with the longitudinal axis of the wire harness. Make sure that the shield ground wires do not make an overlap with each other.
 - (21) Push the overall shield of the wire harness forward. Refer to Figure 80.
- Make sure that:
- The shield ground wires are between the wire harness and the overall shield.
 - The forward end of the overall shield is 0.10 inch \pm 0.03 inch from the rear surface of the EMI backshell.

POSITION OF THE OVERALL SHIELD AND THE SHIELD TERMINATOR BAND
Figure 80

- (22) Install a shield terminator band on the overall shield and the band termination platform. Refer to Figure 80 and Paragraph 5.Y.
- Make sure that:
- The band does not make an overlap with the slot on the band termination platform
 - The band buckle does not make an overlap with the slot on the band termination platform.
- (23) Cut a length of the tape that is approximately 2.5 times the distance around the outer surface of the band termination platform.
 - (24) Put one end of the tape on the end of the band that is cut.
 - (25) Wind the tape around the band termination platform. Refer to Figure 81.
- Make sure that the layers of tape make a 100 percent overlap.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

POSITION OF THE TAPE ON THE SHIELD TERMINATOR BAND

Figure 81

- (26) If a 4.0 inch length of heat shrinkable sleeve is on the wire harness:
 - (a) Push the heat shrinkable sleeve forward until the forward edge of the sleeve is against the rear surface of the EMI backshell.
 - (b) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (27) If a 4.0 inch length of heat shrinkable sleeve is not on the wire harness; install a sleeve. Refer to Figure 82.

POSITION OF THE HEAT SHRINKABLE SLEEVE

Figure 82

- (a) Make a selection of a heat shrinkable sleeve from Table 38, Make sure that the sleeve has the smallest diameter that can move on the wire harness easily.
- (b) Make a longitudinal cut in a 4.0 inch length of the sleeve from one end to the other end.
- (c) Put the sleeve around the wire harness.
- (d) Push the sleeve forward until the forward edge of the sleeve is against the rear surface of the EMI backshell.
Make sure that the longitudinal axis of the sleeve is aligned with the longitudinal axis of the wire harness.
- (e) Assemble a wire harness tie, or install a plastic tie strap on each end of the sleeve. Refer to Subject 20-10-11.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS****Y. Shield Terminator Band Installation**

Table 42
SHIELD TERMINATOR BAND INSTALLATION TOOLS

Part Number	Type	Supplier
600-061	Manual	Glenair
A30199	Manual	Band-It Idex

- (1) Make a selection of an installation tool from Table 42.
- (2) If the shield terminator band is flat, make the band into a coil. Refer to Figure 83.

INSTALLATION CONFIGURATION OF THE BACB42F() SHIELD TERMINATOR BAND
Figure 83

- (a) Put the free end of the band through the thin slot in the buckle.
 - (b) Pull the free end through the buckle until the diameter of the loop is approximately the same size as the diameter of the backshell.
 - (c) Put the free end of the BACB42F() shield terminator band through the thin slot in the buckle again.
 - (d) Pull the free end through the buckle until the inner surface of the second loop is against the surface of the first loop.
- (3) Pull the release trigger of the tool in the direction of the pull-up handle.
 - (4) Put the free end of the terminator band into the tool. Refer to Figure 84.
Make sure that the loop is pointed away from the tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

POSITION OF THE BACB42F() SHIELD TERMINATOR BAND IN THE TOOL
Figure 84

- (5) Pull the pull-up handle to the tool frame to complete one cycle.
 Refer to Figure 85.

NOTE: The terminator band is held in the internal grip mechanism of the tool.

POSITION OF THE PULL-UP HANDLE AT THE END OF A CYCLE
Figure 85

- (6) Put the shield terminator band on the backshell at the location of the installation.
- (7) Align the edges of the two loops of the terminator band. Refer to Figure 86.
 Make sure that the edge of a loop is not more that 0.03 inch farther than the edge of the other loop.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

ALIGNMENT OF THE LOOPS OF THE SHIELD TERMINATOR BAND

Figure 86

- (8) Pull the pull-up handle through the necessary cycles until the terminator band is tight around the backshell.

Make sure that the position of the pull-up handle at the end of the last cycle is the position of the handle at the end of a cycle. Refer to Figure 85.

- (9) If it is necessary to loosen or remove the terminator band after the band is tightened:
 - (a) Hold the pull-up handle tightly.
 - (b) Push the tension release lever forward.
 - (c) Release the pull-up handle.

NOTE: The pull-up handle opens automatically.

- (d) Pull the release trigger to the tool frame.
- (e) Loosen the band and do the installation again from Step (7).
- (f) If it is necessary, remove the band and do the installation again from Step (3).
- (10) Pull the cut-off handle to the tool frame.
- (11) Pull the release trigger of the tool to cut the band.
- (12) Remove the unwanted length of the band from the tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

6. CONNECTOR POLARIZATION

A. Connector Polarization - Shell Types A, B, and C

The polarization code of the connector part number identifies the position of:

- The polarization posts on the plug connector
- The polarization receptacles on the receptacle connector.

Refer to Figure 1.

- (1) Find the polarization code in the connector part number from the equipment list.
- (2) For that code, find the correct position of:
 - The polarization posts on the plug
 - The polarization receptacles on the receptacle.

Refer to Paragraph 6.C.

- (3) If the position of the posts or the receptacles do not agree with the code in the part number from the equipment list, put the posts or the receptacles into the correct position. Refer to Paragraph 6.E.
- (4) If the polarization code in the part number on the connector shell does not agree with the polarization code in the part number from the equipment list, change the part number on the connector shell. Refer to Paragraph 6.G.

B. Connector Polarization - Shell Types D, E and F

The polarization code of the connector part number identifies the position of:

- The polarization posts on the plug connector
- The polarization receptacles on the receptacle connector.

Refer to Figure 1.

- (1) Find the polarization code in the connector part number from the equipment list.
- (2) For that code, find the correct position of:
 - The polarization posts on the plug
 - The polarization receptacles on the receptacle.

Refer to Paragraph 6.D.

- (3) If the position of the posts or the receptacles do not agree with the code in the part number from the equipment list, put the posts or the receptacles into the correct position. Refer to Paragraph 6.F.

C. Polarization Post and Polarization Receptacle Positions - Shell Types A, B, and C

POLARIZATION POSTS AND POLARIZATION RECEPTACLES - SHELL TYPES A, B, AND C

Figure 87

Table 45
POLARIZATION RETAINING PLATE TOOLS

Tool	Type	Size
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64
Torque	Wrench with a Hex Driver	5/64

- (1) Make a selection of these tools from Table 45:
 - A driver
 - A torque tool.
- (2) Disengage the retaining plate screws from the connector shell. Refer to Figure 91.

LOCATION OF THE RETAINING PLATE SCREWS
Figure 91

- (3) Remove the retaining plate.
- (4) Remove the posts or the receptacles.
- (5) In the correct polarization position, align the polarization posts or the polarization receptacles with the slots in the retaining plate.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

Refer to:

- Table 43 for the polarization codes and positions
- Figure 88 for the polarization positions
- Figure 92.

ALIGNMENT OF THE POLARIZATION POSTS OR POLARIZATION RECEPTACLES WITH THE SLOTS IN THE RETAINING PLATE

Figure 92

- (6) Put the posts or the receptacles in the slots. Refer to Figure 93.

POSITION OF THE POLARIZATION POSTS OR POLARIZATION RECEPTACLES IN THE RETAINING PLATE

Figure 93

- (7) Engage the threads of each retaining plate screw and screw hole in the connector shell. Refer to Figure 94.

POSITION OF THE POLARIZATION HARDWARE IN THE CONNECTOR SHELL

Figure 94

- (8) Torque each screw 7 inch-pounds \pm 1 inch-pound.

F. Change of the Polarization Post and Polarization Receptacle Positions - Shell Types D, E and F

- (1) Pull the polarizing posts or the polarizing receptacles from the connector shell. Refer to Figure 95.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

REMOVAL OF THE POLARIZATION POSTS OR THE POLARIZATION RECEPTACLES FROM THE CONNECTOR SHELL

Figure 95

- (2) In the correct polarization position, align the posts or the receptacles with the polarization holes in the connector shell.

Refer to:

- Table 44 for the polarization codes and positions
- Figure 90 for the polarization positions
- Figure 96.

LOCATION OF THE POLARIZATION POSTS OR THE POLARIZATION RECEPTACLES ON THE CONNECTOR SHELL

Figure 96

- (3) Push the posts or the receptacles into the holes in the connector shell. Refer to Figure 97 and Figure 98.

STANDARD WIRING PRACTICES MANUAL

G. Change of the Polarization Code in the Part Number on the Connector - Shell Types A, B, and C

**Table 46
NECESSARY MATERIALS**

Material	Part Number	Supplier
Ink	No. 68 Fast Dry	Independent
	No. 73X NW Opaque	Independent
	No. 73X Opaque	Independent
Paint, Clear	683-3-2	Akzo
	Clear Lacquer	Tartan
	EC-776	3M
	EC-776SR	3M
Pen	Permanent Ink Pen, Ultra Fine Point	Sanford Sharpie

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS**

LOCATION OF THE POLARIZATION CODE ON THE CONNECTOR
Figure 99

Refer to Figure 99.

- (1) Make a selection of these materials from Table 46:
 - An ink or a permanent ink pen
 - A clear paint.
- (2) If the polarization code in the part number on the connector is incorrect:
 - (a) Apply a layer of ink on the code on the connector shell.
Make sure that the code cannot be read.
 - (b) Write the new code on the connector shell adjacent to the layer of ink.
- (3) If the part number on the connector does not have a polarization code, write the code on the connector shell at the end of the part number.
- (4) Let the ink dry for a minimum of 10 minutes.
- (5) Apply a layer of the clear paint on the part number on the connector shell.

CAUTION: DO NOT APPLY PAINT ON THE CONTACTS. PAINT ON THE SURFACE OF A CONTACT CAN CAUSE UNSATISFACTORY ELECTRICAL PERFORMANCE OF THE CONTACT.

- (6) Let the paint dry before the connector shell is touched or moved.

7. INSPECTION AND CLEANING OF A FIBER OPTIC ALIGNMENT SLEEVE INSERT**A. Inspection and Cleaning of a Fiber Optic Alignment Sleeve Insert**

Refer to Subject 20-74-02.

8. CONNECTOR INSTALLATION**A. Equipment Identification**

The identification label on the wire harness near the connector can have this information:

- The equipment number for the connector or the connector insert
- The mate-with disconnect panel number
- The connector position on the panel
- The mate-with nomenclature
- The wire harness number.

Refer to Figure 100.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

EQUIPMENT NUMBER STRUCTURE
Figure 100

B. Installation of the Receptacle

For the installation of the receptacle with a ground block, refer to Paragraph 8.C.

Table 47
RECEPTACLE INSTALLATION FASTENERS

Fastener	Part Number	Supplier
Screw	NAS1802-6-()	QPL

Table 48
NECESSARY TOOLS

Tool	Type	Size (inch)
Driver	Phillips Head Screwdriver	-
	Socket Wrench	1/4
Torque	Phillips Head Torque Screwdriver	-
	Socket Torque Wrench	1/4

ALIGNMENT OF THE RECEPTACLE AND THE STRUCTURE
Figure 101

Refer to Figure 101.

- (1) Make a selection of two screws from Table 47.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS**

Make sure that the screws are new.

CAUTION: SCREWS THAT ARE NOT NEW CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

- (2) Make a selection of these tools from Table 48:
 - A driver
 - A torque tool.
- (3) From the rear side of the structure, align the mounting holes of the receptacle flange with the holes in the structure.
- (4) Put the connector shell in the cutout.
- (5) From the front side of the structure, install a screw in each of the two mounting holes.
- (6) Tighten each screw until:
 - The screw head is against the structure
 - The connector flange is fully against the structure.

Make sure that the flange of the receptacle is fully flat against the surface of the structure.

- (7) Torque each screw 13 inch-pounds to 15 inch-pounds.

C. Installation of the Receptacle with a Ground Block

- (1) Prepare the faying surfaces necessary for the electrical bond of the receptacle shell to the structure.

Refer to:

- Figure 102 for the connector receptacle flange
- Figure 103 for the rear surface of the structure
- Figure 104 for the front surface of the structure
- Subject 20-20-00 for the procedures to prepare the faying surface.

FAYING SURFACE ON THE RECEPTACLE
Figure 102

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

FAYING SURFACE ON THE REAR SIDE OF THE STRUCTURE

Figure 103

FAYING SURFACE ON THE FRONT SIDE OF THE STRUCTURE

Figure 104

- (2) Install the receptacle. Refer to Paragraph 8.B.
- (3) Do the electrical bond test for receptacle connector shells. Refer to Subject 20-20-00 and Figure 105.

TEST POINTS FOR THE RECEPTACLE TO STRUCTURE BOND

Figure 105

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

- (4) If the bond has a resistance greater than the maximum for connector shell bonds specified in Subject 20-20-00:
 - Remove the receptacle from the structure. Refer to Paragraph 4.B.
 - Do Step (1) through Step (3) again.

D. Plug and Receptacle Connection

**Table 49
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	3/32
	Screwdriver, Hex	3/32

- (1) Make a selection of a driver from Table 49.
- (2) Put the coupling indicator on each coupling fastener in the position that is perpendicular to the coupling indicator on the plug shell. Refer to Figure 106.

NOTE: The fasteners can be turned by hand.

**POSITION OF THE COUPLING INDICATOR
Figure 106**

- (3) Align the polarization hardware of the plug with the polarization hardware of the receptacle.
- (4) Push the plug forward until the front surface of the insert cavity of the receptacle is against the shell of the plug.

Make sure that the plug and the receptacle are fully engaged.

CAUTION: THE PLUG AND THE RECEPTACLE MUST BE FULLY ENGAGED. IF THE PLUG AND THE RECEPTACLE ARE NOT FULLY ENGAGED, DAMAGE TO A COUPLING FASTENER CAN OCCUR.

- (5) With the driver, turn one of the coupling fasteners 1/4 turn in the clockwise direction. Refer to Figure 107.

Make sure that the coupling indicator on the fastener is aligned with the coupling indicator on the plug.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65AN, BACC65AP, BACC65AV, AND BACC65AW CONNECTORS

ALIGNMENT OF THE COUPLING INDICATORS
Figure 107

- (6) Do Step (5) again for the other coupling fastener to lock the connectors together.
- (7) Examine the engaging end of the coupling fastener.
Make sure that the engaging end of each coupling fastener has no damage.

20-74-14 CONTENTS

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

1. GENERAL DATA

A. Damage Conditions - Rear Face of the Insert

Refer to Subject 20-74-02.

B. Damage Conditions - Front Face of the Insert

Refer to Subject 20-74-02.

C. Damage Conditions - Strain Relief Clamp

The strain relief clamp must be replaced if:

- The clamp has a crack
- The wire harness tie tab is broken.

A saddle bar of a strain relief clamp must be replaced if:

- The saddle bar screw hole threads are damaged
- The saddle bar has a crack.

D. Minimum Wire O.D. for an Environmentally Sealed Connector

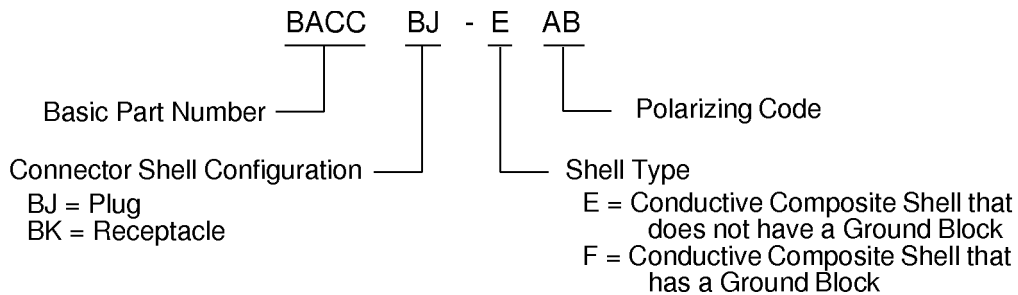

Refer to Subject 20-74-02.

2. PART NUMBERS AND DESCRIPTION

A. Connector Shell Part Numbers

**Table 1
CONNECTOR SHELL PART NUMBERS**

B. BACC65BJ and BACC65BK Connector Description

Refer to Figure 2 and Figure 3 for the configuration of the BACC65BJ plug and BACC65BK receptacle.

The BACC65BJ and BACC65BK connectors have these technical features:

- A metallized composite shell
- An integral EMI ground spring on the plug shell
- Shield ground wire terminations on some versions of the plug and the receptacle
- A slide latch mechanism to attach the plug to the receptacle
- A removable insert
- Rear insertion and removal of the insert assembly
- Size 22, 20, 16, 12, and 5 rear release, rear removal, crimp type contacts
- Size 5 coax contacts, rear release and rear removal
- Size 8 Quadrax contacts
- Size 16 fiber optic termini
- Size 22, 20, 16, and 12 rear release, rear removal, crimp type contacts
- A removable EMI backshell when there is no ground block
- 16 polarization positions.

A. BAC10AL and BAC10AM Inserts

Refer to Subject 20-74-02.

4. CONNECTOR DISASSEMBLY

A. Connector Separation

- (1) Pull the cam latch on the BACC65BJ() plug connector away from the mated connectors until it stops. Refer to Figure 6.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

UNLOCKING THE PLUG AND RECEPTACLE
Figure 6

SEPARATION OF THE PLUG AND RECEPTACLE
Figure 7

(2) Pull the plug straight away from the receptacle. Refer to Figure 7.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

B. Removal of the Receptacle

**Table 9
NECESSARY TOOLS**

Tool	Example	Maximum Shaft Diameter (inch)
A Shaft that Has a Handle	Screwdriver, Hex or Flat Blade	1/8

- (1) Push the spring latch to release the connector from the mounting track. Refer to Figure 8 for the direction to push the latch.

**DIRECTION TO PUSH THE SPRING LATCH FOR RECEPTACLE REMOVAL
Figure 8**

- (2) If the latch does not move, make a selection of a tool from Table 9 to release the connector from the mounting track.
- (3) Put the end of the tool in the hole in the end of the spring latch. Refer to Figure 9 for location to put the tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

POSITION OF THE TOOL FOR RECEPTACLE REMOVAL STEP 1
Figure 9

- (4) Move the handle of the tool toward the connector to release the connector from the track. Refer to Figure 9 and Figure 10 for direction toe move the tool..

POSITION OF THE TOOL FOR RECEPTACLE REMOVAL STEP 2
Figure 10

- (5) Hold the spring latch with a finger, and at the same time, move handle of the tool back away from the connector and pull the tool out of the spring latch. Refer to Figure 11.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

REMOVAL OF THE TOOL FROM THE SPRING LATCH

Figure 11

C. Removal of the Alignment Sleeve Insert

CAUTION: DO NOT PULL, SHAKE, OR TWIST THE ALIGNMENT SLEEVE INSERT FROM THE CONNECTOR. DAMAGE TO THE CERAMIC FERRULES OF THE CONTACT TERMINI CAN OCCUR.

**Table 10
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Allen Wrench	5/64
	Screwdriver, Hex	5/64

ALIGNMENT SLEEVE INSERT INSTALLATION SCREW

Figure 12

- (1) Make a selection of a driver from Table 10.

NOTE: The driver can have a ball type end.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

- (2) Turn the installation screw in a counterclockwise direction until the screw is disengaged from the face of the connector.

CAUTION: DO NOT SHAKE OR TWIST THE ALIGNMENT SLEEVE INSERT TO REMOVE IT FROM THE CONNECTOR. DAMAGE TO THE CERAMIC FERRULES OF THE CONTACT TERMINI CAN OCCUR.

- (3) Put the alignment sleeve insert in a clean plastic bag.

CAUTION: KEEP THE ALIGNMENT SLEEVE INSERT IN A CLEAN PLASTIC BAG UNTIL IT IS INSTALLED IN THE CONNECTOR. CONTAMINATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

D. Insert Removal

NOTE: Remove the insert contacts before the insert is removed.

**Table 11
INSERT REMOVAL TOOLS**

Tool	Part Number
Insert Removal Tool	282 521 002
Insert Removal Tool	282 521 005

- (1) Make a selection of an insert removal tool from Table 11.
- (2) Remove the EMI backshell from the connector; refer to Paragraph 4.G.
- (3) Remove the ground block contacts from the ground block; refer to Paragraph 4.F.
- (4) From the rear of the connector, align the two ends of the removal tool with the rear of the insert. Refer to Figure 13.

**ALIGNMENT OF THE INSERT REMOVAL TOOL
Figure 13**

- (5) Carefully push the removal tool between the insert cavity and the insert. Make sure to keep the tool aligned with the insert.
- (6) Push the two sides of the tool at the same time into the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

(7) Pull the insert removal tool and the insert straight out of the connector. Refer to Figure 14.

REMOVAL OF THE INSERT
Figure 14

E. Seal Plug and Seal Rod Removal

Refer to Subject 20-74-02.

F. Contact Removal

This paragraph gives the procedure to remove size 16 contacts from the ground block:

For the procedure to remove contacts from the connector insert, refer to Subject 20-74-02.

Table 12
REMOVAL TOOLS FOR SIZE 16 GROUND BLOCK CONTACTS

Contact Cavity Size	Contact			Removal Tool	
	Engaging End Size	Crimp Barrel Size	Size	Part Number	Color
16	16	18	1618	ATR2080	-
				ATR2079	-
				M81969/14-11	White
				RRX20B	-
	20	1620	ATR2080	-	
			ATR2079	-	
			M81969/14-11	White	
			RRX20B	-	

(1) Make a selection of a contact removal tool from Table 12 for size 16 ground block contacts:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE GROMMET OR THE RETENTION CLIP.

- (2) Remove the plastic tie straps or the wire harness ties that are less than 6 inches from the connector.
- (3) Put the tip of the removal tool on the wire near the grommet or the ground block.
- (4) Axially align the removal tool and the contact cavity.
- (5) Carefully push the removal tool straight into the contact cavity until it stops.
- (6) Carefully pull the wire and the removal tool straight out of the contact cavity at the same time.
- (7) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the removal tool approximately 90 degrees.
 - (c) Do Step (3) through Step (6) again.

G. EMI Backshell Removal

**Table 13
EMI BACKSHELL REMOVAL TOOLS**

Tool	Supplier
Diagonal Cutter	An available source
Knife	An available source

- (1) Remove the heat shrinkable sleeve from the wire harness. Refer to Figure 15.

**REMOVAL OF THE HEAT SHRINKABLE SLEEVE
Figure 15**

- (a) If the heat shrinkable sleeve has tie straps or wire harness ties, cut them off.
- (b) Carefully make a longitudinal cut in the heat shrinkable sleeve from one end to the other end.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS**

CAUTION: DO NOT CUT INTO THE STRANDS OF THE OVERALL SHIELD OR OTHER COMPONENTS OF THE WIRE HARNESS. DAMAGE TO THE SHIELD OR COMPONENTS CAN OCCUR.

- (c) Remove the heat shrinkable sleeve from the wire harness.
- (2) Remove the tape at the end of the overall shield. Refer to Figure 16.

REMOVAL OF THE TAPE
Figure 16

- (3) Make a selection of a pair of diagonal cutters from Table 13.
- (4) Remove the shield terminator band from the overall shield. Refer to Figure 17.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS****REMOVAL OF THE SHIELD TERMINATOR BAND FROM THE OVERALL SHIELD****Figure 17**

- (a) Hold the buckle of the shield terminator band with the cutters.
- (b) Rotate the cutters and lift the buckle of the band away from the backshell until the buckle releases or the band breaks.
- (c) Remove the band.
- (5) Push the overall shield away from the band termination platform.
- (6) Remove the shield terminator band from the shield ground wires on the band termination platform. Refer to Figure 18.

20-74-14

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

REMOVAL OF THE SHIELD TERMINATOR BAND FROM THE BAND TERMINATION PLATFORM
Figure 18

- (a) Hold the buckle of the shield terminator band with the cutters.
- (b) Rotate the cutters and lift the buckle of the band away from the backshell until the buckle releases or the band breaks.
- (c) Remove the band.
- (7) Remove the plastic tie strap. Refer to Figure 18.
- (8) If the connector has a shield ground wire that comes out of the slot in the EMI backshell:
 - (a) Remove the insulation on the shield ground wire. Refer to Figure 18.
 - (b) Push the EMI Backshell up away from the connector shell.
 - (c) Push the shield ground wire into the slot.
 - (d) Pull the shield ground wire out of the EMI backshell.
 - (e) Do Step (c) and Step (d) for each shield ground wire.
- (9) Remove the EMI backshell from the connector shell. Refer to Figure 19.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

REMOVAL OF THE EMI BACKSHELL FROM THE CONNECTOR SHELL
Figure 19

5. CONNECTOR ASSEMBLY

A. Shield Ground Wire Assembly

This paragraph gives the procedure to assemble a shield ground wire and a contact for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Raychem 55A6160-() cable, refer to Paragraph 5.C.
- BMS13-60 Type 27 Class 1 wire, refer to Paragraph 5.D.
- The termination of the shield at the EMI backshell, refer to Paragraph 5.B.

- (1) Remove 2.5 inches \pm 0.1 inch of the cable jacket from the end of the cable. Refer to Figure 20.

CABLE JACKET REMOVAL
Figure 20

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

- (2) Assemble an insulated shield ground wire. Refer to Subject 20-10-15.

NOTE: The shield ground wire must have the same size as the crimp barrel of the applicable contact. Refer to:

- Table 5 for the ground block contact
- Subject 20-74-02 for the insert contact.

Make sure that:

- The shield ground wire assembly components are applicable for the shield material of the wire
- The length of the shield ground wire is 2.5 inches minimum
- The free end of the shield ground wire is pointed forward to the end of the cable.

CAUTION: A SHIELD GROUND WIRE ASSEMBLY WITH A SOLDER SLEEVE IS NOT APPLICABLE FOR A CABLE OR A WIRE WITH A SHIELD THAT HAS NICKEL PLATED CONDUCTORS. UNSATISFACTORY PERFORMANCE OF THE SHIELD TERMINATION CAN OCCUR.

- (3) Remove the unwanted length from the end of the shield ground wire and the wires of the cable. Refer to Figure 21.

LENGTH OF THE SHIELD GROUND WIRE AND THE WIRES OF THE CABLE

Figure 21

NOTE: The connection of the shield and the shield ground wire can be:

- The melted solder ring of a solder sleeve
- A mechanical ferrule
- An RSK Shield-Kon.

- (a) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the connection to the end of the shield ground wire equal to 2.0 inches maximum.
- (b) Remove the necessary length from the end of the each wire of the cable to make the distance from the forward edge of the connection to the end of the wire equal to 2.25 inches ± 0.06 inch.
- (4) Assemble the specified contact on the end of the shield ground wire.

For the procedure to assemble:

- An insert contact, refer to Subject 20-74-02
- A ground block contact, refer to Paragraph 5.F. .

B. Shield Ground Wire Assembly for Shield Termination at the EMI Backshell

- (1) Remove 2.50 inches ± 0.1 inch of the cable jacket from the end of the cable. Refer to Figure 22.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

CABLE PREPARATION
Figure 22

(2) Assemble an uninsulated shield ground wire. Refer to Subject 20-10-15 and Figure 23.

Make sure that:

- The size of the shield ground wire is AWG 20
- The length of the shield ground wire is 5 inches minimum
- The shield ground wire is pointed back away from the end of the cable.

CAUTION: A SHIELD GROUND WIRE ASSEMBLY WITH A SOLDER SLEEVE IS NOT APPLICABLE FOR A CABLE OR A WIRE WITH A SHIELD THAT HAS NICKEL PLATED CONDUCTORS. UNSATISFACTORY PERFORMANCE OF THE SHIELD TERMINATION CAN OCCUR.

SHIELD GROUND WIRE CONFIGURATION
Figure 23

C. Shield Ground Wire Assembly for Raychem 55A6160-() Cable

This paragraph gives the procedure to assemble the shield ground wires and contacts for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Wire or cable that has one shield, refer to Paragraph 5.A.
- BMS13-60 Type 27 Class 1 wire, refer to Paragraph 5.D.

Table 14
NECESSARY PARTS

Part	Boeing Standard	Shield Ground Wire Size (AWG)
Solder Sleeve with an integral wire	BACS13CT3C	20

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

- (1) Make a selection of a solder sleeve with an integral wire from Table 14.

NOTE: Two solder sleeves are necessary.

Refer to Subject 20-10-15 for approved suppliers of Boeing standard solder sleeves.

- (2) Prepare the cable for termination of the outer shield. Refer to Figure 24 and Subject 20-00-15.

OUTER JACKET AND OUTER SHIELD REMOVAL

Figure 24

- (a) Remove 2.80 inches ± 0.02 inch of the outer jacket from the end of the cable.
- (b) Remove the necessary length of the shield to make the distance from the end of the jacket to the end of the shield equal to 0.25 inch ± 0.06 inch.
- (3) Assemble the shield ground wire of the outer shield. Refer to Figure 25.

TERMINATION OF THE OUTER SHIELD

Figure 25

- (a) Put the solder sleeve on the wire or cable.
- Make sure that:
- The free end of the shield ground wire is pointed forward to the end of the cable
 - The large end of the solder sleeve is put on the wire or cable first
 - The inner edge of the rear seal ring is aligned with the end of the outer jacket.
- (b) Shrink the solder sleeve into its position.
- Make sure that:
- The solder sleeve stays in the correct position
 - A minimum of 75 percent of the indicator ring on top of the solder ring is melted.
- (c) Remove the necessary length of the shield ground wire to make the distance from the forward edge of the solder ring to the end of the wire equal to 2.0 inches maximum.
- (4) Prepare the cable for termination of the inner shield. Refer to Figure 26 and Subject 20-00-15.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

INNER JACKET AND INNER SHIELD REMOVAL

Figure 26

- (a) Remove 2.00 inches ± 0.02 inch of the inner jacket from the end of the cable.
- (b) Remove the necessary length of the inner shield to make the distance from the end of the shield to the end of the jacket equal to 0.25 inch ± 0.06 inch.
- (c) Remove the necessary length of the red wire to make the distance from the end of the red wire to the end of the blue wire equal to 0.30 inch ± 0.02 inch.
- (d) Remove 0.21 inch ± 0.02 inch of insulation from the end of the blue wire. Refer to Subject 20-00-15.
- (5) Assemble the shield ground wire of the inner shield. Refer to Figure 27.

Make sure that:

- The free end of the shield ground wire is pointed forward to the end of the cable
- The large end of the solder sleeve is put on the wire or cable first
- The inner edge of the rear seal ring is aligned with the end of the jacket.

TERMINATION OF THE INNER SHIELD

Figure 27

- (a) Fold the blue wire back and put the end of the wire between the inner shield and the rear end of the solder sleeve.

Make sure the center of the conductor is aligned with the solder ring of the solder sleeve.

CAUTION: THE STRANDS OF THE WIRE MUST NOT GO INTO THE SHIELD OF THE CABLE. A SHORT CIRCUIT BETWEEN THE CONDUCTOR OF THE WIRE CAN OCCUR.

- (b) Shrink the solder sleeve into its position.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

Make sure that:

- The solder sleeve stays in the correct position
 - A minimum of 75 percent of the indicator ring on top of the solder ring is melted.
- (c) Remove the necessary length of the shield ground wire to make the distance from the forward edge of the solder ring to the end of the wire equal to 2.0 inches maximum.
- (6) Assemble the specified contact on the end of the shield ground wire.

For the assembly of:

- A ground block contact, refer to Paragraph 5.F.
- An insert contact, refer to Subject 20-74-02

D. Shield Ground Wire Assembly for BMS13-60 Type 27 Class 1 Wire

This paragraph gives the procedure to assemble shield ground wires and contacts for installation in:

- The connector ground block
- The connector insert.

For the procedure to assemble the shield ground wires for:

- Wire or cable that has one shield, refer to Paragraph 5.A.
- Raychem 55A6160-() cable, refer to Paragraph 5.C.

**Table 15
MECHANICAL FERRULE PART NUMBERS**

Shield	Ferrule Type	Boeing Standard
Inner	Inner	BACS13S071BNP
	Outer	BACS13S149CNP
Outer	Inner	BACS13S090BNP
	Outer	BACS13S175CNP

NOTE: Refer to Subject 20-10-15 for approved suppliers of Boeing standard mechanical ferrules.

**Table 16
NECESSARY MATERIALS**

Material	Part Number	Supplier
Sleeve, Heat Shrinkable	SAE-AMS-DTL-23053/12 Class 2	QPL
	SAE-AMS-DTL-23053/12 Class 5	QPL
	TFE-2X	Zeus
	TFE-4X	Zeus

- (1) Prepare the cable for the termination of the outer shield. Refer to Figure 28 and Subject 20-00-15.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

OUTER JACKET AND OUTER SHIELD REMOVAL

Figure 28

- (a) Remove 2.60 inches ±0.02 inch of the outer jacket from the end of the cable.
 - (b) Remove the necessary length of the outer shield to make the distance from the end of the jacket to the end of the shield equal to 0.35 inch ±0.03 inch.
- (2) Assemble the shield ground wire of the outer shield. Refer to Figure 29.

TERMINATION OF THE OUTER SHIELD

Figure 29

- (a) Make a selection of an inner and outer ferrule from Table 15.
 - (b) Make a selection of a ferrule crimp tool. Refer to Subject 20-10-15.
 - (c) Make a selection of a heat shrinkable sleeve from Table 16.
- Make sure that the heat shrinkable sleeve has the smallest diameter that can move freely on the shield ground wire assembly.

NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.

- (d) Make a selection of a shield ground wire. Refer to Subject 20-10-15.

NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to Table 5 for the ground block contact.

- (e) Put the outer ferrule on the cable.
- (f) Put the inner ferrule on the cable.

Make sure that:

- The inner ferrule is between the shield and the inner jacket
- The rear end of the inner ferrule is tight against the end of the outer jacket.

- (g) Remove the necessary length of insulation from one end of the shield ground wire. Refer to Subject 20-00-15.

Make sure that the bare conductor can extend a small amount farther than the length of the outer ferrule.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

- (h) Put the conductor of the shield ground wire between the shield and the outer ferrule.
Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the wire
 - The bare conductor extends a small amount farther than the rear end of the outer ferrule.
- (i) Push the outer ferrule and the shield ground wire forward until the center of the outer ferrule is aligned with the center of the inner ferrule.
- (j) Make sure that the forward end of the inner ferrule does not extend farther than 0.06 inch from the forward end of the outer ferrule.
- (k) Crimp the outer ferrule.
- (l) Remove the unwanted length of the shield that extends farther than the forward edge of the outer ferrule.

NOTE: The outer surface of the inner ferrule can be used to cut against.

- (m) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the outer ferrule to the end of the wire equal to 2.0 inches maximum.
 - (n) Put the necessary length of heat shrinkable sleeve on the wire or cable.
Make sure that the distance:
 - From the rear end of the ferrule to the rear end of the sleeve is 0.25 inch minimum
 - From the forward end of the ferrule to the forward end of the sleeve is 0.5 inch minimum.
 - (o) Shrink the sleeve into its position. Refer to Subject 20-10-14.
- (3) Prepare the cable for the termination of the inner shield. Refer to Figure 30 and Subject 20-00-15.

INNER JACKET AND INNER SHIELD REMOVAL

Figure 30

- (a) Remove 1.85 inches ± 0.02 inch of the inner jacket from the end of the cable.
 - (b) Remove the necessary length of the inner shield to make the distance from the end of the jacket to the end of the shield equal to 0.35 inch ± 0.03 inch.
- (4) Assemble the shield ground wire of the inner shield. Refer to Figure 31.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

TERMINATION OF THE INNER SHIELD

Figure 31

- (a) Make a selection of an inner and outer ferrule from Table 15.
 - (b) Make a selection of a ferrule crimp tool. Refer to Subject 20-10-15.
 - (c) Make a selection of a heat shrinkable sleeve from Table 16.
Make sure that the heat shrinkable sleeve has the smallest diameter that can move freely on the shield ground wire assembly.
- NOTE: For alternative heat shrinkable sleeves, refer to Subject 20-00-11.
- (d) Make a selection of a shield ground wire. Refer to Subject 20-10-15.
NOTE: The shield ground wire must have the same size as the crimp barrel of the specified contact. Refer to Subject 20-74-02 for the insert contact.
 - (e) Put the outer ferrule on the cable.
 - (f) Put the inner ferrule on the cable.
Make sure that:
 - The inner ferrule is between the shield and the primary insulation
 - The rear end of the inner ferrule is tight against the end of the inner jacket.
 - (g) Remove the necessary length of insulation from one end of the shield ground wire. Refer to Subject 20-00-15.
Make sure that the bare conductor can extend a small amount farther than the length of the outer ferrule.
 - (h) Put the conductor of the shield ground wire between the shield and the outer ferrule.
Make sure that:
 - The free end of the shield ground wire is pointed forward to the end of the wire
 - The bare conductor extends a small amount farther than the rear end of the outer ferrule.
 - (i) Push the outer ferrule and the shield ground wire forward until the center of the outer ferrule is aligned with the center of the inner ferrule.
 - (j) Make sure that the forward end of the inner ferrule does not extend farther than 0.06 inch from the forward end of the outer ferrule.
 - (k) Crimp the outer ferrule.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

- (l) Remove the unwanted length of the shield that extends farther than the forward edge of the outer ferrule.

NOTE: The outer surface of the inner ferrule can be used to cut against.

- (m) Remove the necessary length from the end of the shield ground wire to make the distance from the forward edge of the outer ferrule to the end of the wire equal to 2.0 inches maximum.
- (n) Put the necessary length of heat shrinkable sleeve on the wire or cable.

Make sure that the distance:

- From the rear end of the ferrule to the rear end of the sleeve is 0.25 inch minimum
- From the forward end of the ferrule to the forward end of the sleeve is 0.5 inch minimum.

- (o) Shrink the sleeve into its position. Refer to Subject 20-10-14.

- (5) Assemble the specified contact on the end of the shield ground wire.

For the assembly of:

- A ground block contact, refer to Paragraph 5.F.
- An insert contact, refer to Subject .20-74-02

E. Contact Assembly

For the procedure to assemble:

- Insert contacts, refer to Subject 20-74-02
- Ground block contacts, refer to Paragraph 5.F. .

F. Ground Block Contact Assembly

**Table 17
GROUND BLOCK CONTACT CRIMP TOOLS**

				WA27F	5	M22520/1-02	Red

- (1) Make a selection of a crimp tool from Table 17.
- (2) Remove 0.18 inch ± 0.02 inch of insulation from the end of the shield ground wire.

Refer to:

- Figure 32
- Subject 20-00-15 for the insulation removal procedures.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

INSULATION REMOVAL LENGTH

Figure 32

(3) Put the end of the wire in the crimp barrel of the contact. Refer to Figure 33.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL OF THE CONTACT

Figure 33

(4) Crimp the contact.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is not more than 0.03 inch.

G. Size 5 Coax Contact Assembly

Refer to Subject 20-74-02.

H. Assembly of Size 5 Power Contacts

Refer to Subject 20-74-02.

I. Assembly of Size 8 Coax Contacts

Refer to Subject 20-74-02.

J. Size 8 Twinax Contact Assembly

Refer to Subject 20-74-02.

K. Insertion of Size 8 Coax and Size 8 Twinax Contacts

Refer to Subject 20-74-02.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

L. Size 8 Quadrax Contact Assembly

Refer to Subject 20-74-02.

M. Contact Insertion

This paragraph gives the procedure to install ground block contacts. For the procedure to install insert contacts, refer to Subject 20-74-02.

NOTE: Insert contacts can be installed in the insert before or after the insert is installed in the connector shell.

If a cable clamp is specified, it must be installed before:

- An insert with assembled contacts is installed in the connector shell
- Assembled ground block contacts are installed in the ground block.

**Table 18
GROUND BLOCK CONTACT INSERTION TOOLS**

Engaging End Size	Insertion Tool	
	Part Number	Color
16	DAK83-20	-
	M81969/14-11	Red
	ST2220-2-28	-

- (1) Make a selection of the contact insertion tool from Table 18 for the ground block contacts.
- (2) Put the contact assembly in the insertion tool.
- (3) Axially align the insertion tool and the contact cavity.
- (4) Carefully push the insertion tool and the contact straight into the contact cavity until it stops.

For the ground block contacts, make sure that tension does not occur between the shield ground wire and:

- The solder sleeve
- The contact crimp barrel.

- (5) Carefully pull the insertion tool straight out of the contact cavity.
- (6) Remove the insertion tool from the wire.
- (7) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (8) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly from the contact cavity.
 - (b) Do Step (2) through Step (7) again.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

N. Insertion of Fiber Optic Contact Termini

Refer to Subject 20-74-02.

O. Size 5 Coax Contact Insertion

Refer to Subject 20-74-02.

P. Installation of Size 8 Quadrax Contacts

Refer to Subject 20-74-02.

Q. Seal of an Empty Contact Cavity

Refer to Subject 20-74-02.

R. Insert Installation

NOTE: An insert can be installed with contacts or without contacts.

The connector shells for the BACC65BJ() and BACC65BK() connector:

- Will only accept inserts that have "A" polarization
- Will not accept inserts that have "B" polarization.

BACC65BJ() PLUG CONNECTOR INSERT INSTALLATION

Figure 34

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

BACC65BK() RECEPTACLE CONNECTOR INSERT INSTALLATION
Figure 35

- (1) Align the polarization key on the insert with the polarization keyway on the rear side of the insert cavity. Refer to Figure 34 and Figure 35.

NOTE: A blank insert does not have a polarization key.

- (2) Push the insert into the insert cavity until it stops and is locked in position.

CAUTION: IF THE INSERT DOES NOT GO INTO THE CONNECTOR SHELL EASILY, DO NOT CONTINUE TO PUSH THE INSERT. DAMAGE TO THE INSERT CAN OCCUR.

- (3) If the insert does not go into the connector shell correctly:
 - (a) Remove the insert. Refer to Paragraph 4.D.
 - (b) Do Step (1) and Step (2) again.

S. Installation of the Fiber Optic Alignment Sleeve Insert

Refer to Subject .20-74-02.

T. Installation of the BACC10MR() EMI Backshells

Table 19
NECESSARY TOOLS

Part Number	Description	Supplier
600-061	Manual Band Installation Tool	Glenair
A30199	Manual Band Installation Tool	Band-It Idex

Table 20
NECESSARY MATERIALS

Part Number	Description	Supplier
BACB42F()	Band, Shield Termination	QPL
BACS38W2	Plastic Tie Strap	QPL

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

Table 20 (continued)

Part Number	Description	Supplier
Scotch 70	Silicone Tape, Self Bonding Silicone Rubber, High Temperature, 0.012 inch thick, 0.25 inch wide	3M
912-10X12	Silicone Tape, Self Bonding Silicone Rubber, High Temperature, 0.012 inch thick, 0.25 inch wide	Arlon

- (1) Engage the EMI spring fingers of the backshell with the bottom of the connector shell. Refer to Figure 36.

THE EMI SPRING FINGERS ENGAGED WITH THE CONNECTOR SHELL
Figure 36

- (2) Install the shield ground wires.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

INSTALLATION OF THE SHIELD GROUND WIRE

Figure 37

- (a) Put approximately half of the each free end shield ground wire through the slot in the backshell. Refer to Figure 37 .
- (b) Pull each free end of shield ground wire to make sure that there is no unwanted length of each shield ground wire in the backshell.
- (3) Push the backshell onto the connector shell. Refer to Figure 38.

Make sure that the shield ground wires:

- Are straight
- Are evenly spaced around the band termination platform
- Do not overlap with other shield ground wires.

INSTALLATION CONFIGURATION OF THE EMI BACKSHELL

Figure 38

20-74-14

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS**

- (4) Make a selection of a band installation tool from Table 19.
- (5) Make a selection of a shield termination band from Table 20.
- (6) If the shield terminator band is flat, make the band into a coil around the band termination platform. Refer to Figure 39.

**INSTALLATION CONFIGURATION OF THE BACB42F() SHIELD TERMINATOR BAND****Figure 39**

- (a) Put the free end of the band through the thin slot in the buckle.
 - (b) Pull the free end through the buckle until the diameter of the loop is approximately the same size as the diameter of the band termination platform on the backshell.
 - (c) Put the free end of the BACB42F() shield terminator band through the thin slot in the buckle again.
 - (d) Pull the free end through the buckle until the inner surface of the second loop is against the surface of the first loop.
- (7) Pull the release trigger of the tool in the direction of the pull-up handle.
 - (8) Put the free end of the terminator band into the tool. Refer to Figure 40.
Make sure that the loop is pointed away from the tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

POSITION OF THE BACB42F () SHIELD TERMINATOR BAND IN THE TOOL
Figure 40

- (9) Pull the pull-up handle to the tool frame to complete one cycle.
 Refer to Figure 41.

NOTE: The terminator band is held in the internal grip mechanism of the tool.

POSITION OF THE PULL-UP HANDLE AT THE END OF A CYCLE
Figure 41

- (10) Put the shield terminator band on the band termination platform. Refer to Figure 42.
 Make sure that:

- The buckle on the band does not overlap with a shield ground wire
- The buckle on the band does not overlap with the slot in the band termination platform
- The buckle on the band lies flat on the band termination platform.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

POSITION OF THE SHIELD TERMINATOR BAND

Figure 42

- (11) Align the edges of the two loops of the terminator band. Refer to Figure 43.
 Make sure that the edge of a loop is not more that 0.03 inch farther than the edge of the other loop.

ALIGNMENT OF THE LOOPS OF THE SHIELD TERMINATOR BAND

Figure 43

- (12) Pull the pull-up handle through the necessary cycles until the terminator band is tight around the backshell.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

Make sure that the position of the pull-up handle at the end of the last cycle is the position of the handle at the end of a cycle. Refer to Figure 41.

- (13) If it is necessary to loosen or remove the terminator band after the band is tightened:
 - (a) Hold the pull-up handle tightly.
 - (b) Push the tension release lever forward.
 - (c) Release the pull-up handle.

NOTE: The pull-up handle opens automatically.

- (d) Pull the release trigger to the tool frame.
 - (e) Loosen the band and do the installation again from Step (7).
 - (f) If it is necessary, remove the band and do the installation again from Step (3).
- (14) Pull the cut-off handle to the tool frame.
 - (15) Pull the release trigger of the tool to cut the band.
 - (16) Remove the unwanted length of the band from the tool.
 - (17) Trim the shield ground wires, so that it is approximately 2.5 inches long.

Make sure that the length of the shield ground wires is approximately 2.5 inches measured from the shield termination band.

- (18) Make a selection of a heat shrinkable sleeve. Refer to Subject 20-00-11
- (19) Install a 3.00 ± 0.10 inch length and 0.19 inch diameter of heat shrinkable sleeve over the free end of each shield ground wire. Refer to Subject 20-10-14.
- (20) Install a BACS38W2 plastic tie strap at the back of the BACC10MR EMI backshell. Refer to Figure 44.

POSITION OF THE PLASTIC TIE STRAP AND THE SHIELD GROUND WIRE
Figure 44

- (21) Put the overall shield over the band termination platform of the backshell. Make sure that the distance from the edge of the overall shield to the top surface of the back shell is 0.10 ± 0.03 inch. Refer to Figure 45.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

POSITION OF THE OVERALL SHIELD
Figure 45

(22) Install a shield terminator band on the overall shield on the band shield platform. Refer to Step (4) through Step (16).

Make sure that:

- The buckle of the band does not overlap a shield ground wire
- The buckle of the band does not overlap the slot in the backshell
- The buckle of the band is not against the collar of the band termination platform
- The buckle of the band lies flat against the band termination platform.

(23) Make a selection of tape from Table 20.

(24) Wind 3 layers of tape around the shield terminator band. Refer to Figure 46.

Make sure that there are 3 layers of tape on the buckle.

POSITION OF THE SILICONE TAPE
Figure 46

(25) If the wire bundle has an overall heat shrinkable sleeving:

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS**

- (a) Move the sleeving toward the connector until it touches the backshell. Refer to Figure 47
- (b) Shrink the sleeve in position. Refer to Subject 20-10-14.

**POSITION OF THE HEAT SHRINKABLE SLEEVE****Figure 47**

- (26) If the sleeve is loose on the wire bundle, tie the sleeving using lacing tape wire harness ties. Refer to Subject 20-10-11.

6. CONNECTOR POLARIZATION**A. Connector Polarization:**

Procedure to make sure the correct posts or receptacles position are installed on the connector shell:

The polarization code from the connector shell identifies the position of:

- The polarization posts on the plug connector shell
- The polarization receptacles on the receptacle connectors shell.

- (1) Find the polarization code in the connector part number from the equipment list, refer to Figure 1 for part number structure.
- (2) Find the polarization code from the connector shell. Refer to Paragraph 6.B..
- (3) Match the polarization code from the equipment list with the polarization code from the connector shell.
- (4) If the code from the connector shell does not agree with the code in the part number from the equipment list, adjust the position of the posts or receptacles to show the correct code on the connector shell. Refer to Paragraph 6.C..

C. Change of the Polarization Post and Polarization Receptacle Positions

**Table 22
NECESSARY TOOLS**

Tool	Supplier
Screwdriver, Flat Blade	An available source

- (1) Make a selection of a small flat blade screwdriver. Make sure that its tip is able to go into the slot. Refer to Figure 50 and Table 22.
- (2) Put the tip of the screwdriver into the slot of the shell with the flat part of the tip against the end of the post or receptacle.

**LOCATION TO PUT SCREWDRIVER TO REMOVE THE POST OR RECEPTACLE
Figure 50**

- (3) Push the post or receptacle forward to release them from the connector shell.
- (4) Place the screwdriver into the window and push the post or receptacle forward again to fully remove it.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

- (5) Push the polarization post or polarization receptacle in the correct position into its hole in the connector shell. Refer to Figure 51.

Make sure to:

- Show the correct code on the windows
- Install the posts or receptacles one at a time
- Fully engage each post or receptacle in the hole in the connector shell.

POLARIZATION POST AND RECEPTACLE INSTALLATION
Figure 51

7. CONNECTOR INSTALLATION

A. Equipment Identification

The identification label on the wire harness near the connector can have this information:

- The equipment number for the connector or the connector insert
- The mate-with disconnect panel number
- The connector position on the panel
- The mate-with nomenclature
- The wire harness number.

Refer to Figure 52.

EQUIPMENT NUMBER STRUCTURE
Figure 52

B. Installation of the Receptacle

This procedure applies to installation of the receptacle with a ground block.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

**Table 23
NECESSARY TOOLS**

Tool	Example	Maximum Shaft Diameter (inch)
A shaft that has a handle	Screwdriver, Hex or Flat Blade	1/8

(1) Make sure that the spring latch is locked in the retracted position. Refer to Figure 53.

**SPRING LATCH POSITIONS
Figure 53**

(2) If the spring latch is not in the retracted position:

(a) Push the spring latch to the retracted position. Hold the spring latch with a finger to make sure that the latch catches in the base of the connector. Refer to Figure 54.

**DIRECTION TO RETRACT THE SPRING LATCH
Figure 54**

(b) If it is necessary, make a selection of a tool from Table 23 to help push the spring latch to the retracted position. Refer to Figure 55.

Make sure that the latch catches in the base of the connector.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

DIRECTION TO MOVE THE TOOL TO RETRACT THE SPRING LATCH

Figure 55

- (3) Find the mounting location of the receptacle connector on the mounting track. Refer to Figure 56.

LOCATION TO INSTALL A RECEPTACLE CONNECTOR ON THE MOUNTING TRACK

Figure 56

- (4) Put the receptacle spring fingers against one edge of the mounting track. Refer to Figure 57.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BJ AND BACC65BK CONNECTORS

SPRING FINGERS ON THE EDGE OF THE MOUNTING TRACK

Figure 57

- (5) Hold the spring fingers against the edge of the mounting track, and at the same time, move the receptacle onto the mounting track. Refer to Figure 57.
Make sure that the base of the receptacle is against both edges of the mounting track.
- (6) Hold the receptacle against both edges of the mounting track. At the same time, push the spring latch release button in the base of the receptacle to lock the receptacle to the mounting track. Refer to Figure 58.

LOCATION OF THE BUTTON TO PRESS TO RELEASE SPRING LATCH

Figure 58

- (7) Make sure that the connector is locked on the mounting track. Refer to Figure 59.

STANDARD WIRING PRACTICES MANUAL

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS****B. Connector Description**

The BACC65BC() and BACC65BD() rectangular connector plug and receptacle have these technical features:

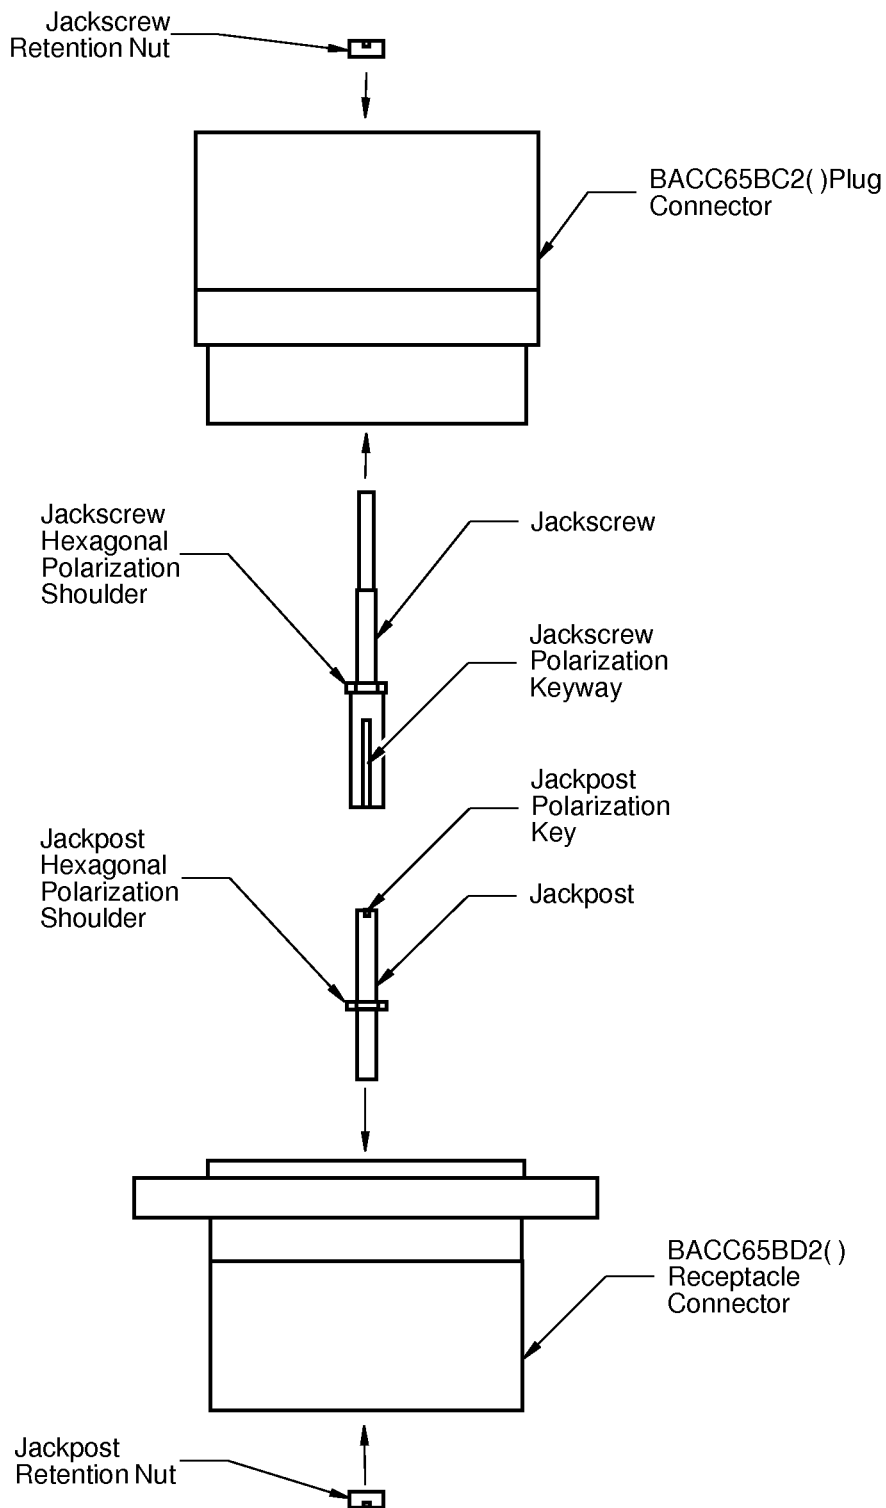

- Are available with 2 contact cavities or 12 contact cavities
- Can accept both size 8 coax contacts and size 8 quadrax contacts
- The connector insert and shell are a one piece design
- The BACC65BC() plug accepts size 8 coax socket contacts and size 8 quadrax socket contacts
- The BACC65BD() receptacle accepts size 8 coax pin contacts and size 8 quadrax pin contacts
- The BACC65BC() plug has the jackscrew
- The BACC65BD() receptacle has the jackpost
- The contact cavities have keyways
- The jackscrew and jackpost have 6 flat polarization positions A,B,C,D,E, and F
- The contacts are inserted and removed from the rear face of the connector
- The backshell is plastic, is removable, and holds the cables with wire harness tie attachments.

2. CONNECTOR DISASSEMBLY

A. Connector Separation

Table 10
NECESSARY TOOLS

Tool	Type	Size (inch)
Wrench	Allen Wrench	9/64

- (1) Make a selection of a wrench from Table 10.
NOTE: The wrench can have a ball style end.
- (2) With the wrench, turn the jackscrew in the plug counterclockwise until the jackscrew disengages from the jackpost in the receptacle. Refer to Figure 2 and Figure 4.
- (3) Pull the plug straight away from the receptacle.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

B. Removal of the Receptacle

**Table 11
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Phillips Head Screwdriver	-
	Socket Wrench	1/4

- (1) Make a selection of a driver from Table 11.
- (2) Remove the two receptacle connector installation screws. Refer to Figure 11.

**REMOVAL OF THE RECEPTACLE FROM THE STRUCTURE
Figure 11**

- (3) Pull the receptacle shell from the structure.

C. Strain Relief Backshell Removal

**Table 12
BACKSHELL REMOVAL TOOLS**

Tool	Supplier
Diagonal Cutters	An available source
Allen Wrench, 7/64 inch	An available source

- (1) Make a selection of a pair of diagonal cutters from Table 12.
- (2) Remove the plastic tie straps that hold the cables to the backshell and the plastic tie straps or wire harness ties that are less than 6 inches from the connector. Refer to Figure 12 and Figure 13.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

REMOVAL OF THE BACC10MD1 BACKSHELLS

Figure 12

REMOVAL OF THE BACC10MC1 AND BACC10MC2 BACKSHELLS

Figure 13

- (a) Cut the plastic tie straps at the head, parallel to the cables.
- (b) Remove all the loose strap pieces.
- (c) Examine the cables for damaged insulation.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

CAUTION: Make sure that you remove and discard all the pieces of the lose plastic tie straps. Lose strap pieces can cause abrasion and cutting damage to the cable insulation.

- (3) Make a selection of a wrench from Table 12..
- (4) Disengage the threads of the backshell installation screws. Refer to Figure 12 and Figure 13.

NOTE: The screws are captivated and cannot be removed from the strain relief backshell.

- (5) Pull the backshell from the connector shell.
 - (a) Push the backshell for the BACC65BC2() and BACC65BD2() connector along the cable away from the connector. It cannot be fully removed until the contacts are removed.
 - (b) Remove the backshell for the BACC65BC12() and BACC65BD12() connector.

D. Seal Plug and Seal Rod Removal

**Table 13
NECESSARY TOOLS**

Tool	Type
Pliers	Needle Nose

- (1) Make a selection of a pair of pliers from Table 13.
- (2) Tightly hold the end of the seal plug or the seal rod in the jaws of the pliers.
- (3) Pull the seal plug or the seal rod directly out of the contact cavity.

E. Contact Removal

**Table 14
CONTACT REMOVAL TOOLS FOR SIZE 8 COAX AND SIZE 8 QUADRAx CONNECTORS**

Contact Cavity Size	Removal Tool Part Number	Supplier
8	1738894-1	Tyco
	1738196-1	Tyco

**CONTACT REMOVAL TOOL
Figure 14**

- (1) Make a selection of a contact removal tool from Table 14.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS**

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE CONTACT RETENTION CLIP IN THE CONNECTOR.

- (2) Put the tip of the removal tool on the cable near the rear of the connector.
- (3) Axially align the removal tool and the contact cavity.
- (4) Carefully push the removal tool straight into the contact cavity until it stops.
- (5) Carefully pull the cable and the removal tool straight out of the contact cavity at the same time.
- (6) If the contact is not released:
 - (a) Pull the contact removal tool out of the contact cavity.
 - (b) Turn the removal tool approximately 90 degrees.
 - (c) Do Step (2) through Step (5) again.

3. CONNECTOR POLARIZATION**A. Connector Polarization**

The polarization code of the connector part number identifies the position of:

- The polarization of the jackscrew on the plug connector
- The polarization of the jackpost on the receptacle connector.

Refer to Figure 15 and Figure 16.

JACKSCREW POLARIZATION ON THE BACC65BC() PLUG CONNECTOR

Figure 15

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

JACKPOST POLARIZATION ON THE BACC65BD() RECEPTACLE CONNECTOR

Figure 16

- (1) Find the polarization code in the connector part number from the equipment list.
- (2) For that code, find the correct position of:
 - The jackscrew keyway on the plug
 - The jackpost key on the receptacle.
- (3) If the position of the jackscrew key way or the jackpost key do not agree with the code in the part number from the equipment list, put the jackscrew and jackpost into the correct position. Refer to Paragraph 3.B..
- (4) If the polarization code in the part number on the connector does not agree with the polarization code in the part number from the equipment list, change the part number on the connector shell. Refer to Paragraph 3.D..

B. Change of the Jackscrew Polarization Keyway on the Plug Connector

NOTE: If it is necessary, change the polarization of the BACC65BC() and BACC65BD() connectors before the backshells are installed.

**Table 15
POLARIZATION RETAINING PLATE TOOLS**

Tool	Part Number	Supplier
Retention Nut Wrench	1604972-1	Tyco
Torque Tool	-	An available source

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

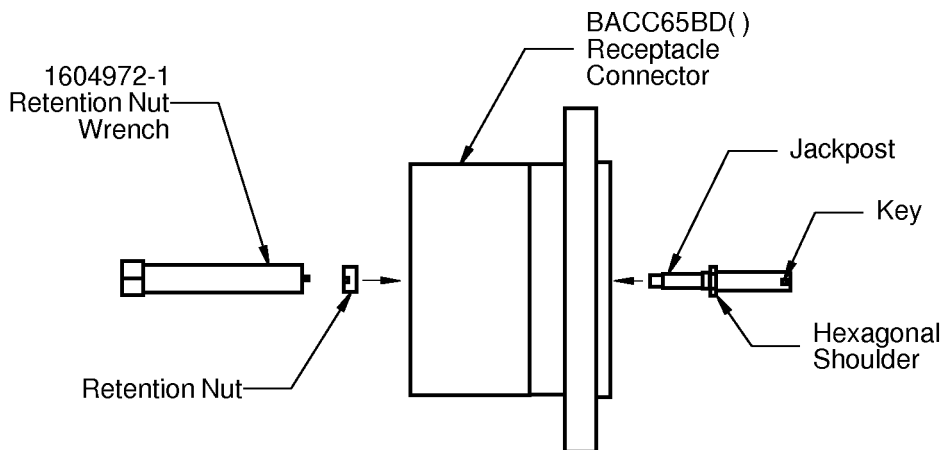

CHANGE OF THE JACKSCREW POLARIZATION KEYWAY
Figure 17

- (1) Make a selection of these tools from Table 15:
 - A retention nut wrench
 - A torque tool.
- (2) From the rear of the connector, remove the jackscrew retention nut. Refer to Figure 17.
- (3) Put the polarization keyway in the correct position. Refer to Figure 15.
- (4) From the front of the connector, push the jackscrew into the jackscrew hole until it stops.
 Make sure that the keyway is in the correct polarization position.
- (5) From the rear of the connector, install the retention nut on the jackscrew.
- (6) Torque the retention nut 10 inch-pounds \pm 1 inch-pound.

C. Change of the Jackpost Polarization Key on the Receptacle Connector

NOTE: If it is necessary, change the polarization of the BACC65BC () and BACC65BD () connectors before the backshells are installed.

CHANGE OF THE JACKPOST KEY ON THE RECEPTACLE CONNECTOR
Figure 18

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

- (1) Make a selection of these tools from Table 15:
 - A retention nut wrench
 - A torque tool.
- (2) From the rear of the connector, remove the jackpost retention nut. Refer to Figure 18.
- (3) Put the polarization key in the correct position. Refer to Figure 16.
- (4) From the front of the connector, push the jackpost into the jackpost hole until it stops.
Make sure that the key is in the correct polarization position.
- (5) From the rear of the connector, install the retention nut on the jackpost.
- (6) Torque the retention nut 10 inch-pounds \pm 1 inch-pound.

D. Change of the Polarization Code in the Part Number on the Connector

**Table 16
NECESSARY MATERIALS**

Material	Part Number	Supplier
Ink	No. 68 Fast Dry	Independent
	No. 73X NW Opaque	Independent
	No. 73X Opaque	Independent
Paint, Clear	683-3-2	Akzo
	Clear Lacquer	Tartan
	EC-776	3M
	EC-776SR	3M
Permanent Ink Pen	13601	Sanford Sharpie
	13801	

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

Mark the Polarization Code here.

The Polarization Code must be one of these letters: A, B, C, D, E, F

THE LOCATION TO MARK THE POLARIZATION CODE
Figure 19

- (1) Make a selection of these materials from Table 16:
 - An ink or a permanent ink pen
 - A clear paint.
- (2) If the polarization code in the part number on the connector is incorrect:
 - (a) Apply a layer of ink on the code on the connector shell.
 Make sure that the code cannot be read.
 - (b) Write the new code on the connector shell adjacent to the layer of ink.
- (3) If the part number on the connector does not have a polarization code, write the code on the connector shell at the end of the part number. Refer to Figure 19.
- (4) Let the ink dry for a minimum of 10 minutes.
- (5) Apply a layer of the clear paint on the part number on the connector shell.

CAUTION: DO NOT APPLY PAINT ON THE CONTACTS. PAINT ON THE SURFACE OF A CONTACT CAN CAUSE UNSATISFACTORY ELECTRICAL PERFORMANCE OF THE CONTACT.

- (6) Let the paint dry before the connector shell is touched or moved.

4. CONNECTOR ASSEMBLY

A. Assembly of S280W554-113 Size 8 Coax Contacts

Table 17
SEAL BOOT

Part Number	Supplier
1811481-1	Tyco

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

**Table 18
CENTER CONTACT CRIMP TOOLS**

Coax Contact Size	Crimp Tool

	Part Number	Setting	
8	M22520/2-01	5	K1025S

**Table 19
OUTER CONTACT CRIMP TOOLS**

Coax Contact Size	Crimp Tool		
	Basic Unit	Die	
		Part Number	Cavity
8	M22520/5-01	Y793A	A

- (1) Make a selection of a center contact crimp tool from Table 18.
- (2) Make a selection of an outer contact crimp tool from Table 19.
- (3) Discard the seal boot that comes with the S280W554-113 contact.

NOTE: The seal boot that is included in the size 8 coax contact kit will not make a seal in a contact cavity that has a keyway.

- (4) Put these components on the cable:
 - The Tyco 1811481-1 seal boot
 - The outer ferrule.

Refer to Figure 20.

**POSITION OF THE SEAL BOOT AND THE OUTER FERRULE ON THE CABLE
Figure 20**

- (5) Remove 0.62 inch \pm 0.02 inch of jacket from the end of the cable. Refer to Figure 21.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

OUTER JACKET REMOVAL LENGTH

Figure 21

- (6) Cut the outer round shield to make the distance from the end of the cable jacket to the end of the round shield equal to 0.20 inch \pm 0.02 inch.

Refer to Figure 22.

REMOVAL OF THE OUTER ROUND SHIELD

Figure 22

- (7) Loosen the round shield and fold it back on the cable jacket.
- (8) Cut the inner flat shield to align the edge of the shield with the edge of the folded back outer round shield. Refer to Figure 23.

OUTER ROUND SHIELD FOLDED BACK

Figure 23

- (9) Push the inner ferrule assembly rearward on the dielectric until it is against the edge of the round shield. Refer to Figure 24.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

POSITION OF THE INNER FERRULE ASSEMBLY ON THE CABLE

Figure 24

- (10) Remove the length of the dielectric between the end of the inner ferrule assembly and the end of the cable. Refer to Figure 25.

Make sure that the distance from the end of the dielectric to the edge of the inner ferrule assembly is not greater than 0.02 inch.

DIELECTRIC REMOVAL

Figure 25

- (11) Put the conductor into the crimp barrel of the center contact.

Make sure that:

- All of the strands of the conductor are in the center contact
- The conductor can be seen in the inspection hole.

- (12) Push the center contact rearward toward the outer ferrule until the inner ferrule assembly is against the outer round shield. Refer to Figure 26.

POSITION OF THE CENTER CONTACT ON THE CABLE

Figure 26

- (13) Crimp the center contact.

- (14) Symmetrically put the outer round shield around the inner ferrule assembly. Refer to Figure 27.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

POSITION OF THE OUTER ROUND SHIELD ON THE INNER FERRULE ASSEMBLY
Figure 27

- (15) Push the outer ferrule forward until it is against the inner ferrule assembly. Refer to Figure 28. Make sure that the shield is between the outer ferrule and the inner ferrule assembly.

POSITION OF THE OUTER FERRULE AGAINST THE INNER FERRULE ASSEMBLY
Figure 28

- (16) Remove the unwanted length of the shield strands. Make sure that the end of the shield strands aligns with the rear edge of the shoulder of the inner ferrule assembly.
- (17) Push the cable and the inner contact assembly into the outer contact assembly until it stops. Refer to Figure 29.

ALIGNMENT OF THE CENTER CONTACT AND THE OUTER CONTACT
Figure 29

- (18) Apply pressure on the outer contact toward the outer and inner ferrule and crimp the outer contact. Refer to Figure 30. Make sure that the outer contact is against the outer ferrule during the crimp operation.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

DIRECTION OF PRESSURE DURING THE CRIMP OPERATION
Figure 30

- (19) Examine the crimp area of the outer contact.
Make sure that the length of the crimp area on the outer contact is 0.09 inch or longer. Refer to Figure 31.

CRIMP AREA OF THE OUTER CONTACT
Figure 31

- (20) Push the seal boot and cable support assembly toward the contact assembly until it stops. Refer to Figure 32.

POSITION OF THE SEAL BOOT AGAINST THE CONTACT ASSEMBLY
Figure 32

B. Assembly of Tyco 1757624-1 and 1883369-2 Size 8 Coax Contacts to BMS 13-65 Type 0F Coax Cable

Table 20

1883369-2	M22520/5-01	M22520/5-45	B

- (1) Make a selection of a center contact crimp tool from Table 20.
- (2) Make a selection of an outer contact crimp tool from Table 21.
- (3) Put the seal boot on the cable. Refer to Figure 33.
Make sure that the larger end of the seal boot points to the end of the cable.
- (4) Make a selection of a 3/16 inch diameter Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11.
- (5) Put a 0.5 inch ± 0.05 inch length of the heat shrinkable sleeve on the cable.
- (6) Remove 0.60 inch ± 0.03 inch of jacket from the end of the cable.
- (7) Shrink the sleeve into its position. Refer to Figure 33.

Make sure that the distance from the end of the cable jacket to the end of the sleeve is 0.33 inch ± 0.03 inch.

POSITION OF THE SEAL BOOT AND THE HEAT SHRINKABLE SLEEVE ON THE CABLE
Figure 33

- (8) Put the ferrule on the cable. Refer to Figure 34.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

Make sure that:

- The smaller end of the the ferrule points to the end of the cable
- The end of the ferrule and the end of the cable outer jacket are aligned.

POSITION OF THE FERRULE ON THE CABLE

Figure 34

- (9) Loosen the strands of the round shield and fold the round shield back on the ferrule. Refer to Figure 35.

ROUND SHIELD FOLDED BACK ON THE FERRULE

Figure 35

- (10) Remove the unwanted length of the round shield strands that extend rearward of the forward edge of the shoulder of the ferrule. Refer to Figure 35.
- (11) Cut the inner flat shield to align the trimmed end of the flat shield and the edge of the folded back round shield. Refer to Figure 35.
- (12) Remove 0.33 inch \pm 0.03 inch of the insulation from the end of the center conductor.
- (13) Put the center conductor into the crimp barrel of the center contact. Refer to Figure 36.

Make sure that:

- All of the strands of the center conductor are in the crimp barrel of the center contact
- The conductor can be seen in the inspection hole.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

POSITION OF THE CENTER CONTACT ON THE CENTER CONDUCTOR
Figure 36

(14) Crimp the center contact.

Make sure that:

- All of the strands of the conductor are in the crimp barrel of the center contact
- The conductor can be seen in the inspection hole.

(15) Push the cable and the center contact assembly into the outer contact until it stops. Refer to Figure 37.

COAX CONTACT ASSEMBLY
Figure 37

(16) Hold the contact assembly together, and at the same time, crimp the outer contact.

Make sure that the distance from the shoulder of the inner ferrule to the edge of the outer contact crimp barrel is less than 0.03 inch. Refer to Figure 37.

(17) Remove the unwanted shield strands that come out from between the outer contact crimp barrel and the shoulder of the ferrule.

(18) Push the seal boot to the contact assembly until it stops.

C. Assembly of the Size 8 BACC47GA1 and BACC47GB1 Quadrax Contacts

Table 22
QUADRAX CONTACT INNER CONTACT CRIMP TOOLS

Quadrax Contact	Crimp Tool		
	Basic Unit		Locator

QUADRAX CONTACT OUTER CONTACT CRIMP TOOLS**

Quadrax Contact	Crimp Tool		
	Basic Unit	Die	
		Part Number	Cavity
BACC47GA1	M22520/5-01	M22520/5-45	B
BACC47GB1	M22520/5-01	M22520/5-45	B

- (1) Make a selection of an inner contact crimp tool from Table 22.
- (2) Make a selection of an outer contact crimp tool from Table 23.
- (3) Cut the cable perpendicular to its longitudinal axis.
- (4) Put the seal boot on the cable. Refer to Figure 38.

Make sure that the end of the seal boot that has the smaller diameter points rearward, away from the end of the cable.

**THE SEAL BOOT ON THE CABLE
Figure 38**

- (5) Move the seal boot away from the end of the cable.
- (6) Prepare the end of the cable. Refer to Figure 39.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

QUADRAX CABLE TRIM DIMENSIONS

Figure 39

- (a) Remove 0.61 inch ± 0.02 inch of the outer jacket from the end of the cable.
 - (b) Remove the necessary length of the shield from the end of the cable to make the distance from the end of the outer jacket to the end of the shield equal to 0.56 inch ± 0.02 inch.
- (7) Put the ferrule on the cable. Refer to Figure 40.
- Make sure that the end of the ferrule that has the smaller diameter is pointed forward toward the end of the cable.

POSITION OF THE FERRULE ON THE CABLE

Figure 40

- (8) Push the ferrule rearward until it is against the end of the outer jacket. Refer to Figure 40.
- (9) Fold the outer round shield back on the ferrule. Refer to Figure 41.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

INNER CONDUCTOR INSULATION REMOVAL DIMENSIONS AND SHIELD PREPARATION

Figure 41

- (10) Remove the necessary length of the inner flat shield and the tape wrap insulation.
Make sure that the ends of the flat shield and the tape wrap are approximately aligned with the front end of the ferrule.
- (11) Move the four inner conductors apart.
Make sure that:
 - The inner conductors do not cross each other
 - The initial positions of the inner conductors in the cable is not changed.
- (12) Remove the necessary length of the filler rods.
Make sure that the ends of the filler rods are approximately aligned with the front end of the ferrule.
- (13) Remove 0.15 inch \pm 0.02 inch of insulation from each of the four inner conductors.
Refer to:
 - Refer to Figure 41.
 - Subject 20-00-15 for the procedure to remove the wire insulation.
- (14) Crimp an inner contact on each of the four inner conductors.
Make sure that:
 - The distance between the wire insulation and the end of each inner contact crimp barrel is 0.02 inch maximum
 - The wire insulation is not in the crimp barrel
 - The conductor strands can be seen in the inspection hole
 - All conductor strands are in the crimp barrel
 - The conductor strands do not go out of the inspection hole
 - The plating of each inner contact is not removed
 - The inner contacts have no cracks.
- (15) Put the inner contacts into the larger end of the insulator. Refer to Figure 42 and Figure 43.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

Make sure that:

- The red conductor and the yellow conductor are adjacent to the wiring keyway of the insulator
- The position of the conductors in the insulator is the same as the position of the conductors in the cable
- Each inner contact is fully installed in the insulator
- The conductors do not cross each other.

INSTALLATION OF THE INNER CONTACTS IN THE INSULATOR
Figure 42

INSULATOR REAR VIEW - WIRE SIDE

POSITION OF THE INNER CONTACTS IN THE INSULATOR
Figure 43

(16) Align the wiring key on the outer contact and the wiring keyway of the insulator. Refer to Figure 44.

ALIGNMENT OF THE OUTER CONTACT AND THE INSULATOR ASSEMBLY
Figure 44

(17) Push the insulator assembly into the outer contact until it stops . Refer to Figure 45.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

Make sure that:

- The wiring key on the outer contact and the wiring keyway of the insulator are aligned
- The rear of the insulator is against the shield that is folded back on the ferrule
- The distance from the rear edge of the outer contact to the shoulder of the ferrule is not more than 0.02 inch
- The distance from the rear end of the ferrule to the end of the cable jacket is not more than 0.02 inch.

QUADRAX CONTACT ASSEMBLY
Figure 45

- (18) Crimp the outer contact. Refer to Figure 45.
- (19) Remove all of the strands of the shield that are between the rear edge of the outer contact and the shoulder of the ferrule.

D. Installation of Size 8 Coax Contacts and Size 8 Quadrax Contacts

NOTE: Change the polarization of the BACC65BC() and BACC65BD() connectors before the backshells are installed.

Refer to paragraph 3.A..

NOTE: Install the 2 contact cavity BACC10MD1 backshell on the cable before contact insertion. Refer to Paragraph 4.D. .

NOTE: Install the 12 contact cavity BACC10MC1 and BACC10MC2 backshells after contact insertion.

NOTE: Install seal plugs in empty contact cavities before or after contact insertion. Refer to Paragraph 4.E.

Table 24
LUBRICANTS

Lubricant	Specification	Supplier

- (1) For the BACC65BC2() and BACC65BD2() connectors that have 2 contact cavities, put the backshell on the cable before you install the contacts. Refer to Figure 51.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

THE BACC10MD1 BACKSHELL ON THE CABLE

Figure 51

NOTE: The backshells for the connectors that have 12 contact cavities are installed after the contacts are installed.

- (2) Install the contacts into the contact cavities on the rear face of the connector.
 - (a) For the size 8 quadrax contact:
 - Axially align the contact with the contact cavity at the rear of the connector
 - Align the contact keyway with the contact cavity keyway.

Refer to:

- Figure 46 for the polarization key of the quadrax contact
- Figure 47, 47, 47 and 47 for the keyway of the quadrax contact cavity.

- (b) For the size 8 coax contact, axially align the contact with the contact cavity at the rear of the connector.

NOTE: The coax contact does not have a polarization key.

Make sure that the longitudinal axis of the contact assembly is perpendicular to the rear face of the connector.

- (3) Push the contact into the contact cavity until the contact stops and is locked.

Make sure that the contact stays axially aligned with the contact cavity.

NOTE: A lubricant can be used to make it easier to push the contact into the contact cavity. Refer to Table 24

- (4) Align the seal boot key with the contact cavity keyway. Refer to Figure 52.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

THE LOCATION OF THE SEAL BOOT KEY
Figure 52

- (5) Push the seal boot into the contact cavity.
Make sure that the rear edge of the seal boot key is aligned with the rear face of the connector.
NOTE: A lubricant can be used to make it easier to push the seal boot into the contact cavity. Refer to Table 24.
- (6) Lightly pull on the cable.
Make sure that the contact is locked in the contact cavity.
CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.
CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.
- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the contact cavity.
 - (b) Do Step (7) through Step (6) again.

E. Seal of an Empty Contact Cavity

- NOTE:** Install seal plugs before the backshell is installed.
- NOTE:** Install seal plugs before or after the contacts are installed.

Table 25
SEAL PLUGS

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

INSTALLATION OF THE RECEPTACLE AND THE STRUCTURE
Figure 58

Refer to Figure 58.

- (1) Make a selection of two screws from Table 27.

Make sure that the screws are new.

CAUTION: SCREWS THAT ARE NOT NEW CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE CONNECTOR.

- (2) Make a selection of these tools from Table 28:

- A driver
- A torque tool.

- (3) From the rear side of the structure, put the front face of the receptacle into the cutout and align the mounting holes of the receptacle flange with the holes in the structure.

- (4) From the front side of the structure, install 2 screws.

- (a) Install the first screw in the mounting hole next to contact cavity number 1.
- (b) Install the second screw in the mounting hole diagonally opposite to the first screw.

- (5) Tighten each screw until:

- The screw head is against the structure
- The connector flange is fully against the structure.

Make sure that the flange of the receptacle is fully flat against the surface of the structure.

- (6) Torque each screw 12 inch-pounds to 15 inch-pounds.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

B. Plug and Receptacle Connection

**Table 29
NECESSARY TOOLS**

Tool	Type	Size (inch)
Driver	Hex Head	9/64

- (1) Make a selection of a driver from Table 29.
- (2) Make sure that the polarization position of the key on the plug connector agrees with the polarization position of the keyway on the receptacle connector.
- (3) Align the plug keyway to the receptacle key.
- (4) Align the the plug connector perpendicular to the front face of the receptacle connector.

Alignment of the Plug to the Receptacle

Completed Installation

INSTALLATION OF THE BACC65BC2() PLUG CONNECTOR

Figure 59

- (5) Push the plug connector into the receptacle until it stops. Refer to Figure 59.
- (6) With the driver:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACC65BC AND BACC65BD CONNECTORS

- (a) Engage the threads of the plug jackscrew and the threads of the receptacle jackpost.
- (b) Torque the plug jackscrew 7 inch-pounds to 8 inch-pounds.

	DRK16

- (1) Make a selection of a contact removal tool from Table 3.
- (2) At the front of the relay socket, axially align the contact removal tool and the contact cavity.
- (3) Put the tip of the removal tool on the engaging end of the contact.
- (4) Carefully push the removal tool into the contact cavity until it stops.

20-81-11

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 10-60450 FRONT RELEASE PLUG-IN RELAY SOCKETS

- (5) Push the removal tool, and at the same time, push the internal plunger of the removal tool. Make sure that the contact moves out of the rear of the relay socket.

CAUTION: DO NOT USE MORE FORCE THAN THE FORCE THAT IS NECESSARY TO PUSH THE REMOVAL TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Carefully pull the removal tool out of the contact cavity.
- (7) Pull the wire and contact out of the contact cavity at the rear of the relay socket.

3. RELAY SOCKET ASSEMBLY

A. Contact Assembly

**Table 4

14	1614	M22520/1-01	7	M22520/1-02	Blue

- (1) Make a selection of a crimp tool from Table 4.
- (2) Remove 0.28 inch ±0.03 inch of the wire insulation from the end of the wire.

Refer to:

- Figure 2
- Subject 20-00-15 for the insulation removal procedures.

**WIRE PREPARATION
Figure 2**

- (3) Put the end of the wire into the crimp barrel of the contact. Refer to Figure 3.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 10-60450 FRONT RELEASE PLUG-IN RELAY SOCKETS

Make sure that:

- The conductor can be seen in the inspection hole of the contact
- All of the strands of the conductor are in the crimp barrel
- The distance between the rear end of the contact and the wire insulation is 0.03 inch maximum.

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 3

(4) Crimp the contact.

Make sure that:

- Make sure the conductor can be seen in the inspection hole of the contact.
- The distance between the rear end of the contact and the wire insulation is 0.03 inch maximum
- The contact does not have a bend larger than 3.5 degrees from the longitudinal axis of the contact.

B. Contact Insertion

Table 5
CONTACT INSERTION TOOLS

Contact Size	Insertion Tool	Supplier
1616	M81969/17-04	QPL
1614	M81969/17-04	QPL

- (1) Make a selection of an insertion tool from Table 5.
- (2) Put the end of the insertion tool tip against the contact shoulder. Refer to Figure 4.

INSERTION TOOL POSITION ON THE CONTACT
Figure 4

- (3) At the rear of the connector, carefully push the tool and the contact into the contact cavity until it stops. Refer to Figure 5.

Make sure that the insertion tool stays aligned with the contact cavity.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 10-60450 FRONT RELEASE PLUG-IN RELAY SOCKETS

CONTACT INSERTION
Figure 5

NOTE: The 10-60450-4 relay socket does not have a rubber grommet.

- (4) Carefully remove the insertion tool.
- (5) Lightly pull on the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT MAKE A DENT IN THE INSULATION OF WIRE WITH THE FINGERNAILS. DAMAGE TO THE INSULATION CAN OCCUR.

C. Spare Contact Installation

- (1) Install a spare contact in each unused contact cavity.
Refer to Subject 20-60-08.

D. Polarization Plug Installation

Polarization plugs come with the relay socket.

10-60540-1 AND 10-60540-6 RELAY SOCKET POLARIZATION - KEY G1

10-60540-2 RELAY SOCKET POLARIZATION - KEY G2
Figure 7

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF 10-60450 FRONT RELEASE PLUG-IN RELAY SOCKETS

10-60540-3 RELAY SOCKET POLARIZATION - KEY G3
Figure 8

- (1) Install polarization plugs in the socket. Refer to Figure 6, Figure 7, and Figure 8 for the correct key.
 - (a) Make a selection of an insertion tool from Table 5.
 - (b) Put the end of the insertion tool tip against the plug shoulder.
 - (c) Carefully push the plug straight through the grommet hole until the plug is completely inserted.

2. RELAY SOCKET DISASSEMBLY

A. Contact Removal

**Table 4
CONTACT REMOVAL TOOLS**

Contact Engaging End Size	Removal Tool
16	294-97
	AT 2016
	DRK16
	M81969/19-01
	M81969/19-08
	MS24256R16
	RRBX-16S
	RX16-8
	ZZL-R-9511-16

- (1) Make a selection of a removal tool from Table 4.
- (2) At the front of the relay socket, axially align the contact removal tool and the contact cavity.
- (3) Put the tip of the removal tool on the engaging end of the contact.
- (4) Carefully push the removal tool into the contact cavity until it stops.
- (5) Push the removal tool, and at the same time, push the internal plunger of the removal tool. Make sure that the contact moves out of the rear of the relay socket.

CAUTION: DO NOT USE MORE FORCE THAN THE FORCE THAT IS NECESSARY TO PUSH THE REMOVAL TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Carefully pull the removal tool out of the contact cavity.
- (7) Pull the wire and contact out of the rear of the relay socket.

- (1) Make a selection of a crimp tool from:
 - Table 6 for contacts that have one wire
 - Table 7 for contacts that have more than one wire.
- (2) Remove the necessary length of the wire insulation from the end of the wire or wires.
Refer to:
 - Figure 6
 - Table 5 for the insulation removal length
 - Subject 20-00-15 for the insulation removal procedures.

WIRE PREPARATION
Figure 6

- (3) If it is specified, fold the conductor back. Refer to Figure 7.

CONDUCTOR FOLDED BACK
Figure 7

- (4) Put the contact in the locator of the crimp tool.
- (5) Put the end of the wire into the crimp barrel of the contact. Refer to Figure 8.

STANDARD WIRING PRACTICES MANUAL

BACS16W AND BACS16X FRONT RELEASE RELAY SOCKETS

Make sure that:

- The conductor can be seen in the inspection hole of the contact
- All of the strands of the conductor are in the crimp barrel
- The distance between the rear end of the contact and the wire insulation is 0.06 inch maximum.

POSITION OF THE WIRE IN THE CRIMP BARREL OF THE BACC47DJ CONTACT
Figure 8

(6) Crimp the contact.

Make sure that:

- Make sure the conductor can be seen in the inspection hole of the contact.
- The distance between the rear end of the contact and the wire insulation is 0.06 inch maximum
- The contact does not have a bend larger than 3.5 degrees from the longitudinal axis of the contact.

B. Contact Insertion

Table 8
CONTACT INSERTION TOOLS

Contact Size	Insertion Tool

1614	294-88
	M81969/17-09
	ZZL-R-9510-20

- (1) Make a selection of an insertion tool from Table 8.
- (2) At the rear of the relay socket, put each wired contact in the contact cavities with the hand. Refer to Figure 9.

STANDARD WIRING PRACTICES MANUAL**BACS16W AND BACS16X FRONT RELEASE RELAY SOCKETS**

POSITION OF THE CONTACT IN THE CONTACT CAVITY
Figure 9

- (3) Put the end of the insertion tool tip against end of contact. Refer to Figure 10.

POSITION OF THE INSERTION TOOL ON THE CONTACT
Figure 10

- (4) Carefully push the tool and the contact into the contact cavity until it stops. Refer to Figure 11. Make sure that the insertion tool stays aligned with the contact cavity.

FULLY INSERTED CONTACT
Figure 11

- (5) Carefully remove the insertion tool.
(6) Lightly pull on the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT MAKE A DENT IN THE INSULATION OF WIRE WITH THE FINGERNAILS.

- (7) Do Step (3) through Step (6) again for each contact in the relay socket.

C. Spare Contact or Seal Plug Installation

- (1) Install spare contacts or seal plugs in all unused contact cavities.
Refer to Subject 20-60-08.

- (1) Remove the wire insulation.
Refer to Table 6 and Subject 20-00-15.
- (2) Make a selection of the crimp tool from Table 7.
- (3) For AWG 24, AWG 22, AWG 20, and AWG 18 wire in a size 12 contact, insert an eyelet into the contact.
Refer to Table 4.
- (4) Put the wire in the contact crimp barrel.
Make sure that:
 - All the conductor strands are in the barrel
 - The conductor is visible in the contact inspection hole.
- (5) Put the contact in the crimp tool.
- (6) Crimp the contact.
Make sure that the gap between the contact and wire insulation is not more than 1/32 inch.

- (1) Make a selection of an insertion tool from Table 8.
- (2) Snap the colored end of the insertion tool over the wire.
- (3) Slide the tool down over the contact.
Make sure that the tip of the tool is against the contact shoulder.
- (4) Hold the tool perpendicular to the socket grommet face.
- (5) Push the contact into the grommet hole until it stops.
- (6) Carefully remove the insertion tool.
Make sure the contact is completely inserted.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

C. Spare Contact or Seal Plug Installation

- (1) Install a spare contact or a sealing plug in all unused contact cavities.
Refer to Subject 20-60-08.

707, 727-787

A. Contact Removal

**Table 3
CONTACT REMOVAL TOOLS**

Crimp Barrel Size	Removal Tool	Supplier
16	NAS1664-16	QPL
12	NAS1664-12	QPL

- (1) Make a selection of the removal tool from Table 3.
- (2) Put the tip of the white end of the tool over the wire.
- (3) Hold the tool perpendicular to the face of the grommet.
- (4) Push the tool down the wire and into the grommet until the tool hits the bottom.
- (5) Hold the tool against the bottom and press the wire against the serrations in the tool handle.
- (6) Pull the tool and the wired contact out of the contact cavity at the same time.

3. RELAY SOCKET ASSEMBLY

A. Contact Assembly

**Table 4
CONTACT CRIMP TOOLS**

Contact	Crimp Tool				
	Basic Unit		Locator		
	Part Number	Supplier	Part Number	Color	Supplier

	M22520/1-01	QPL	M22520/1-02	Yellow	QPL

- (1) Remove 1/4 inch ± 1/64 inch of wire insulation. Refer to Subject 20-00-15.
- (2) Make a selection of a crimp tool from Table 4.
- (3) Put the wire or wires in the contact crimp barrel.
Make sure that the conductor can be seen in the contact inspection hole.
- (4) Put the contact in the crimp tool.
- (5) Crimp the contact.
Make sure that the distance from the end of the crimp barrel to the end of the wire insulation is 0.03 inch maximum.

CAUTION: THE INDEX POINT AND THE INDENTERS WILL NOT BE IN THE CORRECT POSITION IF THERE IS TOO MUCH PRESSURE ON THE CONTACT.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LEACH SO-1057-8912 REAR RELEASE RELAY SOCKETS

B. Contact Insertion

**Table 5
CONTACT INSERTION TOOLS**

Crimp Barrel Size	Insertion Tool	Supplier
16	NAS1664-16	QPL
12	NAS1664-12	QPL

- (1) Make a selection of the insertion tool from Table 5.
- (2) Examine the contact to make sure that it is straight.
- (3) Put the colored end of the insertion tool on the wire.
- (4) Push the tool down over the contact so that the tip of the tool is against the shoulder of the contact. Refer to Figure 2.

**POSITION OF THE INSERTION TOOL ON THE CONTACT
Figure 2**

- (5) Hold the tool perpendicular to the face of the grommet and push the contact into the grommet hole until it stops.
- (6) Carefully remove the insertion tool.
- (7) To make sure that the contact is fully inserted, lightly pull the wire.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

C. Installation of Spare Contacts

Refer to Subject 20-60-08.

If it is necessary to install a spare contact in the contact cavities that are not used:

- (1) Make a selection of a contact insertion tool from Table 5.
- (2) Put the contact in the contact cavity.
- (3) Axially align the tool and the contact.
- (4) Push the tool straight into the contact cavity until the tool stops.
- (5) Carefully remove the tool from the contact cavity.

D. Installation of Seal Plugs or Seal Rods

Refer to Subject 20-60-08.

707, 727-787

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LEACH SO-1057-8912 REAR RELEASE RELAY SOCKETS

If it is necessary to install a seal plug or a seal rod in the contact cavities that are not used:

- (1) Make a selection of a seal plug or a seal rod.
- (2) Push the plug or the rod into the contact cavity.

Make sure that the distance from the end of the plug or the rod to the grommet is less than 0.1 inch.

- (1) Make a selection of the contact from Table 2.
- (2) Remove 1/4 inch ± 1/64 inch of insulation from wire end.
- (3) For AWG 20, AWG 22, or AWG 24 wire in a size 16 contact:
 - (a) Make a selection of a filler wire from Table 4.
- (4) Make a selection of the crimp tool from Table 5.
- (5) Put the wire or wires in the contact crimp barrel.
Make sure that the conductor is visible in the contact inspection hole.
- (6) Put the contact in the crimp tool.
- (7) Crimp the contact.

CAUTION: THE INDEX POINT AND THE INDENTORS WILL NOT BE IN THE CORRECT POSITION IF THERE IS TOO MUCH PRESSURE ON THE CONTACT.

Make sure that the maximum gap between the contact and wire insulation is 1/32 inch.

B. Contact Insertion

**Table 6
CONTACT INSERTION TOOLS**

Crimp Barrel Size	Insertion Tool	Supplier
20	NAS1664-16	QPL
16	NAS1664-16	QPL

- (1) Make a selection of the insertion tool from Table 6.
Make sure that the contact is straight.
- (2) Put the colored end of the insertion tool over the wire.
- (3) Slide the tool down over the contact with the tool tip against the contact shoulder. Refer to Figure 3.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF LEACH SO-1048-8308 REAR RELEASE RELAY SOCKETS****POSITION OF THE INSERTION TOOL ON THE CONTACT****Figure 3**

- (4) Hold the tool perpendicular to the socket grommet face and push the contact into grommet hole until it stops.
- (5) Carefully remove the insertion tool.
Make sure the contact is fully inserted.

CAUTION: DO NOT JERK ON THE WIRE OR INDENT THE WIRE INSULATION WITH THE FINGERNAILS.

C. Spare Contact or Seal Plug Installation

- (1) Install a spare contact or a seal plug in all unused contact cavities.
Refer to Subject 20-60-08.

2. RELAY SOCKET DISASSEMBLY

A. Contact Removal

Table 4
CONTACT REMOVAL TOOLS

Contact Size	Removal Tool
2220	M83723/31-20

- (1) Make a selection of the removal tool from Table 4.
- (2) At the rear of the relay socket, put the white end of the removal tool on the wire.
- (3) Align the tool with the contact cavity.
- (4) Push the tool into the contact cavity until it stops.
Make sure that the tool stays aligned with the contact cavity.
- (5) Hold the tool against the relay socket and, at the same time, press the wire against the handle of the removal tool.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACS16A()1 REAR RELEASE RELAY SOCKETS

(6) Pull both the tool and wired contact out of the rear of the contact cavity at the same time.

3. RELAY SOCKET ASSEMBLY

A. Contact Assembly

				ST2220-1-Y	-	ST2220-1-48	-

- (1) Remove 0.14 inch ±0.02 inch of wire insulation from the end of the wire.
- (2) Make a selection of a crimp tool from:
 - Table 5 if one wire is to be installed in the crimp barrel
 - Table 6 if two wires are to be installed in the crimp barrel.
- (3) Put wire or wires in the contact barrel.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACS16A()1 REAR RELEASE RELAY SOCKETS

Make sure that:

- All of the conductor strands are in the crimp barrel
- The conductor is visible in the contact inspection hole.

(4) Put the contact in the crimp tool.

NOTE: As an option, the wire can be put in the contact before the contact is put in the crimp tool.

(5) Crimp the contact.

Make sure the distance between the end of the contact and the wire insulation is a maximum of:

- 0.03 inch if one wire is to be installed in the crimp barrel
- 0.05 inch if two wires are to be installed in the crimp barrel.

B. Contact Insertion

**Table 7
CONTACT INSERTION TOOLS**

Contact Size	Insertion Tool
2220	M83723/31-20

CAUTION: DO NOT INSTALL AN UNWIRED CONTACT.

(1) Make a selection of an insertion tool from Table 7.

Make sure the contact is straight.

(2) Put the colored end of the insertion tool on the wire.

(3) Move the tool onto the contact. Refer to Figure 4.

Make sure that the tip end of the tool is against the shoulder of the contact.

NOTE: As an option, wired contacts assembled with AWG 22 or larger wire can be inserted by hand.

**POSITION OF THE INSERTION TOOL ON THE CONTACT
Figure 4**

(4) Hold the insertion tool, and at the same time, press the wire against the tool.

(5) Push the contact into the contact cavity until it stops.

Make sure that the tool stays aligned with the contact cavity.

(6) Carefully remove the tool.

Lightly pull on the wire to make sure that contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR SUDDEN FORCE. DAMAGE TO THE CONTACT OR THE CONTACT RETENTION CLIPS CAN OCCUR.

CAUTION: DO NOT INDENT THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE INSULATION CAN OCCUR.

707, 727-787

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACS16A()1 REAR RELEASE RELAY SOCKETS

C. Seal Plug Installation

- (1) Make a selection of a seal plug from Table 3.
- (2) Install seal plugs in all unwired grommet holes.

Refer to Subject 20-60-08.

2. RELAY SOCKET DISASSEMBLY

A. Contact Removal

**Table 3
CONTACT REMOVAL TOOLS**

Crimp Barrel Size	Removal Tool	Supplier
22	NAS1664-20	QPL
16	NAS1664-1-16	QPL

- (1) Make a selection of the removal tool from Table 3.
- (2) Put the tool on the wire.
- (3) Push the tool along the wire and into the contact cavity until the tool hits the bottom.
- (4) Pull the tool and the wire out of the socket at the same time.

3. RELAY SOCKET ASSEMBLY

A. Contact Assembly

**Table 4
CONTACT CRIMP TOOLS**

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LEACH SO-1055-8690 REAR RELEASE RELAY SOCKETS

Table 4 (continued)

Crimp Barrel Size	Crimp Tool			
	Basic Unit		Locator	
	Part Number	Supplier	Part Number	Supplier
16	M22520/1-01	QPL	M22520/1-02	QPL
	MS3191-A	QPL	MS3191-16A	QPL

- (1) Remove 1/4 inch ± 1/64 inch of wire insulation.
- (2) Make a selection of the contact crimp tool from Table 4.
- (3) Put the wire in the contact crimp barrel.

Make sure that:

- The gap between the wire insulation and the contact is no more than 1/32 inch
- The conductor is visible in the contact inspection hole.

- (4) Crimp the contact.

B. Contact Insertion

**Table 5
CONTACT INSERTION TOOLS**

Crimp Barrel Size	Insertion Tool	Supplier
22	NAS1664-20	QPL
16	NAS1664-1-16	QPL

- (1) Make a selection of the insertion tool from Table 5.
- (2) Put the wire and contact into the insertion side of the tool.
- (3) Push the tool and contact into the socket cavity until the tool hits the bottom.
- (4) Remove the tool.

Make sure the contact is locked by a gentle pull on the wire.

2. RELAY SOCKET INSTALLATION

A. Leach Relay Sockets

- (1) Install the relay socket and relay with three nuts for each stud. Refer to Figure 1.

NOTE: The nut and the washer are not required for installation if the socket has molded-in mounting studs.

STANDARD WIRING PRACTICES MANUAL

INSTALLATION OF RELAY SOCKETS

NOTE: All the nuts and washers are required when the socket is mounted with either of these conditions:

- Separate mounting studs (loose pieces)
- The bottom of socket against the panel or the support bracket.

LEACH RELAY SOCKET AND RELAY INSTALLATION

Figure 1

B. BACS16X and BACS16W Relay Sockets

(1) Install the relay socket with one nut per stud. Refer to Figure 2.

2. CONNECTOR DISASSEMBLY

A. Tab-Terminal Contact Removal

Table 5
TAB-TERMINAL CONTACT REMOVAL TOOLS

Connector Configuration	Removal Tool	Supplier
Dual Terminal	91011-1	AMP
Quad Terminal	91017-3	AMP

- (1) Make a selection of the removal tool from Table 5.
- (2) With longer tip of the removal tool adjacent to the terminal wire to be removed, insert the removal tool between the pair of terminals. Refer to Figure 4.

Make sure that the removal tool is against the bottom before removing the terminal.

STANDARD WIRING PRACTICES MANUAL

AMP TAB-TERMINAL PRINTED CIRCUIT BOARD CONNECTORS

- (3) Hold the wire and removal tool together and pull them from the connector at the same time.

TAB-TERMINAL CONTACT REMOVAL
Figure 4

B. Female Spring Contact Removal

Table 6
SPRING CONTACT REMOVAL TOOLS

Connector Configuration	Removal Tool	Supplier
Dual Terminal	91018-1	AMP
Quad Terminal	91018-2	AMP

- (1) Make a selection of the removal tool from Table 6.
- (2) Move the short leg back so that releasing tip is extended. Refer to Figure 5.

CAUTION: DO NOT USE THE SPRING CONTACT AGAIN. THE CONTACT WILL NOT BE SECURED.

SPRING CONTACT REMOVAL TOOL
Figure 5

- (3) Insert the releasing tip into the housing. Refer to Figure 6.

NOTE: As the releasing tip hits the bottom of the housing, it releases the locking latch on the female contact.

- (4) Push on handle of the short leg.

NOTE: The socket contact will back out part of the way from the housing.

- (5) Remove the tool from the housing.
- (6) Pull back on the contact to remove it completely from the housing.

STANDARD WIRING PRACTICES MANUAL

AMP TAB-TERMINAL PRINTED CIRCUIT BOARD CONNECTORS

SPRING CONTACT REMOVAL TOOL OPERATION

Figure 6

C. Keying Plug Removal

CAUTION: REMOVAL OF THE KEYING PLUG CAUSES DAMAGE TO THE CONTACT. AFTER THE KEYING PLUG IS REMOVED:

- THE OLD TAB TERMINAL CONTACT MUST BE REMOVED; REFER TO PARAGRAPH 2.A.
- A NEW TAB-TERMINAL CONTACT MUST BE ASSEMBLED AND INSTALLED; REFER TO PARAGRAPH 3.A. AND PARAGRAPH 3.C.

- (1) Use a pair a needle nose pliers that have been modified. Refer to Figure 7.
- (2) With the tip of the pliers, squeeze the end of the keying plug.

NOTE: This will cause the triangular projections to disengage the notches in the connector.

- (3) Pull the keying plug out of the connector with the pliers.

KEYING PLUG REMOVAL TOOL - MODIFIED NEEDLE NOSE PLIERS

24	0.029	0.060	66168-2	O
22	0.029	0.060	66168-2	O
	0.046	0.074	66161-2	X
20	0.029	0.060	66168-2	O
	0.046	0.074	66161-2	X
18	0.046	0.074	66161-2	X

**Table 8
TERMINAL CRIMP TOOLS**

Terminal	Identifier	Crimp Tool	
		Basic Unit	Supplier
66168-2	O	90090-2	AMP
		90090-3	AMP
66161-2	X	90090-2	AMP
		90090-3	AMP

- (1) Make a selection of a contact from Table 7.
- (2) Remove 1/8 inch ± 1/32 inch of the wire insulation. Refer to Figure 2.
- (3) Make a selection of the crimp tool from Table 7.
- (4) Crimp the contact:
 - (a) Insert the terminal into the back of the tool so that the tab fits in the slot locator. Refer to Figure 8.
 Make sure:
 - To use the crimp section that matches the crimp identifier on the contact
 - That the terminal hits the bottom of the locator.
 - (b) Close the handles to raise the lower crimping die to hold the terminal.
 The positioner will engage the terminal as the inserts close.

CAUTION: DO NOT DEFORM THE WIRE BARREL OR INSULATION BARREL.

 - (c) Push the wire into the terminal barrel until wire hits the wire stop. Refer to Figure 8.
 - (d) Hold the wire in place and close the tool until the crimp tool ratchet releases.

20-82-11

STANDARD WIRING PRACTICES MANUAL

AMP TAB-TERMINAL PRINTED CIRCUIT BOARD CONNECTORS

POSITION OF THE TERMINAL IN THE CRIMP TOOL
Figure 8

- (e) Open the tool handle and remove the crimped terminal from the tool.
- (f) Examine the raised dots on crimped terminal to make sure that the correct die position has been used. Refer to Figure 9.

66168-2 Terminal Contact

66161-2 Terminal Contact

CRIMPED TERMINAL IDENTIFICATION
Figure 9

B. Tab-Terminal Contact Assembly with Raychem 5026D1018 Coax Cable

- (1) Prepare the cable. Refer to Figure 10.
 - (a) Remove 2-1/16 inches of the cable jacket.
 - (b) Remove 1-3/4 inches of the shield.
 - (c) Remove 1/4 inch of the dielectric.

RAYCHEM 5026D1018 COAX CABLE TRIM DIMENSIONS
Figure 10

STANDARD WIRING PRACTICES MANUAL**AMP TAB-TERMINAL PRINTED CIRCUIT BOARD CONNECTORS**

- (2) Slide a BACS135-128C outer ferrule over the cable.
- (3) Slide a BACS13S-063B inner ferrule:
 - Over the dielectric
 - Under the shield
 - Up to the edge of the jacket.
- (4) Push the outer ferrule over the shield and the inner ferrule.
- (5) Add a 3-inch length of black shield ground wire.
- (6) Crimp the outer ferrule.
Refer to Subject 20-10-15.
- (7) Install an AMP 66168-2 tab-terminal contact. Refer to Paragraph 3.A.
- (8) Put a 1 inch length of 1/4 inch diameter heat shrinkable sleeve over the ferrule.
- (9) Shrink the sleeve into place.
Refer to Subject 20-10-14.

C. Tab-Terminal Contact Insertion

NOTE: No insertion tool is required.

- (1) Hold the molded plastic housing in one hand with the wire side up.
- (2) Push the contact into the contact cavity until it clicks.
- (3) If the contact is wired, lightly pull the wire until it slips between the thumb and forefinger to make sure that the terminal is completely inserted.

D. Keying Plug Installation

- (1) Install a keying plug into the printed circuit board side of the connector at the specified location. Refer to Figure 11.

Make sure that the keying plug is fully inserted. The triangular projections must engage the notches in the connector so that the plug will not slip from side to side.

KEYING PLUG INSTALLATION

	2	66026-2	59525	AMP

- (1) Remove 1/8 inch ± 1/32 inch of the insulation from the wire or wires.
- (2) Make a selection of the contact and the crimp tool from Table 5.
- (3) Hold the tool so that the front side of the tool points away. Refer to Figure 2.
- (4) Insert the contact, insulation barrel first, into the front of the crimp section. Refer to Figure 5.
- (5) Position the contact so that the locator will enter the locator slot.

**POSITION OF THE CONTACT IN THE CRIMP TOOL
Figure 5**

- (6) Close the tool handles until the insulation anvil begins to enter the insulation crimper to hold the contact in place.

CAUTION: DO NOT DEFORM THE INSULATION BARREL OR WIRE BARREL.

- (7) Insert the bare wire or wires through the locator and into the contact wire barrel until the wire is against the wire stop.

707, 727-787

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF AMP 3-582151-() PRINTED CIRCUIT CONNECTORS

- (8) Hold the wire in place and close the tool handles until the ratchet releases.
- (9) Open the tool handles completely.
- (10) Remove the wired contact from the tool.

B. Contact Insertion

NOTE: No insertion tool is required.

- (1) Hold the molded plastic housing in one hand.
- (2) Push the contact into the contact cavity until it clicks.
Make sure that the contact is completely inserted.
- (3) Install the keying plug into the connector.

	CIET 22	-	Cannon

- (1) Make a selection of a contact removal tool from Table 4.
- (2) Put the tool on the wire.
- (3) Push the tool into the connector to release the contact.
- (4) Pull the wire and tool out of the contact cavity at the same time.

CAUTION: MAKE SURE THAT DAMAGE TO THE WIRE OR CONTACT WITH THE REMOVAL TOOL OR THE FINGERS DOES NOT OCCUR.

STANDARD WIRING PRACTICES MANUAL

BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS

B. Solder Contact Removal

**Table 5
CONTACT REMOVAL TOOLS FOR SOLDER TYPE CONTACTS**

Boeing Standard	Removal Tool		
	Part Number	Description	Supplier
BACC47EL1	710-0020-000	Metal	Incon
	91-021	Plastic, White	Incon
	CIET 22	-	Cannon

- (1) Make a selection of a contact removal tool from Table 5.
- (2) Push tool straight into the contact cavity.
- (3) Lightly move the end of the tool around the contact until it is against the bottom of the cavity.
- (4) Push the contact and the tool out of the cavity with a smooth rod with a maximum diameter of 0.030 inch.

C. Keying Plug Removal

**Table 6
KEYING PLUG REMOVAL TOOLS**

Keying Plug	Removal Tool

**BACC47EM1 KEYING PLUG REMOVAL
Figure 7**

Refer to Figure 7.

- (1) Make a selection of a removal tool from Table 6.
- (2) Push the tool straight into the contact cavity until it hits the bottom.
- (3) Push the contact and the tool out of the cavity with a smooth rod with a maximum diameter of 0.030 inch.

20-82-13

STANDARD WIRING PRACTICES MANUAL

BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS

3. CONNECTOR PLUG ASSEMBLY

CAUTION: IT IS IMPORTANT THAT THE CONNECTOR IS KEYED CORRECTLY BEFORE IT IS INSTALLED ON THE PRINTED WIRING BOARD. IF THE CONNECTOR IS NOT KEYED CORRECTLY, THE CONNECTOR MUST BE DISCARDED.

A. Connector Plug Keying

**Table 7
CONNECTOR PLUG KEYING TOOLS**

Keying Tool	Supplier
ST2351B	Boeing
ST2351C	Boeing

**BACC65K() CONNECTOR PLUG KEYING TOOLS
Figure 8**

Refer to Figure 8.

- (1) Make a selection of a keying tool from Table 7.
- (2) If the selection is the ST2351B tool, cut the contact pin 0.26 inch minimum below the outer surface of the connector shell.

20-82-13

STANDARD WIRING PRACTICES MANUAL**BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS**

CAUTION: DO NOT BEND OR CAUSE ANY DAMAGE TO THE ANY ADJACENT PINS OF THE INSERT FACE OF THE CONNECTOR.

- (3) If the selection is the ST2351C tool, break the contact pin 0.26 inch minimum below the outer surface of the connector shell.

CAUTION: DO NOT BEND OR CAUSE ANY DAMAGE TO THE ANY ADJACENT PINS OF THE INSERT FACE OF THE CONNECTOR.

B. Connector Plug Assembly

- (1) Examine the surfaces of the printed wiring board and the plug that are adjacent when the plug is installed.
- (2) If either surface has any contamination:
- (a) Apply the necessary quantity of either of these cleaners to the surface with a bristle brush:
 - Isopropyl alcohol
 - Solvent cleaner.
 - (b) Let the cleaner evaporate.

NOTE: As an alternative, the cleaner can be dried with compressed air.

- (3) Align the connector solder pins with the correct holes in the printed wiring board.
- (4) Push the connector into the printed wiring board until the surface of the plug is against the surface of the board.

CAUTION: DO NOT USE FORCE. DAMAGE TO THE CONNECTOR OR THE PRINTED WIRING BOARD, OR BOTH CAN OCCUR.

- (5) Install the screws:
- (a) Apply a drop of Loctite 242 on a minimum of two threads on the opposite sides of one of the screws.
 - (b) Put the screw one of the mount holes.
 - (c) Do Step (a) and Step (b) again for the other screw.
 - (d) Torque the screws approximately 4 inch-pounds to 6 inch-pounds.
- (6) Solder the connector pins to the PWB.
- (7) Clean the assembly.
- (8) Apply a layer of conformal coating on the printed wiring assembly (PWA).
- (9) If a layer of conformal coating cannot be put on the assembly within 24 hours, put the assembly:
- In a clean, dry polyethylene bag
 - In an area where the relative humidity is no higher than 50 percent

NOTE: A satisfactory alternative is to clean assembly again.

- (10) Apply the same conformal coating to the opening between the connector and the PWB so that any bare conductors or any bare solder pins have a layer of the coating.

Refer to Figure 9.

STANDARD WIRING PRACTICES MANUAL

BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS

Keying Plug	Insertion Tool		
	Part Number	Description	Supplier
BACC47EM1	710-0021-000	Metal	Incon
	91-023	Plastic, Green	Incon
	CIET 22	-	Cannon

- (1) Make a selection of the insertion tool from Table 8.
- (2) Put the BACC47EM1 keying plug into the correct contact cavity at the rear face of the receptacle. Refer to Figure 10.

CAUTION: IF THE KEYING PLUG IS PUT IN BACKWARDS, IT IS LOCKED INTO POSITION AND CANNOT BE REMOVED.

INSERTION OF THE BACC47EM1 KEYING PLUG
Figure 10

20-82-13

STANDARD WIRING PRACTICES MANUAL

BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS

- (3) Manually push the keying plug into the connector cavity until the end of the plug is aligned with the wire support spacer on the rear face of the connector.
- (4) Push the plug into the contact cavity with the insertion tool until it makes a click.
- (5) Mark the connector with the keying part number.

B. BACC65L114 Receptacle Connector Keying

- (1) Put the BACC47EM2 keying plug in the contact cavity from the front face of the connector. Refer to Figure 11.

CAUTION: ONCE THE KEYING PLUG HAS BEEN INSTALLED, IT CANNOT BE REMOVED.

INSERTION OF THE BACC47EM2 KEYING PLUG
Figure 11

- (2) Manually push the keying plug into the contact cavity until the surface of the head is aligned with the face of the connector.
- (3) Mark the connector with keying part number.

C. Contact Assembly With Stranded Conductor Wire

Table 9
CRIMP TOOLS FOR CONTACTS WITH STRANDED CONDUCTORS

Wire Size (AWG)	Crimp Tool				
	Basic Unit		Locator	Depth Adjustment (inch)	
	Part Number	Setting		Minimum	Maximum

	612118	-	612827	0.030	0.035
22	M22520/2-01	6	M22520/2-21	-	-
	612118	-	612827	0.030	0.035

20-82-13

STANDARD WIRING PRACTICES MANUAL

BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS

- (1) Make a selection of a crimp tool from Table 9.
- (2) Remove 0.18 inch \pm 0.03 inch of the insulation from the end of the wire.
- (3) Crimp the contact.

D. Contact Assembly With Solid Conductor Wire

**Table 10
CRIMP TOOLS FOR CONTACTS WITH SOLID CONDUCTORS**

Solid Conductor Wire (AWG)	Stranded Filler Wire (AWG)	Crimp Tool		
		Basic Unit		Locator
		Part Number	Setting	
30	24	M22520/2-01	6	M22520/2-21
28	24	M22520/2-01	6	M22520/2-21
26	-	M22520/2-01	6	M22520/2-21
24	-	M22520/2-01	6	M22520/2-21

- (1) Make a selection of a crimp tool from Table 10.
- (2) Remove 0.18 inch \pm 0.03 inch of insulation from the end of the solid conductor wire.
- (3) If a stranded filler wire is necessary, remove 0.18 inch \pm 0.03 inch of insulation from the end of the filler wire.
- (4) Put the end of the wire or wires in the crimp barrel of the contact.
- (5) Crimp the contact.
- (6) If a filler wire is used, install the necessary insulation on the free end of the filler wire. Refer to Subject 20-10-11.

E. Contact Insertion for Crimped Contacts

**Table 11
INSERTION TOOLS FOR CRIMPED CONTACTS**

Contact	Insertion Tool	
	Part Number	Description
BACC47EK1	710-0021-000	Metal
	91-023	Plastic, Green
	CIET 22	-

- (1) Make a selection of an insertion tool from Table 11.
- (2) Put the tool on the wire of the contact assembly.
- (3) From the rear of the receptacle, push the contact assembly straight into the contact cavity. Refer to Figure 12.

STANDARD WIRING PRACTICES MANUAL

BACC65K() AND BACC65L() PRINTED WIRING BOARD CONNECTORS

CONTACT INSERTION
Figure 12

- (4) Push the tool until the contact seats or clicks to indicate complete insertion.
- (5) Install unwired contacts in all unused contact cavities.

NOTE: Installation of seal rods in the unwired contacts is not necessary.

F. Contact Insertion for Soldered Contacts

Table 12
INSERTION TOOLS FOR SOLDERED CONTACTS

Contact	Insertion Tool	
	Part Number	Description
BACC47EL1	710-0021-000	Metal
	91-023	Plastic, Green
	CIET 22	-

- (1) Make a selection of an insertion tool from Table 12.
- (2) From the rear of the connector, put the contact into the contact cavity.
- (3) Push the contact into the contact cavity until it makes a click.

	M83723/31-16	-
	NAS1664-16	-
	ST2220-3-7	-

- (1) Make a selection of a contact removal tool from Table 7.
- (2) Put the end of the removal tool on the wire.
- (3) Carefully push the tool straight into the contact cavity until it stops.

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (4) Pull the wire and the tool out of the contact cavity at the same time.
- (5) If the contact does come out of the contact cavity:
 - (a) Pull the tool out of the contact cavity.
 - (b) Turn the tool 90 degrees.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF INTEGRATED WIRING TERMINATION SYSTEMS

(c) Do Step (2) through Step (4) again.

B. Seal Plug Removal

- (1) Make a selection of a pair of needle nose pliers that has:
 - Jaws with smooth surfaces
 - No sharp edges.

CAUTION: ROUGH SURFACES OR SHARP EDGES CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) Hold the end of the seal plug tightly in the jaws of the pliers.
- (3) Pull the seal plug straight out of the rear grommet.

3. TERMINATION SYSTEM ASSEMBLY

A. Wire Preparation

**Table 8
INSULATION REMOVAL LENGTH**

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)		Special Instructions
		Minimum	Maximum	
24	22	0.12	0.15	-
	20	0.12	0.15	-
22	22	0.12	0.15	-
	20	0.12	0.15	-
	16	0.24	0.30	Fold the conductor back
20	20	0.12	0.15	-
	16	0.12	0.15	-
18	16	0.21	0.24	-
16	16	0.21	0.24	-

**WIRE PREPARATION
Figure 3**

- (1) Remove the necessary length of insulation from the end of the wire.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF INTEGRATED WIRING TERMINATION SYSTEMS

Refer to:

- Figure 3
- Table 8 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedures.

(2) If it is specified, fold the conductor back. Refer to Figure 4.

CONDUCTOR FOLDED BACK

		ST2220-1	-	ST2220-1-2	-
		WA27F	6	M22520/1-02	Blue

- (1) Make a selection of a crimp tool from Table 9.
- (2) Put the end the wire into the crimp barrel of the contact. Refer to Figure 5.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The strands of the conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is a maximum of 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 5

- (3) Crimp the contact.
- (4) Examine the contact assembly for these types of damage:
 - A broken strand of the conductor
 - A strand of the conductor on which the base metal can be seen
 - A crack in the crimp barrel of the contact.
- (5) If the contact or the wire has damage, replace the contact.

C. Contact Insertion

Table 10
CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool	
	Part Number	Color
22	M81969/14-11	Red
	ST2220-2-30	-

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF INTEGRATED WIRING TERMINATION SYSTEMS

Table 10 (continued)

Crimp Barrel Size	Insertion Tool	
	Part Number	Color
20	DAK83-20	-
	M81969/14-11	Red
	ST2220-2-28	-

	M81969/14-03	Blue
	M83723/31-16	-
	NAS1664-16	-
	ST2220-2-4	-

(1) Make a selection of a contact insertion tool from Table 10.

CAUTION: DO NOT USE A TOOL WITH A TIP THAT:

- IS BENT
- IS FLARED
- IS BROKEN
- HAS A CRACK.

WARNING: A DEFECTIVE TOOL CAN CAUSE INJURY TO THE OPERATOR.

CAUTION: A DEFECTIVE TOOL CAN CAUSE DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS.

(2) Put the contact assembly in the insertion tool. Refer to Figure 6.

CAUTION: AN UNWIRED CONTACT MUST NOT BE INSTALLED IN A MODULE. IT CANNOT BE REMOVED.

POSITION OF THE CONTACT IN THE INSERTION TOOL

Figure 6

(3) At the rear of the connector, axially align the contact, the tool, and the contact cavity.

(4) Carefully push the tool into the contact cavity until it stops.

Make sure that the tool and the contact cavity stay axially aligned.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF INTEGRATED WIRING TERMINATION SYSTEMS

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (5) Carefully pull the tool out of the contact cavity.
Make sure that the tool and the contact cavity stay axially aligned.
- (6) Lightly pull the wire to make sure that the contact is locked in position.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE TERMINAL MODULE OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact out of the cavity.
 - (b) Do Step (2) through Step (6) again.

D. Seal Plug Installation

- (1) Install seal plugs in all empty contact cavities.
Refer to Subject 20-60-08.

NOTE: Nylon or teflon rods can be used in place of MS() seal plugs.

4. APPROVED TOOL SUPPLIERS

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM

1. PART NUMBERS AND DESCRIPTION

A. Terminal Junction System Description

The terminal junction system has these components:

- Feedback terminal modules
- Feedthru terminal modules
- Tracks for feedback modules
- Tracks for feedthru modules
- Brackets for feedback modules.

M81714/5 AND M81714/16 FEEDBACK TERMINAL MODULE TRACKS

M81714/29 TERMINAL MODULE BRACKET
Figure 3

B. Terminal Module Part Numbers

Feedback terminal modules have these technical properties:

- One grommet
- Bussed contact cavities.

Feedthru terminal modules have these technical properties:

- Two grommets on opposite sides
- Bussed contact cavities that are connected to the cavities on the opposite side.

	ST2220-3-28	-

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM**

CONTACT REMOVAL
Figure 10

Refer to Figure 10.

- (1) Make a selection of a contact removal tool from Table 15.
- (2) Put the end of the removal tool on the wire.
- (3) Carefully push the tool straight into the contact cavity until it stops.

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (4) Pull the wire and the tool out of the contact cavity at the same time.
- (5) If the contact does come out of the contact cavity:
 - (a) Pull the tool out of the contact cavity.
 - (b) Turn the tool 90 degrees.
 - (c) Do Step (2) through Step (4) again.

B. Seal Plug Removal

- (1) Make a selection of a pair of needle nose pliers that has:
 - Jaws with smooth surfaces
 - No sharp edges.

CAUTION: ROUGH SURFACES OR SHARP EDGES CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) Hold the end of the seal plug tightly in the jaws of the pliers.
- (3) Pull the seal plug straight out of the rear grommet.

C. Removal of the Terminal Module from a Bracket

- (1) Remove the two bracket installation screws.
- (2) Pull the bracket from the module.

D. Removal of the Terminal Module from a Track

- (1) If the clamp screw has lockwire, remove the wire.

20-83-01

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM**

- (2) Loosen the clamp screw until it can be moved freely in the track.
- (3) Push the clamp away from the terminal module a minimum of one half the width of the module.
- (4) Horizontally align the module between two locking tabs on each side of the track.
- (5) Pull the module out of the track.

4. TERMINAL JUNCTION SYSTEM ASSEMBLY**A. Installation of a Terminal Module and a Bracket**

- (1) Put the module into the bracket. Refer to Figure 11.

Make sure that each shoulder of the module is against the applicable tab of the bracket.

**TERMINAL MODULE INSTALLATION IN A BRACKET****Figure 11**

- (2) Align the installation screw holes of the bracket and the structure.
- (3) Install the screws in the installation screw holes.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM

B. Installation of a Terminal Module into a Track

INSTALLATION OF A TERMINAL MODULE IN AN M81714/5 OR AN M81715/16 TRACK
Figure 12

INSTALLATION OF A TERMINAL MODULE IN AN M81714/10 OR AN M81715/14 TRACK
Figure 13

For the installation of a module in:

- An M81714/5 or an M81714/16 track; refer to Figure 12
- An M81714/10 or an M81714/14 track; refer to Figure 13.

- (1) Horizontally align the module between two module locking tabs in each side of the track.
- (2) Push the module down between the module locking tabs.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM

- (3) Push the module in the direction that is opposite the locking clamp until the module is against the stop or the last installed module.
Make sure that the bottom of the module is flat against the track.
- (4) Do Step (1) through Step (3) again for each module that must be installed.
- (5) Push the locking clamp tightly against the last module that is installed.
- (6) Tighten the clamp screw.
- (7) If the installation is in a high vibration area, install lockwire on the clamp screw.

C. Wire Preparation

**Table 16
INSULATION REMOVAL LENGTH**

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)		Special Instructions
		Minimum	Maximum	
24	22	0.12	0.15	-
	20	0.12	0.15	-
22	22	0.12	0.15	-
	20	0.12	0.15	-
	16	0.24	0.30	Fold the conductor back
20	20	0.12	0.15	-
	16	0.12	0.15	-
18	16	0.21	0.24	-
16	16	0.21	0.24	-
	12	0.21	0.24	-
14	12	0.21	0.24	-
12	12	0.21	0.24	-

**WIRE PREPARATION
Figure 14**

- (1) Remove the necessary length of insulation from the end of the wire.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM

Refer to:

- Figure 14
 - Table 16 for the insulation removal length
 - Subject 20-00-15 for the insulation removal procedures.
- (2) If it is specified, fold the conductor back. Refer to Figure 15.

CONDUCTOR FOLDED BACK
Figure 15

- (3) If the O.D. of the wire is less than the minimum seal diameter of the grommet hole, increase the O.D. of the wire. Refer to Table 17.

Table 17
MINIMUM SEAL DIAMETERS

Contact Cavity Size	Minimum Seal Diameter (inch)
22	0.034
20	0.038
16	0.060
12	0.087

- (a) Put a 0.5 inch length of 1/8 inch diameter MIL-LT or equivalent heat shrinkable sleeve on the wire.
Make sure that the distance from the forward end of the sleeve to the end of the insulation is a maximum of 0.1 inch.
- (b) Shrink the sleeve into position. Refer to Subject 20-10-14.

		WA27F	8	M22520/1-02	Yellow

- (1) Make a selection of a crimp tool from Table 18.
- (2) Put the end the wire into the crimp barrel of the contact. Refer to Figure 16.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The strands of the conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is a maximum of 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 16

- (3) Crimp the contact.
- (4) Examine the contact assembly for these types of damage:
 - A broken strand of the conductor
 - A strand of the conductor on which the base metal can be seen
 - A crack in the crimp barrel of the contact.
- (5) If the contact or the wire has damage, replace the contact.

	ST2220-2-5	-

(1) Make a selection of a contact insertion tool from Table 19.

CAUTION: DO NOT USE A TOOL WITH A TIP:

- IS BENT
- IS FLARED
- IS BROKEN
- HAS A CRACK.

WARNING: A DEFECTIVE TOOL CAN CAUSE INJURY TO THE OPERATOR.

CAUTION: A DEFECTIVE TOOL CAN CAUSE DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS.

(2) Put the contact into the insertion end of the insertion tool. Refer to Figure 17.

CAUTION: AN UNWIRED CONTACT MUST NOT BE INSTALLED IN A MODULE. IT CANNOT BE REMOVED.

POSITION OF THE CONTACT IN THE INSERTION TOOL

Figure 17

20-83-01

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF THE M81714() SERIES I TERMINAL JUNCTION SYSTEM**

- (3) Axially align the contact, the tool and the contact cavity. Refer to Figure 18.

ALIGNMENT OF THE INSERTION TOOL AND THE CONTACT CAVITY
Figure 18

- (4) Carefully push the tool straight into the contact cavity until it stops.

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (5) Carefully pull the tool straight out of the contact cavity.

- (6) Lightly pull the wire to make sure that the contact is locked in position.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE TERMINAL MODULE OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:

- (a) Pull the contact out of the cavity.
- (b) Do Step (2) through Step (6) again.

F. Seal of an Empty Contact Cavity

All empty contact cavities must be sealed.

- (1) Make a selection of a seal plug from Table 13.
- (2) Install seal plugs in each empty contact cavity. Refer to Subject 20-60-08.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES II TERMINAL JUNCTION SYSTEM

This Subject gives the procedures:

- To assemble the M81714 Series II terminal block modules
- To install the terminal block modules in the terminal junction system racks.

1. PART NUMBERS AND DESCRIPTION

A. Terminal Block Module Part Numbers

Table 1
TERMINAL BLOCK MODULE PART NUMBERS

Part Number	Supplier
M81714/6()	QPL
280-30001-()	Boeing

B. Assembly Part Numbers

Table 2
ASSEMBLIES THAT USE THE M81714 SERIES II TERMINAL BLOCK MODULES

Part Number	Description	Supplier
117432-2001	Connector, ARINC 404	Sabritec

C. Contact Part Numbers

3. TERMINAL JUNCTION SYSTEM DISASSEMBLY

A. Contact Removal

Table 5
CONTACT REMOVAL TOOLS

Crimp Barrel Size	Removal Tool	Supplier
22	MS3160-22	QPL
20	M83723/31-20	QPL
16	M83723/31-16	QPL
12	MS3160-12	QPL

- (1) Make a selection of a removal tool from Table 5.
- (2) Put the white end of the tool on the wire.
- (3) Hold the tool so that it is perpendicular to the module.
- (4) Push the tool down the wire and into the module contact cavity until the end of the tool is against the bottom.
- (5) Hold the tool tightly against the bottom and push the wire against the serrations in the tool handle.

20-83-02

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES II TERMINAL JUNCTION SYSTEM

(6) Pull the tool and the wire out of the contact cavity at the same time.

B. Terminal Block Module Removal

**Table 6
TERMINAL JUNCTION MODULE REMOVAL TOOLS**

Removal Tool	Supplier
CTJ-R06	Deutsch

- (1) Make a selection of the module removal tool from Table 6.
- (2) Put the tool into the grooves on the sides of the module.
- (3) Lightly push the tool until the tool is fully inserted.
- (4) Hold the tines of the tool tightly and pull the tool up.

4. TERMINAL JUNCTION SYSTEM ASSEMBLY

A. Terminal Block Module Installation

- (1) Put the module in the correct position on the top of the rail.
- (2) Lightly push the module down until it makes a click.

B. Contact Assembly

**Table 7
CONTACT CRIMP TOOLS**

Contact Size		Crimp Tool			
Engaging End	Crimp Barrel	Basic Unit		Locator	
		Part Number	Supplier	Part Number	Supplier
22	22	M22520/7-01	QPL	M22520/7-11	QPL
20	20	M22520/7-01	QPL	M22520/7-12	QPL
16	16	M22520/7-01	QPL	M22520/7-13	QPL
12	12	M22520/1-01	QPL	M22520/1-04	QPL

- (1) Make a selection of a crimp tool from Table 7.
- (2) Remove 3/16 inch ± 1/32 inch of the insulation from the end of the wire. Refer to Subject 20-00-15.
- (3) Put the contact in the crimp tool.

NOTE: The wire can be put in the contact before the contact is put into the crimp tool.

- (4) Put the bare end of the wire into the crimp barrel of the contact so that:
 - All of the conductor strands are in the crimp barrel
 - The conductor can be seen in the contact inspection hole.
- (5) Crimp the contact.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF THE M81714() SERIES II TERMINAL JUNCTION SYSTEM

C. Contact Insertion

**Table 8
CONTACT INSERTION TOOLS**

Crimp Barrel Size	Insertion Tool	Supplier
22	MS3160-22	QPL
20	M83723/31-20	QPL
16	M83723/31-16	QPL
12	MS3160-12	QPL

- (1) Make a selection of an insertion tool from Table 8.
- (2) Install each wired contact one at a time:
 - (a) Examine the contact to make sure that it is straight.
 - (b) Put the colored end of the insertion tool on the wire.
 - (c) Push the end of the tool over the contact so that the tip end of the tool is against the shoulder of the contact.

NOTE: For size 22 contacts, the end of the tool must be against the end of the crimp barrel.

- (d) Align the tool so that it is perpendicular to the rear face of the module.
- (e) Carefully push the tool straight into the contact cavity until the contact is fully inserted.
- (3) Carefully pull the tool out of the contact cavity.
- (4) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

D. Seal Plug Installation

Seal plugs must be installed in all contact cavities that are not used. Refer to Subject 20-60-08.

- (1) Make a selection of a seal plug from Table 3.
- (2) Push the seal plug into the contact cavity.

	M83723/31-16	-	QPL
	NAS1664-16	-	QPL
	ST2220-3-7	-	Boeing

- (1) Make a selection of a contact removal tool from Table 5.
- (2) Put the end of the removal tool on the wire.
- (3) Carefully push the tool straight into the contact cavity until it stops.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF MICRO SWITCH 10(TL) SERIES TOGGLE SWITCH

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (4) Pull the wire and the tool out of the contact cavity at the same time.
- (5) If the contact does come out of the contact cavity:
 - (a) Pull the tool out of the contact cavity.
 - (b) Turn the tool 90 degrees.
 - (c) Do Step (2) through Step (4) again.
- (6) Remove the wire and removal tool from the insert cavity at the same time.

3. SWITCH ASSEMBLY

A. Wire Preparation

**Table 6
INSULATION REMOVAL LENGTH**

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)		Special Instructions
		Minimum	Maximum	
22	20	0.12	0.15	-
	16	0.24	0.30	Fold the conductor back
20	20	0.12	0.15	-
	16	0.12	0.15	-
18	16	0.21	0.24	-
16	16	0.21	0.24	-

**WIRE PREPARATION
Figure 2**

- (1) Remove the necessary length of insulation from the end of the wire. Refer to:
 - Figure 2
 - Table 6 for the insulation removal length.
 - Subject 20-00-15 for the insulation removal procedures.
- (2) If it is specified, fold the conductor back. Refer to Figure 3.

**CONDUCTOR FOLDED BACK
Figure 3**

20-83-11

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF MICRO SWITCH 10(TL) SERIES TOGGLE SWITCH

- (3) If the O.D. of the wire is less than the minimum seal diameter of the grommet hole, increase the O.D of the wire. Refer to Table 7.

**Table 7
MINIMUM SEAL DIAMETERS**

Contact Cavity Size	Minimum Seal Diameter (inch)
20	0.038
16	0.060

- (a) Put a 0.5 inch length of 1/8 inch diameter MIL-LT or equivalent heat shrinkable sleeve on the wire.
 Make sure that the distance from the forward end of the sleeve to the end of the insulation is a maximum of 0.1 inch.
- (b) Shrink the sleeve into position. Refer to Subject 20-60-08.

B. Contact Assembly

**Table 8
CONTACT CRIMP TOOLS**

Wire Size (AWG)	Crimp Tool					
	Basic Unit			Locator		
	Part Number	Setting	Supplier	Part Number	Color	Supplier
22	M22520/1-01	3	QPL	M22520/1-02	Blue	QPL
	MS3191-4	-	QPL	MS3191-3T	-	QPL

	MS3191-4	-	QPL	MS3191-3T	-	QPL

- (1) Make a selection of a contact from Table 2.
 (2) Make a selection of a crimp tool from Table 8.
 (3) Put the end of the wire into the crimp barrel of the contact. Refer to Figure 4.

Make sure that:

- All of the strands of the conductor are in the crimp barrel.
- The strands of the conductor can be seen in the inspection hole.
- The distance from the end of the insulation to the end of the crimp barrel is a maximum of 0.03 inch.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF MICRO SWITCH 10(TL) SERIES TOGGLE SWITCH

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 4

- (4) Crimp the contact.
- (5) Examine the contact assembly for these types of damage:
 - A broken strand of the conductor
 - A strand of the conductor on which the base metal can be seen
 - A crack in the crimp barrel of the contact
- (6) If the contact or the wire has damage, replace the contact.

C. Contact Insertion

Table 9
CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool		Supplier
	Part Number	Color	
20	DAK83-20	-	Daniels
	M81969/14-11	Red	QPL

	M83723/31-16	-	QPL
	NAS1664-16	-	QPL
	ST2220-2-4	-	Boeing

- (1) Make a selection of a contact insertion tool from Table 9.

CAUTION: DO NOT USE A TOOL WITH A TIP:

- IS BENT
- IS FLARED
- IS BROKEN
- HAS A CRACK

WARNING: A DEFECTIVE TOOL CAN CAUSE INJURY TO THE OPERATOR.

CAUTION: A DEFECTIVE TOOL CAN CAUSE DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS.

- (2) Put the contact into the insertion end of the insertion tool. Refer to Figure 5.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF MICRO SWITCH 10(TL) SERIES TOGGLE SWITCH

CAUTION: AN UNWIRED CONTACT MUST NOT BE INSTALLED IN A CONTACT CAVITY. IT CANNOT BE REMOVED.

POSITION OF THE CONTACT IN THE INSERTION TOOL

Figure 5

- (3) Axially align the contact, the tool and the contact cavity.
- (4) Carefully push the tool straight into the contact cavity until it stops.

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (5) Carefully pull the tool straight out of the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in position.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE TERMINAL MODULE OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact out of the cavity.
 - (b) Do Step (2) through Step (6) again.

D. Seal of an Empty Contact Cavity

- (1) Make a selection of a seal plug from Table 4.
- (2) Install seal plugs in each empty contact cavity. Refer to Subject 20-60-08.

	24	0.25	± 0.03	Fold the wire to make a loop

20-84-00

STANDARD WIRING PRACTICES MANUAL

ESTERLINE-MASON AND WESTERN INDICATOR LAMP SOCKETS AND CONNECTORS

Table 4 (continued)

Number of Wires	Wire Size (AWG)	Length (inch)		Special Instructions
		Target	Tolerance	
2	24	0.25	± 0.03	Fold the wires to make a loop

- (1) Remove the necessary length of insulation from the end of the wire. Refer to Table 4.
- (2) If it is specified, fold the conductor back.
- (3) If a loop is specified:
 - (a) Remove the same length of insulation from the other end of the wire.
 - (b) Fold the wire or wires to make a loop.

B. Contact Assembly

**Table 5
CONTACT CRIMP TOOLS**

Basic Unit	Supplier
CT514	Western Indicator
614464	Astro
614464	Buchanan

**Table 6

Obsolete Crimp Tool		Replacement Crimp Tool	
Basic Unit	Supplier	Basic Unit	Supplier
CT514	Western Indicator	614464	Astro
614464	Buchanan	614464	Astro

- (1) Make a selection of the contact crimp tool. Refer to Table 5.
- (2) Put the conductor or conductors into the contact crimp barrel.
- (3) To adjust the crimp tool crimp depth, set the indenter opening of the crimp tool so that a Number 51 drill (0.067 inch) is lightly gripped by the indentors at the point of the ratchet release.
- (4) Crimp the contact.

C. Connector Installation

- (1) Make a selection of the connector installation tool from Table 3.
- (2) Press the connector assembly onto the lamp socket until the internal ridge of the connector snaps over the lamp socket.

Make sure that the connector plastic hood has covered three threads on the lamp socket.

(1) Lamp Bulb Replacement:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF GRIMES-HONEYWELL ELECTRIC LIGHTS

GRIMES-HONEYWELL A-8985 FLOOD LIGHT - LAMP BASE AND LENS
Figure 1

Refer to Figure 1:

- (a) Remove the screws and nuts that hold the lens to the front of the lamp base.
- (b) Remove the lens retainer, the spring gasket, and the lens from the lamp base.
- (c) Push the old lamp bulb into the bulb socket until it stops.
- (d) While you hold the old lamp bulb in, turn it counterclockwise until it stops.
- (e) Remove the old lamp bulb from the lamp bulb socket.
- (f) Make a selection of a lamp bulb from Table 2.
- (g) Push the new lamp bulb into the lamp bulb socket until it stops.
- (h) While you hold the lamp bulb in, turn it clockwise until it stops.
 Make sure that the new lamp bulb is locked in its position.
- (i) Put the lens, the spring gasket, and the lens retainer on the lamp base.
- (j) Install the screws and nuts that hold the lens retainer, the lens, and the spring gasket to the front of the lamp base.

(2) Flood Light Disassembly:

GRIMES-HONEYWELL A-8985 FLOOD LIGHT
Figure 2

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF GRIMES-HONEYWELL ELECTRIC LIGHTS

Refer to Figure 2.

- (a) Remove the lamp bulb. Refer to Step (1).
 - (b) At the rear of the lamp base, disengage the threads of the cap nut and the threads of the lamp base.
 - (c) Remove the cap nut from rear of the lamp base.
 - (d) Pull the grommet from the rear end of the lamp base.
 - (e) From the rear of the floodlight, push the wire forward into the lamp base.
 - (f) From the front of the lamp base, remove:
 - The contact and wire assembly
 - The washer
 - The insulator
 - The spring.
- (3) Flood Light Assembly

**Table 4
INSULATION REMOVAL LENGTH FOR THE A-8985 FLOOD LIGHT**

Wire Size	Insulation Removal Length		Special Instructions
	Target (inch)	Tolerance (inch)	
20	0.50	± 0.02	Fold back the conductor
18	0.25	± 0.02	-

**Table 5
CRIMP TOOLS FOR THE A-8985 FLOOD LIGHT CONTACT**

Wire Size	Crimp Tool			
	Basic Unit	Locator	Setting	Supplier
20	M22520/1-01	M22520/1-02	5	QPL
18	M22520/1-01	M22520/1-02	5	QPL

Refer to Figure 2.

- (a) Put the cap nut on the wire.
Make sure that the end of the cap nut that has the threads points forward to the end of the wire.
- (b) Put the grommet on the wire.
Make sure that the smaller diameter end of the grommet points forward to the end of the wire.
- (c) Put the lamp base on the wire.
Make sure that the threaded end of the lamp base points rearward, away from the end of the wire.
- (d) Put the spring on the wire.
- (e) Put the insulator on the wire.
Make sure that the large end of the insulator points forward to the end of the wire.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF GRIMES-HONEYWELL ELECTRIC LIGHTS

- (f) Put the washer on the wire.
- (g) Remove the correct length of insulation from the end of the wire. Refer to Table 4.
- (h) Make a selection of a crimp tool from Table 5.
- (i) Put the end of the wire into the contact.
 Make sure that:
 - The washer, the insulator, the spring, the lamp base, the grommet and the cap nut are on the wire. Refer to Figure 2.
 - The distance between the end of the wire insulation and the contact is between 0.03 inch and 0.09 inch.
- (j) Crimp the contact.
- (k) Put the washer against the shoulder of the contact.
- (l) Put the spring, the insulator, the washer and the contact and wire assembly into the front of the lamp bulb socket.
 Make sure that:
 - The shoulder of the contact is against the washer
 - The washer is in the counterbore of the insulator.
- (m) Install the lamp bulb. Refer to Step (1).
- (n) Push the grommet into the end of the lamp base until it stops.
- (o) Engage the threads of the cap nut and the threads of the lamp base.
- (p) Tighten the cap nut.
- (q) Install the lens, the spring gasket, and the lens retainer. Refer to Step (1).

B. Assembly of the Grimes-Honeywell B-9845 Dome Light

Part Number	Supplier
TE-096	Grimes-Honeywell

(1) Lamp Bulb Replacement

**GRIMES-HONEYWELL B-8945 DOME LIGHT - LAMP BASE AND LENS
Figure 3**

Refer to Figure 3.

- (a) Pull the middle of the lens handle away from the lens.
- (b) Use the lens handle to turn the lens in the counterclockwise direction until it stops.
- (c) Use the lens handle to pull the lens from the lamp base.
- (d) Push the old lamp bulb into the bulb socket until it stops.
- (e) While you hold the old lamp bulb in, turn it counterclockwise until it stops.
- (f) Remove the old lamp bulb from the lamp bulb socket.
- (g) Make a selection of a lamp bulb from Table 7.
- (h) Push the new lamp bulb into the lamp bulb socket until it stops.
- (i) While you hold the new lamp bulb in, turn it clockwise until it stops.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF GRIMES-HONEYWELL ELECTRIC LIGHTS

Make sure that the new lamp bulb is locked it in its position

- (j) Align the bayonet pins on the lens and the latch slots on the lamp base.

Make sure that the cut-out is aligned with the lamp bulb socket.

- (k) Push the lens into the lamp base until it stops.
- (l) Use the lens handle to turn the lens in the clockwise direction until it stops.
Make sure that the lens is locked to the lamp base.

- (m) Push the middle of the lens cover handle against the lamp base.

(2) Dome Light Disassembly

GRIMES-HONEYWELL B-9845 DOME LIGHT
Figure 4

Refer to Figure 4.

- (a) Remove the lamp bulb. Refer to Step (1).
- (b) From the rear of the domelight, push the wire forward into the assembly.
- (c) From the front of the lamp bulb socket, remove:
 - The contact and wire assembly
 - The insulator
 - The spring.

(3) Dome Light Assembly

Table 9
INSULATION REMOVAL LENGTH FOR THE B-9845 DOME LIGHT

Wire Size (AWG)	Insulation Removal Length		Special Instructions
	Target (inch)	Tolerance (inch)	
20	0.69	± 0.03	Fold back the conductor
16	0.34	± 0.03	-

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF GRIMES-HONEYWELL ELECTRIC LIGHTS

**Table 10
CRIMP TOOLS FOR THE B-9845 DOME LIGHT CONTACT**

Basic Unit		Die		
Part Number	Supplier	Part Number	Position	Supplier
WT-400	Thomas and Betts	M22520/5-35	B	QPL
M22520/5-01	QPL	M22520/5-35	B	QPL

Refer to Figure 4.

- (a) From the outer side of the lamp base, put the end of the wire through the lamp base grommet and through the lamp bulb socket.
- (b) Put the spring on the wire.
- (c) Put the insulator on the wire.

Make sure that the larger diameter end of the insulator points to the end of the wire.

- (d) Remove the correct length of insulation from the end of the wire. Refer to Table 9.
- (e) Make a selection of a crimp tool from Table 10.
- (f) Put the end of the wire into the contact.

Make sure that:

- The wire goes through the lamp base grommet, the lamp bulb socket, the spring, and the insulator. Refer to Figure 4.
- The distance between the end of the wire insulation and the contact is between 0.03 inch and 0.09 inch.

- (g) Crimp the contact.

Make sure that the flash on the contact crimp barrel does not touch the insulator when the contact is installed in the insulator.

- (h) Put the contact and wire assembly in the insulator.

Make sure that the contact shoulder is in the counterbore of the insulator.

- (i) Put the spring, the insulator, and the contact and wire assembly into the front of the lamp bulb socket.

Make sure that:

- The spring is in the lamp bulb socket
- The rear step of the insulator is in the spring
- The contact shoulder is in the counterbore of the insulator.

- (j) Install the lamp bulb. Refer to Step (1).

- (k) Install the lens. Refer to Step (1).

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

This subject gives these procedures for the Eaton lighted push button switches:

- Disassembly and assembly
- Removal and installation
- Replacement of contacts and lamps.

1. PART NUMBERS AND DESCRIPTION

A. Lighted Push Button Switch Part Numbers

**Table 1
LIGHTED PUSH BUTTON SWITCH PART NUMBERS**

Part Number	Type	Button Sign Label		Supplier
		Contents	Color	
851-37167()-001	Momentary	ACPT	White	Eaton

851-37962()-	T-1 midget, flange base, 28VDC	92490516-020	Eaton
		LTX-6859	Lamptronix
		OL-3335	Oshino

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

2. SWITCH DISASSEMBLY

A. Lamp Capsule Removal

**Table 5
LAMP CAPSULE EXTRACTION TOOLS**

Part Number	Supplier
584-901	Eaton

**LAMP CAPSULE EXTRACTION TOOL
Figure 3**

- (1) Press and release the button or the lamp capsule of the switch so that the button or the lamp capsule is in the OFF position.

Make sure that the outer edge of the button or lamp capsule is out from or beyond the edge of the switch body.

NOTE: The button or lamp capsule of an alternate action switch is:

- Pressed in when the switch is on
- Is out when the switch is off.

CAUTION: REMOVAL OF THE BUTTON OR THE LAMP CAPSULE FROM THE SWITCH WHEN THE BUTTON IS IN THE ON POSITION CAUSES DAMAGE TO THE SWITCH.

- (2) Make a selection of a lamp capsule extraction tool from Table 5.

NOTE: The fingernails are a satisfactory alternative to the extraction tool.

- (3) Put the ends of the tool or the fingernails into the grooves on the opposite sides of the button or the lamp capsule. Refer to Figure 1 or Figure 2.

CAUTION: ONLY THE TOOLS SPECIFIED IN TABLE 5 OR THE FINGERNAILS CAN BE USED TO REMOVE THE CAPSULE. IF DIFFERENT TOOLS ARE USED, DAMAGE TO THE LAMP CAPSULE OR THE SWITCH BODY, OR BOTH CAN OCCUR.

- (4) Pull the lamp capsule approximately 0.25 inch out of the switch body until the button or lamp capsule stops against the retaining hinge.

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

CAUTION: DO NOT USE MORE THAN THE NECESSARY FORCE TO PULL THE BUTTON OR LAMP CAPSULE AGAINST THE RETAINING HINGE. DAMAGE TO THE CAPSULE, THE HINGE, OR THE SWITCH BODY CAN OCCUR.

B. Switch Removal From The Panel

Access to the back of the panel:

- Is necessary to remove the 851-37167-() switch body from the front of the panel
- Is not necessary to remove the 851-37962-() switch body from the front of the panel.

NOTE: The 851-37962-() switch has a retainer clip that is held loosely in the panel by spring clips. The retainer clip holds the connector sleeve on the panel so that the switch body can be removed from the front of the panel. It is not necessary to remove the connector sleeve and the connector block from the back of the panel.

**Table 6
SWITCH INSTALLATION AND REMOVAL TORQUE TOOLS**

Description	Part Number	Torque Limit (inch-ounce)	Supplier
Torque Screwdriver	584-510	18	Eaton
Torque Screwdriver	TS-100	18	U TI CA

For this procedure, the lamp capsule must be removed from the switch body. Refer to Paragraph 2.A.

- (1) Make a selection of a switch removal tool from Table 6.

NOTE: A small screwdriver is a satisfactory alternative.

- (2) Turn the power to the switch off.
- (3) Extend the retaining hinges of the lamp capsule.
- (4) Find the heads of the two lug screws that tighten the mounting pawls at the bottom of the switch body.
- (5) With the screwdriver, turn each of the lug screws counterclockwise approximately two to four turns loosen the switch body.

CAUTION: DO NOT CONTINUE TO TURN THE SCREWS AFTER THE SWITCH IS LOOSE. DAMAGE TO THE SWITCH CAN OCCUR.

- (6) Pull the switch body from the connector sleeve.

The connector sleeve and connector block of:

- The 851-37167-() switch disengages from the panel
- The 851-37962-() switch stays attached to the panel.

C. Switch Connector Block Removal

**Table 7
CONNECTOR BLOCK REMOVAL TOOLS**

Removal Tool	Supplier
RRX-367	Russtech

- (1) Make a selection of a removal tool from Table 7.

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

- (2) Put the two round ends of the tool into each slot on both sides of the connector block at the same time.
- (3) Push the tool into the slots until it stops.
- (4) Pull the tool and the connector block out of the connector sleeve.
- (5) Remove the tool from the connector block.

D. Contact Removal

**Table 8
CONTACT REMOVAL TOOLS**

Crimp Barrel Size	Removal Tool	
	Part Number	Supplier
22	M81969/14-01	QPL
	MS27495A22M	QPL
20	M82969/14-10	QPL

- (1) Make a selection of a contact removal tool from Table 8.
- (2) Put the tip of the contact removal tool on the wire near the rear grommet.
- (3) Carefully push the contact removal tool in the contact cavity until it stops.
- (4) Pull the wire and the removal tool out of the contact cavity at the same time.
- (5) If the contact does not release:
 - (a) Carefully pull the removal tool out of the contact cavity.
 - (b) Turn the removal tool a small amount.
 - (c) Do Step (2) through Step (4) again.

E. Lamp Replacement

For this procedure, the lamp capsule must be removed from the switch body. Refer to Paragraph 2.A.

- (1) Make a selection of a replacement lamp from Table 4.

CAUTION: THE SELECTION AND INSTALLATION OF AN INCORRECT REPLACEMENT LAMP FOR THE SPECIFIED SWITCH CAN CAUSE ANY OF THESE CONDITIONS:

- DAMAGE TO THE LAMP GROUND CONTACT
- DAMAGE TO THE SWITCH MECHANISM
- INTERMITTENT OPERATION OF THE LAMP
- SHORT LAMP LIFE
- TOO MUCH ILLUMINATION OF THE LAMP
- ILLUMINATION OF THE LAMP THAT IS NOT SUFFICIENT.

- (2) Examine the bottom of the lamp capsule.

In the bottom of the lamp capsule can be:

- As many as four lamp bases
- As many as two plastic plugs in the lamp sockets.

NOTE: A plastic plug prevents the installation of a lamp in the socket.

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

- (3) Pull each lamp out with the fingernails.

NOTE: Each lamp base has an edge around it.

CAUTION: DO NOT REMOVE ANY PLASTIC PLUG THAT IS IN A LAMP SOCKET. A LAMP SOCKET WITH A PLUG CANNOT HAVE A LAMP BECAUSE THERE IS NOT A LIGHTED SIGN FOR THAT AREA OF THE LAMP CAPSULE.

- (4) Install the necessary number of new lamps.

Make sure that Step (a) through Step (c) are done in order.

CAUTION: IF THE STEPS ARE NOT DONE IN ORDER, ANY OF THESE CONDITIONS CAN OCCUR:

- DAMAGE TO THE LAMP GROUND CONTACT
- DAMAGE TO THE SWITCH MECHANISM
- INTERMITTENT OPERATION OF THE LAMP

(a) Put each new lamp in an empty lamp socket, but do not push them in.

(b) Push the two lamps near the top of the lamp capsule in at the same time until they stop.

(c) Push the other two lamps near the bottom of the lamp capsule in at the same time until they stop.

- (5) Align the corners of the lamp capsule with the corners of the switch body.

- (6) Push the lamp capsule into the switch body.

CAUTION: DO NOT APPLY MORE THAN THE NECESSARY AMOUNT OF FORCE ON THE LAMP CAPSULE. DAMAGE TO THE LAMP CAPSULE OR THE SWITCH BODY, OR BOTH CAN OCCUR.

- (7) To help prevent intermittent operation of the lamp, press the button or lamp capsule two times with the finger so that the switch is operated one full ON and OFF cycle.

3. SWITCH ASSEMBLY

A. Contact Assembly

**Table 9

- (1) Make a selection of the correct contact from Table 3.
- (2) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Table 9
- Figure 4
- Subject 20-00-15.

**INSULATION REMOVAL
Figure 4**

- (3) Make a selection of a crimp tool from Table 9.
- (4) Push the conductor into the contact crimp barrel until the end of the conductor is against the bottom of the crimp barrel. Refer to Figure 5.

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is less than or equal to 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL OF THE CONTACT
Figure 5

(5) Crimp the contact.

B. Contact Insertion

Table 11
CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool	
	Part Number	Supplier
22	M81969/14-01	QPL
	MS27495A22M	QPL
20	M81969/14-10	QPL

(1) Make a selection of an insertion tool from Table 11.

CAUTION: DO NOT USE AN INSERTION TOOL THAT HAS:

- A BENT TIP
- A BENT BIT
- A FLARED TIP
- A BROKEN TIP
- A TIP WITH A CRACK.

CAUTION: IF A DEFECTIVE INSERTION TOOL IS USED, IT CAN CAUSE:

- INJURY TO THE OPERATOR
- DAMAGE TO THE CONTACT RETENTION CLIPS
- DAMAGE TO THE REAR GROMMET OF THE CONNECTOR BLOCK.

(2) Put the wired contact in the insertion tool. Refer to Figure 6.

STANDARD WIRING PRACTICES MANUAL

EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES

POSITION OF THE WIRED CONTACT IN THE INSERTION TOOL
Figure 6

- (3) Push the wired contact and the tool into the contact cavity from the rear of the connector so that the contact is fully inserted.

C. Connector Block Polarization

Table 12
SWITCH KEY POSITIONS

Switch	Key Position
851-37167-()-001	A
851-37167-()-002	C
851-37167-()-003	B

- (1) Find the correct key position. Refer to Table 12.
- (2) Push the plastic key into the correct slot of the connector block.
- (3) Find the key slot on the end of the switch body.
- (4) Align the key in the connector block with the key slot in the switch body.

CAUTION: IF THE KEY IN THE CONNECTOR BLOCK IS NOT ALIGNED WITH THE KEY SLOT IN THE SWITCH BODY, THE SWITCH BODY CANNOT BE INSTALLED ON THE CONNECTOR BLOCK.

4. SWITCH INSTALLATION

A. Installation of the 851-37167-() Switch in a Panel

For this procedure, the lamp capsule must be removed from the switch body. Refer to Paragraph 2.A.

- (1) Make a selection of a switch removal tool from Table 6.

NOTE: A small screwdriver is a satisfactory alternative.
- (2) If a spacer is used, put the spacer on the switch body from the bottom.
- (3) Turn the connector block so that the side of the connector block with the key position identifiers A B C is on the same side as the TOP mark on the connector sleeve.
- (4) Push the connector block into the end of the connector sleeve until it makes a click.
- (5) Hold the connector sleeve with the connector block behind the panel so that:
 - The connector block is pointed out from the panel
 - The side of the connector sleeve with the TOP mark is pointed up.
- (6) Turn the switch body so that the side with the TOP mark is pointed up.

STANDARD WIRING PRACTICES MANUAL**EATON 851-37()-() SERIES LIGHTED PUSH BUTTON SWITCHES**

- (7) From the front of the panel, push the switch body into the connector sleeve.
- (8) To tighten the mounting pawls, turn the lug screws at the bottom of the switch body with the screwdriver in the clockwise direction until the torque screwdriver does not turn the screws.

CAUTION: IF THE LUG SCREWS ARE TIGHTENED MORE THAN 18 INCH-OUNCES:

- DAMAGE TO THE SWITCH CAN OCCUR
- DAMAGE TO THE LAMP CAPSULE CAN OCCUR
- THE LAMP CAPSULE DOES NOT MOVE FREELY.

- (9) Push the lamp capsule into the switch body.

CAUTION: DO NOT APPLY MORE THAN THE NECESSARY AMOUNT OF FORCE ON THE LAMP CAPSULE. DAMAGE TO THE LAMP CAPSULE OR THE SWITCH BODY, OR BOTH CAN OCCUR.

- (10) To help prevent intermittent operation of the lamp, press the button or lamp capsule two times with the finger so that the switch is operated one full ON and OFF cycle.

B. Installation of the 851-37962()- Switch in a Panel

- (1) Make a selection of a switch removal tool from Table 6.

NOTE: A small screwdriver is a satisfactory alternative.

- (2) Turn the connector sleeve so that the TOP mark is pointed up.
- (3) From the front of the panel, push the bottom of the connector sleeve through the hole in the panel until the flange is against the panel.
- (4) Align the holes in the retainer clip with the holes for the mounting pawls on the connector sleeve.
- (5) From the back of the panel, push the connector sleeve into the retainer clip until the clip is locked in the sleeve.
- (6) Turn the connector block so that the side with the key position identifiers A B C is on the same side as:
 - The TOP mark on the connector sleeve
 - The TOP mark on the retainer clip.
- (7) Push the connector block into the connector sleeve until it makes a click.
- (8) Remove the lamp capsule from the switch body. Refer to Paragraph 2.A.
- (9) If a button guard is used, put the guard over the switch body from the rear of the switch body.
- (10) If a switch guard is used, put the switch guard over the switch body from the rear of the switch body.
- (11) If a spacer is used, put the spacer over the switch body from the rear of the switch body.
- (12) Turn the switch body so that the side with the TOP mark is pointed up.
- (13) From the front of the panel, push the switch body into the connector sleeve.
- (14) To tighten the mounting pawls, turn the lug screws at the bottom of the switch body with the screwdriver in the clockwise direction until the torque screwdriver does not turn the screws.

CAUTION: IF THE LUG SCREWS ARE TIGHTENED MORE THAN 18 INCH-OUNCES:

- DAMAGE TO THE SWITCH CAN OCCUR
- DAMAGE TO THE LAMP CAPSULE CAN OCCUR
- THE LAMP CAPSULE DOES NOT MOVE FREELY.

- (15) Push the lamp capsule into the switch body.

A. Contact Removal

Table 6
CONTACT REMOVAL TOOLS

Crimp Barrel Size	Removal Tool		
	Part Number	Color	Supplier
20	M81969/14-10	Orange	QPL

NOTE: For plastic tools, the color given in Table 6 is the color of the removal end of the combination tools that are both insertion and removal tools.

(1) Make a selection of a contact removal tool from Table 6.

CAUTION: DO NOT USE A REMOVAL TOOL THAT HAS A DEFECT. A REMOVAL TOOL THAT HAS A DEFECT CAN CAUSE DAMAGE TO THE GROMMET OR THE RETENTION CLIP.

(2) At the rear of the connector block, put the removal tool on the wire.

(3) Axially align the removal tool and the contact cavity.

(4) Carefully push the removal tool into the contact cavity until it stops.

CAUTION: DO NOT ROTATE THE TOOL OR SPREAD THE TOOL TIPS WHILE THE TOOL IS IN THE CONTACT CAVITY.

(5) Carefully pull the wire and the removal tool from the contact cavity at the same time.

Make sure that the removal tool and the contact cavity stay axially aligned.

(6) If the contact does not release:

(a) Pull the removal tool out of the contact cavity.

(b) Turn the removal tool approximately 90 degrees.

(c) Do Step (2) through Step (5) again.

STANDARD WIRING PRACTICES MANUAL

BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES

B. Lamp Replacement

The lamps are Light Emitting Diodes (LED) soldered into the cap module assembly. It is not possible to replace an LED. The cap module must be replaced. Refer to Paragraph 2.H. to separate the cap module from the switch module.

C. Removal of the Connector Block from the Switch Housing

**Table 7
CONNECTOR BLOCK REMOVAL TOOLS**

Removal Tool	Supplier
09-530-9605	Korry Electronics

- (1) Make a selection of a connector block removal tool from Table 7.

NOTE: A satisfactory alternative is to use the fingers to disengage the tabs.

- (2) Align the fingers of the removal tool with the slot on each side of the switch housing. Refer to Figure 4.

**POSITION OF THE REMOVAL TOOL
Figure 4**

- (3) Push the tool together to press against the tabs on the connector block and at the same time pull the connector block rearward. Refer to Figure 5.

STANDARD WIRING PRACTICES MANUAL

BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES

REMOVAL OF THE CONNECTOR BLOCK
Figure 5

D. Removal of the Switch from the Panel

- (1) From the rear of the mounting sleeve, disengage each installation screw from the threads in the switch housing. Refer to Figure 6.

SWITCH REMOVAL
Figure 6

- (2) From the rear of the panel, pull the mounting sleeve rearward off the switch housing. Refer to Figure 6.
- (3) From the front of the panel, pull the switch housing out from the panel. Refer to Figure 6.

E. Switch Guard Removal

- (1) Remove the switch from the panel. Refer to Paragraph 2.D.
- (2) Pull the switch guard to the rear of the switch housing from the switch housing until it is free.

20-84-14

STANDARD WIRING PRACTICES MANUAL

BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES

F. Removal of the Switch Module from the Switch Housing

REMOVAL OF THE SWITCH MODULE
Figure 7

Refer to Figure 7.

- (1) If a switch guard is installed, open the cover more than 154 degrees.
- (2) If the cap is in the pushed in position, push the cap in to make it go to the out position.
- (3) Gently hold the sides of the cap module and at the same time, pull the cap module out of the switch module until it stops.
- (4) Turn the cap module counterclockwise 22 degrees or until it stops.
- (5) Pull the switch module out from the switch housing.

G. Fuse Removal

Table 8
FUSE REMOVAL TOOLS

Part Number	Supplier
09-530-9604	Korry Electronics

- (1) Make a selection of a fuse removal tool from Table 8.
- (2) Remove the switch module from the switch housing. Refer to Paragraph 2.F.
- (3) Open the fuse cover.
- (4) Turn the switch module to make the fuse pointed up.
- (5) With the removal tool, gently hold the fuse by the ceramic area of the fuse.
- (6) Pull the fuse out of the clips in the switch module.

H. Separation of the Cap Module from the Switch Module

- (1) Hold the switch module assembly with the rear of the switch module pointed up.
- (2) With a flat blade screwdriver, turn the inner shaft approximately 90 degrees until the slot in the shaft is aligned with the lines that have the mark "UNL".
- (3) Pull the cap module from the switch module.

STANDARD WIRING PRACTICES MANUAL

BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES

3. SWITCH ASSEMBLY

A. Contact Assembly

**Table 9
INSULATION REMOVAL LENGTH**

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)	
		Target	Tolerance
20	20	0.18	± 0.03

**Table 10
CONTACT CRIMP TOOLS**

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool		
		Basic Unit		Locator Part Number
		Part Number	Setting	
24	20	M22520/7-01	3	M22520/7-12
22	20	M22520/7-01	4	M22520/7-12
20	20	M22520/7-01	5	M22520/7-12

- (1) Make a selection of a crimp tool from Table 10 .
- (2) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 8
- Table 9 for the insulation removal length
- Subject 20-00-15 for the insulation removal procedures.

**INSULATION REMOVAL LENGTH
Figure 8**

- (3) Put the end of the conductor in the crimp barrel of the contact. Refer to Figure 9.

Make sure that:

- All the conductor strands are in the crimp barrel
- The conductor strands are visible in the inspection hole of the contact
- The distance from the end of the insulation to the crimp barrel is not more than 0.03 inch.

STANDARD WIRING PRACTICES MANUAL

BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES

POSITION OF THE CONDUCTOR IN THE CRIMP BARREL OF THE CONTACT
Figure 9

- (4) Crimp the contact.

B. Contact Insertion

Table 11
CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool		
	Part Number	Color	Supplier
20	M81969/14-10	Red	QPL

- (1) Make a selection of an insertion tool from Table 11.

CAUTION: DO NOT USE DAMAGED TOOLS.

- (2) Lubricate the rear grommet of the connector with isopropyl alcohol.

CAUTION: DO NOT PUT THE CONNECTOR GROMMET OR CONTACT ASSEMBLY FULLY INTO THE ALCOHOL. TOO MUCH LUBRICANT CAN CAUSE DAMAGE TO THE CONNECTOR.

- (3) Put the contact assembly in the insertion tool.
- (4) Axially align the insertion tool and the contact cavity at the rear of the connector block.
- (5) Carefully push the contact assembly into the contact cavity until it stops.

Make sure that the insertion tool stays axially aligned with the contact cavity.

CAUTION: DO NOT USE MORE THAN THE NECESSARY AMOUNT OF FORCE TO PUSH THE TOOL INTO THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

CAUTION: DO NOT TURN THE TOOL CLOCKWISE OR COUNTERCLOCKWISE WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (6) Carefully pull the tool out of the contact cavity.
 Make sure that the tool and the contact cavity stay axially aligned.
- (7) Lightly pull the wire to make sure that the contact is locked in the connector block.

STANDARD WIRING PRACTICES MANUAL

BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE CONNECTOR OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE OF THE WIRE.

- (8) If the contact is not locked in the contact cavity:
 - (a) Pull the contact assembly out of the contact cavity.
 - (b) Do Step (3) through Step (7) again.

C. Fuse Installation

**Table 12
FUSE INSTALLATION TOOLS**

Part Number	Supplier
09-530-9604	Korry Electronics

- (1) Remove the fuse that has damage. Refer to Paragraph 2.G.
- (2) Make a selection of a fuse installation tool from Table 12.
- (3) Put the fuse between the fingers of the fuse installation tool at the ceramic area of the fuse.
- (4) Gently push the fuse into the clips on the switch module.
- (5) Close the fuse cover.

D. Connection of the Cap Module and the Switch Module

**CONNECTION OF THE CAP MODULE AND THE SWITCH MODULE
Figure 10**

Refer to Figure 10.

- (1) Hold the switch module with the rear of the module pointed up.
- (2) With a flat blade screwdriver, turn the inner shaft on the rear of the module until the slot in the shaft is aligned with the lines that have the mark "UNL".
- (3) Turn the locking collar on the front of the switch module until the label on the module is aligned with the center of the top of the module.

STANDARD WIRING PRACTICES MANUAL**BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES**

- (4) Turn the cap module until the top of the cap module is aligned with the top of the switch module
- (5) Push the cap module into the switch module until it stops.
- (6) Lightly push the cap module into the switch module and at the same time, use a flat blade screwdriver to turn the inner shaft 90 degrees until the slot is aligned with the lines that have the mark "LKD".

E. Installation of the Switch Module into the Switch Housing

- (1) Hold the switch module with the hand and pull the cap module out from the switch module until it stops.
- (2) Turn the cap module 22 degrees counterclockwise until it stops. Refer to Figure 11.

POSITION OF THE CAP MODULE
Figure 11

- (3) Align the top of the switch module with the top of the switch housing.
- (4) Push the switch module into the switch housing until it stops. Refer to Figure 12.
Make sure that the cap is in the out position.

INSTALLATION OF THE SWITCH MODULE
Figure 12

- (5) Pull gently on the cap module, and at the same time, rotate the cap module clockwise until the top of the cap module is aligned with the switch housing.
- (6) Release the cap module.

STANDARD WIRING PRACTICES MANUAL**BOEING S231W240-() AND KORRY ELECTRONICS 09-530-() LIGHTED PUSHBUTTON SWITCHES****F. Installation of the Switch Guard**

- (1) Put the switch guard on the switch housing.
- (2) Install the switch in the panel. Refer to Paragraph 3.G.

G. Installation of the Switch in the Panel**INSTALLATION OF THE SWITCH IN THE PANEL****Figure 13**

- (1) From the front of the panel, put the switch housing through the mounting hole. Make sure that the side of the housing that has the word "TOP" is up.
- (2) From the rear of the panel, align the mounting sleeve with the switch housing. Make sure that the installation screws are aligned with the threaded holes in the switch housing.
- (3) Push the mounting sleeve on the switch housing.
- (4) Tighten the installation screws.
- (5) Torque each installation screw 30 inch-ounces \pm 2 inch-ounces.

H. Installation of the Connector Block in the Switch Housing

- (1) Align the polarization key on the connector block with the polarization keyway on the switch housing.
- (2) Push the connector block into the switch assembly until the tabs on the connector block engage with the slots in the housing.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

This Subject gives the procedures to assemble the landing gear cables for these Model 747, Model 767, and Model 777 systems:

- Anti-Skid
- Brake Cooling
- Tire Pressure
- In-Axle.

1. PART NUMBERS AND DESCRIPTION

A. Necessary Parts and Materials

**Table 1
CABLE ASSEMBLY COMPONENT PART NUMBERS**

Component	Part Number	Supplier
Adapter	G1504-()	Glenair
Lanyard	G70259T77-()	Glenair

**Table 2
NECESSARY MATERIALS**

2. LANDING GEAR CABLE ASSEMBLY: 747-100, 747-200, 747-300

This Paragraph gives the procedures to install Glenair G1504-() cable adapters on landing gear cables for the anti-skid system.

A. Anti-Skid Cable Assembly

ANTI-SKID CABLE ASSEMBLY
Figure 1

- (1) Cut the length of SPIRAP. Refer to Table 3.
- (2) Put the SPIRAP on the cable.
- (3) Remove 2.0 inches ± 0.1 inch of the outer jacket of the cable. Refer to Figure 2.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

CABLE SHIELD TERMINATION

Figure 2

- (4) Terminate the shield so that it is a dead end. Refer to Figure 2 and Subject 20-10-15.
 - (a) Cut the shield so that the end of the shield is 0.25 inch \pm 0.06 inch from the end of the jacket.
 - (b) Fold the shield back over the jacket.
 - (c) Shrink a 3 inch length of heat shrinkable sleeve over the shield.
- (5) Put these sleeves in this sequence over the cable:
 - (a) A 1-3/4 inch length of 1/2 inch diameter yellow heat shrinkable sleeve
 - (b) A 2-1/4 inch length of 3/8 inch diameter yellow heat shrinkable sleeve
 - (c) A 2-3/4 inch length of 3/8 inch diameter yellow heat shrinkable sleeve.
- (6) Put the Glenair G1504-() cable adapter over the cable.
Make sure to put the clamp end first.
- (7) Remove the cable clamp from the G1504-() adapter.
- (8) Put one drop of Vibratite thread lock compound:
 - On a minimum of two threads of the internal threads of the adapter body
 - On a minimum of two threads of the external threads of the adapter body.
 Refer to Figure 3.

LOCATION OF THE VIBRATITE

Figure 3

- (9) Put the edge of the SPIRAP so that it is approximately flush with the cable jacket. Refer to Figure 4.

POSITION OF THE SPIRAP

Figure 4

- (10) Install the cable diameter buildup sleeves. Refer to Figure 5 and Subject 20-10-14.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

CABLE DIAMETER BUILDUP SLEEVES

Figure 5

- (a) Slide the 2-3/4 length of 3/8 inch diameter sleeve to the end of the cable until it extends between 1/8 inch and 1/4 inch farther than the forward edge of the SPIRAP.
 - (b) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (c) Put the 2-1/4 inch length of 3/8 inch diameter sleeve over the first sleeve.
 - (d) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (e) Put the 1-3/4 inch length of 1/2 inch diameter sleeve over the second sleeve.
 - (f) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (11) Assemble the connector. Refer to Subject 20-61-11.
- (12) Hold the two conductors immediately forward of the buildup sleeves and push them to the connector to make the wires bend.
- The wires should remain bent after they are released.

CAUTION: DO NOT GRIP THE BUILDUP SLEEVES TO MAKE THE WIRES BEND. THE SLEEVES CAN MOVE OUT OF POSITION.

- (13) Move the adapter body forward.
- (14) Engage the threads of the adapter and the connector.
- (15) Torque the adapter hand tight plus 1/8 of a turn.
- (16) Hold the cable and put the forward edge of the buildup sleeves so that they are flush to 1/8 inch in the end of the adapter body.

Make sure that:

- The sleeve remains in position when the cable is released
- The wires have slack in the adapter.

- (17) Engage the threads of the cable clamp and the adapter.
- (18) Torque the cable clamp hand tight plus 1/8 of a turn.
- (19) Tighten the clamp saddle screws.
- (20) If the cable clamp does not hold the cable tightly:
 - (a) Remove the cable clamp from the adapter.
 - (b) Remove the adapter from the connector.
 - (c) Remove the contacts from the connector. Refer to Subject 20-61-11.
 - (d) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2.
Make sure that the sleeve has the smallest diameter that can move easily on the cable.
 - (e) Put the necessary number of 1 inch lengths of the heat shrinkable sleeve on the cable.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (f) Align the forward edge of each sleeve with the forward edge of the 2-3/4 inch length of heat shrinkable sleeve.
- (g) Shrink each sleeve in position. Refer to Subject 20-10-14.
- (h) Do Step (11) thru Step (19) again.

Make sure that the clamp holds the cable tightly.

- (21) Install safety wires on the saddle screws.

B. Brake Cooling Cable Assembly

- (1) Assemble the brake cooling cable but do not tighten the saddle clamp screws. Refer to Paragraph 2.A.
- (2) Make a selection of a lanyard from Table 3.
- (3) Install the lanyard. Refer to Figure 6.

INSTALLATION OF THE LANYARD
Figure 6

- (4) Attach the forward lanyard fitting below one of the clamp saddle screws.
Make sure:
 - That the forward lanyard mounting hole is approximately centered over the rear sleeve
 - To keep the lanyard as straight as possible.

A bend in the cable results after the lanyard has been secured to the Glenair adapter.

- (5) Tighten the clamp saddle screws.
- (6) If the cable clamp does not hold the cable tightly:
 - (a) Remove the lanyard from the clamp.
 - (b) Remove the clamp from the connector.
 - (c) Remove the adapter from the connector.
 - (d) Remove the contacts from the connector. Refer to Subject 20-61-11.
 - (e) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2.
Make sure that the sleeve has the smallest diameter that can move easily on the cable.
 - (f) Put the necessary number of 1 inch lengths of the sleeve on the cable.
 - (g) Align the forward edge of each sleeve with the forward edge of the 2-3/4 inch length of heat shrinkable sleeve.
 - (h) Shrink each sleeve in position. Refer to Subject 20-10-14.
 - (i) Do Step (1) thru Step (5) again.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

Make sure that the clamp holds the cable tightly.

- (7) Install safety wires on the saddle screws.

3. LANDING GEAR CABLE ASSEMBLY: 747-400

A. Anti-Skid Cable Assembly

ANTI-SKID CABLE ASSEMBLY
Figure 7

- (1) Make a selection of the necessary length of TFE 2X teflon sleeve. Refer to Table 2 and Table 3.
- (2) Put the sleeve on the cable.
- (3) Remove 2.0 inches ± 0.1 inch of the outer jacket of the cable. Refer to Figure 8.

CABLE SHIELD TERMINATION
Figure 8

- (4) Assemble a shield dead end. Refer to Figure 8.
 - (a) Cut the shield so that the end of the shield is 0.25 inch ± 0.06 inch from the end of the jacket.
 - (b) Fold the shield back over the jacket.
 - (c) Shrink a 3 inch length of heat shrinkable sleeve.

Make sure the end of the sleeve extends 0.25 inch farther than the end of outer jacket.
- (5) Push a 1.0 inch ± 0.1 inch length of 3/16 inch diameter heat shrinkable sleeve on the cable until the rear end of the sleeve is against the shield dead end. Refer to Figure 9.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

POSITION OF THE FORWARD SLEEVE

Figure 9

- (6) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (7) Push a 2.75 inch ± 0.10 inch length of 3/16 inch diameter heat shrinkable sleeve on the cable until the forward end is aligned with the forward end of the 1 inch sleeve. Refer to Figure 10.

POSITION OF THE REAR SLEEVE

Figure 10

- (8) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (9) Push the TFE 2X sleeve on the wire end of the cable, over the forward and rear heat shrinkable sleeves until the forward end of the TFE 2X sleeve extends 0 inch to 0.2 inch farther than the end of the heat shrinkable sleeves.
- (10) Put these sleeves in this sequence over the cable:
 - (a) A 1.5 inch ± 0.1 inch length of 1/2 inch diameter yellow heat shrinkable sleeve
 - (b) A 2.0 inch ± 0.1 inch length of 3/8 inch diameter yellow heat shrinkable sleeve
 - (c) A 2.5 inch ± 0.1 inch length of 3/8 inch diameter yellow heat shrinkable sleeve.
- (11) Install the cable diameter buildup sleeves. Refer to Figure 11.

CABLE DIAMETER BUILDUP SLEEVES

Figure 11

- (a) Push the 2.5 inch length of 3/8 inch diameter sleeve forward until the forward edge is 0 inch to 0.2 inch behind the forward edge of the TFE 2X sleeve.
- (b) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (c) Align the forward end of the 2.0 inch length of 3/8 inch diameter sleeve with the forward end of the 2.5 inch sleeve.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF LANDING GEAR CABLES**

- (d) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (e) Align the forward end of the 1.5 inch length of 1/2 inch diameter sleeve with the forward end of the 2.0 inch sleeve.
 - (f) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (12) Assemble the connector. Refer to Subject 20-61-11.
- (13) Put one drop of Vibratite thread lock compound on the internal threads of the saddle clamp.
Make sure that each drop of Vibratite covers a minimum of two threads.
- (14) Engage the threads of the cable clamp and the connector.
- (15) Torque the cable clamp hand tight plus 1/8 of a turn.
- (16) Tighten the clamp saddle screws.
Make sure that the distance from the forward edge of the clamp bar to the forward edge of the heat shrinkable sleeves is 0.13 inch minimum. Refer to Figure 7.
- (17) If the cable clamp does not hold the cable tightly:
- (a) Remove the cable clamp from the connector.
 - (b) Remove the contacts from the connector. Refer to Subject 20-61-11.
 - (c) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2.
Make sure that the sleeve has the smallest diameter that can move easily on the cable.
 - (d) Put the necessary number of 1 inch lengths of the sleeve on the cable.
 - (e) Align the forward edge of each sleeve with the forward edge of the 1.5 inch length of heat shrinkable sleeve.
 - (f) Shrink each sleeve into position. Refer to Subject 20-10-14.
 - (g) Do Step (12) thru Step (16) again for each sleeve.
Make sure that the clamp holds the cable tightly.
- (18) Install safety wires the saddle screws.

B. Brake Cooling Cable Assembly

- (1) Cut the length of the TFE 2X sleeve. Refer to Table 3.
- (2) Put the TFE 2X sleeve on the cable so that it is 0.9 inch from the cable end.
- (3) Put a 2-1/2 inch length of 3/8 inch diameter heat shrinkable sleeve over the TFE 2X sleeve.
- (4) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (5) Cut the length of SPIRAP. Refer to Table 3.
- (6) Put the SPIRAP on the cable over the TFE 2X sleeve.
- (7) Put a 2 inch length of 1/2 inch diameter heat shrinkable sleeve over the SPIRAP.
- (8) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (9) Put a 1-1/2 inch length of 1/2 inch diameter heat shrinkable sleeve over the SPIRAP and the first sleeve.
- (10) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (11) Assemble the connector. Refer to Subject 20-61-11.
- (12) Put one drop of Vibratite thread lock compound on the internal threads of the saddle clamp.
Make sure that each drop of Vibratite covers a minimum of two threads.

20-85-12

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (13) Engage the threads of the cable clamp and the connector.
- (14) Torque the cable clamp hand tight plus 1/8 of a turn.
- (15) Make a selection of a lanyard from Table 3.
- (16) Install the lanyard. Refer to Figure 12.

INSTALLATION OF THE LANYARD

Figure 12

- (17) Attach the forward lanyard fitting below one of the clamp saddle screws.
Make sure:
 - That the forward lanyard mounting hole is approximately centered over the rear sleeve
 - To keep the lanyard as straight as possible.

A bend in the cable will result after the lanyard has been secured to the Glenair adapter.
- (18) Tighten the clamp saddle screws.
- (19) If the cable clamp does not hold the cable tightly:
 - (a) Remove the lanyard from the clamp.
 - (b) Remove the clamp from the connector.
 - (c) Remove the contacts from the connector. Refer to Subject 20-61-11.
 - (d) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2.
Make sure that the sleeve has the smallest diameter that can move easily on the cable.
 - (e) Put the necessary number of 1 inch lengths of the sleeve on the cable.
 - (f) Align the forward edge of each sleeve with the forward edge of the 1-1/2 inch length of heat shrinkable sleeve.
 - (g) Shrink each sleeve in position. Refer to Subject 20-10-14.
 - (h) Do Step (11) thru Step (18) again.
Make sure that the clamp holds the cable tightly.
- (20) Install safety wires the on the saddle screws.

C. Tire Pressure Cable Assembly

- (1) Cut the length of the TFE 2X sleeve. Refer to Table 3.
- (2) Put the TFE 2X on the cable.
- (3) Remove 1.85 inches ± 0.1 inch of cable outer jacket.
- (4) Make a shield ground wire with the solder sleeve procedure. Refer to Figure 13 and Subject 20-10-15.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

CABLE SHIELD TERMINATION

Figure 13

- (5) Put a 1 inch ± 0.06 inch length of 3/16 inch diameter heat shrinkable sleeve against the shield termination.
- (6) Put a 2.75 inch ± 0.06 inch length of 3/16 inch diameter heat shrinkable sleeve over the 1 inch sleeve. Refer to Figure 14.

POSITION OF THE SLEEVE

Figure 14

- (7) Put the TFE 2X sleeve over the cable and heat shrinkable sleeves so that it is flush with the end of the sleeves.
- (8) Put these sleeves in this sequence over the cable:
 - (a) A 1-1/2 inch length of 1/2 inch diameter yellow heat shrinkable sleeve
 - (b) A 2 inch length of 3/8 inch diameter yellow heat shrinkable sleeve
 - (c) A 2-1/2 inch length of 3/8 inch diameter yellow heat shrinkable sleeve.
- (9) Install the cable diameter buildup sleeves. Refer to Figure 15 and Subject 20-10-14.

CABLE DIAMETER BUILDUP SLEEVES

Figure 15

- (a) Put the 2-1/2 length of 3/8 inch diameter sleeve forward until it is flush with the forward edge of the TFE 2X sleeve.
- (b) Shrink the sleeve into position. Subject 20-10-14.
- (c) Put the 2 inch length of 3/8 inch diameter sleeve over the first sleeve.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (d) Shrink the sleeve into position. Subject 20-10-14.
- (e) Put the 1-1/2 inch length of 1/2 inch diameter sleeve over the second sleeve.
- (f) Shrink the sleeve into position. Subject 20-10-14.
- (10) Assemble the connector. Refer to Subject 20-61-11.
- (11) Put one drop of Vibratite thread lock compound on the internal threads of the saddle clamp. Make sure that each drop of Vibratite covers a minimum of two threads.
- (12) Engage the threads of the cable clamp and the connector.
- (13) Torque the cable clamp hand tight plus 1/8 of a turn.
- (14) Tighten the clamp saddle screws.
- (15) If the cable clamp does not hold the cable tightly:
 - (a) Remove the cable clamp from the connector.
 - (b) Remove the contacts from the connector. Refer to Subject 20-61-11.
 - (c) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2. Make sure that the sleeve has the smallest diameter that can move easily on the cable.
 - (d) Put the necessary number of 1 inch lengths of the sleeve on the cable.
 - (e) Align the forward edge of each sleeve with the forward edge of the 1-1/2 inch length of heat shrinkable sleeve.
 - (f) Shrink each sleeve in position. Refer to Subject 20-10-14.
 - (g) Do Step (10) thru Step (14) again. Make sure that the clamp holds the cable tightly.
- (16) Install safety wires the on the saddle screws.

4. LANDING GEAR CABLE ASSEMBLY: 767

A. Anti-Skid Cable Assembly

ANTI-SKID CABLE ASSEMBLY
Figure 16

- (1) Make a selection of the necessary length of TFE 2X teflon sleeve. Refer to Table 2 and Table 3.
- (2) Put the sleeve on the cable.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (3) Remove 2.0 inches ± 0.1 inch of the outer jacket of the cable. Refer to Figure 17.

CABLE SHIELD TERMINATION

Figure 17

- (4) Assemble a shield dead end. Refer to Figure 17.
- Cut the shield so that the end of the shield is 0.25 inch ± 0.06 inch from the end of the jacket.
 - Fold the shield back over the jacket.
 - Shrink a 3 inch length of heat shrinkable sleeve over the shield.
Make sure the end of the sleeve extends 0.25 inch farther than the end of outer jacket.
- (5) Push a 1.0 inch ± 0.1 inch length of 3/16 inch diameter heat shrinkable sleeve on the cable until the rear end of the sleeve is against the shield dead end. Refer to Figure 18.

POSITION OF THE FORWARD SLEEVE

Figure 18

- (6) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (7) Push a 2.75 inch ± 0.10 inch length of 3/16 inch diameter heat shrinkable sleeve on the cable until the forward end is aligned with the forward end of the 1 inch sleeve. Refer to Figure 19.

POSITION OF THE REAR SLEEVE

Figure 19

- (8) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (9) Push the TFE 2X sleeve on the wire end of the cable, over the forward and rear heat shrinkable sleeves until the forward end of the TFE 2X sleeve extends 0 inch to 0.2 inch farther than the end of the heat shrinkable sleeves.
- (10) Put these sleeves in this sequence over the cable:

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (a) A 1.5 inch \pm 0.1 inch length of 1/2 inch diameter yellow heat shrinkable sleeve
 - (b) A 2.0 inch \pm 0.1 inch length of 3/8 inch diameter yellow heat shrinkable sleeve
 - (c) A 2.5 inch \pm 0.1 inch length of 3/8 inch diameter yellow heat shrinkable sleeve.
- (11) Install the cable diameter buildup sleeves. Refer to Figure 20 and Subject 20-10-14.

CABLE DIAMETER BUILDUP SLEEVES

Figure 20

- (a) Push the 2.5 inch length of 3/8 inch diameter sleeve forward until the forward edge is 0 inch to 0.2 inch behind the forward edge of the TFE 2X sleeve.
 - (b) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (c) Align the forward end of the 2.0 inch length of 3/8 inch diameter sleeve with the forward end of the 2.5 inch sleeve.
 - (d) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (e) Align the forward end of the 1.5 inch length of 1/2 inch diameter sleeve with the forward end of the 2.0 inch sleeve.
 - (f) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (12) Assemble the connector. Refer to Subject 20-61-11.
- (13) Put one drop of Vibratite thread lock compound on the internal threads of the saddle clamp. Make sure that each drop of Vibratite covers a minimum of two threads.
- (14) Engage the threads of the cable clamp and the connector.
- (15) Torque the cable clamp hand tight plus 1/8 of a turn.
- (16) Tighten the clamp saddle screws.
- Make sure that the distance from the forward edge of the clamp bar to the forward edge of the heat shrinkable sleeves is 0.13 inch minimum. Refer to Figure 16.
- (17) If the cable clamp does not hold the cable tightly:
- (a) Remove the cable clamp from the connector.
 - (b) Remove the contacts from the connector. Refer to Subject 20-61-11.
 - (c) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2. Make sure that the sleeve has the smallest diameter that can move easily on the cable.
 - (d) Put the necessary number of 1 inch lengths of the sleeve on the cable.
 - (e) Align the forward edge of each sleeve with the forward edge of the 1.5 inch length of heat shrinkable sleeve.
 - (f) Shrink each sleeve into position. Refer to Subject 20-10-14.
 - (g) Do Step (12) thru Step (16) again for each sleeve.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

Make sure that the clamp holds the cable tightly.

- (18) Install safety wires the on the saddle screws.

B. Brake Cooling and Tire Pressure Cable Assembly

- (1) Cut the length of the TFE 2X sleeve. Refer to Table 3.
- (2) Put the TFE 2X on the cable.
- (3) Cut the length of SPIRAP. Refer to Table 3.
- (4) Put the SPIRAP on the cable over the TFE 2X sleeve.
- (5) Remove 2.0 inches ± 0.1 inches of the outer jacket of the cable.
- (6) Terminate the shield so that it is a dead end. Refer to Figure 21 and Subject 20-10-15.

CABLE SHIELD TERMINATION
Figure 21

- (a) Cut the shield so that the end of the shield is 0.25 inch ± 0.06 inch from the end of the jacket.
- (b) Fold the shield back over the jacket.
- (c) Shrink a 3 inch length of heat shrinkable sleeve over the shield.
- (7) Put a 1 inch ± 0.06 inch length of 3/16 inch diameter heat shrinkable sleeve against the shield dead end. Refer to Figure 22.

POSITION OF THE FORWARD SLEEVE
Figure 22

- (8) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (9) Put a 2.75 inch ± 0.06 inch length of 3/16 inch diameter heat shrinkable sleeve over the 1 inch sleeve. Refer to Figure 23.

POSITION OF THE REAR SLEEVE
Figure 23

20-85-12

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF LANDING GEAR CABLES**

- (10) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (11) Put the TFE 2X sleeve on the wire end of the cable, over the forward and rear heat shrinkable sleeves.
- Make sure that the sleeve extends 0.125 inch farther than the end of the heat shrinkable sleeves.
- (12) Put these sleeves in this sequence over the cable:
- (a) A 1-1/2 inch length of 1/2 inch diameter yellow heat shrinkable sleeve
 - (b) A 2 inch length of 3/8 inch diameter yellow heat shrinkable sleeve
 - (c) A 2-1/2 inch length of 3/8 inch diameter yellow heat shrinkable sleeve.
- (13) Install the cable diameter buildup sleeves. Refer to Figure 24 and Subject 20-10-14.

**CABLE DIAMETER BUILDUP SLEEVES****Figure 24**

- (a) Put the 2-1/2 length of 3/8 inch diameter sleeve forward until it is flush with the forward edge of the TFE 2X sleeve.
 - (b) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (c) Put the 2 inch length of 3/8 inch diameter sleeve over the first sleeve.
 - (d) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (e) Put the 1-1/2 inch length of 1/2 inch diameter sleeve over the second sleeve.
 - (f) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (14) Assemble the connector. Refer to Subject 20-61-11.
- (15) Put one drop of Vibratite thread lock compound on the internal threads of the saddle clamp.
- Make sure that each drop of Vibratite covers a minimum of two threads.
- (16) Engage the threads of the cable clamp and the connector.
- (17) Torque the cable clamp hand tight plus 1/8 of a turn.
- (18) Make a selection of a lanyard from Table 3.
- (19) Install the lanyard. Refer to Figure 25.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

INSTALLATION OF THE LANYARD
Figure 25

(20) Attach the forward lanyard fitting below one of the clamp saddle screws.

Make sure:

- That the forward lanyard mounting hole is approximately centered over the rear sleeve
- To keep the lanyard as straight as possible.

A bend in the cable will result after the lanyard has been secured to the Glenair adapter.

(21) If the cable clamp does not hold the cable tightly:

- (a) Remove the lanyard from the cable clamp.
- (b) Remove the cable clamp from the connector.
- (c) Remove the contacts from the connector. Refer to Subject 20-61-11.
- (d) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Table 2.

Make sure that the sleeve has the smallest diameter that can move easily on the cable.

- (e) Put the necessary number of 1 inch lengths of the sleeve on the cable.
- (f) Align the forward edge of each sleeve with the forward edge of the 1-1/2 inch length of heat shrinkable sleeve.
- (g) Shrink each sleeve in position. Refer to Subject 20-10-14.
- (h) Do Step (14) thru Step (20) again.

Make sure that the clamp holds the cable tightly.

(22) If the cable clamp does not hold the cable tightly, install the necessary number of 1 inch heat shrinkable sleeves.

(23) Install safety wires on the saddle screws.

5. LANDING GEAR IN-AXLE CABLE ASSEMBLY: 777

A. Wire Preparation

(1) Put the sleeves with connector and wire identification on the cable. Refer to Figure 26.

LOCATION OF THE CONNECTOR AND WIRE IDENTIFICATION SLEEVES
Figure 26

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (a) Put the sleeve with the connector identification on the wire harness.
 - (b) Put the sleeve with the wire identification on the cable so that it is 4.0 inches \pm 0.2 inches from the end of the cable.
 - (c) Shrink the wire identification sleeve into position. Refer to Subject 20-10-14.
- (2) Remove 2.0 inches \pm 0.13 inch of the outer jacket of the cable.
- (3) If the wiring diagram shows that the end of the shield has a shield ground wire, install the shield ground wire with a solder sleeve.
- Refer to Figure 27 and Subject 20-10-15.

SHIELD TERMINATION WITH A SHIELD GROUND WIRE

Figure 27

- (4) If the wiring diagram shows that the end of the shield is not terminated, terminate the shield so that it is a dead end.
- Refer to Figure 28 and Subject 20-10-15.

SHIELD DEAD END

Figure 28

- (5) Put a 1.0 inch \pm 0.1 inch length of heat shrinkable sleeve on the cable so that it is adjacent to the solder sleeve of the shield ground wire or against the insulation sleeve of the insulated shield.

NOTE: Use a sleeve with the smallest diameter that can move easily on the wires.

Refer to Figure 29.

POSITION OF THE FORWARD SLEEVE

Figure 29

- (6) Put a 2.75 inch \pm 0.1 inch length of heat shrinkable sleeve over the shield end and the first sleeve so that the edge is aligned with the edge of the first sleeve.

NOTE: Use a sleeve with the smallest diameter that can move easily on the wires.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

Refer to Figure 30.

OUTER CABLE END SLEEVE POSITION
Figure 30

- (7) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (8) Cut a length of TFE 2X sleeve. Refer to Table 4.
This sleeve goes on the sleeves 1.0 inch and 2.75 inch lengths of sleeve.

Table 4
TFE 2X SLEEVE LENGTH

Landing Gear		Sleeve Length (inch)
Axle	Truck Location	
Nose	-	46
Left Main	Front	82
	Center	88
	Rear	73
Right Main	Front	82
	Center	88
	Rear	73

- (9) Put the TFE 2X sleeve on the cable so that the end of the sleeve extends 0.20 inch \pm 0.05 inch farther than the aligned end of the other sleeves.

Refer to Figure 31.

POSITION OF THE TFE 2X SLEEVE
Figure 31

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (10) Install the cable diameter buildup sleeves. Refer to Figure 32 and Subject 20-10-14. These sleeves are installed so that the backshell cable clamps hold the cable tightly.

CABLE DIAMETER BUILDUP SLEEVES

Figure 32

- (a) Put a 2.5 inch ± 0.2 inch length of heat shrinkable sleeve on the cable so that the edge of the sleeve aligns with the end of the TFE 2X sleeve.
Make sure that each sleeve has the smallest diameter that can move easily on the cable.
 - (b) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (c) Put a 2.0 inch ± 0.2 inch length of heat shrinkable sleeve on the cable so that the edge of the sleeve aligns with the end of the TFE 2X sleeve.
Make sure that each sleeve has the smallest diameter that can move easily on the cable.
 - (d) Shrink the sleeve into position. Refer to Subject 20-10-14.
 - (e) Put a 1.5 inch ± 0.2 inch length of heat shrinkable sleeve on the cable so that the edge of the sleeve aligns with the end of the TFE 2X sleeve.
Make sure that each sleeve has the smallest diameter that can move easily on the cable.
 - (f) Shrink the sleeve into position. Refer to Subject 20-10-14.
- (11) Install more sleeves for cable diameter buildup so that the cable assembly cannot move when the screws of the strain relief clamp are tightened.
Refer to Figure 32 and Subject 20-10-14.
- (a) Put a 1.0 inch ± 0.2 inch length of heat shrinkable sleeve on the cable so that the edge of the sleeve aligns with the end of the TFE 2X sleeve.
Make sure that each sleeve has the smallest diameter that can move easily on the cable.
 - (b) Shrink the sleeve into position. Refer to Subject 20-10-14.

B. Connector Assembly

- (1) Put the strain relief backshell on the cable.
- (2) Remove the wire insulation. Refer to Subject 20-61-11.
- (3) Assemble the contacts. Refer to Subject 20-61-11.
- (4) Insert the contacts. Refer to Subject 20-61-11.
- (5) Use the procedures in the Subject 20-25-12 to do these three tasks:
- (6) Attach the strain relief backshell to the connector. Refer to Subject 20-25-12.
- (7) Attach the shield ground wire terminals to the strain relief backshell.

707, 727-787

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF LANDING GEAR CABLES

- (8) Tighten the cable clamps on the cable. Refer to Subject 20-25-12.

16	ST2220-3-13	Boeing

- (1) Make a selection of a removal tool from Table 3.
- (2) Align the removal tool with the contact on the front side of the connector.
- (3) Press firmly until the contact is loosened.
- (4) Gently pull on the wire from the rear of the receptacle until the contact is completely removed.

3. CONNECTOR ASSEMBLY

A. Contact Assembly

HF ANTENNA LEAD ASSEMBLY AND PROBE RECEPTACLES

This Subject gives the procedures to assemble the 69B41500 HF antenna lead assembly to the 69-54481 HF probe antenna receptacle.

1. PART NUMBERS AND DESCRIPTION

A. HF Antenna Part Numbers

**Table 1
HF ANTENNA PART NUMBERS**

Description	Part Number	Supplier
HF Antenna Lead Assembly	69B41500	Boeing
HF Probe Antenna Receptacle	69-54481	Boeing
Terminal	69B41501-()	Boeing

2. HF ANTENNA LEAD TO HF PROBE ANTENNA RECEPTACLE ASSEMBLY

A. Terminal Assembly

- (1) Slide the clamp nut and terminal on the lead. Refer to Figure 1.

**CLAMP NUT AND TERMINAL POSITION
Figure 1**

- (2) Put the 69B41501-() terminal into the 69-54481 antenna receptacle. Refer to Figure 2. Make sure that the terminal is against the bottom of the receptacle.

STANDARD WIRING PRACTICES MANUAL**HF ANTENNA LEAD ASSEMBLY AND PROBE RECEPTACLES****TERMINAL AND RECEPTACLE ASSEMBLY****Figure 2**

- (3) Turn the clamp nut on the receptacle.
- (4) Tighten the clamp nut on the receptacle.
Make sure that the clamp nut is torqued to 95 inch-pounds \pm 5 inch-pounds.

THE M39029/11-145 CONTACT
Figure 9

2. TERMINAL BLOCK MODULE LOCATION CODES**A. Terminal Block Module Identification**

Terminal block modules are identified on the wire diagrams by a code that gives:

- The block type
- The location.

Refer to Figure 10.

TERMINAL BLOCK MODULE LOCATION CODE
Figure 10

The location code is the position of the block in relation to the horizontal row identifier and the vertical column identifier.

Refer to Figure 11.

The vertical column identifier:

- Can be located on the T bar or on the block mount rail
- Gives the column of the cavities that is directly adjacent to the number.

The horizontal row identifier:

- Can be located on the end clamp, on a spacer, or on the block mount rail
- Gives the row of the cavities in all the blocks in the rail that is directly adjacent to the letter.

NOTE: If the block module identification code does not have a horizontal row identifier:

- All the cavities in that column are bussed together
- The horizontal location is not important.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACM15C AND BURNDY YHLZD-() AND YHLZR-() TERMINAL BLOCK MODULES

LOCATION OF A MODULE
Figure 11

3. TERMINAL BLOCK MODULE REMOVAL

A. Removal of the Module from the Track

- (1) Loosen the clamp screw until the clamp can be moved.
- (2) Turn the clamp 90 degrees and lift from the track.
NOTE: A satisfactory alternative is to slide the clamp out of the track.
- (3) Move or remove any terminal block modules next to the specified module.
- (4) To remove the block module, turn the module 90 degrees and lift from the track.
NOTE: A satisfactory alternative is to slide the block module out of the track.

4. TERMINAL BLOCK MODULE DISASSEMBLY

A. Contact Removal from Standard Density Terminal Block Modules

Table 8
CONTACT REMOVAL TOOLS

Contact	Removal Tool		
	Handle	Tip	Supplier

	ST2220-3-34-1	ST2220-3-34A-3	Boeing
	ST2220-3-34-2	ST2220-3-34A-8	Boeing

- (1) Make a selection of a contact removal tool from Table 8.

CAUTION: USE ONLY THE REMOVAL TOOLS THAT ARE GIVEN IN TABLE 8. OTHER TOOLS CAN CAUSE DAMAGE TO THE MODULE.

- (2) Put the removal tool into the contact removal tool slot in the module.

20-90-11

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACM15C AND BURNDY YHLZD-() AND YHLZR-() TERMINAL BLOCK MODULES

The contact removal tool slot is adjacent to the contact.

- (3) Push the tool into the slot of the module until it stops.

This releases the lock spring that locks the contact in position.

CAUTION: IF A CONTACT IS REMOVED WHEN THE LOCK SPRING IS NOT RELEASED, DAMAGE TO ANY OF THESE COMPONENTS OCCURS:

- THE CONTACT
- THE MODULE
- THE WIRE.

- (4) Carefully, pull the wire and the contact from the cavity of the module. Refer to Figure 12.

CONTACT REMOVAL
Figure 12

- (5) After the wired contact is removed, pull the removal tool out of the slot.

B. Contact Removal from High Density Terminal Block Modules

Table 9
CONTACT REMOVAL TOOLS

Contact	Removal Tool	Supplier

	DRK-269	Daniels
	M81969/1-02	QPL
	MS3156-20	QPL

- (1) Make a selection of a removal tool from Table 9.

NOTE: The DRK-269 contact removal tool is recommended for high density terminal blocks.

- (2) Put the removal tool on the wire.
- (3) Push the tool on the wire and into the module block until it stops.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACM15C AND BURNDY YHLZD-() AND YHLZR-() TERMINAL BLOCK MODULES

- (4) Hold the wire against the tool.
- (5) Pull the tool and the wired contact out of the module at the same time.

5. STANDARD DENSITY TERMINAL BLOCK MODULE ASSEMBLY

A. Contact Assembly

WA22HPB	-	D30	Daniels
WA27XF	-	TP-904	Daniels
WA27FAP	-	AP27SA	Daniels

- (1) Make a selection of a contact from:
 - Table 10 for a contact that has one wire in the crimp barrel
 - Table 11 for a contact that has two wires in the crimp barrel.
- (2) Remove 0.22 inch \pm 0.03 inch of the insulation from the end of the wire or wires. Refer to Figure 13.

**WIRE PREPARATION
Figure 13**

- (3) If only one wire will be terminated in the contact, measure the diameter of the insulation of the wire.
- (4) If one wire will be terminated in the contact, and If the wire insulation diameter is less than the minimum wire insulation diameter specified in Table 10 for the contact, do step (a) through step (d).
 - (a) Make a selection of a Grade B, Class 1 heat shrinkable sleeve from Subject 20-00-11.
 - (b) Put a 0.5 inch \pm 0.13 inch length of the sleeve on the wire.
Make sure that the end of the sleeve is aligned with the end of the wire insulation.
 - (c) Shrink the sleeve in its position. Refer to Subject 20-10-14.
Make sure that the end of the sleeve:
 - Is not on the conductor
 - Is within 0.03 inch of the end of the insulation.
 - (d) If the insulation grip of the contact and the outer diameter of the sleeve on the wire do not make a fit, measure the new diameter of the sleeve and insulation on the wire, and make a selection of a different contact from Table 10.
- (5) Make a selection of a manual crimp tool from Table 12 or a power crimp tool from Table 13.
- (6) Put the conductor or the conductors into the crimp barrel of the contact. Refer to Figure 14.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACM15C AND BURNDY YHLZD-() AND YHLZR-() TERMINAL BLOCK MODULES

Make sure that:

- All of the conductors of the wire or wires are inside the crimp barrel of the contact
- The conductors can be seen in the inspection hole of the contact
- If only one wire is in the crimp barrel of the contact, the wire insulation is against the bottom of the insulation grip of the contact.

NOTE: If two wires are in the crimp barrel, it is not necessary for the wire insulation of the wire to be in the insulation grip of the contact.

POSITION OF THE CONTACT
Figure 14

(7) Crimp the contact. Refer to Figure 15.

Make sure that there are four crimp indents on:

- The contact crimp barrel
- The wire insulation grip.

CONTACT CRIMP DETAIL
Figure 15

B. Contact Insertion

Table 14
CONTACT INSERTION TOOLS

Contact	Insertion Tool	Supplier
BACC47DE()	ST2220-3-34A-1	Boeing
	ST2220-3-34A-2	Boeing

- (1) Make a selection of a contact insertion tool from Table 14.
- (2) Put the tip of the wired contact into the contact cavity of the module.
- (3) Put the tip of the tool on the contact until it makes a click and the contact stops.
- (4) Push the contact in position. Refer to Figure 16.

Make sure that the contact is locked in the module.

		WA22	7	Daniels	M22520/2-08	QPL

- (1) Make a selection of a contact from Table 7.
- (2) Remove 3/16 inch ± 1/32 inch of the wire insulation.
- (3) Make a selection of a crimp tool from Table 15.
- (4) Put the conductor into the wire barrel of the contact.
- (5) Crimp the contact.

B. Contact Insertion

Table 16
CONTACT INSERTION TOOLS

Contact	Insertion Tool	Supplier
M39029/11-145	M81969/1-02	QPL
	MS3156-20	QPL

- (1) Make a selection of an insertion tool from Table 16.
NOTE: Manual insertion of the contact is a satisfactory alternative.
- (2) Insert the wired contact into the contact cavity.

7. TERMINAL BLOCK MODULE INSTALLATION

A. Installation of the Module on the Track

- (1) Install the block module. Refer to Figure 17.
NOTE: A satisfactory alternative is to slide the block module into the track from the end.

STANDARD WIRING PRACTICES MANUAL

ASSEMBLY OF BACM15C AND BURNDY YHLZD-() AND YHLZR-() TERMINAL BLOCK MODULES

INSTALLATION OF A MODULE
Figure 17

- (a) Put the block module in the track.
Make sure that the sides of the terminal blocks and the end clamps that have the part numbers are turned toward the open side of the track assembly.
- (b) Turn the block 90 degrees.
- (2) When all the terminal blocks and fillers are aligned correctly in the track, push the end clamp tightly against the last block or filler.

NOTE: The A side of the end clamp is on the closed side of the track assembly.

- (3) Tighten the clamp screw so that:
 - The lockwasher is fully compressed
 - The end clamp does not move or turn when pressure is applied.

NOTE: Only a split lockwasher is permitted under the screw head.

YBT20-2	M10S-1	S-6A	SL-3A	Burndy

- (1) Remove the necessary length of insulation from the end of the wire.
Refer to Table 5 and Subject 20-00-15.
- (2) Make a selection of a crimp tool from Table 6.
- (3) Put the wire in the crimp barrel of the contact.
Make sure that:
 - All the strands of the conductor are in the crimp barrel
 - The strands of the conductor are can be seen in the inspection hole.
- (4) Crimp the contact.

STANDARD WIRING PRACTICES MANUAL**ASSEMBLY OF BURNDY SEALOK SEALED TERMINAL BLOCKS****B. Contact Insertion**

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

1. PART NUMBERS AND DESCRIPTION

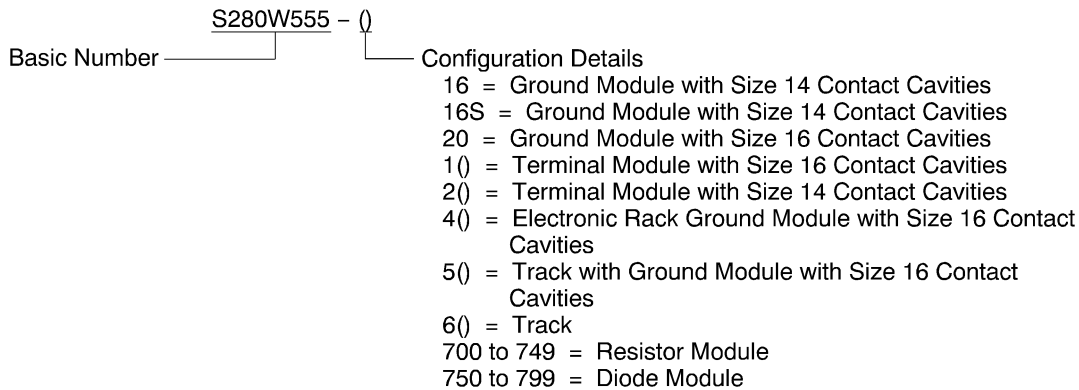

A. Terminal Junction System Description

The terminal junction system has these components:

- Terminal modules
- Ground modules
- Tracks
- Tracks with ground modules
- Diode modules
- Resistor modules.

All contact cavities in a ground module are connected to ground. You can install a contact in any cavity in a ground module.

The contact cavities in each bus set are connected together. You can install a contact in any cavity that belongs to a bus set. Divisions between bus sets are shown by lines on the face of the terminal module. Reference Table 13 and Figure 13.

S280W555-526	16	208

All contact cavities in a ground module are connected to ground. You can install a contact in any cavity in a ground module.

3. DISASSEMBLY OF THE TERMINAL JUNCTION SYSTEM

A. Removal of a Terminal Module from a Track

- (1) Push the latch of the terminal module to release the latch from the latch retainer on the track. Refer to Figure 14.

LOCATION OF THE LATCH ON THE TERMINAL MODULE
Figure 14

- (2) Pull the front of the module from the front of the track. Refer to Figure 15.

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

REMOVAL OF THE TERMINAL MODULE FROM THE TRACK

Figure 15

- (3) Carefully pull the module to the front of the track until the key is disengaged from the keyway.
- (4) Pull the module from the track.

B. Removal of a Diode or a Resistor Module

**Table 15
MODULE REMOVAL TOOLS**

Module	Removal Tool
Diode	RDW20-4
Resistor	RDW20-4

DIODE OR RESISTOR MODULE REMOVAL

Figure 16

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

Refer to Figure 16.

- (1) Make a selection of a removal tool from Table 15.
- (2) Put the fork of the tool behind the latch of the module to release the latch retention tab.
- (3) Pull the tool up to remove the resistor or diode module from the terminal module.

C. Contact Removal

For the procedure to remove an unwired contact, refer to Paragraph 3.D.

Table 16
CONTACT REMOVAL TOOLS

Crimp Barrel Size	Removal Tool	
	Part Number	Color
20	ATR 2080 BAC	-
	ATR 2079 BAC	-
	DRK83-20	Red
	M81969/14-11	White
	RRX20B	-
18	ATR 2080 BAC	-
	ATR 2079 BAC	-
	M81969/14-11	White
16	ATR 2112 BAC	-
	ATR 2106 BAC	-
	M81969/14-03	White
	RRX16B	-

- (1) Make a selection of a contact removal tool from Table 16.
- (2) Put the end of the tool on the wire near the rear grommet.
- (3) Carefully push the tool straight into the contact cavity until it stops.

CAUTION: DO NOT TURN THE TOOL WHILE IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (4) Carefully pull the wire and the tool out of the contact cavity at the same time.
- (5) If the contact does not come out of the contact cavity:
 - (a) Pull the tool out of the contact cavity.
 - (b) Turn the tool 90 degrees.
 - (c) Do Step (2) through Step (4) again.

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

D. Unwired Contact Removal

**Table 17
UNWIRED CONTACT REMOVAL TOOLS**

Contact Size		Removal Tool		
Engaging End	Crimp Barrel	Handle	Bit	
			Part Number	Color
16	20	DRK-110-1SA	DRK-20-2	Red
	18	DRK-110-1SA	DRK-20-2	Red
	16	DRK-110-1SA	DRK-16-2	Blue

- (1) Make a selection of a contact removal tool from Table 17.
- (2) Align the tool axially with the contact.
- (3) Pull the plunger back until it stops.
- (4) Hold the plunger in position.
- (5) Carefully push the end of the tool straight into the contact cavity until it stops.
- (6) Carefully pull the tool straight out of the contact cavity.
- (7) Push the plunger forward to release the contact from the tool.

E. Seal Plug or Seal Rod Removal

- (1) Make a selection of a pair of needle nose pliers that has:
 - Jaws with smooth surfaces
 - No sharp edges.

CAUTION: ROUGH SURFACES OR SHARP EDGES CAN CAUSE DAMAGE TO THE REAR GROMMET.

- (2) Hold the end of the seal plug or seal rod tightly in the jaws of the pliers.
- (3) Pull the plug or rod straight out of the rear grommet.

4. ASSEMBLY OF THE TERMINAL MODULE

A. Contact Assembly

**Table 18

(1) Remove the necessary length of insulation from the end of the wire.

Refer to:

- Figure 17
- Table 18
- Subject 20-00-15 for the insulation removal procedures.

WIRE PREPARATION
Figure 17

(2) If it is specified, fold the conductor back. Refer to Figure 18.

CONDUCTOR FOLDED BACK
Figure 18

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

- (3) Make a selection of a crimp tool from Table 19.
- (4) Put the end of the wire into the crimp barrel of the contact. Refer to Figure 19.

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The strands of the conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is a maximum of 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 19

- (5) Crimp the contact.
- (6) Examine the contact assembly for these types of damage:
 - Broken strands of the conductor
 - Strands of the conductor on which the base metal can be seen
 - Cracks in the crimp barrel of the contact.
- (7) If the contact or the wire has damage, replace the contact.

B. Contact Insertion

Table 20
CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool	
	Part Number	Color
20	DAK83-20	-
	M81969/14-11	Red

16	DAK83-16	-
	M81969/14-03	Blue
	ST2220-2-4	-
	ST2220-2-11A	-

- (1) Make a selection of a contact insertion tool from Table 20.

STANDARD WIRING PRACTICES MANUAL**S280W555-() TERMINAL JUNCTION SYSTEM**

CAUTION: DO NOT USE A TOOL WITH A TIP THAT:

- IS BENT
- IS FLARED
- IS BROKEN
- HAS A CRACK.

WARNING: A DEFECTIVE TOOL CAN CAUSE INJURY TO THE OPERATOR.

CAUTION: A DEFECTIVE TOOL CAN CAUSE DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS.

- (2) Put the contact in the insertion end of the insertion tool. Refer to Figure 20.

POSITION OF THE CONTACT IN THE INSERTION TOOL

Figure 20

- (3) Axially align the contact and the tool with the contact cavity. Refer to Figure 21.

POSITION OF THE CONTACT INSERTION TOOL AND THE CONTACT CAVITY

Figure 21

- (4) Carefully push the tool straight into the contact cavity until it stops.

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

CAUTION: DO NOT TURN THE TOOL WHEN IT IS IN THE CONTACT CAVITY. DAMAGE TO THE CONTACT RETENTION CLIPS CAN OCCUR.

- (5) Carefully pull the tool straight out of the contact cavity.
- (6) Lightly pull the wire to make sure that the contact is locked in position.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE TERMINAL MODULE OR THE CONTACT.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 - (a) Pull the contact out of the cavity.
 - (b) Do Step (2) through Step (6) again.
- (8) Examine the grommet for these types of damage:
 - Damage between the bus sets; refer to Figure 22
 - Damage of the contact cavity that has a depth that is more than the outer seal web in the grommet; refer to Figure 23.

TYPES OF DAMAGE OF THE MODULE GROMMET

Figure 22

DAMAGE OF THE GROMMET IN RELATION TO THE OUTER SEAL WEB

Figure 23

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

C. Seal of an Empty Contact Cavity

These conditions are applicable:

- For a ground module, an empty contact cavity cannot be sealed
- For a terminal module in the pressurized area, the seal of an empty contact cavity is not necessary
- For a terminal module in the unpressurized area, an empty contact cavity must be sealed with a seal plug or a seal rod.

- (1) If it is applicable, install a seal plug or a seal rod in each empty contact cavity of the terminal module. Refer to Subject 20-60-08.

If a seal rod is installed, make sure that the length of the seal rod is 0.5 inch \pm 0.1 inch.

5. INSTALLATION OF THE TERMINAL JUNCTION SYSTEM

A. Installation of a Terminal Module on a Track

- (1) Align the key of the module with the applicable keyway on the track. Refer to Figure 24.

POSITION OF THE TERMINAL MODULE ON THE TRACK

Figure 24

- (2) Push the top of the module until it makes a click and the latch is locked in the latch retainer. Refer to Figure 25.

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

TERMINAL MODULE INSTALLED ON THE TRACK

Figure 25

(3) Examine the terminal module for these types of damage:

- A latch that is bent or broken
- A latch that has a crack
- A latch retention tab that is broken
- A module shell that has a crack
- A key that is broken.

B. Installation of the Diode or Resistor Module

(1) Refer to the Wiring Diagram to find the position of the diode or the resistor module in the terminal module.

(2) Examine the module. Refer to Figure 26.

Make sure that the terminal pins and the alignment pins are straight.

CONFIGURATION OF THE DIODE MODULE OR THE RESISTOR MODULE

Figure 26

(3) Align the pins of the diode or resistor module with the sockets of the terminal module. Refer to Figure 27.

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

Make sure that:

- Latch A is aligned with side A of the terminal module
- Terminal Pin A is aligned with the outer socket on Side A
- Latch B is aligned with side B of the terminal module
- Terminal Pin B is aligned with the outer socket on Side B
- The two filler pins of the module are aligned with the corresponding inner sockets in the terminal module.

CAUTION: IF THE LATCHES ARE NOT ALIGNED WITH THE APPLICABLE SIDE OF THE TERMINAL MODULE, INCORRECT OPERATION OF THE SYSTEM CAN OCCUR.

ALIGNMENT OF THE DIODE OR RESISTOR MODULE AND THE TERMINAL MODULE
Figure 27

(4) Push the module down into the terminal module. Refer to Figure 28.

Make sure that:

- The two terminal pins engage the two sockets
- The two latches are fully engaged with the two latch retention tabs.

STANDARD WIRING PRACTICES MANUAL

S280W555-() TERMINAL JUNCTION SYSTEM

POSITION OF THE DIODE OR RESISTOR MODULE IN THE TERMINAL MODULE

Figure 28

(5) Examine the diode or resistor module for these types of damage:

- A module shell that has a crack
- A latch that has a crack or a bend
- A latch that is broken
- A pin that is bent.

C. Installation of a Track on an Assembly or the Structure

CAUTION: A RIVET MUST NOT BE INSTALLED IN AN OLD HOLE IN THE STRUCTURE. THE ELECTRICAL BOND BETWEEN THE RIVET IN AN OLD HOLE AND THE STRUCTURE CAN CAUSE UNSATISFACTORY PERFORMANCE.

(1) Make a selection of a rivet that:

- Is aluminum
- Has an alodine finish
- Has a 0.125 inch diameter
- Has the necessary length for the installation.

(2) Drill a hole in the assembly or the structure for each hole in the track.

Make sure that the hole has the correct diameter for the rivet.

(3) Install a rivet in each hole of the track and the assembly or structure.

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

This Subject gives the procedures to assemble, connect, disconnect, and install the Burndy RBDSC-() Program Switch Module.

1. PART NUMBERS AND DESCRIPTION

A. Program Switch Module Part Numbers

Table 1
PROGRAM SWITCH MODULE ASSEMBLY PART NUMBERS

Part Numbers	Configuration	Supplier
RBDSC-1	26 Size 16 Contacts with 24 Switched Outputs	Burndy

BURNDY RBDSC-() PROGRAM SWITCH MODULE PART NUMBER STRUCTURE
Figure 1

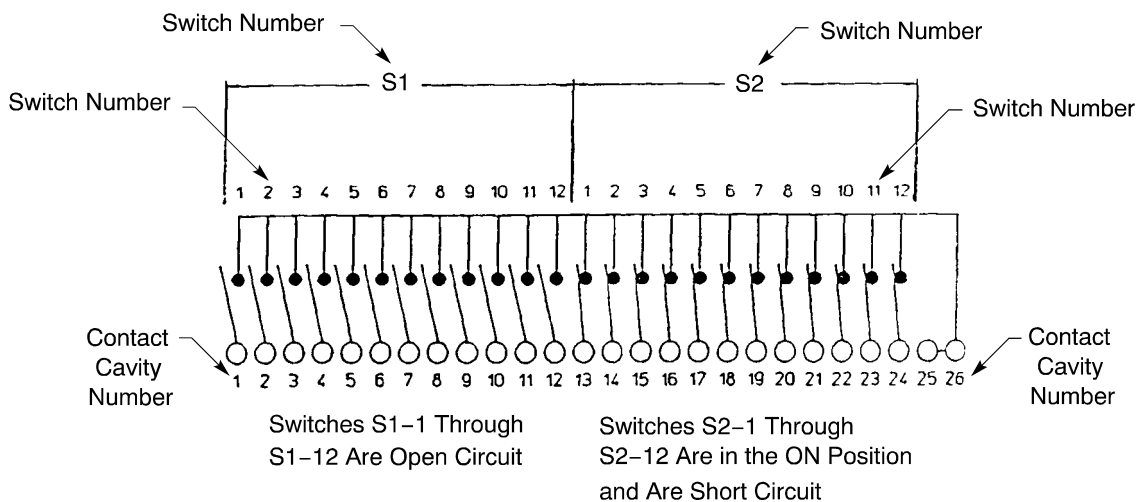

BURNDY RBDSC-1 PROGRAM SWITCH MODULE
Figure 2

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

BURNDY RBDSC-1 PROGRAM SWITCH MODULE WITH A SECURITY COVER
Figure 3

ELECTRICAL CONFIGURATION OF THE SWITCH MODULE
Figure 4

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

The Burndy RBDSC-() program switch module have these technical features:

- 24 switched outputs
- Captive switch seal plugs
- Security covers to protect switch positions
- Standard MIL-C-39029/1-101 size 1620 contacts.

B. Security Cover Assembly Part Numbers

**Table 2
SECURITY COVER ASSEMBLY PART NUMBERS**

Description	Part Number	Supplier	Note
Security Cover	RBDSC-1P15	Burndy	Held in position by the RBDSC-1P12 threaded stud
Threaded Stud	RBDSC-1P12	Burndy	Holds the security cover on the program switch module and the module on the structure

**BURNDY RBDSC-1P15 SECURITY COVER
Figure 5**

The Burndy RBDSC-1P15 security cover:

- Gives protection from accidental change of the position of the switch
- Locks the switch seal covers into position
- Prevents the contamination of the switches.

C. Contact Part Numbers

**Table 3
CONTACT PART NUMBERS**

Contact Size		Contact Type	Part Number	Color Code		Supplier
Engaging End	Crimp Barrel			Band	Color	
16	20	Pin	MIL-C-39029/1-101	1	Brown	QPL
				2	Black	
				3	Brown	

20-90-16

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

EXAMPLE OF A CONTACT SIZE
Figure 6

MIL-C-39029() PIN CONTACT
Figure 7

The contacts have these technical features:

- A size 20 crimp barrel
- A gold finish.

D. Necessary Materials

Table 4
NECESSARY MATERIALS FOR ASSEMBLY

Material	Specification	Supplier	Note
Seal Plug	MS27488-16	QPL	Blue
Seal Rod	AMS 3656	QPL	Cut to the necessary length

E. Recommended Tools

NOTE: The satisfactory alternatives to the tools in Table 5 are:

- In Table 6 for contact removal tools
- In Table 8 contact crimp tools
- In Table 9 contact insertion tools.

Table 5
RECOMMENDED TOOLS

Procedure	Contact Size		Tool	
	Engaging End	Crimp Barrel	Type	Part Number

Table 5 (continued)

Procedure	Contact Size		Tool	
	Engaging End	Crimp Barrel	Type	Part Number
Switch Configuration	16	20	Insertion	M81969/14-02

2. DISASSEMBLY OF THE PROGRAM SWITCH MODULE

A. Security Cover Removal

- (1) Loosen the screws that hold the cover to the module.
- (2) Remove the cover.

B. Switch Seal Plug Removal

- (1) Carefully pull the tab of the applicable switch seal plug up and away from the module. Refer to Figure 8.

Make sure to pull the tab lightly so that the nylon lanyard at the other end of the plug does not break.

CAUTION: THE NYLON LANYARD AT THE ONE END OF THE SWITCH SEAL PLUG KEEPS THE SEAL PLUG ATTACHED TO THE MODULE SO THAT THE PLUG IS ALWAYS AVAILABLE TO GIVE PROTECTION TO THE SWITCHES. DO NOT DISCONNECT THIS END OF THE PLUG.

SWITCH SEAL PLUG REMOVAL
Figure 8

C. Switch Module Removal from the Structure

- (1) Loosen the two nuts that attach the switch module to the structure until each nut is free from each screw.
- (2) Remove the switch module from the structure.

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

D. Contact Removal

**Table 6
CONTACT REMOVAL TOOLS**

Crimp Barrel Size	Removal Tool	
	Part Number	Color
20	ATR 2079 BAC	-
	ATR 2080 BAC	-
	M81969/14-11	White
	RRX20B	-

(1) Make a selection of a contact removal tool from Table 6.

- CAUTION:** DO NOT USE A TOOL WITH:
- A TIP THAT IS BENT
 - A TIP THAT IS FLARED
 - A TIP THAT IS BROKEN
 - A TIP THAT IS CRACKED.

WARNING: A DEFECTIVE TOOL CAN CAUSE INJURY TO THE OPERATOR.

CAUTION: A DEFECTIVE TOOL CAN CAUSE DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS, OR BOTH.

- (2) Put the tip of the tool on the wire near the grommet.
- (3) Carefully push the tip of the tool into the contact cavity until it stops.
- (4) Pull the wire and the tool out of the contact cavity at the same time.
- (5) If the contact does not release:
 - (a) Carefully pull the tool out of the contact cavity.
 - (b) Turn the tool 90 degrees.
 - (c) Do Step (2) through Step (4) again.

3. ASSEMBLY OF THE PROGRAM SWITCH MODULE

A. Contact Assembly

**Table 7
INSULATION REMOVAL LENGTH**

Wire Size (AWG)	Crimp Barrel Size	Removal Length L (inch)		Special Instructions
		Target	Tolerance	
24	20	0.15	± 0.02	-
22	20	0.15	± 0.02	-
20	20	0.15	± 0.02	-

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

**Table 8
CONTACT CRIMP TOOLS**

Wire Size (AWG)	Crimp Barrel Size	Crimp Tool			
		Basic Unit		Locator	
		Part Number	Setting	Part Number	Color
24	20	M22520/1-01	2	M22520/1-02	Red
		M22520/2-01	5	M22520/2-11	-
		WA22	5	M22520/2-11	-
		WA22LC	5	M22520/2-11	-
		WA27	2	M22520/1-02	Red
22	20	M22520/1-01	3	M22520/1-02	Red
		M22520/2-01	6	M22520/2-11	-
		WA22	6	M22520/2-11	-
		WA22LC	6	M22520/2-11	-
		WA27	3	M22520/1-02	Red
20	20	M22520/1-01	4	M22520/1-02	Red
		M22520/2-01	7	M22520/2-11	-
		WA22	7	M22520/2-11	-
		WA22LC	7	M22520/2-11	-
		WA27	4	M22520/1-02	Red

- (1) Make a selection of a crimp tool from Table 8.
- (2) Remove the necessary length of insulation from the end of the wire. Refer to:
 - Table 7 for the insulation removal length
 - Figure 9
 - Subject 20-00-15 for the insulation removal procedure.

INSULATION REMOVAL LENGTH
Figure 9

- (3) Put the end of the wire the crimp barrel of the contact. Refer to Figure 10.

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

Make sure that:

- All of the strands of the conductor are in the crimp barrel
- The strands of the conductor can be seen in the inspection hole
- The distance from the end of the insulation to the end of the crimp barrel is less than or equal to 0.03 inch.

POSITION OF THE WIRE IN THE CRIMP BARREL
Figure 10

- (4) Crimp the contact.
- (5) Examine the contact assembly for these types of damage:
 - Broken strands of the conductor
 - Strands of the conductor on which the base metal can be seen
 - Cracks in the crimp barrel of the contact.

B. Contact Insertion

Table 9
CONTACT INSERTION TOOLS

Crimp Barrel Size	Insertion Tool	
	Part Number	Color
20	DAK83-20	-
	M81969/14-11	Red
	ST2220-2-28	-

- (1) Make a selection of a contact insertion tool from Table 9.

CAUTION: DO NOT USE A TOOL WITH:

- A TIP THAT IS BENT
- A TIP THAT IS FLARED
- A TIP THAT IS BROKEN
- A TIP THAT IS CRACKED.

WARNING: A DEFECTIVE TOOL CAN CAUSE INJURY TO THE OPERATOR.

CAUTION: A DEFECTIVE TOOL CAN CAUSE DAMAGE TO THE GROMMET OF THE CONNECTOR OR THE CONTACT RETENTION CLIPS, OR BOTH.

- (2) Put the wired contact into the end of the insertion tool. Refer to Figure 11.

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

POSITION OF THE WIRED CONTACT IN THE M81969/14-11 INSERTION TOOL

Figure 11

- (3) Axially align the contact and the tool with the correct contact cavity. Refer to Figure 12.

POSITION OF THE CONTACT INSERTION TOOL AND THE CONTACT CAVITY

Figure 12

- (4) Push the tool straight into the contact cavity until the tool stops.
 (5) Carefully remove the tool from the contact cavity.
 (6) Lightly pull the wire to make sure that the contact is locked in the contact cavity.

CAUTION: DO NOT PULL THE WIRE WITH A STRONG OR A SUDDEN FORCE. THE FORCE CAN CAUSE DAMAGE TO THE MODULE OR THE CONTACT, OR BOTH.

CAUTION: DO NOT MAKE A DENT IN THE WIRE INSULATION WITH THE FINGERNAILS. DAMAGE TO THE WIRE INSULATION CAN CAUSE UNSATISFACTORY PERFORMANCE AND RELIABILITY OF THE WIRE.

- (7) If the contact is not locked in the contact cavity:
 (a) Pull the wired contact out of the cavity.
 (b) Do Step (2) through Step (6) again.

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

- (8) Examine the grommet for these types of damage:
- A crack or a hole in the grommet that extends from one contact cavity to another contact cavity
 - A contact cavity that does not have a number.

C. Installation of Spare Contacts

Refer to Subject 20-60-08.

If it is necessary to install a spare contact in the contact cavities that are not used:

- (1) Make a selection of a contact insertion tool from Table 9.
- (2) Put the contact in the contact cavity.
- (3) Axially align the tool and the contact.
- (4) Push the tool straight into the contact cavity until the tool stops.
- (5) Carefully remove the tool from the contact cavity.

D. Installation of Seal Plugs or Seal Rods

Refer to Subject 20-60-08.

If it is necessary to install a seal plug or a seal rod in the contact cavities that are not used:

- (1) Make a selection of a seal plug or a seal rod from Table 4.
- (2) Push the plug or the rod into the contact cavity.
Make sure that the distance from the end of the plug or the rod to the grommet is less than 0.1 inch.

E. Configuration of the Switches

- (1) Remove the switch seal plugs from the module. Refer to Paragraph 2.B.
- (2) Make a selection of a contact insertion tool from Table 5.

NOTE: A plastic awl is a satisfactory alternative.

- (3) Set the switches to the correct position. Refer to Figure 4 and Figure 13.

NOTE: The Wiring Diagram gives the correct position for each switch.

NOTE: The ON position of the switch is an electrical short circuit. The opposite position of the switch is an electrical open circuit.

CONFIGURATION OF THE SWITCHES
Figure 13

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

- (4) Put the each switch seal plug in the correct position over the switches.
Make sure that each switch operates correctly.
- (5) Carefully push the seal plug into the module so that each seal plug is locked into position. Refer to Figure 14.

POSITION OF THE SEAL PLUGS IN THE PROGRAM SWITCH MODULE
Figure 14

4. INSTALLATION OF THE PROGRAM SWITCH MODULE

A. Installation of the Security Cover on the Module

Refer to Figure 3.

- (1) Put the security cover in the correct position on the switch seal plugs.
- (2) Align the screws in the security cover with the holes in the threaded studs.
- (3) Put each screw into the top end of each threaded stud.
- (4) Tighten the screws equally until the bottom of the security cover touches the top of the threaded studs.

B. Installation of the Switch Module on the Structure

- (1) If necessary, remove the 6-32 nuts and the 6-32 screws from the flanges on the module.
- (2) If a security cover is installed on the module:
 - (a) Put the threaded stud in each hole in the flange of the module.
Make sure that the two threaded studs on the base of the module are aligned with the holes on the structure.
 - (b) Put the module on the structure so the threaded studs go through the holes in the structure.
- (3) If a security cover is not installed on the module:
 - (a) Align the holes in the flange of the module with the holes in the structure.

STANDARD WIRING PRACTICES MANUAL

BURNDY RBDSC-() PROGRAM SWITCH MODULE

- (b) Put the 6-32 screws through:
 - The holes in the flanges of the module
 - The two holes in the structure.
- (4) Put the 6-32 elastic lock nuts on the end of each threaded stud.
- (5) Tighten the screws so that the module does not move on the structure.
- (6) If the module moves, tighten the screws again.
- (7) Examine the switch module for these types of damage:
 - Any cracks in the shell of the switch module
 - Any cracked or broken flanges of the switch module
 - Any cracked or broken switch seal plugs
 - A worn nylon lanyard
 - A broken nylon lanyard.

2. LAMP AND FUSE DIODE MODULE DISASSEMBLY

A. Lamp and Fuse Diode Module Removal

- (1) Pull the lens cap assembly out of the mounting panel as far as it will go.
- (2) Turn the lens cap assembly to make it point down. Refer to Figure 1.

STANDARD WIRING PRACTICES MANUAL

FUSE DIODE MODULE AND LAMP REPLACEMENT

LIGHTED PUSHBUTTON SWITCH INDICATOR

Figure 1

- (3) If it is necessary to replace the lamp, hold the circuit drawer and at the same time, pull the lamps out of the lens cap assembly.
- (4) If it is necessary to replace the fuse diode module:
 - (a) Pull the fuse module straight back out of the drawer, until it stops.
 - (b) Hold the drawer with the index finger, and at the same time, turn the fuse diode module up. Refer to Figure 2.

FUSE DIODE MODULE REMOVAL

Figure 2

STANDARD WIRING PRACTICES MANUAL**FUSE DIODE MODULE AND LAMP REPLACEMENT****3. LAMP AND FUSE DIODE MODULE ASSEMBLY****A. Lamp and Fuse Diode Module Installation**

- (1) If it is necessary to install a new lamp:
 - (a) Make a selection of a lamp from Table 2.
 - (b) Remove the broken lamp. Refer to Paragraph 2.A.
 - (c) Insert the new lamp into the lens cap assembly cavity.
- (2) If it is necessary to install a new fuse diode module:
 - (a) Remove the broken fuse diode module. Refer to Paragraph 2.A.
 - (b) Support the bottom of the drawer with the index finger and push the new fuse diode module into the drawer with the thumb.

Refer to Figure 3.

FUSE DIODE MODULE INSTALLATION
Figure 3

- (3) Rotate the lens cap assembly up.
- (4) Push the lens cap assembly into the housing assembly until it clicks.
